LABBAI (LUBBAI) (Tamil, iḻoppai, said to be a corruption of arabi), a class of Indian Musalman, also known as Ḏojnaks (Skt. varana, “Greek, western”), supposed to be descended from Arab immigrants who intermarried with native women, but now having nothing to distinguish them from the aboriginal people, except their mode of dress and manner of shaving the head and trimming the beard. In 1911 they numbered 401,703, found chiefly on the E. coast of Southern India. Most of them are Sunnis, of the Shāfī madhhab, and their head-quarters are at Nagore, the burial place of their patron saint, Shāh al-Hamid 'Abd al-Kādir (ob. 1600), commonly known as Kādir Wali or Mīrān Shāh (see Gazetteer of the Tanjore District, p. 243). They read the Kurān in Tamil translation, written in Arabic characters. They are industrious and enterprising, especially as fishermen and traders.

LABBAKA. [See TALHIYA.]

LABĪD B. RABI'A ABŪ 'A'ĪS Ḥ, an Arab poet of the pagan period, who lived into the days of Islam (muxhadram), belonged to the family of Banū Ḍajjar, a branch of the Khālaba, who belonged to the Banū 'Amir and therefore to the tribe of Hawāzin. According to Ibn Sa'd, vi. 21, he died in 40 (660/661) in the night on which Mu'awiyah arrived in al-Nakhlah to conclude peace with Ḥasan b. 'Alī. Others, like Ibn Hadjar, iii. 657, whom Nöldeke (Fünf Meṣ'alaṭyāt, ii. 51) thinks ought to be followed, give 41 a. h., others again 42. He is said to have reached an unusually great age (al-Sidjestānī, K. al-Mu'ammārin, ed. Goldziher, ch. 61). In fact he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 a. d. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man he is said to have accompanied a deputation from his tribe to the court of king Abū Kābūs Nu'mān of al-Hira (c. 580—602), and when the latter was invited against the Banū 'Amir by his friend Abū Rabi' b. Ziyād al-'Aṣīs (of the tribe to which Labīd's mother belonged), Labīd succeeded with a satirical raqīṣ (Divān, No. 33) in so ridiculing him to the king that he restored his favour to the Banū 'Amir. A verse from Nu'mān's answer to his counsellor who sought to defend himself from the lampoon on him became proverbial (cf. al-Mufaḍḍal, al-Fāakhir, i. 41 sq.; al-'Askarī, Amtahl, on the margin of Maitānī, ii. 33; K. al-Abārānī, iv. 1—94 sqq., 91 sqq., xvi. 1—22 sqq., 21 sqq.; 'Abd al-Kādir, Ḍojnān al-Adab, ii. 79 sqq., iv. 171 sqq.). In his later poems Labīd also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet and scorned the profession of a wandering singer, practised by his contemporary al-'Aṣārī. But the coming of the Prophet Muhammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Ḏumādā II of the year 8 the chiefs of the tribe of 'Amir b. Ṣa'da, 'Amir b. Tufail and Arbad b. Kais, a stepbrother of Labīd, seem to have negotiated in Medina about the adhesion of their tribe to the new constitution without reaching any result (see Caetani, Annali, ii. 90 sqq.). Both men are said to have soon after come to an untimely end, 'Amir from plague and Arbad from a lightning stroke; the latter story seems to find confirmation in Labīd's lament for him (Divān, No. 5). The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible; for in that case Labīd, could hardly have composed several elegies on him and they would certainly not have been included in his Divān. In the year 9 the tribe again sent a delegation to Medina which included the poet and an agreement was reached. Labīd is said on this occasion to have become a Muslim. He later migrated to Kāfā where he died. Of his family only a daughter is mentioned who is said to have inherited his talent (see al-Maitānī, ii. 49 sqq.; al-Ghuzūlī, Mafāsī al-Budūrī, i. 52 sqq.).

Labīd's poems were very highly esteemed by the Arabs. Al-Nabigha is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawāzin, on account of his Mω'allaṭū. He himself is said to have claimed third place after Imru 'l-Kais and Ṣa'da. Al-Djumābi (Ṭubahāt al-Shawārī, ed. Heill, p. 29 sqq.) places him in the third class of pagan poets along with al-Nabigha al-Djumābi, Abū Dhūlāib and al-Shummākī. Labīd showed himself equally master of the Ḍuzūl, the mawṣūla and the kāfūra. One of his Ḍuzūl was adopted into the collection of mω'allaṭūt and is thought by Nöldeke (Fünf Meṣ'alaṭyāt, ii. 51) to be one of the best specimens of Beduin poetry. Labīd uses the traditional pictures from the animal world — wild asses and antelopes fleeing before the hunter and fighting with his dogs — as charmingly as the usual complacencies about drinking bouts. He seems on the other hand to have only cultivated the mω'ab, because it had been traditional. He deals far less with the subject of woman's love than with the description of the AṭĪl which he likes to compare with

THE ENCYCLOPAEDIA OF ISLAM, III.
LABID — LÄDHIK

artistic calligraphy. He is also fond of recalling memories of places of his native district, the palm-groves and irrigation works of which continually move him to charming descriptions; indeed in one such connection he gives the whole itinerary (Diriān, No. 19, v. 4 sqq.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, op. cit., p. 12). As his almost contemporary Abū Dhū‘ayib is fond of doing, in the Mā‘allaqa, v. 55 sqq. he turns however once more to his beloved and thus combines the nasīb with the main part of the kāfīda to an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is however distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad’s mission. While Zuhair, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labid on such occasions always strikes a religious note. He certainly did not profess Christianity nor can we see in him a representative of the so-called Ḥanifs of the Sīra, as von Kremer wished to do. In him rather we find the belief in Allāh as the guardian of morality finding particular expression, a belief widely disseminated in Arabia by the preaching of the Christian church. Such passages naturally invited the Muslim traditionalists to increase them. Indeed a later author went so far as to ascribe to him a verse by Abū ʿAṭā‘iyāh (fig. 18). But many passages of his Dirīān seem to owe inspiration to their author. The statement that he wrote no more poetry after his conversion to Islam is obviously an invention (see Ibn Sahl, vi. 21, 4, repeated later; e.g. al-Chuṭā‘ī, Ma‘ṣūr, i 52 infra); it is contradicted by the simple fact that poems 21 and 53 of the Dirīān were composed shortly before his death (K. al-Aḥānān, xi. 101) The description of Paradise (Dirīān, No. 3, 4) is certainly inspired by the Kurān like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in No. 39 and 41, verses 11 of which, as Ibn Kūtāiba (K. al-Aḥānān, p. 153), already points out, certainly must be written after his conversion, it is not to be considered an interpolation, he replaces the nasīb by pious admonitions. Thus he creates a new artistic form that of poetical paraphrase on the transitory acts of human life; besides the Kurān he may of course have been influenced by Christian preaching. He only follows older models in the connection when he combines admonition with the averting of blame from a woman in No. 14, as in Tanfā’s Mū‘allaqa, verses 50 sqg. 63–65 (cf. C. Schökel, Das Schiskīt, p. 9). The jump herein is only an episode in the text.

LACCADIVES (Lākhā dīwān, “the hundred thousand isles”), a group of coral atolls lying off the Malabar Coast between 8° and 14° N. and 71° 40’ and 74° E. There are thirteen islands in all, but only eight are inhabited, and these are divided into two groups—the northern, including the inhabited islands of Aminī, Kardamāt, Kīltān and Cettāt, and the southern, including the inhabited islands of Attā, Kavaitāt, Androth and Kelpen. The northern group, for administrative purposes, forms part of the south Kārnā District and the southern, of the Malabar District. To the south of the Laccadives stands the isolated island of Minikōi, belonging physically, neither to this group nor to the Maldives, but approaching rather to the latter. The Laccadives were originally colonized by Hindus from Malabar but the inhabitants were converted to Islam in the thirteenth century, according to tradition. They number about 10,000, and in habits and customs resemble the Mā‘pīllass of North Malabar, but their women hold a higher position, and are neither veiled nor secluded. Inheritance follows the female line. The people formerly owned allegiance to the Rāja but were virtually independent until, in the sixteenth century, the Rāja be-towed them on his admiral, the Ḥāli Ṭāja of Kanan, whose descendants governed them until 1791, when Kanan was conquered by the British, into whose hands they fell.

(L. W. Hagen)

LĀDHIK (Lādeīk, Gr. Λαδήικα), the name of several towns in Asia Minor.

1. The ancient Lādeīkai kai ārēs ev Aòsia Mínos (Lādeīkai). It probably derived this name from the smelting furnaces which it had, around the centre of the quicksilver mining area. It was in Karaman on the west coast of Asia Minor. Hājjī Khāliṣī knew it by its modern name of Yörğān Lādeīk or Lādhikīya in Karaman.

LÄDIK — AL-LÄDHIKĪYA

2. Lâdik (Hadżâl Khâla’a: Lâdkhîa), the ancient Laodicea ad Lycum in the southeast of Djemînîya. Al-Battāni calls it, following Greek sources, Lâdkhîyû Frêdî (Φρέδίς) while Ptolomy places it in Caria. According to Ibn Baṭîta it was a large town with 7 Friday mosques, beautiful gardens, flowing rivers and springs and fine markets. The Greek women there made remarkably beautiful and durable woolen goods, embroidered with gold. Ibn Baṭîta also praises the hospitality of the inhabitants but censures the freedom of their morals. Slave girls were sold and prostitution practised even in the public baths. On the history of the town (now Eski Hîgar) see Dârîzî.

3. Lâdik, the ancient Laodikeia Po- sitiva south of Amâsia.

AL-LÄDHIKĪYA, a sea-port in Northern Syria, the ancient Laodikeia Λαοδίκεια; ïπι ἐκάστου. It was founded by Seleucus I, who called it after his mother Laodike, and towards the end of the Seleucid empire it was a member of the alliance of the four most important Syrian cities, the πολές ἀλλήλας, Antiocheia, Apameia, Seleuceia and Laodicea. In the reign of Justinian I it became the capital of the newly founded province of Thraciopolis.

When the Arabs under the governor of Hims, 'Ubâda b. al-Asîr, advanced on the town, the inhabitants made a determined resistance. 'Ubâda encamped near Lâdîkîya and had deep trenches dug in which even horsemen could advance unobserved. After a prolonged retreat he returned in the night and was then able to sur- prise the inhabitants who had unsuspectingly opened the great gate of the city, and to enter the town. The citadel was then stormed and 'Ubâda proclaimed upon the walls Allâh akhbar. A section of the Christian inhabitants was forced to surrender (Greek: τρικλήσιον; al-Baladhûrî, ed. de Goeje, p. 133, 4 should thus be corrected for al-Yusayyîd: Ed. Schwarz in Wellhausen, Z. D. M. G., lx. 246). Their request to be allowed to return to the town was granted on payment of a fixed sum as khârîj. They retained possession of their church, while 'Ubâda had a new mosque built which was later enlarged (al-Baladhûrî, op. cit., p. 132 sq.). About 97 (according to al-Baladhûrî: 100 A. H.), the Greeks attacked the coast of al-Lâdîkîya with a fleet, burned the town and carried off its inhabitants as prisoners. Baladhûrî, op. cit.; Balîkî, *Târîkh*, 731-978, xviii., p. 135. 'Umar had al-Lâdîkîya rebuilt, fortified and ransomed the inhabitants from their captors. Yazîd confirmed the restoration of the city after 'Umar's death and he also put a garrison in it. According to another story however, Yazîd's services to the town were only the renovation of the defences and the strengthen- ing of the garrison (al-Baladhûrî, op. cit.; Mašâ'î, *Mamââlîk al-†âbâh*, Paris, viii., p. 281).

The Nicephoros Phoka in 961, freed the whole of Northern Syria from the Byzantines (Yahyâ b. Sa‘îd al-Anjâski, ed. Krâtîkovsky and Vasiliev in *Petrolog. Oriental*, 1924, xviii., p. 816). In 980, according to Yahyâ b. Sa‘îd, who, Rosen thinks, took his statement from a local chronicle of al-Lâdîkîya, the emperor Basîl II appointed a certain Kârmûrûk, who had distinguished himself in an expedition against Ŧârubûlus which belonged to the Fâimid, to be governor of the town. When it was besieged by the Arabs Nazîzî and Ibn Shâkir, he was captured during a sortie, and beheaded in Cairo (Rosen, *Zaﬁrî Imp. Akad. Nauk*, xlv., p. 16 sqq., 153 sqq.). Michael Burztes (al-Burzî) in 992 put down a rising of the Muslims in the town and had them deported to Bilad al-†âmî (Yahyâ, ed. Rosen, op. cit., p. 30, 237). In 1056 al-Lâdîkîya belonged to the Banû Mun‘îb of Shaisar (Derenbourg, *Ouâsîme*, p. 27 sq) who had, however, to cede it to the Salûdî Malik Shâh. In August 1068, the Count of Normandy took the town; it then passed in rapid suc- cession to the Byzantines, to Bohemund of Tarento, to the Byzantines again and finally after 15 months' siege, to Tancred of Antîkîya (Hohlrett, *Gesch. des Kyris. †aum*, p. 45, note 8). In 1104 we again find the Greeks besieging it by land and sea, and Bohemund promised the Emperor Alexis ComnenoS in the treaty of Devol (1108) the cession of this πστευσις among other places (Anna ComnenoS, *Alexias*, Bonn, ii., p. 241, 6). Tancred however soon afterwards with the help of a Pisan fleet took the town which in the meanwhile had again passed over to the Muslims. The governor of Ŧalab took and sacked it in 1136; in 1157 and 1170 it was visited by two severe earthquakes, in the latter only the principal church was damaged intact. On July 21, 1188, Sâ‘îd al-Dîn took the town (*îmâd al-Dîn, Fâthî*, p. 141; Ali Shâmîa, *Kîlîb al-Rawdûfîn*, ed. Cairo 1257/1288, ii., p. 128 = *Hist. Orient. des Crois.*, iv., p. 361). In autumn 1197 Bohemund III succeeded once more in conquering al-Lâdîkîiya or a part of the town at least. In 1223 the Ŧalabîs destroyed the town or its citadel out of fear of the Christians approaching on the Fifth Crusade. But even after this (since 1197), half the city remained in possession of the Franks. Baillars in 1275 demanded that they should hand over this part of it. In 1281 al-Lâdîkîya belonged to the emir Ŧonkûr, to whom the Sûlîta had been forced to surrender it in a treaty (June 24); but after the fall of Ŧonkûr, another emir won it back from Baillars (April 20, 1287); soon afterwards a new earthquake almost completely destroyed several of its strong towers, the pigeon-tower, the light-house and the towers in the sea; great siege engines completed the destruction of the fortifications.

AL-LĀDIḤIYAH

París MSS. Abb. 4430, fol. 94v, 152v, 243v, in van Berchem, Voyage en Syrie, p. 29c, note 3; al-Kalqashandi, Ṣūbāh al-fishāḥ, iv. 145, transl. Gaudez-Demblynes, La Syrie, p. 113 sq.). The Arab geographers and historians mention many ancient buildings that had survived in the town; they also tell of two castles connected with one another on a hill which commanded al-Lādiḥiyah (Bahā al-Din, in Hist. Or. des Crois., ii. 116), a great city-gate, which it took a number of men to open (al-Baladhuri, op. cit., p. 132), and the description of it in the modern town of al-Din (Maxuṭ, Muḥadi ḍi al-Dhahīṣ al-Ṣawāl, p. 281; Dimashki, ed. Mehren, p. 209; Abu l-Fikrī, Geogr., transl. Reinaud-Guyard, i. 35; in Ibn Baṭṭalīa, i. 183; al-Farāhi), called after Till Fāris still the name of the eminence to the north of the town (M. Hartmann, Z.D.P.V., xiv., pp. 166 and map). A short description of al-Lādiḥiyah is given by Rasul of Cæsarea (Geisa Tamuradi, ch. 144; Kohler, Z.D.P.V., x. 316 has put together a list of the monuments of the town from Frankish and other sources). In spite of the earthquakes and frequent pillaging that occurred in the town in course of centuries, it never seems to have been quite desolate and uninhabited. The fine, high houses and the straight streets, paved with marble blocks, noted by Ibn al-Muḥir and Abu Shāma (Hist. Or. des Crois., i. 740; iv. 361) and which they say had suffered much when the town was sacked (cf. also Yaqūbī, ed. de Goeje, B.G.A., vii 258), recall the description of Laodicea in Posidonius as a kallipta ἔστησεν πάν. (Strabo, xvi., p. 753), and of the modern town van Berchem says (J.A., 1902, p. 425; cf. Voyage, i. p. 289 sq.): la ville de Lattakia a gardé ses rues droites. Il est curieux que ce plan, d'aspect tout moderne, existât au moyen âge, il remonte peut-être à l'antiquité, comme certaines rues droites de Damas et de Jerusalem. The origin of the straight streets and the square plan of the town (cf. Th. Schreiber in the Pfeifferchrift fur H. Kiepert, 1898, p. 335-348) has been ascribed to architects of the Roman empire (A. v. Gerkan, Grieche. Staatsbauten, 1924, passim), but more recently Cultrera has shown that they already existed in the early Hellenistic period and had been borrowed a-early as by Hippodamos of Miletus (fifth century) from the architecture of the ancient east (Architekturne Fundamente, in Memoire dell' Accad. dei Lincei, ser. v., vol. xvii., p. 403; 433 sq.; 473): Cannom, Familier du Douair-Europe, Paris 1916, xix. note 4, 25 sq., 483).

LAGHUAT, al-Aghawat, a town and oasis in Southern Algeria, 250 miles south of Algiers in 2°55' East, Lat., 33°48' N. Lat., at 2,400 feet above sea-level. In 1911 it had 5,599 inhabitants of whom 955 were Europeans. Laghaut which forms part of the "Territorial" of Ghardaia is the capital of a mixed commune and a native commune of 6,650 square miles with 19,810 inhabitants.

The town and the oasis lie on the right bank of the Wād Miṣr, which comes from the Djebel Amīr and finally under the name of Wād Ḥiḍī on the right bank of which is the Shasjel Melghir in the south of the province of Constantine. The houses lie in terraces on the slopes of two rocky hills, spurs of the Djebel Tisgarte, the European quarter on the north-west slope and the native quarter on the north-east slope. It is defended by a wall and two forts on the summit. The oasis extends in a semi-circle north-west and south-east of the town. The north-west part is the more extensive and contains palm groves and fields of cereals. A canal led by a dam from the Wād Miṣr called the Wād Lekkher provides for the irrigation of the gardens. The palm-trees to the number of 30,000 produce dates of mediocre quality, but they supply the food of the inhabitants. The situation of Laghaut between the southern Osrān and southern Constantine at the point where roads diverge to the west, to the Ulā Sidi Shāhik, to the south of the Mab and to Wargla, to the east to the Ziban and Biskra, makes this place a considerable centre of commerce.

History. In the tenth century A.D. there was already on the banks of the Wād Miṣr a little town, the inhabitants of which, after having recognised the authority of the Fātimids, took part in the rebellion of Aḥd Yazid. The country round was inhabited by wandering Berbers of the family Maghrawa. The Hilāli invasion brought other tribes of the same stock into this region, notably the Kelse, driven out of the Zab, who founded a village called Ben Bitta. The rest of Kyur (Ba Membala, Nadjar, Solī Mīmīn, Badila, Khashat Ben Fotli) were built by other refugees, some of Arab origin (Dawwāda, Ulā bi Zayan), others came from the Mab. These groups together took the name of al-Aghawat.

We know very little of the history of this town down to the xvith century. At the end of the
LAHIJDJ — LAHIDJ

xvith century it paid tribute to the Sultan of Morocco; in 1666 the Kshar of Badala and of Kasbat Fotou were abandoned. In 1698 a Marabout originally from Tlemcen, Si Al-Hajj}dji Aissa, settled at Ben Bita, imposed his authority on the people of the three Kshar and on the neighbouring tribe of the Lurba. Under his leadership the people of Lahquat defeated the people of Ksar Al-Agha but were forced to pay tribute to the Sultan of Morocco, Mulay Ismail, who camped under the walls of the town in 1708. After the death of Si Al-Hajj}dji Aissa (1738 a.d.) the history of Lahquat is reduced to that of the struggle between the two sons who disputed control of it, the Uld Serghine, of the south-west quarter and the Hallaf who inhabited the north-east quarter. In the middle of these feuds which bathed the oasis in blood, the Turks made their supremacy recognised. In 1727 the Bey of Titter had imposed an annual tribute on the Kshtrians. The Mzabis driven from the oasis where they had acquired a part of the gardens, formed for the nomads of the south a confederation, over which the people of Lahquat triumphed with the help of the Lurba. Towards the end of the xvith century the Turks reappeared and enforced once more their suzerainty with an army small, while the town had been gradually casting off. The Bey of Melea fell in the first expedition (1784), but the Bey of Oran, Muhammed al-Kabir, seized the town and destroyed the quarter of the Uld Serghine (1786). His successor Othman then took the field against the Hallaf whom he scattered (1787).

The two enemy factions were not long however in reorganising themselves and civil strife began again until the chief of the Hallaf, Ahmad b. Salim, succeeded in making himself master of Lahquat and the neighbouring Kshas (1828). But peace did not last long. The Uld Serghine supported by Abid al-Kadir regained the upper hand in 1837. Their chief Al-Hajj}dji al-Arbi was appointed khalifa by the Amir. He could not fight and was forced to take refuge in Mzab. His successor Abid al-Ba} was no more fortunate, although he had 700 regular troops and a cannon. In obedience to the Amir's orders he tried to imprison the notables but this provoked risings and he had to leave Lahquat (1839). Al-Hajj}dji al-Arbi, again appointed khalifa, was defeated by Ahmad b. Salim in alliance with the Marabout of Ain Mahdi, Tidjani, and then taken prisoner. Thus becoming again lord of Lahquat, Ahmad b. Salim placed himself under French protection who appointed him their khalifa in 1844. A French column under the command of Colonel Marey-Monge on this occasion camped at the very gates of Lahquat. The French came back again in 1847 but did not definitively install themselves till 1852, when the Sharif Muhammed b. Abdullah, already lord of Wargla, had gained entrance to the town with the help of a section of the Hallaf. To retake it from him a column was sent under General Pelissier. Lahquat was taken by storm after a desperate fight in which General Boucaren and Commandant Morand were killed (December 1852). A permanent garrison was then stationed in Lahquat and it became the base of French operations in the south.

gierien,Paris 1845; Fromentin, Un et des Sahare,Paris 1874; Marey Monge, Expedition de Lahquat, Algiers 1844; Moulay Ahmad, Voyages dans le sud de l'Algerie, transl. Bertrugger,Paris 1846.

LAHIJDJ, a sultanate in South Arabia with its capital of the same name north-west of Aden, bounded by the Hwahabi territory on the north, the Fa'li territory on the east, the Akrabi land in the south and the Sabiha territory in the west. The capital, called Lahijdj or el-Huse lies at a height of 350 feet above sea-level between the two Tanns of the Wadi Tabar, the Wadi Lahijdj and the Wadi Kabir, in a fertile oasis which, occupying a wide valley, owes its existence to its irrigation by canals led from the mountain streams and wells of excellent water as much as 15 feet deep. The town is surrounded by palm-groves and fields on which cereals are grown, notably durra (holcus sergum) and different vegetables; in addition to date-palms there are all kinds of fruit trees, including citrons and cocoa-palms, this being one of the most northerly points in Arabia where the latter are found. The town which was visited in 1503 by Ladovico di Barthena and in 1810 by V. G. von Stocken and which Neidhofer still calls on the town wall of Lahijdj 400 houses and 800 straw or reed huts with almost 5,600 inhabitants, owes its prosperity to the Russo-Turkish war in the course of which in 1878 England temporarily proclaimed a state of siege in 'Aden and exacted the Arabs and Somalis from 'Aden. The latter went to Lahijdj where they built themselves thousands of huts close to the town, which now form extensive suburbs and considerably increased the number of inhabitants. The sea of houses is dominated by the palace of the Sultan, built by Italian architects and four or five stories high with extensive subsidiary buildings; it is entirely built of clay and painted white. The palace is surrounded by a clay wall, on the east of which lies the town with its numerous rectangular flat-roofed houses, all built of sun-dried bricks made of a mixture of dung, clay, straw and dried grass and one or two stories high. The monotony of the picture is broken only by the very simple, insignificant mosques which are outlined in white round the roof. To the east of the palace in the shade of beautiful leafy trees and palms is a pleasant looking one-storied bungalow built by the Sultan for foreign guests. Round the town are scattered little groups of low straw huts, made of durra stems and surrounded by a hedge which are inhabited by Somalis and their families. In addition to these there are also Sawalls settled in Lahijdj. The great mass of the inhabitants however are Yemen Arabs, who live in the numerous houses and mud-huts, which form the town with its narrow, winding, dusty streets. A part of the town is reserved for the Jews, who look wretched and are merchants and artisans. There are also a few Muslim Jews who are traders. All types of the population are met with in the bazaar street which is barely six feet wide. Not far from this is the armourers' market where smiths, Arabs and Jews have erected their simple workshops in open booths. The principal weapons made here are the fine daramkas while the long cavalry lances, which are used by the Yemen Kabilis are made in Dhajina, Ansab or Hawir and brought for sale to the Lahijdj market. In
Wellsted's time there were also 30 silk-weavers here, who got their yarn from India. The oasis is very well watered and the numerous little canals are fed by the perennial stream which passes not far from the town. Lahijj which plays an important part in the caravan traffic is connected by a road with 'Aden and in 1907 was to have been linked up by a railway with 'Aden and Dallë, part of which was actually surveyed but the plan was abandoned. England took up the scheme again in 1915 during the war and laid a strategic railway of 1 metre gauge for 25 miles to Lahijj; in 1921 it was extended a few miles beyond the oasis of Lahijj and now reaches Habil al-'Hamra, 8 miles N. W. of al-Hijj. The continuation of the railway to Sa'âb would open up Southern Yemen and increase the importance of Lahijj.

History. The name Lahijj (Lahij) which means a damp low lying area intersected by water-channels, a place-name that admirably suits Lahijj, is connected by the geologists with the Hijmyar Lahijj b. Wâli b. al-Ghawth b. Kânân b. 'Arîb b. Zuhair b. Abyan b. al-Humaisî and is applied by the geographers to a district in Yemen which forms part of the territory of Abyan north-east of 'Aden. Al-Hamdînî mentions it among the towns of Tihâmeh and says that in his time the descendants of Asbâh b. 'Amr b. al-Dhârthi Abu Abyâbâ b. Malik b. Zaid b. al-Ghawth b. Sa'd b. 'Abî b. Abyân b. Malik b. Zaid b. Sidab b. Zu'a Hijmyar al-Aghzir were alive. Ya'âsî says the same for the district of Lahijj which included the towns and villages. A number of poets, particularly South Arabsians, are familiar with the town, e.g. Kais b. Makhjûl 'Amr b. Ma'dikarîth, Khâdîjû b. 'Amr, Suiyid b. Hijmyar, Ahsân b. al-Sâlimî and especially the famous 'Umar b. Abî Khabâb, who had property there.

After Yemen had been won for Islâm, Lahijj shared the fortunes of this extensive province of the Arab empire Lahijj thus passed with Yemen to the Umayyads and then to the Abâbâsids until under al-Ma'mûn the bold 'Abî Ibrahim b. Mišî b. Di'âsîr b. Muhammad, drove his governor Isâhâk b. 'Isâ al-'Abâsî out of Yemen and made himself independent there. In 203 (818/9) the Caliph made a partition of Yemen by which the coast lands from Mecca to 'Aden were put under the governor Muhammad b. 'Abdallâh b. Ziyâd al-Umâwi who founded the town of Zaidih and became the founder of the Ziyâdî dynasty which with one interruption (the capture of Zaidih in 203 [905/6] by the Karmaçîn 'Abî b. al-Faqî al-Hijmyar al-Khôshârî, d. 309 [915/6]) ruled over Zaidih until 402 (1014/1015) Lahijj with 'Aden, Abyan, Harâanntî and al-Sâhirî passed into the hands of the Banû Ma'n in the time of the Abyssinian slaves, who ruled the Ziyâdî kingdom when the dynasty died out. In 436 (1047/1048) 'Aden came under the rule of 'Abî b. Muhammad al-Sâhirî (d. 459 = 1066/67). Zu'ayî b. al-'Abbâsî (d. 485 = 1092/93) was installed as governor there and ruled in a practically independent fashion. Ibn 'Umar, the ruler of Lahijj, al-Shîrî and Husamîn, who later seized 'Aden and ruled jointly with his brother Masûd, made an alliance with him. Their successors succeeded in conquering a great part of the Yemen, but internal dissensions soon weakened them and in 152 A.D., the caliph al-Manṣûr took 'Aden with the help of treachery and was able to hold it until the Ayyûbid al-Mâlik al-Mu'aqqam Tîrân-shîh in 1173 A.D. conquered a great part of Yemen including 'Aden, with whose fate that of Lahijj was henceforth linked. Tîrân-shîh placed a governor in 'Aden, the brother of the Imam of Sa'âb, Malik al-Masûd, whose successor Sulûn Nîr al-Dîn (1233-1249 A.D.) was the founder of the Rasûlîd dynasty of Yemen. He soon conquered the whole of the Yemen and ruled it under the nominal suzerainty of the Abû-basîd Caliph, with whom he quarrelled in 1249 so that Sulûn al-Malik al-Mu'aqqar Shâhîs al-Dîn was sent against him and took 'Aden and Lahijj from him. In 1251 al-Mu'aqqar granted Lahijj and 'Aden to his brothers Mafâdjîl and Fâsîs as a fief. Lahijj again changed its owner when in 294 Ibrahim b. Mu'aqqar took 'Aden and Lahijj, but had soon to part with them again to Dâ'ûd, Mu'aqqar's successor. In 1302 Lahijj passed as a fief to the Shârif Imâd al-Dîn Idrîs. In 1307 the town was pillaged by the Iqâshîl, in 1323 'Umar b. Dîvâdân rebelled in Abyân and Lahijj and besieged 'Aden as his son again did in 1325. In 1454 'Aden with its hinterland passed to the Tîhirîs who held it till 1507. The expeditionary force led by Husain al-Mu'âshirî which had marched from Tanîl Khânûn, sent them at the request of the Tîhirîd Sulûn 'Amîr b. 'Abî al-Wâshîbî to prevent the encroachment of the Portuguese in the Red Sea and which conquered a great part of the Yemen, only paved the way for the Turks. In 1538 the Turkish governor of Kulzum, Sulaimân Fâshâ, set out with a fleet and took 'Aden which belonged to the Turkish empire until in 1635 the Turks had to leave the Yemen, which again became independent under the Imâms of Sa'âb. Quarrals among the claimants to the imâmate however soon shattered the kingdom and in 1728 the 'Abdallâh leader Faqî b. 'Abî b. Faqî b. Sâîlî b. Sîfîm, the founder of the dynasty of Lahijj, made himself independent of the Imâms and made Lahijj the capital of his territory. In 1735 he took 'Aden. His grandson Ahmad b. 'Abd al-Karîm in 1802 concluded through Sir Home Popham a commercial treaty with England but his nephew and successor Muhsîn came into conflict with England (1837) through the plundering of the Indian ship Doria Dowlat by his people and thus lost 'Aden, the fort of which passed to England by a preliminary treaty concluded on January 25, 1838, while the Arabs in the town were to remain under the jurisdiction of the Sulûn of Lahijj who received in compensation a subsidy of 541 dollars a month. On January 19, 1839 the English occupied 'Aden and by a second treaty of June 18, 1839, Captain S. B. Haines made an arrangement between Sulûn Muhsîn of Lahijj and England, by which the former agreed to guarantee the security and regularity of the caravan traffic with 'Aden and to maintain a loyal friendship with England, while Haines in return undertook to pay subsidies to the tribes of Faqî, Ya'î, Hâshîb and 'Amir and to pay Sulûn Muhsîn and his descendants 6,500 dollars annually from Dhu l-Ka'da 1254. At the same time the contracting parties agreed to support one another in case of war between the 'Abdallâh and Lahijj, to put subjects of the Sulûn coming to 'Aden under English jurisdiction during the time of their stay and those who came to Lahijj from 'Aden under that of the Sulûn; further all goods belonging to
the Sultan, or his sons were to enter or leave 'Aden free of duty. In spite of this treaty the Sultan, who was still sore over the loss of 'Aden, continued to intrigue against the English and supported the attack of the Arabs on 'Aden in 1840 and even had the English representative in 'Aden, Hasan Khathib, murdered and regularly adopted a hostile attitude towards the English. His constant failures however forced him to change his policy and on February 11, 1843 he concluded a new agreement with England which was renewed in a more stringent form on February 20, 1844, before his monthly allowance was again paid to him. Muhsin b. Faḍl, who had again allowed himself to be involved in a war with England in 1816 in which he was defeated, died on November 30, 1847. His son and successor Ahmad maintained friendly relations with England as it was in his best interest to do so. He died in 1849 and was succeeded by his brother ʿAli who resumed a policy of hostility to England and roused the hostility of the tribes against 'Aden. On March 7, 1849 a treaty was however concluded with the East India Company which was ratified on October 30, by Lord Dalhousie, but an attitude of constant friendship to England was not thereby secured. The Sultan even cut off supplies and it finally came to open fighting in which the Sultan was defeated on March 15, 1858 at Sheik ʿUthman so that he had again to reconcile himself to a peaceful policy. When in 1873 the Turks in their reconquest of the Yemen advanced on the hinterland of 'Aden, the English occupied Lahij and the Turks had to retire as a result of English diplomatic negotiations with the Sublime Porte. Whether these negotiations were instigated or approved by the Sultan who had lost his independence — only nominal it is true — by the Turkish occupation of his territory, is not known. In any case in 1887, as E. Glaser records, Sultan Faḍl b. ʿAli was receiving a monthly allowance of 1,250 dollars from 'Aden.

GENEALOGICAL SURVEY OF THE SULTANS OF LAHIDJ.

Faḍl b. ʿAli b. Sinḥ b. Sālim (1728–1742)

(machine-cut text continues)

In the World War Turkey assumed the offensive from the Yemen in June 1915 against the English sphere of interest and Turkish troops in conjunction with those of the Imam Yahyā b. Hamid al-Dīn, their ally, under the command of Muhammad Naṣr reached Lahij and in their advance on 'Aden where there was a battle with the English and their allies. In the course of the fighting the English troops evacuated Lahij and Sultan ʿAli b. Ahmad was shot. A counter-attack on July 21, 1915 restored Lahij to the English but by August 21 they were again driven out of Lahij which was occupied by the Turks who held it till the beginning of 1918. It was not till the collapse of Turkey on the Palestine front and the cutting of communications with the Yemen that the position became untenable for the Turkish troops and forced them to retire. Since July 1915, ʿAbd al-Karim b. Faḍl b. ʿAli has been ruler of the Sultanate of Lahij.

Lähidjän. I. A town in Gilân to the east of the Safid-Rûd and north of the mountain Dulfaq (cf. the ancient name of a people Dulafa) on the river Kom-khala (Purdesar) which 8 miles higher up flows through Langardû, the present capital of the district of Rân-i Kûh.

Lähidjän although unknown to the early Arab-geographers is certainly one of the oldest towns in Gilân. Its foundation is attributed to the legendary Lähidj b. Sâm b. Nâh. The river Safid-Rûd divides Gilân into two parts. In ancient times the river formed the frontier between the Amardoi on the east and the Kadsûoi or Gilâi on the west; cf. Andreas, Amardus, in Paulus-Wissowa, Real-Encyclopædia. In the Muslim period the part of Gilân to the east of the river was called Biya-pish and that to the west Biya-pass (the word biya “water” [cf. Ahmad Kazi in Dorn, Auszage, p. 100], corresponds to the Avestan wali, “water-course”). According to Kâhidjân, the people of Biya-pass were ‘Afsâ (“Arabs”) and those of Biya-pass Hamdanîs or sectarians of ustâd Abû Djalâf (＝Tabari).

The old dynasty of Biya-pish was that of the Kawûm or Hawûmûn (in the modern Rân-i Kûh). Its founder was Nasr al-Hâkî Hasan Útîbâ, a descendant of the Caliph ‘Ali, who preached Zaidi doctrines in Gilân and died in 304 (917) (Ibn al-Athîr, vii. 61; Tabari, iii. 2292). His descendants are known as Nâsrîwân. Later the family divided into two branches; in the reign of Udjugàt the lord of Kawûm was Sâlih b. Sâlih b. Kâkâwû b. Shâhînsâh (the descent of this branch is not quite certain); the lord of Lähidjän, the most powerful of the princes of Gilân (or of Biya-pish), was Naw-Pâdişhâh (or Shâh-i na’îw). When in 768 (1070) Udjugàt arrived before Lähidjän (via Târom-Lowshân-Dailamân-Rustûk) Naw Pâdişhâh submitted to him and thus kept his position.

Lähidjän became more generally known as the capital of the dynasty of Biya-pish called Kâr-Kiâyâ. These sayids came originally from the village of Khebâr, which is the district of Khebâr (Kîh). About 709 during the civil war between the two lines of Nâsrîwân, the descendants of Shâfâr al-‘in of Lähidjän and those of Amir Muhammad of Kân-i Kûh, Saiyîd ‘Ali b. Saiyîd Kiây seized Biya-pish, Dailamân and some districts of Mâzandaran. The power of the Nâsrîwân was re-established in 791—792; in 908 (1502) the troops of Amir ‘Hî-‘in al-Din of Fûman (Biya-pas) sacked the town and similar invasions were repeated in 910 (1504) and in 914 (1508), but, except for such interruptions, the dynasty of the Kâr-Kiây lasted till 1509 (1952). The Safawis had close connections with Lähidjän. In the road from Shakhânbar on the road from Lähidjän to Langarûd is the tomb of Shâh Ibrâhîm Zâhid (d. in 714 = 1314) who was the spiritual father (firm) of Shâh ‘Âli al-Din, the famous ancestor of the Safavid dynasty. Shâh Ismâ‘îl I, a fugitive from the Al-Koyuru, found refuge with the Kâr-Kiây Mîr ‘Ali and studied under Mâlûm Shams al-Din Lähidjân (E. Denison Ross, The early years of Shah Ismail, T. E. A. S., 1895, p. 286). These friendly relations were broken in the reign of the Kâr Kiây Khân Ahmad Khân (943—975 and 985—1000) who was at first imprisoned by Shâh Tâhmâsp and later driven from the throne by Shâh ‘Abbâs, who was indignant at his intrigues with the Ottomans. Ahmad Khân ended his days in Constantinople (Hammer, G. O. R., ii. 562, 576). In 1000 (1592) Shâh ‘Abbâs came to Lähidjän and destroyed the garden in front of the castle. During their occupation of Gilân (1724—1734) the Russians built two forts in Lähidjän. Lähidjän has now lost all political importance, but has retained its local importance as the centre of one of the largest and richest districts in Gilân. The town has 2,260 houses with 10,000 inhabitants. There are many tombs there of members of the old ruling family.

The district is divided into seven cantons:

2. Several districts in Persia have however derived from the stems Lâh and Lâr [i.e.: Lähidjân, an important little town in Transcaucasia west of Shâmarâsh [cf. Shirmâsh]; Lähidjân, a village in the canton of Kûrâl in the province of Fars; Lähidjân, a canton of Mukîr Kudûstân [cf. Sawân-’Allâq], which the Sharafûnûs, i. 280 calls Lähidjän. There is a village of Lähidjän near Lîkhtân, south of Tabriz and a village of Lârjân south of the Araxes about 12 miles above the mouth of the river of Ardabil (Kara-Þû). These stems Lâh and Lâr may both come from *Ladh [cf. the old Persian Mîshân, which gave Mîsh in Persian and Mîsh in Armenian]. According to the dictionaries (Vullers) the old name of the town of Lâr [i.e.: Lâdîf] was Lâdîf; the silk called Lâsh is also known as Lâsh (Lâsh however may equally well be explained by Lâj); the change of d (dh) to r is
attested in the Caspian dialects (it is regular in Tāt; in Mzandarān we have the parallel forms گئید/گئار); Melgunof, p. 221). The fact that we have districts of Lāhidjān and Lāhidjān in the adjoining provinces of Gilan and Mzandarān is remarkable, but still more significant is the fact that Lāhidjān of Shirwān represents an idlet of Iranian Tāt surrounded by Turks (the Tāt are now found scattered throughout Daghstān, the country round Tēherān, Astarābidjān, etc.). Their present name has a rather general and vague character, of Tāt. The colony of Lāhidjān may have retained the original dialect formerly spoken in the metropolis. The name of the silk چلیچ/چلاچ suggests the former existence of a place called Lād, which produced silk (cf. Yākūt, s. v. Lāhidj). [Yākūt says that Lāhidj produces the silk called ‘Lāhidjī’ which is not of high quality]. With the suffix -ī, the word Lāh-ī would mean the people of Lād. It remains to be seen if the region of Lāhidjān is not the ancestral home of numerous Lāhidj colonies. At the present day it is spoken in Lāhidjān — although with certain local peculiarities — the Gilaki dialect but this parent dialect has here exercised a levelling influence, of which the foreign Tarkijī was incapable in the case of the people of Lāhidj of Shirwān. Among the Lāhidjān of Kurdistān we may recall the hypothesis of Andreas that the name ‘Dimlāv’ by which the Zāzā call themselves (north of Diyarbakr) is a metathesis of Delām (Uslamlam). The emigrations from Gilān, still very obscure, certainly penetrated far to the west. — [To the names mentioned one might add perhaps that of گفتکی Lāhidj in Khūzistān (?); cf. Tārīkh-ghzida, G. M. S., xiv/1, p. 240].

(V. MINORSKY)

LAHOR, capital of the province of the Panjāb, British India, situated on the river Rāwī, at 31° 35′ north latitude, 74° 20′ east longitude. Population in 1911, 228,687, of whom 129,301 were Muhammadans. The foundation of Lāhōr is traditionally attributed to the mythical Lava or Loh, son of Rāma, after whom it was named Lohāwar. It is not mentioned in the chronicles of the invasion of Alexander the Great, nor is the town described either by Strabo or Pliny; but it may be the Labokla of Ptolemy, which Sir Alexander Cunningham (in his Ancient Geography of India) explains as Lalwala, “the abode of Lava”. In the Mahābhārata, the Pandjāb is called Tākada, or the country of the Tākas. According to Huien Tsiang, Tāki was the capital of the Pandjāb in 633 A.D. He makes no mention of Lāhōr by any name capable of identification as such, though he traversed the entire province and stayed in it for quite two years. Possibly the Lohkot of the Purānas is Lāhōr. The Derawar Bhāyi (a compilation from the Purānas) gives an account of a battle between Bāmnāl, Rādjā of Lāhvār, and one Bhīma Sen Kānīkot, the mythical ancestor of the solar Rājdūpt princes of Central India, is said to have migrated south from Lohkot, an event assigned by Colonel Tod to c. 145 A.D. One of the city gateways is known as the Bāhti Gate; the Solankhis and Bhāts of Radjputāna point to Lāhōr as the seat of an earlier settlement. The first distinct mention of Lāhōr occurs in the history of the campaigns of Subuktigin, and of Māhmūd of Ghurān, when the Brahmans kings of the Kābul valley, being driven from Pashāwar and Ohind, established their new capital first at Bhera on the Djelām, and then at Lāhōr. Both Dujāī Pāl, and his son Anuṅg Pāl, the successive antagonists of the Ghurān invaders, are called Rājda of Lāhōr by Fariṣhta, according to whom the Hindū dynasty was subverted in A.D. 1031, when Lāhōr became the residence of a Muslim governor under the king of Ghurān. A final insurrection of the Hindūs was quelled by Mawdūd in 1042, and the city was left in charge of Malik Ayāz, whom Mūḥammadan tradition regards as the founder. During the reign of Māsūl III (1099—1114), Lāhōr became the capital of the Ghurān dynasty, but was captured in A.D. 1186 by Shihāb al-Dīn, known as Mūhammad Ghiyath, the Mūhammadan conqueror of India. The town was sacked by the Mongols of Ṣiŋži Khān, and of Timūr, and in the reign of Mubārak Shāh, it was “a desolate waste in which no living thing except the owl of ill-omen had its abode” (Elliott-Dowson, iv, 56, 57). Lāhōr remained insignificant throughout the period of the Pathīn dynasties. In 1336, Bahol Lodi seized Lāhōr as a first step to power. It was plundered by Bābar’s troops in 1524.

Even at this time the Pandjāb was an almost uninhabited waste, except for a few walled cities in which the Hindūs could exist in some security from the frontier raids of Balkh and Kābul. Every year used to make raids on the Pandjāb, and for this reason the province remained depopulated for a long time, and very little agriculture was carried on. Rai Kām Deo Bhatti, of Patišā, rented the whole Pandjāb from the governor of Lāhōr for 900,000 takaś (5,200)’ (Bābar’s Memoirs). Under the Great Mughals, Agra, Dihū, and Lāhōr were the three chief cities and mint-towns of the Mughal Empire. Akbar held his court here from 1542 to 1558, and repaired and enlarged the fort. In the time of Dājahārī, who made it a secondary capital, Lāhōr reached its zenith of wealth and splendour; the tombs of this emperor and his famous courtier Nār Dāhān, are on the opposite bank of the Rāwī. The place fully shared in the misfortunes which attended the decline of the Mughal Empire. Situated on the high-road from Afghanistan, it has been exposed to the visitation of every Western invader, and suffered from the successive conquests of Nūr Shāh, Ahmad Shāh Durrānī, and other less famous depredators. Lāhōr was a bone of contention between the Sikhs and the Muslims, and the great city of the Mughal princes and their viceroys was reduced to little more than a heap of ruins. But the rising of Sikh power under Rāndjī Singh (1798 A.D.) made Lāhōr once more the centre of a flourishing realm. It reigned into anarchy after Rāndjī Singh’s death. Then followed the First and Second Sikh Wars, and annexation to British India in 1849. Since that time the capital of the Pandjāb has grown steadily, and a new town covers a large tract which was recently a wilderness. The native city is a walled town with thirteen gates. It has been a municipality since 1867. The old crafts are moribund, but have been replaced by trades of a modern character. There are power mills — cotton, flour, iron — and a large agricultural market. The European quarter, or Civil Station, lies to the south and east of the city, and is a large administrative, educational, and business centre. The older part is known as Anārkanī, and here are the buildings of the Government Secretariat,
University of the Pandžab, Government College, Medical and Law Colleges, and Museum. Anārkali is connected with the newer Civil Station by a fine thoroughfare called the Upper Mall, on which are the High Court, Cathedrals (Anglican and Roman Catholic), Lawrence Gardens, and Government House. Further out is the important military station of Lahor Cantonment, formerly known as Mian Mir. Lāhōr is a great railway centre, and the headquarters of a big system, the North Western Railway, with extensive workshops and a large railway colony.

(K. B. WHITEHEAD)

**LAILA (ā.),** night, *Laiat al-barā'ā, Laiat al-Kadr,* see KAMĀN.

**LAILA l-AKHAYLIYAH, an Arab poetess, daughter of 'Abdallāh b. al-Rahhāl (al- 'Abdallāh b. al- Ḥāfiz b. al- Ḥāfiz b. al- Ḥāfiz b. al- Ḥāfiz b. al- Ḥāfiz) b. Ka'b b. Mu'āwiyah of the tribe of Ḫaṭāl b. Ka'b. She got her name from the fact that her father — according to other traditions one of her ancestors Ka'b or Mu'āwiyah — was known as al- Ḧāyli (= the falcon); perhaps it was a common name in her family and the phrase nāmu 'l- Ḧaylī in her verses glorifying her family may refer to this (Al-Qāhī, x. 80; Hamdān, p. 711). Lāla is usually mentioned in connection with her fellow-tribesmen Tawbā b. Ḥumayyir al- Ḧaṭṭāfī; fragments of her laments for him are preserved in the Kitāb al- Ḧaylī. She also wrote an elegy on the death of the Caliph ʿUthmān. It is also recorded of her that she exchanged lampoons with Nāhibī al- Ḫaḍī. Her conversations with Mu'āwiyah, 'Abd al-Malik and Ḥaḍūjāt b. Yūsfū are several times recorded. She begged the latter, in her old age to take her to her uncle Kūtaba b. Ḫusayn in Kītāb, and she is said to have died on the way. She must therefore have flourished in the second half of the first century A.H.

(H. H. BRAU)

**LAILA KĀHĀN, with Fitnet Kāhān, the greatest Turkish poetess of the older school, at the end of the romantic and beginning of the modern period. Born in Constantinople, the daughter of the Kāk̄-a-ker Morezi-end Ḥāmīd Efendi, she received an excellent education. Izsett Mollā [q.v.] contributed most to her poetical development; she was related to him and always retained a grateful memory of him as is shown by her elegy, full of deep feeling on his death. In her case the lack of information about her is characteristic of the old Turkish conception of women about whom very little is spoken in public. She was early married but divorced very soon afterwards. She had the reputation of a Lez-bian. She cared very little about the opinion of the world. She lived for her pleasures and her writing. A few anecdotes relate to her infringements of the social code of Turkish ladies. She joined the Mewlewī and was buried in the Mewlewī convent in Galata. She died in 1264 (1848).

Lālā Kāhān left a regular Divān entirely lyrical which was several times printed (Būlāk 1260, Constantinople 1267, 1299 etc.). Although she is still completely in the purely Oriental conventional period of Turkish poetry, her place at the end of the old school is not to be denied. Her verses are simple and clear and free from the affected bombast of the time and with their classically correct language much easier to understand than the majority of contemporary poets, wherefore admirers of the old school like M. Nāḏī can find "very few "good", verses in her. Her hymns (mawṣūlāt) and elegies were particularly admired. She was celebrated for her ready wit.

**LAILĀ U-MADJNŪN.** See MADJNĪN.

**LAITH.** See KINĀNA.

**LAK.** The most southern group of Kūrd tribes in Persia. According to Zain al-ʿĀbidīn their name (Lāk, often Lak) is explained by the Persian word lak (100,000) which is said to have been the original number of families of Lak tribe. The group is of importance as the Ṭand dynasty arose from it. The Lak now living in Northern Lūṭistan are sometimes connected with the Lur (Zain al-ʿĀbidīn), whom they resemble from the somatic and ethnical point of view. The facts of history however show that the Lak have immigrated to their present settlements from lands further north. The Lakki language, according to O. Mann, has the characteristics of Kurdish and not of the Lur dialects [cf. Lūk]. Čirikov, *Putesestvye Journal*, St. Petersburg 1875, p. 227, says: "the Lur and the Lak speak different dialects and hate one another". The Lak appear in the Sharaf-nāma, i. 323 alongside of the Zand, among the secondary Kūrd tribes, subjects of Persia. According to Rabino, the Lak were settled in Lūṭistan by order of ʿAbīl ʿAbbās who wished in this way to create some support for the new wāli of Lūṭistan, Ḥusain Kāhān, whom he had chosen from among the relatives of the old Shahwardī Attabeg (Ṭūrāk-i Ḫāmāsī, p. 369). Of these tribes, the Sīsilā had formerly lived at Māhidāṣht (S.W. of Bahmānshāh); the Dīlfān take their name from Abīl ʿAbīl [cf. the article AL-KĀSĪM u. ʿEŠ] whose fief in the third (ninth) century lyed in the north of Lūṭistan [cf. SULĀN XEED]; the Bādīlān of Zohūb [q.v.] as well as of Lūṭistan say they come from Mawjil and are evidently one tribe. The Lūṭistan branch seems to have exchanged its Kurmandji dialect for
Lakki during its sojourn among the Lak in the time of Shah 'Abbas. Even after Shah 'Abbas there were several Lak tribes outside Luristan. Zain al-'Abidin (beg. of the sixteenth century) mentions among the Lak: the Zand, the Mäfi, the Badjalan, and the Zand-yi kula (7). To the last tribe (according to Houtum-Schindler: Begele) belonged Karim Khan Zand (born in Pârîyâ, the modern Pârî about 20 miles from Dâwlatâbâd on the Sulânâbâd road). When at Shîrâz, Karim Khan sent for the Lak tribe of Bârainvând. In 1212 (1797) the Bârainvând and the Badjalan actively supported Muhammad Khan Zand in his attempt to take the power from the Kâdhâr (H. J. Brydges, A History of Persia, London 1833, p. 46, 58; R. G. Watson, A History of Persia, London 1866, p. 116). Under the Kâdhâr several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were found among the Badjâlân of Khânkîn (Khursûd-Efendi, Siyâsat-nâme Na'îrî, Russ. transl., p. 112, 221); there are still a few Zand families in the Dorâ-Fârâmân district to the S.E. of Kirmânshâh (R. M. M., xxxviii, p. 39); a section of the 'Amâla of Pušt-i Kuh claims to be descended from the Karim Khan tribe. At the present day there are Mâfi at Waramîn, Tîhrân and Kazîn. According to a good list compiled by Rousseau at Kirmânshâh in 1807 (cf. Fundgruben d. Orient, Vienna 1818, p. 53), there are 16 Lak tribes as Lak the following tribes: Kâhîrân, Mâfi, Nânâkî, Dîlâwârân, Pâyâmârân, Kûlânî, Şîfûtânwâd, Bârâmânwâd, Karkûkî, Tawallî, Zîyûrânwâd, Kâkûwâd, Nâmânwâd, Ahmânwâd, Bohûğî, Zîlîya, Hârsîni, Şâlikwâd. According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: Sîsilâ (9,000 families), Dîlân (7,470), Tîhrân-Amârî (1,582 families), the Bârainvând (6,000 families) and Dîlânvând (1,000 families) forming part of the Bâlû-ghirîwâ group, a total of about 15,000 tents. The Bârainvând and Dîlânvând live to the east of Khurramâbâd around the sources of the river which then meets by the end of tâleh, the Dîlân occupy the beautiful plains of Alûsrât and Kâhâwâ respectively while the Tîhrân (perhaps = Târkân, i.e. "exempt from taxes") live between the left bank of the Saimara and the lower course of its left bank tributary from Khurramâbâd. The territory occupied by the Lak and including N. and N.W. Luristan is sometimes called Lakistân. The cohesion of the Lak tribes is evident from the fact that even before 1914 the Sîsilâ, Dîlân and Tîhrân were united under the authority of Nażar 'Alî Khân of the Amârî clan. In addition to the bonds of tribe and language, there is that of religion to all the Dîlân and many of the Akhâ. When the Amârî of Tîhrân belong to the extremist Shî'ite sect of the Ahl-î Hakî (cf. Sîlûzân 1893). Bibliography: E. Beer, Das Tsâghi Zendje, Leyden 1888, p. xxvii., p. zî; Zain al-'Abîdîn Shîrâwân, Bustân al-Shîrâhî, Tîhrân 1315, p. 522; O. Mann, Skize d. Lurisitikte, S. B., Ak. Wien, 1904, p. 1173-1193; O. Mann, Die Mundarten d. Lur-Sâmme, Berlin 1910, p. xxiv., xxv.: to the number of tribes speaking "Lakhi" the author adds the Kalbar of Kirmânshâh and the Mâfi of the Pušt-i Kuh; Rabino, Les tribus du Luristan, R. M. M., 1915; Mînory, Notes sur la secte des Ahlî Hakî, R. M. M., 1916, 2. Name given themselves by the Gbîrî.
practically reduced to little more than a title of honour. Its archaic flavour, the glories memories which it recalled of the phylarchs of lṭākeit, was very impressive in the “Burke” or “Almanac de Gogha” of the Arabs. But as to the Lakhnuids, they no longer have a separate existence from the Dīdūṣhām. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Dīdūṣhām. It is in the latter that the chronicler has really had in mind.

(II. LAMMENS)

**LAKHNAU, former capital of the province of Oudh (Awadh), now secondary capital of the United Provinces of Agra and Oudh in British India; situated on the river Gomti, at 26° 52' N. L., 80° 56' E. L. Population at the 1911 census, 197,828, of whom 4,409 were Muhammadans. Nothing is known of its history prior to the Muhammadan invasion; even the derivation of the name is uncertain, though the first syllable is a contraction of Latman or Lakhman. The oldest part is the Lalman Tila, which was colonised by Shaikhs at the close of the thirteenth century. A member of this fraternity, Shāh Mīr, who died in 1478, gained much sanctity and his tomb is an object of pilgrimage. Lakhnau’s prominence began in the time of the Sūri kings of Dīlī. It was occupied by Humāyūn in 1526, and taken by Bābur in 1528; under Akbar it was the chief town of a sūra. The decay of the Moghul Empire enabled Khād ī Khān (1724) to found the dynasty of the Nawāb-Wazirs of Oudh, who ruled as independent governors, and latterly as kings of Oudh, till 1856. Sa’ādāt Khān, a Sayyūd from Persia, of the Shāfī sect, a viceroy of the Empire, destroyed the power of the Shaikhs of Lakhnau, but retained his capital at Faizābād. He adopted the Shīkh as the dynamic bādghe. The grandeur of the city dates from the time of Aṣāf al-Daula (1775–1797), the fourth of his line, whose reckless munificence has passed into a proverb, and whose reign was the golden age of Lakhnau, which he made to the capital of Oudh. East of the beautiful Victoria Park (1857) is a fine group of buildings of the Kānī Darwaza, the Great Ima’mbāgh, and a mosque, all built by Aṣāf al-Daula. The second and third are in the Manzil Bhaiwan, or old fort; here also is the Lalman Tila, surmounted by the mosque of Awrangzēb. The Great Ima’mbāgh is the chief architectural glory of the city. To the same period belongs the Martimiire, built by General Claud Martin, first as a residence for himself, afterwards converted into a school.

Sa’ādāt ‘Alī Khān (1797–1814) constructed the Dilkushah palace and the Sikandra Bāgh. He and his successors continued to adorn the suburbs with palaces, gardens, parks, and country seats. The meretricious style of the period marks the decay of Indian Muhammadan architecture.

Ghāz al-Dīn Haidar assumed the title of king of Oudh. He built the Chattar Manzil palace, and the mausoleum called the Shāh Nādirah.

Muhammad ‘Ali Shāh (1837–1842) reformed the administration, and by his economic measures stayed the downfall of his house for two more reigns. His name is associated with the buildings at Husainbābā. During the reign of his son Amīr ‘Ali Shāh, all the old abuses returned, and the government of the country became utterly paralysed. Wajīd ‘Ali Shāh (1847–1856) was the last king of Oudh. He built the Kāhirah Bāgh palace, a florid structure of stuccoed and gilt brick.

Mal-administration by one of the most extravagant courts known to history led to the annexation of Oudh in 1856 during the vicereignty of Lord Dalhousie. Some of the finest fighting in the Mutiny took place at Lakhnau, the name of which will be ever remembered in connection with the gallant defence of the Residency.

Modern developments have been stimulated and controlled by the wise generosity of the Local Government, and Lakhnau with its suburbs is regarded by many as the finest city in Northern India. As a centre of Urdu culture, it is the rival of Dīlī itself and is a seat of learning with unusual facilities for female education. The Canning College (1864) in the Badshāh Bāgh, King George’s Medical College (1910), and the Isabella Thorburn College for women, are now included in the University. Secondary establishments include the Colvin School, and the Reid Christian College. The Provincial Museum is also in Lakhnau. The Cantonment is the largest military station in the United Provinces. The city is a great railway centre, and the head-quarters of the Oudh and Rohilkhand Railway are here. There used to be an extensive native manufacture of gold and silver brocade, muslins, embroidery, brass and copper ware, but here as elsewhere indigenous arts have fallen on evil days.

**LĂM (BANI LĂM), an Arab tribe living a nomadic life on the lower course of the Tigris (‘Ali Charbi, ‘Ali Sharīk, ‘Amāra). According to the statistics of Khurshid Efendi (middle of the sixth century) there were over 4,400 families of Bani Lăm west of the Tigris (between ‘Amāra and Shāy al-Hay) and 5,607 east of the Tigis, along the Persian frontier from Mandalî to the region of marshes (kūnh) into which the Karkhī disappears. 17–50 families of the Bani Lăm went over to Persian territory between 1788 and 1846 (the southern parts of the Pusht-i Kūh, the domains of the wāli of Huwazir); some columns were even established east of the Karkha and at Fdlāhīya. The Bani Lăm claim to come originally from
the neighbourhood of Mecca (Lyclama a Nijeholt, T'ouyage, iii. 225) and their eponym was their chief Farādā Lām. The Bani Lām, for the most part Shi'i, were on friendly terms with the wāli of Ḥuwaizara (Ibn Subrah) who, q.v. who played an active part in Persian politics in the time of the ʿĀrifīs. In 1678, 1715, 1742, 1748 the Bani Lām in connivance with the chief of Ḥuwaizara rebelled against the qāḍī of Baghdađ. Less happy were the relations of the Bani Lām with the Lūr wāli of Pūshṭı Kūh who deprived them of the villages of Bayār, Def-b Lūrān and Bāršāyā, but as a rule the Bani Lām got on well with their Lūr neighbours.

ʿAli Rida Šāh (in 1836) and Nadjbī Ārānī (after 1843) inflicted heavy defeats on the Bani Lām. The central Persian government also (ex- peditions of Muʿtamid al-Ḍawla in 1841) drove the Bani Lām from the left bank of the Karkhā but, protected by the mountains of Pūshṭı Kūh and the Lūr on the north and east and by the gūr to the south, the Bani Lām kept till 1914 a position of autonomy between Turkey and Persia. The presence of the Bani Lām in the region of Gūrān and Lāms between Amor Nūr, Pūsh Pūl and Dīzčīl had stopped commercial traffic by this direct route.

The unity of the tribe was lost in the sixteenth century; the section on the right bank and that on the left of the Tigris had each its own šāhī." In 1821 the energetic Mādīkūr (Matkür), son of Dīnjālī, succeeded the deceased Shaikh ʿArū but Layard noticed that he had already little authority over his rivals. Lady Blunt speaks of Shaikhs Mīz-bān and her son Bōne, Shaikh ʿUṣmān, son of Bōne, at the beginning of the war of 1914 attacked the English force at Aḥwās but was soon disposed of.

(L. MINORSKY)

**LĀM, 23rd letter of the Arabic alphabet, with the numerical value 30.** For palaeographical details see the art. ARABIA, plate I.

**LAMAS-Sū (Turk. "river of Lamas"; Ar. LAMIS), a river in Cilicia, coming from the Taurus, a day's journey from Taşsū between Ayāsh and Mersina; in ancient times it marked the boundary between the two Ciliae (of the mountains and the plains). On the banks of this river exchanges of prisoners with the Greeks and the Seljuk was several times made. The first of these took place in the reigns of Hārūn al-Rashid and the emperor Nicephorus I in 189 (805); the second under the same caliph and emperor in 192 (808); the third in the reigns of the caliph Abū ʿAbbās and the emperor Michael III the "Drustard" in Muharram 231 (Sept. 845) the fourth in 241 (856) and the fifth in 246 (860)

under the same emperor and the caliph al-Mu'tawakkil; the sixth in 283 (896) under the caliph al-Mu'tadb and the emperor Leo VI; the seventh called "redemption from treachery" under the same emperor and the caliph al-Muktaṣir in 292 (905); the eighth three years later in 295 (907); the ninth took place in 305 (917) under the caliph al-Muṣtaṣir and the emperor Constantine Porphyrogennetos; the tenth took place in 313 (925) under the same rulers; the eleventh in 326 (938) under the same emperor and the caliph al-Ḥārūn; the twelfth took place in 333 (946) in the caliphate of al-Mu'tūf through the intermediacy of Saif al-Ḍawla the Ḥamānī, lord of Aleppo. This river had at this place either a ford or a bridge which the ransomed prisoners crossed. There was also a town of the same name (Lūcūjt, Lamū) on this river not far from the sea.

(C. G. HUARD)

**LAMGHĀNĀT, a district in eastern Afghanistan. It is often referred to by Bābur, see W. Erskine's translation of his "Memoirs", p. 141 and P. de Courteille, i. 287. The name is fancifully connected with Lamech, the father of Noah.

(H. BEVERIDGE)

**LĀMIĪ, nom de plume (nakḥalat) of Shahīr Muḥammad b. ʿOtāmān b. ʿAli al-Naḳḳāsh, a celebrated Sūfi writer and poet of the early part of the reign of Sulaimān I, the era, not only of the greatest political development of the Turkish empire, but also that in which literature was most cultivated. He was born in Brussa, the son of the defterdār of Sulṭān Bāyāzīd's treasury. His grandfather had been taken by Timurlenk after his invasion to be transported to Transoxania (Samarqand) where he learned the art of nakḥalat (embroidery and painting) there highly cultivated and on his return to Asīa Minor introduced the first embroidered saddle. On the completion of his theological studies with Mollā Akhawān and Mollā Muḥammad b. al-Ḥādīdi ʿIṣān-zāde, Lāmī, who had an inclination to Sufism, became mīrād with the Naḵḵbandī Shaikh ʿArīf bā-Ḥāṣīd Sayīd Ahmad al-Bukhārī. He spent his whole life in the calm retirement of a Sūfi, free from external cares and favoured by the patronage of Sultān Selim and Sulaimān who frequently showed signs of their favour to him and his numerous family; he lived in Brussa writing industriously till his death in 938 or 940 (1532 or 1533). He was buried in the mosque built by his grandfather on the citadel in Brussa.

The versatility and quality of his literary output in prose and poetry is really astonishing. But his work was not so much original as translations and
adaptations, as was characteristic of the period which regarded Slavish attachment to Persian models as the highest ideal. He usually took as his model Đâmí, then the most celebrated poet of Persia with whom he had a further link in their both being Nağşbandis and therefore was called Đâmí-i Râmî. His proximity is greater than that of any Turkish writer. We have a cycle of nine romantic poems from his pen. His importance to Turkish literature is considerable but is greatly exaggerated by von Hammer who devotes the longest monograph in his Gesch. d. orts. Dichtkunst (ii. 29-195) to him. Lâmî'i's style is still comparatively lucid and simple. There is not yet any trace in him of the overwhelming turidity of the later artificial classicism, yet it must be confessed that most that is beautiful in him is due to his Persian originals. Ziyya Pasha in his Kharâbât has for this reason paid no attention to him.

The list of his works as given in the Skaraf al-İsmân numbers 24 but in reality there were more. His prose writings are the translations of Đâmî's Sûfî works: Nafşât al-Câs (biographies of Sûfîs with the sub-title Fahîth al-Mađhîdîn i-i Tarâqî Qâlah al-Majâhibîn) and Skaraf al-İsmân (="The works of progeny ") printed at Constantinople in 1293; the Skaraf al-İsmân, "The worth of man", considered by Lâmî to be his masterpiece which is a Turkish version of Part 22 of the 51 Arabic tractates (Kasâ'il) of the İskân al-Nâfia, the struggle between man and animal (ed. and transl. by Duteriki, Berlin 1858, Leipzig 1879 and 1881: Thier und Mensch vor dem Konige der Geister). His works of a religious character are Mu'ammâr Asmâ al-İhsâni, translation and commentary on the 100 verses of Mir Hussein Nishâbûrî on the 99 names of God and Miftâh al-Nâdîj fi Khâvâfi al-İsmân transfer. He also wrote a collection of letters, Münâzârât, a commentary on the Dîbâqî-i Sûfîsân of Sûfî's, and Fêret-numâ (="Book of examples"), a collection of tales and allegories, lth. Constantinople, n.d.); a Mâkma al-Laîfî, or Laîfî-fêretelim (a collection of often very daring anecdotes, quite in the style of Boccaccio's Decameron, which received its final form from his son, 'Abd Allah Lemi, also known as a poet). Finally as a kind of transition to pure poetry he wrote two mûnâzurâs (disputations in the mixture of prose and verse later so popular), namely: Mûnâzurat Behar u-Sâha ("Disputation between summer and winter"), Constantinople 1290, with the title Munâzâra-i Sûfîsân Behar kâ Sîhâyân Sûhta) and Munâzurat Nâfia u-Rûsî ("Disputation between Soul and Spirit").

His very much more important poetic works include a large Divân of about 10,000 verses which contain much that is beautiful and original; besides lâzî's, Chezeli's etc. it also contains the Skhab in 1288; transl by Feinmaier, Verkörung der Engli-Bursa (separately printed at Constantinople 2164, Vienna 1839).

His great Mûnâzurât poems were of permanent influence: some deal in a popular fashion with stories from Persian legends, namely: Sulâmîn b-Âl-i (dedicated to Sultan Selim), from İsmî's original: Vâzâ û-Râsân (dedicated to Sultan Sulaimân, from the original of Fâhî Layhâni (d. 1048) and a version of Nûşûm al-Ârâ'î al-samârâkânî: Vâzâ 'î-Âl-i-3î from the Persian original of 'Usûrî (d. 1050) translated at the express desire of Sultan Sulaimân (transl. by von Hammer, Vienna 1833); Farhâd-nâmâ (transl. by von Hammer, Stuttgart 1812); Heft Paîkar, "The seven beauties" (based on Hâfiz'i's Heft Manzar, which again goes back to Nâşîmî's Heft Paîkar). Besides the two allegorical dramas Gûl-i Cârûqân ("Ball and Bat") and Şâmî ni-Purâvîn, "Candle and Butterfly", the latter probably from the Persian of Ahî Şirâzî, he also wrote two Müşâyârâs of a religious nature, the Namrât-i-Harâz-i Alûm Īsmân hiding the Shî'î Ta'rîzî (illustrated MS. in the 'Êshâr Library, No. 249) and Man-kubat (or Ma'nâbî'î ïïsâst-i Alûm-î-kâmî.

Finally there are his political allegories Hîsun u-Dîl from the Persian original of Fâhî Manzûrî and the Turkish version of Adî (ed., transl. and annotated and compared with Lâmî's Turkish version by R. Drovâk, Hûsun u-dîl, persische Al-legerie von Fâhîî aus Nîzîpur), the Khârîd-nâmâ ("Book of the Intelligence") and the Qâbûr-nâmâ.

(Th. Menzel)

LAMTA, a large Berber tribe of the Barani family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Şâhidjia, Haskara and Gazzila; others give them a Himyari origin like the Hawawa and the Lawata.

The Lamta were one of the nomad tribes who wore a veil (mudahlîsiman). One section lived on the south of the Mzab, between the Massïfa and the Targa (Tuareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in al-Sis, where there were Lamta who led a nomadic life, in company with the Gazzila, the Lamta occupied the territory nearest to the Atlas. On the coming of the nomad Arabs of the Ma'ârî family, the two sections of the Lamta were absorbed by their pen. The Dwâi Hâsân; the remaining sections then joined the Shabamâ, another Ma'ârî tribe, to oppose the Gazzila who joined the Dwayne Hâsân.

In the territory of the Lamta of al-Sis at the mouth of the Wadi Nâî (now Wad Nâî) lay the commercial town of Nul or Nul of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.
The jurist Waggāg b. Zallū of Sidjilmāsa, a pupil of Ābū ʾImrān al-Fāsi, was a member of the tribe of Lamta; one of his pupils was Ābū Allāh b. Yāsīn al-Gazullī, founder of the Almoravide empire.

The country of the Lamta was noted for the lamta bucklers made at Nāl with the skin of the lamta antelope.

**Bibliography:** al-Īdrīsī, al-Bakri, Ibn Khalдан, Kitiāb al-Ibar, indices, s.v. Lamta and Nīl; Leo Africanus, *Description de l’Afrique*, ed. Schefer, ill. 272, 437. (G. S. Colin)

**LAMṬA, a large Berber tribe belonging to the ethnic group of the Šaḥāda who lived in tents, and led a nomadic life in the desert to the south of Morocco with other tribes whose members veiled their faces with the ṣiṭām [q.v.] (muḥṣatulmumūn).**

At first idolators, the Lamta embraced İsľām and converted also the Negro peoples who lived around them. After having had a series of independent kings, they fell into anarchy until Yaḥyā b. Ībrahim al-Gudalī took control of them; having gone on a pilgrimage to Mecca in 440 (1054—1049) he brought back from Nafis the jurist Ābū Allāh b. Yāsīn al-Gazullī, who after having instructed the Lamta in the principles of religion and Muslim law, made himself their chief, conquered their neighbours, the Gudālī and Massūfī, and led them to the conquest of Morocco. He was the founder of the Almohad empire, also known as the empire of the Mulāshūtum or Lamta (cf. ALMORAVIDES). At the fall of the Almoravide empire the Lamta disappear from the history of Morocco. Their name is still borne by some tribes of Mauritania.

**Bibliography:** The first paragraphs of the chapter devoted by the Arab historians to the history of the Almavide dynasty especially: Ibn Abī Za‘r, Rawaḍ al-Kiṣās; Ibn Khalḥān, Kitiāb al-Ibar, ed. de Slane, i. 235 and 237; al-Bakri, Kitiāb al-Muqāṣirīt, ed. de Slane, 1911, p. 164—168. (G. S. Colín)

**LANKORAN (LENKORAN), the capital of the district of the same name in the province of Bbū. Larkoran is the Russian pronunciation of the name which was written as Lankorâ in the Arabic (anchorage, or perhaps Langar-karan (place which pulls out the anchors) which is pronounced Lar karâ in Persian and Lankân in Tâlish. The ships of the Bbū-Enzel (q.v.) line call at Lar koran, which has an open roadstead but at 8 miles N.E. of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lar koran, de Morgan found monuments of very great antiquity (dolmen, tombs, cases of exposure of bodies in the Mazdaean (†) fashion), but it is not known at what period the town of Lar koran was founded. Certain statements (cf. Taqī-i Amīr-ārā under the year 490 [1553] in Den. Anoticum, IV, 283; and Shaikh ʿAlī Hāna (about 1723 A.H.), Taqī-i Amīr-ārā (ed. Balfour, p. 157) suggest that the capital of Tâlish was originally at Astārā; towards the end of the xvith century Lar koran became the capital of this Khá nate. The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Taḥmās II and 1729 with the Afghān Ṣāyraf) but returned to Persia by the treaty of 1732. Retaken by Count Zubow in 1796, Lar koran was retaken in 1812 by the Persians who fortifed it. On the 9th Muḥarram (Ta‘ārīḫ) 1228 (Jan. 1, 1813), Lankoran was taken by storm by General Kotlikâwski after a brave resistance of the Persians. This event hastened the conclusion of the treaty of Gulsrān (1813) by which Persia ceded to Russia part of Tâlish to the north of the river Astārā. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed a part of the republic of Adhar-balādīn, a former member of the Soviet Union.

The population of the town, which was 3,970 in 1867, had reached 11,100 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,200 inhabitants and in 1861 99,632. Later the district was reduced to 2,000 sq. miles: in spite of this, its population in 1897 was 125,805 of whom 46.5% were Azari Turks, Iranian Tâlish 46.2%, Russians 6.9% (in the north) and Armenians (0.2%). The district is composed of 3 zones: to the north, an eastern continuation of the steppes of Mughān; to the east, a marshy littoral intersected by lagoons and covered with a rich subropical vegetation; to the west are wooded mountains running from 5,500 to 7,500 feet above sea-level which rise from the Russian frontier forming the boundary with the Persian province of Ardabil. The district is rich in forests and has good fishing.

(V. Minkovskiy)

**LĀR. I. Capital of the district of Lārīstan, to the southeast of Fārs. Very little is known of Lārīstan and its early history. The country appears to correspond to the land of the dragon Hafisa-bōkt which was killed by Ardashīr Pāpāken. According to Persian legend, Ardashīr’s adversary lived in the village of Alr in the rustāk of Kūdjarān which was one of the maritime rustāks (rasātk al-sīf) of the province Ardashīr-Khurra (Tabari, i. 820); Noldke in his translation of the Kārmanak (p. 50) gives the variants Gālār(?) and Kūčār; the Shāh-nāme, ed. Mohi, v. 368: Kudjarān. Lastly the Armenian geography of the seventh century mentions a Kudjar-Ḥūsrān in Persia (Khuārsān) (cf. Marquart, Erdmth., p. 44): the preening of an a to the name Lār (cf. below). Marquart identifies Kūčārān with the castle of Dēgdān near Strāf; on the other hand the Fars-nāme-yi-Vâzir mentions a village of Kudjar-Ḥūsrān in the canton of Galla-dār (the ancient Fāl Sep Vāl Bāl of Ibn Bāṭtīta; Khud jāb = Khudjā bāl) immediately adjoining Lārīstan. According to a verse attributed to Firdawsi (cf. Vullers, Lexikon, s.v. Lād) but not found in the known editions of the Shāh-nāme, the town was
originally called Lād (and fell to Gurgin Milād, one of the heroes of the cycle of the Kayānīd Kāi Khwāraw). This would be a very curious case of the changing of d to r found especially in Armenian and in the Caspian Tati dialect (Darmesteter, *Ét.-iranienne*, i. 73). The Fārs-nāmayi-Nāsirī mentions another legend according to which the people of Lār in Fāris had come from Lār in Damāvand (cf. below) the cold of which they could not endure.

The Arab geographers do not mention Lār, for apparently the old routes linking up the chief towns of Fāris, with Sīrāf and Kāis, or Hurmāz (by Fāsā and Furg) avoided the town of Lār (cf. Naṣīrī al-Mulk, *p. 185, 187*). According to Ḫamdallāh Mustawfī, Lār is a vilayet near the sea and Ibn Baṭṭūta alone talks of Lār as "a large town, with springs, considerable rivers and gardens".

Lār had a local dynasty. Its princes, relying on the verse already mentioned regarding the presentation by Kāi Khwāraw of the town of Lād to Gurgin, son of Milād, traced their descent from this hero. They were even crowned with the crown of their ancestor and this treasure was among the booty taken by the Safawids in 1010.

The first prince of Lār to be converted to Islam (about 1000) was Djalāl al-Dīn, while according to the genealogy of the Milādns, Bāqālānḡārī was ruling there between 731 and 753. The independence of Lār on the Mazārīfīs is shown by a gold coin of Shāh-budja (760–786) struck in Lār (S. Lane-Poole, *The Coins of the Mongols in the British Museum*, 1881, *p. 240*). In 799 the troops of Muhammad Sultan, grandson of Timūr, ravaged the eastern part of Fāris on the lines of Kārin-Fāl, Djamār-Lār, etc. (Czerny-Nāsirī, i. 809).

There are Timūrid and Caghātai coins struck at Lār (O. Codrington, *A Manual of Moslemian Numismatics*, London 1904, *p. 183*). In the reign of the Milādnī Djamānghā (850–883), the Russian merchant Alanast Nikūn, passed through Lār in 1469 on his way to Hurmāz and India and in 1472 on his way from Hurmāz to Shīrāz. The Milādnī Nāshirīn (the just) (930–948) was a poet, musician and author; he died by the hand of a lāl. His successor Ibrahim Khān submitted to the Safawids and received the title of Amir Pīdān. His son Nūr [Nawr!] al-Dahr lived in the time of Sultan Muhammad Safawī. Under 'Abbās I Mirā' Alā' al-Mulk, son of Nūr al-Dahr, was authorised to take the name of Ibrahim Khān II.

The young Khān showed signs of independence and oppressed merchants and travellers. This could not be tolerated at a time when Lār lay on the great road between the capital and the sea. As a preparation for the occupation of Gombrūn (see Bandar-i 'Abbās) in 1614 (* supra*) and of the island of Hurmāz in 1622, the Beglerbeg of Lār, Allahward Khān, in 1606 and 1610 (1601) marched against Ibrahim Khān and seized his possessions. Ibrahim II had to surrender to the mercy of Allahwardi who treated him humanely and took him to Shīrāz 'Abbās at Bālkh, where he died during an epidemic. The government of Fāris was then entrusted to Kādī Tāškīn of Lār, a sincere Shīrāzi (*tāškī-i shāhī sewānī* [*q. v.*] paimādana; *Tāhir-i Alamārā,* 1314, p. 423–426. Buildings of the Milādns are still to be seen at Lār — a mosque and a bazaar of hewn stone covered with stucco. The bazaar was restored in 1015, by Kanbar *Alt Beg Djal-omī, waṣīr of Lār.*

The memoirs of Shahāq Ali Hażīn contain interesting notes on the domestic life of Lār at the beginning of the sixteenth (xviii) century (rule of the Afghan Khudādād-Khan, passage through Lār of the route army of Shīrāz in 1523). According to Alī Hazīn (1520) the people of a part of the Lār lands (*gāmīr*) of Lārīstan were Shīhīs. They had prospered under the Afghāns but Nādir, wishing to reduce them, sent against them the *sālār* of Fāris, Muhammad Khān Balōc. The latter met with difficulties at Lār and having come to terms with its inhabitants returned to Fāris. In 1146, Muhammad Khān rebelled against Nādir and tried to raise the Shīhīs of Lār. The latter maintained a waiting attitude but by order of Nādir they were massacred and scattered. Lār was later annexed by a certain Nāṣir Khān, formerly a brigand in the *bulāk-i sāfā* (a region between Lārīstan and Kirmān) who received from the Shīh the title of Khān. His family (the begler-legi) remained more or less autonomous till 1206 (1845) when the governor-general of Fāris sent troops to Lār and appointed a simple kalāntar there (*Fārs-nāmayi-Nāsirī*).

At the beginning of the sixteenth century the Balbī Mihīl Khān invaded Lārīstan (Pottinger, *Travels in Bokhistan*, London 1816, *p. 163*). In 1256 (1840) Lār was occupied by the chief of the Ismailīs, Akā Khān who had rebelled against the Shīh (Schindler, *The Eastern Persian Irāk*, p. 94).

The town of Lār lying 57 fasākhās (5.3 km) from Shirāz was very frequently visited by European travellers in the xviiith century when it lay on the direct route Shirāz–Djamār–Dījūmy–Lār–Bandar-i 'Abbās: Figueron (1617), Sir T. Herbert (1627), J. A. Mandelslo (1638), J. B. Tavernier and Thevenot (1665), Struys (1672), Chardin (1673), Dr. J. Fryer (1676), Le Brun (1703). At this time there was a factory of the Dutch East India Co. at Lār (Thevenot, *Voyage*, Amsterdam 1727, *i. 460–476*). After the fall of the Safawids, Bandar-i 'Abbās became the port for the province of Kirmān only, while Būshīr became the principal port of the Persian Gulf. Lār conducted a local trade with the ports of Bandar-i 'Abbās, Linga [*q. v.*] and Tāhirī (the older Sīrāf; *q. v.*), of especially Sturke, *Ancient Trading Centres of the Persian Gulf*, G. J., 1895, *p. 166–173*.

In the sixteenth century, Lār has been described by Dāprē and Stack.

Of the 76 bulks of Fāris, that of Lār called Iārīstan is the most extensive (57 x 47 farsākhās, i.e. about 45,000 square miles). It is bounded on the N.W. by Barānum, on the S.E. the bridge of Lārīstan separates it from the nāhhīya of Bandar-i 'Abbās. This latter had a separate dynasty (the Kahlāt princes of Hurmūz). To the south Lārīstan is washed by the Persian Gulf (the ports of Kung, Linga, Mughūr, Čārak, Nakhibī). In 1617 A. T. Wilson found Lār quite prosperous (*Notes on a Journey from Bandar-Abbās to Shiraz*, Geogr. *Journ.*, Series 1908, *p. 152–170*). On the west it is bordered by the canons of Malīkī, Alā-marwadashi, and Khanī; on the north-west by the buluk of Dījūm; on the north by the buluk of Darāb; on the northeast by the Bulūk-i Saftā. **Lār**
The country is full of mountain ranges running parallel to the shore of the Persian Gulf and has a torrid climate. Water is scarce and brackish. The river of Lārīstān, variously known as Rūd-khwāna-yi shūr-i Galladār, Shūr-i Hing, Rūdkhwāna-yi Lamān etc., runs from west to east and flows into the sea a farakāh east of Kung.

The subdivisions (nāhiya) of the bālūk of Lārīstān are as follows (their orientation from Lār is given and the distance from it is in farakāhs):

</table>

The term bībkū in the local dialect means a valley shut in by two ranges of mountains. Fūṁstān is derived from the word fūmn, corn.

The population of Lārīstān is thinly scattered. The most important towns are Lār (Dupré: 15,000 inhab.; Stack: 1,200 houses: 7,000 inhabitants) and Linga [q.v.]. The majority of the population is Persian. In canton No. 6 there are some Bahārū Turkis and Nos. 2 and 3 are inhabited by Arabs.

Lārīstān has Persian dialects of its own (O. Mann, Die Tadjik-Mandarien der Provinz Fars, Berlin 1909, p. xxxiv. 126—131 and there is even a local literature in them. The Fārs-nāma mentions Ağhund Mullā Muhammad Bākir ("Suḥbat") who was well acquainted with Arabic, Persian and "Dari". Romaskewič has collected some of the poems in the local dialect of the poet Mahdijār as well as Persian quatrains by several popular poets, natives of Lārīstān (Romaskewič, Pers. narod. ečnerovičiši, in Zapiski, 1916, xxiii. 313—349).

2. An island in the Persian Gulf now called Abū Shāʿīb. Near the island at its periphery lies the two great branches of the river Lārīstān, the Nūr and the Bahārū. The Greek names for the rivers were Lārīstān and Bāzū; the name of the island according to Le Strange are Aľān and Lān. The Fārs-nāma, ed. Le Strange, p. 241 makes it a dependency of the island of Ardashīr-Khurra. Yākūt (iv. 341) places it between the islands of Kōr and the port of Sirāf. The Portuguese called it Ilha de Lázaro from the village of Lār (should this be Lādžī—probably the est end of it). It is 13 x 2½ miles in area. The east of it lies the little isle of Shītwār (Cītīvar). Some ten miles north of Lār on the coast of Fārs lies the little harbour of Nakhālū. We do not know if there is any connection between the names of the town and the island Lār. An island "Lārāk" ("little Lār") lies south of the island of Hūrnāz. Bibliography: Tomasevček, Die Kustenfahrt Naruchs, in Sitaeber. Wiener Akad., cxxi., 1890, p. 55.

3. A high valley lying in Māzandarān, on the sources of the Harmāz-pei. The altitude of Lār is from 8,500 to 6,500 feet. It lies west of Damāvand. The valley is deserted in winter. In summer the nomads pitch their tents there. The people of Tībrān also go there for summer quarters. Stahl however (Petraem. Mittel., Ergänzungs-heft Nö. 118, 1896, p. 619) found traces of ancient dwellings on the right bank of the river Lār. The locality is sometimes called Lāridān, which must be a plural of Lārīdān "inhabitant of Lār" (on the suffix -īd, cf. Marquart, Beiträge, Z.D.M.G., 1895, p. 666). The same derivation explains the Arabic transcription al-Lāriz (Balāzhīrī, p. 8), one of the cantons of Tabaristān (not however found in the list in Ibn Rusta, p. 146). Al-Irīz formed part of the possessions of al-Masmūghān taken in 131 (748) by Abū Muslim (Marquart, E. Fādżur, p. 127, 137). The term Lāridān seems to have been applied especially to the place below the high valley of Lār near the modern bridge of Pallīr; cf. Dīf-Falūl in Ibn Isfandiyār, transl. Browne, G. M. S., p. 67. Lāridān is said to have been the longest inhabited part of Tabaristān. Its village, Waraka was said to have been the birthplace of Fāridūn. In the villages lying on the slopes of Damāvand, Stahl saw a festival celebrated in memory of the death of Zohak (Aug. 11; cf. Morier. Second Journey, p. 357). At Lāridān there was a special marzūdā under the ispahabhs of Tabaristān (Ibn Isfandiyār, iibid., p. 15, 183, 280). On the district of Lāridān (Lāridān) cf. Lāridān. — Spiegel (Varena, Z.D.M.G., 1876, xxiv., p. 716—726) was inclined to suppose a connection between Warak (Ibn Isfandiyār, p. 15: Waraka, native place of Fāridūn = Thraētoons) and the Astac-e countains Varena. The site of Waraka is unknown but in Lāridān there exists a village Wana: on the disappearance of r in Persian dialects, cf. Grundrisse d. Iran. Phil., ii, p. 559, 351.

(V. Minorsky)
LÁRANDA (also called Karamín from the name of the dynasty which reigned there in the sixth century), a town in Asia Minor, capital of the kaça of the same name and of the sandjak of Konia, to the S.E. and 35 miles from this town. It is 4,000 feet above sea-level, has 2,000 houses, 7,500 inhabitants, 105 mosques, 21 Friday mosques, 4 dervish monasteries, 515 shops, 30 warehouses, 9 cafes, 4 caravanserais, 14 baking ovens, 7 baths, 5 mills, 1 military depot, 110 fountains, 1 barracks, 1 Greek school, 10 Muslim schools, 21 madrasas. There are a ruined fortress, mosques and other monuments in ruins from the time of the Karamín-çehi (mosque of Amir Măsă with pillars from ancient buildings). The town was annexed to the Ottoman empire in 1464. To the north is the Kara-Dagh covered with mediaeval monasteries now in ruins (ibir bir kille = 1001 churches).

LARI MEHMEH. [See MEHMEH LARI]

LARIN (lar-i), a silver coin current in the Persian Gulf and Indian Ocean in the xviith and xviiith centuries. It takes its name from Lār (k.v.), the capital of Lārāstān (q.v.), at which it was first struck; cf. Pedro Teixeira (Travels, Hakl., Soc., 1902, p. 341). "There is also the city of Lar... whence are called laris, a money of the finest silver, very well drawn and current throughout the East" and Sir Thomas Herbert speaking of Lar in 1627 (Some Years' Travels, London 1605, p. 130): "near this byzar the larnes are cowed, a famous sort of money". The larin weighed about 74 grains (4.9 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herbert) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions of dates like any other coin. It is admirably described by William Larret in his account of the moneys of Al-Başrā in 1558 (Hakluyt, P. oriental voyages, Glasgow 1902, v. 12): "The said larin is a strange piece of money, not being round like all other current money of Christianitie, but is a small rod of silver of the greatness of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juste halfe part and in the head thereof is a stamp Turkesco and there be the best current money in all the Indies and six of the larnes make a ducat".

The kings of Lār ceased to issue these coins after its conquest by Shah Abbās the Great of Persia (Chardin, ii. p. 223. Amsterdam 1755, iii. 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter half of the xviith century issued laris as did the Shāhs of Persia at Shirz and the Ottoman Sultan at Başrā. In India they were struck in the xviith century by the Ādī Shāhs dynasty of Başrā and other rulers and the frequent finds of larin in Western India show how extensive was their circulation there.

In the Malāve Islands in the early xvith century the king struck his own laris as we know from the Voyage of F. Pyrard de Laval (Hakl. Soc., 1857, vol. 1, p. 232 sqq.). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the xviiith century.

A degenerate descendant of the larin still exists (Philly, Heart of Arabia, ii. 319) on the Arabian side of the Persian Gulf, in Hāsa where it is known as a façula, i.e. the "long" (coin). It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Palgrave (Journey, etc., London 1865, ii. 179) who adds that there is a proverb "like a Hāsa façula", applied to any one who like the local currency of no use away from home.

(J. Allan)

AL-LĀT, an old Arabian goddess. The name (from al-lāhat; cf. Al-lāt) means "the goddess" but was the proper name of a definite deity, according to the Arabs themselves (e.g. Ibn Yaʿṣīsh, ed. Jahn, p. 44, 23) the sun. She is found as early as the Nabataean and Palmyran inscriptions and was later worshipped by various Beduin tribes (e.g. the Hewāzin; Ibn Ḥishām, p. 849, 13). An oath by al-lāt is frequently found in the poets, e.g. Ādū Saʿīd ibn Ḥishām, p. 567, 7, Mutamāmmis, ed. Vollers, v. 2, 1, Aws b. Ḥadjar, ed. Geyer, v. 11, 2, and even in al-ʿAqīd, Kibāb al-ḥijābī, vii. 173. She had her principal sanctuary in the valley of Wadijir near Ῥα fiscal, where the Muṭṭāb (ʿAttāb) b. Mālik b. Kaʿb were her priests and a white stone hung with all kinds of decorations was her symbol. She is frequently mentioned along with al-ʿUzza (Ibn Ḥishām, p. 145, 7; 206, 2; 874, 6, where Wudd also is mentioned; Aws b. Ḥadjar, p. 11, 2) and among the Kuraish she, along with this goddess and Mānat, was held in such high esteem, that Muhammad once went so far as to recognise these three goddesses as intercessors with Allāh but soon afterwards withdrew this (Sūrūn, li. 15 sqq.). According to Ṭabāisī, i. 1395, 3 Ābū Suṣyāf carried al-Lāt and al-ʿUzza with him into the battle of Yūḥ. After the capture of Mecca, al-Lāt was destroyed by her sanctuary in Ῥα fiscal by al-Mughira, who were related to her priests. But she was not forgotten, for, according to Doughty, there are still in Ῥα fiscal blocks of stone which the people call al-ʿUzza, Ḥalal and al-Lāt, at which they secretly seek help in cases of illness.

LAWATA, a Berber ethnic group, belonging to the family of BAttir, whose eponymous ancestor was Lawâ the younger, son of Lawâ the older, son of Zubâk. Ibn Khaldún disputes the view of certain Berber genealogists recorded by Ibn Hazm who consider the Lawâta as Saddaâita and the Mazâta as of Coptic origin. Others say the Lawâta with the Hawâwara and the Lâmta were of Himyarite origin. In any case the oldest home of the Lawâta seems most likely to have been the eastern part of North Africa. They were found in Egypt to the north between Alexandria and Cairo; to the south in the oases and in al-Sâ'id. Some

Lawâta led a nomadic life in the region of Borka. In the Maghrib they lived in the Ljâbal Lawâta (south of Gabes and Sfax) and it is probably this section that is mentioned by Corippus under the name Lujący = Berber: lawûtûn; others lived in the country round Bougie and in the region south of Tlaret (Tâlert) where they had adopted the Idrâdi heresy. In Morocco there were Lawâta in the Tâdil (the Zânara section), in the south of Fès and in the land between Tangier and Arzila.

Bibliography: al-Ibrîsi and al-Bakrî, indices; Ibn Khaldûn, Kitâb al-Fitr, ed. de Siane, i. 147-150; transl., i. 171, 231-236.

LAWH (A.), board, tablet; the first meaning is found in the Kurân, Sûra, lvi. 13, where Noah's ark is called al-lawh al-kabîr. The second meaning is that of lawh as writing material, e.g. the tablets of the lawh (Sûra, viii. 142, 149, 153; where the plural al-lawâh is used; see Lâlîn, iii. 421). Al-lawâh, wâl-lawâh (Bukhârî, Tâsîfî al-Kurân, Sûra, iv., bâb 18) corresponds to our "paper and ink". The expression mâ bâna l-lawâhîn "what lies between the two boards" is found in Hadîth, to describe the whole Kurân (Bukhârî, Tâsîfî, Sûra lix., bâb 4; Lâlîn, bâb 84); cf. mâ bâna l-dîffâshân (Bukhârî, Naṣîrî al-Kurân, bâb 16). — In modern linguistic usage al-lawh also means a school-child's slate.

Al-lawh thus means the tablet kept in heaven which in Sûra, lxxv. 22 is called lawh muhâfiz (cf. ii. 1066b, 1076a). According to this passage, it is usually described as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read mâmâ'în, the word does not go with lawh but with the preceding kâ'ûnîn and the translation is: "Verily it is a Kur'an, famous, preserved on a tablet" (see the commentators); "preserved" i.e. against alteration.

In the commentators on Sûra, xxvii. 1, the tablet is again mentioned: "We sent it down (the Kurân) in the night of the decree"; this refers either to the first revelation made to Muhammad or to the descent of the Kurân from that tablet which is above the seventh heaven to the lowest.

The tablet as the original copy of the Kurân is thus identical with wân al-kabîr.

The decisions of the divine will are also written on the lawh with the pen kalâm [q.v.]. We have therefore to distinguish two quite different conceptions:

a. The tablet as the original copy of the Kurân. This idea is found in the pseudographical literature. In the Book of Jubilees, ill. 16, it is said that the laws relating to the purification of women after childbirth (Lev. 15:1) are written on tablets in heaven. In Jub., xii. 28 sq., says the same of the law regarding the "feast of booths" (Lev., xxiii. 40-41) and Jub., xxxii. 15 of the law of tithes (Lev., xxvii).

b. The tablet as the record of the decisions of the divine will is also found in the Book of Jubilees. In Jub., v. 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophecies the future from the contents of these tablets (Book of Enoch, xiii. 2; cf. lxxvii.; xii. 2; xvi. 19). The "scripture of truth" is mentioned as early as Daniel, x. 21, the contents of which
Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages it is evident that in the pseudo-epigraphic literature also the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of lāzkh in Muslim literature.

For other passages, cf. the Index to Charles, *The Apocrypha and Pseudepigrapha of the Old Testament*, v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In mystical and philosophical literature lāzkh is given a place in the cosmic system and sometimes explained as qbl fā'āl and sometimes as nafs kuli or umm al-kulī.

(A. J. Wensinck)

**LAZ,** a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea.

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the Rion, to the Čorokh (the ancient Akampsis) and even to the sources of the Araxes also creates difficulties.

The earliest Greek writers do not mention the Laz. The name *Δζζσι* is only found after the Christian era (Pliny, *Nat. Hist.*, iv. 4; *Periplus* of Arrian, m. 2; Ptolemy, v. 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Noworossisk) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Sochi. In the 5th century the Lazoi occupied the land of the Kerkei, who in the first centuries of the Christian era had migrated southwards under pressure from the Sauki (i.e. the Čerkés [q.v.]) who called themselves Adlighe (Adlighe); the same author regards the Kerkei as a "Georgian" tribe. The fact is that at the time of Arrian (second cent. n. c.), the Lazoi were already living to the south of Sukhumi. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchē (and Sami); Machelones; Ilenichii; Zydrite; Lazari (Δζζσι), subjects of king Malasus; Apilaei; Abasgi (cf. *APKhA*); Sanges near Sebastopolis (Sukhumi).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchē had been renamed Lazica (Anonymous *Periplus,* *Frgm. Hist. Græc.* v. 180). According to Constantine Porphyrogenetus, *De Administr. Imperii,* Ch. 53, in the time of Diocletian (283–303), the king of the Bosporus, Sauromatus, invaded the land of the Lazoi and reached Halys (N. Marr explains this last name by the Laz word meaning river). Among the peoples subject to the Laz, *Prop.*, *Frgm.* iv. 2 and 3 mentions the Aba-gi and the people of Sunnial and Skyvania (i.e. Le-tchumi). It is probable that the name Lazica referred to the most powerful element and covered a federation of several tribes. The Laz were converted to Christianity about the beginning of the 6th century. "In the desert of Jerusalem" Justinian (527–565) restored a Laz temple (*Prop.*, *De Aedificiis,* v. 9) which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (*Prop.*, *Bibl. Got.*, iv. 2). In Colchē the Laz were under the suzerainty of the Roman emperors who gave investiture to their kings and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north. On the other hand the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchē.

In 458 King Gobazes sought the help of the Sasanid Vehshgird II against the Romans. Between 539 and 562 Lazica was the scene of the celebrated struggle between Byzantium (Justinian) and Persia (Khosraw II). According to *Prop.*, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis but their towns (Archaeopolis, Sebastopolis, Pityus, Skanda, Sarapasis, Rhodopolis, Mochoresis) all lay to the north of the river while on the left bank which was desert land the lands of the Laz only stretched for a day's march to the south. Nearest to Trebizond were the "Roman Pontics" which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethnical point of view the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephoros Gregora (v. 7) says that the founder of the dynasty had seized "the lands of Colchē and of the Lazes". In 1282 John Comnenus received the title of "Emperor of the East, of Iveria and of the lands beyond the sea". In 1341 the princess Anna Anakhshata ascended the throne with the help of the Laz. The lands directly under the authority of the emperor of "Trebizond seem to have extended as far as Makrieli while Gonia was under a local dynasty (cf. *Chronicle of Panaetor*, under the year 1376).

In 865 (1461) Sultan Muhammad II conquered Trebizond and as a result the Laz came into contact with Islam, which became their religion (*Şahi*). The stages of their conversion are still unknown. The fact is that even in the central regions of Georgia (Akhaltsikhe) Islam seems to have gained ground gradually from the 13th century (N. Marr in the *Rast. of the Acad. of St. Petersburg*, 1917, p. 445–446, 478–506).

In 926 (1510) Trebizond with Batum was made a separate eyalet. According to EulYSIS Celebi who went through this region in 1550 (1640) the five sandjaks of the eyalet were: *Djanikha* (*Djanik = Samani*); *Trebizond*; *Guniya* (Gonia); Lower and Upper Batum. The modern Lazistan was governed from Gonia, for among the *khatas* of this fortress we find Atina, Sunial, Witte; *Bile* (= Witte- or Arkhawi); Eulaysia and the version of the *Dzhab-nama* in Fellmayer, *Original-Fragmente*, Abb. d. Bayer. *Abh.*, 1846. HeaderValue Khaltiis and Eulaysia Celebi deceased by the similarity in sound of Caucasian
names (as also was Vivien de St. Martin) proposed a theory of the identity of the name Legzi and Laz. Ewliyä calls Trebizond "former Legzi wilâyêt". Hâddjî Khalîfîha after enumerating the peoples of the district (Legzi): Mingrelians (Megrîl), Georgians, Abkhaz (Abaza), Çerkes and Laz, adds that the latter are those who live nearest to Trebizond. To the S. E. of Trebizond in the Çepni mountains he mentions the Turks who "worship as their God mûcûdîn the Șàhlî of Persia (i.e. are extreme Shî'is) and are associated with the Laz". Hâddjî Khalîfîha and Ewliyä do not agree on the number of the afiût of Trebizond; Ewliyä only says that the value of the eyalet has depreciated through the unreliness of many of its 41 nahiye (Dîjîhân-nu mê, p. 429; Ewliyä, ii. 81, 83—85).

The first serious blow to the feudal independence of the derê bey of Lazizân was only struck at the beginning of the sixteenth century by the Ottoman Paşa of Trebizond, but Koch who visited the country after his expedition still found most of the hereditary derê bey's in power, although shorn of some of their liberties. He counted fifteen of them: Atina (two), Buîep, Artashîn, Witse, Kapîste, Ar-khawe, Kisse, Khopa, Makria (Makrâiî), Gonia, Barum, Maradêt (Maradîdî), Perlewan and Çat. The lands of the three latter lay however on the Corôkh behind the mountains separating this valley from the river of Lazizân in the strict sense. On the other hand among the derê bey of Lazizân was the lord of Hamshîn, i.e. of the upper valleys of Kalopotamos and of Furtuna inhabited by Muslim Armenians. According to the Armenian historian Lewond, transl. Chahnaçarian, Paris 1826, p. 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (760—797) (the old Tambur was given the name Hamshin < hammoshem, "built by H."). It is evidently this region that Clavijo (1403—1406), ed. Sreçewski, St Petersburg 1881, p. 383, calls *tierra de Arqaqiel*. He adds that the people, dissatisfied with their king Arqaqiel (Arakiel), submitted to the Muslim ruler of Tisir. The Muslims are now only those of Khopa have not forgotten Armenian. A Hamshin lexicon was published by Kiphidzhe.

With the institution of the wilayets the sandjak Lazizân became part of the wilayet of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the sandjak was transferred to Rize (Rhazaon), detached for this purpose from the old central sandjak of Trebizond. Lazizân lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The kajîs of the sandjak were: Khopa, Atina and Rize, subdivided again into 6 nahiye (Samy-Bey, Kamis al-Alâm, v. 3966). Cuinet, La Turquie d'Asie, i. 118—121, mentions Of as a fourth kajî and gives 8 (7) nahiye (Hamshin, Karadere, Mapawa, Waf, 'Kar'a-yi-sab'a, Witse, Arzkawâ). In 1880 there were in the sandjak 364 inhabited places with 138,467 inhabitants, of above 689 were orthodox Greeks and the rest Muslims (Laz, Turkicised Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term Laz is used in the west of Turkey to designate generally the people of the south-east country round the south-east of the Black Sea, but in reality the people calling themselves this name and speaking the Laz language now live in the two kajîs of Khopa (between Kopolısh and Gurupı) and Atina (between Gurupı and Kemem). Laz is spoken in 64 of the 69 villages of the kajî of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of March 16, 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Corôkh). Rize and Batum are now outside the Laz country proper.

The Laz are good sailors and also practise agriculture (rice, maize, tobacco and fruit-trees). Before 1914 many of them earned a living in Russia as bakers and often came home with Russian wives, who became converts to Islam. The Laz are known for their conversatism in religious matters. Turkish proverbs and the marionette theatre (harağoz) are often very scathing about the Laz (Lazarîth termûnî musulman yore bûn, "the Muslim does not eat Laz jelly"); termûnî from the Greek bêzaq).

The Laz language is closely connected with Mingrelian (which is a sister language of Georgian) by N. Y. Marr small peculiarities which it is difficult to consider it a Mingrelian language rather than a dialect. In the Laz-Mingrelian group he believes he can find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Çkhala). Laz is very full of Turkish words. It has no written literature but there are local poets (Rashid Hilmi, Pehlivian-oglu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pisarew in Zap., 1901, xii., p. 173—201) in which the harmony of the vowels is much neglected (cf. a specimen in N. Marr, Tekstî i rozïkaniyä, St Petersburg, viii., p. 55).

The Georgians call the Laz Čan but the Laz do not know this name. Čan is evidently the original of the Greek name Sannoi/Tzannoi and it survives in the official name of the sandjak of Samson (Dianîk). From the historical point of view the separation of the Laz and Čan seems to have taken place in spite of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Muller in Geogr. Græce Minores, ad Arriani Perip., 8) he places on the river Of the frontier between the Colchis (Laz?) and the Tzannoi (?). Koch mentions the interesting fact that the people of Of speak a "language of their own" and according to Morige, the people of Khoshgish (near Atina) speak an incomprehensible language. Procopius places the Sannoi who are now called the Tzannoi on the area adjoining the mountains separating Corokh from the sea (the Parayades range, the name of which survives in the modern Parkhar/Balkhar). The researches of N. Y. Marr have shown that the Čan (Tzannoi) had at first occupied a larger area including the part of the Corokh and its tributaries on the right bank from which they were temporarily displaced by the Armenians and finally by the Georgians (Kharthi). The chronicles of Trebizond continue to distinguish the Laz from the Tzannoi (Tzannoi). The latter in alliance with
the Muslims attacked the possessions of Trebizond in 1348 and in 1377 were punished by the Emperor. At this period the Tătănași must have been in the southwest of Trebizond (besides, the sandjak of Dănak is to the west of this port). Thus the Georgian application of the name C'an to the Laz may be explained by the confusion of the two tribes, one of whom (the true C'an living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

(V. Minorsky)

LAZARUS is the name in the Gospels of 1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xv. 19–31); 2) the dead man whom Jesus raises to life (John xi.). The Qur'ân mentions neither one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (Sura, iii. 43). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Tabari (Anniel) talks of these miracles in general. According to him, Hâm b. Nâsh is revived by Jesus (i. 187). Al-KisâI only mentions Sam b. Nâsh of those restored to life by Jesus. Thâlât relates, closely following St. John's Gospel, "al-'Azîr died, his silver sent to inform Jesus, Jesus came 3 days after his death, went with his sister to the tomb and caused al-'Azîr to arise; children were born to him." In Ibn al-Athîr the resurrected man is called "Asir," the el of Elâzar was taken for the article, as in al-Yâsâ (Elissa) and Alexander (al-Ikandar) or in Æzar in the Qur'ân, whose name Fraenkel derives from Eliezer. In Ibn al-Athîr we find Muslim legend endeavouring to increase the miracle, Jesus raises not only "Asir (Lazarus) but also his wife (children are born to him), and Sam (son of Nâsh), the prophet "Asir and Ya'hûb b. Zakariya (John the Baptist).

G., 1902, lvii. 71–73; J. Horovitz, Hebrew Union College Annual, 1925, ii., p. 157, 161; as., Koranische Untersuchungen, 1926, p. 12, 85, 86. (Bernhard Heller)

LEBANON. [See Id al-Fitr.]

LEO AFRICANUS, al-Hasan b. Muhammed al-Wazzân al-Zayyâtî, called Yûhanna al-Asad al-Gharbî, in Latin Johannes Leo Africanus, born at Granada in 901 (1465) was brought up in Fès. Entrained with three diplomatic missions to the South of Morocco by the Banu Waïs, he went to Mecca in 921 (1516) and then to Stamboul. Captured on his way home by Sicilian corsairs he was taken to Naples in 926 (1520), then to Rome where the Pope baptised him "Johannes Leo." At Rome he compiled the following works, only the first of which has come down to us in the original Arabic text: 1. Arabic-Hebrew-Latin Vocabulary composed in 930 (1524) for the physician Jacob ben Simon (MS. Escorial 598; cf. H. Dero- bourg, Cat. ms. arabes de l'Escarial, Paris 1884, i. 410): 2. Descrittione dell'Africa, which he translated into Italian on March 10, 1526 (divulged since 1531; publ. by Ramusio, Navigationi, viagg., Venice 1550, i. 1–103; French transl. by Temporal, ed. Schefer, 1896; Latin by Florianus; English by Purdy, ed. Browne, 1896; Dutch by Leers; German by Lorsbach); 3. Libellus de viris illustribus apud Arabes, finished in 1527, Latin transl., ed. by Hottinger, then by Fabrius. These works gave the west the earliest materials for the history of Islam; as. in the economic and social monograph on the city of Fès, Descrittione, Bk. iv., Ch. 23–54, a remarkable resume from the Maliki point of view of the historical development of their country. Before 957 (1559) Leo returned to Tunis where he died, a good Muslim.

Bibliography: Widmansdantz, Evangelia syriaca, 1555; introduction; Casiri, Bibliotheca arabico-bizantina, Madrid 1770, i., 172 sqq.; Schefer, op. ladin.; Goldscher, op. Pallas Nagy Lexicon, Az ossze ismerettek enciklopédiaja, 1897, xi. 426; Massignon, Le Maroc . . . . d’après Leo d’Africain, Algiers 1906, p. 4–11, 32–59. — According to H. de Castries (in his Summae), Signora Angela Codazzi, of Milan, is preparing a critical work upon the Arabic materials of the "Descrittione".

(1. Massignon)

LEPANTO, the Italian form of the name of the Greek town Naupactos which the Turks call Ile Bahlî. This is how the Turkish form is transcribed, e.g. by Leunclavius (Annalia Turcici, p. 33) while von Hammer (G. O. K., iii. 318) transcribes it as Aina Bahlî, which he translates
“Spiegelgluck”; in view of the Greek form however it is very probable that the Turks originally pronounced it Ine Bakhir. The town is situated in the ancient Locris, north of the strait which leads from the Ionian Sea towards the Gulf of Corinth, known since the middle ages as the Gulf of Lepanto.

After froming the xviith century part of the despoty of Epirus, Lepanto fell into the hands of the Venetians who made it one of the strongest places in Greece, Muhammad II during his war with Venice therefore undertook an expedition to take the town by land. In 1477 Khâlid Suleiman Pasha was given the task but did not succeed (Tvârîk, i. i. ‘Othman, p. 115). It was Bâyazid II who ultimately took the town in 1499 with the help of the Turkish fleet after the latter had defeated the Venetians near the island of Sapientza (Burûk Rec’s Adası) in July. The town was already being besieged by Mustafa Pasha, beglerbeg of Rûm III; Bâyazid joined the army later. The commander of the garrison had declared he would never surrender until Turkish vessels should enter the strait. This happened after the battle of Sapientza, for the Venetians made a feeble resistance. The Venetian commander capitulated on Aug. 26, 1499 (cf. Tâvârîk-i Ali ‘Othman, p. 127 and ‘Âshk Pasha Zade, p. 257—258, which gives the date as 3 of Muharram 905 = Aug. 16, 1499). Immediately afterwards Bâyazid built two foris to defend the entrance to the Gulf.

Lepanto is particularly celebrated for the famous naval battle fought on Oct. 7, 1571, between the Turkish fleet and the Christian fleet consisting of 108 Venetian galleys, 77 Spanish, 6 Maltese, 3 Savoy and 12 Papal in addition to 8 enormous Venetian galleasses (the figures given by the Turkish historians vary considerably) united under the command of Don John of Austria. This great combined expedition of the Christian fleets had been provoked by the capture of Cyprus by the Turks under Lala Mustafa Pasha in 1570 and 1571. The Turkish fleet came for the most part from Cyprus with the zer-a’ker Pertew Pasha and the Kapudan Pasha Salı and was joined by Uludğ Ali Pasha (Ochiali) beglerbeg of Algiers with 20 ships. After raids on the coast of Crete and the Ionian Islands it had cast anchor off Lepanto; it was here the Turks learned of the approach of the Christian fleet. The Turkish fleet consisted of 300 ships (so von Hammer; Hâddîji Khalifa speaks of 180); it was not at the top of its strength on account of the numerous desertions. Against the advice of Pertew Pasha and Uludğ Ali, the Kapudan Pasha decided to leave the bay of Lepanto and to attack. The Christian ships entered the Gulf on Oct. 7; the battle which followed only lasted a few hours and ended in the complete destruction of the Turkish fleet; the Kapudan Pasha perished in the battle; Pertew Pasha escaped with difficulty and Uludğ Ali who commanded the left wing succeeded in saving 40 vessels. This, their first great defeat at sea, is called by the Turks singhia donanna seferi, the “expedition of the destroyed fleet”. The immediate results of this event were not considerable, for the Allies could not take advantage of their success and the Turks very soon succeeded in making good their losses in material; Muhammad Soğolli [s.v.] was credited with saying that the empire was rich and powerful enough to make the anchors of the fleet of silver, and the ropes of silk and the sails of atlas (Peçewi, i. 499). The moral results however were very great and justify the great importance attached in history to the battle of Lepanto.

In June 1687 the Venetian and Austrian forces seized Lepanto, but they had to surrender the town to the Turks by the treaty of Carlowitz (1699); as Venice then held the whole of the Morea, Lepanto remained the only Turkish stronghold in this region. The Turkish history of the town ended with the insurrection of the Greeks, as a result of which Naupactus was incorporated in the kingdom of Greece.

The defence of Lepanto consisted of 3 successive lines of fortifications on a cone-shaped hill; it was the residence of a szâbâr-bey of the esvel of the Kapudan Pasha (Hâddîji Khalifa, Tüfîfat el-Kilîr, p. 673). Its great strategic and maritime importance is explained by Hâddîji Khalifa in Rumîli und Bosna, transl. by von Hammer, p. 125.

(J. H. Kramer)

LERIDA, the ancient Lernia, the Arabic Lerída, a town in northern Spain, halfway between Saragossa and Barcelona, now the capital of the province of the same name, with a population of about 29,000. It lies at a height of about 600 feet on the right bank of the Segre (the Wûdî Şîhâr of the Arabs); Yâkût, Mu’âlam el-Bulûnî, s.v., wrongly makes this another name of Lerida), and forms an important strategical point at the entrance to the plains of Aragon.

Lerida, which is undoubtedly of Iberian origin, was taken by Julius Caesar in 49 B.C. in the first Civil War between him and Pompey. In 546 a council met there and it was occupied by the Muslims in the first half of the eighth century. It seems to have henceforth shared the fate of Saragossa and to have been an important point for the defence of the Upper Frontier (al-fûghr al-dîrâ). It was later part of the independent kingdom of the Banû Hûd of Saragossa. At the division which took place on the death of Sulamîn b. Hûd al-Mustânîn bi ‘Ilâm (1046), it fell to his son Yûsuf but was again taken by the ruler of Saragossa Ahmad al-Muqtadir.

(E. Lévi-Provençal)

LEWEND, the name of the members of an irregular militia, which formed part of armed forces of the Ottoman empire during the early centuries of its existence; they were chiefly
employed as soldiers on the fleet in the period when the Turkish navy consisted mainly of the corsair vessels, the Sultans employed for their naval expeditions. The word *lewends* seems to have been borrowed like many other naval terms from the Italian. The Italian word would have been *levantesino* (Sami, Kainru-i Turk) or *levanti* (Djedwat Pasha) and was originally used by the Venetians for the soldiers whom they recruited from the inhabitants of their possessions in the Levant, to defend the coasts or serve on the fleet. It was the same category of men, i.e. Christian Greeks, Albanians or Dalmatians, living on the Mediterranean coasts that the Turks used at first. After a time Turkish elements from Asia Minor joined them.

The levends were a soldiery almost without discipline whom it was impossible to make use of when the navy came to be regularly organised. Even in the time of Muhammad II the use of *saçaks* had been begun for the naval service and under Bayazit II, the first regular body of marines was formed, consisting of 400 *saçaks*. About the same time the *lewends* were employed on the gallORIES as *kurucjig* in place of the less loyal Christians (İhşiçi Khalifa, Tufaşı al-Kitār, p. 108). Thus the true levends were gradually removed from the navy. We find however that the word *lewend* is still used at a later period to indicate the soldiers of the navy, especially the riflemen (*fürekçı*, cf. Djedwat Pasha); in Constantinople there were two barracks of levends, belonging to the organisation of the arsenal. In a figurative sense, the great naval captains of the 18th century are also called *lewend* (e.g. by Safvat Bey in his article *T. O. E. M., Nov. 24*).

The levends after having been removed from the fleet still continued to exist as marauders, especially in Asia Minor where they were a scourge to the country. The word *lewend* thus acquired the meanings of vagabond and rascal; this last meaning has even passed into Persian. On the other hand, the *Pasha* in the province for long continued to recruit their bodyguard among the levends (cf. the picture of a *lewend* in the plate on p. 416 of the third volume of *Dh'obon*).

From the end of the 18th century, the government found itself forced to take steps to abolish the bodies of levends still in existence. Ordinances of 1695, 1718 and 1720 gave them permission to join the new corps of the *ja* and *jaža* (*Randum, Tariq*, Constantinople 1822, v. 13, 123). Finally a series of military expeditions in 1737, 1747, 1752, 1759 and 1763 exterminated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (*Izgi, Tariq*, p. 22, 30, 78, 299; *Wajji, Tariq*, p. 117, 234).

From the end of the 18th century, the government found itself forced to take steps to abolish the bodies of levends still in existence. Ordinances of 1695, 1718 and 1720 gave them permission to join the new corps of the *ja* and *jaža* (*Randum, Tariq*, Constantinople 1822, v. 13, 123). Finally a series of military expeditions in 1737, 1747, 1752, 1759 and 1763 exterminated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (*Izgi, Tariq*, p. 22, 30, 78, 299; *Wajji, Tariq*, p. 117, 234).

The hadiths concerning *lisan* (A.), an oath, which gives a husband the possibility of accusing his wife of adultery without legal proof without becoming liable to the punishment prescribed for this, and of denying the paternity of a child borne by the wife. In the language of the *Sharī'*, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (*la'a*: from this the whole process is a *poto*: named and the wife the wrath of Allāh upon themselves, if they should lie; it frees the husband from *hadād* (the legal punishment) for *hadī* (accusation without proof of infidelity by persons of *irratable* character) and the wife of *hadād* for *incontinence* (A. Spranger, Dictionary of the Technical Terms used in the Sciences of the Muslims, Bibl. Indica, Old Series, ii., 1309). On the technical use of the related verbal forms, cf. the Arabic lexicons and Dozy, Suppl. aux Dict. Arabes, s. v.; al-Kaṣṭallānī, commentary on al-Bukhārī, *Ṭabāb*, 25, at the beginning; al-Zurqānī, commentary on the *Mawża*, *Bāb mā dā'ū fi 'l-lisan*, at the beginning.

1. The following Kur'ānic passage is the basis for the regulations regarding the *lisan*: xxiv. 6 sqq.: "As those who accuse their wives (of adultery) without having other witnesses than themselves, the man concerned shall swear four times by Allāh that he is speaking the truth and the fifth time that the curse of Allāh may fall upon him if he lies; but the woman may avert the punishment from herself if she swears four times by Allāh that he is lying and the fifth time that the wrath of Allāh may fall upon her if he is speaking the truth. If Allāh were not gracious and merciful towards you and wise and turning lovingly towards you".

These verses belong to a part of the Kurān, apparently composed at one time, containing various regulations about adultery and consisting of xxiv. 1—10, 21—26; verses 11—20, which certainly belong to the year 5 were inserted later, our verses must therefore be older (cf. Noldeke-Schawally, Geschichte des Qorans, i. 210 sq.; H. Grimmer, Muhammad, ii. 27, puts the *Sura* between the battles of Badr [2 A.H.] and Uhud [3 A.H.]).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kurān, xxiv. 4 (cf. also verses 23—25) for *kāfū* and are therefore, like this penalty, primarily Muslim and have no affinities in Arab paganism in which an institution like the *lisan* had no place at all (contrary to D. Santillana, *Istitutioni di dotto musulmano*, i. 221 below). The word *lisan*, which comes from the Kurān, is unknown to the pre-Muhammadan poetry.

The hadiths concerning *lisan* are almost entirely (the oldest probably exclusively) exegeetical and profess to give the occasion of the revelation of the Kurān verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurkānī, commentary on the *Mawża*, *Bāb mā dā'ū fi 'l-lisan*), systematised and unshakable (cf. Noldeke-Schawally, etc., where further references are given, to which may now be added those in A. J. Wensinck, Handbueck of Early Muslim Tradition, p. 56 sq. [to p. 56 ult. may be added *Tir. 44, Sura 24*]). Four types may be distinguished among them: 1. the husband (unnamed) laments his sad case to Prophet in covert language whereupon the verses are revealed (oldest form); 2. Usamah b. Härih asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); 3. Hilāl b. Umayra accuses his wife of adultery and is to be punished with *hadād*.
for this, when Allah saves him sometimes by the revelation of the verses (this type probably a development of the first, in which Sa'd b. 'Ubada also is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and not original appearance); 4) some one marries a young woman and finds her not a virgin while she disputes his assertion; the Prophet therefore orders 'I'dân (not exegetic). There are of course other transitional and mixed forms. In so far as the hadîths yield nothing new about 'I'dân, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Kur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon in the Kur'an, whether 'I'dân makes separation between the husband and wife necessary. In many hadîths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the 'I'dân. The statement that al-Mu'sab b. al-Zubair is said to have held this view (Muslim; Nasa'i) is however based only on an inadmissible interpretation of another hadîth, in which he appears as a contemporary; on the other hand that 'Uthman al-Battî held it may be considered sufficiently proven (al-Zurqânî on the Mawwata'). Among the oldest representatives of the other view which later became predominant, that a continuance of the marriage was impossible after 'I'dân, may be included with some probability 'Abd Allah b. Umair and with certainty al-Zuhri in whose time it was already sunna, and Ibrahim al-Nakha'i (Kitâb al-Ahkâm); the tracing of this opinion back to 'Abd Allah b. 'Abbas, which we find in the hadîths, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of 'I'dân is to be carried through, whether by a triple talîk, which the husband has to pronounce against his wife or by the decision of the judge before whom the 'I'dân is taken or by the 'I'dân itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the Hadîth of al-Zuhri in al-Tabari, Ta'rif and al-Buhârî, Talik, bâb 50 and Hadîd, Lâb 43; the tradition in Aḥmad b. Ḥanbal, v. 380 sq. forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tâālîsî, N. 2607). The second opinion survives in the form of the legal talîk, apart from the ample testimonies to it; the oldest representatives known with probability or certainty are 'Abd Allah b. Umair, al-Zuhri, in whose time it appears as sunna, and Ibrahim al-Nakha'i (Kitâb al-Ahkâm); its ascription to 'Abd Allah b. 'Abbas is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the madhâkhîb. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about 'I'dân in tradition, going beyond what is laid down in the Kur'an, are of less importance. Thus, when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a 'I'dân may take place during pregnancy (legal ilkîlîf is later attached to their interpretation of this hadîth), that the child has only relationship with its mother as regards kinship or inheritance i.e. is considered illegitimate. Other hadîths say that the 'I'dân must be taken in a mosque and attribute the formula to be spoken there by the kâfî to the Prophet. We are also brought into contact with questions of detail, which play a part in the later ilkîlîf by a tradition according to which the Prophet did not allow 'I'dân unless the husband and wife were on equal terms as regards Islam and freedom; a series of older authorities who held the contrary view is quoted in the Mawwata.

Details of the further teaching of Ibrahim al-Nakha'i on 'I'dân are given in the Kitâb al-Ahkâm. Two more general pronouncements in Malik and al-Shâfi'i bring us to the period of the rise of the madhâkhîb. Malik states definitely that it was the sunna of al-Madina, about which there is no doubt and no ilkîlîf, that the husband and wife after the 'I'dân has taken place could never marry one another again and al-Shâfi'i says that with 'I'dân divorce of the pair and denial of the paternity of the child was sunna of the Prophet.

3. The teachings of the separate madhâkhîb develop the views of their earliest representatives, not entirely on the same lines (e.g. from the Mawwata'); it is to be assumed with probability that Malik followed the second view regarding the element in 'I'dân which annulled the marriage (cf. above), while his school later held the third opinion entirely). The most important regulation of the Fâhîf regarding 'I'dân that go beyond what has been so far discussed are as follows: if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally prescribed fashion and she denies his charge, recourse is had to the procedure of 'I'dân. If the husband refuses to pronounce the formulae prescribed for him, he is punished with the hadîf for hadîf, according to Abû Hanîfa; however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to hadîf. If the wife refuses to pronounce the corresponding formulae, she is punished with the hadîf for adultery, according to Abû Hanîfa and the better tradition of Aḥmad b. Ḥanbal, however, imprisoned until she pronounces the formulae, whereupon she is set free or confines her transgression and is then liable to hadîf. On the question whether 'I'dân is possible if one partner is not a Muslim or not free or not 'âlid, there is wealth of ilkîlîf, which cannot be detailed here; the same applies to the possibility of 'I'dân during the pregnancy of the woman, with the object of denying the paternity of the child. On this point the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objects of 'I'dân (accusation of the wife of adultery and denial of paternity) which is only a result of later developments. In the whole of the earlier period these two objects come from the juristic point of view. The divorcing element in 'I'dân is, according to the Maliks (on their presumed divergence from Malik himself on this question; cf. above) and a tradition of Aḥmad b. Ḥanbal, the 'I'dân of the wife, according to al-Shâfi'i that of the husband, according to Abû Hanîfa and the
better tradition of Ahmād b. Ḥanbal however the verdict of the judges pronounced after the Ilīn of both. Opinions also differ regarding the legal consequences of a later withdrawal of the Ilīn by the husband; according to Abū Ḥanifa and one tradition of Ahmād b. Ḥanbal, a new marriage of the two people is possible in this case, according to Abū-Muṣṭafī, he, the better tradition of Ahmād b. Ḥanbal it is not; among older authorities only Saʿīd b. Ḏubair is in favour of the first view, while ʿUmar, ʿAbd Allāh b. Maʿṣūd, ʿAbd Allāh b. ʿUmar, ʿAbdārā and al-Zuhri are quoted as in favour of the second (not all have historical confirmation) which was also held by al-Awza`ī and Ṣufyān b. Ḥijrīt. Finally it is a disputed question whether the Ilīn can only be performed orally or (in the case of a dumb person) by gestures; al-Bukhārī devotes chapter 25 of his Kitāb al-Tālibī to the discussion of this question and the reasons for his attitude to it.

It is easy to understand that resort was only made to the Ilīn in extreme cases. Thus we find a scholar of Cordova in the fourth century A.H. pronouncing the Ilīn against his wife simply in order to revive this sunna of the Prophet, which had fallen into oblivion (I. Goldziher, Muhammadienische Studien, ii. 21). But it has not yet fallen completely into desuetude, as Muslim law has no other means of disputing the paternity of a child (cf. Juynbohl, Handledung, p. 217, note 2; Santillana, Institutionen, p. 222).

(Joseph Schacht)

LIHYÂN, an Arab tribe, a branch of the Hudhayl [q. v.]. Genealogy: Liyyān b. Hudhayl b. Mudirka b. al-Yāb b. Muṣār. Settled like the other branches of the Hudhayl in the country N. E. of Mecca, the Liyyān do not seem to have had the same period just before, and after Islam a history independent of their brethren; it is only rarely that they are mentioned apart from them, e.g. in Ḥumaydī, p. 34; a propose of their battles with the weak-potent Taʿāliba Sharāb; ʿAbdārā, Ma'dīqim, ed Wüstenfeld, ii. 272; iv. 104 (cf. Ḥumaydī of the Buyaytis, p. 80—81; Ibn al-Dajhrār, ed. H. H. Bru, N° 86 = S. N., II in, 203. 4. 1927, pl. 31), n 614 of a battle with the Khurās. The poets of this tribe are as a rule reckoned among those of the b. Hudhayl — e.g. Ma'il b. Khalid al-Khurās, al-Mutairiṭr al-Khurās, et al. At the time of the preaching of Islam we find them like the rest of the Hudhayl under the political influence of the Kuraish. This explains their hostile attitude to Muhammad, which resulted in the murder of their chief Ṣufyān b. Khalid b. Nubayl by ʿAbd Allāh b. ʿUmar at the instigation of Muhammad. This murder was cruelly avenged by the Liyyān who slew several Muslims in their turn (al-Maṭrūq, 4. A. H., cf. Hā'ibī). As there is no further mention of hostile relations between the Muslims and the Liyyān, it is probable that the latter were included in the submission which the Hudhayl made to Islam.

After the triumph of Muḥammad and in the periods following, there is almost complete lack of information about the Liyyān and there are very few persons of note belonging to this tribe: the grammarians al-Liyyānī, whose full name was ʿAṭī b. Ḥāzim (Khaṣṣūm) or b. al-Muhabbīn, d. 243 (cf. al-Zubayrī, Tābihat al-Nabībī, ed. Krenkow, K. O., n. 271, 85, 145, 149, 153, with bibliography; Flügel, Die gramm. Schulen, p. 51) perhaps belonged to it, but other sources (Ṭālī al-Arīsī, n. 324, 19) trace his nisba al-Liyyānī to the unusual length of his beard (līkīa).

There was some reason to suspect that the Liyyān at a remoter period of Arab history had played a more important part than that almost unnoticed, which they did later: this seems evident from a passage in Ibn al-Kalbī (K. al-Aṣīrī, p. 57 = Yākūt, Muṣārīm, iii. 184, 15) who assigns to the Liyyān certain priestly functions (ṣadūn) in the cult of the Hudhaylī idol Suwā (cf. Wellhausen, Arab. Heidentum, p. 182; 197); the discovery of several inscriptions and graffiti in the north of the Hájār has not only confirmed this suspicion but revealed the existence of a Liyyānī state several centuries before the coming of Islām. These inscriptions, first known from the imperfect copies of Doughty and Iuber, were later collected in large numbers (over 900) by Euting and deciphered by D. H. Muller after preliminary work by J. Halévy. They are now available in still larger numbers and better known as a result of the discoveries and publications of Fathers Jaussen and Savignac. They are almost all in the vicinity of the village of el-Ola (especially in the area full of archaeological remains, called el-Kherbāk and in the rocky cliffs to the east of this) not far to the south of the great Nabataean centre of al-Hāḍr [q. v.], Mādā'in Śaliḥ; some have even been found here although in much smaller numbers. Their epigraphy closely resembles that of the Minaean inscriptions (which are also found in very large numbers east of el-Ola) of which the Liyyānī inscriptions represent a dependent or parallel form, but in any case of a decidedly later date (against D. H. Muller who wrongly thought them older). Their language on the other hand is quite like that of the Thamudean and Saʿā Đứcitic inscriptions, in Northern Arabic and only differs from classical Arabic by several peculiarities (especially the use of ha in place of al for the article, and of a participle of the form nif'at in contrast to the form muʃin'at of the classical Arabic).

From these inscriptions we learn that el-Ola — the old name of which is given in the form Ḍ大唐 identical with the Dādān of the Bible — was the capital of a "kingdom of (or of the) Liyyān", of which some of the kings were Talmā' and II (cf. the name of Talmā', king of Gezūr, father-in-law of Ab-salām, II Sam. iii. 3 and xiiii. 17), Tashmā, Lawān, Hanā'ash M-SF-M, Karibl. This kingdom seems to have been for a long period of remarkable size and importance; before it was formed or became quite independent el-Ola—Dādān was a colony of the Minaeans and formed one of the stages on the great trade route which brought the commerce of the Yemen and India to the ports of the Mediterranean. After the fall of the Minaean kingdom (according to M. Hartmann between 230 and 200 B.C.) the Nabataeans
replaced the Mineans in the control of trade and settled in al-Hijr; but at the same time the Li'yân, who had absorbed Minean civilization, was apparently independent and asserted the southward advance of the Nabataeans; the frontier of the two states must have been between al-Hijr and el-'Ola. It is probable that these Li'yân were simply a section of the Thamûd [q.v.] whom we find mentioned in the annals of Sargon of Assyria, while there is no ancient reference to the Li'yân until Pliny who mentions them (Hist. Nat., vi. 33, 3) under the name of Lecchiâni. Their power must have increased after the fall of the kingdom of Petra (106 A.D.) and it seems that from this time onwards, they also held al-Hijr, abandoned by the Nabataeans.

When and how the Li'yân fell in their turn to the position in which we find them in the sixth century forming part of the tribe of Hudhail, and settled in a territory considerably to the south of their original home, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamûd with the Thamûd proper and the Nabataeans of al-Hijr: a memory of a very vague one of the old kingdom of Li'yân may perhaps have survived in the isolated mention in a tradition that the Li'yân were "remnants of the Djarhum", who later became part of the Hudhail (Tabari, Annals, ed. de Goeje, i. 749, 11-12; cf. Djarhum) following Ibn al-Kalbi; Ta'zi al-Arûd, x. 324, 1-2, following al-Hamdânî, probably in al-Ikhl and the passage is not found in the text of the Qasîrat al-'Arâb). The Thamûdaean graffiti (which used to be called proto-Arab) are a development (later or parallel) of the Li'yân script, the last stage of which is seen in the Safatîc graffiti; but we are completely ignorant of the historical relations of the peoples who used these similar scripts.

The ruins of Dâdân-el-'Ula, although they have so far only been superficially explored give us some idea of the advanced stage of civilization to which the Li'yân had attained; besides tombs, some of which are decorated with sculptures in high relief, Fathers Jaussen and Savignac have discovered a sanctuary with a central basin circular in form (for ablutions) and ornamented with large statues several important fragments of which have been discovered. An inscription in this sanctuary mentions an abhay of the god Wadd: this term, which certainly is the name of a sacrificial office, is not known to Muslim Arab tradition (Agâhânî, xxxix. 686; Ibn Duraid, K. al-Istihlâh, p. 197, 7). Among the deities worshipped by the Li'yân we find alongside of typically Arab ones like Allâh, al-Lât, Wadd, Yaghûth and a god Dhu Ghâbat of whom we know nothing definite, gods of Aramaean origin, like Balsamen, the god of the sky and, in a theophoric name, Sâlim; in these names as well as in the use of other Aramaic terms (among them nafa in the sense of "degree") there is apparent the influence of the Nabataeans, who undoubtedly contributed with the Mineans to form the character of Li'yân civilization. The presence of Judean elements, which Muller and Glaser thought they recognised is on the other hand more than doubtful.

LIMNI, Turkish form of the name of the island of Lemnos in the Aegean Sea between Mount Athos and the mainland of Asia Minor about 50 miles S.E. of the entrance to the Dardanelles. In ancient times a possession of Athens, in the middle ages it belonged to the Byzantine empire; in this period, in 901, the island was sacked by the Muslim inhabitants of Crete. Towards the end of the middle ages Lemnos had passed into the hands of the Italians who called the island Stafimene (formed with the addition of the Greek preposition εις and the article). When the Turks took Constantinople the island belonged to the Genoese lords of Lesbos (Midilli), the Gattelio. Under Bâyazid I, who had fortified the Dardanelles, Lemnos passed with the other islands under Turkish rule. When but Constantinople became the Turkish capital it was inevitable that Lemnos, the largest of these three islands commanding the entrance to the Dardanelles (the others are Imbros and Tenedos, or Dardija Ada) entered the direct domination of the Turks. In 1456 took place Muhammad II's expedition against Ainos as a result of which the Conqueror became lord of the islands of Thasos, Samothrace and Imbros. Negotiations had been going on between the lord of Lesbos and the Sultan regarding the payment of tribute. But in the course of these negotiations the people of Lemnos, dissatisfied with the rule of Nicholas Gate- lusio, brother of the lord of Midilli, voluntarily submitted to the Sultan who appointed Hamza Beg governor of the island and entrusted Ima'm, beg of Gallipoli, with the task of installing him there. Gatulio succeeded in leaving the island before the arrival of the Turks. The date of these happenings which are recorded only by the Byzantine historians Ducas (xlv. 190) and Chalcocondylas (viii. 248) is not certain; but Ducas who was representative of the princes of Lesbos at the Sultan's court, may be considered a reliable authority. In 1457 a Papal fleet drove out the Turks — the Pope had intended to establish an order of Knights on Lemnos — but some time afterwards the same Ima'm Beg recovered Lemnos with the adjoining islands (Zinkesien, ii. 235 sqq.). In 1462 Muhammad became master of Lesbos also. In the following year the Turkish possession of Lemnos was disputed by the Venetians whose Admiral Canale in 1467 (A.H. 872 in Neshri and Sâ'd al-Din, according to von Hammer) took Ainos and the islands in this part of the Aegean Sea (cf. also Munsejdžim Baqî, iii. 394); these conquests resulted in Muhammad's great expedition against the island of Euboia or Negropont (in Turkish:
Eghrisos) in 1468. Soon afterwards the Turks retook Lemnos and by the peace concluded with Venice in 1479 this island remained definitely a possession of the Turks. In this last year the island of Tenedos was fortified by the Sultan so that the Dardanelles was completed.

In July 1456 the Venetians won a victory over the Turkish fleet before the Dardanelles and as an immediate result took Tenedos, Samothrace and Lemnos. These conquests were such a threat to the capital that the grand vizier Mustafa Koprulu took energetic measures and sent an army of 4,500 men under the Kapudan Paşa Topal Muhàmmad; the latter besieged the citadel of Castro for 63 days, after which he laid siege to the town of Tenedos on November 15, 1657. Tenedos was regained from the Turks by the same expedition (Na'im, ii. 578, 585, 633). Finally in 1770 in the Russo-Turkish war Count Orloff laid siege to Castro and after 60 days had obtained its surrender, when the Kapudan Paşa Husan attacked the Russian fleet in the harbour of Mudros (Turkey: Munduros), forced the Russians to withdraw on October 24, 1770 (Wájs, ii. 118).

Turkey lost Lemnos after the Balkan War. By the peace of Athens (November 14, 1913) it had been stipulated that the powers should delimit the boundaries of the island. In February 1914 allotting all the Aegean islands to Greece except Tenedos, Imbros and Castelorizo. Turkey, reinforced by a strong public opinion, would not accept this decision, but the outbreak of war in 1914 prevented the negotiations being brought to a satisfactory conclusion. In the course of the war the strategic importance of the island for Turkey became manifest; after the failure of the naval attempt to force the Dardanelles, the Entente powers in April 1915 established a naval base in the Gulf of Mudros which lies on the south side of the island to serve as a base of operations for the forces which were to be landed at Gallipoli, to force a road to Constantinople. This is how the British admirals' flag-ship in the Gulf of Mudros came to be the scene of negotiations which preceded the Armistice of Mudros between Turkey and the Entente powers on October 30, 1922.

In the old administrative division of the Turkish empire the island formed part of the sandjak of Gallipoli which was the sandjak of the Kapudan Paşa; after the reforms of the sixteenth century Limni became a sandjak in the Bahri Safid Vilayet including the kula's of Limni, Bozgà Ada (Tenedos) and Imros (Imbros). Castro, a little harbour on the west coast, was always the seat of the governor and had the garrison. Cuenot gives 27,079 as the total of the population which has always been predominantly Greek. Cuenot gives the Muslims as 2,450. One of the specialties for which Lemnos has always been celebrated since ancient times is "terra sigillata" (Turkish "sokkuma"), a kind of earth found near the village of Kokkino on the south coast (where it has been sought to locate the site of the ancient Haphaestia) which is credited with medicinal virtues. This bed of clay was unearthed once a year (August 16) to the accompaniment of certain ceremonies at which the Greek priest and the Turkish hoja both assisted (Na'im, ii. 586).

von Hammer, G. O. R. 3, i. 81, 186, 438 sqq., 494, 534; iii. 457, 482; iv. 685; V. Cunet, La Turquie d'Aile, i. 475 sqq., 480 sqq.

J. H. Kramers)

LINGA, a little seaport on the Persian Gulf which lies between Lãrísîn [q.v.] and the desert. The old port was at Kun, 8 miles east of Linga; the Portuguese had a factory there where they ruled long after the loss of Hormûz (to 1711). In the reign of the Zand dynasty, 1,000 Djawâsim Arabs (Bedi Djaâsim, Djaâwâsim, Kowâsim) with their chief Shâhî Sâlih came from Ras al-Khîmah ("Omân) and took Linga from the kâlnâr of the district Djaâwhângiri. In 1827 the Persian government took possession of Linga and deported to Teherân the last hereditary shâhî (Kadib). The present population is very mixed (Arabs, Persians, Hindus, Africans). On the shore at Linga pre wharves for building boats for local traffic and the port is fairly busy, but the mountains which rise from 3,500—4,000 feet behind Linga make communication with the hinterland difficult (Lâr is 45 farsâkhs from Linga).

V. Minorsky)

LISÂN Al-DIN. [See Ibn al-Khatîb.]

LISBON, Portuguese Lisbon, a city at the mouth of the Tagus, now the capital of Portugal, with 435,000 inhabitants; tradition ascribes its foundation to Ulysses and it originally bore the Phoenician name of Olíppio. Under the Romans it received the name of Félicitas Julia and formed a municipium. It was under the rule of the Alans from 407, of the Visigoths from 858 to 715 when it passed into the power of the Muslims.

For the Arabic transcription of the name of Lisbon we find the two forms Licbînâ and Ucûbînâ with or without the article (cf. especially, David Lopes, Os Árabes nas obras de Alexandre Herculano, Lisbon 1911, p. 58—59 and the references there given). The most usual ethnic is al-Ucûbînî. Lisbon was not a large town in the Muslim period but it was nevertheless frequently described by the Arab geographers. Al-Frisî speaks of its ramparts and its castle and of the springs of warm water which rose in the centre of the town. It is built, he says, opposite the fort called al-Ma'dân (Almada), so called from the gold dust washed up on the bank by the Tagus. It is also from Lisbon that this geographer followed by several authors makes the legendary expedition of the "Adventurers" set out (no doubt to the Canary Islands; cf. above in. p. 880, s.v. al-Abûnî). Lisbon was very early (by 711) fell into the hands of the Muslims and under the Omeyyad caliphs of Córdova formed a part of the district of Bâlîa, along with Santarem and Cintra. The Arab chroniclers record several risings there which were quickly suppressed. It was however from the Normans (Mudjar) that Lisbon suffered most in this period. During their first invasion of al-Andalus in 229 (941) it was there that they disembarked for the first time. According to Ibn 'Idârî, their fleet consisted of 54 galleys and 54 vessels of less
importance; the alarm was given to the caliph of Cordova by the governor of Lisbon, Walib Allâh b. Hazm. Again during the invasions of 966—971, in the reign of al-Hakam II, the Normans began by ravaging the plains of Lisbon after landing at Alcacer do Sal (Kāṣr Abi Dīnār). For further details, cf. the article Málaga and the literature there quoted.

After the fall of the Omayyad caliphate of Spain, Lisbon formed part of the independent kingdom founded by the Afṣāṣids [q. v.] with Badajoz (Batalayn) as capital. Under the Almoravids, it seems to have been taken for a brief period by the Christians and retaken at the end of 504 (1110) by the Emir Sir b. Abi Bakr, at the same time as Santarem, Badajoz, Porto and Évora. It was only some 40 years afterwards, in 542 (1147) that it was finally conquered by Alfonso I Henriques of Portugal with the help of a body of Crusaders who were on their way to Palestine under Arnold van Aerschot.

(L. E. Lévi-Provençal).

LÎTHAM (A. sometimes also pronounced lîthâm), the mouth-veil, is a piece of material with which the Beduins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on Harirī, ed. de Sacy, Paris 1821, p. 374, 2). It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. Ibn l-Rumma, No. 5, 43, also No. 39, 24, and 73, 10; and the commentaries on Mutanabbi, p. 464, 27 and Harirī, p. 374, 2). It also made the face more or less unrecognisable and thus formed a protection against the avenger of blood (Goldzweber, Z. D. M. G., xli. 101). The lîthâm was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the 1001 Nights (ed. Macnaghten, ii. 878) it is worn by a princess, who disguises herself as a man, and (ibid., ii. 59) by a woman for similar reasons. A denominative verb has been formed from lîthâm, the fifth form of which in particular means “to put on the lîthâm” (e.g. Ağhānī, viii. 102, 20; xxi. 55, 19; Ağhānī, ed. Kossegin, p. 121, 7; Wright, Opuscula arabica, p. 111, 2; Harirī, Maḥāmā, ii. 433, 2), while the eighth form in the meaning “to put on something as lîthâm” is generally used only metaphorically (see below) Tâlîthmān usually means a woman’s veil (Cherbonneau in J. d. A., i. 182, 6; i. 64), but tâlîthmāt al-bayâdīf is also found as the distinctive title of a particular office under the Faiṣīms; their chief kâdis wore it along with the turquoise and tâlîthmān (de Sacy, Chrest., ii. 92). In general however, the lîthâm does not seem to have been worn by town-dwellers.

The lîthâm has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the mukhrīm (Bukhārī, i. 390, below).

The custom of wearing a lîthâm was generally disseminated among the Sanhâda tribes [q. v.] in N. W. Africa, who are therefore described as lîthâm-wearers, mukhrīmīs or aṣṣāla al-mukhrīmīn; as the Almoravids originated in one of their clans, the Lamūna, the lîthâm thus came to have a certain political significance. The custom of wearing a lîthâm (below the nîghāb, see Bakri, p. 170) was found in other parts of Africa also, e. g. in Kāmān (Maṣṭirī, i. 193, 33 sq.) and still prevails among the Tuareg. These Africans retained their veils even on journeys into the eastern lands of Ḩaṣm, where it was not the fashion, while their women went unveiled. A tradition of late invention explains the remarkable customs by a story that on one occasion during an attack on a village where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldzweber in Z. D. M. G., xli. 101); another story has it that after the fall of the Omayyads, 200 Omayyads escaped to Africa disguised as women and that the Almoravid lîthâm are descended from them (Wisticsfeld, Der Tod des Haspīn, p. vii.); according to Bakri (text, p. 170 = transl., p. 321), they never took off the lîthâm and if one of them fell in a battle and lost the lîthâm, not even his friends could recognise him till the lîthâm was put on him again; they also called other men who did not wear the lîthâm “fly-mouthed”. The Almohads, particularly Ibn Tûmār, opposed the veiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the lîthâm (Goldzweber in Z. D. M. G., xli. 102). Among further passages, where the term mukhrīmīn occurs in this sense may be mentioned ʿAbdallatif, ed. de Sacy, p. 483, note 48 (with other references); Flei-cher, Kleine Schriften, ii. 243 (discusses several passages); Marquart, Die Benimmvorschriften, Index, s. v. lîthāmīrān.

The word lîthâm and its derivatives was very much used in figurative language, especially by poets. From expressions like “to kiss the lips of the beloved one, which are under their lîthâm” (Dory, Vieimeurs, p. 400; cf. mā tālā hā lîthāmāin = the face in Mutanabbi, p. 464, 7, 10; especially “to kiss another”, mūlthām, the place which is kissel (Forazdāk in Dory, Supplément). A girl is given a lîthâm woven out of her own hair (1001 Nights, Brésilier edition, ii. 52, 2); the camel has a lîthâm of foam around its mouth (Tirrimmāb, p. 431 of the wave, we find it said in Ḩamīs, i. 762, 17: lam ṭalāthīkam; the wine-jar has a lîthâm, i.e. a piece of cloth over its mouth (mūlthām, Maṣṭirī, ed. Lyall, No. 125, 7; cf. also Akhtal, ed. Sallahī, p. 85, 2, and ʿAlkāma, ed. Socin, ii. 43, on jars); the sun is darkened by clouds of dust and is thus given, as described in dawn in Ibn Ṭārābshī, ed. Gohius, [description of dawn in Ibn Ṭārābshī, ed. Gohius, p. 64, 3 from below; cf. the commentary on Harirī, Maḥāmā, ii. 430, 10: kāṭalaʿī (Kāṭalaʿī al-lîthāmīs; many titles of books also begin with Kāṭalaʿī al-lîthāmīs; cf. Brockelmann, C.A.L., ii. 659);
the līthām is to be taken from the walls of buildings, i.e. they are to be exposed (īmād al-Dīn, ed. Landberg, p. 65, 12); to doff the līthām of one's origin = to confess it freely (Harrīt, Maḥāmārī, ii. 426, 3); the archangel Ṣāfārīl has one of his four wings veiled like a vast mouth-veil (īlākhanāna) from heaven down to the seventh earth (Kazwini, ed. Wüstenfeld, i. 56, below); a voice may be hidden, māltūkh (Tarsa, ed. Ahlwardt, N°. 5, 26 = Fairūt ed., 1886, p. 10); a further metaphor is found in Ibn al-Fārid in de Sacy, Chrest., iii. 55, verse 25.

(W. Börkman)

LIWĀ (A. "flag", from lāwā to "euro") means in Turkish official terminology an administrative area, several of which form a vilayet "province" and one is in turn divided into kāzā "districts". It corresponds pretty much to the département in France. It is synonymous with sanjak (T. "flag") and is used alongside of it. The Sanjk is governed by a mutasarrif, whence a third synonym mutasarrif-lik. The institution of the lazāq goes back to the early days of the Ottoman empire but it was under Māḥmūd II in 1834 that the present administrative organisation came into being.

(CL. Huart)

LIWĀN (A., for al-liwān; Dozy, Supplement, ii. 563) in eastern houses is a hall, enclosed by walls on three sides and open through an arch on the fourth; it is raised two or three steps and forms the focus of the house, all the rooms of which open on to this atrium, which is ornamented with plants and trees. This is a type borrowed from the Sāsānian palaces, of which a specimen has survived to the S.E. of Baghštād, in the ruin called Tāb-i-kisrā, "vault of Chosroes", or Tāb-i-kisrā, "hall of audience". It corresponds to the īlār of the modern Persians. It is open on the north side to get the cool air.

(CL. Huart)

LODI, the name of a clan of the Ghilzai tribe of Afgānistān. A family of this tribe was established in Mūltân before India was invaded by Māḥmūd of Ghaznī, for that district was ruled, in 1005, by Abu 'l-Fath Dīwād, grandson of Shaikh Ḥāmid Lodī who had established himself there, but the importance of the tribe dates from the reign of Fīrūz Tughlūk when some of its members entered India for purposes of trade, but soon occupied themselves with politics. Dawlat Ḥān Lodī competed with Khādīr Khān [q.v.] for the throne on the extinction of the Tughlūk dynasty. Malik Bahārum Lodī took service under Malik Mardān Dawlat, governor of Mūltân, and his eldest son, Sulṭān Shāh, served Khādīr Khān at Mūltân. After the battle on Nov. 12, 1405, in which Khādīr Khān defeated and slew Māřī (īkhāl Khān), Sulṭān Shāh received the title of Iṣlām Khān and the sief of Sirhind, where he settled with his four brothers and assembled a body of 12,000 horse, mostly of his own tribe. His next brother, Khālīd, had a son named Buhālī (usually called "Baholī" in India), whom Iṣlām Khān adopted, to the exclusion of his own son, Khūṭ Khān, and married to his daughter. Khūṭ Khān fled to Dīlī and entered the service of Muhammad Shāh the Sayyid, to whom he described his relations as a danger to the state. Muhammad sent a force against them and they were defeated and fled to the hills, but almost immediately returned, recovered their possessions, and defeated the minister, Iṣām Khān, near Sādāhwa. In 1442 Dīlī was threatened by Māḥmūd Khādījī II, of Mālāwa, and Muhammad Shāh appealed to Buhālī, who demanded, as the price of his assistance, the execution of his enemy, Iṣām Khān and the appointment of Iḥām Khān as minister. The feeble king complied, and Buhālī marched to Dīlī with his contingent and took command of the army. The battle with the army of Mālāwa was indecisive, but Māḥmūd was recalled by the news of a riot in his capital and Buhālī was hailed as the saviour of the kingdom, and received the title of Khān Khānān and the government of the Panjāb. He shortly afterwards picked a quarrel with Muhammad and besieged him in Dīlī, but retired to Sirhind without capturing the city. In 1443—1444, Muhammad died, and was succeeded by his son 'Ālam Shāh, a feeble monarch who, after a brief and troubled reign in Dīlī, retired to Budhūn, which he made his place of residence. Buhālī then marched to Dīlī and 'Ālam Shāh abdicated in his favour. Buhālī ascended the throne on April 19, 1451, and reigned for thirty-eight years. He was succeeded, on July 17, 1459, by his son Šikandar, who reigned until November 21, 1517, when he died and was succeeded by his son Ibrāhīm, who was defeated and slain by Bābur on the field of Panipat on April 22, 1526.

(T. W. Haig)

LOJA (A., Lawāka), a little town in Andalusia, 35 miles S.W. of Granada, on the left bank of the Genil at the foot of an imposing limestone mountain, Periquetes. It has now rather less than 20,000 inhabitants but seems to have been more important in the Arab period. It was the birthplace of the famous Iḥān al-Khaṭīb Līsān al-Dīn [q.v.] who wrote an enthusiastic description of it. One can still see there the ruins of the imām which commanded the town in the Arab period. It was repopulated in 280 (893) in the reign of the caliph Ahmad b. Muhammad. This "key of Granada" was besieged in 1458 by the Catholic Kings who took it after a month's siege with the help of a body of English archers.

(E. Lévi-Provençal)

LOMBOK (usually called by the natives Tanah Sasa), the second in order of the Little Sunda Islands lying east of Java; the Strait of Lombok separates it from Bali, the Strait of Alas
from Sumbawa. A not very broad, rather flat, strip runs from east to west approximately through the centre of the island, which is in part extremely fertile and is shot in by hills on the north and south. In the north is the volcanic island of Kindjani revered as holy by a large section of the population. The island is one of the richest parts of the Archipelago; the main industries are agriculture and cattle-rearing, the first being on a particularly high level. A quantity of the rice which is in part grown on fields exceedingly irrigated is exported.

Even if we exclude the foreign traders settled on the coast, the population of the northern towns (especially Baginese, Arabs and Chinese) is not homogeneous but consists of two groups which are sharply distinguished territorially also; the smaller western part is inhabited by Balinese, the centre and the east by the much more numerous Sasak.

The inhabitants of the western part are descendants of the Balinese, who came as conquerors to Lombok in the sixteenth and seventeenth centuries and gradually extended their power over the whole island; they intermarried very little with the native population, so that they do not differ very much from the people of their original home; their language is Balinese, and they profess the popular form of Islam and Buddhism which is found in their mother island, with a few exceptions (they have for example adopted a dewas-slam into their pantheon and the sacrifices to this Muslim god must not include pork).

The Sasaks are the true aborigines of the island; they are quiet and industrious; in their physical features they most closely resemble the Sumbawanese and their language (not yet fully studied) shows a similarity in certain points with the Sumbawanese. They have all adopted Islam except for the little group of the Bodha, who have remained pagan; they live quite apart from the rest of the island, especially in the northern districts of Lombok and Bima on the south coast and engage in agriculture of a primitive type. They claim to be the descendants of Balinese who migrated hither in ancient times before the great invasions; there is however no ground for this assertion; physically and linguistically they are in no respect different from the Sasaks around them and the name Bodha is also found in other parts of the East Indian Archipelago as an expression used by the Malayan Muslims to indicate groups of people who have remained pagan.

Of the earlier history of the island we only know that in the sixteenth century was a possession of the Javanese empire of Madjapahit; we have no really reliable information how and when it became converted to Islam. Islam probably came to Lombok from Eastern Java at the time of the decline of the Empire of Madjapahit. Evidence of a considerable Javanese influence can still be traced, and according to a chronic in the Javanese language found in Lombok, it was Pangeran Prapen, the son of Raden Paku (Sunan Giri) who converted Lombok by force to Islam.

The Sasaks are of course no more orthodox Muslims than any other people in the East Indian Archipelago, but Islam has so far influenced them that we may see in it the reason why, in spite of the large Balinese population in the island, there has been no assimilation between Balinese and Sasak. They are divided into two groups or sects: Waktu lama and Waktu tiga (tiga). The former, who live mainly in the plain of Central Lombok are the Orthodox among the Lombok Muslims; their name shows that (in theory at least) they observe the obligations prescribed by Islam of performing 5 (==-lima) prayers a day. In keeping with this, the name of the Waktu tiga (who live mainly in the mountains) would mean that they are of the opinion that three (tiga, ~== tiga) prayers a day are sufficient. This is however an improbable explanation. Many are of the opinion that the name is to be explained by the fact that the Waktu tiga only know of three times of prayer, namely the gah on Friday (or at the moment of death, and at the end of the month of fasting); others say that the full name is waktu-lama-lama, which is said to be an expression indicating the old paganism (the religion of the time of the three kings, namely the kings of Selaparang, Sakra and Pedajangi). There is no certainty on the point however. In any case the Waktu tiga are regarded, and not without reason, by their countrymen the Waktu lama as half heathens. There are few mosques in their country; they leave the performances of practically all religious observances to their political leaders (khs) and they do not observe the form of fasting or pilgrimage to Mecca. They only observe Muslim principal festivals and their marriage ceremony also shows that they wish to be regarded as Muslims.

At the same time pagan sacrifices and pilgrimages (which however can also be found among the Waktu lama) play a prominent part in their life. In their villages, there is always in addition to the Muhammadan ksa a piman, i.e. one who acts as an intermediary at the worship of all kinds of spiritual powers from the world of animism. It is particularly among the Waktu tiga that we find the custom that the village headman keeps two coarse pieces of cloth woven out of different coloured threads (the one "male" and the other "female") to which offerings are made in case of illness etc.; every household makes a copy on the pattern of these pieces of cloth, which are also treated with reverence.

Practically nothing is known of the early period after the conversion of Lombok to Islam; the island was divided into little principalities often at war with one another; the eastern part was under the influence of Macassar and Sumbawa, the western under the influence of Bali. In 1574 the Dutch East India Company concluded its first treaty with the princes of Lombok. Soon afterwards in 1692 took place the first serious Balinese invasion and about 1740 the king of Karangasem succeeded in bringing the whole island under his sway. Four small Balinese kingdoms thus arose on Lombok which were frequently at war with one another until in 1838 the king of Mataram overthrew his opponents and ruled over the whole of Lombok. Down to 1849 he regarded himself as a vassal of the King of Karangasem on Bali; he then placed himself under the sovereignty of the government of the Dutch East Indies. The Sasak repeatedly rebelled against their Balinese rulers until finally in 1894 the Dutch intervened with the result that they conquered Mataram; since 1895 Lombok has been directly under Dutch rule and administered jointly with Bali.

Bibliography: A complete bibliography for Lombok to the end of 1919 is given in C. Lekkerkerker, Bali en Lombok, Rijswijk 1920.

(W. H. Rassers)

LORCA (Lorob), a town in Eastern Spain between Granada and Murcia, with 26,700 inhabitants. It is the ancient Iluro or Heliocorica of the Romans. In the Muslim period it formed part of the kurra of Tudmir [q.v.] and was famous for the richness of its soil and subsoil and for its strategic position. Its hirin was one of the most substantial in Andalusia. It is 1,200 feet above sea-level on the southern slope of the Sierra del Cane, and dominates the course of the river Guadalestín. Under Arab rule it usually shared the fortunes of Murcia and became Christian again in 1266.

LUBNân (Lebanon). The Arabs have a somewhat confused, almost mysterious idea of Lebanon. Here they place the sojourn of the AKBAL [q.v.]. They do not distinguish it from the Anti-Lebanon for which they have no special name. "Djbal Sanir" means to the Arabs the section of Anti-Lebanon to the north of the valley of the Barâdât [q.v.]. The massif of Hermon has been known since the time of Hassân b Thâlat as Djbal al-Thalâth; it is the Djbal al-Shelb of modern writers. Nor are the Arab geographers agreed about the northern boundary of Lebanon. Some include al-Lattakâm (Amanus) in it. This confusion has been facilitated by the vague popular appellation Djalâl, which has been applied from the Middle Ages to the pre-emptory right to the range parallel to the Mediterranean running through Syria from the mouth of the Orontes to Galilee; from this comes the name AKBAL-Djalâl, "mountaineers", applied by the Muslim chroniclers to the Nusairîs, Mutawâlîs, Druses, etc. A hadîth tells us that stone from Lebanon was used in building the Ka'ba. This tradition perhaps explains why the Arab geographers see in Lebanon the continuation of the long arête which separates the Hûdjâr from Nâjd and Syria and Anatolia to the Black Sea. The southern frontier of Lebanon is usually made to coincide with the lower valley of the Lâjînî, the modern Kâshîmîyâ. Current usage, conforming to local tradition, makes the Lebanon lie between this river and the Nahr al-Kabîr (the ancient Eleutherus) on the north. This is the region which our historical survey will cover. The backwardness and the scattered population of the Anti-Lebanon has always gravitated in the orbit of the towns of Eastern Syria, while Lebanon with its towns opening to the sea and its flanks watered by the abundant rains yielded by the moisture from the sea, which it gives to the rest of Syria by its rivers, is in economic and political dependence on the centres of the ancient Phoenician country.

Lebanon is rarely mentioned by the pre-Muslim madian poets; for example by Nâbiha Dhûbyâni, whose patrons were phylarchs of Ghassân. The name becomes more familiar to their Muslim successors, e.g. Abû Dahbal al-Djumâthi, Nâbiha al-Shâlînâni and Abû al-Râfâmân b. Hassân, from their attendance at the Omayyad court. Its territory, covered with forests of pine, pines, cedars, for the difficulty of access, cut up by deep valleys and torrential rivers, from the Arab conquest has offered a place of refuge to several small nationalities, increased from time to time by the influx of all the oppressed and persecuted.

The semi-independence which it has never ceased to enjoy has favoured its evolution on individualist lines and the local development of its communities, formed at the expense of orthodox Islam i.e. the Mutawâwalîs, the Druses and the Nusairîs [q.v.], not to speak of the Christian sects, Melkites, Jacobites and Maronites; these last are nowhere mentioned by name by the Arab writers, when dealing with Lebanon. The degree of autonomy won by these groups, religious in their origin but finally strictly national, enables us to follow the fluctuations of Arab penetration and Muslim power in Syria.

Each sect, often each district, lived under the rule of petty native dynasties, supposed to be founded by suzerains in Damascus, Baghdad or Cairo. They received grants of investiture and were in return liable to certain obligations and military service, when the actual authority was able to force them to it. With a remarkable agility, the feudal chiefs of Lebanon practised the art of manoeuvring through all the tumults that saw successively installed in the east the rule of the caliphs, Sâlîhîs, Suljûqânîs, Ayyûbîds, Franks, Mamlûks and Turkish pâshas.

Not realising its strategic importance, the Omayyads and ABBÁSIDS did not think of occupying Lebanon, still thinly populated except in the districts on the coast; they were less far-seeing than the Crusaders, who built massive fortresses on the frontier of the "Mountain": Husn al-Akrâd [q.v.] and Shâkîf Arrûnî. This negligence enabled the Djûrâjdêm [q.v.] to enter Lebanon. The establishment of the Mâronites in the upper regions of northern Lebanon must have coincided with the coming of these Anatolian invaders and have facilitated the organisation of this Christian group, which was destined to play a preponderating part in the Mountain. At the end of the ninth century,
Arabs of Tanūkh, coming from the region of Aleppo carved out for themselves in southern Lebanon a principality, that of the "emirs of al-Gharb" in the middle of peoples, partly Arabised and influenced by Shi`a teaching. The development of this emirate was arrested in the eleventh century by the creation of the Frankish dukedoms of Sayfet (Saida) and Barut (Bairut). The lordships of Gibelet (Jibbail), Batron (Batrun) and the county of Tripoli depended for support on the Christians of northern Lebanon.

After the expulsion of the Franks, the Mamluks of Egypt entrusted the defence of Bairut to the Tanūkhids. In the xiiith and xivth centuries, the rising against the Mamluks followed by the extermination of the Mutawalli and Druse rebels of Central Lebanon made it easier for the Maronites to occupy the lands south of the Nahr Ibrāhim (Adonis). In the beginning of the xvith century the Tanūkhids joined the Ottomans who were conquering Syria. Weakened by internal dissensions they had soon to yield place to the Banū Ma`n of whom Fākhr al-Din (q.v.) was the most noteworthy representative. In 1566 on the death of the last of the Ma`nids their political inheritance passed to their relatives, the Banū Shihāb who came originally from the Wādī 'Tain, on the western slopes of Hermon.

The fall of Fakhr al-Din had opened Lebanon to Turkish intrigues. They were not long in undermining the authority of the Shihābids, constantly struggling with the insubordination and encroachments of the Druze feudal chiefs. In the interests of agriculture the Ma`nids had encouraged the immigration of Christians from the north into southern Lebanon. This policy was intensified by the Shihābids who were on good terms with the Maronites. The last of the Ma`nids was Fakhr (q.v.) a Christian by birth (b. 1367). Resuming the scheme of the Ma`nids Fakhr al-Din, he worked for half a century in forming a great state of Lebanon. Deposed in 1580 he died in exile. Direct Turkish rule in Lebanon (1540-1860) perpetuated anarchy and insecurity there and fighting between the Maronites and Druses. This ended in the massacre of Christians by the Druses and the landing of French forces to restore order. An international commission was appointed to elaborate a "Règlement Organique", the charter of a new autonomy for Lebanon, under the control of Europe. At the head of it was a Catholic governor-general, appointed for five years with the approval of the Powers in whom was centralised all the executive power. As a counterpoise to this authority, an administrative council was elected in such a way as to secure representation to the various communities. From this "Règlement Organique" arose modern Lebanon which owes to it fifty years of prosperity and peace such as it had never before known.

The Great War upset everything. Turkish forces occupied the Mountain and a Turkish governor was appointed; famine and disease soon decimated the population. On April 25, 1915, at a conference at San Remo entrusted to France the mandate for Syria and Lebanon. On Sept. 1 of the same year, at Bairut, General Gouraud, High Commissioner of the French Republic, solemnly proclaimed the creation of the "État du Grand Liban" with Bairut as its capital. In addition to the "Autonomous Lebanon" created in 1860, this new state included the districts of Tripoli, Saida and Tyre. It stretches from the Nahr al-Kabīr in the north to the borders of Palestine and is bounded on the east by the chain of the Anti-Lebanon. Grand Liban is governed separately from the "Confédération Syrienne", with which it reserves the right to conclude agreements. It is administered by a French official until a native governor is appointed. A representative council of 30 members elected by vote discuss matters of general interest and the budget.

According to the last census (1921-1922) the population is 629,000. The Christians number 350,000 of different sects of whom 200,000 are Maronites; 275,000 Muslims (125,000 Sunnis, 105,000 Mutawallis or Shi`is, 43,000 Druses etc.); 3,500 Jews; 20,000 foreigners.

Ludd, a town in Palestine. S.E. of Yaffa, is mentioned in the Old Testament (only in the later books: Chr. ii. 33; Neh. vii. 37, xi. 35; 1 Chr. viii. 12) under the name of Lod, in the Greek period as Lydda; the Greek name of Diospolis given in the Roman period did not drive out the old name, the preservation of which was helped by Acts, ix. 32 for example. It was an important place in the early centuries of the Christian era; the capital of a tophary; it had a rabbinical school and was the see of a bishop at quite an early date. It was particularly famous for the alleged tomb of St. George above which a church was built. It was conquered with several of Palestine by 'Amr b. al-`Aṣ and at a later date was the temporary capital of Sulaymān whom his brother, the Caliph Walid (705—715), had appointed governor of Filastin, until he rebuilt Ramla, after which Lydda began to decline. In the tenth century, Maqaddas mentions the splendid church of St. George and the Muslim legend connected with that of the dragon-
sly, according to which Christ will one day slay Antichrist at the door of this church. After the church had been destroyed by the Fatimid Caliph Hakim (996-1020) and rebuilt once more, it was destroyed in 1099 by the Muslims on the approach of the Crusaders, so that the victors only found the splendid tomb when they arrived. Under Christian rule Lydda again became the see of a bishop and a new church was built immediately adjoining the ruins of the old one but was destroyed by Saladin. The town never recovered from its complete destruction by the Mongols in 1271. A mosque was erected on the site of the earlier church while the ruins of the church of the Crusaders were handed over to the Greeks who restored them in modern times.

LUDHIANA, is the name of a district and town in the Delhiadhrs Division of the Panjab province of British India. The tract is an alluvial plain bounded on the north by the river Satlej and traversed by the old bed of that stream; the area is 1,455 square miles. There is some irrigation from the Satluj Canal. The early history is obscure; Sunet is a site where ancient coins are found peculiar to the place. The tract is prominent in the annals of the Sikhs. In the year 1809 Ludhiana town became the British frontier cantonment, and the district assumed almost its present limits at the conclusion of the first Sikh War in 1845. The population of the district in 1921 was 567,692, of whom 30 per cent were Jat Sikhs, fine men and excellent farmers. Gudjarats, Arains and Muhammadan Rajaqts come next in numbers.

The town of Ludhiana stands on the Grand Trunk Road close to the Durbarullah: it is an important junction on the North Western Railway. The founders were Lodi Pathans from whom it took its name. After the first Afghan War the exiled family of Shāh Shuja’d domiliated here. The population in 1921 was 51,880. Ludhiana is a busy market town famous for the manufacture of shawls and turbans, of furniture and woodwork, and for wool and silk dyeing. Military contractors supply uniforms and accessories to the Indian Army. The principal women’s hospital of the Province is here, founded by the American Presbyterian Mission, which has its chief station in Ludhiana.

LUHAYA, a harbour at the southern end of the Gulf of Dāra on the Arabian coast of the Red Sea. The little, now unimportant, town lies on what was once an island but has become joined to the mainland in comparatively recent geological times and is separated from it at high tide, while the harbour is dry at low tide. The town in Nubian times had no wall around it, but there were ten or twelve towers on the land side at intervals of 250 paces with entrances at a height above the ground reached by a ladder. The towers were armed with a few cannons. When Ehrenberg visited Luhayia in 1825 the town was enclosed by walls. At the present day there rises behind the town a fort built by the Turks with one or two modern guns. The houses of the town are for the most part wretched little straw huts, such as are usual in Tihama; only a few are built of stone. The harbour of Luhayia is hardly worth the name, as the anchorage is bad and the entrance is made difficult by sunken reefs. Even quite small ships have therefore to anchor far from the town and at low water even small boats cannot reach the shore if loaded. The drinking-water is brackish and dear. The coast around Luhayia is dry and sterile. The main industry of the population, who are mainly Arabs, but include a few Banians was and still is fishing and trading. Luhayia owes its importance mainly to the trade in coffee, which is brought down from the highlands, stored, sheltered and sold. Near the town there are also a few coffee plantations, the produce of which is highly esteemed and used to be reserved for the Sultan of Turkey. There was and still is a busy trade with Djedda, Hodeida and Aden, mainly conducted by Arab sailing-ships. The principal articles of export is coffee and corn is imported. Luhayia is connected with Djedda and Hodeida by a caravan road 621 miles long. There is also a telegraph line to Hodeida. The Eastern Asia Service of the Lloyd Triestino has a three monthly service to Luhayia.

Nothing definite is known about the origin of Luhayia. A. Sprenger identified the town with the Maqalbas kāwī of Ptolemy but this equation seems at best only possible. The identification of Luhayia with the old town of Sambrachata or the harbour of Laupas or Naqīdātā which E. Glaser supports, is very improbable. Niebuhr supposes that the harbour on the coast when the demands of the export trade in coffee from the interior required it. Here also, as at Mokhā, the hermitage of a Muslim saint is said to have been the nucleus around which the admirers of the saint gradually collected and built the town. A chapel was built over his tomb, the vicinity of which was considered auspicious for living and dead. At the beginning of the sixteenth century the Portuguese who call the town Luya for the first time became acquainted with Luhayia. In 1513 Afonso d’Alboquerque entered the harbour on an expedition into the Red Sea. Luhayia then formed a part of the territory of the Imam of Ṣan’a’ to whom it paid tribute. In the second half of the sixteenth century Luhayia suffered from the raids of the Hāṣid and Bakī tribes, who on one occasion burned it down. In spite of this the trade of the town must even then have been not inconsiderable, for about 1760 in Mawsīm (April to July) it paid 3,000 dollars from the harbour revenues to the Imam of Ṣan’a’. At the beginning of the sixteenth century the governor of the Imam of Ṣan’a’ made himself independent in Luhayia; but when the Wahhabis invaded the Yemen and defeated the jā’il of Luhayia, the latter went over to the victors and took from the Imam of Ṣan’a’ the whole of Tihama from Luhayia to Bāb al-Mandab along with Ṭīq al-Fakih and a considerable part of the coffee-growing country. Luhayia now seemed to
LUHAIVA — LUKMAN

have a brilliant future before it; for it was to be the main harbour of export not only for the whole of this vast area but of the Wahhabi country also and negotiations were opened with the East India Company, who were invited to establish a factory in Luḥaiya. Luḥaiya's prosperity was again interrupted by the invasion of Muhammad 'Ali who occupied Luḥaiya in 1833. In 1869 we find it in possession of the Turks under whom the port and its hinterland formed a qaḍā in the sānduq of Ḥodeideh. Luḥaiya was also used by them as a base of operations against the never completely pacified highlands of 'Asir, which obtained independence with the collapse of Turkey in the world war. Satyāli 'Ali b. Muhammad al-Idrisi, lord of 'Asir who is considerably under Italian influence, has held Luḥaiya and Ḥodeideh since 1918.

(adolf grohmann)

LUKTA (A.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also regulated and regulated according to the circumstances. The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Mālik and al-Shāfi‘ī, has the right to take possession of the article and do what he pleases with it, but according to Abū Ḥanīfa, only if he is "poor"; but the use of the articles as religious alms (sadūqa) even before the expiry of a year is permitted in a preferential clause in Abū Ḥanīfa and Mālik. If the owner appears before the expiry of the period he receives the object back, as he does after the expiry of the period if it is still with the finder; but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dāwūd al-Zāhirī alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Abūmālik b. Ḥanbal (in al-Bukhārī also; cf. his superscription to Luqatā, bab 1). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured. Abūl-Shāfi‘ī and Abūmālik b. Ḥanbal have similarly some special regulations concerning the legal rights of the finder in the Haram, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allāh in the Haram and articles found in it.

These prescriptions of the Fiḥā are based on certain hādīth which have been handed down with several variants (cf. al-Bukhārī, Luqatā; Muslim, Constantinopole 1326 q.v., v. 133) which need not be quoted in detail here as they agree with the principles in question. But it may be mentioned that in a very old stratrum, later worked over, there is mention of a two or three year period. In the conception of the primitive jurists the article found is sometimes described as deposited (waqfā); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the zakāt; finally there is a hādīth which forbids the Meccan pilgrims (khājiq) to pick up articles found at all. From the superscription by Bukhārī to Luqatā, bab 11, it is evident that found articles might be handed over or used to be handed over to a government office, their retention in the finder's care is justified by quoting a special tradition.

None of these traditions can be considered historical; at most the prohibition by the Prophet in his address after the occupation of Mecca from keeping found articles written in the Hārum without advertising the inscription (cf. above) may be genuine on account of its antiquated terminology; Luqatā is not mentioned in the Kur'ān.

(j. schacht)

LUKMĀN, a legendary figure of the period of Arab paganism, who was adopted into the Kur'ān and later legend and poetry. The story of Lūkmān shows three main stages of development: I. The prophet Lūkmān; II. The sīhā of Luğmān, the obsessed hero of the Dāhiliya; III. The Kur'ānic: Luğmān, the wise maker of proverbs; III. The post-Kur'ānic: Lūkmān, the writer of fables.

I. Lūkmān in the old Arab tradition. Even the earlier legends already show Lūkmān in several aspects: 1. as Mu'ammār; 2. as a hero; 3. as a sage. — He is offered a long life. He chooses the duration of the lives of the seven vultures; he brings up a vulture; when it dies, he keeps a second one and so on, for six vultures, which he survives, but he dies at the same time as the seventh, Lubad. The vulture was by far the most popular emblem of longevity among the Arabs (Ps. cxxiv. 4; Goldziher, Asīb. zur arab. Phil., ii., p. 11 sqq.); R. Basset (Leqmān Btrbyr, p.
Luke is remarkable parallel in the interpretation given by Sidonius Apollinaris, for example, of Romulus’s watching for birds: Romulus sees twelve vultures, which means the twelve periods through which Rome will endure. The Kitāb al-
Mu'āmmara of Abū Hātim al-Sijistānī gives Lukman second place for longevity: Khidr was the longest lived man, and Lukman the second, who lived seven times the length of a vulture’s years, i.e. 7 × 50 = 350 years; but the figure is increased in different stories to 1,000, 3,000 or even 3,500 years. The last of the vultures revered by Lukman was called Lubad—endurance; when Lubad finally lets his wings droop, Lukman stirs him up to fly again, but in vain; Lubad dies and with him Lukman. Lukman, as Damiri noted, was already celebrated by Nābiqār. Various adventures are ascribed to Lukman such as the heroines of the Dāhilīyā always had to go through; he was the first to punish the adulterers by stoning and the thief by cutting off his hand. — Lukman belonged to the tribe of Ad. Here we have the old Arab saga coalescing with the Qur’ānic legend. Ad, sinful like Sodom, is devastated by drought. An embassy is sent to Mecca to pray for rain and Lukman goes with it. In the enjoyment of the hospitality given them the ʿAdis forgot the purpose of their journey. Reminded of their duty, one of them obtains by prayer a black cloud. This cloud brings to the tribe of Ad the destruction which was to be their punishment for rejecting the Prophet Ḥūd.

Lukman was already known in the pagan period as a sage. His wisdom is celebrated by pre-Muslim poets (Horovitz, Korānische Untersuchungen, p. 133). It is natural to suppose that the old stories refer to more than one person. Lukman’s wisdom forms the transition from the Dāhilīyā to the Qur’ān.

II. Lukman, the Maker of Proverbs.

In Sūra xxxi of the Qur’ān, Muḥammad introduces Lukman as a sage and makes him utter pious admonitions. These latter do not bear the stamp of Lukman nor of Muḥammad but belong to the common stock of proverbial sayings. A characteristic example is the following: “If all the trees in the earth were pens, and if God were to swell the sea into seven seas of ink, the words of God would not be exhausted.” (Sūra xxxi. 26.)

This great hyperbole is found in hundreds of variants (N. Reinhold Kohler, Und wenn der Himmel so oft Regen, in Orient und Orientf., n. 545—559; Ethnologische Mitteilungen aus Ungarn, i. 317—323, 441—453). It is recorded that this saying arose out of a dispute with the abhūr of the Jews. The abhūr insisted that all knowledge was contained in the law, and the saying is directed against them. Does this really mean that Muhammad borrowed this hyperbole from the Jews, to whom it really belonged originally? In the admiration of Lukman: “Moderate thy pace, lower thy voice, for of all voices, that of the ass is most hateful.” (Sūra xxxi. 48) Rendel Harris has found the model in a Muslim: “Lower thy head, speak quietly, and look down! For if a house could be built by a loud voice, the ass would build two houses in a day.”

Once Muḥammad had consecrated Lukman as the wise utterer of proverbs, everything that was thought pious or sensible could be attributed to him. Wahb b. Munabbih is credited with saying that he had read 10,000 chapters of Lukman’s wisdom. The Arabic collections of proverbs (notably Maḏiḏ‘) attribute much to Lukman (see R. Basset, op. cit., xlv. — liv.). Thā‘alib‘i devotes a chapter of his Maḏjalla to the wisdom of Lukman. Many sayings seem to link up with the Sūra of Lukman. Sūra xxxi. 14 advises reverence for parents but warns against being led astray by parents to worship false gods. Thā‘alib‘i’s authority makes Lukman say: “Be amenable to your friends but never so far as to act against God’s Law.” There is much that recalls Aḥkāf: Lukman teaches that the rod benefits the child like water the seed. In Aḥkāf we have: “Spare not thy son for strokes of the rod are to a boy like dung to the garden.” Lukman says: “When thou seest people who remember God, join them; hast thou knowledge it will be useful to you with them and they will increase it; if thou hast none, they will teach thee; when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee, and if thou art ignorant, they will increase thy ignorance.” Aḥkāf says: “Join the wise man, then thou wilt become as wise as he, but join not the fool and he will make thee his guest.” Lukman gives excellent advice for one going on a journey and also adds that he should be armed, similarly Aḥkāf. In Maḏiḏ‘ the Arabic proverbs Lukman is credited with the following admonition: “My son, consult the physician before thou fallest ill!” This corresponds to the first saying in Ben Sira’s alphabet: “Honour the physician before thou requirest him.” On the other hand Lukman’s warning against hypocrisy is found in similar form in the Disciplina clericalis.

Muslim legend is fond of making the sages and wise men of the past into prophets. But since Muḥammad quotes Lukman as a sage, the story was told that God offered Lukman the choice between becoming a prophet or a sage. Lukman chose wisdom and became vizier to King David, who called him fortunate: “Hail to thee, thine wisdom, ours the pain!” Lukman lived down to the time of the prophet Yūnus (Jonah). He is also called judge of the Jews. Muslim legend sometimes also, although very rarely, makes Lukman a prophet and even gives him the “Madjalla” (megillah), the roll of wisdom (Ṭabarani, Annals, i. 1208).

III. Lukman, the Writer of Fables.

Lukman was honoured by Muḥammad and after him as a maker of proverbs. A few centuries later he became a writer of fables also, perhaps because amṭul‘ mentioned both proverbs and fables. Lukman thus became the Aesop of the Arabs. Much was transferred to Lukman that was told in Europe in Aesop. The tendencies to this can be traced quite early. While the very earliest legend saw in Lukman the hero and Muslim legend makes him a sage, judge, vizier, or even a prophet, the later Oriental legend delights in describing him as a carpenter, a shepherd, a deformed slave, an Egyptian, Nubian or Ethiopian slave, a feature which is obviously modelled on the story of Aesop. Lukman’s vizier order lies him to set the best before his guests. Lukman gives them the tongue and heart of a sheep. On another occasion his master tells him to set his worst before them. Once again Lukman sets a heart and tongue before them, for there is nothing better than a good tongue and a good
heart and nothing worse than an evil tongue and an evil heart (in Plutarch and in the *Vita Aesopi* of Maximus Planudes the tongue only is mentioned and not the heart). — Luḳmān’s fellow-slaves on one occasion eat their master’s figs and accuse Luḳmān. At Luḳmān’s suggestion the master makes them drink warm water. Luḳmān vomits water only, the other slaves figs and water — Luḳmān’s master in his cups had wagered he would drink up the sea. Sobered he asks Luḳmān’s advice. The latter demands of those who had taken upon the wager that they should first dam back all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. The latter is a widely disseminated motive in fairy tales of the type of the Emperor and the Bishop (Walter Anderson, *Kaiser und Arzt*, F. F. Communications, No. 43, p. 134—140, especially p. 139 where reference is made to Luḳmān; Chauvin, *Bibliographie*, viii, 66—62). These anecdotes are also found in the *Vita Aesopi* of Planudes (xivth century), but they are known as early as Plutarch, *Convidium septem Sapientiam*.

The older Arabic literature does not know fables of Luḳmān. They first appear in the late middle ages. The Paris manuscript published by Jos. Derenbourg belongs to the year 1299 and contains 41 fables. These fables have often been published and thoroughly discussed in scholarly fashion especially by Derenbourg, R. Basset and Chauvin. Out of the 41 fables, No. 22 alone has no parallels; the thornbush begs the gardener to tend it so that kings may delight in its flowers and fruits; the gardener waters it twice a day and the thornbush overruns the whole garden. R. Basset recalls the fable of Jotham of the thorn-bush which destroys everything (*Judgec*, ix). All the others with the exception of the thirteenth (the mudge and the bull) are found in the Syriac fables of Sophos (= Aesopus) published by Landsberg. All are found in Aesop except No. 9, the garden of the thorn-bush and No. 12 (the wasp and bee), No. 40 (the man and the snakes). It has been further observed that in these fables the very animals indigenous among the Arabs, the ostrich, the hyena, the jackal and the camel play no part. As these fables first appear in the late middle ages there can now be no doubt that we have to deal with a selection of Aesop’s fables translated into Arabic.

IV. Related legendary figures.

Luḳmān is a many-sided figure: he is *Muḥammad*, hero, sage, maker of proverbs, and writer of fables. It is no wonder then that he has often been compared and identified with other legendary heroes, Prometheus, Alkmaion, Lucian and Solomon. Abu ‘l-Faraj makes Luḳmān the teacher of the pedagogues. Three of these equations deserve closer examination: 1) with Balaam, 2) with Akḥiḳar and 3) with Aesop. The identification with Balaam is old. Arabic legend gives the following genealogy: Luḳmān b. Baʿṯr b. Nāḥīr b. Tarīkḥ. It is evident that the Qurʾān exegetes sought for something corresponding to Luḳmān in the Bible. They found this in Balaam as the vowels *baʿ* and *laʿ* both mean the same: “to devour.” This then became a Muslim tradition, which then forced the Hebrew *Maḥīle Simḥah*, where Luḳmān is one of the seven wise teachers of the king’s son (ed. Cassel, p. 220 sq.) and also the *Disciplina clericalis* of Petrus Alphonsus, where the correct text is *Balaam qui lingua arabica vocatus Lucaman*” (ed. Hilske-Soderhjelm, p. 3). The Qurʾān exegetes had no doubt about this identity. The question arises however: did Muḥammad himself see Balaam in Luḳmān — and next: is Luḳmān really Balaam? Derenbourg, Basset and Eduard Meyer (*Die Israeleiten und ihre Nachbarn*, p. 523) answer in the affirmative. But it is quite incredible. The pre-Qurʾānic tradition about Luḳmān, the Qurʾān Sūra, which shows deep reverence for Luḳmān, have no single feature of the hated Balaam of the Bible and the Haggada. This identification was only made later by Qurʾānic exegetes, who wished to connect Luḳmān with the Bible at any cost, and made him the son of Beʿr, i.e. Balaam, just as they sometimes made him the nephew or cousin of Job. Luḳmān’s similarity to Akḥiḳar was also noticed long ago, but it is only quite recently that the identification has found a vigorous champion in Rendel Harris, who devotes the chap. vii. of his *Story of Akḥiḳar* to it. He bases his identification on the agreement of Sūra xxxi. 18 with Akḥiḳar’s warning about the voice of the ass, and on Arab hypotheses which compare Luḳmān with other fables in legend and history, notably to the relationship of Luḳmān, Akḥiḳar and Aesop. The story of Aesop shows originally a close relationship to that of Akḥiḳar. The later legend of Luḳmān has borrowed much of the story of Aesop and thus becomes like the Akḥiḳar story but in reality Luḳmān is not directly connected with Akḥiḳar but with Aesop.

The development of the Luḳmān legend seems varied but clear. Luḳmān properly belongs to the legends or possibly the history of Arab paganism. For even this period already knows the sage Luḳmān. With Muḥammad he becomes the teacher of pious doctrines. Incited by the Qurʾān the interpreters of the Qurʾān found Luḳmān’s saying, in many places and found Luḳmān himself in the Balaam of the Bible. He was credited with fables in addition to the proverbs and was thus made the Aesop of the Arabs.

(Bernhard Heller)

The Lūr/Luli gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lur [q.v.] highlanders who live in the southwest of Persia, have a fair skin and speak an Iranian dialect with no trace of Indian elements. The situation is however slightly complicated by certain minor points. In the first place the use of the terms Luri, Luri, Lur, etc., is not always quite clear. In the confederation of 'Arab tribes of Fars there is a Lur clan; Sykes, *Ten thousand Miles*, p. 330: Ritich, *Povëdka v Bultistain*, *Isv. Geogr. Obšč.*, 1902, xxxiii., p. 69 speaks of a Lori section (Persian pronunciation of Lūr*) among the Lūrī of Kirmān. Edmonds notes the existence of a Lori? clan in Luristan in the Dasht-i Qandīn division of the Barīmawand group. In Kūstānīdēr there is a clan Lur-ī Khāfāghār [cf. Sena].

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, etc., (cf. Curkow, p. 277). As early as the sixteenth century, Shīkhī al-Dīn al-Ārmarānī mentions the talent of the Lurs in these directions and in our own day we find wandering troops of Lurs as far north as Tabriz where there is a permanent colony of Kāračī gipsies, professional actors and singers. It is possible that the special qualifications of the Lur and gipsy players differ somewhat; the Sāmānī of Kūstānīdēr [cf. Sarful and Sena] who excel in singing and dancing are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Lur artists belong.

There is nothing impossible in a gipsy infiltration into Luristan. Whatever was the ethnical entity covered by the name Ṭuṭ (on the confusion of the Ṭuṭ with the Lūr see above: Hamza, Ḥašālabī) the existence of Ṭuṭ colonies in Khūzestān is known as early as the time of al-Hādījādī [q.v.] (cf. Hāwat al-Ṭuṭ between Arradhān and Kīrām-Hūrzū; the modern town of Ḥašālabī [the 'Indian'] may have a similar origin). According to Ḥalādhūrī, p. 382, when in the second quarter of the first century A.H. the Ṭuṭ had apostatised from Islam, they were joined by the local Kurds, who provoked the punitive expedition of ʿAbd Allāh b. Ṭamīr al-Ṭuṭādī (Mālamū, the future capital of the Kurds). The alliance of the Ṭuṭ and Kurds (Ṭuṭ or Lur; q.v.) so early a date is curious. Under al-Ṭuṭ, Vahānī, p. 833 mentions two places in Kurd and a small district (nāhīyā) under Ahwāz in Khūzestān, Schwarz, *Persien im Mittelalter*, v. 665, identifies this Rūr with the district of al-Lūr (cf. LURISTAN). In the light of what has been said above one might suppose the existence in al-Lūr of a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis—[according to Ibn Hawkal, p. 176, the "Kurī" were predominant in al-Lūr] the question of the origin of the name al-Ṭuṭ in Khūzestān, of the identity of this al-Ṭuṭ with al-Lūr and the remoter origin of the name Lur must for the present be left open. In any case even if the name Lur came from the town of
al-Lūr, the origin of the word would not necessarily settle the question of the ethnic origin of this people.

As to the general question of the gipsies in Persia, their names in the provinces other than Kirmān and Bāltīsītān are as follows:

in Khoarāsān: Kīrshāmīl (in which a fantastic popular etymology sees ghāir-i shumār, interpreted as "innumerable"); in Transcaucasian Turkish dialects "bāltīsī" means "vaurien"; cf. the comedies of Fath 'Ali Akhoundū, q.v.;

in Āstarābād and Māzandarān: Dājū (and elsewhere: Kūlīl (==Kābulī)).

The names mentioned may correspond to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: Sanātī (?), Kasātarāsh, "cup-makers", Budghāli, Adenesīr (Adhar-nāsī,); Zargār-i Kirmānī, "gold-smiths of Kirmān"; Shahīniyār (winter at Hamadān, summer near Damāvand); Karjī, Toar-kābulī (dasnūr + kābulī "sleep-doctor"), Gāzbābi, Bāsh-kāpān (in Turkish bāshkāpān "the who seizes"), Gāzbāri (big hunters in Māzandarān; cf. de Morgan), Kāšhī, Badjāmān. According to Newbold the Persian gipsies fall into two classes: Ŧālī (or Ghurbatī) and Gāzbāri.

As names applied to Persian gipsies in general Gobineau gives Bešābhāvān giàushābhāvān (cf. the name of the Armenian and Transcaucasian gipsies, the Besho) and Oldjīl (cf. The following names have a general and neutral character: Ghurbatī, "living in a foreign land"; according to Ivanov, the gipsies who confuse žīl and žīlə in būrbi an offensive allusion to the promiscuity (būrbi, "relationship, consanguinity") of which isolated communities in all ages have been accused; the name is sometimes transcribed būrbati and kūrbati, Fiyyūd (from the Arabic, fiyūd, "couriers"), Ustākār, Aghā, Ghurbālband ("sieve-makers").

The number of gipsies in Persia may be estimated at 20,000 families, or 100,000 souls, of whom 5,000 families are in Āstarābād, 500 in Kirmān (Sykes). The gipsies have an organisation of their own at the head of which is the chief of the Şāhī's runners (shārīs-brāshī) under whom are the provincial deputies (kāltāntar). In western Persia the gipsies are very little different from the Persian peasantry (Sykes, Ivanov).

In Khoarāsān they play a considerable part in the life of the rural community as artisans, making and repairing sieves, chains, combs etc. In Āstarābād the Gāzbāri are coppersmiths, carders of wool and cotton (de Morgan). Throughout Persia one sees the black tents of the nameless lūr who must be gipsies. It remains to be seen also if the Kurd tribes bearing names like Khorār ("turners"), Harārī, Kūhāsh ("shutters") are not of gipsy origin (cf. the article SENNA). In the towns, such as Sābavāvar, Nishāpūr and Tabriz, the gipsies have quarters of their own. There are troops of gipsy dancers and musicians in Persia but they do not seem to be very popular. Ouseley gives a description of the dances and of the marionette theatres of the Kārači (Tabriz). The dancers and singers of the Sūmāni tribe in Kūrdistan have often been described by travellers; cf. notably: Lycklama and Nijeholt, Voyage, iv., p. 30—70; Cirkow, Probleme, p. 299, 330; Kshushl-Efend, Sīyāšt-i Nūrī, Russian transl., p. 119: cf. T. Thomson, "The Surnram: are they Gipsies?," T. Gipsy Lore Soc., ii., 1909, p. 275—276.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanov) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Roman of Europe; the language of Kirmān and Khoarāsān (Sykes, Ivanov) contains a large number of unrecognisable elements. Loughor Dames out of 86 words in Sykes's vocabulary 4 Arabic, 28 Persian and 52 of unknown origin. He would regard this dialect rather as an artificial secret jargon. Denys Brey (quoted by Ivanov) in any case confirms the fact that in the land of the Kūrdistan is learned by the children as a separate language ("is at any rate acquired naturally by Lūr children, as a language for the home circle").

The Sūmāni tribe are known by Kūrdi. According to Cirkow they are called Dūmān, which must correspond to Dūmān (Dūmān, the name of a low caste in India), which corresponds with the well-known name for gipsies: Reım). The vocabulary of the Dūmān (Baghdād, Aleppo) is collected by Newbold, J.K.A.S., 1854, p. 303 from an informant from Altun-köprü, is full of Kurdish words: kivār, "tone", khoi, "salt", liwā, "boy". A Kūrd tribe in the east of Bohtág bears the suggestive name of Sīndi/Sindīyān (the "Sindians"). According to the Sīnān of Būlān the chief of the Kūrdi clan (of the Zāk) had married a gipsy woman. In discussing the relationships of gipsies and Kurds it should be remembered that in 1220 (835) a section of the Zanṭ settled in K̄ānīkūn, i.e. at the gate of Kurdish territory; cf. de Goeje, Mémoire, p. 30; Tabari, iii. 1168.

According to Sampson, two categories of gipsy speech may be distinguished according to the fate of the primitive Indian aspirated mānas: the one changes them into aspirated tenses, i.e. Piśikrit, bānāti > phar (Armenia, Europe), the other deprivates them of aspiration, bānāti > ban (Persia, Syria, Egypt). The interest of the Persian dialects is in the fact that Persia was the first country in which the gipsies returned after leaving India (probably in the Sā-Ṣāni period). In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley for example found among the Kārači of Tabriz the word khan "sister" which must be older than ābān or ban (cf. also 2. in Gobineau).

Bibliography: See the article LUR, SARTU, SENNA, ZÜT. — Don Juan de Persia, Relaciones, Valladolid, 1604, p. 17 (on the looseness of gipsy morals); English translation by J. L. Strange, London 1926, p. 67; Ouseley, Travels in various Countries of the East, London 1819—1823, i. 309; iii. 400, 405 (the Kārači of Tabriz); Ker Porter, Travels in Georgia etc., London 1822, ii. 528—532: the Kārači near Marāgha; Die Zigeuner in Persien und Indien, Das Ausland, Munich 1833, p. 163—164; Bataillard, Nouvelles recherches sur l'apposition et la dispersion des Bohémians, avec un appendice sur l'immigration en Perse entre les années 420 et 440.
al-Din Arslān Shāh his successor and Lulu' his regent. When Ṣimâl al-Din seized the fortress of al-Imādyya in Ramādān of the same year (Dec. 1218), Lulu' sent an army against him. Lulu'’s troops besieged al-Imādyya but had to return with nothing effected, whereupon the other fortresses in al-Hakkāriya and al-Zawāzīn surrendered to Ṣimâl al-Din when the latter made an alliance with the lord of Irbi, Muṣaffar al-Din Kokbūr. Lulu' sought the assistance of the Ayyūbid al-Malik al-Aṣharf, who ruled the greater part of Mesopotamia, and recognised his suzerainty, whereupon al-Aṣharf sent an army to Naṣībīn to help Lulu' if necessary. In Muḥarram (April 1219) Lulu' was defeated by Ṣimâl al-Din’s forces near al-Ahr and had to flee to Irbi. Peace was however soon afterwards concluded through the intervention of al-Aṣharf and the Caliph al-Nāṣir, but when the sickly Nūr al-Din died in the same or the following year and his brother Naṣīr al-Din Māhmūd, who was some three years old, succeeded him, Ṣimâl al-Din and Muṣaffar al-Din began to raid and plunder the district of al-Mawṣil whereupon Lulu', who had first sent his eldest son with an army to al-Aṣharf to help him against the Franks, appealed for help to Abeg, al-Aṣharf’s general in Naṣībīn. Abeg set out at once and joined Lulu’. On Raḥib 2, 616 (Oct. 20, 1219) Lulu’ was defeated near al-Mawṣil; but while he was again collecting his followers around him Muṣaffar al-Din retired. After the conclusion of peace, Ṣimâl al-Din occupied the fortress of Kauwaḥ, and Lulu’ had again to appeal to Aṣharf. Muṣaffar al-Din however induced a number of emirs, among them Ibn al-Mashjūb to secede from al-Aṣharf and take up a position at Dunā‘īr to prevent the latter’s passing. The emirs however soon changed their views with the sole exception of Ibn al-Mashjūb who went to Irbi. He was twice defeated, first by the garrison of Naṣībīn and then by the troops of Farraḍī Shāh, lord of Sinjār, who took him prisoner. When he had been released, he collected a plundering horde around him and ravaged the country far and wide. He was defeated by an army of Lulu’’s and took refuge in the fortress of Tell A‘far. The latter was besieged and Lulu’ himself came up from al-Mawṣil. On Raḥib 17, 617 (June 21, 1220) he had to capitulate and Ibn al-Mashjūb was taken prisoner and brought to al-Mawṣil. After al-Aṣharf had made peace with Muṣaffar al-Din he handed over to Lulu’ the fortresses of Dündalā, Naṣībīn and the governorship of Mesopotamia, to which other fortresses were later added. After the death of Naṣir al-Din (619 = 1222-1223) or according to others not till 631 = 1233-1234) Lulu’ was recognised as Aṭṭebeg of al-Mawṣil and assumed the name of al-Malik al-Rahim. In 635 (1237-1238) he became involved in war with the Ayyūbīd al-Nāṣir Naṣīr al-Din. The latter took the Khārṣmians into his service and granted them Harrān and Edessa whereupon they seized al-μ the town of Naṣībīn. About three years later they were defeated by the ruler of Ḥalab and Ibn-Last and Lulu’ regained Naṣībīn with Dārā. Lulu’ had also to fight the lord of Ḥalab, the Ayyūbīd al-Nāṣir Yusuf. In 648 (1250-1251) he was defeated and Naṣībīn, Dārā and Karakishāh fell into the hands of the Aleppo forces. Lulu’ died in 657 (1259) aged over 60, after recognising the suzerainty of Ḥālim [v.]

LU'LÜ' I. A Mamlûk of Salīf al-Dawla the ruler of Aleppo, vizier of his son Sa'id al-Dawla and his grandson Sa'id al-Dawla. On the latter’s assassination, he became guardian of his sons and from 394-400 (1003-1009) independent governor of Aleppo under Fātimid suzerainty; cf. the article HAMĀDI, where the bibliography also is given.

2. A eunuch and the trusted advisor of the Salджûk Sultan Ridwān of Aleppo; on the latter’s death in 507 (1113) he became Aṭālēg of his son Alp Arslān al-Akbār (lit. “the dumb”), so called on account of an impediment in his speech). Alp Arslān who left the government in the hands of Lu’lu’ rendered himself hated by his court on account of his crimes and tyrannical conduct and fell a victim to a conspiracy in which Lu’lu’ seems to have had a share. To retain a firm hold on the reins of government, he appointed Alp Arslān’s six year old brother Sultan Shāh his successor, who reigned in name till 517 (1123). Anarchical conditions prevailed in Syria throughout the whole period (cf. the art. ḤAMĀDI). To retain his power Lu’lu’ had to steer a course between the Crusades, the Salджûk Sultan and the Great Salджûk Sultan Muhammad. He promised to hand over Aleppo to the latter but at the same time secretly sought the help of the Aṭālēg Toghtikīn [q.v.] of Damascus against him and of Ughzār of Marīdin and on the other hand to prevent them becoming too strong betrayed their movements to the Crusaders who were able to inflict damage on them. He succeeded in retaining Aleppo with the help of Toghtikīn’s cavalry. To raise the necessary funds to pay these and his own troops he extorted the last farthing out of his viziers and the wealthier inhabitants of Aleppo. He himself never left the citadel for fear of conspiracies. When he was at last forced in 510 (1117) to make a journey, either to take his treasure to a friend’s care or to get money stored with him, his Türkic bodyguard fell upon and killed him. The latter seized his treasure and tried to take Aleppo by surprise but were defeated by the garrison and had to give up their attack. Lu’lu’ is a typical example of the anarchy in Syria at the beginning of the Crusades which was only put an end to by the energy and ability of Nāṣ al-Dīn.

were later called after the places where they had settled, like the Djangrū (Çangrū’i, Djangardi) and the Ürari (Azstari). The governing family of the Atbhes of Little Lur belonged to the Djangrū (the name of their clan, the Saḥarā, Saḥgarā should be corrected from Salwārţi, ‘Amāna-yā, p. 360; Salwārţi, ‘Alī Ḥazīn, Tahkhrū’ā, p. 135 and Salwārṭi in Houtum-Schindler). The Zhāqā-yi Ġorāṅi concludes by enumerating the 8 clans (gānhan) of the two principal gūrih and the 18 other tribes (ajā’īb) of the Lurs.

A few names (Māngarra, Anārkā, Dībādkā) correspond to modern names. Finally 4 clans are mentioned: Sāhā (Sāmī), Arsān (Arstān, Aṣān), Arki and Bāh, who, although speaking Luri, are not Lurs; the people of the other villages of Mānjūd were peasants (turū). About 500 (1106), a hundred (or 400) Faḍlawi Kurd families arrived from Syria. They came by the north (Shurtān-Khū) and settled at first on the lands of the Khūrādhī waṣīr (cf. the article on the ethnical composition of the Great Lur. It is not known if the word gīdāhk). At the beginning of the viııth (xiııth) century new tribes flocked to the standards of Hāzanā-yā of the Great Lurs. Among them were 2 Arab tribes: Īlā (‘Āli; cf. the place of this name below Shūshār), and Ḥāshimi and 28 different tribes (mātagarī) among whom we find the Baktāyār (Maktārū), the Ģīrānšād (Māris, the Gītand (cf. the village near Shūshār), the ʿUle, the Iṣrāwī, the Māmāsān (Māmāsen) etc. According to the Šeṣa-i-rās (i. 26) all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the ethnical composition of the Great Lur. It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom Ibn Batṭūṭa (ii. 21–39) found at the beginning of the xıııth century near Bahshār and Rām Hurnūz when on his way to the capital of the Grand Lur. There has long been a village of Kurdštān on the Dzhānān and it had even given its name to this river. Shāhāb al-In al-Urmān (V, p. 8, p. 320–332) mentions the presence of Lurs in Syria and Egypt and tells how Salādān (563–580), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse. This anecdote throws some light on the causes which produced the arrival of the tribes in this region (cf. returnEM) Luristan about 600 A.H. of numerous Iranian tribes.

The southern part of Little Lur was exposed to miltarily by Kurds, especially through the valley of Kafkha (cf. IKB; just to the north of Su-sa is a tree ṣār-ṭi Bānā, bearing the name of a clan of the Kird tribe of Ṣeṣa, located in the history of the Ḥasanawāhīs; cf. Ibn al-ʿAṣān, V, p. 146, 219) and exposed to Turk and Mongol invasions (cf. the devastating of the Atbhes of the Lur-ṭi Kūk against the Bayāt and Āiwa (= Bahārā, Turk.)

In the Ǧaftāw period, Turkish tribes were introduced into Luristan from the direction of the Kūh-Gūri (where traces of them still exist) and Georgian and Armenian colonies to the north of the Kūh-Gūri country. On the movements of the population under Nādir, the title and Čaḏars were below. The ethnical situation gradually stabilized in the xıııth century.

The names of the Lur tribes and groups are now quite well known and as we have lists going from 1836 to 1922 a companion enables us to note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds but the general framework of the tribal grouping remains essentially the same.

In 1881 (Curzon, ii. 274) there were 421,000 Lurs of whom 170,000 were Baktāyrā, 41,000 Kūh-Gūri, and 210,000 Fellā. According to Rabino, this last section numbered in 1873 150,000 (or 130,000 individuals) in Puh-Kūh, and 10,000 tents (or 50,000 individuals) in Pusht-i Kūh (this last figure seems too low).

The Māmāsān (Mamassam) group includes 2 main tribes: the Bakāsh, Dībādkā (Dījāwī), Dushmanzārī and Rustamī (cf. the article Šīlū). The Kūh-Gūri group (Kūh-Gūri) includes 3 large tribes (Aḵārābar, Bāwā and Dījākī). The first of these tribes (cf. the name of the old Turkish tribe of Aḵādārā) is of a composite character, for of its 7 clans four (Āṣur, Begdā, Cāštān and Kārākhā) are Turkish (evidently the remains of the Aḵārābar, Bāwā and Dījākī, who, according to the Kūh-Gūri, had been given under the Ǧaftāw) and a fifth clan (Tiṅkūt) bears the name of a district in Kurdštān of Sennā (? v.). On the second tribe, Bāwā, O. Mann notes that it bears the name of an Arab tribe of the neighbourhood of Ahwāz but there is also a mountain called Bawā to the south of Khurramābād. The third tribe, Dījākī, is purely Luri and is composed of two main sections: Čaḵwānī and Dījāwī with many subdivisions. This threefold composition of the Kūh-Gūri group is typical of many of the Lur tribes.

As to the Baktāyrā, Sawyer as long ago as 1894 said that their territory was "thoroughly surveyed" and that every tribe visited in their own encampment, everything appertaining to the Baktāyrāis may now be said to be known." But Curzon’s tables (1890) are still the last word available to the student. Of the two Baktāyrā groups: Ǧaḥār-lang and Hāft-lang, the latter is the more important at the present day The Ǧaḥār-lang, who used to be in the south are now mainly on the outskirts in the district north of the northern barrier (between Burīgūr and Gulpāyagān).

The main groups of Lurs are: Tārīn, Dīlnān, and Dīlā (cf. IKB) and Bāg-Gūri. The tribes of the last group are the Lurs par excellence and have important subdivisions: Dir, Goud, Sagward etc. It is possible that the Dir-Goud are the real nucleus of the Lur race. Their chiefs are called mir.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chief, the Lurs proper (Bāg-Gūri) are distinguished by a more democratic feeling. The power of the hereditary families of khan is based on their "guard" (fātāl), but this power is considerably reduced by the authority of the chief of the clan (fīnān). The khans are forced to court the favours of these wild, turbulent chiefs (Edmonds: "uncouth headmen"); the latter are amenable to the solicitations of their neighbours and in this way the tribes are broken up and new groupings take place.

Little is known of the ethnology of the Lurs. The names of Duhouisset (who commanded a Lur regiment in 1859), Études sur la popul. de la Perse, p. 23, of Khânkoff, Min, sur l’ethnogra-
manifestation who is called Bābā Khošin and numbers among his "angels" Bābā Tāhir [q. v.]. An important sanctuary of the sect, the tomb of Shahvāde Aḥmad (the alleged son of the imām Mīrū Khān), is in the district of Kūs near Bī-āw (territory of Ķalawand) and is kept by Saiyids of the Ḩāfī tribe; these Saiyids wear red turbans which recalls the predilection for red of the old Muḥammads = Khurramiya [q. v.] whose flags were of this colour.

The religion of the Lurs was so little orthodox even from the Shī‘a point of view that at the beginning of the sixteenth century prince Muḥammad All Mirzā had to send for a mujtahid to convert the tribes to Islām (Rahino, p. 24). All the Lur and Lak tribes are officially Shī‘is (contrast the attachment of the true Kurds to Sunna orthodoxy).

Language. Down to the beginning of the eighteenth century our knowledge of the Lur dialects was confined to 88 words collected by Rich, to 4 Bakhtiyari verses in Layard and to some thirty words collected by Houtum-Schindler. As late as the Grundriß d. iran. Phil., 1/2, 1898—1901, p. 249, we find the thesis stated that Luri is closely related to Kurdish and may even be described as one of its dialects. The materials of the Pāpī tribe, collected in 1852—1853, were published the day after the death of the author (d. 4/1/1918). The merit therefore of having first established the important fact that Kurdish and Luri are quite separate ("eine tiefgehende Scheidung des Kurdischen vom Luri") is due to O. Mann. This scholar has shown that although these are Kurd tribes in Luristan (cf. the article LAK), the true Lurs speak dialects which belong undoubtedly to the S.W. Iranian group (like Persian and the dialects of Fās) and not to the N. W. group (like Kurdish and the "central" dialects).

The Luri dialects which have none of the asperities of Kurdish (cf. KURD) fall into two categories. To the first belong the dialects of the Great Lours Masamsani, Khūghlu and Bakhtiyari (the latter has a few in-significant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Feith Lurs.

Even the first group possesses very few special features compared with modern Persian. From the point of view of phonetics: -nm at the end of a word becomes -am, -an (muk mon ammanom; dhom ḥomn); n changes into l: pālīlī; intervesicale / gives dh (l): mukshamītād; the combination -kt -st give -kīh and -līt (l): dahktar-lītār, rāfīt; initial kh becomes k: khōlnām, etc. Peculiar to Bakhtiyari is the change of intervesicale m to v: ġūnāv-ğūnā the occasional change of š to s: ṣās = ėsān. It is remarkable that some of these phonetical peculiarities were long ago noted by Handalāv Mustawfī (Tārīkh-e Ġūbir, p. 537—538). He says that Luri (although full of Arabic words) does not have the peculiarly Arabic sounds, like š, ḥ, ẓ, ǧ, etc. Inflection: Plural in -č (švānč); accusative in -m instead of -m: ţām, got = mānu: feitation of the present: ʃ instead of Persian m; first Persian plural ending in -mān(š): škūrāmān = nikšām. Luri usually forms the pretende of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fās) which
give the preterite a passive construction. Vocabulary.

In the present and the preterite stems Luri usually follows Persian but we find stems and words unknown in Persian: زُمان, نَمان، "to throw"; نَرُن, اَنَارُن, "to be able"; نِی, "eye", etc. From the Mongol period, Luri has kept several expressions like: نَرُن, "chief of a clan"; نَسُن, "official"; کَریکُن, "guard of the khan"; in Eastern Turkic "camp, lager", cf. Burdaw, it. 102; کَریکُن, "encampment", in Mongol, کُریکُن, "camp, tent".

As to the Felli group, their dialect differs very little from ordinary Persian (Mann: "weiter nichts als ein stark abgeschilfertes Persisch").

The Luristan is a few islands of Kūrīsh of some importance. Such are in the north the Lur tribes [q.v.]. Among the Felli, the Maliki group (on the frontier of Kirmānshāh, at Hulānam, and farther south) speaks a southern Kūrīsh dialect like that of the Kullur. The Kūrīshīhān group (to the south of Pusht-i Kūr) speaks a "Kurmandji" Kūrīsh. Linguistic conditions in the Pusht-i Kūh still require further study.

Literature. The Lur tribes and especially the Bakhtiyārī have a rich popular literature, fairy tales, epic fragments, celebrating the exploits of their heroes (like Muhammad Taḵi Khan Čaj-Lang and Hājīdīt Hājīt Haf-lang), lyrics, songs sung at marriage (zāma) and in cradle-songs (čalo). These pieces are often pretty and full of sentiment; of the collections by O. Mann and Zuakoowski (the latter published an article on Persian and Bakhtiyārī lullabies in the Journ. Mus. Xav. du. Pressoir, Jan. 1899); D. R. K. Lorimer and E. O. Cameron, 1. Tr. Trans., London 1909, p. 107–134, translation only.

History. On the participation of the tribes of Kūrīshīhān and Fāsī in the fighting between Arabs and Persians in the early centuries of the Hijrī calendar (q.v.). The Carolingians interfered directly in the affairs of the country, especially in Luristan (q.v.). The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Kūrīshīhān, at Shirāz, Isfahān, Hamadān and on the Zagros: the Saffarids, Būyids, Kūkāwhīds, Ḥasanawīds and their successors of the family of Abu l-Shawk (cf. the article Kūrīshīhān).

We have coins of the Būyids struck at Iṣfāṣī (Codrington). In 532 the Būyid army marched through Luristan (Ṣūs — Shāʾīrūk-hāst — Karājī). The Ḥasanawīd Kūds whose capital was at Sarmādī (south of Bāstān) extended their dominions into the valley of the Karkha. Shāʾīrūk-hāst (= Khurramubad) formed part of their possessions about 400 (1009) (Din al-Aṣghir, it. 89; Taḏīrī al-ʿawma, ed. Amedroz, ii. 291, itt. 451). The Kūkāwhīd Garāshāp maintained a siege by the Saljuqs in Shāʾīrūk-hāst (453 = 1062). The amirs of this last dynasty later settled in northern Luristan: the family of Zangi b. Bursuq in Shāʾīrūk-hāst before 499 (1005), Ḥisām al-Dīn Alphāghī at Dūz-i Malki on the Karkha before 549 (1154) (Rūhsat al-Salṭanā, G. M. S., p. 285). A Turk Ḥiṣām al-Dīn Shīhāka or Aḵsāri is mentioned as lord of Luristan and of a part of Kūrīshīhān between 547 and 570. A long inscription (Kūfī?) on a stele near Khurramubad is still undeciphered (cf. a copy in von Bode, ii. 298; Rawlinson thought he recognised in it the name of the Atabeg Shajāʿ al-Dīn but according to Curzon it has an earlier date [517 = 1123]).

In any case all attempts from outside to subdue Luristan or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Aḥtabeks.

The principal source for the domestic history of the country is the Tarīḵ-e Gūzīdah (730 = 1330) based in turn on the Zubštāt al-Tawqīrāh of Ljumal al-Dīn al-Kāshānī (of which the Preussische Staatsbibliothek has only the first volume, No. 368 of Pertz's Catalogue). The Madīna al-ʿAṣāb (c. 742) is based on independent oral tradition but is less accurate. The Dāftār-i-Ābān although late (its author Maḥmūd al-Dīn al-ʿAbān in 1752) uses unpublished data. The Maḥsura (1105 = 1693) is based on the Zubštāt al-Tawqīrāh or perhaps a good copy of the Tarīḵ-e Gūzīdah. According to these sources which supplement the statements of the Arab geographers, the situation in Luristan about 902 (1300) was as follows:

The ShīṬ [q.v.] — who are not mentioned by the Arab before the Mongol epoch — occupied a part ("half") of Luristan. The viceroy of ShīṬ (Tabrīz proper (Tarīḵ-e Gūzīdah, p. 537 and 539) had a governor named Naḵḏ al-Dīn Akbar (according to the Madīna al-ʿAṣāb the title Naḵḏ al-Dīn al-ʿAbān was hereditary among the ShīṬ) while the Lur territory under the ShīṬ (probably Kūh-Golū) had a ḥūsūs Naḵḏ al-Dīn Maḵām whose family had been prominent in the country since the Sassānian period; he was one of the Rūshīhān tribes which the Tarīḵ-e Gūzīdah mentions among the Lur tribes. The rest of Luristan was ruled by a family of Lur princes (independent of the ShīṬ) of whom Baḏr ruled in the Great Lur and his brother Manṣūr in the Little Lur. Their dates are uncertain. Baḏr's successor was his grandson Naḵḏ al-Dīn Muḥamad
b. Khâhil b. Badr (according to the Madjma' al-
Anáh, Naṣîr al-Dîn was a nephew of Avarān
[Rang] b. Muḥammâd b. Hîlî), Naṣîr al-Dîn was
deposed by the Pāčławi Kûrsâ who founded the
dynasty of the Ata'bâgs of the Great Lur and
relied for support on tribes who came from outside
Luristan (cf. above under Ethnology). The same
Pāčlawi drove the Shûl out of their settlements.
We know nothing of Manšûr, brother of the
above mentioned Badr. The tribes of Little Lur
were directly under the caliphs and in the north
were subjected to the invaders. The founder
(about 580) of the native dynasty of the Ata'bâgs
of Lur-i Kâkî [q. v.] had disposed of a rival
Sûrkâb b. A'yâr (probably a scion of the dynasty
of Abu 'l-Sâwh which was called 'A'îyâr/Mânûz;
cf. the article Kûrâsà).
The history of the two dynasties of the Ata'bâgs
is filled with feuds, murders and executions but
in domestic affairs the state of the country was
fairly prosperous. The Ata'bâgs built bridges and
madrasas (îmân Bâşûna) and secured a peaceful
existence for the inhabitants (cf. Tarîkh-i Gâzûda,
p. 550). The revenues of each of the two Ata'bâgs
were estimated at a million dinârs while each of
them paid to the Muslim treasury a tribute of 91,000
dinârs only (Naṣîr al-Anâh, p. 760).
In the interval between the Mongols and the
rise of Timûr, the two Ata'bâgs were vassals of the
Mûsâfârâids. In 758 and 759 Timûr ravaged
Little Lur but treated the lord of Great Lur more
kindly. In 785 Timûr passed through Kûh-Gâlû
and Shûlîstân. The Timûâids (cf. the article Bâskâra)
consolidated their power in Luristan and in 837
the last Ata'bâg of the Great Lur disappeared.
Sha'fawî period. The lords of the Little Lur
maintained their position and by intrigue even
succeeded in extending their power over the plain
to the west of the mountains of Pusht-i Kûh.
After the execution of Shâh-wardi Khân, Shâh
'Abbâs installed in his place a wâli descended
from a lateral line of the old family. The posses-
sions of this Wâli, Husain Khân, were, however,
somewhat reduced.
After the disappearance of the dynasty of the
Great Lur the power had passed to the chiefs of
the tribes composing this federation. Under Shâh Tâmahâ-kp we find the title of Sârîr of the local
âdm (a synonym of the chief of the principal
clan, the Astaraki. Tâdî-nur, having neglected his
duties, was executed and replaced by Mîn Djaâhândîr
Bakhiyârî (the Astaraki and Bakhiyârî had come to
Luristan after 600; cf. Tarîkh-i Gâzûda). Djaâhândîr
under the guarantee of Shâh Rustam of the Little
Lur pledged himself to supply annually to the
Sha'fawî treasury 10,000 mules. In 974 the governor
of Isfâhân was sent to remind him of his obli-
gation (Shâraf-nàma, i. 48). Henceforward the Bak-
hiyârî tribe becomes of the first rank and, as usual,
gives its name to the whole confederation.
As to the Kûh-Gâlû territory, it was governed
by Khân of the Turkoman tribe (Shâh-i Kavân) of
Afsâh settled among the Lurs. In 988 (1530) a
dervish impostor claiming to be Shâh Ismâ'l II
had a considerable success among the Džâkî, Džâ-
wânsî and Bânânsi tribes who killed several Afsâh
governors. In 1007 as a result of the excesses
committed by the Afsâh as well as by the Lurs,
the governor of Fârs, Alah-wardi Khân, established
the direct centre of his government in Kûh-Gâlû
(Tarîkh-i Samâ'î, p. 198, 358).

We do not know under what circumstances at
the end of the Sha'fawî dynasty (Fârs-nâma-yi
Nàjîri) the group of Mâmûsâni tribes, who had
migrated into the Great Lur (after 600) occupied
the ancient Shûlîstân (cf. 837). After the Sha'fawîs:
During the troubles provoked by the appearance of the Afgânîs before Iyâhân, the wâli of Luristan, 'Ali Mârdân Khân
Feiîl (a descendant of the Husain Khân appointed
by Shâh 'Abbâs), played a considerable part. With
5,000 of his men he took part in 1135 (1722) in
the defence of the capital. He was even appointed
commander-in-chief of the Persian troops but the
other Khâns refused to take orders from him.
When the Turk invaded Persia in 1725 'Ali
Mârdân Khân abandoned Khurramishâh (which
was occupied by Ahmad Pâshâ) and retired to
Khuzyzstân from which he undertook a diversion
against Bâhådîd. The Turks who had gone through
the Bakhtîyârî country and reached Fârûzân had
Balîflour, London 1831, p. 115, 124, 147, 153,
who was an eye-witness of the events; Hanway,
The Revolutions of Persia, ii. 140, 159, 168, 238;
Malcolm, History of Persia, London 1829, ii. 60-
61; von Fodê, Travels, ii. 281–283; Hammer,
G. O. K., iv. 227.
About the same time several Bakhtîyârî Khâns
(Kâsîm-Khân, Safî-Khân) are mentioned as resisting
the Afgân and Ottoman invaders but they did
not agree well with 'Ali Mârdân Feiîl. In 1137
(1724) 'Ali Muḥammad Husain Khân Bakhtîyârî
recognised as his suzerain a certain pretender
who claimed to be prince Safî Mirzâ. The latter's
headquarters were in Kûh-Gâlû; he was not taken
to Feiîl till 1140 (1727) (Hanway, Tarîkh-i Afsâhî,
p. 178; 'Ali Mârdân Khân, Tarîkh-i Djaâhîn, p. 23);
Tâbra, 1284, transl. into French by Jones, London 1770,
xxvii). The Afgân do not seem to have penetrated
into the Bakhtîyârî country and their expedition
in 1724 against Kûh-Gâlû was a fiasco.
By the treaty of 1140 (1727) the Afgân Aشرف
occupied Luristan to Turkey with other western
provinces. The Turks kept it (nominally) till
1149 (1736) when Nâdîr reestablished the status
quo (Hanway, ii. 254, 347; von Hammer, G. O. K.,
iv. 255, 317). Under Nâdîr a certain Turkoman chief named
Bâhå-Khân Câwûshî (Cawûshî) was appointed
beglerbeg of Luristân-Feiîl. On the other hand
'Ali Mârdân II Feiîl was entrusted by Nâdîr with
diplomatic negotiations in Constantinople. Nâdîr
in 1732 passed through Kûh-Gâlû with his troops
where Muḥammad Khân Balaç (the claimant to
Shîrâz) was defeated. The local Afsâhs had to support Nâdîr, who was one of their tribe. Several
expeditions were sent against the Bakhtîyârîs among
whom a new chief of Afsâh Mamûn-wân (Câhâr-
lang) had collected together the malcontents.
In 1732 Bâhå-Khân Câwûshî was sent against him
for the first time. In 1149 (1735) Nâdîr Shâh
took the field against him in person going via
Djûpâlaç and Bûrûstûd. The Bakhtîyârî country
was several times invaded but the main blow was
directed against the little explored country south
of Shîrûrân-Khân, 'Ali Mârdân Feiîl, captured and
executed. The Bakhtîyârîs were decimated and
exterminated. A little later a Bakhtîyârî detachment distinguished itself in the assault on Kûndâhâr (Mârdân Khân,
The depaited Bakhtiyari returned from Khurasan immediately after the death of Nādir (Tāvārīq-āl hād Nādirīya, ed. Mann, p. 26) and when the dynasty of the latter was extinguished the Bakhtiyari chief Abu Mardan Khān (who is not to be confused with the two Wallis of Luristan-i-Felūk) attempted to play a big part. In 1163 (1750) along with Karim Khān Zand he set up at Isfahān a scion of the later line of the Safawids (Ali Dāvid under the name of Ismā‘īl III). The career of "guardian of the sovereign" acted by Nādir seemed to be certain for him also but Karim Khān gained the upper hand; the troops of Abu Mardan who included Lāk of the tribes of Kālrūr and Zangana were defeated in 1752; he escaped to Diwāndār but died there by the hand of an assassin cf. Mirzā Šāhīk, Tāvārīq-ī qāl- ī gūč, quoted by Malcolm, ii. 61 and note 7, Hamme, G.O.R., v, 757 477, London, The History of the Shahs of Persia, London 1887, p. xxxvii, Curzon, ii. 282.

Karim Khān [q. v.] who had disposed of his Bakhtiyar rival was himself a Lāk of the tribe of Zand, settled in the immediate neighbourhood of Luristan-i Felūk. On the movements of population in his time, cf. the articles KURIR and LAK. In 1200 (1785) when Lūfard Khān Zand had to fall back on Shirāz a number of Laks and of Turks assembled at Isfahān under former partisans of Ali Mardan Khān but the town was soon occupied by Ağa Muhammad Kādir who had nothing better to do than attack the Bakhtiyāris (Abū al-Karim Shīrāzī, Tāvārīq-ī Zanjīda, ed. Beer, p. 29; Malcolm, cf. cit. ii. 179 n.) which injured his popularity among the tribes.

The Lur Bakhtiyāri country was never completely assimilated during the century and a half which the Khājās reigned. A resume of the history of the Bakhtiyāris in the sixteenth century has been given by Curzon in Ch. xxiv. of his Persia. At first the Khājā family, descended from the brother of Abu Mardan Khān (cf. above), came to the front but the expedition of the governor of Isfahān Manuchīr Khān Muḥammad al-Dawla (whose real name was Yenikolopoulos; he was an Armenian from Tihr) in 1841 put an end to the career of the Khājā Muhammad Tāqi Khān and the family did not recover. About 1850 the Bakhtiyāri (or Badawand, a family which claimed to be descended from a shepherd named Tāpi) rose to prominence in the Fāhrāng group and in spite of the intervention in 1852 of its chief Hāsīn Kādir Khān (Hāsīn Kādir) of prince Žīl al-Sulṭān retained its wealth and its importance. The Bakhtiyāris played a considerable part in the Persian revolution which ended in the deposition of Muḥammad ‘Alī Shah Khājā in 1909. The Bakhtiyāri country all this time enjoyed perfect autonomy under the rule of its Sālimān and Bākā.

The centralising efforts of the Khādās had more effect in Luristan-i Felūk (formerly Luri Kūčk) in as much as, as a result of the governorship in Kirmānshāh of the energetic prince Muḥammad ‘Alī at the beginning of the sixteenth century, the old feuds of the actors of Luristan found its relics reduced simply to the possession of Pachī Kat (q. v. and Ėrīkow, p. 237). The Pachī Kat formed the Persian province of Luristan. Muḥammad ‘Alī Mirzā with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Gūrān regiment. After the famous expedition of Manṣūr Khān (1841), his nephew Sulaimān Khān Shahmān al-Dawla, governor of Khūzestān, maintained order in Luristan but for the second part of the nineteenth century Luristan was plunged more or less into a state of anarchy. It was not till 1900 that prince ‘Alī al-Dawla was able to restore order in Luristan and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Lorimer) on their way to Kirmānshāh were attacked and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and in Persia generally) by the appearance among them of the rebel prince Sālār al-Dawla (several times since 1905). In spite of the efforts of the Persian government Luristan remained closed till 1917, when with the help of foreign representatives several caravan trains were sent to Bārdnjār. About the same time the Persian government confirmed the rank of wālī of Pachī Kat on Nāzīr ‘Alī Khān Amrā (cf. the article LAK.); cf. Edmonds in the Geogr. Jour., 1922.

It is only since the accession of ‘Alī Khān (later Shāh ‘Alī Pahlawī) that the situation in the region inhabited by tribes of Lur origin changed radically and the authority and the Central Government enforced respect for itself through the whole of the south-western provinces.

LUR-I BUZURG, a dynasty of Atābegs which flourished in Eastern and Southern Luristan between 550 (1155) and 827 (1423) the capital of which was ‘Īsdāj (Mālamīr q. v.).

The eponymous founder of the dynasty, also known as Fāglawī, was a Kurd chief of Syria named Faqīla. His descendants (the Dījānār mentions 9 predecessors of Abū Tāhir) migrated from Syria and passing through Meyāsārtīkīn and ‘Ādharbāījān (where they made an alliance with the Amir Dādārī [7] of Gīlān) they arrived about 560 (1166) in the plains north of Uṣūtūrūn-Khū (Luristan).

Their chief Abū Tāhir (b. Abī b. Muḥammad) distinguished himself in the service of the Saljuq Āmūr (543-556) in an expedition against the Shāhā⎡ekā (q. v.). As a reward Šāhā⎡ekā gave him Pachī Kat and agreed to send him to conquer Luristan. He succeeded in this. Abū Tāhir assumed the title of Atābeg and later quarrelled with Āmūr and made himself independent (c. 550). (The Ma‘ṣūr al- ‘Ashīb seems to confuse several individuals under the name Khād ‘Alī, to whom it attributes the following successes: the defeat of the Shīlī [q. v., the deposition of ‘Īsdāj al-Dīl, last descendant of Bādīr, ruler of Luristan, and the defeat of the Khūzestān troops commanded by the Turk Eshek].

Under the son of Abū Tāhir, (2) Malik (sic) Házāras (600-626 or 650), Luristan prospered and new Arab and Iranian tribes flooded into it. Házāras drove out of Luristan the last remnants of the Shīlī and invaded Luristan proper. The Shīlī migrated to Fās. Házāras disputed with the Saljuqs the possession of the fortress of Mālamīr (Mungashi, S. W. of Mālamīr). The possessions of Házāras were extended up to a distance of 4 parasangs from Isfahān. The Caliph
Nasir (575–622) confirmed to Hazerasp the title of Atehbeg. On the other side Haizerasp maintained friendly relations with the Khawarijshah Muhammad and gave his daughter in marriage to his son (Aqma) al-Din (Qudshuqshu, G.M.S., xvi/2, p. 113, 204). [The Qudshuqshu mentions two sons of Haizerasp: 1Mula al-Din (d. 646) and Nasrat al-Din Kalla (d. in 649); the former bound Zarda-Kagh, where several members of the family were afterwards interned.]

(3) Tikla (c. 655–656), son of Haizerasp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atehbeg of Faras, who was indignant among other things at the expulsion of the Shii from Luristan. Tikla took from Hisam al-Din Khaliqi (d. in 649) certain lands of Luri-Kaikik. He defeated the generals sent against him from Khuzistan by the caliph. During the Baghda campaign of Hulagu Khan (656), Tikla accompanied him in Khurasa-nomad's division. He did not however conceal his feelings about the treatment inflicted on the caliph and Muslims. Hulagu took vengeance at this and Tikla fled to Luristan and shut himself up in Mandaqsb. Hulagu pardoned him but later changed his mind and had him executed in Tabriz. Tikla was buried at Zarda-Kagh.

(4) Shams al-Din Alp Arghun succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Ildhadji and at Sis (probably Sisang on the Karun above Shushgar) and his summer one at Djuy-i sard (on the upper waters of the Zanda-rud) and at Bursa (source of the Kuran). His son (5) Yusuf Shah had spent his youth with Abaka-Khan (663–680) and even after appointed in his father's stead remained at the Mongol court with 200 horsemen. He took part in the war against Burak-khan (q.v.) and distinguished himself in a skirmish with the Dulasans. To the possessions of Yusuf Shah Abaka added Khurasa-nomad's region of Khiyibar. He however removed the capital of Firuzan (7 farsakhs above Ifshar) and Djar-bahakhan (Gulpayagan). Yusuf Shah went to Kuh-Giljya and attacked the Shiits settled in the modern Massan ski country east of Kuh-Giljya. After the death of Abaka, Yusuf Shah was forced against this will to go with 2,000 cavalry and 1,000 foot to the help of Ahmad Takalgar. The latter was defeated (653) and the Lurs retreated from Tabas to Natanz across the desert where the majority died of thirst. After the accession of Arghun, Yusuf Shah went to pay him homage and interceded on behalf of the former vizier Khwajah Shams al-Din who had taken refuge in Luristan (cf. d'Olhsson, iv. 5).

His son (6) Afsar-i-yab sent his brother Ahmad to the court of Arghun while he himself remained in Luristan where he put to death the members of the former vizier family. Their relatives having taken refuge in Ifshar, Afsar-i-yab sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghun (690). The Lurs killed the Mongol governor of Ifshar, Afsar-i-yab appointed members of his family to govern in Hamadan, Faras and in the territories reaching to the Persian Gulf and even began to march on the capital. The Mongol general Amir Turak was defeated at Khoroud (Kohrud, near Kasjan). Kalikhth Khan sent Mongol troops against Afsar-i-yab and troops from Luri-Kaikik. Afsar-i-yab shut himself in Mandaqsb but after some time went to Kalikhth who pardoned him. Returning to Luristan, Afsar-i-yab massacred his own relatives and a number of the notables. Ghazan Khan (694–703) at first showed himself favourable to Afsar-i-yab but in 696 on the complaint of Amir Hurkudaq of Fars, Afsar-i-yab was tried and executed at Mahwund (5) of Farahin. The rank of Atehbeg was then conferred on his brother (7) Nasrat al-Din Ahmad (from 695 to 730 or 733) who had spent most of his life at the court of the Ilkhans. According to the Madjma al-Asab he introduced Mongol institutions (zayn-i mo'add) into Luristan. Hamdallah Mustawfi praises his able and prudent administration which repaired the damage done by Afsar-i-yab. He was a friend of men of religion and several books were dedicated to him, like the Turshik Madjma fi Ahwi-i Malak-i 'Ad-djam of Taqi Allah Kazwini. The Madjma al-Asab gives him the title of fir. According to Ibn Battuta he built 160 madrasas (thermataghe) of which 44 were at Ildhadji and he had roads cut through the mountains.

His son and successor (8) Rukn al-Din Yusuf Shah II (733–740) was also a just ruler. His lands (Madjma al-Asab) extended from Basia and Khuzistan to Lahamansin (2) and Firuzan. He was buried in the madrasa of Ruknabad.

His successor was his brother (9) Muzaffar al-Din in Afsari-yab II (Ahmad). Ibn Battuta travelling via Majdul-Kamnus-Tustar, visited the capital Ildhadji or Malamir. He found the prince given to wine. The Arab traveller describes the peculiar customs of the Lurs which he witnessed at the burial of the son of the sultan. The latter's possessions included Tustar (Shushgar) and extended to Garwati al-Rukh (the modern Kahvarukh in Carmahal west of Firuzan). During the ten days the Arab traveller took to cover this distance he found shelter every night in a madrasa. At the time of the battle (743) between Abbas and Mustawfi mentions among the possessions of the Great Lur Djahalak (apparently the district N.E. of Luristan and west of Gulpayagan).

Next follows an obscure period. According to the anonymous historian of Muzar Iskandar, the successor of Afsar-i-yab was his son (10) Nowi al-Ward ("rose-bud"), who ruled from 736 (?) to 756 and dissipated the treasures of his ancestors. According to the Qudshuqshu, Muhammad Mufid of Faras (713–760) learning of his dealings with Ali Iskandur had him blinded at Basia in 750. His cousin (the Turshik time) (11) Shams al-Din Ta-shang b. Yusuf Shah II (?) succeeded him and ruled from 756 to 780. At this time Luristan became involved in the civil wars of the Muqafsars. When Shah Mansur, making Shushgar his headquarters began a series of raids on the lands of Pasbang, Shah Shudjat (elder brother and rival of Manur, d. 786 = 1534) came to the help of Pasbang. We have coins of 764 and 764 struck at Ildhadji in the name of Shudjat (S. Lane-Foote, Cat. of Oriental Coins in the Brit. Mus., vol. vi. [London 1881], p. 255, 237). After the defeat of Pasbang a struggle began between his two sons (12) Malik Fir Ahmad and his younger brother (121) Malik Hushang in which the latter was killed. (According to the anonymous historian of Iskandar, if he has been rightly understood by Howorth, Ahmad and Hi-
shang were sons of Nawr al-Ward and the former was the immediate successor of his father). Shah Manṣūr drove out Pir ʿAlī al-Madīnī and appointed in his stead a notable named Malik Uwais. When Timūr passed through Luristan in 795 Pir ʿAlī came to meet him at Rūm-Hormez. Timūr later received him graciously at Shirāz, confirmed him by a decree (al-tamghāt) in his hereditary possessions and allowed him to repatriate 2,000 families of Lurs deported by Shah Mansūr. In spite of this in 798, Timūr took as hostages to Samarkand the brothers of Pir ʿAlī Ahmad Affāsīyāb and Manṣūr-shāh. Timūr afterwards divided Luri Buzurg (7) between Pir ʿAlī Ahmad and Affāsīyāb. After the death of Timūr, Mīrzā Pir Muhammad imprisoned Pir ʿAlī Ahmad in Kuhāndiz. He was restored in 811 but met his end in a popular rising. The son of Pir ʿAlī Ahmad (13) Abū Saʿīd, kept for two years a hostage at the court of Mīrzā Iskander at Shirāz, succeeded his father and died in 820. His son (14) Shāh Hūsain died in 827 by the hand of his relative (15) Ghiyāth al-Dīn b. Kāṭūs b. Hūshang (1267). The latter seized the power but the Timūrī Sayf ʿAlī b. Shāhrukh sent troops to expel him and thus ended the rule of the Fāḍlalī family. Later the power passed into the hands of local notables of the Bakhṭīyārī tribes (Sharaf-nāma, i. 48).

(V. Minorsky).

Luri KÜCİK, a dynasty of Atābegs which ruled in Northern and Western Luristan between 580 (1184) and 1006 (1597) with Khuuramäbīd as their capital. The Atābegs were descended from the Luri tribe of Djangrāsh (Djàngarā). The dynasty is also known by the name of Khuuramāshīd from the name of the first Atābeg. (It remains to be seen if this name is connected with that of Muhammad Khurshid, vizier of the former rulers of Luristan before the rise of the Atābegs of Luri Buzurg). After 730 the power passed to another line which later claimed to be of ʿAllid descent; at this time also the title mālik succeeded that of atābeg.

The ancestors of the Khurshidī had entered the service of Ḥisām al-Dīn (of the Turk tribe of Shāhīl or Shūbīn) who ruled Luristan and Khūr-istan about the end of the Sālṣūq period (c. 550–580). (1) Shūdījā al-Dīn Khurshidī b. Abī Bakr b. Muhammad b. Khurshidī was at first Shīhna of a part of Luristan on behalf of Ḥisām al-Dīn but after the death of the latter (in 570 or 580) became independent lord of the whole of Luri Kükī. He waged war on the Djangrāsh (the tribe in which he had originated, but which was then being ruled by his rival Surkhāb b. ʿAlīyār) and besieged their stronghold Diz-i-Siyāh (in the district of Mārūd and in the “wilayet” of Šamāq). The Atābegs had already been masters over him, but as the caliph ordered Shūdījā al-Dīn to deliver up to himself the stronghold of Mārgar (Mungerge north of Kīlāb). In compensation Shūdījā received the district of Ťarāzak in Khūr-istan. Shūdījā al-Dīn drove back the Bayāt Turks who were ravaging Luristan. He led a nomadic life and spent the summer at Kirtī (in Bālā-Gūrava) and the winter at Dulur (Dīh-i Lūrān in Push-i Kūh) and at Malāh (?). He died a centenarian in 621 and his tomb was venerated by the Lurs. His son Badr was killed by his nephew (2) Saʿīd al-Dīn Rastam b. Nūr al-Dīn who became Atābeg and was a good ruler. Rastam was succeeded by his brother (3) Shāraf al-Dīn Abū Bakr and next (4) Izz al-Dīn Garshāsp. The latter married the widow of Abū Bakr, Malika Khātūn, who was the sister of Sulaimān ʿAlī Ahwa, later commander-in-chief of the caliph al-Mustaʿṣīm (Abūḥ should be altered to Alūw, name of a tribe or a district in the time of the last Sādūqīs; cf. Kāḥat al-Sadūqī, G. M. S., p. 346; Qubān-wugūga, G. M. S., xv/ii, p. 153; Nicat al-Kutlūb, G. M. S., p. 107; Defrémy, Rech. sur quatre princes d'Hama-ｄas, 7. A., 1847, p. 177). When (5) Ḥīsām al-Dīn Khalīlī b. Badr b. Shūdījā al-Dīn became Aṭābeh and was a struggle ensued between him and Sulaimān-šāh (Shūhā al-Dīn). The Lurs took Bahār (near Hamadān) but finally Khalīl was defeated and killed near Shāpūr khwāst in 640 (1242).

His brother (6) Badr al-Dīn Masʿūd went to the court of Mangī and returned in the train of Hūlagū. This devout man, an authority on Šahīf law, ruled till 658. He showed great kindness to the family of Sulaimān-šāh, when the latter was imprisoned at the taking of Bahādūd. The sons of Masʿūd were executed by Abaḵā, who appointed Atābeg (7) Tāj al-Dīn b. Ḥīsām al-Dīn Khalīlī (also executed by Abaḵā in 677).

He had two immediate successors, the two sons of Masʿūd of whom (8) Fatāk al-Dīn Ḥasan ruled a part of Luristan (diṭār, wilāyat) and (9) Izz al-Dīn Ḥusain ruled the crown domains (inkīf). The number of their troops was 17,000. They chastised the Bayāt and reunited under their control all the lands between Hamadān and Shūhtar and between I-fafān and the Arab lands. Both died in 690.
other son of 'Izz al-Din, took advantage of the decline of the Timurids to extend his territory. He plundered Hamadan, Gulpayğer, Isfahan and even undertook an expedition to Shahrizur where the Bahārūl Turku slew him in 871 (or 873). His son (19) Shāh Rūstam supported Ismā'īl I; at this period the lords of the Little Lur had already adopted the theory that they were of 'Alid descent. The son of Rūstam (20) Qōhār (or Oghuz) accompanied Shāh Tāhmasp on his campaign of 940 against 'Ubayd Allah Khān and during his absence his brother (21) Dūstāngīr wired for power. He was executed in 949. The governor (lala) of his son (22) Rūstam Shāh handed over the latter to Tāhmasp Shāh who imprisoned him in Alamūt while Muḥammad, another son of Dūstāngīr, was hidden by the Lurs at Cangula. An impostor in Luristan gave himself out to be Shāh Rūstam Tāhmasp, then released the true Rūstam who recovered his fief but had to hand over a third of it (do dang) to his brother (22b) Muḥammad. At the instigation of the wife of Shāh Rūstam, the governor (of Shāh Rūstam) sent several Muḥammadmads who was shut up in Alamūt. The sons of Muḥammadmads plunged Luristan and the adjoining provinces into great disorder. Ten years later while Muḥammadmads escaped, and conquered Luristan while Shāh Rūstam took refuge at the court of the Shāh. Muḥammadmad established good relations with Tāhmasp and Ismā'īl II but after they declared Shāh Khusābaba after his father's death. At the time of the occupation of Nīhawand by the Turks Shāhwardī showed some signs of independence. In 1066 good relations with Shāh 'Abbās were re-established with whom Shāhwardī made the most of his alleged descent from 'Abbās b. 'Alī and his Shī'ī (tasā'ī) wc 'Abbāsı). Shāh 'Abbās married his sister, gave him a Safavid princess in marriage in 1002. Shāhwardī in a pitched battle killed the governor of Hamadān Oghurlu Sultan Bayāt who was trying to levy taxes in Būrdjīr. Shāh 'Abbās, filled with wrath, left the Khorāsān front and hastened to Khurramābād. Shāhwardī crossed the Saimara (Karkhā) and escaped to Babylon. Luristan was given to Sultan Husain b. Shāh Rūstam. In 1003 Shāhwardī was pardoned and restored but he was not long in relapsing. In 1006 Shāh 'Abbās took the field against a second time. Shāhwardī was besieged and slain in the fortress of Cangula (in Pusht-i Kūh). Sultan 'Abbās b. Manṣūr beg Salwī (?) was given Luristan, except Saimara, Hindma (?) and Pusht-i Kūh which were given to Tāhmasp Kūli I. This may be regarded as the end of the dynasty of the 'Abbāsids. Only (q.v.) claims descent from Sultan 'Abbās who was a cousin of Shāhwardī.

(V. Minorsky)

LURÎSTÂN, "land of the Lurs", a region in the S.W. of Persia. In the Mongol period the terms "Great Lur" and "Little Lur" roughly covered all the lands inhabited by Lur tribes. Since the Safavid period, the lands of the Great Lur have been distinguished by the names of Kûh-Gîliî and Bakhtiyârî. At the beginning of the viii century the Mamansî confederation occupied the old Shîštîlân [q. v.] and thus created a third Lur territory between Kûh-Gîliî and Shîštîlân.

It is however only since the xvi century that Lurî-Keçî [q. v.] has been known as Luristan (for greater precision it was called Luristanî-Feîîîî). In the xvi century Luristan was divided into two parts: 1. Pîsh-Kûh, "country on this side of the mountains" (i.e. east of Kâbir-Kûh) and 2. Pûshî-Kûh (country beyond the mountains) west of Kâbir-Kûh. At the present day the term Luristan usually means Pûshî-kûh while Pûshî-kûh means the Feîîîî country.

The Mamansî territory and the Kûh-Gîliî form part of the province of Fârs. The capital of the Mamansî is at Fâhlîyân (cf. Sulîhî). Kûh-Gîliî (Kûh-Jûlîyân, Kûh-Gîliî) stretches from Bâîhît (west of Fâhlîyân) to Bâbâbâhân; this last town is the main centre for the tribes of Kûh-Gîliî. To the south the Kûh-Gîliî tribes descend as far as the Persian Gulf. The mountains of Kûh-Gîliî and the frontier between its tribes and the Bakhtiyârî are not yet well known. The chief rivers of Kûh-Gîliî are the Aâv-i Shîštî which is formed by the junction of the Khairâbâd and the Zohra and in its lower course runs via Zâïdân and Hindiyân, and the Aâv-i Kûstān or Djârâkh, one branch of which later runs into the Kâtan [q. v.] and the other towards Daurân. On Kûh-Gîliî see the valuable Fârs-nâmâ-yi Nâsî of Hasan Fârâbî (Tahân 1313), the itineraries of Stocqueler, Hausbuch, (Reisen in Orient, Map iv.), Wells and Herzfeld and the general account in de Bode, i. 251–259; ii. 327–358; Ritter, „Luristan“, i. 132–144 is now very much out of date.

The Bakhtiyârî lands stretch from Câhâmâhâlî (west of Ijâfân) to Şûbî-şahr; to the south the Bakhtiyârî march with the Kûh-Gîliî and to the north they go beyond the northern barrier of Luristan (Shiturân-kûh etc.). They are found at Pâralâdân, Barûhûdî, Fûlapûgh, and in the cantons around Bârûjûr (even before 1850 many villages had been purchased here by Muhammad Tâkî Khan Câhâm-Lang). Roughly speaking the Bakhtiyârî occupy the upper basins of the Zâhârâbâd and of the Kûstân [q. v.] above Şûbî-şahr. The works of Layard, Sawyier, Mrs. Bishop, Carston etc. give a very accurate picture of this mountainous country, in the centre of which rise the Kûh-i Râng (12,500 feet high) which forms the watershed between the Persian Gulf and the central Persia plateau. (It may be asked if the name Kûh-i Râng is not the Mongol kûten, "encampment, lagar", found in Luristan.)

The frontier between the Bakhtiyârî and the Lurs proper follows the western branch of the Aâv-i Dîz, an important tributary of the Kûrân. Luristan (Pûsh-kûh) is bounded on the east and west by the convergent streams of the Aâv-i Dîz and the Kâlkh, while in the north the range of the Cîlîn-nâ-bâlîghân, Garî etc. separates Luristan from Nîwâvad and Sîlâgîr (district of Buregîd). To the west of the Kâlkh Pûshî-kûh begins. In the northwest the frontier of Luristan runs to the southwest of the districts of Huzâlân and Hâsan which belongs to the province of Kirmânshân.

The chief left bank tributary of the Kâlkh is the Kâshgâân (Rawâlîson: Kâshgâhân) which is formed by two arms. The northern arms with its tributaries drains the beautiful plains of Hûr-rûd, Alishâr and Kâhâwâ. The southern arm, separated from the northern one by the Yâfî-kûh range, takes the name of the town of Khurrâmâbâd [q. v.] near which it passes. After the confluence of the two arms, the Kâshgân, running S.W., receives on the left bank the combined waters of the Kâwân and Tâyân, which flow from Kûh-i Hâft Fâhlû (south of Khurrâmâbâd) and the northern slopes of the Kûh-i Girôd. These two ranges are at right angles to the mountains which follow the right bank of the Aâv-i Dûz, which they separate from the valley of the Kâlkh. On the right bank the Kâshgân receives the Mûdîyân-rûd, "river of the mare". Above Kâshgân the Kâlkh receives on its left bank several tributaries of less importance still little known (Rûlûr etc.). Below Kâshgân and also to the left bank, the Kârkh receives the Fânû, Lûlûm (Leulum) and Aû-i Zâl. This last river with its tributaries Amârâk etc. rises in the southern slopes of the Kûh-i Girôd. The topography of the right bank of the Aâv-i Dûz is not very well known. The sources of the Baladûtî and its right bank tributary the Kîr-ûb lie a considerable distance to the north. The Baladût-rûd flows into the Aâv-i Dûz between Dîzûfûl and Sûsâ. The Kîr-ûb receives on its right bank the waters of the Kûh-i-ûb which come down from the high valley of Mûngârâ, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Baladût-rûd from that of the Aû-i Zâl. The Sârâ-yi Lur plain formerly well irrigated lies north of Dîzûfûl and south of Kûbû ("pitch-water") whose naphtha spring has been known since ancient times. It was probably here that Darius set up a colony of Greeks (Ritter, i. 201).

The interior of Luristan presents a series of mountain ranges, which stretch N.W. to S.E., the direction usual in Persia, and rise one behind the other between the plain of Susiana and the northern barrier (height about 9,000 feet).

Ancient history. The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Sûsâ, where there have been found traces of occupation going back to the third millennium B.C., lies just at the entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone are found more to the south-east. Just as the Atabegs of the Great Lur had for their capital Ijâfân (= Mâlamir) so in very early times, the lords of this district, the kings of Kâfîrî (Hâpirî), whatever were their relations with the rulers of Susa had control at least of
the Körün valley. The site of Mālamīr (cf. de Bode, Layard, Jéquier in de Morgan, Dic. en Pers., 1902, ii. 133—143 and Hüsing, Der Zugrers u. seine Völker, Leipzig 1905, p. 49—59) with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs is an important point. The recent discovery by Herzfeld (Reisbericht, Z.D.M.G., 1926, p. 259) in the Mānasīn region of a bas-relief and bricks bearing Elamite characters (1500—1000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lur mountains. Kūh-Gūll lying between Susiana and Persia may correspond to the still unknown region of Aškan (Aναν) out of which came the ancestors of Cyrus the Great. On the survival of this name near Shūštār, cf. Grundr. d. iran. Phil., ii. 418 (according to Rawlinson: Assān).

The antiquities of the valley of the Upper Körün (the two Susān, Lurdagān, the mounds of Salm, Tūr and Tājad) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bakhštīyār lands are "singularly devoid of any ancient landmarks".

For the west part of Luristān in the strict sense of the word see the articles MĀZĀRĀN and PAKHTI Kūl. No monuments of very great antiquity have yet been discovered in Pashābūth except the caves (Median?) of Se-de-rān between Mānmārā and Khurramābd, Čīrīkow, p. 129. The early inhabitants of Luristān were the Kāshāsh = Kōrōla who imposed their rule on Babylon between 1760 and 1650 B.C. The Achemenids paid the Kōrōla for the right of passage by the Babylon—Ecbatana route. These highlanders were temporarily subdued by Alexander the Great. Antiquity, pursued by Eumenes, traversed the heart of the Kōrōla country, according to Rawlinson on the route Pul-i-tang—Keilān pass—Khurramābd (Ritter, Erdkunde, i., p. 335). The Kōrōla (who should perhaps be distinguished from the Kūrtān = ūnāj = Khūz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European. Cf. E. Meyer, Gesch. d. Altert., 1/2, Berlin 1913, § 455; Hüsing, Der Zugrers, p. 24 and Atran in Les langues du monde, Paris 1925, p. 283. [The name Kāshāsh has perhaps survived in that of the river Khashīn.]

It is also probable that northern Luristān was more or less dependent on the land of Ellīpī, often mentioned by the Assyrians. This region, which was considerably influenced by Media is now located in the province of Kermānšāh. Cf. Andreas, Alisus, in Pauly-Wissowa 2; Streck, Z. A., xxv., 379; Cambridge Ancient History, 1924, ii., cf. map.

We know very little about the Mathvāi people who (Herodotos, v. 49) were bounded on one side by the Armenians and on the other by the Susians (Reinach, Un peuple oublïé: Les Mathvâis, Revue des Études Grecques, 1894, vii., p. 313—318).

Here we can only call attention to these various ethnic elements buried in the later strata of Iranian invasions. In the name of Parāsād, a canton in the northeast of Khorramābd, we have a reminiscence of the Median tribe of Parātakēnī (Herodotos, i. 110) and of the province of Parātakēnī (Strabo, i., p. 50) which lay between Media and Persia (in Assyrian: Partakā, Partukā; cf. Streck, Z. A., xv., p. 363). The iranization must have been accelerated by the formation of the great empires, Achaemenid, Macedonian, Parthian and lastly Sasanian. There are many Sasanian towns in the valley of the Karkhā. Many Sasanian buildings are attributed by the natives to the Atābeḵī of Luristān, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, Études Geogr., ii. and Études Archéol., Paris 1896—1897, p. 350—374) and the roads which may still be traced on the upper courses of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be seen at Tang-i Sālak (between Bībāhān and Mālamīr) near the Sasanian bas-reliefs (de Bode, i. 353, 364), to the east and west of Mālamīr (de Bode, i. 390, ii. 820: gāddā-yī aštāhān), between Diğıf and Khābū (Rawlinson, A march from Zobāb, p. 93), to the south of Khāwā (gāddā-yī Khurāra, Čīrīkow, p. 216—221). All these works are evidence of a systematic and continuous penetration. But since at the end of the fourth (tenth) century the inhabitants of the plain of Khūzistān had not yet forgotten the Hūz language (Mukaddās, p. 418) colonies of the ancient stocks may have survived in isolated corners of the mountains. The Lardāshīs, who formerly lived in Khūzistān only assumed their present ethnic character under the Atābeḵīs.

The knowledge of the Arab geographers about the Lur country is very summary although they describe the routes between Khūzistān and Fās (cf. Schwarz, Persien, p. 173—180; Aṭṭālān—Sharṣūr, p. 190: Aṭṭālān—Sunnārām), between Khūzistān and Ṣafābān (the road started from Iľājī; Ibn Khuradābīb, p. 57; Mukaddās, p. 407) and lastly between Khūzistān and Dībhāl. As to these last routes, Īṣakhī, p. 156, reckons from al-Lur to Shāpūr-Khwāst 30 farṣakh, from there to Lāchtār (= Ašīlār) 12 farṣakh, from there to Nibāwān 10 farṣakh (the road must be that which follows the upper waters of the Baladāl). A few details of this route are cleared up by Mukaddās, p. 401, who gives the following eight stages: Karad (cf. the article SUTANABAD)—Wafrāwānd—Jārīkān—Khurādī (certainly = Hūrūd, Hūrūd, north of Khurramābd)—Sāhur—Khawwās (certainly = Shāpūr-Khwāst = Khurramābd)—Khīāš (certainly = al-Khan—Razerān—al-Lur. Mukaddas, p. 418 also makes one suspect the existence of a road along the Āb-i Dīz: from al-Lur to al-Dīz, two stages, from there to Rayāgān one stage, from there to Gūlpāygān 40 farṣakh through uninhabited country (māfārc). The inhabited places in modern Luristān may be noted the following: the town of al-Lur, 2 farṣakh north of Dūzūfūl (Kanṭarat An-dānīsh) the site of which should be sought in the plain of Sābīr-yī Lur near Sālīlābād; the town of Lāchtār, now disappeared, was certainly in the plain of Ašīlār and the town of Shāpūr—Khwāst. The exact location of the latter is important for the comprehension of certain events in the fifth (eleventh) century (Ibn al-Aljīr, ix, 89, 146, 211; x, 166; Ṭūrārī—Gusčā, p. 557). Rawlinson had identified Khurramābd with Shāpūr-Khwāst (cf. Le Strange, The Lands, etc., p. 202, p. 668). The combined evidence of Iṣakhī, p. 196 and 201, of the Nūchāt al-Kalīm, p. 76 and 176 and particularly of the itinerary of Mukaddās, p. 401 fully justify Rawlinson's identification (against Le Strange). The change of name, or moving of the site (cf. Schwarz) must have taken
place in the xiith century. The Achašt al-Kullūb (740 = 1340) which does not include Şahār-ḵāš in its enumeration of the towns of the Little Lur is the first source to mention Khurramabad (a town in ruins). It is on the other hand not at all probable that the wāliyaš of Mān-rūd, the alleged ancestral home of the Lurs, is near Khurramabad. It should be sought to the north of the town of al-Lur near Mān-gara (Māngara). Samah, mentioned in the Tu'īrīḥ-i Gūdcha, p. 548, was in Mān-rūd; its fortress Dīz-i Siyāh must correspond to the fort of Dīz which defends the entrance to Māngara and was destroyed by the wāliyaš of Pūšt-i Kūh in 1895 (Mann, Die Mandarten der Lur(stämme), p. 117). Finally the stronghold of Girīt (Tu'īrīḥ-i Gūdcha, p. 549, 542) is mentioned by Girīk, p. 133, among the encampments of the tribe of Pāp; the south of Khurramabad.

Economic Conditions. Apart from the Bakhštīārī districts near Isfahān where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing. But the future of the mountainous country which lies like an amphitheatre around the plain of Khūzestān is very promising. The Lur lands are rich in minerals and especially in petrol. The famous wells of Masjud-i Sulaimān (Maidūn-Naftūn), belonging to the Anglo-Persian Oil Company are in the middle of Bakhštīārī territory (between Shīhghtar and Mālamir). The same Company has the concession includes all the petrol-bearing lands in the south of western Persia is putting into operation its claims in the Kūh-Gull region (to the north of the port of Gānūūa) etc. (cf. Schwerer, Die türkisch-pers. Erdölverkommen, Hamburg 1919).

Lut, the Biblical Lot has in Muslim legend, even as early as in the Koran, an important place which he does not have in the Bible. In the Hagada as his story is associated with the downfall of the sinful Sodam (not however mentioned in the Koran) he appears to Muhammad as a prophet of punishment along with Had, Sall, Nuh and Shu’aib as predecessors of Muhammad. When Muhammad is accused of being a liar he can console himself with the reflection that he was chosen by the people of Nuh, to be Thamud, the people of Ibrahim and the people of Lut also called their prophets liars (Sira, xxii. 43). Lut’s people called him Lut, l. 133; ishva Lut are usually located between Thamud and Madyan. Lut in the Koran becomes a nazaral, messenger of Allah (xxvi. 160; xxxvii. 133), a rasul umin, a reliable prophet (xxvi. 162), a participant in wisdom and knowledge (xxii. 74). When Ibrahim warns his people, Lut believes him (xxii. 25). Lut is sent to sinners who forbid hospitality (xxv. 70), waylay strangers and practise sodomy and cruelty such as no other people had before them. They threaten him that they will banish those who lead such a moral life saying: "If thou preachest right, bring God’s punishment upon us" (xxix. 25). God thereafter sends his angels of punishment; Ibrahim’s intercession is vain (xxi. 77, 78). The angels come to Lut. His people demand the visitors for sinful purposes. In vain Lut offers his daughters instead. He feels himself helpless. The angels calm him, saying: "We shall save thee, only no one must turn round; thy wife will do it". The city was turned completely upside down (xi. 84; xv. 74); stelgid stones, marked by God, rained upon it.

The Koran mentions no other name in the history of Lut. The destroyed city is called al-muthallakah (litt. 54) of which the plural is al-muthallakat (ix. 72; ix. 9) corresponding to the Hebrew melpha, which is used in the Bible of Sodom.

The Koran commentators also know the Biblical story quite accurately (Tabari, ed. de Goeje, i. 346, 347). They are able to fill all the gaps and give all names. The sins of Sodom are fully described. Sodam has a king of the line of Nimrod. The inhabitants worship idols. Lut admonishes them for 40 years (al-Kisâi). Then God sends three angels Gabriel, Michael and Israfil (in al-Kisâi al Goul-taker Assrel). De Goeje translates: "Will ye destroy a people among whom there are 300 believers." No. — 300, 200, 100 ..." No. — 14 believers: No. — This number is assured, Ibrahim comforts himself, in the belief that Lut’s wife is one of the believers. The angels must not destroy Sodam until Lut testifies four times to its unfaithfulness. They at once meet Lut, who testifies. After meeting others they encounter Lut’s daughter. She invites them into her father’s house. Lut orders his people to be silent, especially his wife who has disobeyed him for 40 years (al-Kisâi). But Lut’s wife deliberately makes a light to show they have visitors or she ostentatiously procures salt (this is why she becomes a pillar of salt) or she actually says: "Young men have come to stay with us, with more beautiful cheeks and sweeter fragrance than I have ever seen".

The people demand the young men; Lut offers his daughters. "If we wanted thy daughters, we would know where to find them", they reply. Lut bars the doors. At the bidding of the angel he opens them. Gabriel blinds the intruders with a blow of his wand. The women say: "Save yourself!", they cry, "Lut’s house is bewitched." As the hour of destruction is at hand, Gabriel (according to others the Angel of Punishment Michael) turns the town upside down, and lifts it up so high that the angels in heaven hear the crowing of the cocks and the howling of the dogs of Sodam. Stelgid stones fall; on each is marked whom it is to strike. As Lut’s wife looks sympathetically on her people, she is struck by a stelgid-stone. The number of killed varies between 4,000 (Thalabi) and four millions (Tabari, ed. de Goeje, i. 342). All perished, except one who fled to Mecca, brought his stelgid-stone to the haram where it hung for 40 days between heaven and earth, until it finally slew the man who brought it there (Thalabi).

The Muslim legend gives names to everything and explains them all. Lut takes his name from láta, "to attach oneself!", because Ibrahim’s heart was affectionately attached to Lut (Thalabi). Lut’s wife is called Halsaka or Wâlata, his older daughter Kih (i), the younger Karyâ (“Wâlata”), Zughfa (“Vâkî”), or Rawaya (2) (al-Kisâi). Not only is Sodam mentioned, but also other four towns, in whose names may be recognised the Biblical
Amūra, Admā, Şeqaım and Şeqār. Of Şeqār, Theylabi says it was saved (Gen. xix. 20-22) "because it believed in Luṭ.

The Muslim legend has a little in common with the old Haggada (Gen. Rabba, xlix. 1.; Snehedrin, 109b), e. g. the fact that Abraham thinks he is sure of a certain number of devout people. When Ṣirku R. Eliser (xxv.) describes the daughters of Luṭ favourably, when Mīhrāh Haghādī (ed. Schechter, p. 287) calls the angels sent to Sodom, Gabriel and Raphaēl, Muslim legend may have had some influence on the later Mīhrāth.

Luṭ, Yaḥyā. [See Aḥ Muṣḥah.]

Lufṭ Āli Begov Adhar, a Persian poet and biographer of the 13th century. He was born in Ḡaftān on the 2oth Rabī’ 1. 1123 (June 7, 1171) and spent his youth at Kīmān and later at Ṣhaṭrā, where his father lived while governor of Laristan and the coast of Fars under Šadīr Shāh. After the death of his father, he made the pilgrimage to Mecca and travelled in Persia, finally settling in Ḡaftān in the service of Šadīr’s successors. He latterly adopted a life of seclusion and put himself under the spiritual direction of Muḥammad Yaḥyā. He died in 1281.

Luṭ Āli Begov is best known for the collection of biographies of Persian poets which he compiled between 1760 and 1779 under the title of Ṣirku-Ḵūdah; in it he gives biographies of poets in Persian in alphabetical order according to towns and districts. The last part deals with 60 contemporaries of the author and is followed by an autobiography. The Ṣirku-Ḵūdah was lithographed at Cāṣpūn in 1299 a. h. and at Bahbā in 1277 a. h. There is a Turkish translation printed at Constantinople in 1599 a. h. Among his poems was a long poem, Poet-ṭā Ṣafīdī, in which the author quotes many verses at the end of the Ṣafīdī. Luṭ Āli Begov was held in considerable esteem by his literary contemporaries; he was particularly intimate with the poet Ἠθμ of Ḡaftān

Luṭ Āli Khān was the last member of the Zand dynasty in Persia. He was born in 1760, the son of DJ̄āfīr, son of the Zand Sultan [i. v.]. Šadīr, who had sat on the throne in 1755, had continued the struggle against the Kāšī Āgha Muhammad, who had forced him to retire to Ṣhaṭrā, where he died on Jan. 23, 1759 from poisoning. During the short period of the reign of his father, Luṭ Āli Khān had been entangled with the conquest of Laristan and Kīmān, which he had successfully carried through. But after the death of DJ̄āfīr he was forced to flee from his own army to Kīmān to seek refuge with the Arab lord Būshīr. With the latter’s help, he was able to make himself master of his capital Shahrūz where a certain Saʿyīd Murād had proclaimed himself king. It was chiefly through the efforts of his father’s minister Hādidjī Ḥārīmī who occupied the position of Ḥażārat (mayor) of the town that Luṭ Āli succeeded in getting himself again recognised as sovereign. After his accession the character of the young man, whose nobility and generosity had hitherto been as much praised as his personal heroism, seems to have changed. His acts of tyranny and cruelty decided Hādidji Ḥārīmī to abandon the cause of the Zands and betray it to the enemy. This he did in 1791 when Luṭ Āli Khān had set out against Āgha Muhammad Khan. Hādidji Ḥārīmī seized Shahrūz and stirred up Luṭ Āli’s own troops to mutiny against him. The latter fled to the coast and succeeded in collecting a small armed force with which he tried in vain to retake Shahrūz. Then followed several years of guerilla warfare waged with incredible vigour by Luṭ Āli against the Kāšārs. He went up and down the whole of southern Persia, being for some time supported by the lord of Taḥbīr and even temporarily taking Yazd. In 1794 being assisted by the chief of the district of Garmsīr, he even took Kīmān. Here Āgha Muhammad besieged him with a large force. After four months the town capitulated; Luṭ Āli Khān succeeded in once more escaping and reaching Būshīr but here he was treacherously delivered over to his enemy who had him taken to Taḥbīr where he was blinded and mutilated and finally put to death. Then came the terrible vengeance wreaked by the Kāšārs on the people of the town of Kīmān [i. v.].

Luṭ Āli Khān, the “last chivalrous figure amongst the kings of Persia” (Brown), probably had the sympathy of most of his contemporaries and it is recalled that even Āgha Muhammad Khan openly recognised his bravery. But as his history was written under the new dynasty of the Kāšārs in Persia, the Persian sources could not show much sympathy for him. European sources give a more faithful picture of the course of events. The more modern Persian historians like Mirza Muhammad ‘Alī Khan (Dzavār-i Muṭaddar-i Tarīḵ-e Pehlī, ii. Tehrān 1326, reproduced in Beck, Niederäsische Kriegs- und Geschichts-Grundriss, Heidelberg 1914, p. 259-256) do not hesitate to describe the action of Hādidji Ḥārīmī as treason, Hādidji Ḥārīmī who some afterwards became minister tried to justify his conduct to Sir John Malcolm.

Lutfi Pasha, properly Ḥādidji Lutfi Pasha b. Abd al-Muṭṭin, an important Turkish statesman, scholar and historian, giant voice in the tune of Sultan Sulayman I al-Kânūnī. He was of Albanian descent. The date and place of his birth are unknown. He was brought up in the imperial saray, which he had
apparently entered through the deveşhrme for the Janissaries. Much may be learned of his career from his own biographical references in the "History" and in the Aşaf-nāme. Even in the serai he devoted himself to theological studies, a fondness for which he retained throughout his whole life. At the accession of Sultan Selim (1512-1520) he passed from the ranks of the pages as a kâşfīr and filled in succession the following offices at the court: taşisnîr (taster), kâşfûdi bâzî, mîr-i İlahm (bearer of the imperial standard). He then became sanâxîk beg of Kaştanah, beglerbeg of Karaman, of Anatolia and in 941 41599 he vacated. He spent a quarter of a century in the foreign service of the Sultan; according to his own account, he was through all the wars and battles in the reign of Sultan Selim who was very favourably disposed to him, usually in his train: in Rumelia and Anatolia, in Arabia, Syria and Egypt; similarly in the reign of Sultan Sulayman he took part in the campaigns against Belgrade, Rhodes, Hungary, Vienna, Tripoli, Bagdad, Corfu etc. In 945 (1538) he took part in the campaign to Kara Boghdan as second vizier. In 946 (1539) he succeeded as grand vizier Ayâs Pasha, who had died of the plague, also an Albanian, at a period when the Ottoman empire was straining its strength to the utmost. (The year 944, which was suggested by Kâtil Celebi's Ta'âlîm al-Tawârîkh, Constantinople 1146, p. 176 adopted by all later historians and so handed down, is incorrect as is proved not only by Lütfi Pasha's own statement but also by an analysis of events). He proved his ability in high army commands, in the fleet and in administrative offices.

He sought to carry through with a strong hand the reforms in internal administration which he had long recognised to be necessary, especially economies in the financial system, the abolition of oppressive institutions (nağa, privileges of couriers), the development and independence of the navy, the importance of which for Turkey his foresight recognised. Earlier than anyone else he saw the beginning of the collapse of the externally so brilliant political system. At the same time he conducted negotiations with Venice, Austria and France with great skill and ingenuity. It is noteworthy that he was the first to recognise the surpassing genius of Mi'yar Sinân, whom he appointed state architect. He was a highly gifted statesman, an energetic inflexible personality, incorruptible and above all intrigue with high ideals and strong religions and scientific leanings. In spite of his violent temper he was regarded as a "good natured Vizier". He was a brother-in-law of Sultan Sulayman, whose sister Şah Sultan he had married. Nevertheless he was summarily dismissed in 945 (1541) when in his rage he used threats to his wife when she reproached him with his inhuman treatment of a Muslim slave-girl. His caginess for reform had naturally gained him few friends at court. It is said that only his rank as a dânmâl saved him from execution. Whether the deeper reason for the matrimonial dissensions lay in his love for boys is not clear.

Lütfi Pasha was banished with a pension to Dimotika where he had a hâşîk. Here he gave himself entirely up to his studies, for which he was well qualified by his constant intercourse with theologians and scholars during his whole political career. After his return from Mecca to Dimotika — his successor Rustam Pasha was successful in preventing a complete reconciliation with the Sultan — he used his enforced leisure to compose numerous works in Arabic and Turkish. He died in all probability after 970 (1562) (so also Munâzârât-âbâ-tii, in any case after 961, in Dimotika. The date 956 (1543) usually given is impossible as he continued his history down to Rama'dan 15, 961 (Aug. 14, 1554) and there is no reason to suppose that any other continued the history; on the contrary there are references in the text to events of the year 961. He only left one foundation, a Medrese in Constantinople, after which the quarter and the Lütfi Pasha mosque take their names; its builder was a dâfârît Ahmed Celebi.

Lütfi Pasha is the author of 21 works, a list of which he himself gives in his "History", p. 2-4 (cf. also the list in Hammer-Purgstall, Geschichte des Osman. Reiches, ii. 702; Wiener Handbcher, ii. p. 243; Tschudi, Türkische Bibliothek, vol. xii, p. xvi-xvii). It includes 13 Arabic and 8 Turkish works, to which perhaps may be added the Kâma-nâme ascribed to him which he perhaps does not mention as his own because it was the result of his official activities.

His theological works have not come down to us, so far as we know. According to sources — not however specially blessed in his favour — he had only a moderate knowledge of the different branches of theological study and medicine, which he loved to display with a dilettante's exaggerated opinion of his powers. This is not quite convincing however as not only his perhaps quite medieocre theological works but also his really important historical writings, except for the Aşaf-nāme have been almost unnoticed.

As a poet he is praised by Selîh, who completed his Heçî Küldârî in 945 in the time of his grand vizierate. But the numerous verses scattered through his history are not by him. Verses certainly by him are very mediocre. Besides, he does not show much sympathy with poets as the contemptuous attitude to 'Ali Celebi, author of the Hamûyân-nâme, shows, to whom he addresses that he had spent 20 years on this work instead of dealing with questions of şerîf.

His importance as a historian cannot however be too highly estimated. His Aşaf-nāme, a kind of mirror for ministers, a textbook of ethics for viziers in which he sought to make available for his successors his wide experience of administration, obtained a certain success, as the not inconsiderable number of existing manuscripts suggests (ed. and transl. by R. Tchâdî, Berlin 1910: ed. by 'Ali Amir, Constantinople 1326). But his history Ta'âlîm al-Tawārîkh is still more important. It is now accessible in 2, however, rather medieocre, edition (Constantinople 1341). Lütfi Pasha, trucked, Türkîe-Devletât-ı Muâcetî Bułgolî Muâcetî (Ankara 1911). No. 28) from an incomplete copy found by M. Tahir in Istanbul supplemented by the formerly unique copy in Vienna by 'Ali used by von Hammer (Fugels, ii. 224, No. 1001).

Lütfi Pasha not only models his title on those of the old Ottoman chronicles but he copies this primitive style of historiography in his manner and style, which forms a striking contrast to the elaborate Persianic court style. Down to Sultan Bayazid he is only a copyist. Then however fol-
lows, and this is what makes his history so remarkable, a description of the events of which he himself was an eye-witness in the reigns of three Sultan (Bayazid, Selim and Sulaiman). His account of the reign of Sultan Sulaiman is naturally the most valuable, especially the period of his grand viziere. In contrast to the shahnamadji and the official nask’u muqaddar, he gives an absolutely untouched picture of the situation although he is not absolutely free from bias in dealing with other statesmen. His two historical works are one of the most important sources for our knowledge of the origins of the weakness and corruption of the Turkish empire in the xviith century.

M

MA’ AL-‘AINAIN AL-SHINGIT, the name by which the famous agitator in Mauritania [q.v.] at the end of the xviith century and beginning of the xviith century is best known (several explanations of his sobriquet are given; the literal meaning is “the water of the eyes” but the most satisfactory seems to be that which sees in it simply a euphemism, like that in the expression Kurrat al-djin).

Muhammad Musafi Maa al-Ainain was the twelfth son of a chief and marabout of great fame in his own country, Muhammad Faiil Il. Ma’inn, born at Walata at the end of the xviith century and chief of the Moorish tribe of Galagma in the district of al-Hawd in the south east of Shingit group. After breaking off from the Fakaya whose religious head was the chief al-Mukhtar al-Kunti [q.v.] he founded a new brotherhood affiliated to that of the Kailriya [q.v.], to which he gave the name of Faidiya derived from his own. On the death of Muhammad Faiil in 1869, Ma’ al-Ainain left the district of al-Hawd to complete his Islamic studies in Shingit (on this flourishing Moorish centre, see the long and interesting monograph by a native of the place resident in Cairo, Ahmad b. al-Amin al-Shingiti, al-Waif fi Tarhajin al-dhob Shingiti, Cairo 1299 [1911]). Ma’ al-Ainain then settled for several years in al-Adrar [q.v.] but afterwards went further north to the al-Sakijat al-Hamara country, which was his usual residence from 1884. All this region, which now forms the northern part of Spanish Rio de Oro, was being desolated by murder and brigandage. He succeeded in establishing security there, restored the land to cultivation, planted numerous palm-groves and encouraged trade by caravan to Senegal and Shingit in one direction and to Morocco on the other. He chose

Shanara as his permanent abode and later built a kasbah for himself there in the Moroccan style on the Wadi Tarzawa. Like the majority of religious leaders of the Saharan countries of North Africa, he practised commerce, politics and the proselytising activities of a marabout and was not long in gathering round him a considerable number of followers who became widely known throughout Morocco by their nickname of “blue men” an account of their costume, consisting of a djellaba of khanta (a cotton stuff from Guinea), a turban and a burnous, all blue in colour. They were also called ‘Amiya, from the name of their master, and al-Shingiti (Shanatria), “the men of Shingit”.

Ma’ al-Ainain very soon entered into regular relations with the Sultans of Morocco. He had already made a sojourn in the country on his journey to the holy places of Islam, in the reign of Mawlay ‘Abd al-Kahiman b. Hisham [q.v.] (1238-1276 = 1822-1859). Later and especially in the reign of Mawlay al-Hasan [q.v.] (1290-1311 = 1873-1894) he travelled regularly to Marrakush and to Fas and was welcomed by the Sultan, whom he supplied with slaves (in which he also deals). When the young Mawlay ‘Abd al-Arar [q.v.] ascended the throne in 1311 (1894), he sent him his homage and went to visit him in 1896 in Marrakush. The Sultan gave him a gift in his southern capital of a site for a zaitiya of his order and he hired him a steamer to take him with his suite from the Moroccan port of Mogador to that of Tarfaya, the natural harbour of the Rio de Oro for his capital Shanara. This little port henceforth became of some importance: Spanish ships, Greek and Spanish sailing-vessels disembarked there merchandise from Morocco and considerable cargoes of arms and ammunition, all consigned to the agitator to enable him to supply.
his followers and arm the Moorish tribes to enable them to fight French expansion beyond the frontiers of Senegal. For several years Mâ al-'Ainain was able to maintain in all the vast area under his influence an atmosphere hostile to French penetration into Mauritania. He was largely the instigator of the anti-French outbursts, which after the assassination on May 12, 1905, near Tijjîledja of the explorer Xavier Coppolani decided France to occupy Tâgant in 1906.

After these happenings, Mâ al-'Ainain, having assembled the chiefs of the great Moorish tribes who were in alliance with him, took them to Fâs to demand the alliance and assistance of Morocco against France in Mauritania. He was favourably received by Mâlayâ 'Abd al-'Azîz and succeeded in getting a cousin of the Sultan, Mâlayâ Idris, sent to al-Adrâr as representative of the makhzen. At the same time Mâ al-'Ainain was authorised to install himself in the Moroccan kasba of Tiznit, to summon to the holy war and to rally around him all the warriors of the Sahara from al-Sûs to the region of Sâkiyat al-Hamrâî. The hopes that Mâlayâ 'Abd al-'Azîz had based on the plans of Mâ al-'Ainain were soon dashed. After the occupation of Uqdat and the destruction of Shâwîya by the French he had to disown Mâ al-'Ainain. The latter had no longer a chance even in his own country, where a fatal blow was struck at his power as a result of the al-Adrâr expedition in the course of which French troops led by Colonel Gouraud completely scattered his forces. Mâ al-'Ainain had however not lost all hope of regaining his former influence in his old territory. He aimed even higher, when in May 1910 he did not hesitate to proclaim himself Sultan and to attempt the conquest of Morocco, which he thought had been sold to the infidels by the Alawid sovereigns. Having united around him all the tribes of the Anti-Atlas and of al-Sûs as well as his own followers, he reached Marrakûsh and from this town tried to take Fâs by surprise, taking the road through the Central Atlas. But he was checked in his advance near Tâdlti [q. v.] by a column under General Moinier which routed him completely on June 23, 1910. He just managed to escape and reach al-Sûs where he was abandoned by all his followers and had to sell his slaves and flocks in order to live. He retired to the kasba of Tiznit, where he died on 17th Shawwâl 1328 (Oct. 28, 1910).

Two years later, the son of Mâ al-'Ainain, Ahmad al-Hiba, in his turn attempted to proclaim himself Sultan. Proclaiming himself the Mahdi, he set out from Tiznit and entered Marrakûsh on Aug. 18, 1912, while he had himself proclaimed, while his troops put the city to fire and sword. But on Aug. 29, al-Hiba was defeated at Benguerir by Colonel Mangin, who after a second encounter at Sidi Bî U'mânan entered Marrakûsh on Sept. 7 following.

Mâ al-'Ainain, who had very many open or secret followers in Morocco has left in the country the reputation of a true ascetic and a great doctor in the Sufi doctrine. "The hair shaved, the face veiled, always clothed in white, he only appeared in public on Fridays to go to the mosque. Mâ al-'Ainain led an austere life, lived exclusively on milk, dates and mutton. A well read man, he composed many pious works, books on theology, mystic Sûfism, astronomy, astrology, books full of contemplative reveries, on theological and dogmatic controversies, on metaphysical theories, and of magical formulæ to acquire riches and power by occult means. Like his father and his brother, he loved to spread among his disciples a reputation as a worker of wonders and a thaumaturgist. These magical practices much increased his prestige in Seguillet (al-Sâkiyâh al-Hamrâî) and in Morocco (E. Richet, La Mauritania, Paris 1920, p. 126–127).

MA'ADD, a collective name for certain Arab tribes, in the traditional usage for the Kurds of North Arabian origin (Mudar and Rabi'a) in contrast to the Yemeni tribes. This contrast said to be inherent in the name Ma'add seems already to be found frequently in the early poets, always presuming the genuineness of the passages in question. Thus in a verse of Imam al-Kaysi (Abulwardi, No. 41, l. 5) the term Ma'add is used apparently in the sense of excluding the Udaiy, Taiy and Kinda, and in Khabigha (Abulwardi, No. 18, l. 1, 2), the Ghasan. Tradition also records fighting between Ma'add and Yemeni in the pre-Muhammadan period (cf. Yakkut, ii. 434; Ibn Badhān, p. 104). At a later period the genealogical term Ma'add is even more sharply contrasted with Southern Arabia, and the Northern and South Arabian had become the dividing political element in the fighting of the Omayyad and 'Abbasid period (passages quoted in Goldziher, see below). The fact that the name Banū is not found combined with Ma'add as well as the form of the word itself suggests that Ma'add may originally have been of similar foundation and meaning to Ma'dhari, a general name for "people" of people. Ibn Duraid (Ihtisāb, p. 20) long ago suggested the derivation from the root "idd", "to count, number", rather than without adding other very different attempts to interpret it. The usual genealogical scheme of Arab tradition has inserted in it the name Ma'add as the name of an ancestor of an eponymous series, namely a son of the traditional founder 'Adnan. Ma'add is brought into connection with the history of Mecca by the legend that he married 'Ummā, a daughter of the Hajarumite. From this marriage were born Nizar, father of the tribal eponym Mūsar, Kā'ab and 'Yazd. According to Abu 'l-Fida', Hist. Ant. Islamica, ed. Flei-cher, p. 72 Ma'add is even said to have been a contemporary of Nebuchadnezzar.

MA'ARRAT MAŠRĪN or MIRSIN, capital of a nāhiya of Halab. The name is also written Ma'arrat Maṣrin which has been wrongly taken as an abbreviation of Ma'arrat Kinnsar (Le Strange, Palestine under the Moslems, p. 471). In Syrian manuscripts of the eighth century, the town is called Ma'arrat Māsrit (Wright, Catalogue of the Syriac MSS. in the Brit. Mus., p. 454); dated 745 in a Armenian translation of St. Gregory Nazianzen's Enchiridion damascense (London 1910); a palimpsest under a collection of biographies of holy women, written by a monk Yohannan Stylet of Beth Mari Kānān, a monastery of the town of Ma'rara in the Kūra of Antioch.

In the year 16, Abu 'Ubaidā defeated a large Greek army which had assembled between Halab and Ma'arrat Mašrin and then took this town, which capitated under conditions similar to Halab (bal-dhadhūr, Fustāḥ, ed. de Goeje, p. 149). In the reign of the Caliph Mutawakkil, 'Amr b. Hawwar, a native of Māšrin al-Buraidiya (cf. Yākūt, Mashārīk, p. 400) near Ma'arrat al-Nu'man, was governor of the town; Kamāl al-Din (Freytag, Selecta ex historia Halabi, Paris 1859, text p. 24; transl. p. 18) quotes the beginning of a lampoon composed on him by Abu Ḫusb b. Djiyānā (cf. 231). Nicephorus Phocas took the town in 537 (968) and deported its 1,200 inhabitants to Bilād al-Rūm (Kamāl al-Din in Freytag, Z.D. M. G., xi. 228). After the truce of Sāfar 359 (969-970) between the Greeks and Karkhūya, the town passed to the territory of the latter (cf. cit., p. 232). In 415 (1024) the Kilib leader Sāliḥ b. Mirdas on his march against Halab sent his follower Abu Manṣūr Sulaymān b. Tawāk against Ma'arrat Mašrin; the latter took the town and made its governor prisoner (J. J. Müller, Historia Meridio-darum, Bonn 1829, p. 14; Rosen, Zapiski Akad. Nauk., xiv. 379). Shortly before the death of Tūmān (454), the Byzantines took the town. Kamāl al-Din (ibid., p. 52). While the Ma'arrat Mašrin advanced on Balaib (cf. Halab), his uncle 'Atiyān advanced with the command of Amāriyā and a Byzantine army against Ma'arrat Mašrin, burnt its outskirts and killed a large number of inhabitants. In 491 Yaghib-Basān, prince of Anṭākiya, died in Ma'arrat Mašrin, which was taken in the same year by Muḥarram 492 by the Franks (Hist. Ord. des Crois., ii. 483). They advanced on the town via al-Rūj, slew all its defenders and destroyed the pulpit of the mosque (minbar) (cf. cit., ii. 579). After the capture of Baldwin of Edessa, the Franks took the district of al-Djarar, in al-Faw, Samin and Ma'arrat Mašrin were surprised and slain in 497 by the inhabitants (cf. cit., p. 592). In 507 (April 1114) a body of Ismā'īlīs (Bātiniya in Kamal al-Din) who lived in Fāmīya, Ma'arrat Nu'man and Ma'arrat Mašrin (so written here) tried to surprise Ṣaḥīz while the Christians were celebrating Easter. But they were driven off by the Banū Munkūl (cf. cit., ii. 548). When Baldwin II approached in 533, the towns of Sarmin and Ma'arrat Mašrin (cf. cit., iii. 623) capitulated. Tāghslūnān and Ilghār in 544 besieged the Franks in this town into which they had retreated. When Baldwin came to their relief, a treaty of peace was concluded by which the Christians were allowed to retain Ma'arrat Mašrin, Kaftānāb, al-Djarā, al-Darā and other fortresses (Ibn al-Athir, Tacnoil Hist. Ord. et. Civis, i. 332; Kamal al-Din, cf. cit., iii. 624). When Aksūnqor of Mas-wāl in 529 invaded the country of Sarmin, al-Fawā and Dānīth, the Franks encamped across his path at the reservoir (ḥisāf) of Ma'arrat Mašrin, until they withdrew in the middle of Rājāb for want of supplies (cf. cit., iii. 653). The Athābāb Imād al-Din Zanjī in 544 attacked the suburbs of al-Āṭārīb and Ma'arrat Mašrin. When Ache, the daughter of Baldwin II and widow of John, rebelled in Anṭākiya against her husband (cf. cit., ii. 661). Sawār (or Aṣwar) of Ṣalāḥ in 537 made a raid on al-Djarar and the castle of Zardānā, surprised the Franks at Halab and invaded the territory of Ma'arrat al-Nu'man and Ma'arrat Mašrin from which he returned to Halab laden with booty (cf. cit., iii. 667). In Qumāda I of the year 619 al-Malik al-Saltah, the son of al-Malik al-Zābīr, received the lands...
of Shughr and Bakās, al-Rudj and Ma'arrat Ma'āria, which he exchanged about five years later for 'Aintāb, Rawandān and Žub (Kamāl-al-Din, transl. Bloeche, R. O. L., v. 64, 72; Abu 'l-Fidā', Anuša Muslawi, ed. Reiske, iv., Copenhagen 1792, p. 312).

The town has not been much visited by modern travellers. Jullien describes Ma'arrat Ma'āria as a large village, lying among sesame fields and olive trees in a rich plain. Garrett is enthusiastic about the country and says 'when the soil there is unusually fertile, fig trees are numerous and roses are growing by roadside'. In modern times the name of the town is often written Ma'arrat el-Misrīn (with the article) e.g. by J. B. L. J. Rousseau (Description du Pachalik de Halep, in Fundgruben des Orients, Vienna 1814, iv. p. 11), Ritter (Erkundige, xvi., p. 1576), Garrett (Publications of an American Archaeol. Expedition to Syria, New York 1914, part i., p. 119) etc.

Not to be confused with our town is Ma'arrat al-Aghwān (also called Ma'arrat al-Akhwān) east of it, sometimes called al-Aghwān, e.g. by Seifl (Zeitschr. f. Erdk., 1875, xiiii., p. 24; Ma'arrat), according to which al-Rudj 'is not without a well, on the surface it is bare and exposed with its white [c. sugar-cane like] roofs on a wide plain'. According to al-Djburi of Ḥalab (d. 843) and Ibn al-Shīja (edited by Abu 'l-Yumn al-Bahtrāni in the eleventh century), Ma'arrat Ma'āria was earlier called Ḍhāt al-Kuṭūr (Z. D. M. G., xxiiii., 182; Ibn al-Shīja, ed. Cheikho, Bāirūt 1909, p. 164 sqq.; Lammenes, M. F. O. B., 1906, i., p. 240). But this statement is due to confusion with Ma'arrat al-Nūmnān (cf. Dussaud, Topographie historique de la Syrie antique et médiévale, Paris 1927, p. 213, note 4).

(E. Homsman).

MA'ARRAT AL-NūMāN. Town in northern Syria, often called simply al-Ma'arrā. It is celebrated as the birthplace of the poet Abu 'l-ʿAli Ahmad al-Ma'āria [i.e.]. According to al-Ṣamʿānī (Kātib al-ʿAnām, reproduced by D. S. Magoulithou, G. M. S., xx, 1912, fol. 336, l. 4) the nisba from the place-name was Ma'arrān to distinguish it from that of Ma'arrat Navrān, Ma'arratasi. The town probably lay on the site of the ancient Arra which is called Kārān (Arably 'āṭār ibn ʿāṭār) in an inscription. Yākūbi says that Ma'arrat al-Nūmnān is an old town in ruins. Nāṣir-i Khusrāw in 438 (1047) found in the town wall a stone column with a inscription in some language not Arabic and Ibn al-Shīja also talks of old pillars being dug up in the town. Van Berchem notes the remains of Greek inscription in the Madrāsa (Voyage, p. 203, note 1).

The town received its new epithet, to distinguish it from the numerous other Syrian towns of the same name, from the Companion of the Prophet, al-Nūmnān b. Bāṣir, who was governor of this district under Mu'āwiyah and whose son died there. According to another tradition it is called after al-Nūmnān b. ʿAbd al-Sātī of the tribe of Tanūkh. An earlier name of the town according to Ibn Baṭṭūta and Kahlil al-Zahiri (ed. Rawani, p. 49) was Ḍhāt al-Kuṭūr, according to al-Dīnārī Ḍhāt al-Kuṭūr; al-Dubrōn and Ibn al-Shīja strongly give the name 'Alī b. ʿAbd al-Fidā'ī (I. v., p. q.v.). The site of a citadel still bears the name of al-Nūmnān (see below). We have much earlier evidence from another older name, Ma'arrat al-Hum (al-Iṣṭakhri, ed. de Goeje, p. 131; Abu 'l-Fidā', Anuša Muslawi, ed. Reiske, i., Copenhagen 1780, p. 226 etc.) The district of this town originally formed an illūn (ṣināa) of the jūnūd of Ḥum (Ibn Khurādhībīh, B. G. A., vii. 75) cf. also — but this is an anachronism, — al-Kalāqāni, Yāḏī al-Aṣṭārī, iv. 142, transl. Guadelfoy-Dembyns, La Syrie, p. 109; The Huns gate (see below) is probably also a memory of this. It was only from the time of Ibn ʿAbīnā al-Ḵāṣṣū that the town belonged to the jūnūd of ʿImārān, the capital of which at a later date was Ḥalab (Le Strange, Palestine unter den Moslems, p. 36, 39).

As early as 278 (919—920) we find Yākūbi giving the name Tanūkh as the inhabitants of the town. The district around it was one of the parts of Syria most strongly settled by Maronites (al-Maṣṣāḥ, Kātib al-Tanūkh, ed. de Goeje, p. 153). As there was no running water near the town, its inhabitants had to collect rain-water in cisterns. But the country round was rich in olive, fig, pistachio and almond trees; wine was also made here as in the ancient Arra. According to Ibn Ḍubrōn the orchards stretched for nearly two days' journey from the town and formed one of the richest and most fertile areas in the world. South of Ma'arrat al-Nūmnān, just beside the town wall was a gate to local tradition, the tomb of Joshua son of Nūn; but Yākūbi says his grave was really at Nūdlūs (cf. Goldziher, Muhammadianische Traditionen über den Grabort des Jesu, in Z. D. P. F., ii. 13-17). The Djas'īn b. Nūh Allāh Vēshī in Ma'arrat al-Nūmnān still bears the name of Jo-hān and has an inscription dated 604 (1207—1208) (van Berchem, Visages en Syrie, p. 202, note 4).

When Abu 'l-ʿAbīd came to Ma'arrat Ḥum, in the year 16 (537), the people came out to welcome him and promised to pay some gold to his people. (al-Iṣṭakhri, ed. de Goeje, p. 131; Caetani, Annales dell'Islama, ii., p. 794, § 584). The Caliph 'Umar II was buried in 161 in the monastery of Simeon (Dair Simeon) at al-Nakha (Snékta) not far from Ma'arrat al-Nūmnān (Homsman, Z.S., i., 1922, p. 17; Dussaud, Topographie historique de...
occupying Ḥalab in 457 allotted Maʿarrat al-Nuʿmān to the Turk chief Hārūn; on Shawaṭīl 17, 458, the latter entered the town with Turks, Dailamis, Kurds, and men of the tribe of al-Awdāj, about 1000 fighting men besides camp-followers. They pitched their camp before the gate at which public prayers were said. Although excellent discipline prevailed among them and no one injured the olive-trees and vineyards or even took water for the sheep and camels, they kept the inhabitants there more freely when they left the town again to assist Maḥmūd on his campaign against the Khalīfs. In 462 Turks in large numbers came out of Byzantine territory against Ḥalab, went via Urṭūz to al-Dżar, Maʿarrat al-Nuʿmān, Kaftarīb, Ḥamām, Hims and Rafanīya, and laid Syria waste in dreadful fashion. The Turk Tūtugh in 472 undertook a campaign from Damascus against the north of Syria; he burned the region of Dżabal al-Summaq and Dżabal Bait Ḍīmam, extorted enormous sums from the people of Sarmin and Maʿarrat al-Nuʿmān and plundered the country east of Maʿarrat al-Nuʿmān; he laid siege to Tall Ḥalab but by mid-June had burned Maʿarrarathā (the ancient Māqarārāt ḍawr) in the district of Kafarjāb. His son Riḍwān in 488 gave the town of Maʿarrat al-Nuʿmān with its lands to Suqmān b. Urṭūz. Soon after the taking of Antiqīya (491) the Franks advanced on our town, supported by the people of Tall Mannās, and all the Christians in Maʿarrat al-Nuʿmān itself but they were defeated between these two towns. In the beginning of 492 they again besieged the town with a large army (then an urbs munitionum, Will. of Tyre, vii. 9) and took it, killing almost the whole population, 20,000 men, women and children (Hist. or. des. Croisades, ii. 452 sq.). Maʿarrat al-Nuʿmān was, like Jerusalem in the same year, completely sacked and the walls and mosque destroyed. During the siege the Franks had destroyed all the gardens round the town and the Kūlibb, who had come to the help of Riḍwān consumed all the supplies of the district so that the country was completely starved. In 496 Riḍwān reconquered the lost fortresses. At the end of 514, he concluded a treaty with the Franks by which the latter were allotted Maʿarrat al-Nuʿmān, Kafarjāb, al-Bāra and and a part of Dżabal al-Summaq. In 531 (1137) the Aṭḥābī Zangi regained Maʿarrat al-Nuʿmān. When the inhabitants asked to have re-possessed to them the estates for which the Franks had deprived them, he demanded the original charters of ownership from them but they had been destroyed. He therefore had search made in the books of the office of the financial department of Ḥalab (Daftarīt Dāwān Ḥalab) and found from the old payments of khorūd what families had owned property and restored them (Ibn al-Athīr, ed. Tornberg, xi. 34 = Hist. or. des. Crois., i. 423; Abu Ṭ-Ṭīdī, Annals Moslem., ed. Reiske, ii. 470; v. 274). Zangi razed the walls. While King Pulco of Jerusalem was putting down a rising in Antiqīya, Turkoman troops entered the district of Maʿarrat al-Nuʿmān and Kafarjāb but were driven out again by the Franks who thereupon conquered Kūlibb b. Maʿṣūm b. Kāmil al-Dżar, Hist. or. d. Crois., iii. 667, where our town is meant by al-Maʿarrāt, not Maʿarrāt Maqra as Robichet, Gesch. d. Konigre. Jerusalem, p. 197 assumes.

The Byzantine emperor John II Comnenos in 532 (1138) invaded the district of Maʿarrat al-
Nu'mān and then turned suddenly against Shaizar [q. v.] which he besieged in vain. The earthquake of 552 (1157–1158) wrought great havoc in Ma'arrat al-Nu'mān (Kamāl al-Dīn, transl. Blochet, in K. R. O. L., iv. 529).

Shāb Ṣafidī al-Dīn in 584 (1188) went from Halāb to Ma'arrat al-Nu'mān from which he made a pilgrimage to the Shāhīd Abū Zakariyyā' al-Maghribī who lived at the tomb of the Caliph 'Umar. Towards the end of the reign of Salāh al-Dīn (C. i. 1191) the town formed part of the Syrian possessions of Taqī al-Dīn (Hist. Or. d. Crois., v. 14). Ma'arrat al-Nu'mān is several times mentioned in the wars between Salāh al-Dīn's sons. About 589 it belonged to al-Malik al-Muṣafar b. Taqī al-Dīn 'Umar. Later we find its possession alternating between Hamā and Halāb. An old Shābī madrasa was built, according to the inscription on its gateway, in the reign of the Aiylūd Sulṭān of Hamā, al-Malik al-Mansūr Muḥammad (plan in Creswell, F. I. F. A. O., xxi. 13); it is by the same architect as the lofty square minaret of the great mosque. Ibn al-Muṣafad in 596 (1159) owned the towns of Fāmiyya, Kafartāb and 25 estates in the district of Ma'arrat al-Nu'mān. In 597 the town was sacked by Sulṭān al-Malik al-Zāhir Ghāzi of Halāb and seems to have belonged to him for a period. An inscription dated 604 (1207–1208) still bears his name. Al-Malik al-Ādil in 598 went from Damascus via Hamā to Tall Safrūn where al-Malik al-Mansūr of Hamā joined him. His opponent al-Malik al-Zāhir of Halāb concluded a treaty with him by which he was to cede Kafr al-Nadīm to Afdal and the part of Ma'arrat al-Nu'mān which he held to al-Malik al-Mansūr. About 619 and 620 the town was still under the lord of Hamā, al-Malik al-Nāṣir; it then passed temporarily to al-Malik al-Muṣafar b. Isā of Damascus which placed a governor in it. (Kamāl al-Dīn, transl. Blochet, K. R. O. L., v. 65; Malikzāde and Ibn Wasi, K. R. O. L., ix. 497 sqq.; Abu l-'Fredī, Annal. Medit., ed. Reiske, iv. 312). During this fighting the lands of Ma'arrat al-Nu'mān and Hamā were ravaged by a horde of Arabs under Mānsūr (K. R. O. L., v. 68). On the advice of Saif al-Dīn b. Abī 'Ali al-Hudhāsī, al-Malik al-Muṣafar of Hamā in 631 (1233–1234) had the citadel of Ma'arrat al-Nu'mān rebuilt, but by 635 al-Malik al-Nāṣir of Halāb seized the town again and after a brief siege the citadel also. The news of its fall was brought to Halāb by a carrier-pigeon (K. R. O. L., v. 100, 105; Abu l-'Fīda, ep. cit., v. 404, 434, 596). The Khwārizmīs, ruled by Čingis Khān, entered Syria over the Fūrat and advanced via al-Dibābīl, Tall A'zāz and Sarmin to Ma'arrat al-Nu'mān which then belonged to Halāb. The geographer al-Bakrī also crosses the town to Halāb. After the victory of Bahrām over the Tatars at 'Ain Dūlūt where the Mongol general Khobbog who had been left behind in Syria by Hulghū fell, Khosrawšāh the Tatar lord of Hamā left Syria. Sulṭān Kūṭur thereupon restored this town along with Bārin and Ma'arrat al-Nu'mān, which had belonged for 23 years to Halāb in 658 (1259) again to its original owner al-Malik al-Mansūr of Hamā.

Henceforth with slight interruptions Ma'arrat al-Nu'mān was in the possession of the lords of Hamā. In the year 713 (1313) Sulṭān granted Bārin and our town to Abu l-'Fīda as a fief but he had to return them to Halāb by 713 (1313) as the conditions of ownership had become ex- tremely obscure on account of the frequent changes in the land-books and repeated grants by the Sulṭān (Abu l-'Fīda, Annal. Medit., v. 274). A journey by the prince to Egypt in 716 resulted in the restoration of the town and citadel to him and a charter of presentation was prepared (ep. cit., v. 302, 304). Abu l-'Fīda quotes a portion of a poem which the Ayyubid scribe (farāk al-Ingāl) Shūhīd al-Dīn Mahmūd composed on the event (ep. cit., v. 306). But by the same year he had again to cede the town to Muḥammad b. Isā (ep. cit., v. 310).

The district of Hamā was confiscated in 742 and placed under the Egyptian governor as a separate province (perāma); henceforth Ma'arrat al-Nu'mān formed a wilāya of this province (al-Kalḵashandī in Gaudefroy-Demombynes, La Syrie à l'époque des Manœstûs, p. 233). In the Mamlūk period the town had seven gates (according to the al-Raṣūl al-Muṣā'fār fī Ajārā' al-Muṣā'fār, quoted in al-Kalḵashandī, Cairo, iv. 142): the Halāb gate, the great gate, that of Shīth, called after the adjoining tomb of Seth, the garden gate, the Ḥim Gate and the lake gate (lāqāy probably a double gate of Ḥim). Ma'arrat al-Nu'mān was a station of the Egyptian pigeon-post (al-mārāj, Tūṣîf, transl. R. Hartmann, Z. D. M. G., lxx. 501; al-Kalḵashandī, iv. 393).

After the battle of Marāj Dūlīk in 922 (1516) the town passed to the Ottomans. Delia Valla a century later found here (1616) a native chief under Turkish suzerainty and the Agha who lived there in Pococke's time while paying tribute to the Porte retained complete independence. Trollo found in the town "zwey scheue Wirths-Hausen, das eine war ziemlich bauvoll, das andere aber noch wohl zugerichtet, umb und umb mit breiten langen bleyern Taffeln bedecket". Seetzen describes Ma'arrat al-Nu'mān as the most northerly place in the Paşalîk of Damascus (Sūriya). Walpole was a guest of the mutaarrif of the town. The district of the town later became a kaṭa' of the livā of Halāb. When Szachau passed through it in 1879, a kā'imkānak was living there, the frontier with Hamā was at Khan Shākhūn. After the world war the town was included in the territory under French mandate According to Szachau it has about 40 well built houses and with its well cared for gardens and fields looks a peaceful and prosperous country town, while van Berchem calls it "a large village of rather dismal appearance"; it lies in a monotonous but well tilled plain at the foot of the eastern edge of the plateau of the Djebl Rifā. In the north-west it is commanded by the high hill on which stand the ruins of the mediaeval citadel (the town by R. Gariff and C. A. Norris, in Arabic, Archæol. Exp. to Syria, i. 50 and Princeton Exp., Dībūs, ii. Sect. B, part 3, Kafr in-Nu'mān is wrongly placed north-east of the town, cf. however also van Berchem, Voyage, p. 202 and Eli Smith in Ritter, Erdk., xvii. 1067 and Szachau, Reise, p. 94). Among the architectural features of Ma'arrat al-Nu'mān the most notable, next to the great mosque, is the already mentioned Shāfī Madrasa (built in 955). A notable building of the Ottoman period is a large square caravanserai on the south side of which is a high gateway with an inscription of the date 14 (1566–1567). Sykes was shown by the Kā'imkānak as one of the sites of the place (the alleged) tomb of the poet Abu l-'Aṣāl.

MA’BAD. Abū ‘מOAD Muḥammad b. ṬA’l Wain, was one of the great singers and composers of the early Umayyad period. He belonged to Madina and was a client of Abū al-Rahmān b. Қaṭan (cf. Aḥkām, i. 19) of the house of Walīya of the Banū Makhdūm. He was a half-caste, his father being a negro. In his youth he was an accountant, but having taken music lessons from Sāʿīb Khiṣṭīr, Nasīḥt al-Fārisi and Djamila [q. v.] he adopted music as a profession and soon made a name for himself. During the reign of Abū al-Malik (655–686 = 685–706) he carried off the prize of singing being organised by Ibn Ǧanab al-Makka. He sang at the courts of al-Walad I (66–696 = 705–715), Yazid II (101–105 = 720–724), and al-Walid II (125–126 = 733–744), the second of these treating him with unheard of favour. On the death of Ibn Surajjī [q. v.] about the year 107 (726), Ma’bad became the leading singer, and when al-Walid II was called to the throne, Ma’bad, although an old man, was invited to his court at Damascus. Here he was honourably treated and received a gift of 12,000 pieces of gold. Shortly afterwards he was again commanded to appear at court, but he was very ill when he arrived. Paralysis intervened, and although he was lodged in the palace itself, and had every possible attention, he died (125 = 743). At his funeral, the caliph and his brother al-Ghaur, walked in front of the bier, whilst the renowned songstress Sallāma al-Kass, one of Ma’bad’s pupils, chanted one of his elegies.

Ma’bad must undoubtedly be counted among the “four great singers” (Aḥkām, i. 98, 151; ii. 127) whatever opinions may be held as to the others. A poet of Madina said: “Fawzas, and after him Ibn Surajjī, excelled in song; its eminence belongs to Ma’bad” (Iṣhāk al-Mawṣili (cf. ii. 439) said: “Ma’bad was a consummate singer, and his compositions reveal a superior talent to all his rivals”. Poets like al-Buṭṭurī [q. v.] and Abū Tammān [q. v.] have shown the worth of Ma’bad in Arabian musical history. Among the compositions of Ma’bad his most famous were the seven known as the “Cities” (Ma’dun) or “Fortresses” (Ḫayṭān), whilst five others were celebrated as the Ma’badī. His fame was made by his adoption of a grandiosu (kūmil ṣāmu) style of composition in the rhythms (iṣṭār) called ḩayṭān or “heavy”. Among his pupils were Ibn ʿAṣīḥa, Malik al-Tāṣ [q. v.], Yūnus al-Kāṭib [q. v.], Siyaṭ, Sallāma al-Kass and Habbābā.

(H. G. FARMER)

AL-MA’BARI, ZAIN AL-DIN wrote about the year 985 (1577) for Sultān ʿAli ʿAdil Shah of Bijapur (d. 987 = 1579) a brief history of the spread of Islam in Malabar, the coming of the Portuguese and their campaigns against the Muslims from 908 to 985 (1498–1578). The work is preserved in Brit. Mus. MS., N°. 94, India Office No. N°. 714 and 1044. 5 and in Morley, Catalogue of Historical MSS., N°. 13 and is entitled Tafsīr al-Muṣṭaṣab; extracts were given by John Bunyan in Viscita, History of the rise of the Mahomedan power in India, London 1829, p. 511 sqq., and it was translated by M. I. Rowlandson, Tafsīr al-Muṣṭaṣab, an Historical work in the Arabic language, London, Or. Trans. Fund 1833 and ed. by D. Lopez, Historia dos Portugueses no Malabar, por Ziasimão, manuscrito arabe do século XVI publicado e traduzido, Lisbon 1898.

(C. BROCKELMANN)

MACASSAR, an important seaport on the island of Celebes, on the Bay of Macassar; it is the capital of the administrative district of “Celebes on Onderhoorigden” and also of the division of it of the same name administered by an assistant-resident. By the native population the town which has made very great
progress in the last few years, is still often called by its original name of Udjong-pandang (Djum-pandang). The Dutch gave it the name Macassar from the kingdom of the same name. The heart of the Macassar country is the former principality of Tello, which has a direct rule of the Dutch East India government in 1914 and is a remnant of the once very powerful kingdom of Macassar. The area inhabited by the Macassars in the wider sense stretches over the whole southern part of the southwestern peninsula of Celebes, as well as over the island of Saleier and several groups of island in the neighbourhood.

The remainder of southern Celebes is inhabited by Buginese who are closely related to the Macassars and whose language, manners and customs are very similar.

The Macassars do not differ much in physical appearance from the Javanese; they are of above medium height and in general well built. Their mode of life, dress and dwellings are simple. The main industry is agriculture which is very successful on the generally fertile soil: in the plains rice is grown, often on wet fields, in the mountains maize particularly, but also vegetables and leguminous plants and cocoa-nuts. The cattle-rearing also is not unimportant. The native industries which are carried on in the houses of natives are not on a very high level; the work of the gold and silver-smiths is relatively good. An unfavourable verdict has often been passed on the character of the Macassars but this seems to be exaggerated; they find it difficult to submit to a regular life but for the rest they are not difficult to govern. Among their vices are their fondness for dice and cock-fighting. Originally three classes were distinguished in Macassar society, the princes and nobles, the people, and the slaves. Slavery has now been abolished even in the districts under independent rule.

The population generally professes Islam and its laws are on the whole conscientiously observed and the Muslim principal feasts faithfully celebrated. But one cannot of course say that Islam regulates the whole of their social and religious life. The custom which has been exaggerated is that the women, very numerous and form a striking contrast to the ideas of Islam. In every village there is still to be found a little building which is used for the worship of the spirits of the animistic period (the chief of whom is Karaeng Lowe, i.e. the "great prince") and where heathen priests offer sacrifices. There can therefore be no question of fanaticism and the very simple mosques are in general in disrepair. The highest Muhammadan office is filled by the keli, usually a man of princely descent, who used formerly to be appointed and dismissed by the king. He had control of all matters relating to worship and he also gave legal decisions in questions of inheritance and played an official part in marriages and divorces. There were lower officials under him who acted as preachers and preceptors, performed the offices of a sexton and gave elementary religious instruction. Their knowledge of Islam is usually very slight. The revenues of their clergy consists of the sakko (zakat), the pitara (fitra) and of presents on all sorts of occasions at which they take part, and of a certain percentage (zynki) on the division of inheritances. The zakko is irregular and unsatisfactorily paid, the pitara much better.

No particulars are known of the earlier history of Macassar and of the regions inhabited by the Macassars in general. In the middle of the sixteenth century they were under the rule of the Hindu-Javanese kingdom of Madjapahit. According to the native chronicles of the royal houses of Gowa and Tello, which, at least so far as the earliest period is concerned, were nearly the same, the Gowa originally consisted of an alliance of nine small districts each under a noble; after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tello, Gowa is said, after the death of the sixth king (at the same time the first whom the chronicles represent to us as an ordinary mortal), to have been divided between his two sons; the one became ruler of Gowa and the other of Tello. It is certain that, so far as our knowledge goes, there were always close relations between these two kingdoms and that there was a certain degree of unity about them; they were known together to Europeans as the "kingdom of the Macassars". About the year 1512 Malays from Sumatra were given permission to settle in Macassar and it was perhaps they who first brought Muslim ideas to South Celebes. When the Portuguese appeared there in the middle of the century, they found only a few foreigners there, who were Muslims; it was not till the beginning of the sixteenth century that the Macassars in general adopted this new religion. During the reign of Tunjilgallo (1565-90), Babullah, king of Ternate, came to Macassar, concluded a treaty and at the same time attempted to introduce the Muslim religion into South Celebes. In 1603 Sultan Aliuddin and one of his brothers became converts to Islam, which thereafter spread rapidly over Gowa and Tello, chiefly through the influence of Karang Matawaiya, administrator of Gowa and prince of Tello. We find traditions about the first preaching of Islam in South Celebes, similar to those of other parts of the archipelago. There they are particularly associated with a certain Dato-ri-Bandang; a Minangkabau peasant from Kotoingah, who is said to have landed about 1546 in Tello and to have preached the Muslim faith at the same time performing all kinds of miracles. Next to him, the two main apostles of Islam are said to have been his contemporaries Dato-ri-Tiro and Dato-Patimang. Their tombs are still much visited.

In the first half of the sixteenth century the kingdom of Macassar extended very much, so that it brought under its suzerainty almost the whole of Celebes, Buton, Flores, Sumbawa, Lombok and the east coast of Borneo. The Dutch East India Company, which had a good deal of trouble with the Macassars, did not succeed till 1637 in concluding a treaty with them which permitted freedom of trade but allowed them no permanent settlement. But as Macassar caused the Company further difficulties in the Moluccas, a war resulted in which the town was burned. By the peace concluded in 1660, the king lost a portion of his territory; the Portuguese were forbidden to remain in the kingdom while the Company were allowed to settle and trade freely in Macasar. Peace was again broken in 1665; the Admiral of the Dutch East India Company, Speelman, sailed with a large fleet to Celebes, destroyed the Macasar fleet and forced the king to sign a treaty of peace ("Bongraisch Verdrag", 1667; confirmed in 1669), whereby
the sovereignty of Macassar over Celebes was finally destroyed. Even after this, the relations of the Company and later of the Dutch government with the kingdom were not good. Telo was incorporated in the government territory in 1856 and leased to the prince of Gowa. In 1905 an armed expedition was sent to Gowa; since 1911, it has been under direct rule.

dom, subjects" (phonetically: vahwako), which is a plural Bantu form (wa-Biki) malagascified va-
< Bantu plural form, wa-~ euphonic intervocalic Malagasy h- ≈ tuh. This radical is identical with the
re-duplicated form used by the Arab geogra-
phers, Wukuri or Wukiri [g. v.] and phonetically
equivalent to the Biki of the early travellers and
the Eastern Bantu wa-Biki, "the Malagasyes" and
Bukini, "Malagascars". This explanation seems
preferable to that which I had proposed in 1904
in J. A., vol. iii., p. 496 sq. I think we must
agree that the Malag. vahikiki comes from wa-
Biki and recognise a Bantu substratum in the
Malag. word.

The present name of Madagascar is given by
Marco Polo in the form Madigeascar (cf. The
Book of Ser Marco Polo, ed. Sir Henry Yule
and Cordier, ii., p. 411 sqq.). Yule long ago
pointed out that Marco Polo had not visited Madagascar
and only knew it by hearsay, and that the
information he gave about it really related to the
adjoining east coast of Africa. The origin of this
name is as follows: As I have already pointed
out in studying once more this chapter of Marco Polo,
Madigeascar is undoubtedly a slightly er-
roneous formation of the form Zang-bar and should
be corrected to Madigeascar (=land of the Mal-
agasy), just as Zang-bar means "land of Zang or
of the Zangs" (cf. Mémoires Soc. de Leng. de Paris,
vol. xiii., 1905–1906: Trois étymologies malagaches,
p. 418–422), where زنج is to be corrected
to زنجبار). This correction is justified by the fol-
lowing facts: In the Travels already quoted, Father
Luís Mariano mentions a kingdom of the S. E.
of Madagascar which he calls Matacasi, Matacasi,
Matasisi (or Matakasi). Three years later in 1616,
Father D’Almeida, travelling in the same country
also mentions a kingdom of Matasasi. Cauche
in his Relation, published in 1654 by Morison
(Relations vivables et curieuses de l’Ile de Madig-
ascar et du Brésil, p. 10, 49, 99, 124, 127, 134),
mentions a province called Madigache by some
and by others Malagasy, the inhabitants of which
he calls Malagases and Malagasies. He also uses
the term Madagasoras, but with the wider sense
of the whole island and its inhabitants. Flacourt
(Histoire de la grande île Madagascar, 1661, p. 1)
says: "The island of Saint Laurens is called
Madagascar by the geographers, by the inhabitants
Madagascar, by Ptolemy Manethion, by Pliny, Cern...,
but its real name is Madaoces." Later writers are
all more or less inspired by the work of Flacourt
and need not be quoted here. All these different
readings go back to two forms: Madagascar
and Malagasi which correspond exactly to two main
categories of dialects: those with dental d
and those with liquid l. It is the latter form that came
to prevail over the whole island, sometimes with
the sibilant: Malagāsī and sometimes with the
palatal: Malagāsii. Both are paroxytons. The modern
vocabulary frequently uses the abbreviated form gāsī
and even gā. These facts seem to justify the
explanation suggested above for the name Madig-
ascar which we owe to Marco Polo.

The doublet, Malagāsī-Madāgāsī, Malāgāsī-
Midadagari is obscure. According to the morphology
of the language it may represent a form *mada
or *mada + gāsī which recalls nothing, whether we
take the form with soft letters mada-gāsī or that
with hard noted by the Portuguese: mato-kāsī. Nor
do we know whether we have to deal with a
western Indonesian root or a Bantu stem. In any
case it is probable that we have to deal here with
a foreign tribal name, the eastern or western origin
of which can no longer be explained from an
ancient or modern language.

In the Arab geographers the first detailed account
of the island of Komr-Madascar is found in the
Kitāb Nuṣḥat al-Muḥātir al-Aṣfāh (1154) of al-Ifrīsī who included the large African
island in the country of the Zangs. "The people
of the island of Zābag = Sumatra", he says, "in
the seventh section of the first clime come to the
country of the Zangs in large and small ships and
use it as a centre for trading in their merchandise
as they understand one another’s language" (MS.
This passage is very important as it shows that
in the 13th century, Madagascar, wrongly located
in the country of the Zangs, had been long before
colonised by immigrants from Sumatra who had
introduced their language into the island and
Malagasy was derived from it. In the eighth section
of the same clime the island of Komr-Madascar
is situated seven days’ sail from the Maldives. Its
king lives in the town of Malý. This is an island
four months’ journey in length. It begins near the
Maldives and ends in the north opposite the islands
of China. The geographer of Roger of Sicily, as
his map shows, has combined into one huge island
Madagascar, Ceylon and a part of Sumatra. In the
ninth section, we are told that the people of Komr
and the merchants of the land of the Maharāḍa
(= Sumatra) come to the inhabitants of the east
coast of Africa and are welcomed by them and
trade with them (cf. my Relations de Voyages, Index,
s.v. Komr and Komor).

Yākūt in his Muḥjam (completed in 1224) says
simply (vol. iv., p. 174): "al-Komr is an island in
the centre of the large island of the Zangs, which con-
tains no larger island than this. It contains a
large number of towns and kingdoms. Each king
makes war on the others. Amber and the leaf al-kumari (sic) are found on its shores. This is a
perfume; it is also called betel flower. Wax is
also obtained from it". The Kitāb al-Muḥātirik
of the same author contains identical information
taken from the Muḥjam (ed. Wustenfeld, p. 358)
but the latter text has more correctly "the leaf
al-kumrī".

Abū Ḥasan 'Ali b. Sa'id al-Maghribī, best
known as Ibn Sa'id, was born in 1208 or 1214
near Granada and died at Damascus in 1274 or
in Tunis in 1286. The Bibliothèque Nationale in
Paris has a copy catalogued as Ms. n°, 2234, a
treatise on general geography which runs from
f. 1 to 117 and is entitled: "The book collected
and epitomised by 'Ali b. Sa'id al-Maghribī the
Spaniard of the Book of the Geography (of Pto-
lemies) in seven climes; and he has added to it
longitudes and latitudes from the book of Ibn
Fāmīma". This copy of the original manuscripts
was dated 714 (1314–1315) and belonged to the
celebrated geographer Abū 'I-Ṭ addī. The text con-
tains in a few lines information of the highest
importance to the following effect: "The Komr
who have given their name to the mountain of
this name situated in eastern Africa are brothers
of the Chinese. They originally lived with the
Chinese in the eastern regions of the earth, i.e.
in the interior of the Asiatic continent. Discord having broken out between them, the latter drove the Korm to these islands. After a certain period of time, dissen-sions broke out among the Korm who had migrated into these islands, the king and his family migrated once more and went to the large island of Korm in Madagascar and the Korm settled in a town of this large island, called Komnya. These Korm immigrants to the large island increased in numbers and spread through the different centres of the island; but new dis-sensions broke out and provoked a new exodus and many of them went to settle in the south at the beginning of inhabited land along the mountain which bears their name (cf. Relations des Voyages, ii. 3 16 of). If we translate these successive migrations into terms of modern geography, we get the following: The Korm, related to the Chinese, originally inhabited Central Asia, migrated from the interior of the continent where they were neighbours of the Chinese to the adjoining maritime lands and islands of the Malay Peninsula and Indonesia; in Decade ii., Book iv., Chap. iv. of Pala-is, p. 352 of the little edition of 1777, the Portuguese historian João de Barros says that the Javanese claim to have originally come from China). They later migrated from Indonesia, more accurately from Sumatra (cf. my Empereurs indiens et javanes in J. A., 1922, vol. xx.) to the large island which bears their name, the island of Korm = Madagascar and from there to the mountain of Korm, the famous mountain in which the Nile was thought to = East Africa.

The first migration, that from Central Asia to the coasts of the Malagatick Island certainly took place long before our era. Several centuries must have passed between the departure of the emigrants from the plateau of Eastern Tibet, their expansion in the region of the coast, from Burma to Indo-China and their crossing to Indonesia. Ibn Sa'd lived in the 8th century. How then could he have known of events that took place several millennia before his time and are not recorded elsewhere? Neither the history nor legends of the Far East knows anything of such happenings. The Indians, Sinhalese, and Indo-siamians who I have consulted cannot think of any text or inscription directly or indirectly referring to them. I am surprised at such a question being raised by a comparatively late Arabic text and I know no satisfactory answer. I was prepared by my studies on Madagascar to accept Ibn Sa'd's statement that the large African island was colonised by Sinhalese whose ancestors had come in the Asiatic continent; but this is exactly what Ibn Sa'd says of the Korm. The agreement between the Arabic text and historical events is striking; but the undeniable agreement is irreconcilable for we do not know as well as we ought, how and where such information could have been obtained in the 8th century. I put toward the hyp thesis (Rés. d l'Ind., 1930) that Ibn Sa'd might have got the information at the court of Heliopolis (cf. Relations des Voyages, ii. 3520) that Ibn Sa'd might have got the information at the court of Heliopolis where he spent some time in the 9th century. But we know from his biographers that the Syrian traveller lived in Bagdad, studying astrol-oby at the 56 libraries of that city and making extracts from manuscripts. He may have had in these works the statements he has fortunately preserved for us.

A contemporary of Ibn Sa'd, Li'mār or Nağm al-Din Abu 'l-Fāth Yūsuf b. Yağit b. Muḥammad, better known as Ibn al-Mudafār al-Shabāni of Damascus, prepared his Tarikh al-Mustawfi (Cod. al-Mustawfi) in 1250 (RS. 6021 of the Bibl. Nat. in Paris). In the 25 folios devoted to the history of 'Aden, 72 a. b. deals with the voyages of the Korm from their original home to 'Aden and gives dates (1262, 1279) from Madagascar to the African coast and to 'Aden (cf. J. A., vol. 13, 1919, p. 469–483).

The following geographers: Shams al-Din Abū 'Abdallāh Sulṭān al-Dumāshiqī (d. 1325), Abu 'l-'Abbās Ahmad al-Nuwaiti (d. 1332), Abu 'l-Fida' (1273–1313), Ibn Khaldūn (d. 1375), Maqrizi (1565–1442) tell us nothing particular about the island of Korm. The towns, which some of them locate in the great African island, are really in Ceylon or farther east or cannot be identified (cf. Relations des Voyages, index, s. v. Kormor and Korm).

In the 18th century Ibn Majdīj (cf. Shihāb al-Dīn Ahmad b. Majdīj) in his Kitāb al-Fawa'il (cf. Instrucions marítimes i encontres arábex et portuguès, vol. i., p. 668, 6), identifies the island of Korm among the ten large islands of the world and mentions it after the Arabian peninsula: "The island which is the second in size", he says, "is the island of Korm. It is now an island (sic)."

The information I have collected orally does not agree about its length or breadth for it is quite apart from the world and the inhabited climes of the earth. This is why there is doubt on the subject. In the large books on geography it is said to be the largest of the inhabited islands. Between it and the land of Sofala and the islands dependent on it (the Mozambique Channel) there are lands and reefs. In spite of this sailors are able to pass among the islands and reefs. The island of Korm takes its name from that of Kormūn, son of 'Amur son of Shem son of Noah. To the south it has the sea which the Greeks called Ogyynas, this is the ocean surrounding the world (al-Malik in Arabic). It is the beginning of the southern darkness, which is to the south of this island of Korm). Ibn Majdīj frequently mentions the island of Korm in his other Nautical Instructions and it undoubtedly is Madagascar.

With Sulaiman al-Mahri (cf. below) our information becomes more definite. In his al-Undat al-ma'ārif, Chap. iv., dealing with the islands and sailing routes along their coasts (cf. Instrucions marítimes i encontres arábex et portuguès, vol. ii., p. 220), he says: "Let us begin with the island of Korm because it is a large island which stretches along the coast of Zang and Sofala. Its northern extremity is called Râs al-Millâ (Amber Cape); it lies in 11 3 26 of North; at the Bear = 8° 37' South; the true latitude is 11° 57'. Its southern extremity which is called Hifa (= Cape Sainte Marie) is in 3 36 of North (21° 37' south; the true latitude is nearly 25° 38'; according to some, in 3 26 of North (24° 51' south) according to others. This latter latitude is the more accurate. There is a difference of opinion about the direction of the sea-routes along its coast; because this island is remote from the inhabited earth. There are two opinions regarding the direction of the route along its east coast: according to some one should sail S.W. according to others S.W. There is a third opinion that one should go W.S.W. from one end to the other of the island. This last view is that of the older sailing
In my opinion, adds Sulaiman al-Mahri, it is possible that the route should be W.S.W., then S.W. \( \frac{1}{4} \) W., then S.W., and in another direction still for two reasons: the first that it is a large island, that its coast is long and the route is also long. The second reason is that the directions given have not been verified on account of the fewness of the voyages made to this island and the insufficient nautical knowledge of those who have been there. Sailing-masters (mawallim) of Zang have told me that the route on the east coast from Raas al-Milhi to the place where Nāsh is 8 ica’ (\( 15^\circ \ 30' \) S.) south is to the south and from this place to the south end of the island is S.-\( \frac{1}{4} \) S.W. I have recorded that the route on its west coast from Raas al-Milhi to the place where Nāsh is 8 ica’ (\( 15^\circ \ 30' \) S.) is to the south; and from this place to the south end of the island S.-\( \frac{1}{4} \) S.W. On the west coast from Raas al-Milhi to the place where Nāsh is 6 ica’ (\( 16^\circ \ 44' \)) the coast is perfectly safe; from 6 ica’ to its south end there is a rīkk ("bank" or "shallow") about 2 ical (\( 6 \) hours) sail or more in length to the neighbourhood of the coast. Between the island of Kom and the coast (east coast of Africa) there are four large inhabited islands, near one another, to which the people of Zang go. The first of these islands is Angazidya (Great Comoro). It is in 11 ica’ \( \frac{1}{2} \) of Nāsh (\( 9^\circ \) S. approx.; Moni, the capital of Angazidya, is in exactly 11° 40' South). Between it and the African coast it is 16 ical (\( 48 \) hours) sailing. The second, Mullah (our Mahali), is in 11 ica’ of Nāsh (\( 8^\circ \ 37' \) S., true Lat. about 12° 20’); the third Dumani (capital of Anjouan) which is in 11 ica’ of Nāsh (\( 8^\circ \ 37' \) S., true Lat. 12° 15’) is to the east of Mullah; the fourth Mawatta (our Mayotte) is in 10 ica’ \( \frac{1}{4} \) of Nāsh (\( 9^\circ \ 25' \), true Lat. 12° 46’ 55”). To the east of these islands lies a great reef of rocks, about 4 ical (\( 12 \) hours) sail, usually called ‘Ali al-Bahr ("eye" or "source of the sea"). The harbours of the east coast of Kom are Langanei (15° 17’ S.), Sa’da (true Lat. approx. 13° 54’) and Manzilal (the bay of Mahadamba, whose west point is in approx. 15° 12’ Lat.). Those of the west coast are Bander Bani Ismā’ (in the same latitude as Langanei on the west coast), and Bismā’ (Vobemar in 15° 21’ 15”). All these ports are dangerous (for ships) except Langanei. Know that between Raas al-Milhi and the coast of Zang, there are 50 ical (\( 150 \) hours) sail; and 20 ical (\( 60 \) hours) to the east of Raas al-Milhi there is an inhabited island called Munawarā (one of the southern Maldives). To the southeast of the island of Kom lie numerous islands called Tirakha (the Mascarene Islands); they are 12 ical (\( 36 \) hours) sail from the island of Kom’. In his Kitāb al-Munawarā al-Tafsir (f. 73b of the same MS.), Sulaiman al-Mahri gives another description of the island of Kom which does not differ from the one given above. Four pages earlier on f. 71a he mentions several other harbours of the island of Kom with their latitude calculated from the altitude of the Great Bear.

Island of Munawar in 11 ica’; Bander Ismā’ or Bani Ismā’ on the east coast and Lālangān or Langān on the west by 10 ica’; Bimarsh on the east coast, Anāmil on the west by 9 ica’; the island of Amber (Djarāt al-Ammār) on the east coast and Bander al-Nūb on the west by 8 ica’; Noshim (\( ? \)) on the east coast and Malawin (\( ? \)) on the west by 7 ica’; Manakāt on the east coast (true Lat. 22° 08’ 50”) and Bender al-Shū’un, "port of the banks", by 6 ica’; Bender Hadīdī on the east coast and Bender Kūrī on the west by 4 ica’; Wabaya (according to the Turkish text of Sidi ‘Ali; the name is illegible in MS. 2559) on the east coast and Bender Hit (or Hait) on the west coast by 3 ica’; Bender Hadīdī (sic) on the east coast; no name known on the west coast in this latitude by 2 ica’; Bender Kūs (or Kaus) on the east coast and the bay of Kūrī on the west coast by 1 ica’; the majority of the names of harbours, which are sometimes found on both coasts recall nothing known elsewhere.

Malagasy undoubtedly belongs to the western Indonesian group of the Malayo-Polynesian family. Down to the adoption of the Arabic alphabet, the language was only oral and, so far as we know, never written down in any alphabet. The lack of epigraphic material on the one hand and of ancient monuments on the other deprivest us of any chance of regaining the past history of this vast island. Before the xvii century, a few Arabic and Chinese texts would constitute our only documents, if the linguistic substrata did not yield us some valuable information. These substrata are of two kinds, Bantu and Sanskrit.

These former are divided into three categories:

1. The borrowings of relatively recent date from Swahili, which in turn got them from Arabic, of the type: Malag. bahari, "sea" < Swahili bahari < Arabic bahār; Malag. komba, "coconut fibre rope" < Swahili komba < Arabic kihār; Malag. sukari, "rudder" < Swahili sukrō < Arabic 'abādūn. These loanwords are practically only found in the maritime dialects of the N.W. and W. coasts.

2. The borrowings from Swahili of the type: Malag. bitu, "baobab" < Swahili milaia; Malag. kōnina, "master", "sir" < Swahili kivonina; Malag. kibōba, "measure for rice" < Swahili kibāba, "measure of about a quart", etc. Like the preceding, these loanwords are found almost solely in the maritime dialects of the west coast; they may therefore be assumed that they also are of recent introduction.

3. The following words are, on the other hand, used either in the old and modern coast dialects or in the dialects of the centre and east, that is outside of the zone frequented by the sailors of the west coast of Africa, Zanzibar and the Comoros. They are found in manuscripts of the Bibliothèque Nationale and in old records of travel; they are not borrowings, but belong to an old substratum of the language:

Malag. amba "dog" < Bantu mowu; Malag. akōnna "guinea-fowl" < Bantu kanga; Malag. amfondrə "ass" < Bantu munda; Malag. ahonambika, ahonambika, "two ox" < Bantu ngombe; Malag. aminana "tale, fable" < Bantu ngana; Malag. amhendri, amhendri "sheep" < Bantu mūnili; Malag. fmũnna, fmũnna "green pigeon" < Bantu ningen; Malag. gidru "kind of lemur" < Bantu ngedere "little black monkey"; Malag. kōni in the tribal name Kasi-mambika "madame" < Bantu mɔnisi "woman, wife";
Malag. kúnguna “boy” < Bantu kunguni;
Malag. kúlù, kúkó “mangrove” < Bantu mboko;
Malag. kómbe “paroquet” < Bantu kwara;
Malag. mina, malángo, mañágo “manioc” < Bantu malongo;
Malag. manjará, musávi “sorcery” < Bantu mêsivi “sorcerer”;
Malag. munyavana “poison” < Bantu unyavana “vegetable poison in which arrows are steeped”;
Malag. ási “goat” < Bantu mbázi;
Malag. pànga “milus agyptius” < Bantu punga, kwàngá “falcon”;
Malag. samba “ship” < Bantu čombo;
Malag. zàkini “stranger to the country or place where one is” < Bantu zvini “foreigners”;
Old Malag. zàká, modern Malag. zàká “stranger (means particularly foreigeners of white race)” < Bantu wàngùna “white stranger, European” etc.

The place-names of Madagascar further show a certain number of names of villages on the coast and of rivers running into the sea which are also Bantu or some Swahilis and others ordinary Bantu. They are referred to in my memoir on L'Origine Africaine des Malgaches, F. A., 1908, vol. II.

The Sanskrit-subtratum contains many words of various classes:

1. Names of gods, spirits and of caste:
   Old Malag. Ran in the expressions ham-nam, lit “enten by Rahu the moon” = eclipse of the moon; ham-nam-ia-matu, lit “obscured by Rahu the sun” = eclipse of the sun.
   Malag. andián, andiana, “noble”, “of royal or noble caste” < Kawi árjya < Sanskrit árjya, etc.

2. Names of the months:
   The names of the months in the Indian calendar are found in the dialects of all the tribes of Madagascar. They have not however been preserved in the original order and a month that is placed at the beginning of the year by one tribe is put at the middle or end by another. On the other hand, Bézina and Bančóns are not found in the Malag. lists; they are replaced by two ásins (large and small), two fénta (large and small) and a month called tíaqó:

Skt. yóné > Malag. fénta, bióna, réna, réka, fána;
Skt. nyóna > Malag. mía;
Skt. cóna > Malag. ásina, ásita, ásó, ásí;
Skt. cóná > Malag. fána, fáka, fáka, fáka;
Skt. yóna > Malag. bióna, bióna, bióna, bióna;
Skt. bóna > Malag. ásina, ásita, ásó, ásí;
Skt. tuqá > Malag. hátáka, háčina, háčina;
Skt. bónina > Malag. sóna, sóna, sóna, sóna;

“A Common words:
Skt. tén “10 millions” > Malag. “10 millions”;
Old Malag. “100 miles” > modern Malag. “100 miles”;
surmounted by a vertical ṭashdīd, then by ﭙ. Contrary to Malay each letter is vocalised, which renders the reading of Malagasy-Arabic texts easy in spite of the variations in orthography, which are too numerous to be given here.

The Arabic-Malagasy alphabet was once used over a very considerable area; at the present day, it is only used on the S.E. coast where very many natives were still using it at the end of the sixteenth century. The Malag. Muslims of the N.W. and W. prefer to use the Arabic-Comoro or Arabico-Swahili alphabet. The latter renders by ﭙ a ṭ identical with the Malag. ṭ but this form is only used in the island of Anjouan. The dialect of this island which has a ṭ transcribes it by ﭙ, the ʿ of Persian and Turkish. The Arabic letters ﭙ, ﭙ, ﭙ, ﭙ, ﭙ, ﭙ, ﭙ, and ﭙ are only found in Malagasy, when Arabic words are quoted and they are pronounced respectively ﭙ, ﭙ, ﭙ, ﭙ, ﭙ, ﭙ, and ﭙ.

Malagasy manuscripts in the Arabic character bear the generic name of shura-ba "great writing", i.e. "sacred writing". They used to be difficult to obtain; the owners gave them an esoteric character which did not allow their contents to be communicated to a stranger. I was able to get some copied and to acquire a few others between 1890 and 1894. The Bibliothèque Nationale in Paris has ten, of which eight are undoubtedly old. MSS. 2, 3, 4 and 5 came from the old Abbey of St. Germain des Prés; No. 6 is also old, although it was only acquired in 1820. Thanks to an interlinear transcription and Latin translation by a European, which can be dated on palaeographical grounds between 1595 and 1620, it may be presumed that No. 7 reached Europe in the second half of the sixteenth century and must therefore have been written before that date. According to an MS. note by Langle, "MS. 8 seems to have been brought to France in 1742"; the MS. 5132 wrongly classed with the Arabic manuscripts is also an old Malagasy manuscript. MS. No. 1 given by the Duc de Coislin to the Abbey of St. Germain des Prés has coloured drawings, coarsely executed of men, animals, trees, and cabalistic figures but not a single line of text. MS. No. 13 is a copy of four short modern manuscripts. With the except of 1 and 13, all the manuscripts are on native paper, written with the kalum with native ink. Flacourt gives a detailed description of them in his Histoire de la grande ile Madagascar (p. 194 sqq. of the edition 1661). The subject matter of the manuscript is very varied. There does not seem to have been a shura-ba prototype out of which all the others proceeded. In an apparent disorder, the result of the fancy of the author or the copyist, we find collected suras of the Koran, interminable lists of the names of Allah, and of names of angels, Arabic religious texts with interlinear Malagasy translations (cf. the facsimile publ. in N.E., vol. xxxviii., 1904, p. 457); Arabic-Malagasy glossaries, magic texts, and invocations in large numbers, magic squares and formulae, texts showing the magic influence, good or bad of the planets, signs of the zodiac, lunar mansions, months, and days of the week, of the male and female character of the twelve Muhammadan months (Mahuaram is male, Safar is female, and so on, in MS. No. 2 sqq., 269), of patterns for amulets (kiri in Arabic ﭗ),

The suras of the Koran are not reproduced in the order which was settled at the revision ordered by the Caliph Othman. MS. 6 gives them in the following order: ṣāfīḥa, cīvīx, cīlix, cīxii, and so on to xcvi. (f. 2a etc.). Then come verses 1—4 of Sūra xciv., verse 256 of xi., verse 16 and beginning of verse 17 of iii. The same MS. also contains Sūra xxxi. (f. 136b) and f. 136b—138b, verses 158—159, 137, 256—259, 284—286 of Sūra ii. and verses 25—26 of Sūra iii.

Here we may mention several texts of particular importance, one of which is certainly unexpected. MS. 3 contains a bilingual glossary of 36 common words, Malagasy and Dutch, the two languages being transcribed into Arabic characters. It was published in B. T. L. V., vol. xi., 1908. I have suggested that it must have been compiled by the interpreter of Frederic de Houtman, "who had spent four years with the Dutch and spoke their language well". He had supplied Houtman with "his collection of Malagasy words".

MS. 5 contains from f. 85a to 88a an Arabic poem with Malagasy translation in honour of a certain Lailā (I have not yet been able to ascertain if this is the lover of Maganin, or of some Laila in Arabic literature). The piece begins "The poets said..." and ends "...the girl who possesses beauty and kindness". The Arabic verses are of an unusual inaccuracy and show that whoever reproduced them had a very superficial knowledge of the language and poetry. MS. 8 (f. 52b to 56b) preserves a ḥṣūba in Arabic entitled Aladua ra-labatiibā (ra is the Malagasy article, "the Khaṭṭib's prayer". Not a line in it is correctly written and some words are absolutely unrecognisable. Under the transformations they have undergone however we still find the formulae used in this same sense. The following are successively mentioned in the ḥṣūba: the Prophet and his family, the first four caliphs, 'Aisha, Fatima, her sons Hasan and Husain, the two uncles of the Prophet, Hamza and al-'Abbas; then the Caliph Abū Ahmad 'Abd Allāh al-Mustafa b'līlah (the text has bi-līlah Allāh) Amir al-Mu'minin. Further on there is a reference to Sulṭān ʿalī, son of Sulṭān Othman.

The mention of the last of the 'Abbasid caliphs seems to indicate that the Malagasy converts to Islam, among whom this ḥṣūba was in use, had been converted by Arabs who had left Baghda or a country under al-Mustafa in this caliph's reign, i.e. between 640 and 656 (1252—1258). We cannot explain otherwise how this name happens with the title "Commander of the Faithful" in a ḥṣūba used in Madagascar. As to the Sulṭān ʿalī (perhaps we should read ʿalī and translate "Sulṭān ʿalī who is here", the khaṭṭī then indicating the Sulṭān in question), I have not been able to identify him. As it is written, the name is neither Arabic nor Malagasy. MSS. 7 and 8 contain two identical versions of a religious text which I published in N.E. (xxviii. 449 sqq.). In a passage devoted to the glorification of the month of Ramāḍān, the anonymous author succes-
sively invokes the prophets of the Old Testament; Jesus and Mary, the Prophet Muhammad, the first four caliphs, Ḥasan and Ḥusain and finally Abū Hanīfa al-Naṣīr, the great Ṣunny Imām, and Muhammad b. Idrīs al-Shāfiʿī, the founder of the Ṣunnī school which bears his name. The mention of these two learned men and the Ḳhatīb already mentioned are evidence of the orthodox character of certain Muslims of Madagascar and perhaps one may say of the generality of Muslims on the southeast coast. But the same manuscript No. 8 contains a Persian text which prevents us putting forward this conjecture. This latter text which is still unique is found on ff. 252—276. The last lines invoke the ʿabara muḥābāhāna, then, the first eight imāmi’s of the Shiʿa sect of the “Twelveers” (cf. ʿAṣIR; ʿAṢIRIYAH) to whom the author has added ʿAli Aklar (“Ali the elder”), son of Ḥusain and half-brother of ʿAli Zain al-ʿĀbidīn. The mention of these imāmi’s of whom the last named, ʿAli al-Kīlī, reigned from 135 (800) to 202 (818) is valuable, for it implies that the writer of this text belonged neither to the schismatic sect of the Zaidīya founded in 695 A. H. nor to the schismatic Shiʿa sect of the Ismāʿīliya which dates from 765 A. D., but to the orthodox Shiʿa sect of the “Twelveers.” This is important, for the Persians whom the historical tradition makes come from ʿAṣūr and colonise Kilwa on the east coast of Africa and the island of Anjouan in the Comoro Archipelago were Ṣalṭis (cf. A. R. Ferrand, Les Saluts de Kīla, in Memorial Henri Basset, in the press) who cannot come into consideration in the present case. The Imāmīya, whose presence in Madagascar is evident from MS. No. 8 thus form a separate group different from that of the Persians who had immigrated to the adjoining coast of Africa.

The Arabic-Malagasy manuscripts which I possess, those of the University Library of the Faculty of Letters in Algiers and others which we are able to see are, as a rule, similar in contents to those of the Bibliothèque Nationale, with the exception of the Ḳurʾān and the Persian text, which so far as I know are found nowhere else. Quite a considerable number of manuscripts like MS. 13 contain genealogies of kings of the Southeast, from which all these documents come, and local histories. One of them gives details of Ra·sa’s campaign in the Imara of 1659—1663 (cf. A. F. P., 1877, xxxvii). The majority of the religious texts which are found in the Arabic Malagasy MSS. of the Paris Nat. are translated into Malagasy. The Arabic part is very incorrect and the Malay translation shows that the exegesis of Magadagasy undergraduates very little of it. The illustrations and illuminated folios, to whom nothing ʿIsmāʿīli a foreign, was interested in the texts which I published. Comparing three translations of the Malagasy text with the Arabic text he concluded that “the meaning of the fundamental ideas was most gravely misunderstood” (A. G. LEcH, Information sur les lettres et les Mānasik d’Africa au XIVe C. in les Oeuvre, R. R. H., 1895).

The borrowings of the Malagasy from the Arabs who converted to Islam are many and are found through all the tribes of the island without exception. The most notable are the names of the days of the week, which are: les, ʿalāʾ, ʿalāʾ, ʿalāʾ, ʿalāʾ and ʿalāʾ. We may note that the Arabic article has been retained for Monday, Wednesday, Thursday, Saturday and Sunday but dropped for Tuesday and Friday. The names of the days are here given in the Merina dialect; the forms of the other dialects show the regular phonetic variations.

2. The names of the twelve months in Merina and in the dialect of some other tribes reproduce the Arabic names of the twelve signs of the Zodiac: al-kāhid, ad-dāʿa, ad-ḥāṣtān, an-nūrān, al-ṣaʿāba, al-nawād, al-aṣāf, al-ṣaḥr, al-ṣaḥr, al-ṭaf, al-ḥāj, and al-ḥāj. Quite a number of tribes do not know the Merina series, but still use the names of Sanskrit origin given above (p. 68, col. a).

3. The names of the 28 days of the month (the S. E. Malagasy however once had a year of 366 days) which are recorded by Flacourt (Histoire, 1661, p. 174) recall those of the 28 lunar mansions of the Arabs. According to the empirical method adopted by al-Shāfiʿī and other writers, i.e. dividing the 28 mansions by 12 the latter are evenly distributed among the signs of the zodiac. “Know,” says al-Shāfiʿī, “that each of the signs of the zodiac has two mansions and a third” (A. C. de Moutylini, Les Mansions initiales des Arabes, texte de Mouhammad al-Mogri, transl. and annot., Algiers 1899, p. 68). In Madagascar to get rid of the fractions, three mansions have been attributed to the first, seventh and ninth signs, and two to each of the eight others:

**Signs of the Zodiac**

The Arabic names of the lunar mansions thus become the names of the 28 days of the Malagasy months. Mentioned along with the day of the week, they take the place of the ordinal which the Arab-Malagasy texts rarely indicate by a figure. This method seems to have now fallen into disuse for ordinary purposes and is hardly used except in sorcery.

4. The *ṣikhl* (dialectical variants: *ṣikhl*, *ṣikkha* <ṣīkhl, “figure”) is the art of divination; its object is to find out what is not known and the means of discovering a remedy against it. Used throughout the island with slight variants from one tribe to another, *ṣikhl*, to take the form generally used, is a direct derivative from the *ṣikhl* “test” in the science of sand or Arab divinity (cf. the *ṣikhl* of *ṣikhl* “test” *ṣikhl* al-Kāhid of the Maḥmūd al-Zanātī, līth., Cairo, n.d.). Shīkh al-Zanātī’s table from which is derived all these tables in Madagascar comprises the following 16 figures:
Each figure of the table bears a name of its own and is composed of a certain number of dots, maximum eight (IV) and minimum four (XIII). Four figures have five dots (V, VII, XVI and XVII); six have six dots (II, III, VI, X, XI, XIV) and four have seven dots (I, VII, VIII, IV). Each figure governs a certain number of things or beings; according to the question put to the diviner, the latter considers very carefully the figure relating to the question asked. The influence of each of the figures comes from the sign of the zodiac, planet, day, Arab month and from one of the four elements to which it corresponds. It is also lucky or unlucky, male or female, fālīb (applying to the person consulting the fates) or maṭlūb (applying to the question asked); it is more or less strong and powerful in such and such conditions, and it also shows in what state the thing asked shall be realised. The 16 figures of the table are divided into different groups each bearing a particular name:

- the ḏawākhīl, "those who enter" which number three (XI, II, XV). If they are present in a large number in the sīdīkī effected by the diviner, it is a very auspicious sign and the questioner will certainly obtain what he seeks. If one of the ḏawākhīl proves to be the first figure, the object sought enters, i.e. is obtained;
- the khawārījī, "those who go out" are three in number (I, X, XII). If they are several times represented in the sīdīkī effected by the diviner, it is an unlucky omen and the object sought will be unattainable; one of the khawārījī proves to be the first figure, the object "goes out"; i.e. is lost to the seeker;
- the muḥkālīs, "those who return" (IV, V, VI, IX, XIV, XVI) are sometimes lucky, sometimes unlucky, according to circumstances. If one of the muḥkālīs is the first figure, the operation will remain without a definite result;
- the ṣawābīt, "those who are fixed, who do not vary" are the figures I, II, X, XI, XIII, XV. They are lucky and assure that the seeker will gain his end;
- the muqānāt, "the dismal" are figures III, VII, VIII, XI. If the first figure is one of the muqānāt the questioner will not obtain what he asks, or will not escape the misfortune he fears.

The figures I, IV, VII, X are called awtūd "the pious". If the four figures found in it are similar, success is assured.

Figures II, V, VIII, XI are called mūḍālī al-awtūd, "what concerns the pious". If the four figures found in it are similar the desire expressed, will be realised.

Figures III, VI, IX, XII are called sa'ilat al-awtūd, "the end of the pious". If the four figures found in it are similar, the object desired is coming and will arrive or the desire is completely realised at the moment of consulting the diviner.

The sixteen figures are also divided into two groups of eight; one is called sīkīl al-maṭlūb, "figure of him who asks"; these are the eight who represent him who is consulting the fates; the other sīkīl al-maṭlūb, "figure of the thing sought", i.e. those who have to answer the request. If the first figure of the sīkīl is among the eight fālīb, and the seventh among the eight maṭlūb, it is a very good omen. If on the other hand, the first figure is maṭlūb and the seventh fālīb, it will be impossible to avert the evil fate. It must also be enquired if the fifteenth figure of the operation of the diviner is fālīb or maṭlūb, if fālīb, it is lucky and if maṭlūb, unlucky.

If the sīkīl is consulted on behalf of a sick man the presence of figures VII, VI, V, XIV, IX, IV, XIII indicates his approaching end.

The four first figures of the table are also called buṣīt al-aḥāyūm, "hours of the days". Repeated several times they indicate that the thing sought will be realised in the course of a day. The four following (V—VIII) are called buṣīt al-qamās, "houses of the weeks" and indicate an interval of a week; the four others (IX—XII) buṣīt al-qalāb, "houses of the months" indicate an interval of a month and the last four (XIII—XVI) buṣīt al-sinām, "houses of the years" indicate an interval of one or several years. If one of the houses of the days occupies a position other than the first four, the interval increases in proportion as it is remote from the first four places. On the other hand if one of the houses of the weeks, months or years is found before its place, the interval diminishes in proportion to its nearness to the first figure.

The figures I, III, V, and X mark the direction of the east; VIII, XII, XIV and XV, the direction of the west; II, IV, VI and VII, the direction of the north, and IX, XI, XII and XVI, the direction of the south.

Figure I of the preceding table is called al-aḥāyūn or ṣāḥīka. The first of these names has passed into Malagasy in the form māhizani. It represents the person who comes to consult the diviner; its zodiacal sign is Pisces; its planet Jupiter; its day Thursday and its element, the sea. The corresponding figure is the fifteenth. It is lucky, male and fālīb; i.e. it is one of the eight figures representing him who consults the fates. Its month is Dhu ‘l-Hijja. If in the preparation of the sīdīk it occupies the first place, the thing demanded will be realised after an interval of three days. The amount of happiness and success which it brings will be greater if it occupies the first place.

Figure II (labīt al-maḍżīlāt, Malag. albashu) is that of wealth, riches, possessions and estates, and merchandise of all kinds. Its sign of the Zodiac is Sagittarius; its planet, the Sun; its day, Sunday; its element, fire. The corresponding figure
is the tenth. It is lucky, feminine and matlıb, i.e. it is one of the eight figures which represent the thing sought. Its month is Dişmâdlâ Al-Awâl. If it occupies the fourth place, the desire of the seeker will be accomplished after an interval of 55 days; if it is in the fifth place, it is still propitious; if in the fourth it indicates greatness.

Figure III (kâfâr al-khârîqâ, Malag. adâla) is that of the family, especially brothers and sisters. Its sign of the Zodiac is Kâs Dişmâwlâh (Pers. gâwâr-zârâr: "the head of the Dragon"); its planet Saturn; its day, Saturday. The corresponding figure is the tenth. It is unlucky, male and fâlîb. If it is in the fourteenth place, the interval necessary for the accomplishment of the desire formulated is 150 days. It reaches the maximum size in the ninth place and strength in the third. Its metal is gold.

Figure IV (al-duqmaâ > Malag. dâma, zuma) is that of the country, gardens and barriers of the dead. Its sign of the Zodiac is Virgo; its planet Mercury; its day, Wednesday. The corresponding figure is the fourteenth, its element black earth. It is good or bad according to circumstances and matlıb. Its month is Dişmâdâ Al-Akhir. If it is in the fourteenth place, the interval before the realization of the desire expressed is 20, 55 or 130 days. It is large in the sixth place and strong in the fifth and tenth. Its metal is silver.

Figure V (al-kâfâr al-khâlîq > Malag. akhâlîq, Malag. akhâlîq) is that of children and bearers of news. Its sign of the Zodiac is Libra, its planet Venus, and its day, Friday. The corresponding figure is the twentieth. The south wind is its element. It is neither good nor bad; it is fâlîb and female. Its month is Kalâbâb. If it occupies the fourteenth place the desire expressed is satisfied the day following. It is large in the twentieth place and strong in the fourth, eighth and eleventh. Its metal is gold.

Figure VI (al-kâfâr al-khâlîq > Malag. akhâlîq, Malag. akhâlîq) is that of the sick, of cries, of war, of slaves, of loss of property, of remedies and of ships sending ships of the Western Indian Ocean. Its sign of the Zodiac is Aquarius; its planet, Mercury; its day, Saturday. The corresponding figure is the seventh. Its element is the west wind. It is good or bad according to circumstances. It is fâlîb or matlıb. Its month is Dhu'l-Ka'dâ; it is female. If it is in the fourteenth place, the interval before accomplishment of the desire expressed will be fifteen days. It is large in the ninth place and strong in the eighth, eleventh and twelfth. Its metal is silver.

Figure VII (al-kâfâr al-khâlîq > Malag. akhâlîq) is that of marriage and of sexual relations. Its sign of the Zodiac is Capricorn; its planet, Saturn; its day, Saturday and its element earth. The corresponding figure is the sixth. It is unlucky, fâlîb or matlıb and male or female according to circumstances. Its month is Shawwâl. If it is in the fourteenth place, it indicates an interval of 55 days before an answer to the question asked the diviner is obtained. It is large and strong in the second, ninth and twelfth. Its metal is silver.

Figure VIII (al-kâfâr al-khâlîq > Malag. akhâlîq) is that of death and removal. Its sign of the Zodiac is the Ram; its planet Mars; its day, Tuesday. Its corresponding figure is the sixteenth, its element fire. It is unlucky, fâlîb and male. Its month is Muḥarram. If it is in the fourteenth place, it indicates an interval of 21 days. It is large in the first and strong in the fourth. Its metal is iron.

Figure IX (bayâa > Malag. alâhâra, adîhîdâdî) is that of departure and of those who clothe the dead in white linen. Its sign of the Zodiac is Cancer; its planet, the moon, its day, Monday. Its corresponding figure is the thirteenth and its element is water. It is neither lucky nor unlucky but may be one or other according to circumstances. It is fâlîb and female; its month is Djuimâdâ Al-Akhir. In the fourteenth place it indicates an interval of ten days for the accomplishment of the desire expressed. It is large in the ninth and strong in the eleventh. Its metal is copper.

Figure X (nâsraât al-khâlîq > Malag. adîhîdâdî) is that of strength and of rulers. Its Zodiacal sign is Leo, its planet is the sun; its day, Sunday; its element fire. It is male, fâlîb and very lucky. Its month is Dhu'l-Ka'dâ. In the fourteenth place the interval before the accomplishment of the desire is 32 days. It is large in the tenth and strong in the thirteenth. Its metal is gold.

Figure XI (nâsraât al-dâhâkîn > Malag. asurâwâyî, asurâwâyî) is that of life in towns, of return to the domestic hearth, of ambition, friendship and of children. Its sign of the Zodiac is Taurus, its planet Venus, its day Friday, its element, black earth. The corresponding figure is the fifth. It is male, lucky and fâlîb. Its month is Râmâdîn. If it is in the fourteenth place, ten months will have to pass before the realization of the desire. It is strong in the fourteenth place and large in the eleventh. Its metal is copper.

Figure XII (sâbat al-kâfâr idâa > Malag. karbâda) is that of enemies, cunning and ambushes. Its sign of the Zodiac is Dhîl al-Djuamâwlâh, "the Dragon's tail", its planet Saturn, its day Saturday. The corresponding figure is the third, its elements are water and terra firma. It is unlucky, matlıb and feminine. If it is in the fourteenth place, the interval before the accomplishment of the desire is 66 days. It is large in the twelfth and strong in the thirteenth. Its metal is iron.

Figure XIII (fârîk > Malag. tarâkî) is that of the road which leads to the house of death, to the cemetery. Its sign of the Zodiac is Cancer; its planet, the Moon; its day, Monday. The corresponding figure is the ninth, its element is water. It is lucky, matlıb and female. Its month is Dhu'l-Ka'dâ. If it is in the fourteenth place, the interval before accomplishment of the desire will be 50 days. It is large in the fourteenth and strong in the twentieth. Its metal is copper.

Figure XIV (al-îdâa > Malag. adîhîdâdî, adîhîdâdî) is that of learned men, of remedies, of knowledge, arms and medicine. Its sign of the Zodiac is Gemini; its planet, Mercury; its day, Wednesday. The corresponding figure is the fourteenth. Its element is the wind. It is lucky or unlucky, male or female. fâlîb. Its month is Djuimâdâ Al-Akhir. In the fourteenth place which is its own, it indicates an interval of 6 months before the accomplishment of the desire. It is large in the fourteenth and strong in the fifteenth. Its metal is iron.

Figure XV (asbah al-dâhâkîn, Malag. alâhâra) is that of the judge. Its Zodiacal sign is Pisces; its planet: Jupiter, its day, Thursday and its element water. The corresponding figure is the
first. It is lucky, male or female and gālūb. Its
month is Ṣawwahāl. In the fourteenth place the
interval before accomplishment of the desire will
be 55 days. It is large in the fourth and strong
in the eleventh. Its metal is iron.

Figure XVI (naši al-kadd > Malag. kisu) is
that of the end of all things and the last of the
sikidī. Its sign of the Zodiac is Scorpio; its planet
Mars, its day Tuesday and its element water. The
corresponding figure is the eighth. It is lucky or
unlucky, male or female and maṭāfī; its month is
Ḍujmādā al-Awwal. In the fourteenth place it
indicates an interval of seven days before the
realization of the desire. It is large on the four-
teenth and strong in the sixteenth which is its
own. Its metal is copper.

These are the sixteen figures of the sikidī and
the signification given them in Madagascar.

As its Arabic name shows, this “science of the
sand” was first practised by tracing lines or dots
on the sand; in Arabic one says darab al-rāmī.
“to strike the sand”, to describe the preparation
of the ilm al-rāmī. On the east coast of Africa
in Swahili the same operation is called kūpiga
baa, lit. “to strike the planchette” (which implies
that the dots forming the sixteen figures are in-
scribed on a planchette) or ramī, a Bantuised
form of the Arabic rāmī “sand”. At the first the
lines or dots were traced on the sand, then on a
planchette of wood and lastly as in Madagascar
on paper. According to another Malagasy method,
the diviner also uses grains of sand, or seeds,
especially those of the sanu tree (Piptadenia
chrysostachys, Bth.).

When requested to consult the fates by the
sikidī, the diviner first of all pronounces the in-
vocation: “Awake, O God, to awaken the Sun!
Awake, O Sun, to awaken the Cock! Awake, O
Cock, to awaken Man (ulambelulunto)! Awake, O
Man, to awaken the sikidī; not that it may lie, not
that it may lead us to error, not that it may make a
laughing stock, not that it may say foolish things,
not that it may deal with any matter of no im-
portance, but that it may search out secrets, that
it may see what is beyond the mountains and
the other side of the forest that it may see what
no human eye can see. Arise! for thy skill which
comes from the Muslims with long hair (ṣīlām
be vohī), from the high mountains, from Raburubuka,
from Tapelaketiketsika, from Zafti-
simaitu (eponym of a tribe of the south-east con-
verted to Islām), from Andriambavitaaahī, from
Rakelihuranna, from lanakara (eponym of another
south-eastern tribe, converts to Islām), from And-
riamoni-Sulanastra, from Vazimba (a dwarf tribe,
of African origin as the name shows; the old
owners of the soil), from Anankandrianaahītra, from
Rakelihavavuli (lit. the little man with long hair).
Arise! for we do not have thee for nothing; for
thou art dear and cause expense! We have taken
thee in exchange for a fat zebu cow with a large
hump. And for money on which there was no
dust (i.e. coins which are still circulating). Awake!
for thou hast the confidence of the ruler and thou
expressest the judgment of the people. If thou
art a sikidī that can speak, a sikidī that can see
and that does not repeat (only) the gossip of people,
the hen killed by its owner, the ox killed in the
market; the dust which clings to the feet (i.e. a
sikidī who does not repeat what everyone knows);
awake, on the mat which is on this very spot!”

(cf. Antananarivo Annual and Madagascar Maga-
nice, 1886, p. 221). If the diviner operates with
seeds, he takes up a few at random and counts
them two by two until at the end he has one or
two which are placed at the top of the figure.
The operation is repeated four times which gives
the four rows of dots of the first figure.

When the diviner works on paper, he traces
with the ḫalam a line in the form of the arc of
a circle, the centre of which is indicated by a
dot. The sum of the dots and initial and final
curves (each of which counts as a dot) must not
exceed 14, although the ṛpīsikidī is understood to
make the dots without counting them. He then
draws three other concentric curves in the same
way. This done, the dots are counted two by
two and line by line from left to right. A vertical
line separates the groups of two dots from one
another. After the last vertical line there remains
either the final curved line which counts as a
dot, either a point or a line, i.e. two dots. This
or these are written opposite each line and given
figures I, II, III, IV:

The four first figures are called in Arabic, um-
maḥāt “the mothers”:

Figure V is obtained by transcribing vertically
from right to left the line u a’, b v, c’ and d’
give in the same way figures VI, VII and VIII.
These four new figures derived from the four first
are called al-hamāt “the daughters”:

Figure IX is formed by adding horizontally
the dots of I and II (in the addition ● ● ● = ● ● ●
● ● ● = ● ● ● ● ● ●). All the other
figures are similarly formed: III and IV give X;
V and VI give XI; VII and VIII give XII; IX
and X give XIII; XI and XII give XIV;
The eight last figures are called *banāt al-banāt* "the daughters of the daughters":

These sixteen figures contain the fate of the inquirer and the diviner has to give him the meaning of each of them by interpreting them from the table of Shukh al-Zanāṭ, which was given above (p. 712). We may therefore imagine what a high place the *zikādi* occupies in Malagasy life, and the very numerous circumstances in which recourse is had to it. The diviner was and undoubtedly still is the true manager of it. In practice it is consulted for every act of private and public life whether of the individual, family, clan or tribe. I have not been able to learn how one becomes a *mptikiddi*. It is the specialty of certain individuals without distinction of sex or birth. A diviner or a sorcerer may be man or woman (I have never known a woman sorcerer but have heard that there are such). The sorcerer may be of royal birth, noble or freeman (I have never heard of a sorcerer or diviner who was a slave, although slaves have been executed on charges of sorcery). The diviner or the sorcerer is very often the son or daughter of a diviner or a divinestar, who assists him an extensive clientele, for he or she is supposed to inherit the paternal (or maternal) secret. The sorcerer or diviner may be either native or foreigner. I was taken for a diviner during a stay of fourteen months at Mmanjāny (S. E. coast) by the Muslim *mpet tid* of the district, who treated me a colleague after I had shown them my knowledge of Islam. It was in this way that I was enabled to be initiated gradually into the practice of *zikadi* and appeal was sometimes made to it.

The area of dissemination of the *zikadi* devoted in Africa is considerable. It is found in Difīrī and the *zikadi* of Bora in Tahomey reveal the existence of practices closely allied to it among a West African people who are however not Muslims. G. Ferrand, *Mauritania* (*Molière* 1894. p. 344. et seq.)

The great annual festival of the *zikadi* of the lamb is only a survival under another form of the old *zikadi* (p. x). On this identification of G. Ferrand, *Mauritania* (*Molière* 1894. p. 344. et seq.)

According to the Portuguese discoverer and especially of Hacen, the Muslime Malagasy of the 18th and 19th centuries lived during Ramañān, rested the obligatory prayers, read the Qurān, and drank fermented liquids and ate pork. There were *zikadi* in the 18th and 19th centuries. The collections of the faithful took place; but there is no mention of the existence of a presiding officer in the early travellers and Hacen describes definitely in his preface that the nation of which he is speaking has no *zikadi*. As in *zikadi* (p. v), the success of Islam was only mediocre in Madagascar. Malagasy does not readily assimilate foreign beliefs and customs and the latter do not profoundly modify native beliefs and customs. His whole philosophy is contained in the proverb *maiti ni isina*, "life is sweet"; he thinks it good to believe; the strict observation of the Qurān, prescriptions would have upset too much his usual life and customs. Allah proscribe fermented liquids, standing stones, games of chance and consulting the fates as abominations invented by Satan. But these abominations are particularly dear to the Malagasy; they are particularly devoted to alcoholic liquors and to gambling, believe firmly in soothsaying and standing stones (*tangambata*) are held in honour throughout the whole island. No doubt they venerate Allah, the Qurān, the Prophet and saints of Islam but it is a purely verbal reverence and they are not really islamised to the degree, that for example are the negroes of the adjoining east coast of Africa.

The conversion of the Malagasy to Christianity was also a failure. At the time of the conquest of the island in 1895 they were quite disposed to be converted en masse to Roman Catholicism, thinking it would please us; they had to be warned that the French government only attached importance to respect for the laws and respected the religious convictions of every one whatever they were. This fact of which I was a witness is more eloquent than any other and throws an illuminating light on the past.

The evidence quoted above and especially that of comparative philology enable us to draw up the following scheme of the settlement of Madagascar so far as our knowledge at present goes:

1. Many legends give the old Vazimbas, now disappeared, as *tanju-tanju* or ancient masters of the oil i.e. the autochthons. The name which is found in East Africa is clearly Bantu and represents an older *va-zimba* Malg. *va-zimba*. They are said to have been of small stature. They were perhaps negroes.

2. There was an important immigration of African Bantu prior to our era of which we have an evidence in a certain substratum of African words which has survived in the modern language.

3. There was next an important immigration of Hindoos from Sumatra (cf. G. Ferrand, *L'Empire sumatranas de Crevjaya* in the second—fourth centuries A.D. A word like the Malag. *kiti* < old Malay. *kitti* = 100,000 < Malay *kit* 100,000 < Sanskrit *koti* 10,000,000 is over many others testifying to this fact. These Indonesians modified the *sonatological*, cultural and linguistic type of the negrito Bantu who peopled Madagascar.

4. Arrival of Arabs in the sixth—ninth centuries and conversion of the Malagasy to Islam. These Arabs probably came from the Persian Gulf and belonged to the Sunna.

5. Another immigration of Sumatrans at the end of the tenth century. I consider the *Wakwak* to be western Indonesians, as I shall explain in the article *Wakwak*. The Book of the Wonders *Inzur* (*Algiz* al-Hind, ed. by van der Lith, and trans. by M. Deren) mentions a piratical campaign by these *Wakwak* in 534 (945) in the Western Indian Ocean. It is probable that we have here a reference to the migration led by Ramini the

(GABRIEL FERRAND)

AL-MADĀ‘ĪN: a mediaeval Arab town or rather a group of towns in al-‘Īrāk (Babylonia) about 20 miles S. E. of Baghdad lying on either side of the Tigris in two almost equal portions. The name al-Madā‘īn (plur. of al-Madīn) “the towns” is explained from the fact that the two capitals situated opposite one another, Seleucia on the west, the Greek colony founded before 312 and 301 B.C., and Ctesiphon on the east (the first reference to which is in 221 B.C.), the winter residence of the Parthian and Sasanian kings, with several other places close at hand were regarded as forming a whole. The Semitic Aramaeans who formed the bulk of the population under the Arsakids and Sasanians comprised the whole group under the name Māḥūr or Mardabūhī “the towns”, which latter word the Arabs adopted in the plural form al-Madā‘īn peculiar to their language. Following the Sasanians, the Arabs reckoned seven towns in al-Madā‘īn, the official names of which they partly arabized.

On the west bank lay Wēh-Andeshir, corrupted by the Arabs to Behirsarfs (often wrongly read Baharsar and Nahr Shīr or Sir; cf. Streek, Babylonien, p. 262, note 3). The name does not mean “good” (is) Ardeṣīr as it is often explained but “house (i.e. foundation) of Ardeṣīr” (cf. thereon, Ndileke, W. Z. K. M., xvi., 1902, p. 7: Wēh = Aram. Bē): In Syriac and Talmudic literature Behirsarfs is usually called Kēbeh (= Kohe of the late classical writers) and Māḥūr (= the town”). It occupied the lower southern half of the former Greek town. A parasang (c. 3 miles) north of it was the village of Darzandān (al-Darzān), and later, Darzān. On the east bank stood Ctesiphon. The Arab historians and geographers usually reproduce this name, which is not Greek but very probably indigenous (Iranian) by Taṣfūn; but we also find Ṭuvfūn and Taḫūn corresponding exactly to the presumed Pahlavi form (Ta-fun, Taštun). On these place-names cf. the very full discussion by Streek in Pauly-Wissowa, l.c., Suppl. vol. iv. 1102 sq. Not uncommonly the town on the east bank, much more important for the Muslims, is called al-Madīn (e.g. in al-Iṣāqātī, B.G.L., i. 87. 1). About an hour’s journey away, south of Ctesiphon stood Wēh Antioch-i Khosra (Khosraw). The Arabs usually called this city founded by Khosraw I Anusharwān, which was settled with the deported inhabitants of Antioch ad Orientem destroyed in 540 and is said to have been planned on the model of the Syrian capital,
Rumiya = Rome or (New) Rome or Byzantium. The Syriac sources distinguish this new foundation from the older towns by the name Māhāzā ḫidhatā = "New town".

We know nothing further about the three other towns of al-Madā'in, which made up the number seven so popular in the east and was here no doubt deliberately chosen. The exact forms of their names are not even known.

As early as the Parthian period there was a stone bridge to convey the traffic between the two thickly populated banks of the Tigris, which the historian Ḥamzah al-Iṣfahānī (cf. his Ta'rikh, ed. Gottwaldt, p. 31, 10) describes as a marvel; but already in his day (beginning of the fourth = tenth century) there was no longer any trace of it. Under the Sāʿānians a second bridge (of boats?) was erected. In the Muslim period however there was still only a bridge of boats.

In Taṣṣufīn-Ḳtesiphon two main quarters are distinguished, the northern "old town". Arab. al-Madā'in al-ʿaṣa'a and the southern, Ḥanāfār (Asāfār, Ḥanāfār, and other variants of the name).

The "old town" probably represents the oldest settlement on the east bank, the foundation of the Parthian period. In it was a royal palace which the Arabs called al-ṭūhr al-ḥayyāf = "the white palace" (there were other palaces of the same name elsewhere; cf. the article Kālīm-e Samānī), probably the residence originally of the Sāʿānian kings built by one of the last Arsakids or first Sāʿānians. The southern quarter Ḥanāfār also included a royal residence, the Ṭūmān (= pillared hall, palace), usually described more definitely by the Arab authors of the middle ages as Ṭūmān al-Ḥār (cf. Khusraw). Chorezos, the general title of the Sāʿānian kings among the Arabs; cf. Streck. Seleucia u. Ktesiphon, p. 37, note 1) Its builder is known with certainty to have been Sapor (Sahār) I (241—272 A.D.). It may be noted that later Arab historians often confuse the "white palace" and the Ṭūmān.

It can hardly be supposed that the site of al-Madā'in, so favoured by nature, at the point where the Euphrates and Tigris most nearly approach each other, was without any considerable settlement even before the time of Seleucus I. There is on the contrary every indication that the town of Ṭūmān (written geographically Ṭūmān) dating back to remote antiquity like its successor Ṭūmān, the Ṭūmān of the classics, could not be located anywhere else than on the site of the same town of Seleucia and Ctesiphon or in the immediate neighbourhood. What the Arab writers say about the founder of al-Madā'in is worthless. They ascribe the foundation to mythical kings of the old Iranian epic like Ḥamshad and Tahmārash or other celebrated rulers of the east like Nirmāl or Iskandār-Alexander, for Nirmāl (see Abu’l-Farābī-Iskandar-Bahreinwānis, Ta’rikh-Muṣḥāf, Beirut ed., p. 20,2).

For the pre-Islamic tradition of al-Madā'in which does not fall within the scope of this work cf. Streck. Seleucia und Ktesiphon, and the pertinent articles in Paulus Miss ions. The Arab sources contain much valuable information for the Sāʿānian period: the most notable is Tabari’s history (cf. Noldeke. Gesch. des Islam. i, 65. 1879). We may here mention that under the later Sāʿānians, Gogus, to some extent lost its popularity as the winter capital, for they, especially Khosrow II Parvēz (590—628), preferred Dastagerd to it, three days journey to the north on the very old "royal road" (cf. Dastān-e Rād).

We have fairly full information about the conquest of al-Madā'in by the Arabs, especially the great chronicles of Tabari (l. 2426—2456) and Ibn al-Aṯir (ed. Torn bare, ii. 396—403; cf. also Caetani. Annali dell’Islam, iii. 732 sq.; Wellhausen, Skizzen und Vorarbeiten, vi. 68 sq., and Streck. Seleucia u. Ktesiphon, p. 38—41). After the glorious battle of al-Kālidāsya, which made the Arabs masters of ʿIrāk west of the Tigris (cf. above, ii, p. 612b), the Caliph ʿOmār ordered Saʿd b. Abī Waḵša, who was then in command of the Muslim troops operating in the ʿIrāk, to march upon the Persian capital. Saʿd advanced, fighting several battles on the Tigris and appeared before Behūrūn in the first half of January 637 (= end of 16 A. 11). The strongly fortified town which was bravely defended was besieged and stormed in vain for two months. In the end the Persians whose supplies were exhausted fled by night unnoticed over the river so that when the Arabs stormed the town soon afterwards they found it quite deserted. A few days later the invaders were able by using a convenient ford to cross the Tigris, much swollen by the spring floods. This almost miraculous crossing effected without any loss is a much celebrated event in Muslim history; it is one of the famous "days" of the period of the conquest. The Persians had not expected that the Arabs would win their way across. The king had taken refuge with his family and court in Huwān (q.v.); the army had retired to ʿĪjār Nahrāwān (about 24 miles north of Ctesiphon). Only a few regiments remained at the palace in the capital. At the end of March 637 Saʿd made his triumphant entrance through the deserted streets. The progress of the Arab operations had not given the Persians sufficient time to carry off the vast treasures accumulated in Ctesiphon. These all fell into the hands of the victors. The Arab sources give many interesting details of the very valuable objects which were captured not only in Ctesiphon but in the pursuit of the Persian army. The total value of the booty taken in Ctesiphon was estimated at 900 million dinārs (of a nominal value of nine pence but it varied a great deal).

The occupation of the Sāʿānian capital, the greatest royal city in nearer Asia, may be said to be the most important event of the period of Islam’s splendour, the period of the great campaigns of conquest. In the "old town" the victorious Saʿd built the chief mosque – the first Muslim place of worship to be built in the ʿIrāk.

Al-Madā'in was not destined to be the residence of the Arab governor of the ʿIrāk; on the contrary it sank under Muslim rule to be a mere provincial town. It was soon over-shadowed by the newly founded Arab military colonies of Kūfa, to which the gates of Ctesiphon were transported, and a symbolic custom found elsewhere in the Arab east – Bilād ʿArab and Jūzayj. Basra and Kūfa now became the political and intellectual centres of Mesopotamia until the Caliph al-Mansūr built Baghdad and the political and cultured centre of gravity of the land gravitated thither. The foundation of Baghdad dealt al-Madā'in its death blow: it was now called upon to yield the building material necessary for the new capital of the caliphate,
just as Babylon had done for Seleucia centuries before.

In the history of the Umayyad and ‘Abdāsid periods al-Madā’in was as a rule no longer of any prominence. It only played a part of some importance in the civil wars of the first two centuries of Islam, those provoked by the Khāridjīs as well as those provoked by the ‘Alids. The Muslim inhabitants of al-Madā’in were, it seems, always strong supporters of the Shi’ā. They were also hostile to the Khāridjī movement. As early as 658 there was fighting around al-Madā’in between the ‘Alids and the Khāridjīs. An attempt by the latter (in 664) to seize Ctesiphon from Behrāsr was thwarted by the commander there who had Shi’ā sympathies, by destroying the bridge of boats. The Khāridjīs however later succeeded in twice gaining temporary possession of al-Madā’in, e.g. in 688 when the Khāridjī group of the Azariyān [q.v.] wrought great slaughter among the Muslims who did not belong to their party. The second occupation of al-Madā’in in 696 was achieved by the Khāridjī leader Shāhib b. Yazid. On these events cf. J. Wellhausen, *Die religions-polit. Oppositionsparteien im alten Islam* (= Abb. G. W. G., N. F., vol. v., No. 2 [1901]), p. 21, 56, 43, 45; R. Brunnow, Der Islam in der vorchristlichen Zeit*, p. 91, 69. The western part of the state (in modern ‘Alamdar) Leyden *1884, p. 22, 92.* With the death of Shāhib b. Yazid, the power of the Khāridjīs was broken, but as late as 751 ‘Abbāsid troops had to be sent to suppress a leader of these rebels; cf. A. Muller, *Der Islam im Morgen- und Abendlande*, i. 440.

As regards the ‘Alid wars in the Ḳaṭṭ the most important campaign was that of Ḥasan to al-Madā’in in the year 661. Ḥasan lived there in the “white palace”. Cf. on this expedition, the Arabic accounts of which differ not inconsiderably: Weil, *Geschichte der Chalifen*, i. 244; Flügel, *Gesch. der Araber*, Leipzig 1867, p. 158—159; A. Muller, *op. cit.,* i. 336 and especially J. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, p. 69. From the year 696, when the ‘Abdāsid conqueror al-Madā’in appears in 684—686 and 744 as supporting the ‘Alids; cf. Wellhausen, *Die religions-polit. Oppositionsparteien*, p. 72, 73, 80, 98. The importance of al-Madā’in as an objective in these civil wars is evident from the fact that in those days the military road from Ḍaṣṭa to Khūfa did not go through the desert along the Arabian bank of the Tigris but went across the canals to the Tigris at al-Madā’in and from thence over further canals to the Euphrates; cf. Wellhausen, *Die religions-polit. Oppositionsparteien*, p. 85, note 3.

The Caliph al-Ma’mūn was repeatedly forced to lend his army against al-Madā’in: in 811, when in the troubles that followed the later ‘Abdāsid succession after the death of Hārūn al-Rašīd the Barmecide ‘Īmān b. Mūsā defended the town against Ma’mūn (cf. i., p. 605) and in 815 when an ‘Alid rebel Abu ‘l-Saṭāyā (al-Sarī b. Māsūr, cf. iv., p. 170) who had seized the town was besieged in it. For the rest we do not hear much more of al-Madā’in in the ‘Abdāsid period; its two main components, Tašafūn and Behrāsr, continued for several centuries more to enjoy the modest existence of small country towns. As regards Rūniya which was included in the system of towns forming al-Madā’in, the Caliph al-Muṣār had temporarily held his court there in 754 and had caused Abū Muslim [q.v.] to be treacherously murdered there (Yākūt, ii. 867, 2; Streck, *Babyloniens*, ii. 268). But about the middle of the tenth century this place according to al-Ma’mūn’s *Muḥāfaẓ al-Makāba*, ed. Paris, i. 200) was already completely deserted; the wall round it built of thick bricks was the sole relic of it left. When Yākūt wrote in the early decades of the xiiith century (cf. his *Maḏa‘īn, i. 768; v. 447, 7*) the whole of the east side of al-Madā’in, i.e. Tašafūn in particular was already completely deserted; on the west bank still stood Behrāsr, a small town, practically a village, inhabited by peasants who practised only agriculture. It was now known as al-Madā’in.

When Khālid Ibn al-Walīd with his Mongol hordes was advancing to conquer the Caliph’s capital in 1257, he pitched his camp in the ruins of the Iwān and in the following year, after he had been joined by the troops of the Mongol princes, he marched on Baghdad; cf. Rashīd al-Dīn, *Histoire des Mongols de la Perse*, ed. Quatremère, Paris 1836, p. 266.

The author of the *Muḥāfaẓ al-Makāba* (ed. Juyboll, iii. 62) who wrote an epilogue of Yākūt and died in 1328 is also acquainted with Behrāsr as a little town inhabited exclusively by Shi’īs, as is also Bākūwi who about 1403 prepared a synopsis of the geography of al-Kaẋwāni [q.v.]; cf. the French translation of the latter *Tawḥīd al-Ashūr* by de Guignes in N. F., ii. 1789, p. 472. When Behrāsr became deserted is unknown. Presumably the disastrous invasion of the Mongols under Tīmūr at the beginning of the xvth century which was so fatal to so many once flourishing towns of the lands of the Euphrates and Tigris also caused the collapse of this last settlement in the territory of al-Madā’in.

It was not till the xiiith century that a modest village arose on the site of Ctesiphon, a little north of the ruins of the Iwān Khūfa, in sight of the highly venerated sanctuary of Salmān Fāk and called after him. This consisted on my visit in 1927 of a single street of mud-houses and Khāns where the numerous Shi’ī pilgrims who pass through here are provided with food and shelter. Behrāsr is mainly supplied by the ruins of the Iwān especially of the north wing of its great hall which collapsed in 1888; cf. Herzfeld, *op. cit.,* ii. 65.

In the Great War the site of al-Madā’in was the scene of desperate fighting, momentous in its results. This is usually called the Battle of Ctesiphon. When the Anglo-Indian army under General Townshend in the late autumn of 1915 began an advance from the fortress of Kūth al-ʿAmāra along the Tigris to the north to try to take Baghdad, it was defeated on the 22nd and 23rd November 1915 in the district of the ruins of al-Madā’in by the Turks. The fighting took place mainly on the right bank; the British line of battle ran on the east of the ruins of the Iwān and the little village near it. This reverse forced Townshend to retire to Kūth al-ʿAmāra, which was soon afterwards surrounded by the Turks and capitulated after a five months’ siege on April 29th 1916. For further particulars of this battle, the greatest on the Mesopotamian front in the world war, see the works on this subject; cf. especially General Townshend’s *My Campaign in Mesopotamia* (London 1919), p. 103 sqq., 171—184, with plan of the battle (map 7).

In connection with this brief sketch of the history of al-Madā’in it may be mentioned that one of the most distinguished scholars in the
field of Arabic history was born here, namely ‘Alî b. M. al-Madâ’inî (cf. the next article), born 753, d. between 830 and 845. His work itself has not survived but may be partly reconstructed from the numerous extracts in Baladhuri, Tabari, Yâkût, the Kita‘ al-Khazini etc., so that we have an idea of its contents; cf. Bröckelmann, G. A. L., i. 140—
141; and J. Heer, Die hist. und geogr. Quellen in ‘Abd al-‘Abbas’s Geogr. Worterbuch (Strasbourg 1898), p. 5—6, 67—68 (on the chapter al-Madâ’in in Baladhuri). Daranzîn (Darâzîn), already mentioned above and included in the heptapolis of al-Madâ’in, was the birthplace of the famous traditionalist and historian al-Khâji‘ib al-Baghâdâdi (d. 963 = 1071); on him cf. ibid. ii, p. 929 ff.; and Bergstrasser, in Z. N., ii, 207—208. In the introduction to his biographical lexicon he gives a brief sketch of the history of al-Madâ’in, making a special point of noting the companions of the Prophet who came to this town and took part in its conquest; cf. L. Salimon, al-Hajjib al-Bagdâdi, Introduction topographique à l’histoire de Bagdad (Paris 1904), p. 13, 25, 175—181, or p. 85—93 of the Arabic text.

As to the mint history of al-Madâ’in, neither the name al-Madâ’in, nor as we might perhaps expect, Ta’if or Behrasir is found on the coins of the Muslim period; on the other hand we have a considerable number of pieces with the inscription al-bâb “the gate” which undoubtedly belong to our city. The Arabs adopted the custom of the Sassanians who gave their coins struck in Ctesiphon the mint name Pâwā “the gate”, which is to be interpreted like “Sublime Porte” as an official epithet of the royal capital (cf. the official designation of Constantineople as Darnî Sâhi‘ “Gate of Bliss”). We have not only a series of Arabic coins with the mint name al-bâb down to the end of the Umayyad period but also a few pieces of Sassanian type with the legend Râhâ on the latter (specimens of the year 67—68) cf. Nutel, Katalog der oriental. Munzen in den kgl. Mus. zu Berlin, ii (1898), p. 102. Coins are also found occasionally with the mint al-Madina al-‘Anisiya, the name of the northern quarter of Ctesiphon (with the Sassanid royal palace: cf. above). For the Arab coins of this mint al-bâb cf. articles of various writers in Z. P. M. G., xxv. 1904, 148 ss.; xxxiv. 691; xxxvii. 52; xxxviii. 702; cf. also Streck, Sel. und Ktes., p. 37—
58 and the references there given.

Here we can only refer briefly to the important part which al-Madâ’in played in the church history of the east independent of Rome, especially Nestorian Christianity. The see of Seleucia, said to have been first erected in the time of the apostles, was the premier diocese in the east. As supreme head of all the Nestorian bishops, in the Sassanian period as well as in that of the Caliphs as patriarch of the east the occupant of the see of Seleucia bore the title Khi‘b al-Muhâd, a number of important synods were held at his official residence in the course of centuries. The episcopal cathedrals were in Behrasir (New Seleucia) which the Syriac sources usually called Khi‘b (cf. above); hence the official title of the patriarchate, “Church of Khi‘b”. Besides the official church of the bishop there were in al-Madâ’in in the quarters on either bank a whole series of other Christian churches, the names of which are occasionally found in Syriac and Arabic texts. From Seleucia the Nestorian church developed considerable missionary activity, extending even to the Far East and reaching its zenith in the period from the sixth to the ninth century. Under the ‘Abbâsids 25 metropolises — the first in rank after the Katholikos was the bishop of Kaskar [q.v.] — each of whom in turn had 6—12 suffragans under him, acknowledged the authority of the see of Seleucia. All the metropolises received their investiture in the cathedral of Khi‘b. Soon after the foundation of Baghdad (762) the Katholikos also moved from Behrasir (Khi‘b), now declining politically and commercially, to the new capital of the empire in order, as religious and political head of the Christian community, the more effectively to champion the interests there at the court of the Caliph, where he usually enjoyed considerable prestige. But each new patriarch continued to be ceremonially installed in the mother church at Khi‘b (probably down to the end of ‘Abbâsid rule). For further information on the significance of al-Madâ’in in oriental church history cf. Streck, Babylonien, ii. 274—275; do., Sel. und Ktesiph., p. 42—7, 64 (sources in Syriac literature); J. Labourt, Le christianisme dans l’Empire perse, Paris 1904.

That al-Madâ’in was also for some time an important centre of the gnostic sect of the Manichaean may be mentioned here; but it is doubtful whether their founder, Mani (Manes), as is often supposed came from Ctesiphon itself; cf. thereon most recently Schaefer, in Ist, xiv. 23.

Finally it may be briefly recalled that al-Madâ’in possesses considerable interest for the history of Judaism, especially for the Talmudic period of it. As in the Hellenistic period, the Jews under Sassanian and Arab rule had also their main settlement on the west bank in Behrasir which in Jewish sources is usually called Mâhâzâ, “the town”. There, as in the Greek Seleucia (cf. Streck, Sel. und Ktes., p. 10, 21), they formed an exceedingly high percentage of the inhabitants, indeed at times they seem to have been in the majority. That they are described as very rich is not surprising in view of the great importance of al-Madâ’in as a trading centre down to the time of the rise of Baghdad. At the same time their character is unfortunately described by the Moslems; it differed from that of the other Jews of Babylonia which is perhaps mainly to be explained by the fact that there were many proselytes among them. That they had also a famous college, which was however only the intellectual centre of Babylonian Judaism under Râbî’ bar Joseph (b. 229 A.D.), a native of Mâhâzâ, and at other times was inferior to the other Jewish centres of learning in Babylon. Nehrâda, Sûra and Pombeditha. For further Jewish accounts of al-Madâ’in, cf. A. Berliner, Histoire des Evêques, et Ethnogr. et Ethnogr. Babyloniens im Talmud und Midrash, Berlin 1883, p. 13, 25—
24, 39—43; 61—62. See also Streck, Sel. und Ktesiph., p. 178 (Bibliography).

Apart from the wretched remains of the modern village of Salmân Pâk the whole of the area of the town of al-Madâ’in measuring about 60 square miles is quite uninhabited. It is only from the middle of the xviith century that we have more or less full accounts of it by European travellers: cf. Streck, Sel. und Ktes., p. 27—8. The first systematic topographical and archaeological examination of the extensive ruined site was made by E. Herzfeld, who visited it five times between 1903 and
1911. He dealt fully with the results of his examination in 1914 in the second volume (not published till 1929) of his and Sarre's Archäologische Reise im Euphrat- und Tigrisgebiet; cf. ii., p. 46—76 and the pictures on Plates xxxix—xliv (Vol. iii.) and xxxii—xxxviii (Vol. iv.). Herzfeld gives (ii. 51) the first plan of the whole area prepared by him in 1911; cf. this reduced to 3/4 of the original also in Streck, Set. u. Baby!., p. 50 and in Pauly-Wissowa, op. cit., Vol. iv., 1106.

Of the towns on the west bank, notably Seleucia, there has survived from the Hellenistic period only remnants of the old city wall (al-sir), a double wall of gigantic dimensions, on the north and (less considerable) south side. The whole west side of the old city is now sunk in a perpendicular swamp (kind) formed since 1900 of the annual inundations. Within the south half of the ancient city walls, there now rise from the otherwise flat plain two mounts of rubble about 15 feet high (dira't, which in the Irāk is practically synonymous with tell), namely the Dirā'at al-Bārīdā and the Dirā'at bin at-Kādī. The former which takes its name (powder-millhill) from a powder-mill which used to stand there to supply the Turkish troops, may, from the finds of pottery, conceal an important part of the Sassanian foundation of Behāsir. The second and with the legendary name Dirā'at (or Kar)[e] behind the city and near the Ka'sr of the Kādī's daughter” may very well mark the site of one of the several times mentioned citadel of Seleucia-Kokhā. Beyond the above mentioned permanent swamp, further hills and walls may be seen: — Tell Umair (or Dirā'at Umār), Khasāf or Abū Hulāisiyta, al-Susīyta, al-Khāyāmīyta and Tell al-Dhahab. They perhaps all fell within the area of Seleucia, and probably come from suburbs of it.

The ruins on the east bank, those of Ctesiphon, begin about a mile above the village of Salāmān Pā'k. After isolated wall-like ruins of walls and canals, the first considerable unit we reach is a large open space (part of the town running for a mile along the Tigris opposite the High School of Ctesiphon). Traversing 400 yards in breadth enclosed by a primitive much destroyed wall of clay: — hence the name at-Tuwāibā, “the little clay-wall”. Within this area lie a few farmplaces with palmgroves, mulberry trees and fields. At-Tuwāibā with its immediate vicinity must mark the site of Madina al-Atiqa, the northern quarter of Ctesiphon. A second area filled with ruins is found around the village of Salāmān Pā'k and around the Iwān.

The village street of Salāmān Pā'k leads in a straight line to the much venerated tomb of Salāmān (Ali-Fāris) (the Persian, or, as it is usually called locally, of the Persian Pure). He is said to have been the first Iranian to have adopted Islam and as “Apostle to the Persians” is one of the most popular Shi'i saints. According to Muslim tradition he died at an advanced age in 656 or 657 in al-Mada'in, where the Caliph 'Umar appointed him governor; it should be noted however that the Arab stories of Salāmān's share in the conquest of the Irāk and in the government of al-Mada'in are little credible. Cf. on Salāmān vol. iv., p. 116 and Streck, Set. und Kreis., p. 53—54. The mausoleum with the alleged grave of Salāmān which is crowned by a dome (it used to be shown in the vicinity of Isfahān) stands on the south side of a court enclosed by a white high walled wall and in its

present form may date from the first half of the 11th century, when it was renovated by Sulān Marād IV (1323—1340). In 1901—1905 the building was restored. A description of the interior by Kāzim al-Du'aliya is given in Herzfeld, op. cit., ii., p. 262, note 1.

South-west of Salāmān Pā'k about 1,000 yards from it close to the bank of the Tigris is a second Muslim tomb with a dome, that of Ḫudayfah ibn Yūnūs, one of the “councillors” of Muḥammad. The latter, an ardent champion of the ‘Āṣir, was given, according to the later, great merit by building the first mosque in al-Mada'in and died in 657 in Kūfah, on him see Baldhūrī, p. 289; Tabarī, i. 245; Streck, Babylonien, ii. 262; Herzfeld, op. cit., ii., 59.

The tradition that these two companions of the Prophet are buried here is old and goes back to the third (ninth) century — the earliest reference is in Yaqūbī, B. G. A., vii. 320. Of the thousands of Persian pilgrims who annually visit the great Shi'a shrines of the Irāk (Kerdī, Nadjaf, Kāzar and Sämarrā) many chose to visit Salāmān Pā'k as one of the stages on the way out or home. K. Niebuhr (cf. his Reisebeschreibung nach Arabien, Copenhagen 1778, i. 306) heard of a tomb of a third companion of the Prophet in al-Mada'in, namely that of 'Abd Allāh ibn Salām, (q.v.) a few of al-Mada'in. The latter — a strenuous opponent of 'Ali — never came to the Irāk so far as we know. The Salmān-i Burjādī of 1317 (1906), p. 256 (according to Herzfeld, op. cit.) mentions in addition to Ḫudayfah a certain ‘Abd Allāh al-Anṣārī, buried in al-Mada'in, but I think his statement like that of Niebuhr (or rather his informants) is not to be relied upon. There is possibly some confusion with 'Abd Allāh b. Sabā, who is said to have been of Jewish origin and accompanied the Caliph 'Ali to the Irāk, but was there banished by him, as his extravagant enthusiasm for him made him a nuisance to al-Mada'in, where he may have died. Details of his end are not known. Another Allāh b. Ḥulābī, who, according to Māšiddī (iv. 410), was murdered by the Khāridjīs in 38 (658) while acting as 'Ali's representative in al-Mada'in. As the interior of Salāmān's sanctuary is said to contain two graves, the second may be claimed as that of this uncertain ‘Abd Allah and not as that of the last Caliph Musta'sim executed by Ḫulāgū, as Mignon, Travels in Chaldæa, London 1829, p. 78 says: he is followed by W. Ginsworth, Narrative of the Explorations, London 1888, ii. 276. For the existence of a tomb of a Caliph at al-Madina there is no literary authority.

As to the second site, south of Salāmān Pā'k, its centre is formed of the great hall of Tāk-i Kītār (= “chapel of Kītār”), the glory of the celebrated Iwān, which will be dealt with briefly below. In the immediate vicinity of the Tāk, four groups of ruins may be distinguished of which the most notable is an oblong mound 20 feet high in the south, called locally Ḩarīm-i Kītār or “the harem of Kītār” or al-Dhār, “the hyena-hill”. It certainly conceals a single building. All these groups of ruins which fringe the Tāk on the four sides undeniably belong to the palace of the Iwān, which must have covered an area about 400 yards long and 300 broad. Some 500 yards S. E. of the ruins of Tāk, behind an irrigation canal the surface shows fewer but continuous remains.
of buildings, which stretch to a corner of the wall, called Bâstân Kišrâ, "the garden of Kišrâ", which perhaps enclosed a park for animals. A thousand yards S.W. of Bâstân Kišrâ rises another mound, 20—25 feet high, almost square at the base, Tell el-Dâhab = "Gold-hill" or Khâsnat Kišrâ = "Treasury of Kišrâ". It is apparently one large building, perhaps the treasure-house built by Khosraw II (cf. Tabari, i. 1042).

In conclusion it must be emphasised that, for the proper appreciation of the ancient mediaeval and modern topography of al-Madâ'in, the important fact must not be overlooked that the configuration of the whole country round was radically altered when the Tigris, since the end of the middle ages, completely changed its course here and now leaves its bed immediately south of Ctesiphon for a stretch of 3 miles and describes a curve five times this length. We must further consider the possibility that not only has a considerable part of Belucina disappeared in the Tigris, but smaller pieces of Ctesiphon have been gradually swallowed up by the floods of the river.

The most impressive memorial to its great past is now the Tâk-i Kišrâ, which stands in the centre of the ruin of al-Madâ'in. The surviving portion consists of a gigantic façade 102 yards long divided into two unequal portions by an arch 80 feet in width thrown boldly across. This, the front wall, originally over 100 feet high, divided into three stories — effectively relieved by open and articulated doors, arcades, pilasters, and half-columns. Through the gigantic archway one reaches a spacious hall 150 feet deep, on either side of which are five parallel side-chambers. A wide door in the back wall of the hall leads into a wide court apparently square in plan.

For the place of Iwân in the history of art and the date of its origin, the reader may be referred to Herzfeld, op. cit., p. 74 sq. According to him the building shows a mixture of Oriental and Hellenistic styles. Sapor (Sabur) I (241—272) is the only possible builder; Khosraw I (531—579) seems to have undertaken a considerable restoration of the whole. The most characteristic part of Iwân, which clearly shows it was mainly intended for a palace of audience, is the great hall, in the Sassanian period the scene of ceremonial public audiences and receptions by the sovereigns. Nothing has survived of the architectural details of the Iwân, and the stucco or mortar coating in which these found expression has fallen off. The Kaiser-Friedrich-Museum in Berlin possesses stucco rosettes, which Herzfeld (Z. d. M. G. i. xxxv, 1927, p. 226) identified as ornaments from the Iwât. In the interior, the palace, as we know from the accounts of the Arabs, was adorned with pictures and images in gilt relief. When the Muslims, pending the building of a mosque of their own, used the great hall of the Iwân provisionally after the capture of Ctesiphon, the paintings remained there intact and were still to be seen two centuries later. For example in the ninth century we find the poet Abû 'Ubayd al-Muhûtiri (cf. i. p. 773), who was very fond of describing palaces, describing the Iwân in a famous poem from his own observation: see this poem in the edition of his Diwân printed at Stamboul in 1300 (1882) (Vol. i. 108 sq.). Almost the whole text is also given in Yahkût, i. 427—429; pieces of it in al-Kharî ibn al-Daghâdî (ed. Salmon, p. 90—91) and in Kârvin, ed. Wustenfeld, ii. 304.

The majestic remains of Ctesiphon, which from early times have always made a deep impression on the Oriental mind, very soon inspired the imagination of the poets. The Persian poet Afdâl al-Din b. 'Ali Khâkânî (d. 595 = 1200 [q.v.]) wrote an elegy on al-Madâ'in, one of his best works; cf. Ech, in Grundrisse d. iran. Phil., i. 264. This was printed in Stamboul in 1330 (1912) and in Berlin 1343 (1924). This latter edition entitled Aʻrawâni-Madâ'in, a poème de Khâkânî, adapté et augmenté par quelques poêtes contemporains (publ. No. 5 of the Iraneshahr press) has a critical historical introduction by Dr. Riča Tetwît and a commentary by the modern Persian writer Husain Dânhis; on it, cf. E. G. Browne, The Persian Poetry of Modern Persia (Cambridge 1904), his 307.

Muslims regard the abandoned and ruined remains of the Persian royal city as monuments of the victory of their religion (on the alleged omen of the collapse of 14 pinacles of the Iwân in the night of Muhammed's birth, see Streck, Sel. uma Bahíyâ, p. 6) and as impressive symbols of fallen greatness. Like the pyramids, we find them in Arabic poetry as the regular symbol of the transitoriness of worldly power: cf. for example the verses of al-Tîfishî in Makrizi, al-Khajût; the chapter on the pyramids, ed. by E. Graefe (Leipzig, 1911), p. 47 and 88 (and 94). The Bûyûd Sulamî al-Dawla (1025—1045) recorded his visit there by inscribing on the wall of the Iwân two verses proclaiming the transitoriness of worldly things (see Yahkût, i. 429, 5); cf. also Streck, op. cit., p. 61. The Arabs reckoned the Iwân, like the pyramids, among the wonders of the world (cf. e.g. Ibn al-Fâkhî, B. G. A., v. 255): indeed it was held to be not the work of man but of the demons, the Djíjan [q.v.]. Quite early many legends became associated with the Iwân, most of which centre round the figure of Khosraw I Anûshwarwân, still proverbial in the east for his generosity: e.g. the story of the old woman's hut which the king tolerated within the precincts of the palace (see Streck, Babâlîyân, ii. 256—258; Streck, Sel. und Ketz., p. 56 and J. A., 1831, Vol. 15, p. 489) which Herzfeld (op. cit., ii. 68) traces to the lack of symmetry in the façade; also the story of the "chain of justice" to which petitions were attached (imitated by Ilkhân in Tabûrz; cf. J. v. Hammer, Geschichte der Íkhâne, Darmstadt 1843, iii. 339) which according to Berumont still seem to be known among the people around al-Madâ'in: cf. the legend published by him in Le Liban, La Revue de Dom. May 1926, p. 10—11: La Légende du Meût d'eau taken down from the lips of a Bedouin there.

Down to the accession of the 'Abhâsids the Iwân seems to have been practically intact; then they began to use it as a quarry but this was abandoned as too costly, the yield being far below the cost of obtaining it. As to the Caliph who ordered it to be taken down, authorities differ. Al-Mansûr is usually given (754—775) but very often Harûn al-Rashîd also (788—809). In any case the partial destruction of the Iwân under the early 'Abhâsids is an assured fact; cf. Streck, Babâlîyân, ii. 255—256, 259; cf. Sel. and Ketz., p. 61—62; Herzfeld, ii. 63. The Iwân with the exception of the Iwân itself and two wings of the façade had been destroyed by this time; for the part that was spared, the name Tâk-i Kišrâ — now popularly pronounced Tâk-i Ksaré as a rule —
came into use, first, I believe, in Rashid al-Din (Hist. des Mongols de la Perse, ed. Quatremère, p. 266). Yākūt (s. 425), as well as Bākūwī (c. 1400) after him, know only the arched hall flanked by two wings as remains of the Iwān. The building remained in this state practically unaltered till 1888 when on April 5th on the occasion of a high flood the northern front wing collapsed, probably undermined by the ruthless robbing of bricks. An attempt was made a few years ago to save the threatened south wing by securing its foundations. Pictures of the Tāfī-khānā before and after 1888 may be found in Fr. Langenegger, Die Baukunst des Irān (Dresden 1911), p. 16.

Also Kāshān al-Abayd, the “White Palace”, has completely disappeared. The case of Cheshme was only spared by the Arabs like the Iwān. The Muslim general Sa’d took up his quarters in it. It met its fate in the reign of the Caliph al-Mulk al-Jadāf (902–908) who had it destroyed to provide building material to complete the al-Tādji palace on the east side of Baghad; cf. Streeck, Babylonien, i. 122; ii. 259; Herzfeld, op. cit., ii. 63.

Systematic excavations have never been conducted on the site of al-Madā’in. The antiquities found here come from isolated chance finds; for a list of these see Pauly-Wissowa, Suppl. iv., p. 1166–1167. The Deutsche Orientgesellschaft has just (the autumn of 1924) finished the excavations at Sabīnān. The enterprise, which is on a considerable scale, will yield valuable results for the archaeology, history and topography of Seleucia and Ctesiphon, especially on disputed points which can only be decided by the spade.

MADĀ‘IN ṢALIH. [See al-Ḥiddir]  

AL-MADĀ‘IN, ‘Ali b. Muhammad b. ’Abd al-Ḥākim b. Ḥāfiz b. ‘Abī Ṣafī b. Ḥasan, an Arab historian and writer, a client of the Kushait family of the ’Abd Ṣāms b. ’Abd Manāf, was born in 135 (752) in Baṣra, where he was a pupil of the theologian Muʿammad b. al-Asḥāʾ, but he became interested in Adab and history; he lived for a time in al-Madā’in but moved from there to Baghad, where he was closely associated with Ishāk b. Ibrāhim al-Mawsīlī in whose house he died in 225 (840), according to the Fihrist in 215 (830), according to others not till 231 (845). His literary activity was very extensive and included works on the history of the Prophet, of the Kushait, of the conquists and the caliphate as well as the history of poets and lighter literature (adab). Tin Fuʾqāʾ al-Qawāʾid (396) is one of his works from his pen but this includes the Kiṭāb al-Dhawābāt twice and many of the works may have been quite short. On the other hand this list is not complete. Although later writers using his works only rarely give their titles, we can add the following to the list in the Fihrist. Among historical monographs omitted is the Kiṭāb Aḥkār Zafar b. al-Hārīshī used by Yākūt (Muǧīm, iv. 369) following a MS. of Sukkari (cf. Heer, Die hist. und geographischen Quellen in Yākūts geogr. Wö., Strassburg 1898, p. 5.). Among adab works is omitted especially the K. al-Fawārid b’dal ʿAbī Ṣafī (cf. Wiener, Isr., iv. 370 sqq.), often used by al-Tanbūkhi, also the K. al-Samīr, cited ii. 174, 2 by the same, the K. al-Muḥarrīrīn used by al-ʿĀbd al-ʿĀdīr al-Baghadādī (cf. Khānān al-Adab, ii. 109, 1). The titles of his works seem to have varied often. Thus the K. al-Nisāʾ al-Fawārid cited by ʿAbd al-Ḵādīr, Khānān al-Adab, i. 408, 15, is doubtless identical, one may say, with the K. al-Nisāʾ al-ʿĀḏīrīb cited ibid., iv. 365, 1 below and 479, 15 and the K. al-Nawābādīb wa l-Nawābātīb of the Fihrist, 102, 1, as doubtless is the K. Zākāt wa in al-Maḏāʿin, i. 220, 15 with the K. Aḥkār Iyās b. Muḥāwīya in Fihrist, 104, 15 and the K. Aḥkār al-Kūlīb in Maḏāʿin, ii. 70, 2 with the K. al-Kūlīb wa...
The fourfold division of matter is very common, e.g. in the ḡawān al-ṣafā': 1. prime matter, either directly or indirectly an emanation from the divine being, i.e. an intelligible matter conceived, according to Pseudo-Empedocles, as the first emanation but usually explained as in neo-Platonism as the last in the series (spirit, soul, nature), often defined as the efflux of light from the light of God; 2. the matter of the universe as a whole, especially and permanently, of the heavenly spheres, which first of all adopts the indefinite form of corporeality (extent) or at once the three definite dimensions; 3. the matter of the four earthly elements, fire, air, water and earth; 4. energy, which is already formed in some way, but can be used for definite purposes, e.g. wood, stone etc.

In agreement with Aristotle the philosophers regard God as pure immaterial form. Only an extreme mystic like ʿAbd al-Karim al-Djilli, can call Him the ḡayūlā of the world. As regards the lower spirits (spirits of the spheres, angels etc.) opinions differ, but most thinkers find it easy to assume an intelligible matter, and even to recognize in the first created, the highest world spirit, a material principle; next however they are fond of distinguishing this intelligible matter as receptive and the earthly sensual matter as passive. — Different opinions are expressed regarding the principium individuationis: in the comparatively speaking purer Aristotelians we find the tendency to seek it in matter and in those who are more inclined to Platonism in form. All insist, although with varying emphasis, upon the desire of matter for form more than the love of form for union with matter.

As to logical matter, it may be noted in conclusion that the three modalities of judgment (necessity, possibility and impossibility) are described as "matters" (Ibn Sinā). — Cf. also the article ʿunṣūr.

(TJ. DE BOER)

MADHANA. [See MANĀRA.]

MADHAB. [See FĪGH.]

MADHIDIJ, an Arab tribe of Yemen origin, traced by the genealogists to Malik b. Uadād, who is said to be descended in the fourth generation from Khaṭṭān and to have received his name Madhidi from a hill of this name on which he and his brother Ṭaqi were born. His sons are said to have been: Saʿd al-ʾAṣhira, Djail, Yuhābir called Murād, and Zaid called ʾAnz. The Madhidijs whose tribal lands are said to have lain near Tarājd "on the road to Yemen" (Yākūt, s.v.) and whose brother tribes were Khāṭham and Murād, were, according to tradition, at war with the ʾAmr b. Saʿaṣa about the time of the appearance of Muḥammad; in the course of this war was fought the battle of Fisf al-Riḥ. In the Muslim period, families of the tribe of Madhidi were predominant in Kūfā along with those of Kinda and Ṣumānāt.

MADID, the second metre in Arabic prosody, very little used on account of a certain heaviness in its rhythm. In theory it consists of four feet in each hemistich and the prosodists quote in support of this several anonymous verses. In practice there are only three.
There are three 'arûd and six darb:

First road: Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun

Second road: Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun

Third road: Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun Ḟaṣîlitun

Ḥadîth may become Ḟaṣîlitun; it only changes into Ḟaṣîlitun (without n) if Ḟaṣîlitun which follows it retains its long vowel. Ḟaṣîlitun, except in the second 'arûd with its third darb, only changes into Ḟaṣîlitun when Ḟaṣîlitun preserves its n.

(M. Owen Cheneb)

AL-MADĪNA, a town in Arabia, the residence of Muhammad after the Hijra, and capital of the Arab empire under the first caliphs. The real Arabic name of the town was Yathrib, Jathribba (this is the correct reading) in Ptolemy and Stephan Byzantinus, Ẓūb in Minaean inscriptions (M. Hartmann, Die arabisch-phrase, p. 253 sq.). Al-Madina on the other hand is a descriptive word in the plural al-Madīnā, while in the Madīna Sūras al-Madina is used as a proper name for the new residence of the Prophet (ix. 102, 121; xxxiii. 60; Ixiii. 8). The old name Yathrib on the other hand is found only once (xxiii. 13). It is evident from these references that the usual explanation of the name as "the town" (of the Prophet) is a later one. It is rather to be supposed that it was a result of the existence of a strong Jewish element in Yathrib that the Arabian loan-word became the regular name of the town. It is analogous to the originally South Arabian Hadjar [q. v.] "town", which is applied to the capital in Baṭrain. Of the Madīnese poets, Ẓāfī b. al-Ḳalṣīm uses the name Yathrib exclusively while Ḥassān b. Thābit and Ka'b b. Mālik use both names, which is also the case with Muhammad's ordinance of the community (Ibn Ḥishām, p. 341 sqq.).
to Samhūdī (Wüstenfeld, Geschichte der Stadt Medina, p. 37) was especially associated with a place west of the tomb of Ḥāmzah where the Banū Ḥārīma settled. The town which arose in this way was not surrounded by a wall so that its defences were the thick groves of palms and the orchards which surrounded the houses. As they were less thick on the north and west sides, these were most exposed to hostile attacks. The little forts (ṣīquṣ, plur. ʿāṣām or ʿudjam, plur. ʿājdām) which were built in considerable numbers formed a substitute for a wall and the inhabitants could retire into them in times of trouble.

There were in later times no reliable traditions regarding the origin and earliest history of Madīna and the historians endeavoured to fill the gap themselves and as elsewhere made the Dījarhum (q. v. and also Krauss, in Z. D. M. G., lxx. 352) and the quite unhistorical 'Amalakites play a part (cf. also Hassan b. Thābit, ed. Hirschfeld, N°. 9, verse 6). It is only with the coming of Jews to Madīna that we are on surer ground, but the historians know so little of the exact period of these settlements that they connect them sometimes with Moses, sometimes with the deportation of the Jews under Nebuchadnezzar, and sometimes with the conquest of Palestine by the Greeks or by the Romans. According to various references in the Talmud there were Jews in Arabia in the early centuries of the Christian era and this certainly means North Arabia in the main (see Hirschfeld, Beiträge zur Erklärung des Koran, p. 49 sq. and that they were numerous is evident from the existence of Jewish communities in Ta'īma, Ḥijr (Javaasen and Savageac, Mission, p. 150, 242), Khāibar, Wādī l-Ḳura, Fadak and Maknā, to which may be added that in Madīna. Everywhere in these cases they took over and developed the cultivation of the soil, and it was probably due to them that these scattered settlements each developed into a kind of town; evidence of this is found in the Aramaic name Madīna for Yā'qūbit. According to the definite statement of Hassan b. Thābit (N°. 9, verse 8 in Hirschfeld) they built a number of small forts in this town. But that they were not the first to do this may probably be concluded from the fact that the earliest inhabitants were not pure Beduins (according to Lammens, Ṭa'īj, p. 72, these forts were built after the model of those of the Yemen). The Jewish tribe of Kainukāī played a prominent part in the immigration, as at a later period one of the principal markets in the western part of the town was called after it. But gradually the tribes of Kuraīza and Naḍīr came to be the leading ones in Madīna Jewry. The former dwelt with the Bahdāl on the W. Mahzūr, the Naḍīr on the W. Buṯān (Kittāb al-ʿAtgānī, xix. 95, where the Jewish tribes and the jədāda Arab tribes are detailed). While in this passage, as usual, the Kuraīza and the Naḍīr are numbered among the pure Jews, according to a notable statement in the historian Yaʿqūbī (ed. Houtsma, ii. 49, 52) they were not pure Jews but jədāda clans of the Arabīc tribe of Dījarhum, which Noldeke has repeatedly emphasized as a genuine tradition. Now it is historically certain that at that time there were many Jewish proselytes (cf. Ibn Kūtaiba, Kittāb al-Maʿārif, p. 299) but in spite of this there are decisive reasons for believing that the Jewish element in Madīna did not arise in this way. It is of special significance that the Kuraīza and Naḍīr are frequently called the Kūḥānīnī, the *two (tribes of) priests*, which shows that the Jews knew their genealogy and laid stress upon their descent (cf. e. g. Ibn Ḥishām, p. 660, 18: "thou revilest the pure of the two tribes of priests").

The same thing is seen from the fact that Naḍīrī Sāfaṣya married by Muḥammad is described as belonging to the family of Aaron (Ibn Saʿd, viii. 86, 1). But the decisive fact is the way in which the Prophet speaks in the Madīna sūras to the Jews there. He apostrophises them as sons of Israel and reminds them that God has raised them above all men (II. 44, 116); he brackets them with the ancient Israelites as if they had taken part in the Exodus from Egypt (II. 46 sqq.); Allāh gave Moses the scriptures so that they might be rightly guided (II. 50); they break the laws which he bound them to observe at the treaty of alliance (II. 77 sqq.) etc. Such passages suggest as clearly as possible that he regarded them as true descendants of the ancient Israelites. There must therefore have been in addition to the jədāda Arabs a stock of true Jews, and indeed it is obvious that without such there could have been no proselytes. Wellhausen moreover has aptly pointed out that the Arabīc Jews by their language, their knowledge of the scriptures, their manner of life, their fondness for malicious mockery, secret arts, poison, magic, and cursing, and their fear of death, make an unusual impression which cannot be explained simply by the jədāda of pure Arabs. But on the other hand it must not be forgotten that the Jews in Arabia were very much influenced by their surroundings and had assumed a character of their own. For example we find among them the division into tribes and families, characteristic of the Arabs, with the obligations associated with this. The names of these tribes cannot be traced to old Jewish names but are thoroughly Arabīc in appearance, which is also true of their personal names among which true Jewish names like Samawal and Sārā are rare. The arabisation of these Jews is particularly notable in the poems which are ascribed to Jews and which might have been equally well written by Beduins (see Noldeke, Beiträge zur Kenntnis der Poesie der alten Araber, p. 52 sqq.).

While the Jews were supreme in other places like Khāibar, al-Fadak etc., the position was changed in Madīna as a result of a new immigration which the Arabs associate with the bursting of the dam at Maṣīb [q. v.] and the migrations of South Arabian tribes produced by it. In this way the two so-called Kaila tribes, Awīl and Khaṣraḍ [q. v.], came to Madīna. The particulars of their culminating recorded, but from an interesting verse in Ibn Khuraṣānī (B. G. A., vi. 128) and Yāqūt, iv. 460, it is evident that they were for a long time subject and tributary to the Jews and that this part of Northern Arabia was at this time under Persian rule, in keeping with the usual Jewish policy of maintaining friendly relations with Persia. Later the Kaila Arabs however succeeded in casting off the Jewish yoke and bringing the Jews under their rule. According to tradition the occasion of this was that a powerful Jewish king named Fitiyaun, who exercised the jus primae noctis, was murdered by a Kharaṣṣa Malik b. al-ʿAddālah to save his threatened sister — a widely disseminated motif (cf. K.
Schmidt, *Fus primae noctis*, 1882, and also *R. E. F.*, 1883, p. 156 sqq.) on which too much stress should not be laid. As to later events there are two different traditions: some make Malik after his deed seek the help of a Ghasanid ruler, Abu Djabala (cf. the name Djabala among the Ghasanids), others of a South Arabian Tubba, Asad Abikibri (c. 430; M. Hartmann, *Die arabische Prage*, p. 482, 497). In this second story, Wellhausen finds some support in some old verses and assumes that Tubba is here an erroneous popular name for a later Abyssinian viceroy. There is however nothing in these verses about an attack of the South Arabs on the Jews of Madina alone but on the inhabitants of the town together, so that Wellhausen further supposes this attack may have some weakened the Jews hitherto predominant that the Arab inhabitants succeeded in breaking their supremacy; but this is of course no more than an attractive hypothesis. In any case the name Abraha in Kais b. al-Khațim, N° 14, verse 15, cannot be used as a basis for further hypotheses for it is certainly not the celebrated Abraha [q. v.] who is meant. Besides, these stories contain legendary allusions to Muhammad’s future appearance in Madina, which betray at least a later recasting by Muslims.

The new lords of Yathrib took over the forts occupied by the Jews and built several more (Samhudi, p. 37). They also learned “Nabataean” arts from them and began to cultivate palms and pursue agriculture. The Khazrajids, whose principal family was Nadjdjar (or Taim al-Lat), as the most powerful tribe assumed the leadership and occupied the centre of the town where the modern Madina lies. West and south of them lived other Khazrajid tribes while the territory of the Hārīth ran to the east. The Awsis, who also comprised several families, settled south and east of their brethren, the Nabit in the northeast separated by the Hārīth from their kinsmen. The two principal Jewish tribes Naḏ르 and Kuraţiţa preserved a certain amount of independence and retained their lands under the Awsis while the Ḥa[js] retained their lands in the southwest although their main industry was practising the goldsmith’s art. Further details of the parts occupied by the tribes and families are given in Samhudi (Wüstenfeld, p. 29 sq., 37 sq.) but these can only now be partly identified. Besides there were in Madina, in addition to the Jews and the immigrant Kaila tribes several Arab tribes, some of which were already there when the former came. They were closely connected with the Jews and were partly judaised. The settlement of affairs reached in this way gave the town a period of peace, which was however gradually broken as an increasing enmity arose between the two Kaila tribes, as was not infrequently the case with Arab brother-tribes. At first it was individual families that fought one another but the conflagration gradually spread until the existence of the whole town was threatened. The quarrel began with the feud of Sumair, so-called after an Awwsi named Sumair. This was settled by an arbitrator but it was not long till renewed friction led to renewed hostilities, of which the so-called feud of Ḥātib was the most serious. We are introduced to this second period by the poems of Kais b. al-Khaṭim of the Awwsi family of al-Nabit. The fighting throughout ended unfavourably for the Awwsi and the Nabit were finally driven from their possessions. In their need the Awwsi appealed for help to the two principal Jewish tribes. They at first refused it; but when the Khazrajids had foolishly slain some Jewish hostages, they concluded an alliance with the Awwsi and declared themselves ready to assist them. It was no longer a fight between a few families but a struggle between the two great rival tribes in their full strength and other inhabitants of Yathrib, even the Beduins of the country round also took sides. At Bu’āth [q. v.] after long preparations a decisive battle was finally fought. It at first looked as if the Awwsi were again to be defeated. The tables were turned and the Khazrajids suffered a severe reverse. It is interesting to note that ‘Abdallāh b. Ubayy of the Khazrajids on this occasion displayed the irreolution that he did later in his opposition to Muḥammad; he took the field with the others but did not enter the battle. On the day of al-Sa[ra]a he actually ran away. The battle of Bu’āth restored the equilibrium between the principal tribes, but the continual fighting had sapped the strength of the town and the bitter feeling which continually revealed itself made the lives of the inhabitants more and more unendurable. Then a momentous change took place when the people of Madina, who required a leader with a strong hand, and Muḥammad, who had only to a slight extent succeeded in winning over the Meccans to his religious views, came into contact with one another.

The Kaila tribes at the time of their immigration to Yathrib had been heathens like the great majority of the Arabs. The principal deity they worshipped was Manūt [q. v.], after whom the Awwsallāh were originally named but they also reverenced among others al-Lat (cf. the name Taim al-Lat already mentioned). Through living alongside of Jews they became influenced by their religious and moral ideas, but unfortunately we know very little of their spiritual outlook before the coming of the Prophet. The poet Kais deals in the Beduin style mainly with the quarrels between the tribes and families and rarely refers to religious matters. He nowhere mentions the local deities but refers to Allāh (No. 6, verse 22) whom he calls the creator (5, 6; cf. Goldziher, *Z. D. M. G.*, lvi. 358), which is in itself sufficient to prove Jewish or Christian influence. Of him he says in No. 11, verse 8: “Allāh will only what he will”; verse 13, 12: “Praise be to Allāh, the lord, the lord of the building” refers to the Ka’ba in Mecca, the *madjjid* covered with carpets (5, 14). The three days in Mina are mentioned in 4, 4 which shows that they then as later in the Muslim poets gave the young men an opportunity for love-affairs with women of other tribes. In rejecting a life after death, 6, 22, he is quite on a level with the pagan Meccans. Alongside of such representatives of a mixed religion there were others whose conceptions had developed farther through contact with Jews or Christians, so that they were reckoned Ḥanifs [q. v.] as they definitely rejected the popular deities and had assumed a tendency to asceticism. Abu ‘I-Haṭīm and Asad b. Zara‘a for example professed monotheism before they became acquainted with Muḥammad (Ibn Sa’d, III/II. 22, 139). A Khazrajid, Abu Kais Sirma b. Abi Anas, wore sackcloth and laid stress on levitical purity; he actually thought of becoming a Christian but gave up the idea and adopted Islam when an old man (Ibn Hīṣām, p. 347 sq.). A man of the Awwsi tribe,
Abū Āmir ‘Abd ‘Amr b. Saifīt was known as “the monk” from his ascetic mode of life; he later became an enemy of the Prophet, left Mādīna and fought against him on the side of the Meccans; he is also said to have supported those who built a rival mosque at the time of the Tabūk campaign (Ibn Hīṣām, p. 411; Ibn Sa’d, III/ii. 90, 7; Wālidī-Wellhausen, p. 310). In evidence of such influence of Christians in Mādīna one might quote a verse of Ḥassān b. Thābit (ed. Hirschfeld, p. 133, 77), but this probably refers to a later period and opportunities of mixing with them were to be found in many places in Arabia. One result of living alongside of Jews in Mādīna was that the art of writing was quite well known also (cf. Ibn Kutaiba, Kitāb al-Ma‘rāf, p. 132 sq. 166; Ballādhūrī, p. 473 sq.; Ibn Sa’d, III/ii. passim).

The spiritual influence of the Jews on the Arab inhabitants of Mādīna became an important factor in the relations between them and Mūḥammad, for it made them receptive to his religious ideas with which they became acquainted by visits to Meca and in other ways. How finally a treaty was concluded between him and several representatives of the Madinese, by which the latter pledged themselves to take him into their community and to defend him as if he were one of themselves and how and those of his followers who were still faithful to him thereupon migrated to Mādīna is related in the article Mūḥammad. After a brief stay in the southern suburb of Kūbā he entered the town and took up his abode with a Khārazdī, Abū Ayyūb Khalīl b. Zayd, with whom he lived till a dwelling was arranged for him. He is said to have left the choice of the site to the movements of his camel — if the story is true, a very clever move not only from the religious but also from the political point of view. In any case it is certain that hardly anything ever showed so clearly his gift, based on his unshakeable belief in his prophetic call, of leading men to follow his will, as the fact that he succeeded in a very short time in bringing some kind of order into Mādīna, hopelessly split up by feuds, and making a kind of unity out of the heterogeneous elements in the town, the earlier Arab inhabitants of Yathrib, the later immigrants, now predominant Kāila tribes, the Muhājirūn from Mecca and the, Jews or Judaized Arabs. We get a glimpse of the first step towards this goal from the ordinance of the community preserved in Ibn Hīṣām, p. 341 sqq. (*Book of the fines*); cf. Ṭabari, Glossary s. v. *khāb*, which Wellhausen, *Skizzen und Vorarbeiten*, iv 67, 69, following him, Caetani, *Annali dell’Islam*, i. 395 sqq. and Wensinck, *Mohammed en de Joden*, p. 78 sqq. have discussed.

It is most interesting for its omissions and it lacks to a marked degree clear and logical fundamental ideas, because Mūḥammad was content temporarily with what could be attained and avoided everything that might cause strife. In it he calls himself the messenger of Allāh, but there is no reference to his divine inspiration. His object is to form a unified umma out of the inhabitants of Mādīna and this is defined from the religious side as the community of believers from Mecca and Yathrib. But the non-believers are not excluded, for the umma coincides rather with the town of Mādīna which included also Jews and heathens, of whom it is not demanded that they should adopt Islām. The tribes retain their autonomy as regards blood-vengeance and ransom of prisoners, but against the rest of the world generally the affording of protection was obligatory on every member of the community without exception and no one could conclude peace separately with the enemies of the community (particularly the Kūrain). All important matters, out of which misfortune might befall the community, were to be brought before Allāh and Mūḥammad.

The valley of Yathrib was to be haram (or haram) for all who were bound by this ordinance. The whole document thus alternates continually between religious and purely political clauses in a very opportunistic fashion. It never became of great importance and it soon fell into oblivion as it was rendered obsolete by the rapid progress of events, certainly not against the wish of Mūḥammad whose plans went far beyond what was laid down in it. The main cause of its loss of importance was the breach which soon occurred between Mūḥammad and the Jews, which the latter provoked by their scornful criticism of Mūḥammad’s revelations, especially of the weak points revealed in his reproduction of stories from the Old Testament. This meant a serious threat to his authority and in addition the Jews endeavoured to destroy the agreement reached in Mādīna by endeavouring to revive the old hostility between the two Kāila tribes (Ibn Hīṣām, p. 385 sqq.; cf. Stāra, iii. 114 sqq.). To meet these difficulties, which of course were very welcome to his enemies in the town, Mūḥammad worked hard to unite his followers for a common object, the war with the Meccans, by which he could at the same time avenge the resistance offered him there. He was at first difficult for him to arouse enthusiasm for this war among the Muhājirūn and even more the Aṣnāb but finally, when a fortunate accident occurred to help him, he succeeded in bringing about a war with the Meccans which led to the momentous victory at Badr. On the further fighting of this campaign, the battle of Uḥud and the capture of the ditch, cf. the article Mūḥammad. The latter campaign gave its name to the ditch (KHANDAK ḥ.-q.) which Mūḥammad on the advice of a Persian (Salmān) had dug around the two protected parts of the town and which, in spite of its modest dimensions (it is said to have been a fathom broad), formed a serious obstacle to the enemy. Ibn Dījbar in the xiith century still saw traces of it, an arrow-shot west of the town.

On its further course cf. Wensinck, *Mohammed en de Joden*, p. 26, 31. The Meccans in this fighting gave him very material assistance by their lack of warlike ability and energy, and the war contributed to consolidate his position in Mādīna, aided not a little by the lack of resolution among the Munāfiqūn who never managed to seize opportunities favourable to them. He was thus not only in a position to continue the war against his native city but also to repay the Jews in ruthless fashion for all the annoyance they had caused him. After the battle of Badr, the Kainūkṭi were driven out of the town and after the battle of Uḥud, which went against the Prophet, the same fate was meted out to a Kāhin tribe, the Naḍīr. But the worst lot was that of the Kuraizā, whom in spite of the intercession of the Awsīs he had massacred. These events however do not show the Jewish tribes in a favourable light as they made no attempt to help one another but left each other...
in the lurch in most cowardly fashion. The Kurish alone at the massacre showed a courage which to some extent atones for their previous attitude. In this way Muhammad succeeded in disposing of the danger that threatened him from the Jews, for the Jews who were left in Medina were of no importance and caused him no serious difficulties. With the treaty of Hudaybiyya in the year 6 A.H., [cf. MUHAMMAD] the war with the Kurish was practically finished, for in it the genius for diplomacy succeeded in bringing them to recognize Medina as a power equal in importance to Mecca. The official conclusion of the struggle was the bloodless occupation of his native city in 8 A.H. However great a triumph this was for the Prophet, it produced a new feud which was to prove fateful for Islam after the death of Muhammad. Even before the decisive turn in the struggle with Mecca, in the campaign against the Banu Mushtilik, the ill feeling between the emigrants and a section of the people of Medina came to a head, threatening fresh bloodshed. Thus, Abu Bakr, the first to deliver some boastful speeches and threatened to expel the troublesome intruders (cf. Sura, Ixiii. 8), which he naturally denied when the Prophet later took him to task. But when Muhammad had entered Medina, his faithful followers in Medina became anxious, as they feared he would now abandon their town and return to his native place. He calmed them however and declared that he would live and die with them (Ibn Hisham, p. 824). But when he began to treat the Meccans with great clemency and after the battle of Hunain was striving to win them over to his religion by rich gifts, the Ansar with justice felt that their lives were slipping away once again feared that he would abandon them. But he delivered them a speech in which he reminded them how he had united them when they were living in hostility to one another and declared his gratitude for all that they had done for him, and when he concluded by asking them to be satisfied if others went home with captured herds but they with the messenger of Allah, they burst into tears and withdrew satisfied (Ibn Hisham, p. 885 sq.). While in such stories there may be an echo of the later antagonism between the Ansar and the Kurish, they undoubtedly give a not inaccurate idea of the feelings which found expression at this time. It is all the more remarkable that according to various indications there must have been an opposition to Muhammad at the time of the Tabik campaign in Medina. His orations against the Munafiqun in the ninth Sura sound unusually excited and recall those of the Meccan period with their threats of punishment. There is also the notable, but unfortunately not quite clear story of the Masjid al-Dirar (cf. also Lammens) which some men had built south of the town in the land of the Amr b. ʿAwf and which he sanctioned until he saw that its object was to provoke disension among the believers for the benefit of his former enemies (Sura, ix. 108 sqq.), wherefore he had it pulled down. Attached to this one story, there is another which has already mentioned Hani b. Abi Amr, the most spirit in it, (Ibn Hisham, p. 906 sq.; Wakidi-Wellhausen, p. 410 sq.; Tabari, i. 1704 sq.; Ibn Saʿd, iii. 36, 59, 66, 13). In any case Muhammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munafiqun died soon afterwards.

Faithful to his promise, the Prophet remained in Medina till his death on June 8, 632. According to a reliable tradition (Tabari, i. 1817; Ibn Saʿd, ii/l. 57, 9, 58, 88, 59, i, 71, 6), his corpse lay unburied for a whole day, so that its putrefaction was far advanced when it was finally buried under ʿAisha's house, apparently a result of the great confusion into which his death threw the town. The unity created by his strong hand at once fell to pieces; the Ansar assembled and chose the Khazzadj Saʿd b. Ubdxa as their chief, while others proposed that the government should be shared between the Ansar and the Mubahjīrin. ʿUmar's rapid and vigorous intervention however succeeded in thwarting these plans so threatening to Islam and carrying through the election of Abū Bakr as Caliph. He and his two successors resided in Medina which thus became the capital of the rapidly growing empire. Abū Bakr and ʿUmar, like the Prophet, were buried under the house of ʿAisha, while ʿUthman's body was brought in the darkness on a bed to the Jews of Medina. Abū Abdullāh delivered several boastful speeches and threatened to expel the troublesome intruders (cf. Sura, Ixiii. 8), which he naturally denied when the Prophet later took him to task. But when Muhammad had entered Medina, his faithful followers in Medina became anxious, as they feared he would now abandon their town and return to his native place. He calmed them however and declared that he would live and die with them (Ibn Hisham, p. 824). But when he began to treat the Meccans with great clemency and after the battle of Hunain was striving to win them over to his religion by rich gifts, the Ansar with justice felt that their lives were slipping away once again feared that he would abandon them. In any case Muhammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munafiqun died soon afterwards.
went with him (Wellhausen, *Die Oppositionspar-
teien*, p. 69). When he was slain, his wives and
son were brought to Madina, where they lived in
peace and took no further part in the fighting.
'Alī’s son, Muḥammad b. al-Ḥanafīya, resided in
Madina (Dhawarī, p. 308). It was not however
only relatives and ardent followers of the Prophet,
who preferred to live here in his city, but several
of his former enemies, the Umayyads, also felt
attracted thither by the quiet and easy life and
would not go to Damascus (Lammens, *Études sur
le califat de Mōwajja*, p. 35). In this way Madina
gradually became the home of a new population,
consisting of people who wished to enjoy un-
disturbed the great wealth which the wars of
conquest had brought them. Life there became
more and more luxurious until finally the holy
city became so notorious (*Ḳiṣāʿ al-Āğānī*, xxi.
197, 19), that during a rising in the year 127 (745)
the last Umayyid Caliph Marwān II could ask
one of the participants in it how it was that the
wines and singing-girls of Madina had not held
him back from taking part in it (Ṭabārī, ii. 1916).
Such was the social position of the present inhabi-
tants of Madina (*Travels in Arabia*, 3rd ed., p. 151: “cardiac, playing, tippling in
arab, bruitish hemp smoking, ribald living”).
This was the golden period of Madina about the
glories of which the poets sang. Flourishing, well-
watered gardens and meadows surrounded the
town, and there were a number of splendid palaces
built by wealthy Quraish, especially in the Wādī
‘l-Akīk of which traces still can be found (cf.
p. 228).
A later section of the people of Madina was
attracted thither by the quiet life, although for
other reasons. Their object was not worldly enjoy-
ments but they devoted themselves to the memories
in the town of its sacred past, by collecting and
studying the legal and ritual enactments dating
from the Prophet, in so far as they were based
on the *sunna* of Madina and the *ijma‘* there.
The most distinguished representative of this group
was Mālik b. Anas (d. 179 = 795), the author of the
*Mawāqif*, who as founder of the Mālikī school
gathered many pupils around him (Goldziher,
*Mukhwamedelischen Studien*, ii. 213 sqq.). One
of them, Ibn Zabālā, composed the first history of the
town of Madina (199 = 814) but it has not survived.
Madina was now ruled by governors appointed
by the Caliph, lists of whom are given by Ṭabārī
and Ibn al-ʿAṯīr. The town was however not
totally unaffected by the wars of the first cen-
turies after Muḥammad. In the reign of Yazīd,
feeling in Madina, even among the Umayyads,
was more or less hostile to the Caliph and many
took sides of his rival ‘Abd Allāh b. Zubayr in
Mecca. The expedition of the governor ‘Amr
b. Sa‘d, which Yazīd ordered, was a failure. In
63 (682/3) the Madinense rebelled openly, appoint-
ing ‘Abd Allāh b. Ḥanazla as their leader and
building a wall with a ditch to defend the town
on the north. The Caliph sent an army under the
leadership of Muslim b. ‘Uqba which took up
its quarters on the Ḥarrā N.E. of the town and
fought the battle of the Ḥarrā, which ended in
the defeat of the Madinense — according to the usual
story, a result of the treachery of the Banū Ḥārīma.
That the inhabitants were abandoned to the ill-
treatment of the Syrian troops is probably a malicious
libel (Wellhausen, *Das arabische Reich*, p. 98 sqq.).
Towards the end of the Umayyad rule, in the year
130(747/8), the Khārijīs under Abū Ḥanīfa defeated
the Madinense at Kubāīd; but he was surprised by
Marwān’s troops and slain (Ṭabārī, ii. 200 sqq.;
*B. C. A.*, viii. 327). When the ‘Abbāsids became
supreme, two ‘Alīd brothers, Muḥammad and Ibrā-
him, sons of ‘Abd Allāh, made an attempt to
fight for their rights. Muḥammad who fled to himself al-Madhī appeared in Madina in 145 (762/3)
where he found not a few adherents, among them
Mālik b. Anas and Abū Ḥanīfa. He endeavoured
in various ways to imitate the example of the
Prophet, used his sword, had the ditch dug by
him round the town restored (see above) etc. The
Caliph sent his relative ‘Īṣa b. Mūsā with 4,000
men against him and when he bridged the ditch
by throwing a couple of doors over it and entered
the town, most of al-Madhī’s followers lost heart,
as was usual with the supporters of the ‘Alīd
party, and when he renewed the hopeless struggle,
he was mortally wounded. About 20 years later (169 =
786) another ‘Alīd arose, Ḥusayn b. ‘Alī, against
the ‘Abbāsids’ decision to execute the present
ruler of Mecca al-Madhī. He was driven out and slain at Fākhrī near Mecca. In
spite of the harm he did to the town of
the Prophet, he was celebrated by the ‘Alīd party as a
martyr (Ṭabārī, iii. 551 sqq.; Ibn al-ʿAṯīr, vi.
60 sqq.). In the caliphate of Wāḥib, Madina suf-
fered severely from the attacks of the Sulaim and
the Banū Hilāl. Boghā the elder [q.v.] came to
their assistance in 230 (844/5) and imprisoned the
Beduins. When he left the town again, the
latter succeeded in breaking out of prison; the
Madinense however discovered their escape and
put them to death (Ibn al-ʿAṯīr, vii. 12). The
love for Wāḥib was shown by their lamenting
him every night after his death (*ibid*., vii. 21).

In the centuries that followed, Madina is only
rarely mentioned by the historians, and what they
tell us about it is of little interest as a rule. When
the Fāṭimids became lords of Egypt and were
threatening the holy cities in the Hijāz, a wall
was at last built round Madina. This was erected
in 364 (974/75) by the Būyid ʿAbd al-Dawla but
enclosed only the central part of the town. It was
restored in 540 (1145/1146) by a vizier of the
sons of Zangi. But as a considerable proportion
of the inhabitants lived outside the wall without
protection from the attacks of the Beduins, the
Anti of Syria, Nūr al-Dīn Māḥmūd b. Zangi, in
557 (1162) built a second wall of greater extent
with towers and gateways. The present wall, 35–
40 feet high, was built by the Ottoman Sultan Sul-
aimān b. Salīm the Magnificent (1520—1566) of
baalt and granite (Sahme-Wustenfeld, p. 126).
A trench was dug around it. The same Sulīm
brought a covered aqueduct from the south into
the town. Finally the wall was raised to a height
of 80 feet by Sulīm ʿAbd al-ʿAzīz, which height
it has retained.

A feud between the governors of Mecca and
Madina with a battle at Ḫub al-Ḥalab is recorded
for the year 601 (1203). The Meccan leader who
had set out to besiege Madina was put to fight
but obtained support from other amirs, whereupon
the Madinense abandoned further hostilities
(Ibn al-ʿAṯīr, xii. 134).

In 654 (1256) Madina was threatened by a
volcanic eruption, known as the fire of Hijāz.
It began on the last day of Djuumādī I with a
slight earth-quake which increased in vigour each succeeding day. Then a glowing stream of lava burst forth which, as the chroniclers tell us, devoured rocks and stones but fortunately flowed to the east of the town and then continued its way northwards. The inhabitants sought protection in the Mosque of the Tomb, praying and confessing their sins. The belief in the latter's inviolability, which had been sought to be shattered by the conflagration described below, Under the rule of the Turks Madina continued to lead a quiet life, little heeded by the outside world, and it is rarely mentioned, a circumstance much facilitated by the fact that the holy city could not be entered by non-Muslims. Radical changes only came about in the sixteenth century. In 1804, the Wahhabitaki took the town, plundered its treasures and prevented pilgrimages to the Tomb of Muhammad. An attempt to destroy the dome over the tomb failed, but the great treasures in pearls, jewels etc., presented by pious visitors to the mosque were carried off. It was not till 1813 that Muhammad bin Ali began the relic of the town and its vicinity. At a moment of peace, 'Abd Allah b. Sa'ūd recognised Turkish suzerainty over the holy places in the Hejaz. Muhammad 'Ali however paid no attention to this, but sent another son Ibrahim to continue the war against Ibn Sa'ud and in 1818 he took Dar'ya and razed it to the ground, whereupon he returned to Madina. The sacred cities once more belonged to the Turks and the Grand Sharif of Mecca even forbade pilgrims from Ibn Sa'ud's territory to enter Mecca. This restoration of Turkish rule brought at least one important innovation: the building of the Hejaz railway from Damascus to Madina in 1903. It was primarily intended for pilgrims but was also of military importance and therefore suffered severely in the world war. Through the intervention of the Grand Sharif Husain b. 'Ali b. 'Abd al-Mu'tin, the fighting and the intrigues in North Arabia became more and more involved. He first posed as a faithful servant of the Turkish Sultan but later he rebelled and on Nov. 6, 1916 he himself proclaimed king of the Hejaz and joined the English. After the peace which ended the world war the Turkish troops evacuated Madina in 1918. In the meanwhile a stronger opponent to Husain had arisen in 'Abd al-Aziz b. Sa'ūd, who had once more raised the Wahhabis to a position of supremacy. Husain's bold move in assuming the title of caliph found no support among the Arab chiefs, and the people of the Hejaz forced him to abdicate. Ibn Sa'ūd seized this opportunity, entered Mecca in October 1924 and forced Husain's son 'Ali to leave the town. The two holy cities are therefore now both in the hands of the Wahhabis, who are however now more tolerant and permit visits to the Mosque of the Tomb and other holy places and only forbid actual worship there. In spite of the inaccessibility of Madina to all non-Muslims the reports of various modern travellers enable us to form a fairly clear picture of it, which can only be briefly outlined here. In keeping with the configuration of the ground, the plain on which Madina lies is divided into an upper southern part and a lower northern part, al-Zayla and al-Shāfiia, names found even in the earliest writers. Al-Zayla is reckoned to run to the above mentioned village of Kubā', 3 miles away, al-Shāfiia to the hill of Uḥud. The older wall encloses the town proper; the already mentioned later wall which is now partly in ruins encloses the western larger suburb of al-Anbariya and "camp of the camels", barr al-munāshā, 400 yards broad lying between it and the town. Here is pointed out the traditional site of the muqāla, the Prophet's place of prayer, a tradition probably worthy of credence, as otherwise it would have been natural to locate it in the great mosque mentioned below. Along the northern side of the wall runs the road of the funeral processions, Darb al-Dhānā, which leads to the old general burial-place, Bab al-Gzarād (so called after the plant nitaria retusa) in the east of the town. Among the thousands who are buried here are the little son of the Prophet, Ibrahim, his wives (whether also his daughter Fatima is disputed: see below), many of his companions, al-Abbās, Muḥammad al-Bākir, Dā'far al-Ṣādik, the already mentioned jurist, Mālik b. Anas, and many others. At the north-west corner of the town stands the castle built on to the town wall. There are several gates in the walls, including the Bab al-Ḥamī in the north, the Bab al-Thawrī in the east, and the Bab al-Anbariya in the west. From a spring of fresh water in the village of Kubā' an aqueduct runs into the town, first laid by Marwān when governor of Madina. It frequently fell into disrepair and was restored for example by several Ottoman sultans, on the last occasion by 'Abd al-Ḥamīd after the Wahhabis had destroyed it. The damage not infrequently done by floods has already been mentioned. In 734 the Madinese were prevented for six months by an inundation from visiting the grave of Ḥamzah. The streets of Madina are clean but narrow and only the main streets are paved. The houses are well built of stone and a number have two stories. Several of them are surrounded by gardens, but the houses with gardens are mainly found outside the north and south wall, especially towards the south where vegetable gardens and orchards alternate with palmgroves and cornfields. The dates of which there are 70 varieties are, as in ancient times, one of the principal products. The pilgrim traffic is however the most important source of revenue for the inhabitants, who let their dwellings to the strangers and guide them to the sacred places and instruct them about ritual duties. The musawwarīn here play the same role as the musawwarīn in Mecca. Burton (ii. 189) gives the number of inhabitants as 16,000-18,000, in addition to 400 men in the garrison. Wavell (p. 63) in 1908 put it at 30,000, excluding soldiers and pilgrims, while Batanini gave 60,000 including many foreign visitors. The results of the world war have of course altered these conditions in many ways. The population used to increase gradually by visitors settling often permanently in the sacred city. Of descendants of the old Ansar there are very few left in Madina; according to Burckhardt there were only ten families in his time. There are a number of Shias in the suburbs. Madina possesses no sanctuary venerated from remote times like the Ka'ba; on the other hand it possesses compensation for this in its sentimental value in Muslim eyes in the mosque which encloses Muhammad's grave and is the goal of countless pilgrims. Some teachers even put this sanctuary higher than the Meccan one, but this view is not general, and the visiting of this mosque is not obligatory like the pilgrimage to Mecca.
and also may be undertaken at any time. According to unanimous tradition the Prophet was buried under ʿAʾṣiba’s house, where also the two first caliphs found their last resting-place. Further, all the earlier stories agree that Muhammad soon after his arrival in Madina had a mosque built, which he enlarged after the taking of Khairāb, and they are also agreed that the dwellings of his wives were close by so that ʿAʾṣiba’s house with the grave could easily have been taken into the mosque. That there is nothing improbable in itself in a mosque having been built in the time of the Prophet is shown by the mention of a rival mosque, Sūra ix. 108 sqq.; cf. xxiv. 36. But Cæcani, Annali, i. 432 ssq., has disputed with important arguments the correctness of the tradition and from various statements drawn the conclusion that originally on the site of the later mosque there was more probably only the dār of Muḥammad with a courtyard and various dwellings. If this is right, it is not known who built the mosque; but probably it was erected not long after Muḥammad’s death, for the rapidly increasing reverence for the Prophet must very soon have aroused the desire to bring his resting-place into touch with his religion. To this mosque, early built, can then be referred what tradition tells us of Muḥammad’s mosque: — a simple building of brick with pillars of palm stems and a roof of brushwood. To the same tradition, ʿUmar had it extended and after him ʿUṯmān who replaced it by a building of stone and mortar with a roof of teak. When Marwān was governor of Madina, he had a māḵsūra of coloured stones erected; but no important advance was made till the reign of Walīd, who commissioned the then governor, afterwards caliph, ʿUmar b. ʿAbd al-ʿAzīz, in 87 (706) to adorn the building in greater splendour. For this ʿUmar used Greek and Coptic builders, and the Byzantine emperor is said to have contributed a ʿamāq of gold and a large quantity of mosaic stones towards it. On this occasion four minarets were placed at the corners of the sanctuary and the roofs covered with plates of lead. The mosque remained unaltered till the reign of al-Mahdi. After this Caliph had visited Madina, it was rebuilt and extended in 162 (778—779) and its length was now 300 and its breadth 200 ells. In the following century another restoration was necessary and was carried through by al-Muṭawakki‘l in the year 247 (861—862).

Of the mosque which thus came into existence there are very full descriptions by Ibn ʿAbd Rabbih (d. 328 = 940), Muḥaddas (375 = 985), Ibn Ḥūbair who travelled in the east in the years 578—581 (1183/83—1186/87), and also Yākūt. Of the many details given by these authors only a few can be quoted here. As is quite evident from several of these descriptions, the mosque had the form, always retained later, of an open courtyard covered with sand or gravel, ʿabān, which was surrounded on all four sides by rows of pillars. In the eastern part of the southern pillar hall was the holy of holies, the tomb of the Prophet, with the tombs of Abū Bakr and of ʿUmar. It is described by Yākūt (iv. 458) as a high building, separated at the top only by a space from the roof of the pillar hall. Regarding the relative positions of the three graves there were in his time different views. North of them, according to some traditions, was the tomb of Fāṭima while according to others this was in the general burying ground. The part of the pillar hall lying west of the graves bore the name al-Rawḍa, the garden, from an alleged utterance of the Prophet. The total number of pillars is said to have been 290; those in the southern part were stuccoed, with gilded capitals, the others were of marble. The walls were adorned with marble, gold, and mosaic. Along the southern border of the Rawḍa ran a barrier, with which several highly venerated relics were associated: — the remains of the trunk of a tree, on which Muḥammad used to lean, and especially his minbar or pulpit. According to tradition Muḥawīya wished to remove this; but immediately a vigorous earthquake began and he abandoned the idea and instead raised it by an upper structure five steps higher. Al-Mahdi later wished to remove this addition, but he was dissuaded from doing this as the nails had been driven into the old minbar (Yaʿkübi, ed. Houtsma, ii. 283; Tabātibī, iii. 483; Muḥaddas, ed. de Goeje, p. 82). According to the descriptions it had 8 steps and there was a slab of ebony over the seat which visitors might touch. The remains of the tree-trunk were kissed and stroked with the hands, an interesting imitation of ancient Arabian religious customs. Among the various treasures of the mosque was the Madina standard manuscript of the canonical text of the Kur’ān prepared by ʿUṯmān. The mosque had 19 doors of which only four, two in the east and two in the west, were opened. There were three minarets, two at the corners of the north side and one at the southern corner.

While the Mosque of the Tomb escaped the volcanic eruption already mentioned (654 = 1256) it suffered in the same year from a fire due to the carelessness of a caretaker, which destroyed a part of it. An appeal to the caliph of Baghdād for assistance to rebuild it remained unanswered as the ʿAbbasid dynasty was then tottering before its fall, which was to take place two years later. Only the roof was repaired in the year after the fire in makeshift fashion; the rubbish was not cleared away from the tombs but remained there for over two centuries. Several of the Mamlīk Sulṭāns showed some interest in the sanctuary, among them Baibars I, who, according to Muṣir al-Dīn (Cairo 1283, p. 434), placed a railing round the tomb of the Prophet and had its roof gilt, while others sent workmen and materials, and notably al-Mansūr Qālanūn in 678 (1279) to mark the site of the tomb built a dome over it covered with plates of lead. ʿAṣḥaf Saif al-Dīn Kātib Bēy (873—890 = 1468—1495) was however the first to deal with the mosque in really energetic fashion and he had the minaret at the southeastern corner, al-Rāʾisīya, taken down and rebuilt. A great calamity then fell upon the mosque for, in a terrible thunderstorm in 886 (1481), it was struck by lightning and partly destroyed, and the library with its valuable manuscripts of the Kurʾān perished. Samhūdi, who lost his own library on this occasion, gives an account of the conflagration. The indefatigable Sulṭān however sent a large number of workmen with tools and materials, and in 889 (1484) the building was restored and among other alterations the dome over the tomb was enlarged; he also presented the brass railing which surrounds the māḵṣūra. On this occasion, the Sulṭān also presented to the town baths and a hypocaust for
them, an aqueduct and a water mill, as well as a large number of valuable books to replace those destroyed. Its misfortunes however were not at an end for in 898 (1492) it was again struck by lightning; the Râsîya at the southeast corner was destroyed and had to be rebuilt. The mosque received its present form by an extension to the north, made by 'Abd al-Majîd in 1270 (1853—1854) which Burton saw before its completion. The many inscriptions which cover the walls, include various Sûras and formulae and the mystic prayer al-Burda.

In modern times we have descriptions by Burckhardt (unfortunately incomplete, as he was ill during his stay), by Burton (1853), a brief one by Wavell in 1908—1909 and a good one by al-Batânînî (1910). In their main outlines they give much the same picture as the older ones. The mosque stands in the centre of the town proper, a little to the east. Al-Batânînî gives the length from north to south as 385 feet, the breadth on the north side as 285 feet and on the south side as 220 feet. The court (al-ṣāhn or al-hawâ) is covered with sand or gravel and enclosed on all four sides by pillared halls of which the largest on the south side encloses the actual masjîd. The pillars in this part are covered with marble with gild ornamentations. All the pillars in the mosque, 327 in number, support arches on which rest little domes like divided oranges. Of the pillars 22 are in the eastern part of the southern hall (the maṣjûra), the sanctuary proper with the tomb of the Prophet. "The Garden", i.e. the area between the tomb and the minbar, is 70 feet long and 50 broad. The maṣjûra is enclosed on the south, where the mosque is extended by a row of pillars, by a brass grille with the relics already mentioned and the beautiful mihrâb of the Prophet with an indication of the direction of prayer. The present minbar is of marble with gilding, a gift of Murâd III in 1598 (1599). The maṣjûra, the holy of holies of the mosque, a quadrangle 50 feet long from north to south and 47 feet broad, is surrounded by a green polished brass railing through which a door, Bâb al-rafta or Bâb al-Wûsûf, leads to al-Rawâd. It encloses an area which is called al-hudja, in allusion to 'A'sha's house. It cannot be accurately described as it is covered with green silk and is not seen by visitors. The covering, which recalls the covering of the Ka'ba, is said to have been first presented by the mother of Hâfiz al-Raṣîl. Nûr al-Dîn Zangi is said to have cleared a new area around the older hudja to protect the tomb. In the hudja are the tombs of the Prophet and of the first two caliphs, according to the usual belief in the following order: the most southern is the tomb of Muhammad with the head to the west, next him Abû Bakr with his head beside Muhammad's feet and on the north 'Umar with his head beside Abû Bakr's shoulders. A fourth, empty grave is said to be intended for Jesus after his parousia. On the north side of the large maṣjûra, another smaller one adjoins it, which, according to an assumption still disputed by many, contains the tomb of the Prophet. Two doors on the east and west side connect it with the maṣjûra. In the wallpaper hanging lamps are placed in this, the most sacred part of the mosque, and in addition in the Rawda there are candelabra of crystal. In the courtyard of the mosque, approximately east, is a quadrangular area shut off by an iron grille, which is called Frurma's garden. Of the 15 palms which grew there in the time of Ibn Djuibair, Burton saw only 12; al-Batânînî mentions several small palms planted round a high one. Behind the boundary is the so-called "Prophet's well". The mosque has four minarets at the four corners and according to Burton a fifth in the centre of the west side, but this is not mentioned by al-Batânînî. Five doors give adittance to the sanctuary: on the west the Bâb al-Salîm and Bâb al-Raîma, on the north the Bâb al-Majîdî, on the east the Bâb Djubrâ'il and Bâb al-Bakîrî and Bâb al-Nâşîri. They are all closed at night. From the descriptions already quoted, the mosque was not impressive when seen from the outside, as the houses were built so thickly round it that an open view of it could not be obtained. Even the richly ornamented Bâb al-Salîm only looked like the termination of a street running from the west. But this seems now to have been altered, as according to Musil, Zur Zeitgeschichte von Arabien, p. 34, all the houses in the immediate vicinity of the mosque were removed in 1916.

The immediate vicinity of the city of the Prophet is of course very rich in places with which are associated anecdotes and traditions of him. The most important of these is the hill of Uhad [q.v.] with the graves of those who fell for the faith there. It is rivalled by the village of Kubâ where Muhammad on his arrival in his new home stayed from Monday till Thursday (Ibn Hishâm, p. 335). The village, which was at that time occupied by the 'Amr b. 'Awf, is according to the Arab geographers 2 miles, according to Burckhardt, 3—4 hours from Madina; to be accurate it is about 3 miles. The surrounding gardens which are exceedingly rich in all kinds of fruit and vegetables extend for 4 or 5 miles (Burckhardt). Burton describes how the village appeared to him as he approached it: "a confused heap of huts and dwelling-houses, chapels and towers, with trees, between foul lanes, heaps of rubbish and yelping dogs".

Tradition marks the spot where the Prophet's camel knelt (al-nabâk) and here also was the mosque mentioned in Sûra, ix. 109 built out of piety, as well as its counterpart, the Masjid al-Dirâr, destroyed by Muhammad's orders (cf. Wâkitî—Wellhausen, p. 411; Ibn Sa'd, nişâr 32, 5; and above). The mosque of Kubâ with its simple minaret was in ruins in Burckhardt's time, but has since been replaced by a stone structure.

AL-MADINAH AL-SALAM. [See BAGHDAD.]

AL-MADINAT AL-ZAHRA', the capital founded near Cordova by the famous 'Abd Allah bin Abi 'Amir ibn Muqim al-Sanjur [q. v.] in 976/977—979. Because he did not wish to deal with state affairs in the palace of the Umayyad Caliphs in Cordova nor at the royal palace at Madinat al-Zahra', al-Mansur decided to build a town which should rival in size his palace and those of the principal court dignitaries. This town was built a short distance from Cordova on the banks of the Guadalquivir [q. v.]. Since the exact site of al-Madinat al-Zahra has not been discovered, one must be content, when trying to locate the site, with the very vague indications given by the Arab historians; indeed not one of the Arab historians has left any description of the 'Amirid town. According to Ibn Hazm, in a passage of his Ta'rik al-Hamama (ed. Petrov, Leyden 1914, p. 104), it lay to the east of Cordova, but on the other hand some Spanish archaeologists think they have identified it by the south-west of this town. Al-Madinat al-Zahra must not be confused with the palace, al-'Amiriyah, the name of a musalla or villa outside the city-walls which was given to al-Mansur by one of his Umayyad masters, the site of which seems to have been identified.

According to Ibn 'Idhari, the greater part of al-Madinat al-Zahra was finished in two years. Al-Mansur settled there in 370 (980—981). He transported thither the different administrative offices and the treasury, and gave land round his palaces to his courtiers, so that Madinat al-Zahra, the town of the Umayyad Caliphs, was almost supplied and practically deserted. The merchants also came to trade there; a few years after its foundation, al-Madinat al-Zahra had become a large town.

After al-Mansur, al-Madinat al-Zahra was the capital of his son and successor 'Abd al-Malik, who had a new palace built there. After his death his brother 'Abd al-Rahman, known as Sanchol, installed himself as well there. But he was soon deposed, according to Muhammad b. 'Abd al-Djabbar al-Mahdi [q. v.]. This usurper occupied the 'Amirid town and seized the treasures which were there. For three days he gave it over to the most thorough pillage. Having sacked the town he gave orders to fire it and to destroy it absolutely (Djumâda II, 399 [January 1000]).

AL-MADINAT AL-ZAHRA, the ancient capital of the Umayyad Caliphs of Cordova, the ruins of which are still in existence about 5 miles to the west of this latter town, at the place called Cordea la Vieja, on one of the last spurs of the Sierra Morena overlooking the valley of Guadalquivir [q. v.].

The western Arab historians give us a great deal of information on the foundation of this royal town, upon the period which marked its prosperity and upon the causes which led to its fall. It was the great Caliph 'Abd al-Rahman III al-Nâşir [q. v.], who decided upon building it, and its construction was begun during the reign of this sovereign at the end of the year 325 (936). The chronicles say that on one of his rounds by the province left him a large sum of money, al-Nâshir wished to utilize this sum for the payment of the ransoms of the Spanish Muhammadan prisoners of war in the kingdoms of Leon and of Navarre. As the envoys who had been sent for this purpose failed to find any prisoners whom they could ransom, the Caliph's favourite al-Zahra is said to have advised him to employ the labour to build a town to which she would give her name. This anecdote is without doubt legendary, at least in several points. The work of building the town was carried on for many years (from 325 to 40 years according to 'Abdallah ibn 'Idhârî), it being about the palace of the Caliph. Six thousand hewn stones were used every day, not to mention other materials; the necessary marble was chiefly imported from Ifrikiya, and no less than 4,313 columns were required, if we may believe Ibn 'Idhârî. According to the same author it was the crown prince al-Hakam himself who directed operations. The name of the chief architect, Maslama b. 'Abd Allâh, has also been preserved.

The building of Madinat al-Zahra engaged not less than 10,000 workmen. Account was taken in the planning of the town of the very steep slope of the site and al-Idrisi gives a clear account of how this slope was utilized. The town was built on three terraces; the upper part was set aside for the palace and its appurtenances; the middle one was devoted to gardens; the lower one contained private dwelling-houses and the Great Mosque. 'Abd al-Rahmân removed with all his court to Madinat al-Zahra, as he felt the Caliph's palace of Cordova which faced the cathedral mosque and overlooked Guadalquivir too small, and this became his favourite residence. His successors al-Hakam II and Hishâm II lived there for the most part during their reigns, and further embellished the town of al-Nâsir. It appears, however, to have very soon fallen into decay, especially from the time when it had as rival the residence of the 'Amirid Fâdîb, al-Madinat al-Zahra [q. v.]. It was pillaged on several occasions by the Berber mercenaries who had rebelled against Cordova. The year 401 (1010) marked its final fall. A century and a half afterwards in the time of al-Idrisi, the walls alone remained and vestiges only of the palace. A few inhabitants still lingered in it.

A beginning was made in exploring and systematically excavating the ruins of Madinat al-Zahra..
about the year 1910, under the direction of the Spanish archaeologist, R. Velázquez Bosco. The first work done was the excavation of the double rampart dividing the upper terrace of the town from the middle terrace and from certain parts of the palace. A large number of carved stones have been brought to light.

### Al-Madjarra, the Milky Way

1. **AL-MADJARRA, the Milky Way (the place, path, road of moving).**

   **The Name.** It is probably taken in the first place from the Greek γαλακτίζων: *al-dā'ira al-labāniya* or *al-darb al-labāni,* the circle or path which looks like milk. Other names are *ṭarīk al-ḥašīl,* the path of milk, as it has the color of milk; *ṭarīk al-tabāšīna,* the road of the place where there is milk, and hence metaphorically *umma al-samā'ī,* mother of heaven, who feeds the heavens as with milk; *ṭarīk al-tābn,* path of straw and *darb or darbī al-tabāsnī,* path of the place where there is straw. Similarly the Milky Way is called in Persian kāḥkēshan, straw-puller, or kākhenγan or rāk-i kākhenγ, path of the straw-puller; in Turkish *saman ughrīt* or *saman kūfan,* straw or fodder-thief. Whether names connected with straw go back to Greek or Oriental ideas is uncertain. Gundel (*op. cit.*) holds the latter view. In the East the Milky Way is the hay, straw, and meal, which Peter or Saint Vinir (Venus) lost and blessed by God flew to heaven. Another Turkish name is *hādīdieter,* path of the pilgrims.

   Other Arabic names are *khāṣṣ al-samā'ī,* gate of heaven, and *al-tahrīdī* or *al-shrādī,* gap, probably from the idea that the Milky Way corresponds to a gap or split through which one can see the shining heaven. Another name is *umma al-nudjūn,* mother of the stars, because no part of the heavens is so rich in stars. The stars are also to have leprosy (*ṣṭarīt al-nudjūn*). Among the Kazan Tatars the Milky Way is called "Path of the Wild Goose" and by Altai Tatars ("Path of Hoar-Frost" (frosted way).

   The name *nakr al-madjarra,* River of the Madjarra, is noteworthy. The Milky Way is regarded as a river; this is evident from the passages in

## Abd al-Rahmān al-Sūfi in his work on the constellations, in al-Birūnī in his Kitāb al-Tajhīm towards the end and in the Chronology (*text, p. 345; transl., p. 348*), in the Karwini in the Cosmography (*text, i. p. 37; transl., p. 18*) and in many others. In these passages the constellation of Sagittarius or the eight stars forming the 20th station of the moon which are called the Ostriches *al-mā'ūm* are described. Four of the stars which lie on the Milky Way are called *al-mā'ūm al-wārid,* the ostrich going to drink; the other four lie at the side of the river of the Milky Way and are called *al-mā'ūm al-ṣūdār,* the ostrich returning from drinking (cf. e.g. L. Ideler, *op. cit.,* p. 184 and Hyde, *Unsch Biz's Tabulae,* Oxford, p. 23).

### Description of the Milky Way

A description of the Milky Way, the stars and constellations in it, is given by Ptolemy in the Almagest (Bk. viii., Ch. 2) and the Muslim translators have borrowed from this. The editors have treated it in different ways. Al-Ṭust for example in his edition of the Almagest gives the description as fully as in Ptolemy; but he does not use the translation by al-Hadrīdādī, as I was able to show. Ibn Sinā on the other hand, who gives a brief synopsis of the contents of the Almagest in the *Ṣhīfā* (Healing) gives no such description; he deals here in the same way as he does with the Tables which he omits.

The very full treatment of the Milky Way is followed in Ptolemy by a description of the method of making a globe of the heavens on which the Milky Way is represented. Ibn Sinā, for example, took over this section word for word in a form which we also find elsewhere. It is therefore exceedingly probable that the Milky Way was represented on one or other celestial globe, of which a whole series is recorded. It does not seem to be on the extant globes (cf. H. Schnell, *Die Kugel mit dem Schmett*).

An independent description of the whole Milky Way as full as that in Ptolemy, I have not been able to find in Arabic works. A brief description is given by Abu Ḥanifa al-Dinawarī (in al-Maẓūkī, *Kitāb al-Asma wa-l-Jamāka,* Haidarābād 1322, ii. 9–12). The description of al-Dinawarī leaves much to be desired and the text is not quite correct. The former is in keeping with *Abd al-Rahmān al-Sūfī* (cf. *op. cit.*), and the latter with al-Dinawarī was very well acquainted with the verses on the Milky Way but his astronomical knowledge was insufficient (it may be noted that *Abd al-Rahmān mentions an Ibn Kunāza, while there is a Muhammad b. Kunāza in al-Maẓūkī*).

The anonymous writer mentioned in the *Bibliography* gives a brief description of it.

1. *Abd al-Rahmān al-Sūfī* unfortunately only gives a description of one part of it. He mentions the part of the Milky Way between the great, bright Milky Way (al-madjarra al-ażīma) and the falling Eagle (Lyra) (ṣīḥat al-madjarra, here at γ Cygni the Milky Way divides). *Abd al-Rahmān* follows this stretch up to η Scorpii. In many cases the position of stars e.g. in the Ship is given from their position with respect to the Milky Way. Schillerup has given details in the tables appended to the synecodic account, p. 5 sqq.

In the *Kitāb al-Tajhīm* of al-Birūnī we read *al-Madjarra of the Arabs, Kākhēshan of the Persians and Rāh Bihisht of the Hindus is an aggregation of a very large number of small stars.*
They form an almost perfect large circle, which runs between Gemini and Sagittarius, sometimes narrow, sometimes wide, in some places it is dense, in others not. Aristotle thinks that the Milky Way consists of stars surrounded by vapour like the halo round the moon and the mist (in the sky) and the comets. 1

Theory of the Milky Way. On the nature of the Milky Way and the cause of its shining there are a number of views, which follow the same lines as those of the ancients (cf. O. Gilbert, *Die meteorologischen Theorien der griechischen Altertums*, Leipzig 1907, index, s. v. γάλα). I now give Al-Karâfi’s account of it.

Al-Karâfi (d. 1285—1286) who wrote a work on Optics (*Noteworthy consideration of what the eyes grasp in 59 questions or problems*), says in the 49th question: "Why do we see a black haze on the moon? Is this an illusion or reality?" and continues:

"Connected with this question is that of the Milky Way which looks like a road in the sky. We are told: 1. It is the gate of heaven. 2. It consists of small stars which are crowded so closely together that the eye cannot distinguish one from the other. 3. It is said to be a vapour, which has risen from the earth and solidified under the cone of the fixed stars. One part forms a black burned body. This is the case in the centre of the Milky Way. A part lies in places which are far away from those in which there is burning; these are the two sides of the Milky Way. These places appear white. 4. Finally we are told that the Milky Way consists of something whose shape is inserted in the heavens and which is in some part of the earth, to which the way cannot be found and which cannot be reached."

Of these four views the second is nearest the truth.

The anonymous author of the Berlin manuscript also tells us very fully about the different views and the nature etc. of the Milky Way; here is the passage in question: "Learned men have many and varied views on the nature and substance of this belt. Some say that it is a part of the upper sphere and thicker and coarser than the rest of it. It is therefore visible, while the rest is not, as the latter is exceedingly fine. This corresponds to the opinion of the philosopher Diodorus (Di-yûdûrs)."

"According to Aristotle this belt consists of vapours which have collected together and ascended into the sky through the intermediary of the stars. As vapours are continually rising, they retain their shape. There is a contradiction in this. If we assume that the belt is formed by rising vapours, they cannot possibly be always seen at one and the same place in the sky; nor can they be seen from all places on earth and they cannot maintain one and the same distance from the stars and the ascendants."

If the belt is always seen in the same way and has permanently the same form, if it is seen in all climes, if its distance from the stars and the ascendants is always the same, this is a sure indication that the belt does not originate in vapours as these completely lack these qualities."

"Some learned men are agreed that the Milky Way, al-Madjarra, has its origin in the fact that small stars have become combined in this figure (ãûtâr) and offer themselves jointly to the view.

On account of their smallness they do not look like shining stars as they are joined together and give their light together (the light of the single stars forming one whole). This is the origin of the shining and the figure which we see. This view is one which is intelligible and men adopt it."

"We say that the Milky Way is a limb of the sphere of the fixed stars. As it is a thick limb, which is thicker than the other limbs, it completely absorbs the light of the sun, corresponding to what the other limbs take up, i.e. as the stars do. This corresponds to the view of him who says that the latter are thick limbs of their sphere. Each limb takes up light in proportion to its density. But this density is the cause of light being reflected to us."

"Many learned men attack the Aristotelian view — as was done even in ancient times — and regard the latter view (*) as the most probable."

The anonymous writer therefore lays it down quite generally that the Milky Way cannot be in the ether; it has always one and the same form quite independently of the position from which it is seen and does not alter its position. Abu l-Faradj (Bar Hebraeus) in his work (*Elevation of the spirits; on the shape of heaven and of the earth*); transl. by F. Nau, Paris 1899, p. 92 sq.) has a section on the "vapour-stars" (kawkâb saâdi) and the Milky Way. He says:

"In the heavens there are some white patches, vapour-stars. Some think these are a part of the Milky Way as like it they resemble clouds. They also think that they consist of a very large number of very small stars lying very close to one another, like the mane below the lion which is in the shape of an ivy leaf. Those who believe this also say that the whole Milky Way consists of very small stars joined together. The Milky Way is obviously neither smoke nor vapour in the air, as the Peripatetics say, since the moon and the planets experience no change in their light as they pass through the Milky Way (it must therefore lie outside the sphere of Saturn) but on the contrary rather affect the Milky Way."

The following note may be added on patches of nebulae:

Among the nebulae known to the Muslims are the Magellan clouds which were observed by merchants in Makdãshîh. They saw there a white patch of cloud which never came down and never changed its position (al-Kazwînî, *Aḏâ’îb al-Makhdûsât*, vol. ii., p. 40).

At quite an early date Ibn al-Haitham thoroughly and fully proved that the Milky Way is not in the air, but in the heavens and at a distance which is very great in proportion to the diameter of the earth, from the absence of a parallax, e.g. from the fact that it has the same position with respect to the fixed stars at different points on the earth. The anonymous writer also points this out (E. Wiedemann, *Über die Lage der Milchstrasse nach Ibn al-Haitham, in Sirius, xxxix.*).

1) According to this, the anonymous writer would believe that the fixed stars, the Milky Way etc., receive light from the sun, a view that is contradicted by Ibn al-Haitham and others: cf. below.
2) In the tables and astronomical works only the vapour-stars (nebulae) mentioned by Ptolemy are given.
3) There is an error here: The Milky Way would have to be below the sphere of Saturn but above the atmosphere like the planets. — The alterations in the brightness of the Milky Way are phenomena caused by dazzling.

The Milky Way is mentioned in a whole series of verses, particularly by modern poets. I have published 22 of these in the S.B.P.M.S. Erlangen with the help of A. Fischer (Leipzig), Kowalski (Cracau), Hell (Erlangen) and Krenkow (Beckenham).

(M. H. EMS.)

MAJDAL AL-DWALWA, Abû TaLib Rustam b. Fakhri al-Dwala, a Bûyid. After the death of his father Fakhri al-Dwala [q. v.], Majd al-Dwala, who, according to the usual statement, was then four years of age, according to another eleven (while Ibn al-Áthir, al-Kamili, ix. 48 says he was born in 379 [989/990] which does not agree with either of these statements) was proclaimed as successor under the regency of his mother Sajida. In 388 [998] Kābus b. Washmîr [q. v.] seized the two provinces of Djurdjâr and Tabariyân, to which was added by the treaty of peace Mazandarân also, and later he brought Gilân also under his rule. In 397 (1006-1007) Majd al-Dwala with the help of the vizier al-Khaﬁj Abû ‘Ali b. Abû al-Kasim attempted to overthrow his mother but he was taken prisoner by his brother Shams al-Dwala [q. v.] and the Kurd chief Badr b. Hasanawi, whereupon Shams al-Dwala took control of the government. His rule did not last long, however; after a year Majd al-Dwala was released and again recognised as ruler, while his brother retired to his governorship of Hamadân. In 405 (1015) the latter succeeded in seizing the town of al-Raii; Sajida and Majd al-Dwala had to take to flight, but were soon able to return because Shams al-Dwala was prevented from following them by a mutiny in the army and had to leave the Sajida held the reins of government till her death (412—1022), while Majd al-Dwala, who although extremely interested in learning, otherwise cared only for his numerous harem, paid no heed to affairs of state. After Sajida’s death complete chaos reigned. In the beginning of the year 420 (1029) Sultan Mâhmand b. Subuktug [q. v.] undertook a campaign into the Trîk. When Majd al-Dwala wrote to him and complained of the rebellious spirit of his army, the Sultan sent a considerable body of troops against Raii and ordered the commander to seize Majd al-Dwala. When the troops appeared the latter went to them and was at once seized along with his son Abû Dulaf. The Sultan himself then set out against Raii, seized the town and had Majd al-Dwala sent in chains to Khordasân.

MAJD AL-DIN. [See Hibat Allâh b. Muhammad.]

MAJDAL AL-MULK, Abû l-Fadîl As-Sad, Muhammad al-Barkhâwî, Finance minister of the Salûkij Sultan Barkîyârûk. As early as 485 (1092—1093) we find Majd al-Mulk mentioned among the officers of the Salûkij Sultan. As time went on and he became more and more powerful, while Barkîyârûk’s weakness and incapacity became more and more obvious. But as a Shî’i Majd al-Mulk became suspected of being the real instigator of the murders committed by the Isma’îlîs and after the amir Bursuk [q. v.] had fallen a victim to Isma’îlî fanaticism, the troops mutinied (Shawwâl 492 = Aug./Sept. 1099) and demanded that Majd al-Mulk should be handed over to them. He offered to sacrifice his life and proposed that the sulûk should have him executed to satisfy the soldiers. But Barkîyârûk refused to save him. After the soldiers had sworn not to slay Majd al-Mulk, but only to imprison him, he was handed over. In spite of their oath, the soldiers fell upon him and at once hewed him to pieces. — His nisba is derived from Baravîstân, a village near Kam; cf. Ya’kût, s. v.

(K. V. ZETTERSTÉEN)

MAJDHUB (a., “attracted”) denotes in the terminology of the Sûfis a person who is drawn by the Divine attraction (diqâh), so that without trouble or effort on his part he attains to union with God. In other words, the madjdhab experiences the ecstatic rapture of losing himself in God, and is thereby distinguished from the sâlik ("traveller"), who makes the journey to God, stage by stage, with conscious endeavour and purpose. The opinion favoured by antinomian derivations, that the madjdhab is superior to the sâlik finds expression in the saying: "One diqâh (act of drawing) from God is equivalent to all the (devotional) work of mankind and dînh (‘amal al-ta’lîm), but it is generally recognised that whether diqâh or sâlik [q. v.] preponderate, both are needed in order to reach perfection. Those in whom diqâh precedes sâlik and constitutes the predominant element in their spiritual life are called madjdhab-i sâlik, while conversely those with whom sâlik comes first are known as sâlik-i madjdhab. Although the terms madjdhab and sâlik are employed by Halladay (Massignon, Passion, ii. 905) and occur
frequently afterwards, their application in a narrower sense to those who repudiate or acknowledge the moral and religious law is characteristic of the dervish fraternities, which, as is well-known, differ widely from each other in their theory and practice concerning this matter.

(R. A. Nicholson)

MADRĪD (L.). [See Allâh.] MADJNûN. In Arabic, Persian and Turkish literature the epithet al-madjnûn, i.e. 'the man possessed by a djinn', 'the madman', is pre-eminently associated with Kâsî b. al-Mu'allî wa-ârî (according to others, the name of his father is Mu'âshî), the magjon of the Banû 'Amîr b. Sâ'a, the story of whose passion for Lâlî, daughter of Sa'd, a woman of the same tribe, is celebrated throughout the Muhammadian world. Kâsî is said to have died about 80 A.H. (Fawâtî, Bûlûk 1283, ii. 172), but it seems doubtful whether he can be regarded as a historical person, and this view is supported by the statements of early Muslim authorities (Aghâni, i. 157-169; cf. Ibn Khallîkîn, ed. Wustenfeld, No. 101, p. 150, B. 8, and Ibn Khâlidîn, Makaddimah, ed. Quatremere, ii. 196, 2 fr. foot; Aghâni, i. 169, 4 fr. foot, where magjon is described as one of three persons who never existed), while Ibn al-Kâlîb declared that the story of Madjnoun and the poems attributed to him were fabricated by a man of the Banû 'Umayya (ibid., i. 167, 4 fr. foot). Stripped of the picturesque details with which later poets have embellished it, the story is a simple one: Kâsî meets Lâlî amongst a party of women, falls in love at first sight and slaughters his camel to make a feast for her. His love is returned, but her father refuses to give her to him in marriage; and soon afterwards she becomes the wife of Ward b. Muhammâm al-'Kašî. Kâsî, crazed with despair, passes the rest of his days in solitude, wandering half-naked in the hills and valleys of Najd, making verses on the subject of his unhappy love, and only seeing Lâlî at rare intervals until his death. The development of this love-tale of the Arabian desert into one of the popular themes of Persian romantic and mystical poetry was begun by Nâsîmî of Gandja, in whose Khamsa the Lâlî al-Madjnûn occupies the third place. Of other poems bearing the same title, the best-known in Persian literature are those by Amir Khusrâw of Dîlî, Djamî and Hâtîf; and in Turkish, by Hämîd (see the abstract in Gibb, History of Ottoman Poetry, ii. 175-190) and Fu'nî (ibid., iii. 85-88; 100-104). — Sûfî writers find in Madjnoun a type of the soul which through tribulation, self-devotion and self-abandonment aspires to be united with God.

(R. A. Nicholson)
Vazadžirdj into tables based on the Muḥammadan era. He also to some extent replaced the meridian of Arin by that of Cordova, and he also gave the approximate positions of the planets for the beginning of the Hijra. On the other hand, he did not notice a series of errors in the older books, which might be made of some other astronomical works of his: a work in which he gives a short method of equating the stars (Ta'dil at-Kauākib) in the tables of al-Battānī; a work on the astrallog which survives in Latin; a translation of the planisphere of Ptolemy; the latter was translated into Latin in 1143 by Hermann Secundus of Tolosa. His interest in astronomy led al-Maḏrīṭī to deal with the principle of the transversal, in which he developed the views of Thābit b. Qurra. His Fī Ṭau'amā 'ilm al-'Adād (On the Perfection of the Doctrine of Numbers) or al-Muṣlāmāt On Business-calculation is mathematical. Whether the Kitāb al-'Adādār (on stones) and the work on the procession of animals are genuine, need not be discussed here.

It has also been suggested that al-Maḏrīṭī wrote the Ḥikawān al-Safā; but his supposed occupation with a work of this kind may be traced to the fact that he either wrote a similar work or a supplement to it or that he edited it and then he or his pupil Kirmānī introduced it into Spain. Whether he inserted separate sections like those on minerals, plants and animals seems to be doubtful.

Two other works belong together in subject matter, Kūbat al-Ḥakīm fi l'-Kīmīyā and Ghāṣyāt al-Ḥakīm fi l'-Ṣīhār, "the Goal of the Learned in Magic", which are ascribed in the manuscripts to al-Maḏrīṭī, although he never mentions himself in them. E. J. Holmyard after a thorough study of the question does not believe they are by al-Maḏrīṭī, the main reason being that al-Maḏrīṭī died before the fatīma, while these works were not written till after this period. The earlier biographers do not mention them among the works of al-Maḏrīṭī. It may be doubted whether works of this kind were in keeping with his mental attitude. Both the works deal with occult subjects. The Ghāṣyā treat of talismans, amulets, etc. Hājjāj Khalīfa, iv. 166, in dealing with the science of talisman (ilm al-tālīmāt), says that in it al-Maḏrīṭī expounded very fully but not always intelligently the principles of the science. The Rūṭa is of an alchemical nature; Hājjāj Khalīfa, v. 230 sq. also quotes al-Maḏrīṭī among the alchemists. Holmyard, op. cit., gives the gist of the book.

MA Declarations. [See W. W. MA.]

MAḏūs (A.), the Zoroastrians. The Greek word μαῦσως (which itself renders an Iranian word, cf. old-Persian magus, new-Persian magū) passed into Arabic through an Aramaic medium. According to the Arabic lexicographers, Maḏūs is a collective like Yāhūd; in the singular Maḏūs is to be used; the religion of the Maḏūs is called al-Maḏūsiya. The lexicographers cite from the root ṣ-md-고 a 3rd form (maḏūsagā) and a ṣth (maḏūsagā). In a poem, cited in the Līsān and the Tūṣ al-Arūs the phrase nār maḏūsagā is found; if we only could be sure, that this poem is really (as is asserted in the Līsān) a composition of Imru 'l-Kais and al-Tawām al-Yāshkuri conjointly, the word would already occur in the oldest Arabic literature extant.

In the lexicon, the word Maḏūs is derived from a proper name, Minḏū Čū, which name, according to them, is the Persian equivalent for Arabic مسح al-adwain ("with little ears"). This man, named Minḏū Čū, they say, is not the same as Zoroaster, but lived before him, and was the first who proclaimed the religion of the Magians. This is one instance of the many etymological and etiological enormities of Arabic antiquarians (cf. Līsān, viii., 98 sq.; Tūṣ al-Arūs, iv., 245; Lane, Lexicon, s. v.). Incidentally, it may be noted that in Arabic literature the word Maḏūs is also used to denote the peoples of Northern Europe, viz. the Scandinavians (cf. Dozy, Recherches, ii., 250 etc., Appendice No. xxxix., p. lxxv.; Rerum normannarum fontes arabici . . . . collegit et ed. A. Seippel, i., Christiania 1896).

In the Kūrān the word Maḏūs occurs once (xiii. 17); with this verse, i. 59 and v. 73 are to be compared. In these three places the Akl al-Kītāb [q. v.] are mentioned, but it is only in xiii. 17 that the name Maḏūs is also found. In this same verse, however, the Maḏūs's also are mentioned, who, of course, can by no means be included in the term Akl al-Kītāb, now, in Muslim law, the Zoroastrians are, it will be seen, treated as if they belonged to the Akl al-Kītāb, but this conception cannot be based on the Kūrānic verse xiii. 17. Also, the commentators (al-Baṣfī, ed. Fleischer, p. 629; al-Zamakhshari, Kudūsh, p. 901; al-Rāzī, Muṣṭāfī al-Qātī, iv., 554; al-Naṣībīnī in marg. al-Ṭabari, Taṣfīr, ed. Cairo, xvii., 74 etc.) give nothing that can point to the fact of the Maḏūs being, theoretically, Akl al-Kītāb. The words of al-Rūzī, who states that the Maḏūs are those who follow a real prophet, but only a mutanabbi, might suggest, that he takes Maḏūs to be a sect intermediate between the real Akl al-Kītāb and the maḏīrī's, the heathens. Al-Naṣībakī also says that the prophet of the
Madjūs — who, moreover, are dualists — is no real prophet but a mutanabbi; the mutanabbi's, on the other hand, have no prophet at all, nor a sacred scripture. In Arabic historical literature the Zoroastrians are themselves occasionally called mafrīk, e.g. al-Balādhuri, ed. de Goeje, p. 302, 303, 350, 357 (mafrīk); p. 407 (kuffār). Finally it must be added that the Kur'ān-verse xxii. 17 seems to be a later addition to this Sūra (cf. Noldeke-Schwally, Gleich. des Qurāns, i. 214; the verse must be Madzinie).

In the Ḥadīth, which represents the theory of Muslim law, there is not very much to be found on the Madjūs in particular (cf. A. J. Wensinck, Handbook of early Muhammadan Tradition, s. v. Madjūs). The substance of the Ḥadīth concerning the Magians is, that they are to be treated like the Ahl al-Kitāb, and, in consequence, are bound to pay the diyya. Practically, the existing Muslim state power could not follow any other way. The subjection of Iran would have become impossible, had the Arabs considered the Zoroastrians as mere heathens, who were to be given the choice either of Islam or the sword. And, even before that time, dealing with the Zoroastrians of Bahrāin in this rigorous way, would have been a grave political fault. Thus tradition, though it also hands down an account of how the prophet gave the Zoroastrians of Bahrāin the choice of either Islam or death, reports that 'Abd al-Rahmān b. 'Awf stated that the prophet had accepted the diyya from these Madjūs. This tradition was regarded as authoritative afterwards, and, the other, stating that the prophet refused to consider Madjūs otherwise than as mafrīk's, was abandoned (cf. Abū Dawūd, xix. 29 = vol. ii. 30). 'Abd al-Rahmān b. 'Awf is said to have delivered his statement on an occasion when the Kāhīna 'Umar felt doubtful whether he should accept the diyya from the Iranians, or not (cf. al-Balādhuri, ed. de Goeje, p. 267: the prophet, according to 'Abd al-Rahmān, had said: „sunūn bikhīm sunūn ahl al-kitāb”). There is a tradition relating that 'Umar, a year before his death, wrote to Dīja' b. Ma‘ūya, regarding the Madjūs, instructing him, to put to death every sorcerer (saḥrī), to separate each Madjūs from his wife and children, and to forbid the practice of samzama (the muttering of Zoroastrian prayers, new-Persian kādī or kādī). Dīja' began to execute these rigid orders, and 'Umar refused to accept the diyya from the Madjūs, until 'Abd al-Rahmān b. 'Awf asserted that the prophet had accepted it from the Madjūs of Bahrāin (Abū Dawūd, loc. cit.; Ibn Hānbal, Musnad, i. 190, 194; al-Bukhārī, Saḥīh, Cairo 1304, ii. 144 sqq.). Al-Bukhārī, moreover (ii. 135) cites the following answer given to a Persian ambassador: “Our prophet has commanded us to fight you, until you serve God, and Him alone, or until you pay the diyya”. So here likewise the Madjūs are put on the same level as the Ahl al-Kitāb. The determination of the position of the Zoroastrians in respect of the Muslim state, is the main point of the Ḥadīth concerning them. Moreover, there is a tradition in al-Dārmī, Fārābī, bāb 42, regulating the hereditary portion of Zoroastrians (not altogether clear, however). Other, not very important traditional matter respecting the Madjūs is cited: Liānān, vii. 99; Lane, Lexicon, s. v. fiṣṭa; the article Kādīkānā.

The traditions of the Muslims about Zoroaster are in accordance with their idea of the Zoroastrians being a kind of inferior Ahl al-Kitāb. Al-Ṭabarī relates, that Zarādūsh b. Ismā‘īl (Ismā‘īl is an adaptation of the Avestic Spītanā, the name of the ancestor of the family to which Zoroaster belonged) laid claim to the title of a prophet, after three years of the reign of king Bīsthāb (the Avestic Wīštāspa) had elapsed (i. 675 sq.); the same historian reports, on the authority of Hīshām b. Muhammad al-Kalbī, that Zarādūsh, who by the Madjūs is said to be their prophet, was, according to the learned men of the Ahl al-Kitāb an inhabitant of Palestine, and a servant of one of the disciples of the prophet Yahwīsh. He committed a fraud against his master, who cursed him, so that he became leprous. Zarādūsh then went to Adharbājījān and began to promulgate the religion called Madjūsīya; afterwards he proceeded to Balkh, where Bīsthāb resided. This king became a convert to the religion of Zarādūsh, and compelled his subjects to embrace that religion also (i. 648; cf. al-Tha‘alībi, Histoire des rois des Perse, ed. Zotenberg, p. 256).

Another tradition, likewise preserved in al-Ṭabarī’s work, brings Zarādūsh together with a Jewish prophet (vocalisation uncertain), who was sent to Bīsthāb, and, at his court, met with Zarādūsh, and the sage Dīāmās (Avestic Dīāmāspa, the minister of Wīštāspa and son-in-law of Zoroaster). Zarādūsh is said to have noted down in Persian the teachings which the Jew delivered in Hebrew. Bīsthāb, and his father Lhrābās (Avestic Arvārāspa) had been Sūbians before and Zarādūsh proclaimed their religion (Ṭabarī, i. 681, 683). These traditions aim at bringing the Zoroastrian faith into a certain connection with the Jewish religion: in the one, Zoroaster is an apostate Jew, in the other, he acts in agreement with a Hebrew prophet. In the Ḥadīth there is a saying of Ibn ʿAbbās: “when the prophet of the Persians had died, Bilav wrote for them the lore of the Madjūs” (inna ahl Fāris lamā māta mīlaḥnahm kastā  laḥamī bilis al-Madjūsīya: Abū Dawūd, Kāhīna, bāb 29 = ii. 30). This isolated tradition might perhaps in some way be connected with the reports about ʿAwf.

Some Arabic authors, of course, had a better knowledge of Zoroaster and his religion, cf. for instance al-Balādhuri, ed. de Goeje, p. 331, where it is stated, that according to the Madjūs, Zarādūsh came from Urmia, and, especially, al-Shahrastānī, Kītāb al-Mīda (ed. Cureton, p. 182 etc.), whose scientific treatise, however, contributes nothing to the knowledge of the ideas about Zoroastrianism prevalent among the Šakīfs. It is enough to say, that al-Shahrastānī whose, information goes back to Iranian sources, gives a succinct, but, in general, correct account of Zoroaster and the Madjūs, whom he subdivides into three principal sects: the Kayyāmārthiyā, the Zarwānīya and the Zarādūshiyā, the latter, according to him, properly the followers of Zoroaster.

The Madjūs are, he rightly remarks, not Ahl al-Kitāb, but, like the dualists, only possessing something like an inspired scripture (zhubhāhu kitāb, p. 179); before the rise of the Madjūsīya, the Persians professed the religion of Ibrāhīm (p. 180).

Respecting the treatment of the Zoroastrians during the Islamic conquest, the following data may be given:
1) al-Yaman. Muhammad had sent envoys to that country, who, among other things, had to collect the diya from those who preferred to remain Christians, Jews or Madjus (al-Baladhuri, p. 69). The Zoroastrians of al-Yaman (the so-called Abna') were said to be descendants from the Persians who had entered the army of Wahiz, who, by order of Khusraw I, carried back Saif b. Dhi Yazan to that country. Muhammad, when sending an army to al-Yaman against the pseudo-prophet al-Aswad, recommended its general, to try and win over to his side these Zoroastrians, who were treated tyrannically by al-Aswad. One of these Madjus, Fariz b. al-Dalaili, had already embraced Islam; the most distinguished man among the Abna', Da'dhawahi (Da'dhuya), also became Muslim, and, at his advice, the remaining Abna' followed. They helped energetically to put down al-Aswad. So we see, that in al-Yaman the Madjus were treated like Abni al-Ki'tab, after which followed their spontaneous conversion to Islam.

2) U'man. There was a tradition that the prophet commanded Abi Za'id to take the zadeka from the Muslims of U'man, and the diya from the Madjus of that country (al-Baladhuri, p. 77).

3) Bahrin. In the year 8 (629/630) Muhammad sent out al-Abi b. Abdallah al-Iwadi to Bahrain; most of the Arabs of that country embraced Islam, and so did Saba'ki, the Persian marzaban of Hadjar (the capital), and some other Zoroastrians. The most part of the Madjus of the country, however, remained faithful to their religion, and had to pay the diya, like the Jews and the Christians, who, in Bahrain, did not embrace Islam. Some Arabs criticized Muhammad, because he pretended to accept the diya only from the Abni al-Ki'tab, and now accepted it from the Madjus of Hadjar. On that occasion Sura v. 104 was revealed (al-Baladhuri, p. 78 etc.). Here it can be seen, that in the oldest Islam it was by no means regarded as a matter of fact that the Madjus were to be reckoned under the Abni al-Ki'tab. During the Khalifate of Abi Bakr and the insurrection took place in Bahrain, the Madjus refusing to pay the diya. This rebellion was not put down before the Khalifate of 'Umar (ibid., p. 85).

4) Irân. Before entering upon the particulars of the state of the Madjus in Irân, it may be remarked that in Armenia the Madjus were treated like the Jews and the Christians. They were obliged to pay the diya, but enjoyed security for their persons and their possessions. In the capitulation of the town of Dabi (Dwain) to Habib b. Maslama, the Christians, Jews and Madjus are comprised alike under these conditions. The kanati and beya' are also mentioned as remaining in possession of their old masters; it may be presumed that here under these words, which properly designate Jewish and Christian sanctuaries, the fire-temples of the Zoroastrians are understood also (al-Baladhuri, p. 200).

In Irân, the regular treatment of the places which surrender themselves is the imposition of the diya and the kharaj (which, at this time, in most cases were identical terms for "tribute" in general, cf. diya and kharaj, but cf. al-Baladhuri, p. 314, where diya = capitulation and kharaj = ground-tax). Thus, the inhabitants are reduced to the state of dhimmi, as if they really were Abni al-Ki'tab. This is the case e.g. on the subjection of Mahruq, Bandanijain (al-Baladhuri, p. 265), Hulwân, Karmain (ibid., p. 301), Nihawand (ibid., p. 306), Dinawar, Sîrwan, Sarmara (ibid., p. 307), Hamadhân (ibid., p. 309), Işfahân (ibid., p. 312 sq.), Ahwâz (ibid., p. 377): here the prisoners of war were released by order of 'Umar, to cultivate the land. Under the old law the pay kharaj (there being not enough Arabs for the purpose), Djuand Sâbîr (ibid., p. 382), Djurma, Ardâdji, Shurâ, Darâbji (ibid., p. 388): at Dârâbji, the chief authority in the town was a Zoroastrian priest, a kirvââ, Tâbas and Kurîn (ibid., p. 403): they concluded a treaty with 'Umar, which later was confirmed by U'îman b. A'dfân, Naisâbûr, Nasâ (ibid., p. 404), Tûs (ibid., p. 405), Harânt, Badghis and Bûshândj (ibid., p. 405), Marw (ibid., p. 405 sq.). The term jahâbâna'a ala ... (dirham), often occurring in our source, must be understood as meaning a tribute; this appears from the last mentioned passage, p. 405 sq.

Not always, however, did the subjugation of the Irânian places come to pass without bloodshed. In Irân a massacre ensued, but there seem to have been no religious motives for it (al-Baladhuri, p. 317). If a town had offered a strong resistance, it might happen, that only a limited number of persons were included in the amân. This was the case at Sârâsh, where, according to the treaty, only 100 men were spared; the marzabân had not included himself in the number, and was, accordingly, killed, while the women were made captives by the conquerors (ibid., p. 405). At Sûs a similar event occurred; here the number of men, comprised in the amân, was 80, as others said, 100 (ibid., p. 378 sq.). At the conquest of Manadhîr all the men were killed, and the rest of the population was taken captive (ibid., p. 378). But another stronghold, though resisting the Muslims vigorously, obtained a capitulation, by which its inhabitants became dhimmîn (ibid., p. 317 sq.). A great slaughter was made at the conquest of Ištārâk, where 40,000 Irânians lost their lives; most of the nobles belonging to the abni al-bayyâtât and the asâvac were perishèd there, as seems, not in the defence of the town, but after its capture (ibid., p. 389 sq.).

When the Zoroastrians were received as dhimmîn, their religious practices must, of course, be respected. Thus al-Farrâûghân paid the Muslims, on behalf of the inhabitants of Irân and Kumis, 500,000 dirham, while the Muslims promised, among other things, not to destroy any fire-temple (ibid., p. 318). When Adharâbadjân was subdued and made tributary, the treaty, which its marzabân concluded with the Arab commander, contained also the stipulation, that no fire-temple should be destroyed, and that the people of Sîs should not be hindered in their dancing-festivals and other practices (ibid., p. 326). It goes without saying, that in the countries, inhabited by Zoroastrians, soon after the appearance of the Arabs, mosques also were built, destined in the first place for the religious worship of the conquerors; the masjid djami' which Sa'd b. Abi Waqâs constructed at al-Ma'dâin, was the earliest building of that kind in al-Sawâf (ibid., p. 289). Under the Khalifate of U'îman, a masjid was built at Ra'în, in which town later on, under the Khalifate of al-Mansûr, a masjid djami' was erected by order of the future Khalif al-Mahdi, in 158 (775) (ibid., p. 309). At Tawâwdjî, its conqueror U'îman b. Abi
Fire-temples in ‘Irāk, Fārā, Kirmān, Sīджistan, Khurāsān, Tabaristān, al-Dībāl, Adharbadhān, Arān” (he adds also: “in Hind, Sind and Sin”. This general statement of al-Mas‘ūdī is fully supported by the mediaeval geographers, who make mention of fire-temples in most of the Iranian towns. The toleration, then, from the part of the Muslims, must have been greater in mediaeval times than in modern ones. That, however, not all Zoroastrians felt happy under a non-Zoroastrian government, appears from the fact, that a number of Madjūs, the ancestors of the Parsis of to-day, emigrated to India. Their landing on the coast of Gujarāt is said to have taken place in the year 716 of the Christian era.

Conversion to Islam may have been, in many cases, “peaceful and to some extent, at least, gradual” (Arnold, loc. cit., p. 181). On the other hand, it is evident, that for a Zoroastrian, desirous to attain to some prominent position, conversion to Islam was indispensable. Among the well-known converts from Zoroastrianism may be cited Ibn al-Mu‘akkala [q.v.], Simān Khudā, the founder of the dynasty of the Sāmnāids [q.v.], the poet Dājīk [q.v.], etc.

Occasionally, the Muslim magistrates, it seems, assisted the Zoroastrian clergy against heretics: al-Shahristānī (K. al-Mīlād wa’l-Mīḥāl, ed. Cureton, p. 187) relates, how Abū Muslim of Naštūb, on an accusation from the part of the mutaqā of the Zoroastrians, caused a sectarian to be killed. It seems, however, that this man, who had been a Zoroastrian, and now proselytized a new creed, held tenets calculated to cause disturbance.

A history of the relations between the Muslim state and the Persian Zoroastrians (for neither the Indian Zoroastrians, the Parsis, nor the internal history of the Zoroastrian community concern us here) can only be written, when the mass of Persian historical literature of the Middle Ages and modern times will be completely accessible. The position of the Zoroastrians has been worse in course of time. Their number seems to have greatly diminished by the disturbances which ensued after the death of Nādir Shāh (1160 = 1747), when the Afghans destroyed the Zoroastrian quarter at Kirmān, and by the war between Aga Muhammad Khan Kādjar and Luṭf ‘Ali Khan (see also Kirmān). In modern times the number of Zoroastrians in Persia is estimated by v. Houtum-Schindler (1879) at 8,499 at all; by Browne (1887/1888) at 7,000–8,000 for Kirmān, Yazd and environs alone [but elsewhere (A year among the Persians, p. 370) he gives for Yazd and its environs alone 7,000–10,000] and for Bahramābād 20–25. The Encyc. Britannica (1911) has the number 9,000 for the whole of Persia.

In 1834, there were in Yazd and its environs 6,658 Zoroastrians, of whom 25 merchants, and the rest small husbandmen and labourers (Karaka, History of the Parsis, i. 55). The same author gives for Kirmān (in 1884, the date of the book) no more than 450; for Yihār 50 merchants, and a small number of numberless position, who were employed as gardeners in the palace of the Shah. At Shiraz, some Zoroastrian families were found, who exercised the trade of shop-keepers. Further more, there are Zoroastrians at Kāshān and Esfahān (v. Houtum-Schindler). The Gegers of Baku are Indian Parsis (cf. BAKT).

According to Browne, there are in Persia 5
on Oct. 1, 834. It was not till November that they were forced to seek the shelter of their vessels by the Muslim armies sent against them. Other bands at the same time ravaged with fire and sword the whole coast from Lisbon to Trafalgar and one of them reached a point in Africa where they captured the town Aljāla (Arrilà [q.v.]) was founded soon afterwards, but took to flight on the approach of the Berbers of the region.

After this invasion, the leader of the Norse hordes seems to have sent an ambassador to the Caliph 'Abd al-Rahmān II to propose a peace. The Umayyad sovereign agreed to his request and sent to discuss the terms of the treaty a diplomat of his entourage, Yahyā b. al-Hashām al-Bakri al-Dāisiyānī, known as al-Ghāzal. The latter reached Silves, where he entered a ship which after various adventures took him to the Norse leader. Al-Ghāzal returned to his master after an absence of 20 months. The account of his ambassy has been preserved for us by Ibn Dārī, who got it from the viziers Tamām b. Alkama, a friend of al-Ghāzal.

Fifteen years later, in 244 (858), Spain and the Maghrib again suffered a Norse invasion. We have accounts of it by Ibn al-Kūtīya, al-Bakri and Ibn Idhārī. It lasted several years, at least till 247 (861). The Northmen began by seizing the town of Nūkūr in Morocco. They then appeared at the mouth of the Guadalquivir but without success; they then seized Algeciras where they burned the great mosque. They appear to have then had an encounter at sea with the fleet of the Caliph Muhammad b. Abd al-Rahmān.

We have fuller details of the invasions which followed. In 255 (960), the Danes, who had come to the assistance of the first Duke of Normandy, made an expedition against Muslim Spain, on the interested advice of Richard I. This lasted three years. The invaders, always called Madjās by the Arab historians, appeared first at Kāsr Abī Dānis (Alcacer do Sal) and landed in the country round Lisbon which they laid waste. The Caliph al-Hashām sent against them a fleet from Seville which met theirs in the estuary of the Tagus. At the same time a battle was fought on land near Lisbon in which the Muslims were defeated. The Danes then extended their efforts to Galicia and in 970 seized St. Iago da Campostella. In the next year, they again attacked Muslim Spain but they were much weakened by the losses they had suffered in the north of the Peninsula and they do not seem to have dared to land anywhere.

It is also to the Madjās (the name being accompanied by the more precise one of اردومنیون = Arudomani) that the Arabs attribute the celebrated taking in the following century of the town of Barbastro (Barbúshar) to the N.W. of Saragossa, on the borders of Aragon. The historian Ibn Ḥajān wrote a detailed account of it, which is preserved by Ibn Idhārī. A Norman expedition, in which French knights shared, was evidently led by Guillaume de Montreuil, succeeded in capturing Barbastro in 1064 (456). This success and the barbaric treatment inflicted on the population made a deep impression on Muslim Spain. In the next year the king of Saragossa, Aḥmad b. Sulaymān Ibn Hūd al-Muṭādārī, with an army reinforced by a contingent of cavalry sent by the Seville ruler, al-Muṭādād Ibn ‘Abdād, recaptured Barbastro, where a weak garrison left
by the Normans on their return to France could offer only a brief resistance and was almost entirely wiped out.

**Madmun** is the legal institution of the *gānâ (*q.v.*), "debt", a term which occurs in the following connections: *madâmân 'anahu "debtor"*, *madâmân lâhu or 'alâki "creditor", madâmân (fikr) "pawn"*. For the parties to the agreement and the article in question in a bond, the rules hold which apply to all other contracts.

I. In the chapters of the Fiji books which deal with the law of obligations, *madâmân* is used for the thing for which one is liable or responsible, i.e. is bound to replace. In this way *gānâ* comes to mean in the wider sense, "liability, obligation to restore" in contracts. This liability consists either in the producing of something identical (*mîthâl*) i.e. of a thing of the same quality and quantity (*qâsâs wa-ta'âsâs*), e.g. in edible things (*mîthâl mîthâl*) which are measured by quality, weight, or number (*mawâṣṣ wa-makhlîk wa-mâdîd*) or in the value of the thing (*ṣîma*) e.g. in non- edible things (*mâkarâs mîkât*) which have a special individuality, and are therefore *āin = species*.

**Bibliography:** The chapters on the conditions of legal agreements in the Fiji books.

---

**MADRAS** Presidency, the southernmost province in British India, occupies the whole of the southern portion of the Peninsula, with an area of 142,260 sq. m.; total population (1921): 42,318,955, of whom 2,843,885 (nearly 7%) are Muhammadans. The majority of these are Sunnis, 2,651,045 (93.60 per cent.); Shi'ites: 54,114. The only Native State with a Muhammadan ruler is Banganapalle (255 sq. m.); population 36,632, of whom only 16% are Muhammadans. The language spoken by the majority of the Muhammadans of the province is Malayalam (1,168,865 i.e. 357 per 1,000, including almost all the Mappilas; *q.v.*); Hindustâni, 335 per 1,000; Tamil, 209 per 1,000.

*History.* Southern India began to suffer early in the 16th century from plundering raids—carried out by the Muhammadans established in the north, until the rise of the Hindu kingdom of Vidyjnagar in 1536 erected an effective barrier against the southward expansion of Muhammadan power for more than two centuries. When in 1564 the four Sultans of the Muslim kingdoms of the Deccan,—Bidjâpur, Bidar, Ahmadnagar and Golconda,—joined forces against this powerful Hindu state, in a single decisive battle (Tâlikota, January 1565) they effected the ruin of Vidyjnagar and utterly destroyed the capital, and its territories were for the most part incorporated in the kingdoms of Bidjâpur and Golconda. In 1656 and 1657 Awrangzeb (*q.v.*) conquered these two kingdoms and made them part of the Moghal empire. After Asaf Dîlah, the first Nişām of Haidarabâd, had made himself independent, in 1724, the Nâwâb of the Carnatic (*q.v.*), also styled the Nâwâb of Arcot (Arkât) from the name of his capital, became his chief subordinate in the South of India. When in the middle of the xviiith century the English and the French were in conflict with one another in Southern India, each espoused the cause of a different claimant for the office of Nâwâb of the Carnatic. The support of British troops under the command of Robert Clive assured the success of Muḥammad 'Ali (*q.v.*), but papers seized at Siringapatam after its capture in 1799 having proved that both he and his son and successor, though nominally allies of the British, had been in secret correspondence with Tipû Sultan (*q.v.*), Lord Wellesley, then Governor-general of India, declared them to be public enemies of the British Government, and in 1801 concluded a treaty with a grandson of Muḥammad 'Ali, named A'jam al-Dawla, according to which he resigned the government of the Carnatic into the hands of the East India Company, but retained the titular dignity and received a considerable pension. The present representative of the family bears the title of Prince of Arcot and has the position of the premier native nobleman of Madras. The greater part of the existing Presidency of Madras consists of the territories annexed by Lord Wellesley.

**MADRAS City,** on the shore of the Bay of Bengal, in 3° 4' N. and 80° 15' E., is the capital of the presidency of the same name; population (1921): 528,911, of whom 113 in every 1,000 are Muhammadans.

**MADRASA.** [See Masjid.]

**MADRID.** The present capital of Spain has kept the name it had in the Muslim period: *Madrid* (ethnic *al-Madhrîj*). Arab geographers describe it as a little town grouped round a strong fortress, with a khâba mosque, at the foot of the Djîbal al-Sharâs, the Sierra de Guadarrama, and a dependency of the province of Toledo. It was especially known for its potteries. It had only an unimportant history, but gave birth to several famous Muslim scholars, among whom the most important was Abu 'l-Kâsin Maslama b. Ahmad al-Madhrîj, who lived in the second half of the fourth century and on whom cf. Brockelmann, G. *A. Z.*, i. 243. Madrid was taken in 1476 (1083) by King Alphonso VI. According to a Christian tradition, Ramiro II had previously held possession of it for a short time during his campaign against the Muslims in 327 (930). It was on the site of the old cathedral (*qâmi*) of Madrid that the king
of Castille had the church dedicated to the Virgin of the Almudena built.

MADURA, an island north of Eastern Java, with the sea of the north and the strait of Madura on the south; a narrow strip separates it from the residency of Surabaya. For administrative purposes it forms a separate residency along with several small adjoining islands. From the geological point of view Madura is a continuation of the limestone hills of the residences of Rėmbang and Surabaya in Java; it is doubtful whether the statement in the Nāgarakṛtākrama (Ballad XV, verse 2; also the earliest mention of the island) that Madura only became separated from Java at the beginning of the third century A.D. is of any historical value. The ground is hilly; large parts of the country are not at all fertile. Although agriculture is beginning more and more important with the completion of irrigation works, the quantity of rice grown is quite insufficient for the wants of the dense and still rapidly increasing population; they have frequently to live partly or completely on maize. Every year many Madurese leave their land for a certain period to seek work in various ways in Eastern Java; the comparatively unfruitful nature of the soil has always forced the inhabitants to emigrate permanently to the Eastern residencies of Java and these are therefore with the exception of a few districts inhabited by a population which speaks Madurese. Of more importance for the Madurese than agriculture is the rearing of domestic animals (cattle, horses, goats and sheep). The Madurese cattle are probably the best in the whole archipelago; many draught animals and fat stock are annually exported. A very popular sport is bull racing; the beasts used for this are bred and looked after with the greatest care. The Madurese have a certain preference for the trade of a wandering pedlar; on the coast and on the islands the main source of livelihood is fishing and fish-breeding.

The population is closely related to that of Java; the customs at birth, marriage and death agree in general with those that prevail there. There are however striking differences. The Madurese are more heavily built, more energetic and enterprising than the Javanese; he is also less sophisticated. He is said to be faithful, reliable, economical and even avaricious. Dress, houses and farms of the Madurese look less cared for than those of the Javanese; the houses are not as in Java close together in settlements but are scattered. The Madurese are specially fitted for hard heavy work and less for occupations which require skill and application. Alcoholic beverages are much drunk; the little opium is taken. The language is also related to Javanese but much influenced by it; the literature consists mainly of translations and versions of Javanese works.

ISLĀM is the generally prevailing religion. The Madurese have no tendency to fanaticism but as a rule they faithfully perform the principal duties of their religion; the great Muslim feasts are duly observed. All receive the usual elementary religious instruction and many are not content with this only. We have no exact or reliable information as to the period of their conversion and the manner in which it came about; the stories given in the native sources do not agree. But as Madura has politically always been closely connected with Java (in the Hindu period it was subject to the kingdoms of Tumapēl and Madjapahit; at a later date it was under the adipati of Surabaya and then under the Sulītūn of Mataram) and as it is quite close to the district through which the new religion entered Java, it may well be assumed that between the first disembarkation of Muslim ideas on Java and on Madura not a great deal of time passed. The complete conversion of the island to ISLĀM seems to have taken place quickly and without difficulty. Hindu rule had never made a deep impression. According to native tradition Madura belonged to the Mughalishan coalition which overthrew the Hindu Javanese kingdom of Madjapahit. Until 1625 Madura (which was divided into five small states) formed part of the territory of the adipati of Surabaya. In this year it was acquired by Mataram and a Madurese prince appointed governor. When in 1678 a faction of his, Trunja Djaya, rebelled against Mataram, endeavoured to make Madura independent and even aimed at rule over Java, the ruler of Mataram sought the intervention of the Dutch East India Company. In 1679 Trunja Djaya was taken prisoner; in 1705 Mataram recognized the suzerainty of the Dutch East India Company (which had existed in reality since 1653) over the eastern part of Madura and in 1743 over the whole island. The Company and after them the Dutch government for a considerable time always avoided intervention in the internal affairs of the island; as the rulers of Madura had repeatedly performed important services, they were treated — often to the injury of their subjects — less as servants of the Company than as independent allies. From the middle of the 16th century the power of the rulers was gradually limited; since 1885 the whole island has been directly under Dutch rule.

MADUWA — MADYAN SHU'AI'B

MADYAN SHU'AI'B, a town on the east side of the Gulf of Akaba. The name is connected with that of the tribe of Mehalite, known from the Old Testament (xxviii: Sha'ail, Meadum, in Josephus Malum or Madum). It perhaps is of some importance to weigh the name of this tribe, as the town might be a later Median settlement; but it is difficult to fix the real home of such wandering tribes in the Old Testament. The town of Madian (xxviii: Shu'ail, Lidd.) is not mentioned in the Kings, vi. 18 where Madan should probably be read. The town may be a later Median settlement; but it is difficult to fix the real home of such wandering tribes. In the Old Testament a town of Madian is not mentioned (and even in 1 Kings, vi. 18 where Madon should probably be read). On the other hand Josephus (xxviii: Shu'ail, Lidd.) speaks of Madiane as a town on the Erythraean Sea as do the Ptolemists (Onomast., ed. Lagarde, p. 276); in Pudim (xxviii: 7) it is mentioned as a town on the coast and called Madiana or Maduma while in another passage it gives itself as an inland town under the name Madima, a difference which is explained by the actual position of the town. In Muhammad's time there is only one reference in Ibn Isshak to the town of Madian, when the Prophet sent an expedition under Zaid b. Harihth the thither. There are occasional references in the poet Kuthayyir (in Yaqut, d. 723) who speaks of the monks there and in the record of Muhammad b. al-Hanafiya's journey to Aila. In the geographers we find Madian only as a town near the coast, six days' journey from Tabuk; it was the second station on the pilgrims' road from Aila to Madina and was a dependency of Madina. In the sixth century Madian is called the undulating and rich in springs and cucumbers, gardens and date groves and of its mixed population. Iskakhtir says it is larger than Tabuk and describes from his own observations the spring there, from which Moses watered the flocks of Shu'ail (see below), it was now covered by a house which had been built over it. The town then began to decline gradually. In the xiiith century Idrist says it is an unimportant little trading centre with scanty resources; in the xivth century Abu al-Fida says it was in ruins. Only in recent times has it been visited e.g. by Rappell, Burton and Musil. The extensive ruins, which the Arabs call Maghira Shu'ail after the caves-ruins, lie about 16 miles east of the port of Makina in 28° 20' N. Lat. In the southern part of the valley of al-Bud is which is rich in streams and palms and other trees. According to Burton the whole district between 29° 28' and 27° 40' is called Ardi Madyan.

In the Kur'an following the Old Testament there are several references to Madian as a people: for example in the stories of Moses' stay with them (xxvii: 42; xxviii: 21 sqq., 45), where his father-in-law (Jethro in the O. T.) is still anonymous, or in one of the stereotyped legends of prophets in which the Madian are punished because they would not believe their prophet Shu'ail (vi: 83-91; xi: 85-98; xxix: 35 sqq.). Shu'ail was later identified with the father-in-law of Moses, for which there is no authority in the Old Testament. But perhaps the real truth is that Shu'ail had originally nothing to do with Madian. In the older Suras (xxvii: 76 sqq.; xxviii: 12; l: 13) it is not the Midanites but the Agib al-Sha' (the people of the thicket) who are his enemies and it is therefore very possible that Muhammad only later combined an indigenous story of the people of the thicket and their Shu'ail with the Midanites of the Old Testament.

(FR. BUHL)
MAGNATIS, MAGNA\NIS, MAGNITIS, Lode\nstone and Compass.

I. The Lodestone and Magnetism

The lodestone is a widely disseminated mineral, and is therefore frequently mentioned by geographers and cosmographers, for example in the pseudopeigographical Petrolgy of Aristotle, by al-Dimishki, al-Kazwini, Ibn al-Fakhir, al-Kalkashandi, etc. Of Amid and Hashadji, it is said that the lodestone is found there in a hard rock. According to Ibn Sin\n, the Indian is the best and al-Kazwini makes it come from India. Like the Greeks and Romans, the Arabs also discussed the properties of the lodestone and its effects on iron. They found that the lodestone can hold an iron needle (a ring), this a second, a third and so on, so that a chain is formed.

The power of attraction of the lodestone was defined. Most writers say that a lodestone can lift double its weight in iron, and one from Hashadji three times. Djahir b. Haiyan al-Sufi, owned a particularly strong one. Djahir b. Haiyan ascertained that it could work through metal. Other information is given by Shams al-Din al-Dimishki, p. 73, or 85 of the work mentioned below (cf. also E. Wiedemann, Beiträge, ii. 3: Uber Magneti\nmus, S. B. P. M. S. Erlangen, xxxvi, 1904, p 322).

Knives and swords rubbed on lodestone, according to Ibn al-Fakhir and al-Kalkashandi, became themselves magnetic. They consist also, like needles, of iron which contains carbon, i.e., steel. They are stronger than the lodestone and do not lose their power of attraction as the former does.

It was noticed that in needles which floated on water the end rubbed pointed sometimes to the north and sometimes to the south, apparently according as it was rubbed with one or the other pole of the magnet; there appears to be no suspicion that the end not rubbed had also changed. Ufarid al-Hassabi's statement that there are three kinds of lodestone is probably connected with the effects on the magnetised needle: one he says attracts, the second, the repels, and in the third one side attracts and the other repels.

The Arabs devoted much attention to the theory of these phenomena — with how little satisfactory results is evident from the remark of Ibn Butla: — "It is very annoying for us to feel that we do not know this with certainty (the cause of the attraction of iron), although we perceive it with the senses". Djahir b. Haiyan explains the power as a spiritual one, classing it with scents. Al-Tughiti includes the lodestone among the stones which contain spirits (see E. Wiedemann, Beiträge, xxiv: Zur Alchemie bei den Arabern, S. B. P. M. S. Erl., xlii, 1911, p. 82). Al-Razi seems to have dealt with its attraction through vacant space in a work which has not survived, entitled Kitab ilma Lakhdo Haqiqat al-Maghazati Rihidawd wa-Tafi Qalum Kafir il-Adora' i.e. "Book of the reason why the magnetically attracted iron: in it there is much discussion of empty space" (see Ibn Abi Usha\n, i. 320). Ibn Sin\n develops views which are very obscure in his Kitab al-Shif\n (Ma\nala 2); Ibn Hazin is more lucid in his Kitab Tawwq al-Hamima f\'l-L\n\n, f\'l-Ullaf, Al-Kazwini traces the attraction to a similarity of natures, through which love and at-raction between them arose at the beginning of their existence. The Arabs are very fond in poetry and prose of comparing the effect of the magnet on iron to that of the lover on the beloved.

That there are many fables associated with this power of attraction is to be expected. Idols etc. of iron are said to be kept suspended in the air by lodestones (cf. E. Wiedemann, Beitr. xi: Uber Lampen und Uhr, S. B. P. M. S. Erl., x, 1907, viii, p. 207). Nails were drawn out of ships and they were thus caused to sink, as was the case with Sindbad's. According to al-Kazwini (A\n\n'ab al-Maghi\n\n, i. 172) there are submarine mountains at Ka\n\n\n which have this effect. Therefore, he says, the beams of ships in the Red Sea were bound together with ropes. The lodestone is said to be especially effective if it is kept for a time in goat's blood, which is of course false. The lodestone is occasionally used in medicine (cf. Ibn Sin\n and Ibn al-Baitar, s.v.). In alchemy its name means "lion" and "with the brilliant eye".

Besides the lodestone, which attracts iron, quite a number of other stones are given, which have the same quality with respect to other bodies, for example, gold is the magnet of quicksilver, etc. Numerous statements about such attracting bodies, which include a number of plants, are given in the A\n\n'ab of Shams al-Din Dimishk\n (cf. the Bibliography) in the Arabic text p. 73—77, in the translation p. 85—89. Al-Kazwini also gives a number of such magnets under the word L\n\n ("picking, collecting") among the minerals.

II. The Compass

The Arabs of the East became acquainted with the compass through Chinese sailors, without however at first giving it a special name; there was considerable traffic between the Persian etc. ports and Southern China. Thence it came to Syria and then to the Mediterranean ports of Europe. The compass had probably however already reached the north of Europe by the trade-route of the Russian rivers as early as the eighth or ninth centuries. This explains why the compass was known earlier in the north than in the south of Europe and perhaps explains also why the Norsemen were able to undertake long voyages by sea (cf. R. Hennig, Verhantl. der Geol. d. Naturforser etc., 84th Versammlung 1912, p. 95).

In deciding the direction by means of a magnetic needle, the Muslims used the word which pointed to the south; as Mecca lay to the south of most places in Syria etc. the Kit\n (s.v.) corresponded almost exactly to the south.

The oldest passage in which the word karamid or karamid corresponding to "magnet" (alam\n\n) occurs is given by Dozy for the year 759 (854) in Supplement, ii. 337 who found it in al-Bay\n\n al-Maghrib (Histoire de l'Afrique et de l'Espagne) edited by him. Serious objections have however been raised to interpreting the word as compass in this passage (M. S. O. Berlin, x. 1—2, 1900, p. 268). From the fact that in narratives of travels of the ninth century A.D. and that in al-Mas\n\n (923) the directions are given in the same way as on compasses, G. Ferrand concludes that the compass was already in use then. The next earliest absolutely certain reference is in the Djaw\n\n al-Hikayat of 'Awf; it is in his Lib\n\n al-Al\n\n (ed. Browne and Mir\n\n Muhammad Kazwini). A

In the Beiträge ii. the earlier literature is collected. This is also done in other works e.g. by Clément Mullet on the Compass. Of special importance are the works of A. Schück (Der Kompass etc., Hamburg 1911, 1915 sqq.), which also deal with the Boussole in China. (E. Wiedemann)

MAGHRĪBA, a large confederation of Berber tribes, belonging to the Zanāta group and related to the confederations of the Banū Ifran [q. v.] and Banū Injīyān. These tribes, who led a nomadic life, in the middle ages roved over the country between the valley of the Chelif as far as Tlemcen and the mountains inhabited by the Madyūna. They were successively converted to Islam and their chief Šāīūt b. Waṣāmīr is to have gone to Madina to the Caliph ʿUthmān and been confirmed by him in his rule over the Maghribī. This is why this confederation came to consider themselves clients of the Umayyads of Spain and supported, sometimes by force of arms, the cause of this dynasty in the Maghrib. This chief Šāīūt was succeeded by his son Hāfīs and he by his son ʿAbd al-Kairawān, and he was the Arabian amir of al-Kairawān and had to deal with the time of the rebellion of Māisara in 122 (739). On his death his son Mu-
In 573 (983–984) the Maghrāwa, after the departure of the Spanish governor Ibn ʿAskulāda, were chosen by al-Manṣūr to rule Morocco in his stead. In 577 (987–988) the ḥādjīb appointed as his vassal to rule the western Maghrib, the amir of the Maghrāwa, Zīr ibn ʿĀṭiya b. ʿAbd Allāh b. Khazar. The latter made Fās his residence and settled his tribe around the town. By orders of al-Manṣūr he waged war on the Ṣanḥāja and notably increased his dominions towards the east. In 582 (992) he made a journey to Cordova on the invitation of the ḥādjīb. In spite of the assertions — frequently contradictory — of the historians, it seems that the reign of Zīr ibn ʿĀṭiya was rather troubled and that changes of fortune placed on the throne of Fās sometimes the Maghrawīd prince and sometimes his Ifrīdīn rival Yuddū b. Yaʿlī. On his return to Fās, Zīrī found his place occupied by Ibn Yaʿlī and it was only after a murderous struggle that he succeeded in regaining his throne. But, finding Fās not sufficiently central in position, he decided, like his Spanish suzerain, to build a capital for himself and the principal chiefs of his confederation. In 584 (994) he laid the foundations of the town of Wajdāja (Oujda) and came with his court to live there. At the same time he tried to throw off the suzerainty of Cordova and relations were finally broken off between him and al-Manṣūr. Ibn ʿĀmir sent against him an expedition under the freeman Wādiḥ: a battle was fought on the banks of the Wāld Kāṭ and the Spanish army defeated. The ḥādjīb then sent another force under the command of his own son ʿAbd al-Mallīk al-Muẓaffar. On this campaign Zīrī was twice routed in 587 (997). He sought to take refuge in Fās, but the inhabitants prevented him entering it and ʿAbd al-Mallīk soon afterwards entered the capital. Zīrī had to go to the Sahara; later he tried to create a principality for himself in the land of the Ṣanḥāja. He laid siege to their capital ʿAṣhir [q. v.] but before he could take the town, he died of the consequences of an old wound in 591 (1000–1001).

On the death of Zīrī ibn ʿĀṭiya, the Maghrāwa proclaimed his son al-Muʿizz; he began his reign by endeavouring to regain the favour of al-Manṣūr b. ʿAbd Allāh b. Khazar in Fās. His father, and his successor ʿAbd al-Raḥmān al-Muẓaffar appointed him governor of Fās and western Maghrāwa in 593 (1002–1003). He received from Cordova letters of investiture for all Morocco, except the land of Sidjilmāsa, which was kept for the Banū Khazar. Morocco seems to have had peace and a certain degree of prosperity in the reign of al-Muʿizz, who died in 617 (1026) or 622 (1031).

His successor was his cousin on the father’s side Ḥanāma b. al-Muʿizz b. ʿĀṭiya. He took advantage of the anarchy then prevailing in Spain to strengthen his position. He surrounded himself with literary men and legal authorities. But in 624 (1032–1033) the pretender of a rival dynasty Abu ʿl-Kamīl Ṭamīm b. Zīrī al-Ifrānī marched from Salē on Fās. Ḥanāma took the field against him with the Maghrāwa but they were defeated. Tamīm entered Fās the same year and persecuted the Jewish population. As to Ḥanāma, he reached Wajdāja (Oujda) and Tenes and gathered there considerable forces, with which he marched on Fās in 629 (1037–1038). Tamīm had to withdraw from Fās and returned to his own capital, ʿIsha [q. v.],
Hamzâna then continued to reign till his death, which probably took place in 431 (1039—1040).

After him the power passed to his son Dûnâs, quickly suppressing a rebellion by one of his cousins, he devoted his reign to the embellishment of Fâs which was then beginning to become a great city, with a large population and a busy trade. This prince died in 452 (1060).

The successor of Dûnâs b. Hamzâna in Fâs was his son al- Futuh, but on his accession his right to the throne was disputed by his brother A’dîjsa. He made himself master of part of the capital, the “bank” (tâbâa) of al-Karawiyân, while al-Futuh established himself on the opposite bank, that of al-Andulâns. The two brothers fought in the town itself and the inhabitants were divided into two camps. Morocco was engulfed in anarchy and it was only after three years of fighting that al-Futuh was able to reign undisputed in Fâs, after A’dîjsa had been killed. A gate of this city perched in the south-west wall still bears his name; another in the north wall bears the name of his brother in a slightly corrupted form (bi’tîq Gisr).

Al-Futuh was driven from his capital in 454 (1062) by the Hammadid sovereigns Bologgin b. Muhammad. This was the time when the Almoravids were beginning to invade Morocco. After the departure of al-Futuh, the Maghrâwa appointed one of his relatives to succeed him, Mu’âllânzar (or Mu’âllannzar) b. Hammad b. al-Mu’izz b. A’tijsa, who was proclaimed in 455 (1063) and took up the struggle against the Saharan invaders. He succeeded in defeating one of the lieutenants of Yusuf b. Tadhin and retaking Fâs, which he had lost. The Almoravids having laid siege to the city, the amir of the Maghrâwa attempted a sortie in the course of which he met his death (25 June 1067—1068). The people of Fâs then proclaimed his son Tamim. But the capital was taken by Yusuf b. Tadhin two years later and the young ruler put to death along with a large number of Maghrâwa and Banû Ifran. This was the end of the dynasty of the Maghrâwa of Fâs. This city, which had enjoyed a certain amount of prosperity under the early members of the dynasty and had been extended by them, later suffered a great deal, according to western historians, from their tyranny and exactions.

According to Ibn Khaldûn, in the period of the decline of Maghrâwa power in Fâs, there was at Aqhmâr, at one of the entrances to the Great Atlas on the plains of Marrâkush, a little dynasty of amirs belonging to the same confederation. The last of these chiefs who flourished about 450—460 (1058—1067) was called Laggût b. Yusuf b. A’dijsa. He was defeated and slain by the Almoravids when they made their successful thrust to the north of Morocco.

The Maghrâwa of Sidjilmâsa (Banû Khažrûn). At the instigation of the hadjib of Cordova, al-Ma’nûsr b. Abi ‘Amir, a Maghrâwa chief in 360 (976/7), had taken Sidjilmâsa (q.v.) which for over two centuries had been governed by amirs of the Mîkâns branch of the Banû Mîrâr. This chief who was called Khažrûn b. Falîfî b. Khažrûn proclaimed the suzerainty of the Umayyads of Spain in Sidjilmâsa and sent to Cordova the head of the last Midrârî ruler al-Mu’tazzi b. Lîlâh. Khažrûn received from al-Ma’nûsr the governorship of the town and kept it till his death. He was succeeded by his son Wânûdîn. The latter had to defend himself against the invasion of the Sâhâda in western Maghrâb and in the end was confirmed in his governorship by the Umayyads in 390 (999) after a period of disgrace. On the fall of the Spanish caliphate he proclaimed himself independent, seized the region of Dra (Darâ) and in 407 (1016—1017) took Sufriyâ (Sefrou [q.v.]) and the valley of the Wâdî Malwiya (Molouia). His son and successor Mas’ûd was defeated, deprived of his lands and slain by the Almoravids in 445 (1053—1054). Ten years later, the last of the Banû Khažrûn, who still held out in Sufriyâ, were in their turn scattered.

On the Maghrâwa dynasty of Tripoli in Barbag. cf. TRIPOLI.

(E. LÉVY-PROVENÇAL)

MAGHRIB, the name given by Arab writers to that part of Africa which modern writers on geography call Barbary or Africa Minor or which includes Tripolitania, Tunisia, Algeria and Morocco. The word “Maghrîb” means the West, the setting sun, in opposition to “Maghrîk”, the East, the rising sun (Levant), but as Ibn Khaldûn remarks, the general denomination was applied to a particular region. The extent of this area, moreover, varies according to different authors. Some Oriental writers include in the Maghrib not only North Africa but also Spain; the majority, however, reserve the name Maghrib for the first of these countries. But they are not in agreement upon the boundaries to be assigned to it on the East. On the other hand they are in agreement about the Northern, Western and Southern boundaries. To the North, Maghrib is bordered by the “Roman Sea” (Mediterranean). To the West it extends as
far as the "Surrounding Sea", also called the "Green Sea", the "Sea of Darkness", and by foreigners called, according to Ibn Khaldūn, Okeanos or Atlant (Atlantic Ocean), which stretches from Tangier to the desert of Lemptūn (Abu ‘l-Fidā’ī) or only, according to Ibn Khaldūn, as far as Asāfi (Saffī) and Deren (Great Atlas). To the South it stretches as far as the barrier of moving sands, separating the country of the Berbers from the land of the Negroes, that is to say the Erg [cf. ‘Ararf] and as far as the rocky region called "hamnadā" (Ibn Khaldūn). Some districts situated outside this limit, such as Būda, Tamentit, Gītara, Ghdames, Fezzān, Wāddīn, are sometimes considered as belonging to Maghrīb although they are in reality countries of the Sahara. As regards the Eastern boundary, certain authors made it extend as far as the sea of Kūlum (the Red Sea) and thus include in the Maghrīb, Egypt and the country of Barga [see the article BARKA]. Others, whose opinion is adopted by Abu ‘l-Fidā’, maintain it coincides with the actual frontier of Egypt, from the oases as far as the "Akbār" which is on the sea between Barga and Alexandria (Akbat al-Kabīra). Ibn Khaldūn does not accept this delimitation, because, he says, the inhabitants of the Maghrīb do not consider Egypt and Barga as forming part of their country. The latter commences only at the province of Tripoli and encloses the districts of which the country of the Berbers was composed in former times. Ibn Sa‘d and the later Maghrīb writers such as al-Zīyānī and Abu Ra‘s limit themselves to reproducing with a few variations in detail, the boundaries of Ibn Khaldūn. As to Yākūṭ he confines the Maghrīb to the country stretching from Milanīa to Sūs (ed. Wustenfeld, iv. 513).

Confined within the sixth "clime" the Maghrīb is divided into several regions. Ibn Hawāil (Description... transl. de Sélane, f. A., 1841) distinguishes two of them: the Eastern Maghrīb from the frontier of Egypt as far as Zuwila in Tripoli and the Western Maghrīb from this point to Sūs al-Aksā; but the division commonly accepted is that into three regions, Irīkiya, Central Maghrīb and Farther Maghrīb (Abu ‘l-Fidā’, al-Khālidīn etc.). Ibn Sa‘d adopts a slightly different division: Irīkiya, outer Maghrīb, and further Sūs. Irīkiya stretches from Kāsh Almāh near Misrāt (Ibn Sa‘d) to Bougie, Central Maghrīb from Bougie to Mulūya (Ibn Khaldūn), Farther Maghrīb from Mulūya to Asāfi and to Deren, to which must be added al-Sūs which forms as might be said, according to Ibn Khaldūn, an island or country detached from all others and surrounded by seas and mountains.

1. ‘Ali b. al-Husain, Abu l-Hasan. Like his father, ‘Ali was one of the intimate friends of the Ḥamdānī Sa‘īd al-Dawla of Ḥalab. He had also great influence with his son Sa‘īd al-Dawla, but when a cloud came over their friendship, ‘Ali left Ḥalab and went to al-Ra‘ṣafa to Bakdūr, who had been one of Sa‘īd al-Dawla’s Mamūs and persuaded him to enter into negotiations with the Fāṭimid caliph al-A‘zīz bi‘l-Tāh [q.v.] with whom ‘Ali had had relations for a long time. When Bakdūr had been given the governorship of Damascus by al-A‘zīz, at the suggestion of Sa‘īd whom he had made his vizier, he set out against Ḥalab but was defeated in Safār 389 (April 991) whereupon ‘Ali fled to al-Ra‘ṣafa. When Sa‘īd al-Dawla took this town, ‘Ali fled to Kūfā, from whence he wrote to al-A‘zīz and asked permission to come to Egypt. In Dju‘amā‘ I of the same year (July–Aug 991) he reached Egypt and by his advice the caliph sent an army in 383 (993–994) under Mangútegin, then governor of Damascus, against Ḥalab where Abu ‘l-Faḍā‘l, son of Sa‘īd al-Dawla, had now succeeded his father ‘Ali, who took part in the campaign against the caliph’s envoy. The caliph, who was at Muhūr, was at first, on the contrary, bedside, Mangútegin and persuaded Mangútegin to retire, pretending that he lacked supplies. When the Caliph heard of this, he ordered Mangútegin to assume the siege without delay and dismissed ‘Ali at once, who therefore returned to Egypt. ‘Ali made himself very popular with the caliph al-Ḥākim, who succeeded his father al-A‘zīz in 386 (996) as did his son al-Ḥasan also. After a few years, however, he was sacrificed to the suspicions of al-Ḥākim and on the 2nd of Dhu ‘l-Ka‘da 400 (June 18, 1010) ‘Ali was executed along with his brother Mūhammad and two sons.

2. al-Husain b. ‘Ali, Abu l-Kāsim, called "al-‘Azīr al-Maghrībī"; son of the preceding, was born in Egypt on the 13th of Dhu ‘l-Hijja 370 (June 19th, 981). In 400 (1010) when his father was executed, al-Ḥasan fled from Egypt to al-Ra‘ṣafa to Ḥalab, and then to Ḥasān b. al-Mansūr, emir of the Banū Ṭājīy, and induced him to forswear his allegiance to the Caliph al-Ḥākim and pay homage to the ‘Ālid amir of Mecca, Abu ‘l-Futūh al-Ḥasan b. al-Ḍafā‘. The latter came to al-Ra‘ṣafa and was proclaimed caliph. But when Ḥasān was bled by al-Ḥākim Abu ‘l-Futūh had to return to Mecca while al-Ḥusain sought refuge with Fākhr al-Mulk, vizier of the Būyid Bihār al-Dawla. Although as an Egyptian he was subject to the ‘Abbasid Caliph al-Ḳādir, he was permitted to accompany Fākhr al-Dawla to Wāṣit and remained there till his death. He then went to al-Mawsil where the ʿUkālid Karwāsh took him into his service as secretary. In 414 (1023) the Būyid governor of Irīk Şāfīrī Hilal al-Dawla appointed him vizier. But the very next year he quarrelled with the Turkish mercenaries and fled to Karwāsh. But as he quarrelled with the ‘Abbāsid Caliph on some trifling matter, he had to leave al-Mawsil in the same year. He then went to the court of the ruler of Fīyār Bakr, Naṣr al-Dawla [cf. MARVĀNIŠ], who gave him a sanctuary. Al-Ḥusain died at Mayyāfirān on 13th Rā‘ṣafa 418 (Oct. 17, 1027) and was buried in Kūfā.

3. Muhammad b. ‘Amir b. Muhammad b. ‘Ali, Abu ’l-Faraj, grandson of a brother of the preceding. When Abu ’l-Faraj grew up, he left Egypt and went to the Irak where he lived for a time. After various vicissitudes he returned to Egypt and was appointed head of the Divan al-Qasid by the vizier al-Barizi. He held his office till the dismissal of al-Baziri; the latter’s successor had him arrested. While Abu ’l-Faraj was still in prison, he was himself appointed vizier on 25th Rab‘a‘ II, 450 (June 21, 1058) and given the titles “al-Wazir al-a‘bâl al-kunf al-‘an-dhah fiyyi Amir al-Mamluk wa-al-Hajjajib ‘Ilahiyya.”

After a few years (9th Ramadan 452 = Oct. 7, 1060) he was dismissed and given the control of the chancellery (Divan al-Qasid). He died in 478 (1085—1086).

MAGES. [See MA‘C DIS.]

MAGNISIA (MAHNSIA, MANIS-A), the ancient Magnesia ad Sipyrum, the capital of the Sandafak (now wilâyet) of Sarakhsin in the wilâyet of Smyrna, on the northern slope of the Magnia or Pityusus mountains, and two miles to the south of the river Gediz and 20 miles N. East of Smyrna. The town, celebrated in Greek and Roman antiquity, was occupied by the Turcoman Amir Sarakhsin in the year 713 (began 28th April 1313) and was the capital of his principality and of that of his son Sulaiman, who was buried there with his father in the tube of the family.

Yildirim Sultan Bayazid seized it in the year 702 (began 20th Dec. 1309). Tamerlane collected his treasures there in the year 1402; after the restoration of the Ottoman power, the town saw the rebellions of Barklidje Magusa, a person of the Sandafak. In the war of 1426 Murad II made it one of the first towns in his kingdom and built a palace there in 1444 which is now in ruins. Murad III also contributed to beautifying Magnesia with the Muradiya mosque built in 1591. In 1633 the town was sacked during the rebellion of Elidj Pasha. In 1890 Cuniet put the population at 35,000.

MAHALLA, an Arabic word which, like mahalla from the same root, originally means a place where one makes a halt. Mahalla thus came to have the special meaning of a quarter of a town, a meaning which has also passed into Turkish (e.g. the Yori Mahalla quarter in Constantinople), into Persian and Hindustani (where the popular pronunciation is mahalas); the term formerly applied to a quarter of a town used to be dör (as in old Baghdad). The mahallas are often under the administration of a special official called muhtasir. In Egypt the word mahalla is frequently found as the first element in the names of towns and villages. Here the primitive meaning of place, locality has been preserved, while quarters of a town are rather called khita especially in al-Fustat and Alexandria. According to the Muqaddimah al-Buldan, there are about 100 places in Egypt called al-Mahalla; ‘Ali Pasha Mubarak gives over 30 in al-Khitat al-dajdula (xx. 21 sq.) in addition to the large town of al-Mahalla al-Kubra [q. v.].

(J. H. KRAMERS)

MAHALLA AL-KUBRA or MAHALLA KABIR is the modern name of an important town in the Delta of the Nile at some distance to the west of the Damietta arm, north-east of Tanta. It lies on the Tor‘at al-Milah canal, a branch of the Bahir Shbibin.

In view of the large number of Egyptian geographical names compounded with Mahalla, the identification of the town with the names mentioned by earlier Arabic writers is a matter of some difficulty. Maspero and Wiet indentify it with the Coptich Tha‘r (Amélineau, La géographie de l’Egypte à l’époque copte, Paris 1893, p. 262), but this identification is rendered doubtful by the fact that al-Mahalla is a purely Arabic name (and it also remains to be proved that it is a rendering of the Coptic name just mentioned), and because the work of Abu ‘Ali in the Christian buildings of Egypt makes no mention of this town. The earliest author who knew a town called al-Mahalla or al-Mahalla al-Kubra is al-Ma‘kri (p. 55, 194, 196, 200); he tells us that it was a town of al-Rif built in two parts, one called Sandafa (or Sandafah), but the statement that the town was situated on the river by Alexandria (p. 200) seems to be an error. Al-Bakri seems to know the same town under the name Mahṣalṭ Mahru (Kitāb al-Ma‘alik wa-l-Ma‘allik, Brit. Mus. MS. Idri‘, Description de l’Afrique, p. 158, calls the town simply al-Mahalla and knows a canal called after it. Yâ‘qûb’s statements are confused, for he speaks of a town called Mahallat Daqalah and of another Mahallat Sharqiyin (iv. 428), both of which seem to refer to the same place. Mahallat Sharqiyin in Yâ‘qûb—which he also calls Mahallat al-Kubra—forms one town, the Nile and Sandafah, and on the other hand he says that Mahalla Daqalah between al-Khira and Dimyat is the largest of the Mahallas that he knows (cf. also Abu‘l-Fida‘, ii. 160), while the geographer al-Dimishkî (p. 231) knows Mahalla Daqalah as the capital of the Kura of Daqalah; Ibn Dhu‘ayb (v. 82) says that the governorship of this town was regarded as “the little vizirate” (al-wizira‘ al-saghirah).

The name Mahallat Sharqiyin is again found in al-Makrizi (ed. Wiet, iii. 207). It is clear from these writers that the town was an important commercial centre from the tenth century onwards. It does not seem however to have played any considerable part in history, although ‘Ali Pasha Mubarak quotes some events that took place there, from al-Ma‘kri and al-Djasbati. In Egypt in the sixteenth century the town had to give way to Tanta, which became the capital of the mudhiry of al-Gharya, while al-Mahalla became the capital of a smaller administrative area; ‘Ali Mubarak estimates its inhabitants at 50,000, while the 1928 Baederker only gives it 33,500. It is at present a centre of the cotton trade; raw cotton is there cleaned in the factories. Of the many individuals who bear the nisba al-Mahalli, the most celebrated is Djalal al-Din al-Mahalli [q.v.] who was born here.

(J. H. Kramers)

MAHARI or MAKARI, a negro tribe also called Kotoko, living on both banks of the Lower Logone below Musgum and on both banks of the Lower Chari from Lake Chad to Fort Lamy and Kusseri.

They are usually divided into three groups: the Lagwere on the Logone, where they are mixed with Musgu, the Semsir at Kusseri and the Sungwal Kwe at Guelfi. These natives do not seem to be autochthonous; the first occupants of the country according to tradition were the Kerebina, who are perhaps related to the ancient people of the Sao or So. As a rule, tall and slim, lank and bony, they have a narrow head and dark skin; they make three parallel cicatrices on the forehead, the middle one of which runs from the top of the nose to the roots of the hair. They speak languages akin to the Sao, Kuri and Buduma. They are nearly connected with the Musgu, with whom they form the Massa group. The Kanuri have passed on to them the Muslim religion and a certain degree of civilization.

The Makari or Kotoko are agriculturists and fishermen; they grow different kinds of millet, maize earnuts and grind their corn with a quern. Fishing provides them with an abundant supply of food; they follow it in large pirogues, about 40 feet long and two to four feet wide. These crafts which are propelled by poles or paddles, have a flat-bottom and a raised bow and stern; they are built of strong planks bound together with fibre passed through holes which after being tied, are caulked with various barks. This is how they come to be described as sewn. They carry 25 to 30 persons. The Kotoko fish with a large net mounted on two places forked in different directions at the front and manoeuvred by a lever. This net is lowered to touch the bottom by a little pirogue rowed by children drives the fish towards the fishing boat by striking the water with poles. The apparatus is lifted as soon as the fish have entered it.

The homes of the Makari are built of clay, are fairly large and comparatively comfortable. The walls are about 6 feet high; they have an elliptical door about 5 feet high; the roof is of straw and hemispherical in shape. Inside is a bed of clay, shelves of clay to hold household utensils and the fireplace. Sometimes there is also a bed made of thongs of hide laced round a framework. There are a few related to the Makari country; they are generally grouped in villages of which the most important are Logone, Gana (Little Logone), Kannak Logone or Logone Berni (Great Logone) and Kusseri. They used all to be surrounded by circular ditches and clay walls pierced by several narrow gates. These defences were intended to protect the inhabitants from the frequent attacks of their neighbours.

The population includes smiths, potters, weavers and a few traders. There are a few Arabs among them. Politically the Makari belonged to the ancient empire of Bornou [q.v.]. They were divided into several small vassal states; that of Karnak Logone showed more independence.

MAHDUB, the name given in North Africa and Egypt (cf. Dozy, Supplement, s. v.) to the Turkish gold sequin, contraction for ZERMAYE

(Mahdawis, the followers of Sayyid Muhammad Mahdi, of Djawnpur, near Banaras, 847–910 (1443–1504), who declared that he was the promised Mahdi [q. v.] and by his preaching gained a number of adherents in Ahmadabad [q.v.] and other parts of Gujrat. His followers credited him with the power of working miracles, raising the dead, healing the blind and the dumb, etc. For a time they were allowed to profess their faith unmolested and add to their number by proselytising, but in the reign of Mquisites I. Sultan of Gujrat (1513–1526) they were persecuted and many of them put to death. Awanzebe [q.v.] also persecuted them when in 1645 he was governor of Ahmadabad. In consequence of these persecutions, the Mahdawis to the present day practise tâziya [q.v.] and wish to pass as orthodox Muslims; their exact number is therefore uncertain, but they are found in small groups in mo-t parts of Gujrat, in Bombay, Sind, the Dakhan [q.v.] and Upper Hindustan. They believe that Sayyid Muhammad was the last Imām, the promised Mahdi, and in consequence of his having come, they are said by their religious opponents neither to repent for their sins nor to pray for the souls of their dead. They observe certain ceremonies peculiar to themselves at marriages and funerals. By their enemies they are styled Ghar-Ghadhis, i.e. those who do not believe in a Mahdi who is still to come; but the Mahdawis themselves apply this designation to other Muhammadans as having failed to recognise the Mahdi who has already appeared.

Bibliography: Sikandar b. Muhammad, Mirāt-i Sibandi, p. 136–138, Bombay 1891 (English transl. by Fazulullah Lutfullah Faridi, p. 90–91); H. Blochmann, Translation of the Aʿin-i Akbari, Introduction, p. iv–v, Calcutta 1873; Dāʾfar Sharif, Qanoon-e-Islam, 2nd ed., p. 171–172, Madras 1863; ed. W. Crooke, p. 208–209, Oxford 1921; Gazetteer of the Bombay Presidency, vol. i., part ii., p. 62–64, Bombay 1899; Hastings’ Encyclopaedia of Religion and Ethics, vi. 189 (Goldzirer on Ghair Mahdi); Goldzirer, Vorlesungen über den Islam, Heidelberg 1925, in the Makari country; al-Mahdawī (A.), means literally “the guided one”, and, as all guidance (khdā) is from Allah, it has come to mean the divinely guided one, guided that is, in a peculiar and individual way. For Allah, in the intense and immediate theism of Islam, is guiding every one and everything in the world, whether by the human reason or by the instincts of the lower animals, to a knowledge of Himself and to what is needed for their existence and continence (Lisān, x. 228, 290). One of His names is al-khátī, “the Guide” (Kurān, xxii. 53; xx. 122), and the idea of His guidance is reiterated in the Kurān. For a statement of its different kinds see Baidawi on Kurān, i. 5 (Fleischer’s ed., i. 8, ll. 21 sqq.); Musnad
of al-Râghib al-Iṣfahânî, p. 560 of ed. Cairo 1324; al-Maqrîzî al-sani'î of al-Ghazâlî, p. 580 of ed. Cairo 1324. But it is singular that the word mahdi (the passive participle of the I Stem) never occurs in the Kur'an and that the passive of that stem occurs only four times. In the usage of the Kur’an, the VIII stem, ma'dûd, strictly “he accepted guidance for himself”, is used as a quasi or reflexive passive. Thus the man whom Allâh guides is not simply “guided” but reacts himself to the divine guidance.

There seems to be no original authority for the vocalisation al-Mahdi which Edward Pococke gave as Nî, xvi, of the Sigils in his Porta Mecâni, ii, 203 of ed. 1655, with the meaning “director”; cf. Lane’s note in the Supplement to his lexicon, p. 3042 c Margoliouth (article cited below, p. 337a) suggests that it may mean “the giver” and refers to traditions (see below) of the Mahdi bestowing uncounted wealth; but there does not seem to be any oriental authority for this epithet. Also, the verb used in these traditions is di'mâ, who is mahdi, or al-mahdi, is in a different position; he is absolutely guided. It is used of certain individuals in the past and of an eschatological individual in the future. Thus the iṣâ’ (sx. 229, 1. 9 from below) quotes from a tradition “the usage of the Khalifs who followed the right way and were guided” (summa't ushkalajī a'srâ’ all-mahdiyin), meaning the first four Khalifas, and goes on to state that it is applied especially, as a name, to the Mahdi of whom the Prophet gave good tidings that he would come in the Fm of Time. There are many other instances of the non-eschatological application of the term mahdi to historical personages. Goldziher (Fortunaten, p. 267, n. note 13, 7) has gathered a number of such cases: Thus Djârîr (Nâhî’î, ed. Rivâ, Noh. 104, v. 29) applies it to Abraham and Hasan b. ‘Abbâs (Dâ’ûn, ed. Tanis, 24, 1) to Muhammad; see, too, Ibn Sa’d (xi, 94, 4). It is often applied by Sunnîtes to ‘Ali, in distinction even to the other three Khalifas; thus in al-Ǧâba’a (iv, 31. 2) he is khâlid us-mahdiyin, and Sulamân b. Naufal calls ‘Abd-Allâh, after his death, “Mahdi son of the Mahdi” (Tâbarî, Tārikh, ed. Leydon, Ser. ii, p. 546, 11). Farâbî and Djârîr applied it as an honorific to the Umayyad Khalifas. As applied by the pious to ‘Umar II, the Umayyad (Ibn Sa’d, v. 245, 1), it seems to have been more than an honorific; he was regarded as a real muṣâhidh [q. v.] and under peculiar divine guidance. In the view of later Islam he was the first of these “renewers” of the Faith and the eighth and last of these would be either the Mahdi, a descendant of the Prophet, or Ikh (al-maṭbî al-muṣkatî), according to the two positions; cf. article Ikh. See on the whole question of the Muṣâhidh and his relation to the Mahdi: Goldziher, Zur Charakteristik der nabi’îns, in S. B. d. A., Wien, lxix, p. 10 sgg. It is characteristic of Islam to take a very pessimistic view of human nature: men always fall away from the faith and have to be brought back. This will be so especially towards the end of the world. Men will become thoroughly secular and Allâh will leave them to themselves. The Ka’bah will vanish, and the copies of the Kur’an will become blank paper, and its words will vanish also, from the memories of men. They will think only of poems and songs. Then the end will come.

In a similar heightened sense the term Mahdi was applied by Ibn al-Ta’awwîd (Divân, ed. Margoliouth, p. 105, 5, 6) to the ‘Abbâsî Khalifa al-Nâṣir (A. H. 575—622); he is the Mahdi and no other eschatological Mahdi need be looked for. In a narrower but more true etymological sense it came to be applied to the converts to Islam: Allâh always guided these to the right Way. For such, Turks use the more Kur’anic term muḥâdî; see above for the distinction. Goldziher (p. 268) gives cases. In a heightened sense, also, the term was applied very early (A. H. 66) to Muhammad b. al-Ḥanâfiya, a son of ‘Ali by another wife than Fâṭima. After the death of ‘Abd-Allâh b. Mâ khuṭîr b. ‘Abî ‘Uchâd put forward this Muhammad as a claimant of the Khalifate and called him “the Mahdi, son of the legatee (al-wâfi)”, a term applied to ‘Ali by those who asserted that the Prophet had bequeathed the headship of the people to him (Tâbarî, Ta’rikh, ii, p. 534). This was after the deaths of Hasan and Husain; the two sons of Allâh by Fâṭima, the daughter of the Prophet, and shows a different drift to the inheritance of the Imâmîte from that of the Shi’ite legitimists. This Muhammad was heir as the son of ‘Ali and not as possessing the blood of the Prophet. He seems himself to have declined the dignity thus thrust upon him but, muṣâhid ‘îs, he became the founder of the Kâsîniyya sect which looked for his return from his grave in Mount Râdâw, where he remains undying. This was maintained by the poet Kuṭbâhirî (d. 105 = 723) and by the Sâyi’î al-Ḥimyârî (d. 173 = 789; Aghâhî, vii, 32; cf. Mâṣîhî, Paris ed., v. 180 sgg.). Muhammad thus had become an “eschatological Mahdi munir” like the Hidden Imam of the Twelve Shi’ites. For the position of the Kâsîniyya see Shahrârâni’s Milâl wa-Nihâl, ed. on margin of Ibn Ḥazm, i, 196: Mâ khuṭîr, disgusted with Muhammad, eventually founded the Mâ khuṭîrîyya sect which was strict Shi’ite and upheld Fâṭima b. ‘Ali (Shahrârâni, p. 197). The whole episode is interesting as showing the extreme fluidity of the religious-political parties at the time. It also shows very clearly how the term mahdi gradually hardened from being a general honorific to a special designation, and even a proper name, for a restorer of the faith in the last days.

The Hidden Imam of the Twelve Shi’ites, whose return (ruḍ’î) is awaited, is also called, by the Shi’a, al-Mahdi. But his status is entirely different from that of the future restorer looked for by the Sunnîtes. The very essence of Sunni Islam is that the Muslim people shall rule itself and can attain truth and certainty by its own exertions. When, at any time, its qualified scholars (muâjjihâd’s) have applied the three ni’āl — Khâriq, Sunna, A’zîr — to any point of Islam and have come to an agreement (lîqâ’î) on it, that point is assured and the acceptance of it as of faith is binding on all Muslims. The idea of an absolute Mahdi, there being an infallible guide, suggests too much that tekhîl [q. v.], which the later Sunnî theologians rejected. Sunni Islam, as Goldziher has taught us, is a recoil against the idea of blind submission to any human teacher. Even Iṣâ, as restorer, is called muḥâdî, which is much less emphatic in its suggestion of infallibility. Yet the masses demanded an absolute restorer and it was among the masses that the belief in a Mahdi was, and is, strong. To return — the
Mahdi, or ʻIsa when he comes as a restorer and ruler, will restore and apply that Consensus of Islam which has been reached by the successive generations of mufaddalīs. Thus the Muslim people not only rules itself but is also the ultimate and infallible interpreter of the revelation through the Prophet. The Shi‘ites, on the other hand, admit no such authority either in the Muslim people or in their own mufaddalīs; by Kūrān, Sunna, [hlīyā and ʻIbtāl] certainty can only be gained from the instruction (ʿaṣlīm; cf. Goldziher’s Straitschrift des Gazālī gegen die Bāṭinīyūn, Sects, of the hidden Imām who is divinely protected (maqūṭūn) against all error and sin and whose function it is to interpret Islam to men. The mufaddalīs of the Shi‘a are his intermediaries with men; but they in their intermediation may err. When the Hidden Imām returns he will rule personally by divine right. He is called a Mahdi, but it is in a different sense from any Sunnite use of that term. The idea of protection against error and sin (ʿīnā; see article above, ii., p. 543) seems to have been introduced into Sunnite Islam from the Mu‘tazīite system by Fāṭḥi al-Dīn Abū ʿUmar al-Rāzī (d. 606 = 1209; see, further, Goldziher in Ḥṣ., iii. 238–245), but there it has been limited strictly to prophets. No “successor” (khāṭīf) can enjoy it and the Mahdi, for those Sunnites who expect him, is strictly an ultimate khalīfa of the Prophet. For those Sunnites who look to ʻIsa to play the part of the Mahdi he will not return as a prophet in his own right. It will not be a return (raḍḍū) in his case but simply a “descendent” (nāfīl) and he will rule according to the law (ṣaḥī’a) of Muhammad; see article ʻIsa above, ii., p. 525. As all Shi‘ite sects agree on this status of their Imām it is unnecessary to go into further details on them; see in general, article ʻIsa.

Another important point of difference between Shi‘ites and Sunnites as to the Mahdi is that he is an essential part of the Shi‘ite creed but not of the Sunnite. That there will be a final restorer of the faith all Sunnite Islam believes as a part of its eschatology, but not that he will be called Mahdi. There is no mention of the Mahdi in either of the two Sahīh’s, of Muslim or of Bukhārī. Similarly Sunnite systematic theologians do not deal with him. The Mutawwābi of al-Iṣāqī has nothing on him; nor, indeed, on any of the Signs of the Hour (ayrāt al-sī‘a; cf. article Kullama). Nasa’ī in his Ṣajjīl has, of these, only al-Daḍidjal (see article above, vol. i., p. 880) and the Descent of ʻIsa; Taltāzanī, in his commentary, gives ten Signs but not the Mahdi. Even al-Ghazālī, a popularizing theologian, has nothing on the Signs in the last Book of his Ḥikāya, that on eschatology, and has only a slight allusion in the Book dealing with the ʿHadīq (ed. 1334, i. 218; Ḥift, the commentary of the Saṭayīd Murtuḍā, iv. 279) to the coming of al-Daḍidjal, the descent of ʻIsa and his slaying of al-Daḍidjal; there is no mention of the Mahdi either in the text or in the commentary. Al-Ghazālī’s whole point in this passage is to stress the final falling away from the faith of all men to which reference has been made above.

It was, then, in the hearts of the Muslim multitude that the faith in the Mahdi found its resting-place and support. In the midst of growing darkness and uncertainty — political, social, moral, theological — they clung to the idea of a future deliverer and restorer and of a short millennium before the end. This belief is, therefore, expressed in a multitude of later traditions, often expansions and expositions of better authenticated and older traditions, and often linking themselves to old stories of inter-tribal and inter-dynastic conflicts in the civil wars after the murder of ʿUthmān. We, therefore, find among them references to historical movements and sects which had failed in their time but had left remains, if only a name, to add to the confusion of this eschatological lore. These are gathered up in later edifying collections, such as the Tadhkira of Abū ʻAbd Allāh al-Ḵūṭūbī (d. 671 = 1272; Brockelmann, G. A. L., i. 415) which we have in a Muhktarār by al-Shārīnī (d. 973 = 1565; Brockelmann, ii. 335; ed. Cairo 1324) and the Muhktar al-Anwar of a modern writer, Ḥasan al-Iddi al-Ḥamāzī (d. 1303 = 1886; Brockelmann, ii. 486; many editions).

But the clearest presentation of the alleged basis for this belief is given by Ibn Khaldūn (d. 808 = 1406) in his Muqaddima (ed. Quatremère, i. 142 sqq.; Būlāq, folio ed., 1274, p. 151 sqq.; transl. by De Slane, ii. 156 sqq.). “A section on the descendant of Fāṭima and what will be said as to him and on clearing up the obscurity as to that. It has been commonly accepted (mahktūr) among the masses (al-qāṣī) of the people of Islam, as the ages have passed, that there must needs appear in the End of Time a man of the family of Muhammad (mas‘ī al-bi‘r) who will aid the Faith (din) and make justice triumph; that the Muslims will follow him and that he will reign over the Muslim kingdoms and be called al-Mahdi. The appearance of al-Daḍidjal and of the other Signs of the Last Day (ayrāt al-sī‘a), which are established in sound tradition (al-qasāb) will come after him. ʻIsa will descend after his appearance and will kill al-Daḍidjal or will descend along with him and aid him in that killing; and in Worship ʻIsa will follow the Mahdi as his Imām. In support of this position traditions are used which some authorities on tradition have alleged and which others have disputed and often opposed with other narrations. The later Ṣafīs have followed another course and method of proof in the case of this descendant of Fāṭima and often seek support, as to that, in the mystical “unveiling” (kasāf) which is the basis of their method.”

This is a very careful statement of the strictly popular drift in Ibn Khaldūn’s time, a drift with which he evidently had no sympathy. He goes on to give formally 24 traditions bearing upon this restorer and adds six variants, criticizing the authenticity of them all. In only 14 of these is this restorer named Mahdi. For references to traditions on the Mahdi in Ḥanbal’s Manṣūr, Abū Da‘ūd’s Sunan, Tirmidhī’s Sahīh and Ibn Mādīja’s Sunan, see Wensinck’s Handbook of early Muhammadan Tradition under Mahdi; in the Majābī al-Sunna of al-Baghawi, see ii. 134 of ed. Cairo 1318 and in the Murṣī al-Maṣūḥā, see p. 399–401 of ed. Dīhī 1327. All these, however, have only a certain number of the mass of traditions quoted by Ibn Khaldūn. In the Tadhkīr of al-Ḵūṭūbī, on the other hand, there are (p. 117–121 of ed. Cairo 1324) a further mass of luxuriant detail which Ibn Khaldūn had evidently disdain engaged to incorporate; cf. his later reference to the town Mūṣa, p. 173, l. 7. In the Tadhkīr the Prophet, for example, foretells the future conquest and re-conquest of Spain by name. Al-

THE ENCYCLOPAEDIA OF ISLAM, III.
Kurtubī died in 617 (1272) in the first years of the Nasirids of Granada when Granada was the only part of Spain left to the Muslims. He and those around him felt grievously the need of such a restored and Mahīdī, and detailed traditions sprang up as to his coming. The situation called for a mightier and more specific champion of Islam than ʿIṣā whose business strictly was to kill al-Dadīdī. Devotion, also, to the blood of the Prophet, of whom the Mahīdī was to come, and which was so strong even in the Sunnite Magribī, may have helped the al-Kurtubī's Mahīdī to come from the Magribī as opposed to the earlier ones who were to come from Syria or Khurāsān. He will come from a place in the Dījāl of the Magribī, on the shore of the sea, called Māsā; they will swear allegiance to him there and again, a second time, at Mecca. Here the tradition joins and attempts to explain an earlier one, given by Abū Daʿūd and quoted by Ibn Khaldūn (p. 143; see, also, below), telling of an expedition against Kahlī and of the booty of Kahlī, thus linking up with the earliest inter-tribal conflicts. This Western Mahīdī will also kill al-Sufyānī who is supported by Kahlī. This is not the place to enter upon the history of the Marwānīs, how the Umayyads supplanted their cousins, the Sufyānīs. But from the early history of Islam there is the mystery connected with the voluntary abdication and speedy death of Muʿāwiyah II, the successor of Marwān b. al-Ḥakam and the sudden death or assassination of Wālid b. Uthmān b. ʿAbd Sufyān (fuṭūna wa-sirājat maṣṣūla, Masʿādī, Paris, ed. v. 170) at the burial of Muʿāwiyah II, there seems to have sprung an Imāmī party among the Umayyads (ṣaḥāḥ b. b. al-ʿImāmīyā min al-ʿImāmīyā, al-Ghāzālī in Goldscher's Streitschrift, p. 14 of the Arabic text); yet this Wālid appears later alive in Tabārī’s narrative. In the account of Khālid b. Yazīd in the Aṣḥābī (xvi. 58) there is a story that he was the first to start this (ṣaḥāḥ khābār al-Sufyānī wa-khābār al-ʿImāmīyāy) although that is also denied and a more general and earlier origin is asserted. In the civil war at the rise of the Abhābīs, one of the “white”, i.e. Umayyads, revolted in support of the claims of the “Sufyānī of whom there used to be mention” (ṣaḥāḥ khābār b. b. al-Ṣufyānī b. b. Khābār as-suḥābā b. b. al-ʿImāmīyāy), although that last origin has never been heard of; the earth will bring forth its fruits and the heavens shall not pass away; the Hour shall not come until then. He will be of the People of my House (min ash-hāṭī); of my kindred (min ʿinārī); of my Nation (min ʿummatī), of the offspring of Fāṭima (min waḥāl Fāṭima); his name will be my name and his father’s name my father’s name. He will resemble the Prophet in disposition (ṣaḥāḥ) but not in appearance (khalil); this is put in the mouth of ʿAli. He will be bale of the forehead, hook-nosed, high-nosed. He will find the world full of evil and oppression and ungodliness; if a man say: “Allāh! Allāh!” he will be killed. He will fill the world with equity and justice; he will beat men until they return to Allāh (al-khaṭīb). The Muslims will enjoy under him prosperity, the like of which has never been heard of; the earth will bring forth its fruits and the heavens will pour down its rain; money in that day will be like that which is trodden under foot and will be uncounted; a man will stand up and say: “O Mahīdī, give to me,” and he will say: “Take!” and he will pour into his robe as much as he can carry. It is suggested that this is a tafsīr, legitimate or illegitimate, of a tradition in the Sahih of Muslim: “There will come in the end of my nation a khalīfa who will scatter wealth, not counting it!”. See many references for this munificent khalīfa and the abundance of money in the last days in Wensinck, Handbuck of Tradition, p. 1068. But in this tradition, as in all Muslim and Bukhārī, there is no mention of the Mahīdī. Again: the Mahīdī is of us, the People of the House. Allāh will bring him suddenly and unexpectedly (ṣaḥāḥ bi-luḥūm wa-l-ṣaḥāḥ fi ṣīlahu); he will rule five, seven, nine years. There are frequent allusions to his coming in a time of dissensions (ṣīlah). These will be such that it will take a voice from heaven to still them, saying: “Your Amir is so-and-so” (Ibn Khaldūn, p. 162). This is very likely an ironical comment, but it is cited as a simple foretelling. In the earlier traditions he will come from the East (al-Mahīdī, Khurāsān), from beyond the River (Oxus); in later times (e.g. Kurtubī
and Ibn Khaldūn, p. 171—176) he was to come from the wide, unknown, lands of the Maghrib. The original Black Banners (ra'yāt šāb) tradition about the ʿAbbāsids, apparently forged to lead them to support the ʿAlids, does not mention the Mahdi (Ibn Khaldūn, p. 153), but in an evidently later form there is added, "for he is the khalifa of Allah, the Mahdi" (Ibn Khaldūn, p. 159). One long tradition (Ibn Khaldūn, p. 148) may be given entire as an illustration of a type and because of the later expansion and use of it by Kūtubi: "There will arise a difference at the death of a khalifa and a man of the people of al-Madinah will go forth, seeking to Mecca. Then some of the people of Mecca will accept him and make him go out (apparently rise in insurrection) against his will and they will swear allegiance to him between the Rub'a and the Maṣjīm. And an army will be sent against (or, "to", ill.) him from Syria but will be swallowed up in the earth in the desert (al-baṣārah) between Mecca and al-Madinah. Whenever the people see that, the ʿAbbāl ("Substitutes" or "Nobles") of Syria and the ʿAṣāʾir ("Companions" or "Sectaries"; see Lane, p. 2059b) of al-Irāq will come to him and they will swear allegiance to him. Thereafter there will arise a man of Kūrāsh with maternal grandfathers of Kūrāsh, and they will accept him as the Mahdi, and it will overcome them and that will be the expedition (baʿth) of Kūrāsh. And oh! the disappointment of some of those who will not have part in the booby of Kūrāsh! He will divide the wealth and rule over the people according to the sunna of their Prophet and he will subject himself to the support of ʿAlām. He will remain seven or nine years and then die and the Muslims will pray over him. This is evidently an echo of the early ʿAlid conflicts and is not eschatological nor does it mention the Mahdi. But its motifs of the ʿAbbāl and of the earth swallowing up in the desert (al-baṣārah) re-appear in other traditions which are connected with the end of the time (p. 156, 161) and it is worked into al-Kūtubī's tradition about the Mahdi from the Maghrib. Again, in a tradition evidently eirenics between the ʿAbbāsids and the ʿAlīds, the Muslims are exhorted to "turn to the youth of the tribe of ʿAzmān (ʿalakum bi ʿl-fata ʿl-tamimī) for he will come from the East and will be the standard-bearer of the Mahdi!" (Ibn Khaldūn, p. 162). But it is plain, too, that the doctrine of the Mahdi arose late and was not generally received. Thus the doctrine of al-Daḍḍīdī is fixed in all Muslim eschatology, official and popular, but a tradition tries to assert that belief in the Mahdi is more of Faith than belief in him: "Whether he denies the Mahdi is an unbeliever but whoever denies al-Daḍḍīdī is only denied" (Ibn Khaldūn, p. 144). On the other hand a tradition asserts that there is no Mahdi but ʿIsa. The upholders of the Mahdi tried to turn this by saying that it means that no one ever spoke in the cradle (mahdū; Kurāsh, iii. 41) except ʿIsa (Ibn Khaldūn, p. 163; Kūtubī, p. 118). For al-Kuṭbī, another restorer who is not mentioned in any of the collections of traditions used above, see article ʿAṣāʾir, above, vol. ii., p. 630a and Snouck Hurgronje's article Der Mahdi, p. 12 (Ver. Geschr., i. 156).

The later, therefore, we go and the more popular are our sources the more fixed do we find the belief in the eschatological Mahdi. The more, too, the Muslim masses have felt themselves oppressed and humiliated, either by their own rulers or by non-Muslims, the more fervent has been their longing for this ultimate restorer of the true ʿAlām and conqueror of the whole world for ʿAlām. And as the need for a Mahdi has been felt, the Mahdi has always appeared and ʿAlām has risen, sword in hand, under their banner. It is impossible here to give the history of these risings. See for details upon them the article Mahdi by Margoliouth in Hasting's Encyclopedia of Religion and Ethics, viii. 336—340 and Goldziher, Vorlesungen, p. 231, 268, 291. For the Sudanese Mahdi, see especially Snouck Hurgronje's article Der Mahdi, reprinted in Ver. Geschr., i., p. 147—158. The condition, also, a fundamental discussion of the origin and history of the idea of a restorer in ʿAlām; see also beneath, s.v. MUHAMMAD AḤMAD.

Bibliography: has been given in the course of the article. The three important treatments of the subject are undoubtedly those by Snouck Hurgronje, Goldziher and Margoliouth.

(D. B. Macdonald)

AL-MAḤDĪ, ʿABD ʿABBĀS ʿABD ALLĀH MUḤAṢ̣-MMAD, a m ʿABBĀSĪD CĀLĪPḤ. His father was the Caliph al-Manṣūr, his mother was called Umma Mūṣā bint al-Manṣūr b. ʿAbd Allāh and belonged to the family of the Ummayyids of Syria. He became heir to the throne on the death of his cousin, the governor of Khurāsān ʿAbd al-Dāḏīdī b. ʿAbd al-Qāḥṣān [q.v.] rebelled, the Caliph sent his son Muhammad al-Mahdi with an army against him; the real commander was Khāzīm b. Khāzīm. After taking ʿAbd al-Dāḏīdī prisoner, al-Mahdi by his father's orders undertook an expedition against Tabārisīn which had to submit to him [cf. ʿABŪ G.], In 144 (761—762) he returned to the Ṭrāq where he married Rawāt, the daughter of the Caliph Abū ʿl-ʿAbbās al-Ṣaffāh. For the next few years he lived in al-Rayy. ʿIssa b. Mūsā had long been designated as successor to the throne but he was persuaded by al-Manṣūr to waive his rights in favour of al-Maḥdī, and after the defeat of al-Manṣūr in Ibn ʿUthaimīn’s Revolt (Oct. 79) al-Mahdi was recognised as Caliph. He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him. For example he had the son of the vizier Abū ʿAbd Allāh Muḥāṣ̣-āy[a b. ʿUṭmah Allāh [q.v.], executed on a mere suspicion and another vizier Yaḥyā b. Jāwūd who had fallen into disfavour with him was thrown into a prison so dark that he lost the use of his eyes. In 160 (776—777) a rebellion broke out in the always unruly Khurāsān; the leader of the rebels, Yūsuf b. ʿIbāḥīm, was however defeated and taken prisoner whereupon the Caliph had him executed in the most brutal fashion. The war against the Byzantines was continued under al-Mahdi. In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible; there was however never any thought of permanently occupying any territory temporarily conquered. On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Angora. Michael Lachanodrakon however with a Byzantine army advanced against them, destroyed the fortress of al-Ḥadāth [q.v.], which however was soon rebuilt, and had the land waste as far as the Syrian frontier (162 = 778/779). In the following year al-Mahdi equipped a great expedition in which his son Hārūn took part against

AL-MAḤDĪ, ʿABD ʿABBĀS ʿABD ALLĀH MUḤAṢ̣-MMAD, a m ʿABBĀSĪD CĀLĪPḤ. His father was the Caliph al-Manṣūr, his mother was called Umma Mūṣā bint al-Manṣūr b. ʿAbd Allāh and belonged to the family of the Ummayyids of Syria. He became heir to the throne on the death of his cousin, the governor of Khurāsān ʿAbd al-Dāḏīdī b. ʿAbd al-Qāḥṣān [q.v.] rebelled, the Caliph sent his son Muhammad al-Mahdi with an army against him; the real commander was Khāzīm b. Khāzīm. After taking ʿAbd al-Dāḏīdī prisoner, al-Mahdi by his father's orders undertook an expedition against Tabārisīn which had to submit to him [cf. ʿABŪ G.], In 144 (761—762) he returned to the Ṭrāq where he married Rawāt, the daughter of the Caliph Abū ʿl-ʿAbbās al-Ṣaffāh. For the next few years he lived in al-Rayy. ʿIssa b. Mūsā had long been designated as successor to the throne but he was persuaded by al-Manṣūr to waive his rights in favour of al-Maḥdī, and after the defeat of al-Manṣūr in Ibn ʿUthaimīn’s Revolt (Oct. 79) al-Mahdi was recognised as Caliph. He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him. For example he had the son of the vizier Abū ʿAbd Allāh Muḥāṣ̣-āy[a b. ʿUṭmah Allāh [q.v.], executed on a mere suspicion and another vizier Yaḥyā b. Jāwūd who had fallen into disfavour with him was thrown into a prison so dark that he lost the use of his eyes. In 160 (776—777) a rebellion broke out in the always unruly Khurāsān; the leader of the rebels, Yūsuf b. ʿIbāḥīm, was however defeated and taken prisoner whereupon the Caliph had him executed in the most brutal fashion. The war against the Byzantines was continued under al-Mahdi. In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible; there was however never any thought of permanently occupying any territory temporarily conquered. On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Angora. Michael Lachanodrakon however with a Byzantine army advanced against them, destroyed the fortress of al-Ḥadāth [q.v.], which however was soon rebuilt, and had the land waste as far as the Syrian frontier (162 = 778/779). In the following year al-Mahdi equipped a great expedition in which his son Hārūn took part against
the Byzantines and in 165 (782) Hārōn took the
field again, accompanied by the Caliph's favourite
al-Kābi b. Vūnus, later vizier. This time the
Muslims penetrated to the Bosphorus and the
Empress Irene was forced to make a three years'
truce and to promise to pay an annual tribute.
In Ramadan 168 (March/April 785), however,
the truce was broken by the Byzantines and
hostilities lasted till the death of al-Mahdi,
without however any decision being reached.
In his reign appeared the sectarian fanatic al-
Muhanna, who gave the Caliph's troops much
trouble and sustained a long siege in a fortress
in the region of Kāshā, till finally he poisoned
himself in 165 (779/780) in order not to fall alive
into the hands of his enemies. In other parts of
the empire also, heretics, especially real or alleged
Manicheans (Zindī), were treated with the utmost
severity. Al-Mahdi acquired great merit by his
work for the peaceful development of his empire;
new roads were laid down and the postal system
improved; trade and industry reached a prosperity
hitherto unknown and scholars were richly rewarded.
At the same time there appeared an undesirable
tendency to extravagance, which in the end was to
prove really fatal, and with al-Mahdi began
that expenditure of the revenues on useless luxury,
which contributed not a little under his succe-
sors to the ruin of the 'Abbāsid empire. In time the
Caliph fell under the control of his courtiers
and in particular allowed himself to be guided by
his chamberlain al-Kābi b. Vūnus and especially by
his wife al-Khaizūrān, formerly a slave who was
the mother of two sons, Mūsā and Hārūn. As
early as 160 (776) honours had been paid to the
former as successor designate under the name of
al-Hādī in place of 'Uth b. Mūsā [q. v.] and six
years later al-Mahdi had his younger son Hārūn
proclaimed as successor to al-Hādī. But as Kha-
izūrān preferred Hārūn and he was also supported
by the Banūmūsids, the Caliph decided to alter
the succession in favour of him: al-Hālī, who
was then in Dūr̄ān refused to agree. Al-Mahdi
thereupon set out to discuss the matter with him
in person, but died suddenly on the 22nd Muharram
169 (Aug. 4, 785) in Māsāchānān at the age of
43. As a ruler he was undoubtedly one of the best
among the 'Abbāsids.

(See Ibn Tūmart.)

AL-MAHDI [See Muhammad Ashhad.]
and his Christians. In spite of all the efforts of al-Mahdi, the blockade of Cordova became more and more strict. He then tried to put on the throne the caliph Hishām II b. al-Mu‘ayyadh whom he had himself deposed and then given out that he was dead, but this was in vain. On 16th Rabi‘ I, 400 (Nov. 7, 1009) the palace of the caliph was in the hands of the besiegers. Al-Mahdi’s only hope was to hide himself. The pretender of the Berbers, Sulaimān, received the oath of allegiance at al-Cordova and assumed the honorific title of al-Mahdi b. Sulaimān.

In the following month al-Mahdi was able to leave Cordova secretly and seek refuge in Toledo where he was well received by the inhabitants. He then sought and obtained an alliance with the Catalans (Ifrāqī) who marched with him on Cordova in Shawwāl 400 (May–June 1010). The town was taken and the second reign of al-Mahdi began with a bloody persecution of all the Berbers in Cordova. To avenge the wrongs of their fellow-countrymen in the capital, the Berbers in the army of Sulaimān al-Mustā’in returned to besiege the city. Al-Mahdi, betrayed by his servants, was slain during the siege in the palace of Cordova by the hands of al-Mu‘ayyadh, al-Dhul-Hajjāj 400 (July 23, 1010). His first reign lasted nine months, the second less than two.

**MAHDI KHAH, MILZA MUHAMMAD MAHDI ASTARKHOS B. MUHAMMAD, HISTORIAN OF NADIR SHAH OF PERSIA, whose deeds he recorded in the Ta’rikh-i Djahan Gushayi-i Nādiri; this work written in Persian is an excellent complement to those by James Fraser and Jonas Hanway on the conqueror. In it Mahdi Khān details the life of Nādir from his birth to his death while other Persian writers only deal with periods of it (e.g. Mahsīn b. ʿImānī records only the expedition to India in his Dīnawar-i Şammmā; Abd al-Karim Kashmiri in his Bayān-i Vahlī conserves himself to the period from this expedition to 1784). W. Jones in his introduction to the Ta’rikh of Mahdi Khān says that “the narrative of these perpetual rebellions... is somewhat dry and fatiguing”; as to the boundless praise which he bestows on the author’s style, especially the descriptions of spring at the beginning of each year, it is exaggerated; in these descriptions all the images used had been employed to satiety for years before. It is true that some works of the period are still more hackneyed. Mahdi Khān himself gives free train to this vexatious tendency in another version of his Ta’rikh which he published in 1748 only: Durvar-i Nādir, in a style uniformly artificial and elaborate. Malcolm (History of Persia) reproaches Mahdi Khān with having been too flattering to Nādir; he recognises however that the historian has spoken frankly of the cruelties which were a blot upon the latter part of the reign. Mahdi Khān was Nādir’s secretary. This is revealed not only in the accuracy of his details but in certain statements also. Mahdi, for example, says that he was with the prince when the latter received news of the birth of a grandson (transl. Jones i. 191); at the end of his reign Nādir sent him on a diplomatic mission to the Sultan of Turkey (ii. 179). H. Brydges (Abd-er-Kazzak, History of the Kajart, London 1833, p. clxxxi, note) also credits him with secretarial duties. Besides his historical works, Mahdi Khān contributed to his celebrated Eastern Turkish-Persian dictionary entitled Sanzkhā (1717 = 1760) a valuable thesaurus enriched with examples taken from the Turkish classics (Mir ʿAlī-Shīr, Bābūb-Nāma etc.); the publication of this work of which there are two abbreviations is highly desirable.

**AL-MAHDI LI-DIN ALLAH AHMAD**, a title and name of several Zaidi Imāms of the Yaman.

About 250 years after al-Hādi Yahyā, the founder of the Zaidiya [q.v.] dynasty of the Yaman, his direct descendant, the Imām al-Mutawakkil ʿAlī Ilāhem b. Sulaimān had, between 532 and 566 (1134–1170), restored the kingdom to its extent in al-Hādi’s period, with Sa’d, Nadjān and for a time also Zabid and San‘ā’. A generation later (593–614 = 1197–1217), the hill country from Sa’dā to Dhamār was again ruled by one man, al-Manṣūr b.ʿAbd Allāh b. Ḥanāţa, not a descendant of al-Hādi but of a Rassid, i.e. one of the family of al-Hādi’s grandfather, al-Ḵāṣim b. Tabatabah, the spiritual founder of the Zaydiyyas of the Yaman. Al-Manṣūr was twice able to enter San‘ā’; he was also recognised as Imām by the Kāspīd Zādīs, the Ṣuḵtāwī; but even before his death his power had become restricted by the last Ayābūd Sulṭān of the Yaman, al-Malik al-Muḥammad once more to the land of Kawāḥīn. After his death his sons, first Muḥammad ʿĪsā al-Dīn, then the Imām Āḥmad al-Mutawakkil tried their fortune in the south, while one of al-Hādi’s descendants and his name-sake al-Hādi Yahyā b. al-Muḥsin created a petty imāmat around Sa’dā. An attempt to unite the divided forces of the dynasty was made by a. AL-MAHDI LI-DIN ALLAH: his full official title, one previously met with among the Zaidis, was al-Mahdi li-Dīn Allāh, Āḥmad b. ʿAlīshān b. Ahmad b. al-Ḵāṣim b. ʿAbd Allāh b. al-Ḵāṣim b. Āḥmad b. Ismāʿīl Abu ʿl-Barakāt. The uncertainty about his genealogy, that occurs may be explained from the fact that, as is also found in the superscription to his Kitāb al-Ḵurūf (see Bibli.) there is a jump from Ismāʿīl Abu ʿl-Barakāt to Ismāʿīl al-Dībāḏ (cf. de Zambur, Table B); he himself expressly says that his genealogy meets that of al-Manṣūr in al-Ḵāṣim b.
Ibrahim, i.e. that he was a Rassid. His reign of ten years during which the Yemen was harassed by plague and famine does not reveal a great ruler nor even any real and consistent authority, but gives a remarkable picture of conditions in South Arabia, when for want of a definite line of succession, success alone decided how far an ‘Aliid pretender was able to hold his own among his kinsmen and with any forces he could gather to make a stand against foreign foes. In 646 (1248) Aḥmad had himself proclaimed Imam in the fortress of Ṭhula in the highlands of Ḥadīr, north-west of Ṣan‘ā’, by arrangement with the Banū Ḥamzah, with the benevolent tolerance of Aṣad al-Dīn Muḥammad b. al-Ḥasan, the brother’s son of the first Ṣaḥīḥi Muḥammad b. ‘Alī b. Ṣa‘d. But he was defeated by Nūr al-Dīn and besieged in Ṭhula, and in 647 (1250) we find him having to fight with the Banū Ḥamzah who had again deserted him. He was saved by the death of Nūr al-Dīn who was killed by his own Mamluks in Ḥāzib, an event which is probably connected with contemporary Mamluk attempts on the Egyptian Arayḥā; Aṣad al-Dīn who wished to make his government in Ṣan‘ā’ independent, is also accused of this thankless task. The last mentioned active under Nūr al-Dīn’s son and successor al-Muḥammad Ya‘ṣīr, rebelling and suing for peace alternately, sometimes on the side of the Imam and sometimes intriguing against him. Al-Maḥdī, who in the meanwhile had bound Shams al-Dīn Aḥmad, son of the late Imam and chief of the Banū Ḥamzah, to joint action with him, took Ṣan‘ā’ in the beginning of Dhmādah 1648 (July 1250); although harassed by Aṣad al-Dīn who held the fortress of Birāsh, he was able to extend his rule to the south as far as Ḡanār. But before a year had elapsed al-Maḥdī had to abandon Ṣan‘ā’. Aṣad al-Dīn indeed sold him the fortress of Birāsh but it was just an arrangement of this that the final breach occurred between them. Aṣad al-Dīn again went over to al-Muḥammad who had the government of the Yemen granted him by the Caliph al-Mustaṣim, who is even said to have sent assassins (Sirah, see Ref., fol. 237a) against the Imam. In a thoroughly Zādī fashion, however, his fate was decided not by foreign foes but by the Zādid themselves He quarrelled with his ablest and most ardent supporter, Shāhīd Aḥmad al-Raṣās. With the help of the Raṣāsid, Shams al-Dīn made himself Imam of the Zādīs in 652 (1254) in the old capital of Ṣa‘dīa. Al-Maḥdī was again confided to his original territory. The very next year a Zādī ascended the throne, an event which was to bring about a rivalry between the Zādīs and the Ṣa‘dīs. In the decisive battle of Wadi Shu‘wāh, which runs from Ṣa‘dī parallel in the northwest to the Wāḥi Khārdī, he was slain at the age of 42, his head sent round as a trophy and treated shamefully but finally burned with his body in the little Wāḥi of Dhu Bin (Dhelelān). His inglorious end did not prevent his tomb from becoming a wonder-working abode of grace; his biographer calls him the “martyr on the path of Allah and the commander of the faithful” and many miracles are recorded of him even from his lifetime. His assassination at the beginning of 655 (1258) falls in the same year as the execution of his old enemy, the last Abbāsīd Caliph, al-Mustaṣim. Legend says that the messenger who was to carry the news to Ḍūlārīd learned on the way that the caliph had met his fate on the same day.

While in his Dā‘uq (see Bihāj, al-Maḥdī collected the usual Zādī arguments with the regular sayings from the Qur’ān and Ḥadīths practically in the traditional form as a general appeal to support the Zādī cause and himself, his Ḥalīf is a passionate personal protest against his deposition and an attempt to bring back his enemies especially Shams al-Dīn Aḥmad to the loyalty they had sworn to him. This, he proclaims them, was as unrighteous as the recognition of Muḥammad’s authority as a Prophet by the Umayyads.

The Shams al-Dīn Aḥmad above mentioned, who adopted the official title of al-Muṭawakkil and recognised the Rasūls as his overlords, was at once challenged by a rival Imam in the person of Ṣa‘dī Muḥammad al-Ḥasan b. al-Wahhāb. The position remained the same for the next 50 years. The Tatimmah gives nine men, the last being al-Nāṣir Ṣa‘d al-Dīn Muḥammad b. ‘Ali, who succeeded in obtaining some recognition as imāms in the period between al-Maḥdī Aḥmad b. al-Ḥusayn and al-Ṣa‘dī Muḥammad al-Dīn Aḥmad b. Yahyā b. al-Muṭarṣaṣ b. Ahmad b. al-Muṭarṣaṣ b. al-Muṣafalb b. Mansūr b. al-Muṣafalb b. al-Muṭarṣaṣ b. ‘Ali b. Yahyā b. al-Ḵāsim b. ‘Abbās b. Al-Dīn b. Yahyā b. al-Muṣafalb b. Aḥmad al-Nāṣir. The last named ancestor was the son and second successor of Yahyā al-Ḥādhī. After the death of al-Nāṣir Ṣa‘d al-Dīn, a kādī ‘Abbāl Ṣa‘d b. al-Ḥasan al-Dauwārī worked with a few partisans on behalf of his sons who were still minors. But the ‘Abbāl, anxious to consolidate the power which was gradually breaking up, placed in the mosque of Dhmādah al-Dīn in Ṣa‘dā three claimants: ‘Abbāl b. Aḥmad al-Faḍaṭ, al-Nāṣir b. Ahmad b. Muḥammad and Ahmad b. Yahyā b. al-Muṭarṣaṣ and these three were to decide on the order of the number. The choice fell on Ahmad b. Yahyā, the youngest of them. In spite of his objections, he had to give in to their argument that “one who has gone deeply into learned problems with their subtle points, cannot be incapable of conducting worldly affairs”. They at the same time promised him their advice and support (Tatimmah, fol. 72a). But on the very night on which he was proclaimed, the kādī al-Dauwārī succeeded in getting homage paid to his candidate (end of 793 = 1391). Ahmad b. Yahyā and his adherents at once left the town in a body and withdrew to the hills to the Banū Shīhāb, a clan of the Hamalānids. His abode was betrayed by one of the Shīhāb. Fighting went on for 13 days in which the enemy lost about 50 men and the Imam 10. The latter then went farther into the mountains and his claims were recognised in Amīn also. Among his special supporters were al-Hadī b. al-Muṣafalb, son of a former Imam, and Ibn Aḥmad b. Faḍaṭ. He was also asked by people in Ṣa‘dā to receive his homage. But he was surprised by his enemies and as he would not interrupt his ritual ablutions and prayers to fight, he surrendered under a promise that no harm would befall him. In spite of this, as the Tatimmah tells us, which, it is however much biased in his favour, 80 of his men were massacred, he himself was taken to Ṣa‘dā where he was kept a prisoner for 7 years.
and 3 weeks (794—801). Liberated with the help of his warders, he lived a further 40 years, “tossed up and down the country”, devoting himself entirely to learning until he died in Żafar (end of 1437) of the plague in the Yamans, which had already carried off with many notables including the rival İmân ‘Ali b. Şalâd al-Din. According to the Tütünnim (fol. 75a) İbn al-Murtafa was born in 775 (1373) in Dhamâr, according to other sources (see Rieu, in Brit. Mus. Cat. Suppl., No. 365) in 764 (1363) at Anis. The choice of İbn al-Murtafa as İmân was a mistake, inasmuch as he lacked the necessary military and administrative ability. On the other hand he had another qualification in perfection. As a result of a careful education and a thirst for learning from his youth upwards, he wrote a great deal, dogmatic, legal and paraenetic; he was also a poet and worked at grammar and logic. The kindness of his warders, who supplied him with ink and paper, enabled him to compose the law book Al-Aṣār fi fiqh al-Aimmâ al-ağaḥr (Berlin MS. 4919) on which he wrote a commentary. His most valuable work is still his theological and legal encyclopedia, al-Bahr al-zâlühhâr (Berlin MS. 4894—4907) on which he likewise wrote a commentary. Although not the work of an original scholar, it is a rich and well arranged compendium, which deserves attention, if only for the part of the introduction which compares the various religions, as the distinctions between them are seen from quite a different point of view to that of Ash‘arî or Shâhrastânî.

About 80 years after al-Mahdî Aḥmad b. Yahyâ from 922 (1516), the Turks had begun to occupy Yemen and to hold it with great fortunes (see Kuft al-Din al-Makki, al-Burk al-Yamanî fi l-Fath al-ÔtÔmâni, in S. de Sacy, in N.E., iv. 412—504 and A. Rutgers, Història Iemanae sus Isisano Pascha, Leyden 1838). In his struggle with them al-Muṣârî b’il-lâh al-Kâsim b. Muḥammad, a descendant of al-Ḥâdi in the 17th generation, was able about 1600 A.H. to restore the present imâmâte in Şan‘î (see A.S. Tritton, The Rise of the Ismâ‘îls of Sanaa, Oxford 1925). Of his sons, Muḥammad al-Mu‘āyâyad succeeded him. Even in his reign but still more after his death in 1054 (1647), when his successor _WS b. al-Kâsim, was making his way with difficulty against his many brothers and nephews, one of al-Kâsim’s grandsons began to come to the front, afterwards the İmân ʃ al-Mahdî li-Dîn Allâh Aḥmad b. al-Hâsân b. al-Kâsim. His father was not İmân but distinguished himself in the wars against the Turks and was also a scholar. In 1049 Aḥmad appeared in the hills of Wusâb; in 1051 he besieged Dhamâr without success; in 1053 he was in Mecca with many members of his family on the pilgrimage. Just at the accession of İsmâ‘îl, he set out with another cousin against Şan‘î. At first he came to terms with the İmân but then fought in different places for his own hand, eg. at al-Ṭili and again in the Djebel Wusâb. In 1057, he was chosen for İsmâ‘îl, to which the İzids had been summoned by the disputes for the throne. When in 1057 (1676) on the death of İsmâ‘îl he himself assumed the İmâmâte, a nephew, al-Kâsim b. Muḥammad al-Mu‘āyâyad, proclaimed himself İmân and was recognised particularly in the remoter territory in the south towards al-Tihâma in Zâhid. A Zâhid assembly of leading Şâris and ‘Ulama met, at which Aḥmad was with some difficulty recognised as the legitimate İmân. Although this did not mean that he enjoyed the authority of a sovereign, since his rivals and the other amirs remained as independent as before, yet peace and security reigned in the country. But Aḥmad b. al-Hâsân died soon afterwards in 1092 (1681) in al-Ghîris near Sibân which had been built by the first Turkish conqueror Hasan Pasha. After the short and weak reign of his son al-Mu‘âwakkil Muḥammad (to 1097 = 1686), family feuds broke out again. Among the later İmânâtes of this Kâsimid dynasty another Aḥmad b. al-Hâsân b. al-Kâsim (from 1221 = 1806) again bore the official title of al-Mahdî li-Dîn Allâh.

(AG. STROMFALT)
The most important events of this reign were the attacks on Egypt. The Mahdi's son, Abu 'Uqayl b. Ziyād, was sent in command of the forces; while a fleet operated under Khabasa. Tripoli, Barka, and then Alexandria (302 = 914) were taken, until the victorious army was checked outside Fustat by the eunuch Mūnis, the Egyptian commander. A second expeditionary force (916–917) repeated the feats of the previous one and devastated the Delta and ravaged the Faiyum, only to be checked once more at Old Cairo, while the fleet of 80 vessels was destroyed at Rosetta (307 = 920) by the Khāliṣa's smaller but more efficient fleet under the Greek mariners. Once more the Mahdi had to withdraw. Nevertheless the dominion of the Mahdi extended from the borders of Egypt to the confines of the Idrisid stronghold in Morocco. His fleets spread terror throughout the Mediterranean. Malta, Sicily, Sardinia, and the Balearic Islands felt his influence; while his secret-service agents were to be found throughout Andalusia. A revolt in Sicily in favour of an Aḥlabī prince Alī b. Ziyād b. Al-Mahdi affected his sway in that island, but his administration generally was strong and secure, albeit rigorous and unmerciful. The year 926 found him taking up his residence in the new city he had founded on the Tunisian coast, named after himself Al-Mahdiyya (p. v.) (now "Africa" of Frisson). This became his capital instead of Kairawān (16 mls. distant). The new town was founded in 303 (916) and was situated on a projecting peninsula called Ḥajarat al-Fār. It was strongly fortified with high and massive walls, and colossal heavy gates, enclosing the palace and the royal barracks. A natural harbour was improved to shelter 100 vessels of war. On the mainland lay the faubourg of Zawila intended as a place of residence for traders and the general public. After a reign of 25 years the 'Ubayd Allāh died on the 4th March 934 (14th Rabi' I, 322) at the age of 63 and was succeeded by his son Abu 'Uqayl b. Ziyād under the title of 'Ubayd Allāh.

MAHDIYA, a town on the east coast of Tunisia, is the "town of Africa" of the European historians of the Middle Ages. It is built between Sousse and Gabès on the coast, more than a mile in length and less than 500 yards in breadth, which terminates the cape of Africa and is connected to the mainland by a narrow isthmus "much as the hand is joined to the wrist". The site was without doubt occupied by a Phoenician factory and by a Roman settlement, which it has not been possible to identify. Its name comes from the Shī'ite Mahdi 'Ubayd Allāh, who in 300 (912) founded and fortified it, after having consulted the oracles and foreseeing the dangers which would threaten the Fatimid dynasty. A rampart of rubble of which a few towers are in existence ran along the coast, and the wall protected the port, an ancient Phoenician harbour excavated out of the rock, which the ships entered under a large gate flanked by two strong defensive works. A little farther on, towards the point was the naval arsenal. From the side of the isthmus, the rampart, which is very strong and strengthened by round and square towers, had a wall in front of it and was pierced by a gate which still exists. Flanked by two salients with inclined sides entrance is gained under an arch 45 yards in length (al-kīfâ, al-kaḥlî). The highest point of the peninsula is occupied by an old Turkish ārâb, built on the probable site of the palace of Mahdi. In front towards the west, probably lay the palace of his son al-Kâmil. The town owes to the Fatimids also a great mosque built near the sea, of which considerable remains still exist, notably an ornamental porch. A customs-house was at hand (dar al-maḥâṣabâh); beyond the peninsula the suburb of Zawila (ancient Zella') of which the site is still known and where remains have been found, amongst other things glass-ware.

The Mahdi 'Ubayd Allâh after leaving Raqqâda near al-Kairawaän, came to live at al-Mahdiya in the year 308 (921) Having become the capital of the empire, the town prospered. It was, according to Tâhâ, the richest city in Barbary. The son of 'Ubayd Allâh, al-Kâmil, was besieged there for over five months (January–September 945) by 'Abî Yazid, "the man with the ass", a kharjì agitator, who starting from Tawzer made himself master of the whole of Hišîyâ. The failure of the blockade of al-Mahdiya was the first stage in the downfall of the heretic. More than a century after, al-Mahdiya, which had been the refuge of the Fâtimids when in danger, served also as an asylum to their unconquered vassals, the Zirid Amirs, the victims of the Hilîlî invasion. In the year 449 (1057) the Zirid al-Mu'izz abandoned al-Kairawaan for al-Mahdiya. From that time onwards the corsairs set themselves to recover the lands they had formerly ruled. From there they also turned their activities to the sea. Al-Mahdiya, where the corsairs were now equipped, became and was to remain
down to modern times the most active centre of Tunisian piracy. The expeditions of the Muslim corsairs provoked attacks from the Normans of Sicily, Pisan and Genoan raids on the town along the coast. In 1087, al-Mahdiya fell into the hands of the combined Christian forces. The Normans again took it in 1148. Then they were blockaded in it by land and by sea during the conquest of Ifriqiya by the Almohad 'Abd al-Mu'min. Having become once more a Muslim town, it was retaken and pillaged in 1180. Then it concluded with William II, the King of Sicily, a treaty of peace. The Normans were able to trade with it. During the famous campaigns of the B. Ghannuqy [q.v.], Almoravid Amir, al-Mahdiya was for a short time in the hands of an adventurer 'Abd al-Karim al-Kagragh who took the title of Caliph. Those troubles led to the installation in Ifriqiya of a governor of the Almohad family of the B. Hafs. Al-Mahdiya was henceforth one of the principal towns of the kingdom of the Hafsids. Its government was generally confined to one of the sons of the sovereign of Tunis.

The persistent activity however of the Corsairs provoked in the year 1390 a new Genoan expedition supported by Charles VI, King of France, who sent his galleys and his knights against *cette malheureuse ville d'Affrique* (Fosse-des-sables). Al-Mahdiya resisted but was forced to pay a tribute to the Christians. In 1539, after the conquest of Tunis by Charles V, the town received a Spanish garrison. In the following year the corsair Dragut took it by surprise. Taken prisoner by the fleet of Andrea Doria, then released, Dragut came back and installed himself in al-Mahdiya. On the 8th September 1559, Dorra seized the town from Dragut "prince of Africa", after a memorable siege. Charles V offered the charge of it to the Knights of Malta but they refused it, so he ordered it to be disembowelled. Al-Mahdiya, after falling once more into the hands of the Muslims, arose from its ruins and remained under Turkish rule until the 18th century, the nest of corsairs, the terror of Christian merchant-ships that it had been for nearly 900 years. It is now a quiet little town of about 10,000 inhabitants, who live by fishing and by the produce of their oil-works.

**AL-MADHIYA**, formerly called AL-MA'MURA, a town of Morocco, on the Atlantic coast at the mouth of the Wadi Sabib (Sebou), built on a rocky promontory which dominates the valley of the river. Situated on the southern extremity of the plain of Gharb and 20 miles to the North East of Salé (Salia) it enjoys a geographical position of the first importance. A port is shortly to be created here for ships of heavy tonnage, which cannot sail up the Wadi Sabib as far as the river port of Kenitra (Ar. al-Kunaitira, "the little bridge") situated 6 miles as the crow flies from the mouth of the river.

It is generally agreed that the site of al-Mahdiya corresponds to that of one of the earliest Phoenician settlements founded by Hanno in the fifth century B.C. on the Atlantic coast of Morocco: the Phoenician factory of Thynateria. Nothing is known of the later history of this foundation and we have to wait till the fourth century A.D. (tenth A.D.) to get the first mention in Arab writers of the town at the mouth of the Wadi Sabib under the names al-Ma'mura ("the populated, the flourishing"); Halik ("the mouth") al-Mumura or Halik Sabib. According to the chronicle of Abu'l-Kasim al-Zayani [q.v.] the modern town was founded by the short-lived dynasty of the Banu Ifren [q.v.] which settled on the Atlantic side of Morocco at the end of the tenth century of our era. In the second half of the XIIth, the Almohad Sultan 'Abd al-Mu'min built there one of his dockyards for his navy (dar al-mu'alla). Later, down to the XVIth century, al-Ma'mura's history is obscure — it was a small trading centre to which European ships came for the products of the country.

Al-Ma'mura, when the Christians of the Iberian peninsula made their offensive against Morocco, was one of their first objectives; on June 24, 1515 a large Portuguese fleet anchored at the mouth of the Wadi Sabib and a landing force of 8,000 men occupied the town without a blow being struck. The Portuguese made themselves a strong base in al-Mumura, built fortifications there, remains of which still exist, but they were only able to hold it for a short time. The Muslims drove the Christians out of al-Mumura at the end of the same year, inflicting very heavy losses upon them.

Al-Ma'mura re-enters history when at the end of the XVIIth century it became a formidable nest of European pirates, who under the leadership of an English captain, Mainwaring, practised piracy along the whole Atlantic coast and became a terror to the seafaring centres of Europe. This state of things was put an end to when Spain, which in 1610 had occupied the port of Larache (al-Ar'ish, q.v.), a little farther north, made a landing at al-Mumura in August 1614, after negotiations with the Moroccan ruler, the Sa'dian Mawlay Zaidan. The town was taken and the Spanish fleet withdrew leaving a strong garrison of 1,500 men. The captured town was given the name of San Miguel de Ultrimar.

The Spanish occupation of al-Ma'mura was to last 67 years, during which it was several times fiercely attacked by the Muslims, particularly the "volunteers of the faith" (Mujahidin), who mobilised to drive the Christians from the various points on the coast where they had established themselves under the active leadership of the chief al-Aysh of Salé. The principal attacks on San Miguel de Ultrimar were delivered in 1628, 1630
and 1647. In 1681 (1092 A.H.) the 'Alawid Sultan Mawlāy Ḫisamu'll [q.v.] laid siege to the town and finally took it by storm. He then gave it the name of al-Maḥdīya; the name of al-Ma'mūra only survived that of the great forest of cork oaks which lies between Salé and the lower valley of the Wādi Sabīḥ. — It may be noted that for a few years at an earlier date the name al-Maḥdīya had been borne in Morocco by the little military station founded by the Almohad Caliph 'Abd al-Mu'min on the site of the future Ribāṭ al-Faṭḥ (Rabat), on the south bank at the mouth of the Wādi Salé (the modern Wādi Būregreg) [cf. the article Rabat]. Al-Maḥdīya was occupied by French troops in 1911. Considerable remains survive at al-Maḥdīya, dating from the brief Portuguese occupation, the Spanish occupation or from the date when it was definitely retaken by the Muslims. Around the citadel (kābra) runs a continuous rampart with a ditch. These defences are entered by two gates; — one very massive, with two Arabic inscriptions, dates from the XVIIth century. The other, a simple postern, dating from the Spanish occupation, opens on the steep slope which runs down to the river. In the dark streets of the broken town a little mosque are the runs of the Muslim governor's palace of the XVIIIth century. Between the foot of the citadel and the bank of the Wādi Sabīḥ for a length of 200 yards and a breadth of about 40 may still be seen buildings consisting of a series of square chambers completely isolated from one another and each protected by a double wall. These were probably granaries, which need not be earlier than the end of the XVIIth century, and are not, as has been suggested, of the Phoenician period.

(É. LEVI-PROVENÇAL)

MAḤIYA (A.), technical term in metaphysics, quidditā, frequently used as equivalent of gowhar, substance. Abī Ḥanīfa, Dīrār (and al-Nāḏḏār) used it to designate the pure divine essence; cf. 'Abd al-Kādir al-Baghdādī, al-Fārāb bain al-Fārāb, p. 201—202; al-Shahrārī, Kitiš al-Malā' wa 'l-Nihāl Cairos, i. 114; Kitiš al-Malā', ed. and translat. Huart, i. 85. On the question whether the quiddity is identical or not to existence (rendjīd) cf. Dīrārīn, Sharḥ al-Mawāfīq, Cairo, p. 92.

(L. MASSIGNON)

MAḤKAMA. [See MAḤKAMAH.]

MAḤMAL (or more correctly: MAḤMI, A.), the name of the splendidly decorated empty litters, which since the Xth century have been sent by the Mamluk sultans princes on the Ḥājiyūd to Mecca, to display their independence and claim to a place of honour at the ceremony. The camel which bears the maḥmal is not ridden but borne on the shoulders. It goes at the head of the caravan and is regarded as its sanctifying element. What extravagance the rivalry of princes led to is shown by the mention of a maḥmal adorned with much gold, pearls and jewels, which was sent in 721 (1321) from the 'Irāq to Mecca (Die Chroniken der Stadt Mekka, ed. F. Wustenfeld, ii, 1859, p. 278). The maḥmal which is most esteemed, that which accompanied the pilgrim caravan from Cairo, is described by Lane as a square wooden framework, with a pyramid at top and covered with black brocade richly worked with inscriptions and ornamental embroidery in gold, in some parts upon a ground of green or red silk; it is bordered with a fringe of silk and silver balls are fixed to the corners and to the top of the pyramid. On the front of the pyramidal roof is a view of the Kaʿbah in enamelled gold. In the brief description given by Burckhardt of the Egyptian maḥmal it is added that it is decorated with ostrich feathers. According to him there was only a prayer-book in the empty interior, which on its return was exhibited in Cairo and kissed by the people; according to Lane on the other hand there are two silver receptacles in the maḥmal which contain two Kurāns, one in a scroll, the other in book form. The maḥmal is carried by a fine tall camel, which after the pilgrimage is spared any further work. On their arrival in Mecca the maḥmals are hailed with joy and led through the crowded streets in a solemn procession after which they go with the pilgrims to 'Arafat, where they occupy a position reserved for them. It used to be generally supposed that the covering of the Egyptian maḥmal was used to cover the tomb of Muhammad or the Kaʿbah but this is wrong; the kiswa is of course taken to Mecca with the great pilgrim caravan but it has nothing to do with the maḥmal.

According to Maḥzārī the custom of sending a maḥmal to Mecca was first introduced in 670 A.H. by the Mamluk Sultan Bihārī but others attribute it to the Shari' Abū Naym; it is also said that it was a prince going on the pilgrimage in a splendid litter that gave Bihārī the idea of sending one with the pilgrim caravan. This is however only a story; and it is a much more important question whether the custom did not arise at an earlier date and whether it did not originally have a direct religious significance. It is natural to recall the portable sanctuaries of the Arabs and the maḥmal particularly reminds one of the description which Mūsīl (Die Kultur, 1910, p. 8 sq.) gives of the "Abū Zühr al-Markhāt" of the Rvāḥa tribe: a framework of thin pieces of wood adorned with ostrich feathers which is fastened on to the saddle of a pack-camel and is the visible centre of the tribe. This would at any rate lead us to the practical significance of the later maḥmal, a visible sign of independence and claim to suzerainty of the various Muslim states. It is just this significance which gives the maḥmals a certain historical interest as political changes and rivalries are reflected in them in course of time. There have occasionally been rulers who by sending maḥmals gave expression to their endeavour to obtain recognition as sovereigns and protectors of the sharīfs, only to be soon driven from power again by others. That the Egyptian maḥmal came to obtain a place of honour, that from Syria being the only other at all comparable to it, was a result of the great wealth of the Mamluk Sultāns. It is noteworthy that Ottoman rule made no alteration in this respect and an attempt to send a maḥmal from Constantinople met with no success. In 1587 an interruption was
caused by the conquest of Mecca by the Wahhābīs who forbade this empty pomp so hateful to them; but this ceased when they were driven out and Muhammad 'Alī's rule again gave the Egyptian maḥmāl pride of place.

After the World War the sending of a maḥmāl from Syria stopped. Difficulties arose between the Egyptian government and King Ḥusayn (1915—1924) regarding the powers of the heads of a field-hospital which was to accompany the maḥmāl as well as regarding the ceremony of its reception, which twice resulted in the maḥmāl not being sent.

When Ibn Saʿūd had become king of the Ḥijārā, long negotiations took place over the maḥmāl. The Wahhābī ruler insisted on the maḥmāl which usually accompanied the maḥmāl being omitted and all sort of superstitious customs being dropped; he also protested against the armed escort as a denial of his sovereignty. The attempt made in 1926 to harmonize the demands of the two sides came to nothing: a fight broke out between the Ḥiwald of Ibn Saʿūd and the Egyptian soldiers which was stopped by the personal intervention of Ibn Saʿūd. Since then the Egyptian government has not sent a maḥmāl, but neither does it any longer send a new ḥirāf for the Kaʿba to the Ḥajj. By biogr.: Burkhart. MAHMUD I. Twentieth Ottoman Sultan, reigned 1143—1168 (1730—1754). He was born in the 3rd Muharram 1108 (Aug. 2, 1696), the son of Mustafa II — the S defter 'Othmān gives the date 7th Ramadān 1107 (April 10, 1696) — and had spent his life in seclusion up to his accession. He came to the throne through the mutiny of the Janissaries under Patrona Khalīl, a mutiny which cost the grand vizier Ḥabīb Pasha, the Kapudan Pasha and the Kuyu Beg their lives, and forced Sultan Ἀljāmād III to abdicate in favour of Mahmund; these events took place on the 17th Rabī'a 1, 1143 (Oct. 1. 1730). The mutiny, which really had the sympathy of most of the 'Ālūm and seems to have been in the nature of a social revolt (Jorga), was only suppressed after some time through the efforts of the KİLAR Ağa Beşhir; for its suppression a certain number of appointment-to important offices dictated by the rebels had to be conceded and the many palaces built in the luxurious reign of Ahmad III were allowed to be pillaged. After the Janissaries had been pacified by considerable largesse on the accession of the Sultan, Beşhir Ağa succeeded in plotting the death of Patrona Khalīl, who was assassinated on Nov. 15, 1730. The KİLAR-agha continued to exercise a preponderating influence on affairs of state; the Sultan, who was by nature more interested in literature and in the erection of more or less useful buildings, did nothing to throw off this influence, which on the whole was for the good of the state. One of the consequences of this system was the very frequent changes of grand viziers — there were no fewer then 16 in Mahmūd's reign — but the state possessed a number of able men who worked for the good of the empire in the offices of grand vizier, reis efendi and kuyu beg. The state finances were kept in good order, as much by the confiscation of any great fortunes amassed by high officials as by a financial system which made no distinction between the public treasury and the personal revenues of the Sultan. The situation abroad was also favourable, especially after the peace of Belgrade in 1739, which secured to Turkey a fairly long period of peace in Europe.

At the beginning of the reign, Turkey was at war with Persia. The campaign of 1731 was favourable to the Turks, who reconquered Kirmānshāh and took Hamadān (battle of Kordijān, Sept. 15), Urmīyā and Tabrīz; however, by a peace signed on Jan. 10, 1732 by the ser−asker and grand vizier Topal 'Othmān Pasha, Turkey gave up Tabrīz and Hamadān. This peace neither pleased the powers in Constantinople, who replaced the grand vizier by Hekum Zāde 'Ali Pasha [q.v.] nor 'Ālūm Kuli Khān, who on his return from Herāt had despatched Şah 'Ālamār and was making new preparations for war. On Oct. 6, 1732, the Porte issued a formal declaration of war and in December a Persian army invaded Mesopotamia, took Kūrkū and laid siege to Baghdād; the great battles of this campaign were those of Duldijālīk on the Tigris, where the Persians were defeated (July 19, 1733), and that of Kūrkū, where a week later the Turks suffered a defeat which involved the death of the ser−asker Topal 'Othmān Pasha. In the same year, the Persian war produced a conflict with Russia, provoked by the Khān of the Crimean march through the Caucasus to reinforce the Turkish troops fighting against Persia. Russia declared she could not allow the passage of the Tatars through the country of the Kumuk and the Kaituk, which she regarded as under her authority; the Khān's force was therefore held up and several battles were fought in Daghestān between Turks and Russians. The negotiations opened at Constantinople showed more and more that a war with Russia would be inevitable and they were finally broken off by the siege and capture of Azof by the Russians in March 1736. Meanwhile the war withPersia, which had ceased in 1734 on an armistice being concluded by the Pasha of Baghādād, had been resumed in 1735 when 'Ālūm Kopulā was appointed ser−asker. The campaign was unfortunate for the Turks. They lost a number of towns in the Caucasus; however the development of affairs in Persia where 'Ālamār Kuli, afterwards Şāhid Šāh, proclaimed himself king on Dec. 1, 1735 in his camp on the Caucasus front, was favourable to the peace negotiations which began at this time. These negotiations ended in a peace signed at Constantinople on Oct. 17, 1736; the frontiers of the two countries remained as they had been fixed in the time of Murād IV. In the same year a Russian army invaded and laid waste the Crimea, although negotiations still went on, first at Constantinople and then in the country. Austria, posing as mediator, took an active part in these negotiations, which were finally broken off at the Congress of Nierwind in Aug. 1637, when it became evident that Austria was really Russia's ally, so that Turkey had to
deal with two adversaries. The war began badly for the Turks who lost Niş to the Austrians and Ocakow to the Russians. Niş however was won back in Oct. 1737. During the next two years fortune was rather on the side of the Turkish armies under the grand vizier Yegen Muhammad Pasha. The conclusion of the war was marked by the appearance of the forces of the grand vizier Hâdidji Muḥammad before Belgrade in July 1739. It was before this town that the famous peace of Belgrade (Sept. 18) was negotiated with the assistance and mediation of the French Ambassador, the Marquis de Villeneuve, by which Turkey again obtained possession of the town. Russia was included in the same treaty and had to promise to demolish the fortifications of Azof.

This ending of the war in a way very advantageous to the Porte was followed by a long period of peace with the states of Europe, which, as a result of the Seven Years’ War, had no time to devote to plans for the partition of Turkey. From 1743 to 1746 there was a new Persian war. It began through the demands of Nādir Shāh to have the Persian Shi’a recognised as a fifth Madžhhab, that of the 40. The Porte gave an evasive answer but after they had become convinced that Nādir Shāh intended to make himself lord of Mesopotamia, the Shāhī al-Īslām gave a fatwâ against the recognition of the Dājrâ’iyya. In 1743 Nādir Shāh took Kirkūk and laid siege to al-Mawâril, only to be forced to raise it after a while. In the following year the scene of hostilities shifted to the Caucasus. The Porte then attempted to support a Persian pretender of the Šafawī family, whom it sent off with great pomp to ʿArāz; in 1746 the Turkish ser-asker, the former grand vizier Yegen Muḥammad, fell in the battle of Murâd Tepe in Kurdistan. During all this time, peace negotiations were going on in Constantinople and conducted through the Turkish commander-in-chief. During these negotiations Nādir Shāh had dropped his demand for the recognition of the Dājrâ’iyya and finally agreement was reached on the basis of the frontiers of Murâd IV (Sept. 4, 1746). In July of the same year the all powerful Beshir Agha died at the age of 96; in spite of the efforts of the grand vizier al-Sâyi’d Ḥasan Pasha, his successor Beshir Agha the younger succeeded in procuring the same influence in affairs. This new regime only lasted till 1752 when there was reason to fear a new outbreak of discontent among the Janissaries and the ‘ulama’ also; the Sultan seems therefore to have decided to sacrifice the Kizlar Agha by having him treacherously assassinated along with other favorites (July 16, 1752). Two years later, on Friday, Dec. 1754, Muḥammad himself died suddenly on his way from the mosque; he was buried in the Yeni Dâjmâ.

The Sultan left a pleasing memory behind him; it is even said of him that he took a personal part in the affairs of state (Sîdîjî-i ʿOthmânî, l.c.) although the sources give little evidence of this. He did not continue the splendors of the court of his predecessor, respecting public feeling which had led to the latter’s fall. Muḥammad is especially celebrated for the large number of buildings he had erected; in Constantinople he built no less than four cîsme and he began the building of the Nûr-i ʿOthmânî mosque. This activity was equally displayed in the provinces. This Sultan also acquired considerable merit by founding four libraries in the capital, those of Aya Soφia, the Wâlide Dâjmâʿ-i mosque, the Fâtih mosque and the Gâhâla Şerâyî. The reign of Muḥammad is further marked by the display of a very skilful diplomatic activity by the Porte, conducted by several very able reis efendî, like Râghib Pasha [q. v.]. They had profited by the lessons of European diplomats and also by the advice of the famous French renegade Bonneval, who lived in Constantinople from 1729 till his death in 1747 and introduced several useful reforms into the army. But in spite of appearances, the Ottoman empire was far from being a strong power as the historian Djeuwêd Pasha (Taṣrîk-i Lycuwêd, 1302 ed., i. 63) has very justly remarked; therefore, in the period of anarchy that followed in Persia the death of Nâdir Shâh, the Porte consistently declined to interfere in Persian affairs. From time to time minor revolts contributed to weaken the strength of the empire; besides the always dangerous Janissaries, there were several risings in Anatolia (e.g. Şârî Beg Oğlu in ʿAldîn in 1739). It was also in the reign of Muḥammad I that the Wâhidîs first began to give trouble to the government. In Egypt the Mamlûk beylerbey was re-introduced in the country in practical independence, in spite of the energetic steps taken by Râghib Pasha, when the latter was governor of this province. As to foreign relations, it is interesting to note that it was in this reign that France, which became very influential after the peace of Belgrade, succeeded in 1740 in obtaining the celebrated capitulation which became in time the most important document on the extra-territorial rights of foreigners in Turkey.

Bibliography: The principal Turkish sources are the imperial historiographers Taṣrîk Şâhî ve Şâhir ve-Sûbûh, Constantinople 1195 (years 1143–1156), Taṣrîk-i ʿAzî, Constantinople 1199 (year 1157–1165) and the beginning of the Taṣrîk-i Wâdîf, Constantinople 1219 (beginning in 1166); then there are the reports of certain embassies like the Taṣrîk ve-Taṣrîf of Râghib Pasha on the peace negotiations with Nâdir Shâh in 1736, a manuscript which was used by von Hammer. There are also several works still in manuscript on the history of the reign of Muḥammad I, noted by Babinger, G.O.W., Leipzig 1927, p. 332. The same author (op. cit., p. 289) also quotes a series of monographs in Turkish which deal with the wars of Nâdir Shâh. For these wars, a complementary source is the biography of Nâdir Shâh by Mahdî Khan and Hanway, A Journal of Travels from London through Russia into Persia, 1735. — General sketches of the reign of Muḥammad I are to be found in von Hammer, G.O.R. 2, Pêsh 1836, iv. 462–468; Zinkelstein, Geschichte des Osmanischen Reiches in Europa, v., Göra 1857; p. 620–647; Jorga, Geschichte des Osmanischen Reiches, Göra 1911, iv. 409–462. (J. H. Kramer)}
dethroned sultan had undoubtedly exercised a great influence on Mahmud's ideas, making him appear afterwards as Salim's avenger.

The grand-vizierate of Muṣṭafā Bairâdâr Paṣha, the consequence of the latter's victory, lasted only until November 1808; a revolt put an end to his reformatory tyranny and to his life. The next years were taken up by the war against the Russians, who had occupied the Danubian principalities in December 1806. Endeavouring to continue their conquests on the southern side of the Danube, the Russians met with more resistance from the Turks than had been expected; it was, however, due principally to the increasing danger of the Franco-Russian war, that the Turks obtained the peace of Bucarest, signed on May 25, 1812, and negotiated, on the part of the Turks, by Ghalib Efendi. By this peace, Turkey had only to cede Bessarabia to Russia. In the meantime the new sultan had inaugurated a policy of internal consolidation of the empire, a policy which lasted until the Greek revolt in 1820 began to absorb all the strength of the state. He put an end to the almost independent position of the ḥāna in Rumelia and to that of the numerous derebâys in Anatolia, especially to the families of the Kâr 'Othman Oghlu in Sarukhan and Arîin and of the Çapan Oghlu of the region of Kar-asâyı [cf. Derbây].

The sultan's authority was equally reestablished in southern Mesopotamia after the death of Sulayman Paṣha of Baghdad in 1810. The aid of Muhammad 'Ali Paṣha of Egypt had to be invoked to repulse the Wahhabi power in Arabia; Mekka and Medina were reconquered in 1813 by 'Uṣūn Paṣha [cf. ibn Saʿīd]. In Syria it was only after years of trouble that an arrangement could be attained, which left Miḥd-ūd as supreme baṣr of this principality. The submission of Bosna only took place after 1821. On the contrary 'Ali Paṣha of Yemen succeeded in keeping his strong position during this period; not till 1820 were the Turkish troops able to lay siege to Yemâna. In Constanti-nopole the sultan took severe measures to maintain order, especially against the dangerous element of the Janissaries.

During this time the diplomatic difficulties with Russia, relating to the interpretation and the execution of the peace treaty, continued, especially with regard to the regime in Moldavia and Wallachia. These difficulties were to become a real danger after the Greek insurrection had broken out. This insurrection, being in a way a consequence of the autocratic regime of 'Ali of Yemen, and secretly favoured by Russia, began in 1820 with the appearance of Alexander Ipsilânti in Rumânia and a feeble revolt in Morea, instigated by Demetrius Ipsilânti. The first reactions on the Turkish side were numerous executions at Constantinople, including that of the Greek patriarch Then Turkish troops entered Rumânia, where Ipsilânti was easily beaten. As this military action provoked sharp protests from Russia, who ambassador Stroganow left Constantinople, the Turkish troops were soon withdrawn for the greater part. But in 1822 the insurrection in Morea spread quickly: Tripoli and Corinth fell into the hands of the insurgents. In the same year 'Ali of Yemen was murdered. In May 1822 the Ecumenical Patriarch of Athens was surrendered by the Turks: the latter, however, remained on the whole stronger than the Greeks. In order to avoid all difficulties with Russia, the Porte had evacuated in 1823 the whole of Rumânia, while declaring that, henceforward, she would suffer no more foreign intervention in her internal affairs. But Russia continually came forward with new claims (e.g. the division of Greece into three principalities, after the model of the principalities on the Danube); at the same time the other European powers no longer remained indifferent towards the Greek affairs, partly because public opinion began to be influenced by the philhellenic movement, and partly because they feared that Russia might gain too much profit from the weakness of the Ottoman Empire. In these years Turkey had even to sustain a war with Persia occasioned by Persian incursions into Kurdistan; this war was ended by 1823. During the years 1824 and 1825, while Turks and Greeks were waging a guerilla war by land and sea, and while amongst the Greeks there reigned complete anarchy, nothing decisive happened. The situation was only changed by the death of Alexander I of Russia (December 1, 1825) — which brought to the throne Nicolas I, much more inclined to make short work of the Turks — and by the combined action in Morea of Egyptian and Turkish troops under the command of Ibrahim Paṣha, son of Muḥammad 'Ali. This action was crowned by complete success, for Morea was entirely subdued, and on April 23, 1826 the fortress of Missolonghi capitulated after a siege of more than six months.

The Turkish successes encouraged the sultan to realise his long considered project to form a new army, trained and equipped after the European fashion. These new troops were recruited from the Janissaries. Their inauguration took place on June 4, 1826 and occasioned, ten days afterwards, the revolt of the Janissaries which ended in the complete and bloody extermination of these once famous troops (June 16). The extermination of the Janissaries is an act that will always be connected with the name of Mahmud II; it made a formidable impression in the whole country and in the reform party — who spoke of it as the waṭfa-i khairyī — considered it as the beginning of a new era of prosperity. The first consequences, however, were disastrous; the strength of the empire was weakened to a degree, which made itself felt more and more in the development of the relations with Russia. Hoping to get rid of the everlasting demands of Russia, the Porte had given still more concessions by the convention of Akkerman (September 25, 1826), but soon afterwards followed an agreement between Russia, Great Britain, France and Prussia with regard to the Greek question (July 7, 1827), which precipitated the Turks from the suppression of the insurrection. Though directed, since the beginning of 1827, by the fanatical Pertev Efendi as Re's Efendi, Turkish diplomacy was powerless against this new intervention. One of the consequences of the agreement of the powers was the destruction of the Turkish-Egyptian fleet in the Gulf of Navarino, on October 10, 1827, without previous declaration of war, by the English, French and Russian naval forces. Subsequently the diplomatic relations with these countries were broken off, but, when war actually broke out, it was only with Russia.

The Russian war, inaugurated by a declaration of war by Russia (May 7, 1828), was particularly disastrous for Turkey. The Russians immediately
occupied Rumania and crossed the Danube, while on the Oriental front they took Karas and Akhalčik in the Caucasus. In 1829 the debacle was completed by the occupation of Adrianople by General Diebitch, on August 19. Thus, by the peace treaty of Adrianople of September 14, 1829, the Porte was obliged to make all the concessions required of her. Russia gave back nearly all her conquests, but obtained the payment of a heavy war indemnity. As to Greece, Turkey had to accept the decision of the great powers, which meant absolute independence. In the following years the near frontier and the future relations between Turkey and the new state were regulated by special conventions.

The principal political facts of the nine last years of Mahmud's reign were the conflict with Muhammad 'Ali of Egypt and the Russian intervention, which was its consequence and put Turkey in a state of dependence on Russia. The activity of Muhammad 'Ali [q. v.] began in 1831 with the invasion by Ibrahim Pasha of the territory of the pasha of Akka; this town was besieged and fell in May 1832. Within a short time Damascus, and Aleppo also submitted to Ibrahim. The military measures of the sultan were unable to stop the advance of the Egyptian troops, who marched from Syria into Asia Minor; the Turkish General Rashid Pasha was beaten by them in the battle of Konya (December 21, 1832) and was himself made a prisoner. The Porte then was obliged to accept the aid offered by Russia and the mediation of France, the result of which was an agreement, concluded on April 8, 1833 at Kutahiya, with Ibrahim Pasha; Muhammad 'Ali had to be recognised as pasha of Syria while the province of Adana was given to Ibrahim. In the meantime Russian troops had been landed in the Bosporus. These were only withdrawn after the conclusion of the notorious treaty of Hasköy, signed on July 1, 1853 between Turkey and Russia. The treaty was a defensive alliance and contained a secret clause by which Turkey undertook to prevent any eventual enemies of Russia from entering into the Black Sea. Thus Turkey became still more politically linked to Russia, without the other powers being able to hinder this.

On the other hand Mahmud continued with tenacity the consolidation of his authority in the interior. The principal agent of this policy was the former grand-vizier Rashid Pasha, appointed governor of Siwās after his return from Egyptian captivity. He succeeded in establishing order in Upper and Lower Egypt and in Armenia, especially by subduing the Karageorges. After his death, in 1836, he was replaced as serasker by Hāfiz Pasha. The latter, unlike Rashid, was in favour of the introduction of modern tactics into the Turkish army; in his successful expeditions in the north of Mesopotamia he was accompanied by the Prussian lieutenant von Moltke, one of the army instructors who had been sent by the King of Prussia. These military measures of Mahmud had also in view the strengthening of the frontier on the Syrian side, in order to be prepared for a new conflict with Muhammad 'Ali. This event happened only after 1838, when Khusraw Pasha [q. v.], the zealous reformer and ancient enemy of the Egypt, came again into power as president of the new Turkish cabinet. The next year Hāfiz Pasha, appointed again as serasker in Kurdistan, crossed the Euphrates and occupied 'Aintab, but he was completely beaten by the Egyptians under Ibrahim Pasha, in the battle of Nizib, on June 24, 1839. This battle left Turkey again in a desperate condition, just a week before the death of Mahmud himself.

During the same period the sultan had to suppress dangerous and repeated revolts in Albania and Bosnia; the situation in Serbia had remained quiet after a khaṭṭat sharif of 1830. In 1837, the situation in the interior had become sufficiently stabilised for Mahmud to undertake a journey in his European provinces, which he had on no previous occasion. He then went to Adrianople, and to Constantinople in his palace of Çanlıca, above Scutari.

It is quite clear, from the many descriptions we possess of this sultan, that he was a strong personality, who made his own ideas prevail in the government of his empire. In his immediate entourage only few first rate men were to be found. But the task which Mahmud had set himself, of reforming the empire after the European model was nearly super-human in the extremely unfavourable political circumstances that prevailed during his reign. To which must be added the enormous difficulties presented by the traditional institutions and views existing in all ranks of the Turkish people of those days (cf. e.g. the severe judgement by von Moltke, p. 434 sgg.). Mahmud has often been compared, as a reformer, with Peter the Great, though the conditions were quite different. On the other hand he has been blamed for having commenced his reforms where he should have finished ("par la queue"), for demolishing things existing without being capable of constructive activity; especially in Turkey of to-day Mahmud is judged severely (cf. Halide Edib, Monatsz., London 1926, p. 237 sgg.). It is very probable, however, that without the drastic measures of this sultan, the following period of the Tanzimat [q. v.] would have been an impossibility (cf. Rosen, i. 300 sgg.). The most important reform was that of the army; it brought about the extermination of the Janissaries, but the formation of an army after the European fashion did not succeed till much later; the most zealous reformers, such as Khusraw Pasha, had only very vague ideas about what it really meant. The most useful work was done by the Prussian military instructors. By sending young officers to military schools in Western Europe, Mahmud prepared, however, a new organization. In the government system there gradually developed a cabinet of ministers of state after the Western fashion; at a certain period in 1837, the ancient title of qadi-i aẓam was even temporarily abolished, and the ministers received the new title of vakil. Moreover, by a firman of October 1826, Mahmud had opened the way to the development of a better and more dignified position of the state functionaries; this firman abolished the sultan's right of confiscating the possessions of the functionaries after their death. It was, however, a long time before a new corps of real and loyal functionaries came into existence. The men whose services Mahmud was obliged to use were too often highly corruptible, a circumstance of which the other powers,
especially Russia, took advantage in a large degree.

Mahmūd II lies buried in the turbe that bears his name; it was constructed in Stambul on the Dvān Yolu by his son and successor 'Abd al-Majīd.

**Bibliography:** The Turkish historical works deserve more attention than has been paid as so far. The more accessible ones are: Dżawdat Paşa’s Tārīkh, Constantinople 1303, vol. 1—xii, comprising the period from 1223 to 1241, and its continuation, the Turbe of Ahmad Lutfî, Constantinople 1350—1306, vol. 1—vi, comprising the period from 1241 to 1255. Other printed sources are: Abū Bakr, Wahāf al-dīdī, Constantinople 1332; Tārīkh ‘Abbâs, Constantinople n. d.; Mahfūz ‘Abd, Uṣūl al-faḡīf, Constantinople 1243, a monograph on the extermination of the Janisaries; Mahfūz Thūreryā, Nāṣir al-Waṭāfî, Constantinople (cf. also Bahmig, G. O. W., p. 387). European general treatments of this period: Zinkisen, Geschichte des Osmanischen Reiches in Europa, vol. 3, Gotha 1869, p. 561 sqq. (until 1812); Rosen, Geschichte des Türkischen, Leipzig 1866, vol. 8 (after 1826); Jorga, Geschichte des Osmanischen Reiches, vol. 4, Gotha 1319, p. 382—387.

A valuable contemporary source is H. von Mutke, Beziehungen und Begebenheiten in der Türkei, Berlin 1883.

**MAHMŪD I, NĀṢIR AL-DĪN,** was Sultan of Bengal from 1446 to 1460. When the ferocious tyranny of Shahb al-Dīn Ahmad Shāh, grandson of the usurper, Kāḏjā Čanās, or Čanāš, could no longer be borne, he was put to death, and Nāṣir Kān, one of his amirs, seized the throne, but after a reign of one week was slain by his amirs, who would not submit to one of their own number. Their choice fell on Mahmūd, who was a descendant of Hāfūz, the founder of the old royal house, and he was raised to the throne. He reigned with justice and clemency for twenty-six years, and restored and beautified the city of Gaur. On his death in 1460 he was succeeded by his son Barbak Shāh.

**Bibliography:** Ghulām Husain Salim, Nāṣir al-Dīn Ahmad Shāh, both in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kāsim Fīrishtā, Gulshan-e-Haḍīmi, Bombay lith. ed. of 1832.

**MAHMŪD II, NĀṢIR AL-DĪN** was the third of the Hābšārī, or African Sultāns of Bengal. He succeeded his father in 1494, but was a mere puppet in the hands of one minister after another. His first minister, an African entitled Habīb Shāh, was slain by a rival, another African known as Mālik Bahr the Mahmūd, who afterwards slew Mahmūd, he having occupied the throne for no more than six months, and usurped the throne.

**Bibliography:** see MAHMŪD I of Bengal.

**MAHMŪD III, GHUVRĪ AL-DĪN,** was one of the sixteen sons of ‘Alī al-Dīn Husain Shāh of Bengal. He remained loyal to his eldest brother, Nāṣir al-Dīn ‘Alī Shāh, throughout his reign, but after his death slew his son, ‘Alī al-Dīn Firūz Shāh, in 1533, and ascended the throne. During a troubled reign of five years he never ruled the whole of Bengal Shīr Khān Sūr, who ultimately ascended the throne of Delhi, was already powerful in Bāhār, and allied himself to Mahmūd’s rebellious brother-in-law, Mahdūm-
MAHMBUD, NASIR AL-DIN, Sultan of Dihli, was the son of Shams al-Din Itutmish by the daughter of Kuth al-Din Aibak [q.v.]. In 1246, when the nobles at Dihli were growing weary of the sloth, incompetence, and tyranny of Mas'ud, Mahmud, then about 18 years of age, was governor of Bahrali, and hastened secretly to the capital when he learned that the throne was likely to become vacant. On June 10, 1246, Mas'ud was deposed and thrown into prison, where he died shortly afterwards, and Mahmud, his uncle, was enthroned in the Green Palace. He was an amiable and pious prince, with a taste for calligraphy, which he displayed in making copies of the Koran, but as a ruler he was a mere cipher. He was well served by Chiyay al-Din Balban, whose daughter he married, and who ultimately succeeded him on the throne. Balban restored the royal authority in the Pandjab, the Dab, Mewat, Multan, Nagaur, and northern Malwa, but his enemies had long been busy during his absence from court, and on his return attempted to assassinate him. He frustrated this design, but was banished from court. The nobles soon grew weary of the rough Rajah, who had supplanted Dihli, and Balban and other nobles assembled their troops at Bhatinda. Rajah and the king marched against them, but as most of the nobles in the royal camp were in sympathy with Balban, who hesitated to attack the king, serious hostilities were avoided, and the royal army retreated. The nobles at court now prevailed upon the king to dismiss Rajah, who was banished, first to Budan, and afterwards to Bahrali, a reconciliation between the king and Balban was effected, and they returned together to Dihli in January, 1255. Rajah was soon discovered to be in communication with Kutlug Khan, of Bayana, who had secretly married the king's mother, and the enuch was captured and put to death. In 1256 Mahmud and Balban marched against Kutlug Khan, who fled, and when he was pursued, in 1257, into Sirmur, again fled and took refuge with Myri Khan, the rebellious governor of Multan and Ceth. Balban marched against the rebels, but they evaded him and marched on Dihli. Finding, however, that preparations had been made to receive them, and that Balban was menacing their retreat, they fled, and in 1259 joined an army of Mughuls which was invading the Pandjab. It was feared that the Mughuls would attack Dihli, but they retired without crossing the Satlaj. Order was then again restored in the Dihli, and in the following year the Meos of Mewat expiated by a terrible punishment a long series of crimes. Their country was ravaged, and 250 of their principal men were brought to Dihli and put to death with torture. In a second expedition 12,000 of them, men, women, and children were put to the sword. Meanwhile negotiations had been in progress with Hulaghi Khan at Tabriz, and in 1260 a Mughul envoy reached Dihli and promised, in his master's name, that raids into India should cease. At this point a hiatus of nearly six years occurs in the history of the Muslims in India, and the next fact which is recorded is that Mahmud died on Feb. 18, 1266, and was succeeded by Balban.

Bibliography: Minhaj al-Din Siraj. Tabakat Nasi'i, text and translation by Major H. G. Raverty; 'Abd al-Kadir Bad'awi, Munakhab al-Tawarikh, text and translation by G. S. A. Ranking; Nizam al-Din Ahmad, Tabakat-i Akbari, text, in all in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kaim Firuz, Gulshan-i Ibrahiimi, Bombay lith. ed. of 1832. (T. W. Haig) MAHMBUD II, NASIR AL-DIN, was the grandson of Firuz Shah, of the Tughluq dynasty, and was placed on the throne of Dihli on March 8, 1353, on the death of his elder brother Humayun (Skandar Shah) and was never more than a puppet in the hands of intriguing ministers. The eunuch Sarwar, who was amanuensis to Humayun, led a Hindustan rebellion in Awadh, received the title of Sultan al-Shahr, and never returned to Dihli, but established his independence in Dnjawan. Another amir, Sargar Khan, became virtually independent in the Pandjab, and the minister Sa'idat Khan, presenting his supersession by Mukarrab Khan, set up Mahmud's cousin Nu'srat as a rival king within the narrow limits of the kingdom of Dihli. In 1358 Mulla, the brother of Sargar Khan, murdered Mukarrab Khan and assumed control of Mahmud, who deposed him on the title of Iibai Khan, Nu'srat Shah was then driven into the Dab, but the kingdom of Dihli was thrown into confusion when, in October, 1358, news was received that the Amir Timur [q.v.] had crossed the Indus and taken Multan. He reached Panipat on Dec. 2, and meanwhile the capital had been filled with fugitives, fleeing before him. The sources of the kingdom were so restricted that no adequate preparations could be made to resist him, and Mahmud and Mulla were filled with terror; but such troops as could be collected were assembled within the walls, and on Dec. 15, the king and his minister marched forth to meet the invader, who had crossed the Dnjama from his camp at Lon. They were utterly defeated, and fled by night, Mulla to Baran in the Dab, and Mahmud to Gudjarat, and afterwards to Malwa. Timur left Dihli on Jan. 1, 1359, and on his way to plunder, devastation, and bloodshed was finished, and Mahmud's rival, Nu'srat Shah, occupied the ruins of the capital, but was expelled by Mulla, and driven into Mewat, where he shortly afterwards died. Mulla returned to Dihli in 1400, and in 1401 was rejoined by Mahmud. In 1402 Mulla, carrying Mahmud with him, marched to Kannwadj to attack Ibrhim Shah of Dnjawan, but Mahmud, weary of the domination of Mulla, fled and joined Ibrhim, who, however, received him so ill that he again fled, and established himself in Kannwadj. Mulla then made a fruitless attempt to recover Gwalior, and returned to Kannwadj in order to recapture Mahmud, but was baffled by the strength of its defences and returned to Dihli. He attempted to subdue Khijr Khan of Multan, but was defeated and slain by him in November, 1405. After his death Djalat Khan Lodhi became the virtual ruler of Dihli, and at his invitation Mahmud returned to his capital. The rest of his reign was spent in attempts to re-establish his authority in Sambha, Sambhal, and Baran, and to punish Ibrhim of Dnjawan for his reception of him when he had fled from Mulla; but he was obliged to conclude an inglorious peace with Ibrhim, and his successes in other directions was neutralized by the advance of Khijr Khan, who pretended that Timur had appointed him his viceregy in India, and in 1406 stripped Mahmud of all his possessions beyond the walls of Dihli except the Dab, Rohtak, and
Sambhal. In 1409 and 1410 Khizr Khān captured Rohtak, Nainauli, three towns to the south of Dhilli, and Firuzābād, and besieged Mahmūd in his capital, which was only saved by a famine which compelled the invader to retire. In 1413 Mahmūd died, the last of his line, at Kaithal, after a nominal reign of twenty years.

Bibliography: Abd al-Kadîr Badshâh, Muntahâb al-Tawârîkh, text, and translation by Rangkî; Nizâm al-Dîn Ahmad, Tâbâqât-i Akhbari, text, all in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kâsim Firdusi, Gûlshan-i Irânshâh, Bombay lith. ed. of 1870 (T. W. Hays). MAHMUD, Bâhil Shârki, succeeded his father, Irâshâm Shah, on the throne of Džawnpûr in 1436. In 1443 he obtained permission from Mahmûd I of Mâwla to punish Nâvir Khân, governor of Kalâ, which was a sie of Mâwla, for breaches of the law and customs of Islâm committed by him, but Mahmûd of Mâwla repented of his complaisance, and war broke out between Mâwla and Džawnpûr. Hostilities, which were indiscriminate were terminated by a compromise. In 1452 Mahmûd Shârki, on the invitation of some disaffected nobles, attacked Dhilli in the absence of Bahûdûr Loud, but was defeated and compelled to retreat to Džawnpûr. The foolish act of aggression served only to arouse in Bahûlû a sense of the danger to Dhilli of the existence of an independent kingdom in Awadh. And in 1457 he marched to attack Mahmûd, who, however, died before he could meet him in the field.

MAHMUD I, SAFI AL-DIN, Bâhil Shârki, the greatest of the Suljânân of Gujrat, was a younger son of Muhammad I, Karm, and was born in 1444. In 1458 the nobles dethroned his nephew, Dâwûd, a vicious and depraved youth, and placed Mahmûd on the throne. The boy immediately displayed great courage and resource in the suppression of a serious conspiracy and rebellion at the beginning of his reign, and in 1461-1462 he marched to the assistance of the youthful Nizâm Shâh of the Dakhân, whose dominions had been invaded by Mahmûd I of Mâwla. He compelled the invaders to retire and frustrated a second attempt to invade the Dakhân. In 1466-1467 he attacked and defeated the Râdji of Gînîr in Kâthîwâr, which had been independent since the capture of the fortresses by Muhammad b. Tughluq of Dhilli in 1438, and reduced them to the position of a vassal. In 1470 he again invaded Gînîr, and on Dec. 4, captured the Râdji's stronghold and compelled him to accept Islâm, thus putting an end to the Cûdâsma dynasty, which had reigned in Gînîr for about 1,000 years. The Râdji became an amir of Gujrat, and received the title of Khân-Djâhan, and Mahmûd founded, near Gînîr, a new fortress, which he named Mushâtâbâbâd. He then invaded Kaich and suppressed a rebellion in that province, carrying its leaders, who were compelled to accept Islâm, to Musûtâtâbâbâd as hostages. In 1472 he crossed the Rân and marched into Sind, to assist LâshâNâ Nânda (Nizâm al-Dîn) who was beset by rebels. He crushed the rebellion, and after his return marched to Dwarthâ, to punish the Râdji, Bhîm, who had plundered a ship belonging to a Muslim merchant. Dwarthâ and Bhâst Shânkhodhar, the robber chief's stronghold, were taken, and a Muslim governor was appointed to manage the small state. Bhîm himself was captured and executed. Mahmûd's next expedition was against some Malâbârt pirates who had harassed the coast near Khambatây (Camby), and whose depredations were checked by the capture and execution of some of their number. Râdji Patâ of Câmpânâ had long encouraged brigandage in the kingdom of Gujrat, and Mahmûd now retaliated by raiding some districts of his state. On his return to Ahmadabâd he discovered a plot to depose him, formed by some of his nobles, who were weary of his ceaseless activity, but the malcontents, who were well aware of the dangers which threatened the kingdom, were brought to their senses by his threat to perform the pilgrimage to Makkah, leaving his young son as regent. After restoring order in various districts of his kingdom he marched, in December, 1482, to settle accounts with Câmpânâ. The forces fell, after a siege of two years, at the end of 1484 and the Râdji and his Minister, having refused, after five months' imprisonment, to accept Islâm, were put to death. In 1491 Mahmûd was disturbed by acts of piracy and aggression committed against his subjects by Bahûdûr Gilânî, a rebel in the Konkan, and his protests compelled the nobles of the distracted kingdom of the Dakân to unite for the purpose of crushing the rebel. In 1507 Mahmûd's fleet, under Malik Aiyân of Dîâ, participated with that of Malik Ashraf Kanâtî, of Egypt, in the victory over the Portuguese fleet, in which the gallant young Lourenço de Almeida, son of the viceroy, was slain, and later in the same year he invaded Khândesh and placed on the throne of that kingdom his daughter's son, 'Alam Khân, whose father was descended from the ruling family of Khândesh, and who ascended the throne under the title of 'Adîl Khân. In this campaign he was opposed by Nizâm Shâh of Ahmâdâbâd. In 1511 a mission from Shâh Isâm of Safawî of Persia arrived in Gujrat for the purpose of inviting Mahmûd to accept the Shîa faith, but he refused to see the heretics. He had now been ailing for some time, and on Nov. 23, 1511, he died, at the age of sixty-nine (lunar) years, after a reign of rather more than fifty-three years. He was a tall, burly man of commanding appearance, and was, besides being an able administrator, both warlike and chivalrous. His nickname of Begarha has been variously explained, but it undoubtedly had reference to his capture of the two great fortresses (gârêb) of Gînîr and Câmpânâ. His elder brother had died of poison, and strange stories are told of his precautions against a like fate. He is said to have gradually absorbed poisons into his system until he was so impregnated with them that a fly settling on his hand instantly died. Butler refers to this strange prophylactic treatment in the lines:

"The King of Cambay's daily food
Is ap, and basilisk, and toad".

He was also distinguished by his voracious ap-
petite. His daily allowance of food was between twenty and thirty pounds' weight, and before going to sleep he placed two pounds, or more, of boiled rice on either side of his couch, so that he might find something to eat on whichever side he awoke. When he rose in the morning he swallowed a cup of honey, a cup of butter, and from 100 to 150 bananans.

MAHMUD II of Gujurat, was the sixth son of Mu'ajjar II, on whose death his eldest son, Sikandar, was raised to the throne, but was assassinated on July 12, 1526. The minister then placed on the throne Mahmūd, who was an infant, in order that he might rule in his name, but Bahādur, the second son of Mu'ajjar, who had been absent at Dhihli and Djarwāpur, hastened back to secure his birthright, and on July 11, ascended the throne at Aḩmadābād and marched on to Cāmpāner, where his infant brother was. He entered the fortress without opposition, and Mahmūd was dethroned and secretly murdered within the year.

Bibliography: See MAHMUD I of Gujurat.

MAHMUD III, Sād-al-Dīn, of Gujurat, was the son of Latif Kān, third son of Mu'ajjar II. On the death of Bahādur Shāh Muhammed Shāh Farūkī of Kāhndes was offered the crown of Gujurat, but died on his way thither. The choice of the nobles then fell on Mahmūd, the heir male, but his cousin, Mubārak II of Kāhndes, in whose custody he was, and who had himself expected an offer of the crown of Gujurat, refused to surrender him, until an army from Gujurat compelled him to do so. The prince was escorted back to his country, and on Aug. 8, 1537, was enthroned as Mahmūd III, being then only eleven years of age. For the first three or four years of his reign he was a puppet in the hands of powerful ministers, and when he escaped from tutelage proved himself to be weak and inefficient. His attempt, in 1546, to recover Dīrī from the Portu-
guese, was a miserable failure, brutally avenged by him on the few Portuguese prisoners in his hands. In 1549 he retired to Mahmūdābād, where he lived in slothful luxury, ruining his constitution with drugs. On Feb. 15, 1554, he was stabbed, as he lay in a drunken stupor, at the instigation of an attendant named Burhān al-Dīn, who attempted to usurp the throne, but was slain by the nobles. The discovery of an heir was no easy matter, for Mahmūd, dreading an heir as a possible competitor, had taken the barbarous precaution of procuring an abortion whenever a woman of his harem became pregnant. The choice of the nobles ultimately fell on a young prince entitled Rādī al-Mulk, the great-grandson of Shākar Kān, a younger son of Aḩmad I, and he was raised to the throne under the title of Aḩmad II.

Bibliography: See MAHMUD I of Gujurat.

MAHMUD I, KHALID, of Mālwa, was the son of Malik Mu'ayyad, sister's son to Dilās̄ar Kān, the first independent Sulṭān of Mālwa. On May 12, 1436, Mahmūd caused his cousin, Muhammed Ghūrī, a debauched and barbarous prince, to be poisoned, frustrated an attempt to enthrone his young son, Mas'ūd, and offered the crown to his own father, Muqībī, who refused it, whereupon Mahmūd himself ascended the throne. He was beset by difficulties, and after quelling a rebellion raised on behalf of Aḩmad, a Ghūrī prince, repelled an invasion by Aḩmad I of Gujurat, who attempted to restore Mas'ūd to his father's throne. A pretender was set up in Cāndēri, and died while Mahmūd was besieging the fortress, but he was obliged to turn immediately against Dongar Singh of Gvālıār, who had taken advantage of the disturbed state of Mālwa to invade the country. He expelled the Hindus and returned to Māndū, whence he was summoned, in 1440, by a faction among the nobles of Dīhli, who offered him the throne. He marched to Tughluqābād, but his partisans failed him, and he was met by the army of Muhammed Shāh the Sayyid, under Bahālūl Lodi. After some indecisive fighting he agreed to retire, assenting the more readily owing to news of a serious rebellion in Māndū. On his return he found that the rebellion had been suppressed by his father, and in 1442 he invaded Mewār to punish the Rānā for the assistance which he had given to the pretender who had troubled the early years of his reign. He had considerable success in the campaign, but retired without attempting to besiege Cītār. On his return to Māndū he quarrelled with Mahmūd Shāh Shāh Shāfiq [q. v.] of Djarwāpur, regarding Nasīr Kān, the turbulent ruler of Kālpī, but after an indecisive campaign the two kings made peace on the basis of a compromise. In October, 1446, he again invaded Mewār, extorted some tribute from the Rānā, established his own authority in Ranthambhor, compelled Aḩmad Kān of Bīyānā to do homage and pay tribute, and collected tribute from the Rājā of Kota. He left a force to besiege Cītār, but the siege was not formed. In 1450 he invaded Gujurat to establish him to the allegiance of Kanak Dās, Rājā of Cāmpāner, but gained nothing except an instalment of tribute from the Rājā, and in the following year he suffered a severe defeat during a second invasion of Gujurat. In 1451 he subdued the turbulent Hārā Rājdāps on his northern frontier, and later in the year invaded Berār and besieged Māhūr, but retired when the Bahmani king marched to its relief. In 1455 he again invaded Mewār, recaptured Aḑjmer, collected tribute from minor chieftains, and harassed and plundered large tracts in Rājdūtpūtañā. In 1461 he was induced to invade the Dakan, where he defeated the army of the boy-king, Nīżām Shāh, and besieged him in his capital, but was obliged to retire by the news that Mahmūd I of Gujurat was marching to the assistance of Nīżām Shāh, and suffered severely at the hands of the Korkūs of the Melghāt during his retreat. He invaded the Dakan in the following year, but before he could effect anything was again obliged to retire by Mahmūd I of Gujurat. In the same year Kherla, a fortress of Berār held by him, was taken by the officers of the Bahmani king, but he succeeded in recovering it. In 1466 he again invaded Mewār, but though he defeated Rānā
Kumhā in the field he failed to take his capital by surprise, and returned to Māndā. In 1468 he marched to Canderi, and his officers captured and destroyed the fortress of Karahra. On his way back to Māndā he suffered severely from the heat, and on June 1, 1469, he died, at the age of sixty-eight. He was the greatest of the Muslim kings of Mālwa, and under him the kingdom reached its greatest extent. The "column of victory" at Citor is said to commemorate Rānā Kumhā's victories over Māhūmd I of Gudjarāt, and Māhūmd II, not by Kumhā himself, but by Māhūmd I. Māhūmd I's fame had reached distant Egypt, for he received an envoy from the phantom 'Abhāsīd Khālsī, who formally recognized him as Sulṭān of Mālwa. He was a zealous Muslim, and restored the use in all public offices of the inconvenient lunar calendar of Islām, and, while he gloried in his successes against the "infidels", was careful to excuse himself for his attacks — often unjustifiable — on sovereigns of his own faith.

(T. W. Haig)

MAHŪMD II, "ALI" AL-DIN, KHALEDJ, OF MĀLWA, was raised to the throne on May 2, 1511, on the death of his father, Nāṣir al-Dīn Khāledj. The early days of his reign were disturbed by rebellions on behalf of his brothers, and other pretenders, and he was once driven from his capital, but was enabled to return and expel the rebels by the assistance of Mehdī Khāj, with a force of Kāhdjīs. The king soon had reason to repent of having accepted their aid, for Mehdī Khāj assumed the place of minister, and the dominion of the Hindūs, alienated and disgusted all the Muslim nobles of the kingdom. Bihījī Khaṇ, governor of Canderi, openly expressed the cause of a pretender, and Māhūmd, while engaged in correspondence with him, was disturbed by news of a revolt in his capital, and of the invasion of his kingdom by Muṣafar II of Gudjarāt, but the revolt was suppressed, and the invader was recalled to Gudjarāt by domestic disturbances. After protracted negotiations the pretender fled, and Bihījī Khaṇ received Māhūmd at Canderi and endeavoured, but in vain, to free him from the influence of the Hindūs. Māhūmd returned to Māndā early in 1514 and fell entirely under the control of the Kāhdjīs, at whose instance he put to death many of the Muslim nobles of the kingdom. The arrogance of the Hindūs at length became intolerable, and in 1517 Māhūmd fled to Gudjarāt and sought aid of Muṣafar II, who led an army into Mālwa to restore his authority, captured Māndā, and massacred the Kāhdjīs who had held it. The rest of the Kāhdjīs in the state established themselves on its northern border and transferred their allegiance to Rānā Sangrama of Citor. Muṣafar retired to Gudjarāt leaving 10,000 horse to a-i Māhūmd, and Māhūmd besieged Gāgrān, held by Hemkaran for Mehdī Khāj. The Rānā marched to its relief, and Māhūmd, turning aside to meet him, suffered a severe defeat, and was wounded and captured. Sangrama received him courteously, but compelled him to surrender his crown jewels. He might now have annexed Mālwa, but, fearing to arouse the hostility of every Muslim ruler in India, made a virtue of necessity, and replaced Māhūmd on his throne. A few years later Māhūmd harboured and encouraged Cānd Khān, brother of Bahādur Shāh of Gudjarāt, and a pretendee to his throne. Bahādur invaded Mālwa and besieged Māndā. Māhūmd's sloth and negligence infected his army, and on March 17, 1531, Bahādur captured the city, and Māhūmd appeared before him. Mālwa was annexed to Gudjarāt, and Māhūmd and his family were sent towards Cāmpānī, to be imprisoned there. On April 12 the camp was attacked by a force of Bhīls and Kōlis, and Māhūmd's guards, fearing a rescue, put him to death. His seven sons were conveyed to Cāmpānī, and nothing more is known of their fate.

Bibliography: See MAHŪMD I OF MĀLWA.

(T. W. Haig)

MAHŪMD B. ISMĀ'IL. [See IBN KĀDI SMĀNĪN.]

MAHŪMD B. MUḤĀMMAD B. MALIKSHAḤ, a Salṭān ruler in the 'Irāq (511-525 = 1118-1131), ascended the throne as a boy of 13, being the eldest of his father's five sons. To his misfortune, his trusted advisers only troubled about their own interests, and made the young Sulṭān take various steps which were fatal to the prosperity of his reign. Anushahverd in al-Bondārī mentions no fewer than ten such fatal mistakes, the result was that even in the early years of his reign several ambitious Turkish emirs were in open rebellion while his father's Great Hādījī 'Ali Bār, who, during the latter's illness, had had and still retained control of the vast treasures which the latter had hoarded up, dissipated them in a very short time and let the young Sulṭān lead a gay life. Especially dangerous to him were the atabeks of his brothers Mas'ūd and Tūghrīl, who found the opportunity a favourable one to dispute the sultanate on behalf of their infant protégés. The result was that in 513 (1119) Sandjar, the Sulṭān's powerful uncle, was forced to interfere and marched on al-Ra'i after an attempt to appease him had failed. Māhūmd was then forced to allow matters to come to an open fight but his troops were defeated at Sāwā [q.v.] and nothing was left for him but to go to the victor and accede to the demands made by him. Fortunately Sandjar, whose mother was Māhūmd's grandmother, was favourably disposed to his nephew and announced himself content to add to his territory a few districts, e.g. al-Ra'i, but otherwise received Māhūmd in a friendly fashion and even gave him one of his daughters in marriage. Thereupon he retired and left Māhūmd without his help to make the best of the difficulties that faced him in the 'Irāq. There were had enough, for the Atabeg of Mas'ūd, whom Ibn al-Mīrīr calls Ayāba Dīyūḥsh-beg (cf. Erculii, ii. 132, note), in conjunction with the unruly Malik al-'Arab Dūhās [q.v.], was plotting to proclaim his protégé Sulṭān. The plan failed, however: Ayāba's troops were routed at Asadābād (514) and Mas'ūd's, unlucky vizier, the celebrated Arab poet al-'Uṭbārī [q.v.], was captured and soon afterwards put to death on the pretext
that he was an infidel. The two brothers readily
made friends again as Mṣūd was still a mere
child; Aiyāba escaped, was afterwards pardoned
by Mahmūd, but lost to Aṣḵonḵor al-Bursuki
[q.v.]; the governorship of Mūsul which he had
previously held. Dubais was preparing the Sulṭān
still further, and in the spring of 324 H., because Toghhril, who with his Atālıql had mean-
while been given the province of Arrān as Ṣafīq,
could not withstand the Georgians there, who had
taken Tiflis in 515 (cf. Brosset, Histoire de la
Géorgie, i. 365; Matthias de Edessa, ch. 230—
232; Ibn al-Fārīḵi in Ibn al-Ḵalâfī, ed. Ame-
droz, p. 205), and came to the ʿIrāk to seek
help from Mahmūd. The latter himself took the
field against the Georgians without doing much
and Toghhril, who had now returned to his pro-
vince, soon received a visit there from Dubais,
who persuaded him to set out to the ʿIrāk
against the caliph al-Mustarshīd. As they had no
success in this enterprise, they went to Shāndaq,
to attack the coming Caliph and Mahmūd. Shāndaq
thereupon went to al-Iṣaṣi and sent an
invitation to Mahmūd to come to answer the
charges (522 = 1128). Mahmūd was received with
honours and instructed to restore Dubais to his
territory in Ḥilla while Toghhril and Mṣūd was
also with him, went off with Shāndaq. Mahmūd
however did not find the caliph inclined to tolerate
Dubais in his neighbourhood, and the Sulṭān with-
drew his claims for a sum of 100,000 ānārs and
went to ʿHamadān. There had been trouble between
Mahmūd and the Caliph before and in 520 (1126)
for example there had been open fighting in the streets of ʿAbād between the Arabs and the
Sulṭān's Turkish troops. In all these circumstances,
Mahmūd proved unequal to his task; while he left
the business of government to his vinters,
among whom al-Sumairam and al-Dargazint (or
al-Anasaḵlādī as Ibn al-Ṯāhir always has it) were
the most prominent, he spent his time with his
hawks and hounds, which, according to Mīrḵhwānd,
were 400 in number and wore jewelled collars
and coverings embroidered with gold. It became
worse when he devoted himself to sensual plea-
sures and as a result of his sexual excesses fell
ill and died at ʿHamadān at the early age of
27 (Shawwāl 15, 525 = Sept. 10, 1131). Nevertheless
he was by no means an insignificant figure; he
had a good acquaintance with Arabic and was
celebrated in a long panegyric by Ḥaḡa-Baḡa
[q.v.]; Ibn al-Ṯāhir hands his gentleness and em-
phases that he never, as Sulṭāns usually did,
laid violent hands on the property of his sub-
jects.

Bibliography: in the article ʿIRĀK; cf. also Ibn Ḵalīḵūn, Wafayāt, Cairo 1299;
ii. 519 sq.

Mahmūd of Ghazna, one of the most
famous of Muslim conquerrors, was the
elder son of Subuktigin and was born in 969 A.D.
In 994 Nūḥ II of Buhkār appointed Subuktigin
governor of Khurāsān, as a reward for assistance
received from him, and Subuktigin appointed as
his deputy his son Mahmūd, who took Nīshāpūr
and made it his capital. On his death in 997 Subuktigin left his throne to his young son Mṣūd, but Mahmūd marched to Ghazna, defeated his brother, and ascended the
throne in 999. Begrānī, an amir of Manṣūr II
of Buhkār, attempted to deprive Mahmūd of the
government of Khurāsān, but failed, and the Sī-
mānī dynasty was shortly afterwards extinguished,
its dominions being divided between Mahmūd and
Iḥāl Khand of Kāḡḡar. The ʿKhāṭif the ʿKāḏī
den now recognized Mahmūd as king of Ghazna
and Khurāsān, and conferred on him the title of
Aṭīm al-Malāt, and later that of Vāmīn al-Dawla,
as the last, and also as the successor of the
Valmī dynasty. Mahmūd now made a vow
to invade India and chastise the infidels every year
of his life, and during the remaining thirty years
of his life led no fewer than seventeen raids into
India. After an expedition in the year 1000 he
defeated and captured Djiāpīl I of the Pandjāb
in 1004, and took the town of Īnd. Djiāpīl was
released on promising to pay tribute, but would
not survive his disgrace, and burned himself to
death, leaving his kingdom to his son, Anandpāl.
Mahmūd received the title of Ghiārā, and in 1003
subdued Sīstān. Ḵalaf b. ʿArīmah, whom he defeated,
saved his life by addressing his conqueror as
ʿṢafīqīn"; a title which pleased Mahmūd so much
that he bore it ever afterwards, being, it is said,
the first Muslim sovereign to do so. In 1004 he
invaded the Multān state, and besieged its ruler,
Ḍawād, who had adopted the Carthamian heresy,
for seven months in its capital. Dāwād saved his
kingdom by abjuring his heresy and undertaking
to pay tribute, and Mahmūd returned to his
domains in time to meet Iḥāl Khand, who had
invaded them, near Ḵalīkh. He defeated the invader
and put him to flight, but while he was thus
engaged Sukhpal, a son of Anandpāl, who had
accepted Islam and received the title of Nawās,
tacitly rebelled. Mahmūd marched towards Ḵubār, Sukhpal's capital, but before his arrival there his officers had captured Sukhpal,
who was compelled to disgorge 400,000 dirhams,
and was imprisoned for life. Mahmūd then invaded
the district of Ghiārā, conquered it, and compelled
the inhabitants to accept Islam. Meanwhile the
princes of India had formed a confederacy to
defend their country and their religion, and when
Mahmūd crossed the Indus in 1008 he was met
at Īnd by a great army composed of the troops
of Anandpāl and those of the Ṭarāḏās of Udīḏḏān,
Gwaḵyār, Kūḵāndar, Kāmnawād, Dīḥī, and ʿAdḡān. Their combined forces nearly succeeded in defeating
Mahmūd, but after a hotly contested battle he
won the day, and the Hindus fled. The Ṭarāḏās
lost faith in each other, and the confederacy was
dissolved. Mahmūd pressed on to the fortress of
Ḵhavān and the temple of Nagarkot or ʿḴindā, the
gates of which were opened to him after a siege of seven days. The enormous plunder which
the temple yielded whetted Mahmūd's appetite
for further exploits of the same nature. In 1009
he again invaded the Pandjāb and plundered the
country and slaughtered its inhabitants. Anandpāl,
who dared not attack him, purchased peace by
the payment of an indemnity, a promise of tribute,
and an undertaking to allow him unrestricted
passage through the Pandjāb in future. Dāwād of
Multān had by now relapsed into heresy, and in
1010 Mahmūd invaded his kingdom, took his
capital, and after slaughtering and mutilating great
numbers of his heretical subjects sent him to end
his days as a prisoner in Ghiārā. In 1011 Mahmūd
marched through the Pandjāb to the plunder of
the wealthy temple of Thānesar. The Ṭarāḏās fled,
and Mahmūd plundered the temple, the city and
the kingdom, and carried off the idol Čakravartin,
with much booty and large numbers of captives, to Ghazna.

In 1012 Mahmūd's officers subdued Ghardjistān, and he compelled the Khalīfa al-Kādīr to cede to him those districts of Khurāsān which he had not yet occupied, but the Khalīfa returned a stern refusal to Mahmūd's demand for Samarkand, and Mahmūd was obliged to apologize for his presumption.

Anandpāl had now died and had been succeeded by his son, Trilokanāpāl, a weak monarch who committed the management of his affairs to his son, Nidar Bhīm, or "Bhim the Fearless". Bhīm reversed the submissive policy of his grandfather, and in 1013 Mahmūd was obliged to invade the Pandjāb in order to keep the road to Hindūstān open. In the spring of 1014 he defeated the Hindū prince in the Margala Pass, captured the fortress of Nandana, and pursued him into Kashmir, but was unable to come up with him, and was obliged to return. A second invasion of Kashmir was equally unsuccessful; he failed to take Lahore, and in the spring of 1016 he retired, with heavy losses, from his only unsuccessful campaign in India, losing, on his way, many of his men in the flooded Dījhām. In the same year he marched to Khāhir to avenge the death of his sister's husband, Abu 'l-Abbās Ma'nūn, who had been slain by rebels. He crushed the rebellion and appointed one of his own officers, Alūntāsh, to the government of his new conquest. In the autumn of 1016 he set out on his long meditated expedition into Hindustān, whether Trilokanāpāl and Nidar Bhīm had retired. He crossed the Indus on December 3 and received the submission of the Rāja of Barān, 10,000 of whose subjects accepted Islam. He next defeated Rājā Kulkand of Mahāthān, who to avoid disgrace stabbed his daughter and son, and himself. He sacked and destroyed the splendid cities of Mathurā and Fīrūzābād, and, using the greater part of his army there, marched with a picked force to Kannawād, defended by seven forts on the Ganges. Its ruler, Kāhyapāla, fled, leaving his capital undefended, the seven forts were plundered in one day, and the city was sacked. Aon, further down the Ganges, shared its fate, and Māhājān, "the Fort of the Brahman", was plundered after its defenders had been slain to a man. Rājā Can of Bharaya fled, but this city was sacked, and he was overtaken and defeated on January 6, 1019. Mahmūd then set out on his return march to Ghazna with a large number of elephants, 300,000 dālam, much other plunder, and captives so numerous that slaves were to be had for two or three dālam each. On his return he founded at Ghazna his great mosque, the "Pride of Heaven". Rādžā Nanda of Khānīqān and the Rājā of Gwalīyār had marched to Kannawād after Mahmūd's retreat, and had plundered Kāhyapāla for his cowardly desertion of his capital by putting him to death. They were attempting to form a new confederacy of Hindū princes when Mahmūd, in his invasion of Hindustān to frustrate their design, he defeated Trilokanāpāl on the Kāmān Pass and then turned to confront Rājā Nanda, who was marching to meet him with a great army, at the sight of which even Mahmūd quailed. Nanda, however, was smitten with a sudden panic and fled in the night, leaving his camp to be plundered by Mahmūd, who obtained, with much other booty, 580 elephants, in addition to 270 already taken

from Trilokanāpāl. Then, fearing lest his retreat through the Pandjāb should be cut off, he returned to Ghazna. In 1021 he resolved to provide himself with a base for future raids, and having invaded Swāt and Badjawr and compelled the inhabitants to accept Islam he attacked, but again failed to capture, the fortress of Lokhot, and, raising the siege, marched into the Pandjāb. Trilokanāpāl was dead, and Nidar Bhīm fled and took refuge with the Rājā of Adjarā, where he died in 1026. Mahmūd was thus able to annex the Pandjāb, and brought it under his own sway. In 1022 he again invaded Hindustān and attacked the fortresses of Gwalīyār and Kālidārā, but left their rulers in possession of them on their promising to pay tribute. On his return to Ghazna he mustered his army, and in 1023 invaded Transoxiana to establish his authority there. The smaller chiefs hastened to pay him homage, the ruler of Samarkand was brought before him in chains and was sentenced as a prisoner to Kālindārā, as were also the chiefs of the Saldājā tribe, 4,000 families of which Mahmūd, though he was apprehensive of their power, transported into Khurāsān. In 1025 Mahmūd set out on the most famous of his raids into India, the expedition to Sonnāth. The insolent boasts of the Brāhmans had annoyed him, but it was the reputed wealth of the temple that prompted the enterprise. He crossed the Indian desert after elaborate preparations, plundered both Adjarā and Anhilwārā, and reached Sonnāth in the middle of January, 1026. Within two days his troops had stormed the ramparts and entered the city, but the temple was strongly defended, and while he was attacking it he learned that the Hindū princes of Gujārāt, who had fled before his arrival, had rallied to the defence of the idol, and were before the city. Leaving a force to continue the siege of the temple, he marched against them, and, after a battle in which he narrowly escaped defeat, put them to flight. Their defeat sealed the fate of the temple, which was almost immediately captured. Mahmūd plundered it of its vast treasures and broke up its idol, a huge lingam. From Sonnāth he marched to punish Param Deo, Rādžā of Anhilwārā, for the attempt to relieve the temple, but the Rājā fled, leaving his stronghold and its treasures to the conqueror. It is said that Mahmūd was so captivated by the beauty and climate of Gujārāt that he was with difficulty dissuaded by his officers from making Anihilwārā his capital, and leaving Ghazna to his son, Ma'sūd. On his return march through the Sind desert his army suffered severely, and after crossing the desert was harried by the Dījāts, but succeeded in reaching Ghazna with its spoils. In 1027 Mahmūd undertook his last expedition into India, in order to punish these Dījāts. He collected a flotilla of boats at Multān, and, owing partly to their superior construction, defeated the Dījāts in a naval battle on the Indus, and carried off their families, which they had removed for safety to islands in the river.

The remainder of Mahmūd's life was devoted to the western provinces of his empire. He wrested Ira'ī, Ray 'i and Isfahān from the Buwayhids, invested his son Ma'sūd with the government of the newly conquered territory, and employed himself in establishing order and security on the caravan routes throughout his wide dominions, and in extirpating the heretics whom the Shī'ā Buwayhids had tolerated. In 1029 he returned from Ray'ī to

Balkh, and marched in the spring to Ghazna, where, on April 30, 1050, he died, at the age of sixty-three, worn out with the labours of forty years.

Mahmūd was far from being the zealous champion of the faith depicted by Muslim historians. Occasionally he encouraged, and even compelled Hindūs and others to accept Islam, but the propagation of the faith was never the primary object of any of his campaigns. Temples were attacked rather because they contained treasure than because they contained idols, and he did not hesitate to employ bodies of unconverted Hindūs, even against his brethren in the faith. He has been described as miserly but he loved money chieflly as the source of power. He adorned Ghazna with noble buildings and his court was in that age the chief resort of poets and men of learning, and was adorned by al-‘Uthn, al-Brānī, Usuri, Asadi, Asadad, Mināshirī, Firdawsī, and many other poets and men of letters. His sycophant treatment of Firdawsī is to be attributed rather to the malignity of a personal enemy than to the meanness of the king, and the poet’s mode of resenting it placed him beyond the pale of forgiveness. Mahmūd was one of the great figures in Islamic history, and though his warlike career left him no leisure for the acquisition of learning, he knew how to appreciate and reward literary merit in others.

(W. T. Hark)

MAHMUD GAWAN, IMAD AL-DIN, Khwārīzma, was born in A.D. 1045, of a family which had long held high office in the small principality of Ghur, which was attached to the empire of Gāwān, by which he was afterwards known in India, from Khwārīzma, his birthplace. He received a good education and as a young man made the pilgrimage to Mecca. While he was there his family fell into disgrace, so that he could not safely return home. Refusing offers of employment in other parts of Persia he became a merchant, and in 1055 sailed from the Persian Gulf for India, and landed at the port of Dabhol. Thence he proceeded to Bīdar, the capital of the Bahmani kings, and was well received by ‘Alī al-Dīn Aḥmad II, who was then reigning. He received the command of 1,000 horse and was sent to quell the rebellion of Daulat Khan in Telingāna. His conspicuous success secured his position as one of the leading nobles of the kingdom, and after the death of Aḥmad II in 1057 he received from his son and successor, Humayyān, the title of Malik al-Tughrīr (“Chief of the Merchants”), then highly esteemed. During Humayūn’s short reign he was employed in suppressing rebellion and restoring order in Telingāna, and on the king’s death, in 1061, was associated by his widow with herself and Khwādja Dānān in a council of regency. The foreign enemies of the kingdom took advantage of the childhood of the new king; Niẓām Shāh, and Mahmūd Gāwān bore an honourable part in repelling the invasion of the Rūdiana of Ur, who was forced to pay a large indemnity. Mahmūd Khaḍjī I of Māvāra next invaded the Dākan, defeated the army of Niẓām Shāh, and menaced the existence of the state. Mahmūd Gāwān succeeded in enlisting the aid of Mahmūd I, Begarā, of Gudjarāt, and with his help defeated and expelled the invader. Niẓām Shāh died in 1063, and the kingdom was governed for his younger brother, who succeeded as Muhammad III, by the same council of regency, but the arrogance and ambition of Khwādja Dānān the Turc so aroused the suspicions of the queen-mother that she ordered her young son to put him to death. She shortly afterwards retired from public life, leaving Mahmūd Gāwān, now entitled Khwādja Dānān, sole regent. In 1069 he was sent to subdue the Konkan, and to suppress the pirates of that region, and, in a series of campaigns extending over three years, conquered the country and captured Goa, then one of the principal ports of Vidāyānagar. On his return to Bīdar he was received with great honour and his position as first noble of the kingdom was assured. In 1072 he brought the seige of Belgaum to a successful conclusion, but the chief service which he rendered to the Bahmani kingdom was the reform of its administration. It had originally been divided into four great provinces, Jawlākhān, Berār, and Telingāna, to which the name of fārṣa was given, and the power of the fārṣār, or provincial governor, was almost absolute. He collected the revenue; raised, paid and commanded the army; and appointed all officials, his responsibility to the king being limited to maintaining order, keeping the people contented, remitting to the capital the quota of revenue due, and joining the king, when summoned, with the contingent of troops which he was bound to supply. Even in the early days of the kingdom rebellions raised by provincial governors had not been unknown, but the system had worked well on the whole so long as the limits of the kingdom were comparatively narrow, and the kings were energetic; but when the kingdom now stretched from sea to sea, the provinces were unwieldy and the duties and dangers of the old system were apparent to all. Mahmūd Gāwān divided each of the original fārṣas into two, so that their number became eight. Berār was divided into the two fārṣas of Gāwāl and Mihār; Dawlatābād into Dawlatābād and Dhumār; Gulbarga into Gulbarga and Bīḍā; and Telingāna into Warangal and Rājāmāhendri. The powers of the fārṣās were at the same time curtailed. These reforms were resented by all the old fārṣās, and by none more than by Malik Hasan Bahri. Niẓām al-Mulk, fārṣār of the great province of Telingāna, who was posted to the new fārṣa of Khwādja Dānān, and found his power, influence, and his emoluments reduced by more than half. He was the leader of the Dā-kānī party and Mahmūd, though he had done all in his power to end the strife between the Dakāns and the Foreigners, was a foreigner, and was regarded by all as the leader of the Foreign party. In 1081, the royal camp being then in Telingāna, Hasan Bahri took advantage of the absence of Mahmūd’s chief supporter, Yūnus ‘Adil Khan the Turk, who had been sent on an expedition into the eastern provinces of the kingdom of Vidāyānagar, to compass the downfall and death of Mahmūd. The minister’s
confidential secretary was induced, by misrepresen-
tation, to affix his master’s seal to a folded paper. The
paper was blank, and the conspirators wrote, above the
deed, a treasonable letter to the Râdja of Urisa, inviting him to invade the
kingdom. The letter was shown to the king when he was
drunk, and he at once summoned Mahmûd, who, though warned by his friends that mischief was
afoot, insisted on obeying the order. He was asked
by the king what was the punishment of treason
and unhesitatingly replied, “Death by the sword”.
He was then confronted with the letter, and though
he declared it to be a forgery the king paid no heed
to him, but bade the executioner do his
office, and withdrew. Mahmûd knelt down and repeated
the symbol of his faith, and the executioner, Dêshwar by name, struck off his head. An
order for the plundering of his camp was then
issued, and his followers were dispersed. The king
was much disappointed by the examination of his
late minister’s affairs. He had, throughout his official life continued his mercantile transactions,
and lived frugally on his profits. His great official
emoluments were expended on the troops and
establishments which he maintained and on public
works, and the balance was di-bur-ed in alms, in the
king’s name as well as in his own. Mahmûd III understood, too late, the value of the servant whom he had so
summarily put to death, and his remorse was bitter. Mahmûd was a great statesman and public benefactor. Learned himself,
he was a munificent patron of learning, and built at Biah a magnificent college, the ruins of which
are still to be seen. The only private property
which he left at his death was a splendid library.
He is one of the foremost figures in the political
history of India, and his death was the cause of the
fall of the dynasty which he had served so
well, for it destroyed the confidence of the nobles
in the town, and hastened the advent of the day
when the provincial governors proclaimed their
independence.

(M. W. Huc)

MAHMÛD PASHA, grand vizier in the reign of the Ottoman Sultan Muhammad II, often
called Weli Mahmûd Pasha. He was born in Maşû
Hissar (Krusevatz) in Serbia, of Christian parents;
according to Chalcedonians, his father was Greek and his mother Serb. Taken in his youth to
Adrianople, he was brought up at the court of
Murâd II, and began his public career on the occasion of the accession of Muhammad II in 1451. Soon
afterwards he became Îlgerbeg of Rûmânia; ac-
cording to the historian Rûmiyyâ‘n Zade Mehmed
(Kutûk Nishândî) he had been also Nâşri arîb
[q. v.]. As Îlgerbeg, he took part in the capture
of Constantinople. After this event he was ap-
pointed grand vizier in 1453; the office had been
empty since the execution of Cendereki Khâtîf Pasha. As grand vizier, Mahmûd Pasha frequently
accompanied the Sultan on his campaigns but in
1456–1458 he was appointed to conduct the
operations against the Serbs, while the Sultan
conquered the Morea; in 1459 Muhammad himself
advanced against Serbia which was completely
subdued; during this war Mahmûd Pasha’s brother
was the leader of the Turkish party in Serbia. In
1460 and 1461 the grand vizier took part in the
expeditions against Sâmora and Trebizond as
commander of the fleet while Mahmûd led the
army by land. The capture of Trebizond was
mainly due to Mahmûd Pasha; he was related to
a high dignitary of the court there so that some Greek
authors talk of treachery (Fallmerayer, Geschichte des Kaiserums Trapezunt, p. 279). In 1462, Mahmûd
accompanied the Sultan against the Woiwod of
Wallachia, Wlad Dracul and in the following year as commander of the fleet he was sent to
conquer Lesbos and forced the Duke of Lesbos to
capitulate. In the same year he drove the Venetians
out of the isleusmus of Corinth. In the Bosnian
campaign of 1464, Mahmûd prepared the way for the Sultan’s advance by taking the principal
towns of the country. In the war that followed with Mathias, king of Hungary, Mahmûd failed
in his latter attempt to raise the siege of Zvornik. In
1466 he aided the Sultan in the campaign which was
to put an end to the power of the Karamanoglu and
defeated the Karamanîd Ishâq Beg near Lâranda. The latter himself escaped and this fact
combined with the too humane treatment which the
governor wished to apply to the people of
Konîja and Lâranda and the intrigues of the
second vizier Rûm Mahmûd Pasha, brought the
Sultan to dismiss him on the return march to
Constantinople. Mahmûd Pasha then governed the
sandjak of Gallipoli for some time. In 1472 he
again became grand vizier. The Sultan wished in
that year to send him against Uzun Hasan but
was persuaded by Mahmûd to send Ishâq Pasha in
his place; in the following year he accompanied the
Sultan against the Ak-Koyunlu, who were
finally routed after the Ottomans themselves had
suffered the defeat of Beg Bazar. In the same year
Mahmûd was again dismissed; the reason alleged
was a lack of zeal in the pursuit of the fugitives.
He then retired to the village of Khaîs Koy near
Adrianople. Next year he came to the capital on
the occasion of the marriage of Prince Muştafâ; this
opportunity was taken to calumniate him to the
Sultan on account of the intimacy which had existed
between Muştafâ and Mahmûd Pasha. This was
sufficient to get him imprisoned in the castle of
Yeti Kule and executed a few days later in Rabî’I,
879 (July—Aug. 1474).

Mahmûd Pasha was one of the most popular
grand viziers. His name still survives in the mosque
which he built at Stamoul in 868 (1463–64) on a site originally occupied by a church; in the
mosque is the turbe of the founder. He also erected
a medres, a mekhâme, a mekteb, a well and a
hammâm. There is a legendary story entitled
Menâkîr-ntâmî Mahmûd Pasha, in which his
unjust execution is specially emphasised (printed
in Fr. Dieterici, Christomathic Ottomanae, Berlin
1854): the historian Şarî al-Dîn in his Tâbîî
Tarîx-ü Eâmûî (i. 557) also devotes a chapter to the
Wâ‘arîâ‘ Mahmûd Pasha. Mahmûd Pasha was the
patron of a number of men of letters and scholars,
who dedicated their works to him. He was himself
a poet but it is uncertain whether he wrote under
the nâmâlis of ‘Adâm or ‘Adil. There is a Divân
of ‘Adil (printed Constantinople 1358) which is
generally attributed to Sultan Bâyazîd II but Glib
(Hist. Ott. Poetry, ii. 25 ff.) thinks it should be attributed to Mâhûd Paxha.

(I. H. Kramers)

MAHÂPAIKER. [See KOSFAM.]

MAHR (x.), Hebrew Mahor, Syriac Mahî, "bridal gift", originally "purchase-money",
synonymous with gaddik which properly means
"friendship", then "present", a gift given voluntarily
and not as a result of a contract, is in Muslim
law the gift which the bridegroom has to give
the bride when the contract of marriage is made
and which becomes the property of the wife.

1. Among the pagan Arabs the mahû was an essential condition for a legal marriage and
only when a mahû had been given did a proper legal relationship arise. A marriage without a mahû
was regarded as shameful and looked upon as
concupiscible. In the romance of Antar the Arab
women, who are being forced to marry without
a mahû, indignantly reject such a marriage as
a disgrace. Victors alone married the daughter
of the conquered without giving them a mahû.

In the pre-Islamic period, the mahû was handed
over to the zâwi, i.e. the father, or brother or
relative in whose guardianship (zawil) the girl
was. Here the original character of the marriage
by purchase is more apparent. Earlier times
the bride received none of the mahû. What was
usually given the woman at the betrothal is the
gaddik: the mahû, being the purchase price
of the bride, is given to the wife.

But in the period shortly before Muhammad,
the mahû, or at least a part of it, seems already
to be given to the woman. According to the
Kurânic regulation that a divorce after cohabita-
tion the woman has the right to the whole mahû.

4. According to Muslim fîqh-books, marriage
is a contract (wed) made between the bridegroom
and the zawil of the bride. An essential element
in it is the mahû or gaddik, which the bridegroom
hands himself to give to the bride. The marriage
is null without a mahû. The jurisprudents
are not quite agreed as to the nature of the mahû.
Some regard it practically as purchase-money (e.g.
Khalil: "the mahû is like the purchase-money")
or as an equivalent (iwâf) for the possession
of the woman and the right over her, so that it is
like the price paid in a contract of sale, while
other jurisprudents see in the mahû a symbol, a mark
of honour or a proper legal security of property
for the woman.

All the things can be given as mahû that are
things (mîlî) in the legal sense and therefore
possible to deal in, that is can be the object of
an agreement. The mahû may also — but opinions
differ on the point — consist in a pledge to do
something or in doing something, e.g. instructing
the woman in the Kurânic regulation or allowing her to make
the pilgrimage. The whole of the mahû can either
be given at or shortly after the marriage or it
may be paid in installments. When the latter is
the case it is recommended to give the woman
a half or two-thirds before cohabitation and the rest
later. The mahû may be consumed:

Two kinds of mahû are distinguished:

dissolved. "And if ye wish to exchange one wife
for another and have given one a talent, take
nothing of it back". Even if the man divorces
the wife before he has cohabited with her he
must leave half the mahû with her (Sûra, ii. 237—238).

Down into the Muslim period the wife was
considered after the death of the husband as part
of his estate; the heir simply continued the marriage
of the deceased. Such levirate marriages are found
in the Old Testament also. Muhammad abolished
this custom, which still remained in his time, by
Sûra, iv. 23: "O ye, who are believers, it is not
permitted to you to inherit women against their will."

3. There was an ample store of traditions
about the mahû and these pave the way for the
theories laid down by the jurists in the fîqh-books.
From all the traditions, it is clear that the mahû
was an essential part of the contract of marriage.

According to a tradition in Bukhûrî the mahû is an essential condition for the legality of the marriage:
"every marriage without mahû is null and void".
Even if this tradition, so brief and to the point,
is not genuine, a number of traditions point to
the fact that the mahû was necessary for the
marriage, even if it only consisted of some trifling
thing. Thus in Ibn Mađa and Bukhûrî traditions
are given, according to which the Prophet permitted
a marriage with only a pair of shoes as mahû
and approved of a poor man, who did not even
possess an iron ring, giving his wife instruction
in the Kurânic mahû.

A few hadîths endeavour to show that the mahû
must be neither too high nor too low. From the
traditions we also learn what mahû was given in
particular cases in the Prophet's time: for example,
the bridal gift of "Abd al-Rahmân b. ˚Awf was
an ounce of gold, that of Abu Hurairâ of 10 ākâya
and a dish, that of Shaḥb. Sa'd an iron ring.

In the hadîths we again frequently find
the Kurânic regulation that in a divorce after cohabita-
tion the woman has the right to the whole mahû.

4. According to Muslim fîqh-books, marriage
is a contract (wed) made between the bridegroom
and the zawil of the bride. An essential element
in it is the mahû or gaddik, which the bridegroom
hands himself to give to the bride. The marriage
is null without a mahû. The jurisprudents
are not quite agreed as to the nature of the mahû.
Some regard it practically as purchase-money (e.g.
Khalil: "the mahû is like the purchase-money")
or as an equivalent (iwâf) for the possession
of the woman and the right over her, so that it is
like the price paid in a contract of sale, while
other jurisprudents see in the mahû a symbol, a mark
of honour or a proper legal security of property
for the woman.

All the things can be given as mahû that are
things (mîlî) in the legal sense and therefore
possible to deal in, that is can be the object of
an agreement. The mahû may also — but opinions
differ on the point — consist in a pledge to do
something or in doing something, e.g. instructing
the woman in the Kurânic regulation or allowing her to make
the pilgrimage. The whole of the mahû can either
be given at or shortly after the marriage or it
may be paid in installments. When the latter is
the case it is recommended to give the woman
a half or two-thirds before cohabitation and the rest
later. The mahû may be consumed:

Two kinds of mahû are distinguished:

a. Mahr muṣammā, "definite mahr", the amount of which is exactly laid down in the wedding contract.

b. Mahr al-mithl in which the amount is not exactly laid down, but the bridgegroom gives a brid al gift befitting the wealth, family and qualities of the bride. This mahr al-mithl is also applied in all cases in which nothing definite about the mahr was agreed upon in the contract.

The mahr becomes the property of the wife and she has full right to dispose of it as she likes. In the case of any dispute afterwards as to whether certain things belong to the mahr or not, the man is put upon oath.

The Sharī'ah lays down no maximum or minimum for the amount of the mahr; but limitations were introduced by the various law-schools: the Hanafīs and Shāfiʿīs insist upon 10 dirhems as a minimum and the Malikīs three dirhems. The difference in the amount fixed depends on the economic conditions in the different countries where the madhhab in question prevail.

If the man pronounces a divorce, the mahr must be paid in every case if cohabitation has taken place but the bridgegroom may give it in four installments before it is consummated; in this case he is bound to give the woman half the mahr.

MAHRA, a land on the southeast coast of Arabia on the Indian Ocean between Ḥadramāt, the coast of which is inhabited by the Kaʾait (Geyt), and Zafar: the Arabs however and modern geographers include Zafar itself. Formerly the town only and now the country, the old frankencese region [see Zafar], in Mahra, so that Mahra may be said to be the country between Ḥadramāt and Oman (cf. al-Dakhli, B. G. A. I. 11, 271; T. al-Husaini, ch. 6, n. 172; al-Makki, ibid., ch. 11, 52; Vajāk, Maṣṣūm, iv. 700; al-Dhīl, ed. Jaubert, Farnham 1836, p. 48; Ibn Khallābin, in Kay, Roman, London 1892, p. 132). This connotation of Mahra seems to have been already known to the Greeks of the fourth century n.c.: Theophrastus, Hist. Plant. iv. 4. 2, numbers among the lands of Arabia which yield spices, along with Sabaʾ, Ḥadramāt and Katabān, a fourth, Manusāna (var. Mānṣā). A satisfactory identification of this land, which would also explain the name, has not been made. Of the various attempts to explain it, given in the article SABAʾ in Pauly-Wissowa, Realencykl. d. r. Kunst. Altchristl., col. 1331 sqq. [cf. the article SABAʾ, iv. p. 64] that which suggests Manusāna is a corruption of Manusāna (Mānṣā) which Strabo, xvi. 678 gives with the three South Arabian kingdoms above mentioned, following Erothosthenes — these two authors represent one original source; Erothosthenes and Strabo are two different sources — is certainly wrong. The identification of Mānṣā with Mahra proposed by A. Sprenger, Die alte Geographie Arabiens, München 1875, p. 92, 263, 266, without however any attempt at proving it and also adopted by Fr. Hommel, Ethnologie und Geographie des alten Orients, München 1896 (i. v. Müller, Handbuch der Altertumswissenschaft, Sect. iii., Pt. i., vol. 1) p. 137, is worthy of attention. It was naturally to be expected that the botanist Theophrastus, whose duty it was to give as full a list as possible of lands in Arabia producing aromatic plants, should mention the real land of frankencese, Zafar or in a wider sense Mahra, including Zaftar. On the other hand, it is not to be denied that the mention in Theophrastus of a Mamali or Mali, which is quite unknown, after three well-known names, is remarkable, as it must of course be an important country, fit to be compared with Sabaʾ, Ḥadramāt and Katabān. Simply for this reason Alzer's various attempts to identify it (Schize der Geschichte und Geogr. Arabiens, ii., Berlin 1890, p. 3, 35 sqq., 40, 132, 153 sqq., 217), not one of which is tenable (cf. Realencykl. s.v. Sabaʾ, col. 1333 and here Sabaʾ, iv. p. 56), may be discarded. The passage in Theophrastus has been wrongly interpreted as mentioning Mamali only as the home of the cinnamon plant (see SABAʾ, iv., p. 56) and the literature there given to which may be now added: Hommel, Ethnologie [= Grundriss], p. 517, note 2). Although Mahra is not suggested without certain inherent probability, the question still arises how has it come to be called Mamali or Mali, which must remain more or less a puzzle. As the first two letters in Mahra and Mali are the same, it may be supposed that there is a corruption in the third letter of Mali. The name seems to conceal the Greek transcription of Mahra, which in the form MAPI (from MAPA), was corrupted to MAALI because it was of course unintelligible to the Greek copyists, or more likely been altered by a learned editor with emendation of the first syllable to MAMALI, especially as this form might seem to him to be superficially supported by the Maṣṣālā kūnām in Ptolemy, iv. 7. 5. A further corroborating factor is that Theophrastus' description of the hilly country, where the lībrahūs grows, with the ḫirʾ ṣuʾlah and ḥāwūt and nūrān, from which rivers pour down to the plain and which was visible to sailors from the coast, agrees very well with the description of the ḥirʾ lībrahūs wārṣā你会 in کی یا دچاریت of the land of Zafar [q.v.: in the Persian 'Peregrina Maris Erythraei', § 29 (cf. the ḫirʾ ṣuʾlah and širāth and nūrān, § 32, very probably the Ḥār mountains), and also recalls Carter's statement that nowhere else in South Arabia is there so much running water as in the frankencese country. This undeniable agreement is not affected by the fact that, according to Theophrastus, the frankencese country mentioned by him was in possession of the Sabaens. The fact that he mentions this land as a fourth with Sabaʾ, Ḥadramāt and Katabān and at the same time says that the Sabaens were lords (mişaṣa) of this frankencese country, suggests that the country which was quite a considerable distance from their original home, had passed to Sabaʾ by direct conquest or automatically with the occupation of the
whole territory of some formerly independent power. This may have been either its ancient rival Katabân, which, although still an independent kingdom, no longer exercised sovereignty over the frankincense country and about two centuries later lost its independence to Saba', or the ancient kingdom of Ḥadramôt, which with the frankincense country was in the time of Juba a part of the Sabaeœan kingdom, already ruled by the Himyars (according to Pliny, *Nat. Hist.*, xii. 52 sq.; see Saba') and to which, certainly in the time of the Peripius, i.e. in the Himyar period of the early centuries A.D., long after the beginning of the dissolution of Sabæan rule, the frankincense country belonged but it is only if it is supposed that the frankincense country had been lost however have also been Saba' become a great power. Hommel assumes (*op. cit.*, p. 140 and notably p. 655) quite a close ethnic connection between the Ḥadramôtis and the Minaeans and he definitely says that the Ḥadramôtis Minaeans were those who took possession of the frankincense land, which geographically also appears most natural. No convincing argument can be brought against the evidence of Theophrastus that in his time or in that of his authority, perhaps Andrae's dates (cf. *Realencycl.*, s. v. Saba', col. 1306), the frankincense country was not independent, but belonged to Saba', so that the latter was already a great power, which possessed the hegemony of South Arabia and numbered its weaker neighbours among its feudatories. The frankincense land only became independent early in the Christian era. That the campaigns of the Sabæans extended considerably to the east may be deduced from the Šir̄at inscription (Glaseur, No. 1000) (cf. Hommel, *op. cit.*, p. 658 sq.). On the unjustified alteration in the text (Za2r) in Theophrastus, see Sarx, iv. 6 (to the literature there quoted may now be added: Hommel, *op. cit.*, p. 516 sq. and 653 sq. [in addition to 138]). To support the assumption that the Katabûnians occupied the frankincense land, it is not necessary to presume Gebban as a later name of Katabân (in allusion to the Gebhânaids of Pliny, *Nat. Hist.* vi. 153: on Glaseur's chronological error in the period of Katabûnian occupation of the frankincense country, see Zafer, No. 4). The expression Yamanat in the longer titles of the south Arabian kings of the last epoch means, according to Hommel in *Handbuch der alterthumskunde*, ed. by D. Nielsen, Copenhagen—Paris—Leipzig 1927, p. 96, note 5, "perhaps the frankincense coast as the "southland" of Ḥadramût"; it might well be interpreted as a general name of the southern coasts, at a later date still included in Yemen, in contrast to the lands of Saba', Ḫārīdân and Ḥadramût preceding it in the title, i.e. 49, "Sprenger's remark: *Das Leben und die Leere des Mahommed*, Berlin 1865, iii. 437: "The Mahrites were called Sachalities by the Greeks", is misleading; the land around the Sachalite Gulf is in the conception of the author of the Peripius and of Ptolemy not only Mahra, but also the land lying east of it and especially the part of al-Shîhr in the wider sense lying west of it, the land of the Ka‘āʾit (cf. the article *Ibaraita* in *Realencycl.*). The *regio turfae* in Pliny, xii. 52 (vi. 161) is probably to be understood as Zafr in the narrower sense but may include Mahra to which alone Glaseur refers it (*Die Abh. in Arabien und Afrika*, Munich 1895, p. 125; see at the beginning). The ʿAzārāḥ used in *Herodotos*, ii. 73, in the story of the phoenix is practically a reference to Mahra (Hommel, *op. cit.*, p. 138) although it is not mentioned by name. On the *ʿAzārāḥ* in Stephanus, see below.

The inscriptions which, according to Pliny, *Nat. Hist.*, vi. 150, are inscribed on stone pillars on an island off the South Arabian coast (cf. the article *Shinna* in *Realencycl.*), cannot as Ritter for example (*Erzbuch.*, Vol. viii., Sect. 1, Pt. xii., Berlin 1846, p. 290) thought, be attributed "to the Mahri who were settled in the neighbourhood of Cane" but were probably Minaean (or Nabataean). The position of the emporium of Kanē which according to the *Peripius*, § 27 and Pliny, vi. 134 belonged to the frankincense country and is also mentioned by Ptolemy, vi. 7, 10 cannot be definitely ascertained. Recently several scholars, following Glaser, *op. cit.*, p. 175, C. Landberg, *Arabica*, i., Leyden 1897, p. 75 sq., and *Études sur les dialectes de l'Arabe Miridionade*, i. (Ḥadhamōt), Leyden 1901, p. 196 and earlier writers (see the list in *Realencycl.*, s. v. Saba, col. 1330), have again expressed the view that this port is probably to be located at Ḥṣn al-Ghūrâb (Nielsen in *Handbuch, op. cit.*, p. 8) while Sprenger, *Geographie*, p. 82 sq. had placed it at Bâl-Ḥäft. Since Sprenger, nothing new has been produced in favour of the old view and against. In favour of the latter, in the inscription of Bâl-Ḥäft, and the description of the *Peripius*, § 27 according to which two uninhabited islands, the Šfrūw nūrēh ("Bird Island") and Ṣūllāla were 120 stadia distant from Kane. These, according to Sprenger, are the islands of "Haliyân and Ghusâl", also called al-Sīkka" (to be written: Ḥillīnâyyâ and ʿAnnâs also called Sakkâ; see Landberg, *Arabica*, iv. 66). Their mention makes certain the reference to Bâl-Ḥäft as the opposite point on the coast from which they are 110 and 150 stadia distant respectively, but not to Ḥṣn al-Ghūrâb which, according to Carter, is only a mile from Ḥillīnâyyâ. Landberg himself tells us that the island of ʿAnnâs seems never to have been inhabited. The distances from Bâl-Ḥäft from Ptolemy which besides varying in the manuscripts, naturally yield nothing really convincing in favour of Ḥṣn al-Ghūrâb (particularly of "Ka‘a al-ʿAṣīda, the equivalent of Cape Kane, west of Kane", according to Glaser, *op. cit.*, p. 216: but this promontory of al-ʿAṣīda is at Bâl-Ḥäft!): these measurements can equally well be made to fit Bâl-Ḥäft. 11. v. Malizan, *Reise nach Sudarabien*, Brunswick 1873, p. 225 sqq. who could not yet have known of Sprenger's view, had already called attention to the Ḥṣn (he transcribes it Cane) occurring in the (third) smaller inscription of Ḥṣn al-Ghūrâb (a reprint in Landberg, *Arabica*, iv., P. 102, F. 398), is mentioned in it with "Cape Euphratium"; J. H. Mordtmann, *Z. D. M. G.*, xxxv. (1885), 233 likewise explained it as Kanē, the harbour of the citadel of al-Ghūrâb. Even if we readily grant that the uncertain word in the text of the inscription, most recently and probably definitively published and translated by B. Mlaker in *W. Z. K. M.*, xxxiv. (1927), p. 72, really reproduces the name Kanē, this does not prove, as Sprenger, *op. cit.*, p. 83 has pointed out, that the ancient seaport lay on the present rocky point of Ḥṣn al-Ghūrâb. It must also be remembered that the names of many Arabian harbours have in course of time been transferred to other places in the vicinity, e.g. Zafr (q. v., No. 4) and Mibāt. Landberg's
objection (Arabic, iv. 76) that the Periplos, if Kazâh had been Bûl-Haf, would not have said (39) that after Kane came another gulf running far inland, the Sâkhalîn, but would have mentioned the harbour of Bir ʿAll to the east of it, is not a cogent one. The Periplos gives a list of the most important gulfs of South Arabia and the comparatively small bay of Bir ʿAll might easily be overlooked behind the broad Sâkhalîn gulf which runs far inland, especially as the use of the term Sâkhalîn is a fairly elastic one (cf. the article IOMRÎT in Realencyc.) and the list of the places on the coast in the Periplos is not as a rule scientifically complete and exact but sometimes even gives wrong names (e.g. Mâyax, to say nothing of the fact that in many places on the South Arabian coast, the habitation conditions have changed since ancient times. Landberg himself (op. cit., p. 65) observes that the promontory of Hûn al-Qalmûn must have had a different appearance in earlier times. M. Hartmann, also, who had previously The Chibcha: Their ethnographical relations (Die Islamische Welt, ii.), Berlin 1909, p. 173, declared for the older views, and later in the very same work, p. 418, 614 that he had now adopted Sprenger’s opinion. The ʿAṣw in the inscription is still not sufficient ground for the conclusion that the identification of Kazâh with Bûl-Haf should be rejected in opposition to Sprenger, who himself appreciated the force of this evidence. The form of the name used by Sprenger, Bûl-Haf (Bûl-Haf), is incorrect however (as also is Glaser-ʿArr e-al-Ḥaṭf; cf. Landberg, Haṭf und Wadi ʿArabia, p. 195), ʿAṣw is equivalent to ʿAṣw but Sprenger rightly recognised that in this name there is preserved a memory of a son of al-Ḥaṭf, the son of Kudîa and ancestor of the Mahra (al-Lakkû, i. 19. Tāyit aṣṣirû, in. 551, see below).

The Arab geographers had no accurate knowledge of Mahra nor of Ḥadramît; modern explorers have found out much more about these regions. Al-Ḥamdûnī, Ṣafī al-Din Æbû al-Ṭârīkh (ed. D. H. Mâlî, Leyden 1884), p. 45 mentions al-ʿĀṣw—which Landberg Haṭf und Wadi ʿArabia, p. 158—wishes to restore to al-Wâṣa from manuscript-extracts— as the capital of Mahra, which, according to Glaser, Abécédaire, p. 87, stretches to the district lying roughly between Dûmûn and Ṣâq al-Tarîb ʿAll, almost in the centre of the modern coast region of Mahra. On p. 53 he says, as do Ibn al-Madhâwûr and others after him, that the Mahra people also inhabit Solōfûn (the conversion to Christianity of the mixed population of Solōfûn, see Yâkût, Muṣjam, in. 102; al-Muḥînī. Muṣjam, in. 36 sqq., etc. particularly in the article ʿAṣwû). On p. 51 he talks of the Mahra tribes and their settling and on p. 86 of the road from Ḥadramît to Mahra and tells us about the tomb of the Prophet Ἠḥîd. This sanctuary on the frontier between Ḥadramît and Mahra is still held in particular veneration and is much visited by the inhabitants of these two lands (a text from Ḥadramît showing this is given in Landberg, Haṭf und Wadi ʿArabia, ii. 432 :). — The Arab geographers include Mahra in the Yemen, e.g. Yâkût, Muṣjam, in. 394; see the reference to the Mîkhîrî Malî Mahra in Yâkût, Muṣjam, iv. 700. who in this his main reference, also repeats the view that Mahra is the name of a tribe and that the correct form is Mahârî. The Mahârî in Mahra is mentioned on iv. 697. It is sometimes more accurately defined as an extreme (furthest) Yemenite. E.g. Yâkût, Muṣjam, i. 280; ii. 510 (= Muḥînî, p. 160); iii. 306; iv. 345, 495; Muḥînî, p. 415. The Arabs speak of a Najdî in the land of the Mahra (Yâkût, Muṣjam, i. 280; iii. 681; iv. 345, 495, 697; Muḥînî, p. 394, 415; cf. al-Mukaddasî, op. cit., p. 98, al-Ṭabarî, ed. de Goeje, i. 1986). This is the Najdî (or Najdû) which Carter also mentions as a district in which the frankincense especially flourishes, the highland country about two days’ journey north of the coast within the latitude which Carter has also defined, although too narrowly (cf. 36X). The Mahra are also said to be inhabitants of the coastland of al-Ṣîhîr (q.v.1), for example by al-Masʿûdî, i. 333 and Yâkût, Muṣjam, iv. 387 and we find the land of Mahra is called al-Ṣîhîr (al-Ṣîhîr, op. cit., p. 25 = Ibn Ḥawâl, op. cit., p. 32 sqq.; al-Idrîsî, i. 48: Ibn Kâhûlán, ed. Kay, op. cit., p. 132; cf. al-Ḥamdûnî, Siṣa, p. 51 and al-Lakkû on al-ṢÎhîr; the statement in Rommel, Abhînedar Arabî Arabî Descriptiô, Göttingen 1802, p. 32 sq., is obscure). Al-Ṣîhîr however in the later and modern use of the name is applied to the coast not only of Mahraland proper but of the land of Ḫafṣîr also which is that of the frankincense country generally, i.e. the “frankincense coast” which is identified by many modern writers with the Mahra country but at the same time includes the part of the Ḥadramît which adjoins on the west (cf. Ibn Kâhûlán, op. cit., i. 332), i.e. in general the name of the shores of the Gulf of the Moon, finally in a still wider sense, the name of the whole coast between ʿĀden and ʿOmnā. Al-Ṣîhîr, op. cit., p. 25, and almost in the same words, Ibn Ḥawâl, op. cit., p. 32, also al-Masʿûdî, i. 333 op.; al-Idrîsî, i. 48, 150; Abu ʿI-Fâdî (see Rommel, op. cit., p. 33); Ibn Kâhûlán (loc. cit.) describe Mahra as a desert in which there are no palms and no agriculture and the inhabitants therefore are not acquainted with bread. Carter, like these Arab writers, also emphasises the contrast between the frankincense region and the dreary desert west and east of it and more recent travellers like Bent agree with him. The only possessors of the inhabitants, according to these authorities, are goats and very fine camels, particularly renowned for their swiftness, mentioned also by al-Ḥamdûnî, op. cit., p. 100, 201; Ibn Ḥawâl, Siṣa, ed. Westenfeld, p. 963 and the poets as well as the Lîfîn al-ʿArab, vii. 36; Kîmûs, i. 455 and Tâyît al-ʿArab (Mahârî); the Lîfîn quote three plural forms of Mahârîn, Mahârîn, Mahârûn; on the first cf. Howe, Grammar, i. 997, 1000). The camel which Mahârîn dîrîd chose for him-elf out of the booty after the battle of Badr had been purchased in Mahra; his governor the Yemen procured Mahra camels for the Caliph Sulâmîn b. Abî al-Malîk (714—717) (al-Ḵâzânî, ʿArab al-Ṭâfîl, ed. Westenfeld, u. 41). Ibn Ḥawâl (ibid.; Ibn Kâhûlán, op. cit.; cf. al-Idrîsî, i. 48) adds that the Mahra live on meat, milk and its products, and fish (cf. al-Mukaddasî, op. cit., p. 100) and that they feed their camels and goats on fish. Yâkût, Muṣjam, iv. 700, records a note that the Mahra camels do not take their name from the land but from the ancestor of the Mahra’s, Mahra b. Ḥailûn (cf. al-Ḥajwârî, also Lîfîn, Kîmûs and Tâyît loc. cit. and Rommel, op. cit., p. 33). According to Landberg, Haṭf und Wadi ʿArabia, p. 87, and others the Mahra riding camels have for long had a bad reputation, as they are really not swift; the best of this kind is said to be those of the Banî
In 1837 he obtained some information about conditions along this coast through his intercourse in Djidda with merchants from Ḥadramūt or Mahra (in *Journ. As.,* 3rd Ser., 1838, vol. v. 507 sqq., vol. vi. 529 sqq.); he gave an account of Gišīn, the capital of Mahra and the Sulṭān whose authority did not extend beyond the walls of the city. His description of the boundaries of the country was incorrect. Much more detailed and accurate were the topographical data collected by Captain S. B. Haines, who was appointed in 1854 to make an astronomical and nautical survey of the South Arabian coast from Bāb al-Mandab eastwards (as far as Ṣāṣ al-Ḥaḍād). In his *Memoir of the South and East Coast of Arabia* (in *J. R. Geog. Soc.,* London 1845, xvi. 104 sqq.), he describes the western boundary of Mahra, the Wāḍī Muslīm, which is rich in water and well tilled by the Mahra and contains many villages lying among palm groves. He then gives his short notes on the town of Ṣēṣṭ east of the Wāḍī and corroborates Frenzel’s account of Gišīn about which he is the first to give fuller details. C. Niebuhr, *Beschreibung von Arabien,* Copenhagen 1772, p. 287, had already mentioned “Keschin” and the independent shāikh there, who was also lord of Soḥoṣra; he also gives a plan of the harbour from a drawing by an Englishman, whom he had met only a few points on it, which were practically confined to the Gulf of Gišīn because their duty was really confined to surveying the coast west of Mahra. Valuable information about the Mahra is given in H. J. Carter’s *Notes on the Mahra Tribe of Southern Arabia with a Vocabulary of their Language,* in *J. R. A. S.,* Bombay Branch, July 1847, vol. ii., p. 339 sqq. Maltzan combined ethnological research with his study of the Mahra language (in the introduction of his edition of Adolph von Wrangel’s *Reise in Ḥadramaut,* Brunswick 1873 [the preface is dated 1870], p. 15 sqq., and 25 sqq., and in his article cited below) but regarding the country itself which he never entered, he knows not more than the English naval officers. The extracts in Ritter, *op. cit.* xii. 625 sqq., and 625 sqq. he says, are sufficiently accurate according to his own information. The coastlands east of Wāḍī Muslīm to Rās al-Ḥaḍād, i.e., Mahra, Zafār and ‘Oman he however calls the great “terra incognita of Oceanic Arabia.” “The names Mahra and Gārā (also ‘Al-nahr “writen Gara”) by which the two countries on the coast are distinguished, he described as “not clearly defined” (*op. cit.* p. 28). We now know that these are the Mahra and Kārā (the hill-people of Zafār) and the language of the latter is Kārāwī (Grawī or Shāhwī, in modern times also called Ḥakīli, or Shēhrāt [cf. Zafār]). Maltzan recognised
that the two peoples are fundamentally different in language, mode of life, and religion from the people of Central Arabia.

Glaser, Sicer, ii, p. 26, wrongly identifies Musawa in Sandeq, xvi, 768 (quoting Eratothenes) with Mahra (Keil, loc. cit., s.v. Satb, 1334 sgg.). On p. 20 he gives the land of Hadramut (after the fall of the ‘Abyssinian-Arab kingdom’) too great an extent (as far as Mirtha). On his note that the ‘Wajzatir’ of Hadramut are the hill-people of all Mahra cf. Keil, loc. cit., s.v. JOPAPATTEL. — As a result of the inquiries made by him on his travels in Arabia, he states (Abou Inaner, p. 87) that there are three distinct divisions of the Mahra tribes: the east-tern is called Shehab or Za’ir and inhabitant, according to another authority from the island of Mayara, to Ras Nas (55° 17’ East Long. from Gr.), according to another other person from the island of Mayara, to Ras Darbat ‘Ali (53° 3’ East Long.); the western that to which the name Mahra is generally applied, stretches from Ras Darbat ‘Ali to Sehut, while the third group inhabits Soqotra (cf. above on Ibn al-Madawi). — L. Hirsch gives not a little new and valuable information about the people of the southwestern coast. His account of Mahra is based on his ten days’ stay (1893) in Gishin (or Gishin, tran-scribed Kishan or Kishin; Hirsch writes sometimes [op. cit., p. 48, 50, 52 sgg.], Gishin and sometimes Kischin, like W. Hein and others [p. 2 sgg.]), he gives “Kaschen” in the Index as the Mahri pronunciation which is also given by Jahn (see below). Of the wretched little capital of the country, he tells us, practically agreeing with Haines before him and Hein and Bent after him, that it consists almost entirely of isolated mud-houses in a ruinous condition and a few ragged tents and reed huts which, being scattered aimlessly over a wide area, leave irregular wide open spaces between them. Even the palace of the Sultan whose rule over Gishin and Sehut and other places on the coast is quite nominal, as he can do nothing without the approval of his Beduins, is a broken down mud building; there is said to be only one building in the town that is kept clean, the house of another Sultan According to Hain, the most imposing of the mud houses, which are not built according to any system, is that occupied by the reigning Sultan’s body-guard. There is nothing like a regular market or regulated trade there. Even the most rudimentary necessities of life are acquired by barter and money is unknown from the government buildings a little mosque may be seen. While Maltan, corroborating Frendel and Haines, pointed out (Brit. E. Africa, p. 25), that the Mahra have long been distinguished a heretics, from the great majority of the orthodox and in creed can hardly be called Muslims at all, Hirsch says that at least in Gishin and Sehut the Mahra are no less attached to Islam than any other Arabs; he saw them regularly performing their "fetis". This contradiction may perhaps be explained by the observation already made by Haines on the same question. According to Hirsch the ruling Sultans or Shams are pure Arabs and not Mahra’s. In any case the attitude to Islam of Belus living north of the coastal territory is quite superficial. The Sultan of Gishin belongs to the dynasty which has also a kind of suzerainty over Soqotra. The Mahra coast, like Soqotra is under British suzerainty. Hirsch (p. 76 sgg. and on his map) gives the names of several places on the coast east of Gishin. Th.
p. 134) calls their language a jargon and al-Mašūdi, i. 333, points out differences between it and Arabic. Fresnel was the first, apart from early vague reports of a peculiar language in Hadramût, to explain that Hadramût, like a number of other districts of Arabia, had a language quite different from Arabic "in the interior of Yemen towards Ḥaḍramût". He had become acquainted with it from natives who called it Eḥkilī. This name however he gave (Note sur la langue Hdimarite f.A, 1838, 3rd Ser., vi. 79 sqq.) not only to Mehri or what he considered as such but to other South Arabian dialects and, as Maltzan has already pointed out, to Ḥimyarite also, although we must confess that this (or Sabaean) has several features in common with Mehri. Ritter, op. cit., xii. 46 ff., 254 and others followed Fresnel’s error, including Sprenger, Das Leben und die Lehre des Mohammed, iii. 437; it is however quite an old mistake; it was made by Ibn Durri (see Wustenfeld, Genealogische Tabellen, Register, p. 280) whom Sprenger follows (on al-Idrisi see above). Haines (see above) said that the language of the Mahra was strange to the Arabs. With these earlier and recent statements may be compared Landberg’s observation given by Hommel, Ethnologie, p. 153, that, “according to the statements of Arabs, Beduin tribes of the great desert of el-Ruba’ el-khalī north of Ḥaḍramût and the frankincense coast speak a language which the ordinary Arabs do not understand”; this, according to Hommel, could best be explained if a Mahra dialect was known in Ḥimyarite, from which it was descended through an unknown intermediary. He called attention to the similarity with Ethiopic and its modern forms, Ge’ez and Amhāric, and presupposed a homogeneous group distinct from Kur’ānic Arabic (see also his edition of Wrede’s Reise, p. 30 ff.). In Sprenger’s belief (Geographie, p. 268), the Semites of Ethiopia are of Mahri origin.

Maltzan’s studies in spite of their defects were most valuable preliminary work. Glaser was the first to define more accurately the limits within which Mehri was spoken (Abessinier, p. 87). Fresnel, Maltzan and Glaser had not been in Mahra or Ṣafar, but they ascertained the existence of the two districts: Fresnel in Djdma, Maltzan and Glaser in ‘Aden (Glaser, Abessinier, p. 184). The latter states (Szkize, ii. p. 96) that the Ḥakili live east of Ḥaḍramût and western Mahra (on the word of the cf. Hommel, Ethnologie, p. 233), and their language is called Shehrāt, while the dialect of the territory west of it is “Mehri (certainly not Eḥkilī)”, similarly in p. 178 sq. In his Abessinier, p. 155, also he identifies the Karā people with the Ḥakili [as does Hommel, op. cit., p. 153, who says: *šrā (villages) is the Arabic name for the native tribe of Ḥakili, whose language is called Shehrāt”). Ḥakili is the name given by Glaser (Szkize, ii., p. 95) to the inhabitants of Mahra whose tribal name in the form Ḥejjilī, Fresnel took for the name of the language spoken there and thus introduced it into European philological literature. Landberg’s opinion (Arabica, x., Leyden, 1898, p. 153) that the name Ḥakili is “toute à fait juste à côté de la vraie forme Ḥakilī”, is contradicted by Hirschi’s testimony (op. cit., p. 52: from Suhāt) that the name Ḥakili applied by European scholars to Mehri is unknown there and simply means “barbaric, unintelligible”. Hommel records (op. cit., p. 153) that Glaser had interesting specimens of the Karā dialect and of Mehri and Soğut but these have not been published.

Glaser (cf. Szkize, ii., p. 20, 96, 181 sq., 246, 503; Abessinier, p. 8 sqq. and Hommel, Ethnologie, p. 12, 148, 150 sqq.) further developed these ideas of Maltzan on the South Arabian-Ethiopian group of languages. According to the latter, the Ethiopic alphabet came from the Axum inscriptions and that of the later literature in the Ge’ez language from a variety of the alphabet of the South Arabian inscriptions, once common in the Mahra country and the frankincense land in general was the ancestral home of the Semitic Abyssinians and Amhārs. Against the view that the name of the latter is a plural of Mahra, it is sufficient to quote the form Amhār (Hommel, op. cit., p. 152, No. 182).

There is no reason to doubt contacts between Mehri and Ethiohpic (Hommel, p. 153). That in ancient times members of the people called Ḥabashat in the South Arabian inscriptions (cf. Glaser, Szkize, i., p. 25—27 and Abessinier, p. 28) were settled in Arabia is suggested by the mention of the Aṣṣuṣnu in Stephanus Byzantius s.v. from Uranus’ Arabia (μετα τος Σαμείου Χαθαμάτυ, Α’)[ Ahyfn] and the ‘Aṣṣuṣṣu tóis in Ptolemys, vi. 7, 11 (in Ṣafar, q.v.). From the first passage, Glaser, Abessinier, p. 88 has concluded that the Aṣṣuṣnu lived east of Ḥaḍramût, from Szkize, i., p. 26 he had previously supposed that by the land of the Aṣṣuṣnu was understood the whole coast from Ṣafar and Ṣāfī in the Ṣāfī and islands lying off it: his further identification, which however had been suggested by his predecessors, of the Aṣṣuṣnu with the Abyssinians (cf. Sabatik Dēnbąyler by J. H. Mordtmann and D. H. Muller, Vienna 1853, p. 40, where attention is called to the Albagshin of the inscriptions) is however worthy of attention. C. Conti Rossini in his article Sayli Ḥabashi (K, R. A. L., Vol. xiv., Ser. 54, 1906, p. 39—59) has however shown that the old home of the Ḥabashat of the South Arabian and Axumite inscriptions was in the southwest of Arabia and on the plains along the coast west of Ṣan’ā’, roughly between Ṣaḥaṭ and Zabīd. In the Aṣṣuṣnu of Uranus, Rossini rightly sees only an isolated section of this people or a military settlement. Glaser moreover (Szkize, i., p. 27) had at once identified the people Ṣakṣar mentioned in the Monumentum Adulatum (cf. D. H. Muller, Epigraphische Denkmaler aus Abessinien, Denkämmer, Ak. Wiener, xlii., p. 5, 7 sqg. ) in the Mahra and the people of the islands off the coast, which cannot at all be considered proved. In any case one cannot draw any deductions from the spread of Mehri regarding the extent of an old Ḥabashat kingdom (with Glaser, Szkize, p. 179) nor assume that as late as 100 B.C. the kings of Ḥabashat
were established in the land of Mahra (Hommel, Ethnologie, p. 151).

D. H. Müller and his collaborators were the first to collect and investigate texts in the Mahra language in a systematic and comprehensive fashion. In Vol. iv. of the Sudarabische Expedition, Vienna 1902, Die Mehri- und Sogotri-Sprache (1) he published Biblical texts, stories, poems and proverbs, which he collected for the most part on the Swedish steamer placed at the disposal of the expedition from the mouths of natives, who had been taken on board in ‘Aden and Soqotri. For Mehri in particular, he had a single authority, the same man as Jahn had. In the third volume of the same collection appeared Die Mehri-Sprache in Sudarabien by A. Jahn, texts and glossary, Vienna 1902. On these two works cf. the brief review by Glaser, Zwei Wiener Publikationen über den habschtlisch-puntischen Dialekt in Sudarabien, Beilage der Monatlichen Allgemeinen Zeitung, 1902, Nr. 186 and 187 of 16th and 18th August, and the very thorough and expert criticism by Landberg, Die Mehri-Sprache in Sudarabien… von A. Jahn and … D. H. Müller, kritisch durch Landberg, Seputri, 1902, Vol. iv. ed. by D. H. Müller, Sogotri-Texte, Wien 1902, forms Vol. vi. of the collection.

The already mentioned traveller W. Hein had in 1902 in Gishin with the assistance of various natives collected Mehri and Hadrami texts. He died in 1903 before he was able to put his material into its final form; D. H. Müller edited and published it in vol. ix. of the collection (Mehri- und Hadrami-Texte… Vienna 1909). Some of these texts are also included in vol. vii, Sogotri-Texte (III) by D. H. Müller, Vienna 1910 and supplied with Shihwari and Soqotri parallels.

M. Bittner’s grammatical studies in Mehri are full of matter and excellent in method (see Bibli.). The modern South Arabian dialects differ somewhat in some features in common with Sabaean cannot be explained as daughter-languages and the last surviving relics of the South Arabian language which is found in the Sabaeo and Minaean inscriptions (Jahn, op. cit., p. 1; see also Sogotri). In them, especially Mehri and Soqotri, we can at most recognize with Hommel, op. cit., p. 152 “a daughter language of south Arabian dialects formerly spoken there (in Mahra-land and on Soqotri), a pronouncement to which Mehri had already come very near. On the other hand Glaser went too far when he decreed Mehri and Soqotri as remains of the old “Panitic” Arabian (cf. Wirtschaft und Sozialleben der Mahra, Beilage der Monatlichen Allgemeinen Zeitung, 1899, Nr. 120 and 121 of May 27 and 29) as descendant of the old language of Hadhabat from which Ethiope and Amburhi are also and to come (see Hommel, op. cit., p. 153. note 1 and 4 and in Nielsen’s Handbuch, p. 91).

According to Vollers (Z. t. xvii. 223) the South Arabian dialects go back to the time of the settlement from Yemen; the immigrant Ad. not long before the coming of Islam, had occupied Mahra from which it had inculcated its language by their dialect. So early as al-Maqrizi (535) we find that the Mahra described as a mixed people (Glaser, Sogotri, u. p. 188 and 96) also speaks of the influence of eastern and north-eastern people on the Mahra language, but he wrongly ascribes to Parthian and Indian elements “the notable corruption of the Arabic language in the district of Mahra This”, hypothesis is in any case sufficient to help to explain the similarity of ‘Omání to the neighbouring dialect of Zafar. As regards Mehri, the possibility of older and deeper causes for its fundamental divergence from Arabic must be taken into consideration. That the foundations for the modern South Arabian dialects were laid not much before the coming of Islam is not improbable. The Mahra may, as has already been suggested, be the remains of an original population, which was driven into the inhospitable south from more habitable territory by later immigrations of Arab tribes. Even now, as Glaser, Sogotri, p. 187 tells us, the whole area in which Mahra is spoken is becoming more and more Arabic because no foreign people is now predominant in these regions, but traders who are mainly Arab. The cultural level of the Mahra is very low. They have never played a part of any note in history.

AL-MÂĐÂNĪ (A.), the Table, title of the fifth Sûra of the Qur’ân.

The obliquity of the ecliptic is one of the fundamental magnitudes of the solar system. It was therefore continually being calculated anew and almost always so as to obtain the altitudes of culmination $a_1$ and $a_2$ of the sun at the summer and winter solstices. The sun is at these times at the same distance from the equator, north in one case and south in the other. The obliquity of the ecliptic is the $\frac{a_1-a_2}{2} = \epsilon$. It should be mentioned that Muḥammad b. Ṣahāḥ (c. 875) claims to ascertain the magnitude from three different points (O. Schirmer, op. cit., p. 52).

The first method was that used by Hipparchus, Ptolemy and Eratosthenes, using the most varied instruments, the two rings, the quadrant and the armillary spheres. In the Muḥammadan period these observations were continued with larger and larger instruments and account taken of the fact that the sun does not always enter the solstices in question by day but may do so at night, that the heavens may be obscured at the time etc. From observations made before and after in time the question has to be obtained by interpolations. This is how Ṣahāḥ worked, (on the instruments used, cf. e.g. E. Wiedemann and Th. W. Juynboll, Astronomische Schriften ein von ihm erschlossenes Beobachtungsinstrument, Acta orientalci, v., 1926, p. 81–167). The values ascertained have been calculated by O. Schirmer (O. Schirmer, Studien zur Astronomic der Araber, S. B. P. M. S. Erl., lvii., 1926, p. 30–96). From the measurements, it was found that the obliquity of the ecliptic decreases in course of time, i.e. that the plain of the ecliptic approaches the plain of the equator. A conspectus of the views of Muslim scholars on this question has been given by O. Schirmer (op. cit.).

Further expressions used in this connection are utsūf al-mā'dīl, the inclined horizontal; it means any horizontal, except that of the equator, i.e. the horizontal inclined towards the horizontal of the equator. Khāṭf mā'dī 'an khāṭf al-irritwī', i.e. the line which is inclined towards the equator; this is a line (a circle) which lies parallel to the equator on the globe of the earth either north or south. Falak mā'dī 'an falak ma' addil al-naḥār has a corresponding meaning on the globe of the heavens; ṭirīṣa' a ṣaddūt tā mail il-ṣamthi, third altitude in the first vertical i.e. the vertical which goes through the eastern and western points of the horizontal.

(E. Wiedemann)

MAIMANA. situated at 36° N. and 64° 45' E., was formerly known as Al-Yahūdī, or Yahūdīya (Yakūt also calls it Yūhūdīn al-Kabīr), but the name was changed to Maimana, "the auspicious town", for the sake of good omen. It is at present the capital of the little province of Almār in Afghan Turkestan on the trade route between Herat and Balkh. Afghan Turkestan includes the western Kūhātes of Sir-i-pul, Shībargān, Andkhū and Maimana, sometimes classed together as the Čahār Wilāyāt. Dost Muḥammad took this territory from Būkhrā in the year 1855; the sovereignty remained in dispute between Kābul and Būkhrā, till it was settled in favour of Kābul by the Anglo-Russian agreement of 1873. The low-spurs and offshoots of the Band-i Turkistān range subside gently into the Oxus plains and this favoured part of Afghanistan is
rich in agricultural possibilities. Until Maimana was visited by Professor Vambery in 1863, but one European, Captain Süring, had set foot within it. According to Vambery, the place consisted of some fifteen hundred mud huts and a dilapidated brick bazaar. Its inhabitants are Uzbekhs with a sprinkling of Tajiks, Heratis, Jews, Hindus and Afghans. Trade is now considerable and Maimana is renowned for its carpets and other stuffs made partly of wool and partly of camel's hair. It traffics with Persia and Baghdad in raisins, aniseed and pistacho nuts. Horses are good, plentiful and cheap.

**[R. I. Whitehead] Maimaní, the name of a district in southern Irāq.**

The origin and significance of this name, which fell into disuse in the late middle ages, is unknown. There is no certain trace of it in the cuneiform inscriptions; for the Babylonian Māšān, which Hommel (Ehmerer und Geogr. des alt. Orientes, Munich 1926, p. 261, 263) identifies with it is little worthy of serious consideration as the Old Testament *Māshān* (נָבָן, Gen. x. 30) which Biblical exegists frequently quote. Māšān first appears in the form *Maršān* in Sarbel in the first century A.D. Ptolemy gives *Marashān kēlēs* as the name for the innermost part of the land of the Persian Gulf. The word is certainly not Greek; the meaning "middle land", the land between two rivers, may be dismissed as a fanciful etymology. The territory of Mesene is in the cuneiform inscriptions the region of the southern Kaldu states, especially the most southerly Bit-Yakin; at the same time we find in them the term the sea-land (*māt-lamān*) as almost identical with Bit-Yakin; the part of Mesene between the Tigris and Kūzūstān was in the Babylonian period the home of the nomadic Aramaic tribes of Gambaū; cf. Streck, *Assurmapilul*, Leipzig 1916, iss. 775, 783, 796-97.

In classical literature Mesene is usually absolutely synonymous with Charakaene. Mesene or Charakeane appears in the second century B.C. (after ca. 129) as a small independent kingdom founded by a certain Hygasinoes, our knowledge of whom is practically limited to his coinage. After an existence of three and a half centuries Ardashir I put an end to this kingdom shortly after his accession, between 224 and 227 A.D.: for Arabic sources for this event, see Nolderke, *Gesch. d. Araber und Perser zur Zeit der Sassaniden*, Leyden 1879, p. 13 (Tabari, i 818). In the strict sense of the word, Charakeene is only the delta of the Euphrates and Tigris before the junction of the two streams, the land on the north was Mesene: we have no information about the eastern and western frontiers of Charakeene. Perhaps, as Wensbach suggests (see Bibl.), Mesene was only later conquered by the rulers of Charakeene and its name transferred to this southern district. The Tailmād knows Mesene as *Mashān* (and *Māşān*). Syrian literature also knows *Mashān*. Among the Persians we have *Mēshān* and the Armenians *Mēšān*; of therein Schneider, *et al.*, p. 11. The Arabs took the word over as *Masān*; but we occasionally also find *Masān* (e.g. Tabari, iii. 1950 s). The old name Mesene is perhaps concealed in that of the little town of Mashān, which, according to the Arab sources, was near Basra and was celebrated as the birthplace of the Masānā

As in the case of Mesene-Charakene, we have no exact information about the mediaeval Arab Maīsān, which would enable us to define exactly the area and boundaries of the district. According to Yākūt, iv. 714 and ʿAlāʾīnī, p. 310, Maïsān is "an extensive district with numerous villages and palm groves between Baṣra and Wasṣīt, the capital of which is also called Maïsān". This district formed the sixth in the term Maïsān was also called "Sādāh-Baṣra" which was taken over by the Arabs (q. v.) and was called Shāḥān-Baṣra or "the Tigris district"; the name Furāt-Baṣra is also found. It was divided into four divisions (ṭasīd, q. v.) namely, Bahman Ardaṣhir, Maïsān, Dastmaīsān and Abāz-Kubād; according to Kūdāmā (B. G. A., vi. 236, 19), these four divisions of the Tigris district later passed into the administrative district of Baṣra. All four ṭasīd are to be located on the east side of the Tigris. Bahman Ardaṣhir, the capital of the district of the same name, lay on the left or north bank of the Tigris, opposite Ubūl on the west or south side of the Tigris river (the latter roughly on the site of the modern Ṭashḫah, the port of modern Baṣra). The second division, Maïsān in the narrow sense, must have been in that which stood the capital of the whole district of the same name. Al-Madīḥār however usually figures as such in the Arabic sources; it may be supposed that this was the successor of an older town called Maïsān. The locality of Al-Madīḥār cannot be exactly fixed (see below); it lies on the east bank of the Tigris, about thirty miles (as the crow flies) north of Kurna. Dastmaīsān also is to be sought east of the Tigris, in the region of al-Madīḥār, probably south or south-east of it. As to the fourth division, Abāz-Kubād, a name, which Marqāṭ, op. cit., p. 61 and Herzfeld, Id., ii. 150 would emend to Iradāh-Kawādī (Kubādī), relying on Ḥamza al-Iṣfahānī (Ṭurābīz, ed. Gottwaldt, p. 57), this also must be placed east of the Tigris not too far from al-Madīḥār. A reference in Kūdāmā (p. 235, 15 sq.) agrees very well with this, according to which the four divisions of the land of Maïsān lay east of the Tigris.

Even under the Sassanians there was a separate Neotestamental ecclesiastical province of Maïsān, which was again divided into four subdivisions, the bishoprics of Pārāt de Maïsān, Karḵā de Maïsān, Bēḥ Raimā and Nehār Gāl (Gūr); cf. especially Sashau, op. cit., p. 48 sq. Marqāṭ, op. cit., assumed it as certain that these four dioceses must correspond to the four political divisions of the district of Maïsān. This view in itself probable and first found by Sashau, p. 49 as worthy of consideration is untenable, as Schaeber, op. cit., p. 29 sq. has shown. Pārāt de Maïsān is certainly identical with Bahmān but the second bishopric Karḵā de Maïsān does not correspond to the tāṣūd of Maïsān or Madīḥār but is to be located much farther south in the district of the modern Muḥammama. Bēḥ Raimā very probably lay not on the east but on the west bank of the Tigris at some distance N. E. of Baṣra, so that it does not even come into consideration as the equivalent of one of the four Arab divisions. Nehār Gāl (Gūr) may be equated to Nahīr Dīlūr of the Arab geographers (see Sashau, op. cit., p. 51; Schaeber, op. cit., p. 37). This is to be sought towards Khūzistān somewhere in the neighbourhood of Ḥuwaiza (see below). Whether the fourth tāṣūd Abāz-Kubād corresponds to it cannot be settled.

If then the capitals of all four divisions of the Tigris district are to be located on the east bank of the river, the lands on the west bank, also included in the sawād must have belonged to the same district as did the whole delta down to the Persian Gulf; for there is no district to which only the doubtful western and southern divisions might be allotted. In the Sasanian period, according to the Turfan fragments (cf. A. Schaser, op. cit., p. 370), the term Maïsān was also used for the whole of southern ʿIrāq (or Mādīgām) and this remained the case under the Arabs. But according to the Muslim sources, it does not seem to have been limited to the south proper but to have extended a considerable distance northwards. The quotations above given from Yākūt and ʿAlāʾīnī show that Maïsān was considered to stretch northwards to Wāṣīt (q. v. and vol. i., p. 676, ii., art. Kaskar); indeed it is most probable that the extreme N. E. frontier of the area known as Maïsān lay in the vicinity of the modern Kūt al-Amāra (q. v.; the Madīḥāyūd of the Arab geographers, cf. 669 sqq. of Masʿūd, Babylonian, ii. 310). The territory of Kaskar also stretched up to here and seems in the main to have included lands east of the Tigris (cf. Kaskar).

To avoid misunderstandings it should here be expressly mentioned that for the Arab period, of the present course of the Tigris only the Shāṭ al-ʿArab and the stretches as far as al-Maṭār come into question; in those days the Tigris bed corresponded with that of the Nahr al-Gharrāḥ (Shāṭ al-Hair) which was the western boundary of the district of Kaskar. For further details of the hydrography of Maïsān, see below. Maïsān is occasionally used as synonymous with Kaskar; cf. Schaeber, op. cit., p. 14, 17 sq. Maïsān probably stretched to the east as far as the alluvial land of the sawād, up to the frontier of Khūzistān in places beyond the present frontier of ʿIrāq. At least Ḥuwaiza (the modern Ḥawiza [q. v.]) which is now on Persian soil, is expressly mentioned as a town belonging to Maïsān.

The swamp regions, al-Batīf, for the most part came within the area of Maïsān. On this cf. al-Baṭiḥa and the articles on al-Baṭiḥa al-Hilāya and al-Djāzīrī by ʿAli Shārktī in the periodical Luḥat al-ʿArab, iv. (Baghdād 1927), p. 375-384, 474-477, 526-530 and vi. 277-279; also Ḥasım al-Sādī, Liqāʿīyat al-ʿIrāq, Baghdād 1927, p. 40, where the more important of the swamps (ḥūrūs) are given. In modern times the practically synonymous name Al-Kūhār (plur. of Ḫūr) is used for al-Batīf (see ʿAli Shārktī, op. cit., p. 376). The two specifically ʿIrāqī words Ḫūr and Ḫūr, which are very often used indiscriminately in European works, especially on maps (usually the one form Ḫūr) (cf. al-Baṭiḥa where Ḫūr is wrongly given for Ḫūr), have to be carefully distinguished. For haŭr (older alternative hasel), popularly Ḫūr = "permanent swamp, temporary lake, land liable to inundation" (cf. B. G. A., ed. de Goeje, iv. 370; G. le Strange, J.R.A.S., 1895, p. 298) and al-ḥawwār, popularly Ḫūr = "arm of a river, creek, lagoon-like gulf"; cf. especially the remarks of Brecc, in his Austerlitz-Marien, the account of the Baghdād periodical Luḥat al-ʿArab, in M. Lidzbarski, Das Johannesebuch der Mandaeer (Gießen 1915, p. 145).

One of the divisions of the Tigris district was called, as already mentioned, Dāst-i Maīsān. The
name is also vocalised Dastu- and Dasta-Maisan in our Arabic texts. Ibn Khalikān always writes the Persian form Dastūr Maisān; cf. ماریزد al-lṭlis‘, ed. Juybūlī, v. 468. Dastūr, dastūr can here only be the Persian dastūr = "plain". Schaefer's assumption, op. cit., p. 34, that Dastūr represents an abbreviation of the Pahlavi Daskert (Arabic maškar, q.v.) seems to me hardly tenable. With this division in particular was distinguished as the "plain of Maisān" from Maisān proper (especially from the second division of the district), is however not apparent. Could it here have been a more level plain, less filled with swamps? In any case, it is not correct to equate Dastūr Maisān without more ado to Maisān (as does G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 43). Yākūt (ib. 574) thus defines Dastūr Maisān:

"It is an important district between Wāsīt, Bāṣra and al-Ahwāz [q.v. (= Khūzāt, q.v.)] lying near to the last-named. The capital is Basamata; Dastūr Maisān is not identical with Maisān but is connected with it; it is also said that it is a district with the capital al-Ubulla and Bāṣra belonging to it." Nothing further is known about Basamata; here mentioned as the capital of Dastūr Maisān: the form in which the name is handed down varies (see the variant in the Mašūq, ed. Juybūlī, v. 468); it is apparently identical with Bāṣamāy, which al-Ma‘ṣūdādās (F. G. A., ii, 114, 4) details among the places of the district of Wāsīt (cf. Tahtān, iii, 1958, 17; Z. D. M. G., xxix. 669; xxxix. 26).

From the rather general remarks in Yākūt the boundaries of the district of Dastūr Maisān cannot unfortunately be ascertained. We are brought a step forward by a note in Ibn Rostān (F. G. A., vii 94, 2) which expressly states that a place named Aḥādīs, frequently mentioned in Arabic sources, is in Dastūr Maisān. When Yākūt in another connection (iv. 275, 2) mentions Aḥādīs as the "district of Dastūr Maisān" (i.e. distinguishing the two), as a division of the Kūzait, this probably is an inaccuracy. From the passage of Ibn Rostān quoted it is further evident that Aḥādīs must have been also al-Maḥān in the direction of Wāsīt. In keeping with this is an itinerary given by Kadhāmī (F. G. A., vii 126, 1-4) according to which a road from Wāsīt via Bāb Alīn (5 far. sakhs S. or S. E. of Wāsīt; cf. Yākūt, i. 461) to Bāṣra passed successively through Aḥādīs (= Aḥādīs) and al-Maḥān, Masakin. The distance of Bāb Alīn from Aḥādīs is put at 5 stages (zikā‘a’s), and from Aḥādīs to al-Maḥān at 8; cf. also Streck. Baby.-lon., i. 13-14. As a zikā‘a on the average may be put at 4-5 miles (see Streck, op. cit., p. xv) the distance from Bāb Alīn to Aḥādīs may be estimated at 30-40 miles; from Bāb Alīn to Wāsīt was about 15 miles. To this location of Aḥādīs agrees very well a note in Ibn Hawā‘īs (F. G. A., ii. 159, 1) who says that the date-palm grove of the district of Bāṣra stretched without interruption for over 20 parasangs = 150 miles, hardly remanufacturable from Aḥādīs (then away to the south on the seashore; q.v.) as far as Aḥādīs; the latter must mark the northern limit of the then district of Bāṣra. From the passages mentioned we have to look for Aḥādīs a fair distance to the north of al-Maḥān, probably rather near the bank of the eastern arm of the Tigris which was dry in the middle ages. The position given to Aḥādīs by G. Le Strange in his map to Ibn Serapion (J. K. A. A., 1895) and in The Lands of the Eastern Caliphate (map ii.) — south of al-Maḥān on the left bank of the Tigris (in map ii.) or on the right bank opposite al-Maḥān — seems untenable. For further reference to Aḥādīs (with the variants ‘Abdās, ‘Abdās or ‘Abdās; according to Ḫanrawī al-Ǧāhidīn in Yākūt, iii. 609, 19 a Pehlavi name in B. G. A., Glossary, p. 94). The approximate identification of the position of ‘Abdās, which we have obtained, gives us a clue to that of Dastūr Maisān. This must have been aboveMaisān proper (with al-Maḥān), and have comprised roughly the most northern part of the whole district of Maisān in the wider sense. It should be noted that the order in which the four divisions of the Tigris district are officially given (Bahman Ardašīr, Maisān, Dastūr Maisān, Abāz-Kūhād; see above) is apparently that from south to north or rather north-east to the east. Dastūr Maisān extended as far as Khūzāt. It should not be forgotten that the eastern frontier of the caliphate during the caliphate must have undergone changes as a result of the constant alterations in the organisation of the provincial administration (cf. Schwartz, op. cit., p. 290, 291); this explains the apparent contradictions in our sources, in which one and the same place is sometimes put in the Ǧāhidīs, sometimes in Ahwāz [q.v.] (Khūzāt, q.v.; ‘Abāzīstan; see ARĀKIRI).

When we know definitely that Dastūr Maisān was separated by the division of Maisān from that of Bahman Ardašīr to which Ubbulla belonged, it appears rather remarkable that in Ibn Khordādbeh as well as in Yākūt (cf. Streck, op. cit., vi. 16, 19) Dastūr Maisān is equivalent to Ubbulla. If this is not simply a mistake, it might at most be explained, as Schaefer does (op. cit., p. 35) by saying that under the Ǧāhidīs the headquarters for the collection of taxes for Dastūr Maisān was moved to Ubbulla. The whole system of division into sawād, originally simply made for convenience in taxation, had lost any practical importance, at least under the later rulers of this dynasty. We are further definitely told that the Tigris district later passed under Bāṣra, where no doubt some of the officials of the old administrative district were moved to towns near Bāṣra like Ubbulla.

A part of Dastūr Maisān was known as Dūkhā. It must have lain to the west of the modern course of the Tigris roughly from al-Maḥān to ‘Abdās Ibn Rostān (op. cit., p. 95) tells us that in Dūkhā between the two towns just mentioned, a part of the Tigris water used at one time to collect into swamps, before the river altered its bed in the direction of Wāṣit. From the accounts of the campaigns of the Ǧāhidīs in the Umayyad period when the Dūkhā was a favourite place for these rebels to assemble (see vol. ii., p. 903b), it is evident that this district must have occupied the position here sketched out for it; cf. Wellhausen, in N. G. W. Götz, N. S., vol. vi., no. 2 (1901), p. 22. Whether al-Dūkhā stretched as far as the Nahr al-Ǧamarāf (Shāft al-Hayān) and even beyond it, we do not know. There is a Tell Dūkhā at some distance from the west bank of the Nahr al-Ǧamarāf, to be exact in 45° 52' E. Long., Greenew and 31° 45' N. Lat. It is possible that the mediaeval name of the division Dūkhā has survived in that of this mound, which conceals the ruins of the very ancient, not unimportant town of Ummā (ideographically written Ǧīh-Ūḥī).
For Umma, which is mentioned in inscriptions as early as 3200 B.C., and disappeared from history even before the time of Hammurabi, see Hommel, op. cit., p. 354–355, 1019, 1102 (Index) and Unger in the Reisschrift. der Vorgeschichte, xv. (1928), p. 3–4. Names like Đūkhā, Đawkhā, Đawkhan are found elsewhere in the mediaeval geographical nomenclature of ʻIrāk and Kūtšātān; see Yākūt, i. 669, 15–16; ii. 143; 144, 1; iii. 13; cf. on Đūkhā (Đawkhan) also Scheeder, op. cit., p. 23.

In southern ʻIrāk, to which the district of Mašān of the Arab middle ages roughly corresponds, in course of time far reaching changes have taken place in the appearance of the country. The history of the hydrography of this area is thus a very complicated problem and the solution of topographical questions especially difficult. The first thing to note in this connection is the fact that the Persian Gulf, the Khaljī al-Baṣra or al- ʿFāris, as the modern inhabitants of al- ʻIrāk call it (cf. Hāshim al- ʻAṣdā, op. cit., p. 20, 41; ʻAbd al-Razzāk al-ʿAṣdā, op. cit., p. 115; Lughat al-ʿArab, iii. 58, and the article BAṢRA AL-FĀRIS), stretched much farther north in ancient times and that what is now, that what is now called the Bahreinian period it was a lagoon almost as wide as a sea called Nārum Murratu (see Streck, Astur- banipal, Leipzig 1916, i. 726) and stretched northwards nearly as far as 31° N. Lat. The lagoon must have stretched from Kurna in a westerly direction indicated by the later course of the Euphrates or the modern swamps (hūrūs) of Abū Kīlām and al-Ḥamār, as far as the region of the mound of ruins of Abū Shahriyān (c. 12 miles S.W. of al-Maṣāyiyr-Ur). Abū Shahriyān, the ancient Eridu, certainly lay on the shore of this lagoon as we know from inscriptions found there; cf. Langdon, Ausgrabungen in Babylonien seit 1918 = A O. xxvi. (1928), p. 3–4; Weisbach's objections to the equation Abū Shahriyān = Eridu (in Pauly-Wissowa, op. cit., vi. 1205) are now disposed of. From Kurna the lagoon probably sent an arm to the east as far as the Kārūn. The land south of Kurna beyond Baṣra on both sides of the broad arm of the sea now marked by the bed of the Shatt al- ʿArab was probably only partly under water in ancient times (cf. Herzfeld, in Sarre-Herzfeld, Archäolog. Reise im Euphrat und Tigrisgebiet, vol. i. Berlin 1911, p. 251), although it was probably exceedingly swampy. In any case in the Sargoniid period, the Euphrates, Tigris, Kārūn, and Kārūn all entered the sea or rather the lagoon running up from it by separate mouths. Cf. also al-BAṬĪHA and ii., p. 777.

If then the question of the extent of the delta since the beginning of the historical period can be approximately answered, it hardly seems possible to allot accurately the increase in land to each century, as we do not know if the sea always retired at a constant rate. In the middle ages 'Abbadān (q. v. and below) in 48° 22' E. Long. Greenwich, and 30° 12' N. Lat., c. 45 miles in a direct line from Baṣra, was still regarded as the most southerly town of the ʻIrāk. According to Ibn Baṭṭuta's Travels (ed. Paris, ii. 18) in the first half of the xivth century, it was also an hour's journey from the coast. This distance has now increased to over 20 miles. In the last 50 years there has been an average increase of land of at least 2½ miles a century. For further information on the steady formation of land by alluvial deposits at the north end of the Persian Gulf cf. SHATT AL- ʿARAB; S. Genthe, Der Pers. Meroosien, Marburg 1896, p. 54 sq.; The Persian Gulf (= Handbooks of the Historical Section of the Foreign Office, No. 76, London 1920), p. 13; Hāshim al- ʿAṣdā, op. cit., p. 51–52. Since the last century the most southerly settlement immediately on the sea has been the telegraph and lighthouse station of Pāo; on this cf. below.

On the hydrographical conditions in Southern ʻIrāk, especially the course of the Euphrates and Tigris and the canal systems connected with them, as well as the swamps there (al-BAṬĪHA, q. v. or al-BAṬĀTH), we have a full and lucid description of the beginning of the tenth century in the part of the Geography of Ibn Serapion that has survived to us; see the pertinent passages in Le Strange's edition, in J. R. A. S., 1895, p. 9–10 (sect. i.–ii.), 28–30 (sect. xiii.–xvi.), and translation and notes on p. 33 sq., 46 sq., 296–311.

The Tigris, probably, was in ancient times at its site in the modern Kūt al-ʿAmāra (q. v.), the Mādharā of the mediaeval Arabic sources (see above), into an eastern and western arm. For four centuries after 750 the Tigris has used the eastern bed running via ʿAmāra to Kurna, while the western arm, a more canal-like channel only navigable at high water, has been connected with the Euphrates. This western arm is in modern European literature known as Shatt al-Haiy. This seems to be a name coined by European travellers, apparently first found in the last decades of the xvith century (in Beauchamp; see Ritter, Erdkunde, xi. 973). Shatt al-Haiy = "river of the Haiy" was and still is the name given locally to the northern stretch of the river reaching as far as Haiy; but its whole course is usually called the ʻIrāk Nahr al-Gharrāf (cf. the quotations noted below from the works of Hāshim al- ʿAṣdā and ʻAbd al-Razzāk al- ʿAṣdā); Yākūt (ii. 533, 5 sq.; iii. 781, 3) already knows Nahr al-Gharrāf as the name of one of the five arms of the Tigris and of a district belonging to it. The Nahr al-Gharrāf was at one time called al-Muṣārakah; cf. Lughat al-ʿArab, i. 51. At the little town of al-Haiy the Nahr al-Gharrāf divides into five channels of which only the western Abū Djinairān has any water, while the eastern Shatt al-ʿAmā (or Amā; on the name cf. above ii. 777) is now quite dry; cf. Lughat al-ʿArab, i. 51, with note and correction on p. 225 sq. Four miles above Shattāra the main western arm also divides into the large Nahr al-Shattā Ṿ in the west, which enters the Tigris at Nāvyīrā (Nāvyīyeh, see KUT AL-ʿAMĀRA), the capital of the liwā of Muntashīk — for some years joined by a branch line to the station of al-Muṣārakah-Ur (Ur-junction) on the Baghdād-Baṣra railway —, and the smaller eastern Nahr Badīʿa (Baḍā) said to have been originally dug out by the Muntashīk which enters the Hūr al-Ḥamār somewhat east of Sīk al-Shiyākh (q. v.).

On the Nahr al-Gharrāf (Shatt al-Haiy) and the territory through which it flows, of which now as in the Turkish period, the northern part (including al-Haiy) belongs to the liwā of Kūt (al-ʿAmāra) and the southern to the liwā of al-Muntashīk, cf. vol. i., p. 676; ii. 513 sq. and KUT AL-ʿAMĀRA; and Streck, Babylonien, ii. 311 sq.; Lughat al-ʿArab, i. 51 sq., 152, 217, 219,
a little below the modern Kurna; cf. i. 676, 969 sq., ii. 119. Yākūt's account differs seriously from Ibn Serapion's description of the Lower Tigris. How far Yākūt, who lived 300 years after Ibn Serapion, reflects an alteration in the river system, it is impossible to say. According to Yākūt (iv. 553, 3 sq.; cf. thereon Streck, Babylonien, i. 39-40 and above i., p. 676), the Tigris after passing Wāsiṣ divided into five arms, which reunited at a place called al-Maṭara. This Maṭara (var. Maṭara and Maṭār in B. G. A., ii. 53, 15; iii. 161, 3) lay a day's journey from Baṣra i.e. about halfway between this town and Kurna.

These five arms of the Tigris were, he says, the Nahr Sāṣi, Nahr Gharraß, Nahr Dījār and Nahr Maṣān. Sāṣi is mentioned in another passage in Yākūt (iii. 11, 20) as a place above Wāsiṣ. Gharraß has already been mentioned as the usual modern name for the western arm of the Tigris (Shaṭ al-Hayy). The Nahr Dījār (apparently the Araicic form of the Arabic Diṭla) flowed, according to Yākūt, iv. 830, 22, or v. 838, 2, near the Nahr Abi l-Asad and east of the Nahr Dījār. The latter was (see Yākūt, v. 838, 2) between Wāsiṣ and Nahr Dākla. The Nahr Maṣān, finally, seems to be identical with the Diṭla al-Awrāa from al-Maṭara to the mouth of the Nahr Abi l-Asad (cf. also Yākūt, i. 603, 4).

The bed of the upper Diṭla al-Awrāa' which seems to have been dammed at al-Maṭara was apparently also fed by the waters of the Nahr Abi l-Asad. The Arab geographer Kūdāma (B. G. A., vi. 233, 3-4) says, "After leaving the Baṭha, the Tigris divides into two arms, the one of which goes to Baṣra and the other to al-Maṭara". On the banks of the Nahr Maṣān, "between al-Maṭara and Baṣra", lay the village of al-Bāzzār (Yākūt, i. 603, 4).

As to the Euphrates, we are told that in the middle ages it poured its waters into the Baṭha in two channels below Kūf & Hilla, like the main body of the Tigris in the west; cf. especially Ibn Serapion, ed. G. Le Strange, in J. R. A. S., 1895, p. 109, 10 sq. and (p. 47, 260); G. Le Strange, Thi. Lands etc., p. 74 and above i., p. 513, 48, art. AL-FURĀT.

The Nahr Abi l-Asad, which runs out of the Baṭha and is often described by the Arab geographers as the eastern section of the (western) Tigris (cf. above and Yākūt, iv. 830, 22) might with a certain amount of justice also be claimed as the last stretch of the Euphrates. It is in this sense that Yākūt (iv. 561, 22) says that al-Maṭara, mentioned above, is "on the bank of the Tigris and the Euphrates at the junction of the two". On the alterations in the lower course of the Euphrates in the later middle ages down to the xvth century we have very little information (cf. AL-FURĀT), but we may assume that since about the xvth century, at latest since the beginning of the xvth, the whole volume of the Euphrates no longer disappeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and we may assume that since about the xvth century, at latest since the beginning of the xvth, the whole volume of the Euphrates no longer disappeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and we may assume that since about the xvi cent.
town; see also below, iv. 364). Since the great scheme for regulating the Euphrates was carried out by Willoccks in the last decade of this century (cf. ii., p. 515a and Shatt Al-`Arab) only a small and insignificant arm of the Euphrates now flows out at Kirkuk while its main arm cuts through the swamps of al-Hammar in a new channel and enters what is now called the Shatt al-`Arab above Karmat `Ali (c. 10 miles N. of Basra). On this modern Euphrates channel called after Karmat `Ali (popularly Karmat and Garmat `Ali) cf. Hāším al-Sa’dī, op. cit. p. 20, 69q. 36. In 1595, 56. 1 Abū al-Rāzáq al-Ḥasanī, op. cit., p. 69; 2, luḥat al-`Arab, ii. 365, 8 sq.; iv. 527; 3, Mecopotamia (Handbook of the Foreign Office, No. 63), London 1920, p. 6, 52 sq., 55 and cf. ii., p. 515.

The Eastern Tigris from al-Madīḥar to its mouth on the Persian Gulf bore in the middle ages the name of Dīdijat al-`Arwārā the one-eyed Tigris (on this cf. above, ii. 777); cf. especially Ibn Rosta (B. G. A., viii.), p. 94 sq. and Ibn Serapion (J. R. A. S., 1895, p. 28, 299–303); Streck, Babylonien, i. 41–42; G. Le Strange, The Lands etc., p. 43; Schaefer, op. cit., p. 21–23 and cf. i., p. 676, 699 sq.; ii., p. 513 sq. Yākūt (iv. 850, 20) however limits the definition of Dīdijat al-`Arwārā from Oman to Maṭāra to the sea, i.e. the combined Euphrates and Tigris. At the same time we find other special names for this last section among the Arab authors of the middle ages like Dīdijat al-Asa`ra (the Tigris of B.), Fād al-Asa`ra (cf. e.g. Yākūt, iii. 931, 10), Batingha` Ward (Yākūt, i. 462, 11). A specifically Persian name is Bahmanīr = the river of the district of Bahman Ardashir (cf. ii., p. 777; see Yākūt, i. 770, 20).

Even in the Babylonian period the lower Tigris seems to have had a special name, Surāpū; see Meissner, op. cit., p. 5. For nearly two centuries the combined Euphrates and Tigris has been known as Shatt al-`Arab = the river of the Arabs, because its banks, although sinuous and with interior interruptions they have been in parts incorporated in the Persian kingdom, are almost exclusively inhabited by Arab tribesmen. (The name Shatt al-`Arab is found in the middle of the 11th century in Naṣr-i Khusraw [Sefernānī, ed. Schefer, p. 89] but this is the only early occurrence). In its lower half the Shatt al-`Arab has since that date formed the often contested frontier between Persia and Turkey (since the World War) the Kingdom of Irāk; about an hour's journey above (or west of) Muḥammara, the eastern bank becomes Persian. Cf. also the article Shatt al-`Arab and The Persian Gulf (Foreign Office Handbook, No. 76), London 1820, p. 15, 54.

The stretch of the Dīdijat al-`Arwārā corresponding to the modern Shatt al-`Arab in the middle ages sent out numerous canals on either side; the very complicated canal-system of the country round Basra was especially celebrated. The most important canals on the west bank were the Nahr Ma`ṣik (still to-day the name of a small village, an hour above al-`Aṣḥārā and the Nahr Ubulla (apparently the modern Nahr al-`Aṣḥārā) which united at the town of Basra and connected it with the Tigris. The medieval Nahr Abū al-Khalīsb, c. 15 miles south of Basra to the west side, may also be mentioned: this still exists to-day and has given its name to a district and its capital (belonging to the sandjak of Basra): see Cuinet, op. cit. p. 23; Abū al-Rāzáq al-Ḥasanī, op. cit., p. 118. Of the canals on the west bank the most important was the Nahr Bayān (cf. Schwars, Iran im Mittelalter, p. 311, 390–391). The Nahr Bayān formed an artificial channel connecting the Tigris and the Kārūn; we have also medieval references to a similar communication between these two rivers. Another canal still in existence on the west side is the Nahr Kayān (Rayān; modern Ryan) north of the Nahr Bayān. The most northern canal on the east side which left the Tigris about the neighbourhood of the modern Kirkuk, was called Nahr al-Mubarak, not Nahr al-Madīḥar (cf. thereon de Goeje, in J. R. A. S., 1895, p. 749; cf. also to J. R. A. S., 1895, p. 30, 207, 308 and Streck, Babylonien, i. 41). Generally speaking, there are not now so many canals in the Shatt al-`Arab as there were in the middle ages. The best account of conditions in the caliphate is that of Ibn Serapion: see the text in J. R. A. S., 1895, p. 29–30 (thereon p. 303–311); cf. also Streck, Babylonien, i. 42 and G. Le Strange, The Lands etc., p. 46–48. Cf. particularly the article al-`Asa`ra wa-Ankhurā, which gives a list of old and new names of canals, in Luḥat al-`Arab, iii. (1915), p. 57–68, 128–132 and p. 673–674 (additions) and p. 700–704 (indices); al-Nakhšhī, al-Tabšt al-Nakhshīyā fi Taʿrikh al-Qaṣr al-`Arabiyya, 2nd ed. Cairo 1342 (1923), ii. 15–53.

After the hydrography of the district of Māsān, we may now deal briefly with the more important places in it. The mediaeval Arab geographers give as its capital the already frequently mentioned al-Madīḥar on the eastern bank of the Tigris, 4 days' journey from Basra. The Shā`a inhabitants according to Yākūt (vi. 468) had a splendid mosque here with the tomb of `Abd Allāh b. `Ali who fell at Karbalā' in the year 680; on this see the references in Wustenfeld, Genealogische Tabellen der arab. Stamme, Register (1855), p. 8 and Yākūt, vi. 506; cf. also Ḫuwxī. This sanctuary still survives and it has not been noticed before (hence, for example, the inaccurate locations by G. Le Strange in J. R. A. S., 1895, p. 300 and in The Lands etc., p. 42) to define quite exactly the site of al-Madīḥar. The name al-Madīḥar is no longer known on the spot; as of the old town the highly revered `Alid sanctuary is all that remains, the place is now called simply `Abd Allāh b. `Ali. Keppel, who passed here on his way up the river in 1824, speaks erroneously of "the residence of Sheikh Abdulla bin Ali, an Arab chief"; cf. his Personal Narrative of a Journey from India to England (London 1837), i. 91. According to his map (see Expedition for the Survey of the Rivers Euphrates and Tigris, London 1856, Atlas, Pl. x.), Uzair and `Abbās Allāh are only 10 miles apart in a direct line, a figure which has however to be doubled when allowing for the many windings of the river if one goes by boat. The traveller Schläfli, who in 1862 went down the Tigris on a steamer, took two hours to go from `Abbās Allāh b. `Ali to Uzair; cf. his Reisen im Orient (Winterthur 1864), p. 137. Kich took six hours to ascend (Ritter, xi. 945). On my own journey in March 1927 I visited `Abbās Allāh b. `Ali the steamer covered Uzair with the river in favourable condition in not quite three hours. `Abbās Allāh b. `Ali lies on a slight eminence ten minutes from the left bank of the Tigris, which describes a curve here. The mosque of the tomb with its dome
visible from a long distance off stands within the south side of an oblong court, to which entrance is given by a door in the slightly built north wall. The Mağâna-poet al-Ḥarîrî, born in Mâsân (near Bâsra) is said by Yâkîn (iv. 468) to have died in al-Madâhr. As Ibn Rostâ (B. G. A., vil.), p. 95. tells us, the tides came up as far as al-Madâhr; this agrees with Schlafli’s observation (cf. cit.). The tide indeed is sometimes perceptible as far up as the town of Kaḥfân Sâbih, farther north; cf. Hashim al-Śâdî, op. cit., p. 39. 2; cf. also The Persian Gulf Pilot, London 1898, p. 295.

Opposite al-Madâhr, on the west bank was the little town of al-Hâtî (Yâkîn, iv. 947, ch. 49). When one observes in one passage (iv. 714) that the capital of Mâsân was also called Mâsân, he can only be referring to al-Madâhr, the centre of the district of Mâsân in the narrower sense, not perhaps, Futât Mâsân, for which we also find an abbreviated form Mâsân. The name al-Madâhr probably first came into existence in the Muslim period, perhaps for a new foundation on the site of the old town of Mâsân.

As to Kaḥfân Sâbih already mentioned on the left bank of the Tigris, which is called Abd Allah b. Ṭâīr, it belonged to the ārâb of Amâra, see Hashim al-Śâdî, op. cit., p. 151; Abd al-Razzâk al-Ḥanî, op. cit., p. 173—174 and Lâzhâb at-Ṭârîkh, iv. 377—378, 380—385. This town of modern origin a couple of hours’ journey below Abd Allah b. Ṭâīr has now about 3,000 inhabitants (including many Mandaes). The site of al-Madâhr cannot be marked by Kaḥfân Sâbih for al-Madâhr was certainly of moderate extent and the Abd mosque is to be sought within it and not in its vicinity.

As to ‘Uzâir already mentioned (now usually pronounced Aṣṣār), south of Abd Allah b. Ṭâīr on the west bank of the Tigris, it is especially mentioned that it belonged to the district of Mâsân; see Yâkîn, iv. 319, 740; Kazwinî, Aṣṣâr at-Ṭârîkh, ed. Wuûtenfeld, ii. 310. The proper name of this place with the alleged tomb of Ezra (Uzâir) in the middle ages was, according to Arabic and Jewish sources, Nahr Sâma (popularity Summarah); cf. e.g. Yâkîn, iv. 820, 90. Cf. on Uzâir especially D. S. Sasson, op. cit. (see Bibl.). J. R. Ghannam, op. cit. (see Bibl.), p. 189 sqq. and the article ‘Uzâir.

The town of Aḥ láb (‘Ahlâb etc.) to the north of al-Madâhr has already been discussed. On the town of Huwâza (now Ḥawwârî) also belonging to Mâsân see above i. 670 and art. Ḥawwârî; to the Ḥawwârî may now also be added Layard in J. R. G. S. xi. (1846) p. 36. 36, l. de Morgan, Mission scientifique en Perse, État du Chalpeh, ii. Paris 1895, p. 275 and Schwarz, Ibn Imtâr at-Ṭârîkh, p. 392 sqq.; Lâzhâb at-Ṭârîkh, vi. 377 sqq. An extensive swamp (ľâr), (cf. i.e. 676), takes its name from this town, the water from which flows into the Tigris a little south of Kûrân; cf. Hashim al-Śâdî, op. cit., p. 21.

The modern towns of importance on the Nahr al-Ghâzârî (Ṣaṭîb al-Hayî) are of recent origin and are still developing. They are from north to south: Hayî (Kît al-Hayî), a town with 9,000—10,000 inhabitants (cf. above i. 676; Lâzhâb at-Ṭârîkh, i. 152, 224; Kaḥfân Sikkar with 1,500 and Shârû with 7,000 inhabitants; on these three places cf. Cunnet, op. cit., ii. 290, 310 sqq. 312—315, where Kaḥfân Šâhî is wrongly given for Kaḥfân Sikkar); Sâchûn, Am Enufatrât a And Tigris, Leipzig 1900, p. 69 sqq.; ’Abd al-Razzâk al-Ḥanî, op. cit., p. 111—113, 130 sqq.; Hashim al-Šâdî, op. cit., p. 147, 162—163.

At the spot which up till some two centuries ago was regarded as the junction of the Euphrates and the Tigris stands the little town of Kûrân (Kûrân, Gurna) with 2,000 inhabitants. It is not known to have existed in the middle ages; on it cf. above and Mignan, Travels in Chaldaea, London 1829, p. 284 sqq.; Ritter, xi. 1018—1023; Cunnet, op. cit., ii. 211 sqq.; ’Abd al-Razzâk al-Ḥanî, op. cit., p. 119; Hashim al-Śâdî, op. cit., p. 156; Lâzhâb at-Ṭârîkh, ii. 37. Halfway between Kûrân and Bâsra must have stood al-Mâsânârâ where, according to Yâkîn, the two streams of the Tigris, or the Euphrates and the Tigris met in the middle ages; cf. above. About 3 hours’ journey above Bâsra on the right bank of the river is the little village of Kûrmârî, where as already mentioned, the main stream of the Euphrates flows into the Tigris or the Ṣaṭîb al-Ṭârîkh.

In the Muslim period, Bâsra was the largest and most important town in the old district of Mâsân and in practice its capital, although under the Ábbâṣids, al-Madâhr may have for a considerable period been regarded as the official capital. On Bâsra, mediaeval Bâsra, modern Bâsra and al-Áshâhîr, cf. the article Bâsra.

Al-Áshâhîr stands approximately on the site of Ubbûlla which as a suburb and port on the Tigris for the mediaeval Bâsra was of some importance. In our sources we are expressly told that Ubbûlla lay north of the canal which bore its name, partly on an island, which was formed by the Tigris and the two canals of Nahr al-Mâqîl and Nahr al-Ubbûlla which joined another at Bâsra. The modern Nahr al-Mâkîrî which leaves the Ṣaṭîb al-Ṭârîkh about one hour south of al-Áshâhîr, cannot be the Nahr al-Ubbûlla (in spite of Lâzhâb at-Ṭârîkh, iii. 63). The modern al-Áshâhîr, the principal commercial centre of southern Irâk, is only a little inferior to Bâsra as regards numbers of population. The two together have now a population of 50—60,000. On Ubbûlla, the ancient Aṣṣâr al-kirîsî (i.e. Paulus-Wissowa, Reallex. der klass. Altertumswiss, Suppl.-Bd., i. 111), cf. G. Le Strange, J. R. A. S., 1895, p. 306 and The Lands etc., p. 47; Drouin, a.a.O. (Lit.), p. 91; Sachau, Arâb. Pr. Ac. W., 1919, N° 1, p. 20, 31 sqq.; Isl., xi. 151; Lâzhâb at-Ṭârîkh, v. 477; vi. 200 sqq. and the art. UBBULLA.

Opposite al-Áshâhîr, on the east bank of the Ṣaṭîb al-Ṭârîkh stands the little town of al-Tânîmâ (cf. Lâzhâb at-Ṭârîkh, i. 129, p. 230, qii; ’Abd al-Razzâk al-Ḥanî, op. cit., p. 118; Hashim al-Šâdî, op. cit., p. 156, no). On its site or at least in the neighbourhood, there was already in ancient and mediaeval times an important harbour, known to Pliny as Forat (cf. also Drouin, op. cit., p. 8). In the Talmud (see Berliner, op. cit., p. 44) and in Syrian sources it is called Perât de Maṣîhân, in the mediaeval Arab authors Forât, Mâsân or Forât al-Bâsra. In Syrian and Arabic texts we also find Perât or Futât, without the addition of Mâsân; with Futât = Euphrates the name has no connection. When the first Sāsânîan king Ardâshîr I refounded the city it received from him the new name of Bâman-Ardâshîr, shortened to Bahmanshîr; see Hâmra al-Jâfshâhî, Tarîkh, ed. Gottwaldt, p. 37 sqq. 46 and Isl., xi. 149. Cf. the above mentioned
specifically Persian name of the Dījjāt al-`Awrīt and Banīshir (= Bahmanshir) as a name of an arm of the Kūrān (cf. ii., p. 777). That Farūt Mašāin was opposite Ubbul in the left bank is quite clear from the Arabic references: cf. Wellhausen, Abh. G. W. Götting. N. F., v., No. 2 (1901), p. 34 and Schaefer, op. cit., p. 31. The identification of Farūt Mašāin with the modern Başra or even with old Başra (Berliner, op. cit.), which has been championed by different scholars (Noldeke in S. B. Ak. Wien, 1893, Abb. ix., p. 18; Marquart, op. cit., p. 41; Sachau, Abh. Pr. Ak. W., 1919, No. 1, p. 49; only suggested as a possibility by Herzfeld in Sylloge Inscriptionum Assyriarum, 1891, i., 251) is therefore untenable. Perāt de Mašāin was the see of the Nestorian metropolitan which was later moved to Başra (first certain reference in 893); cf. Sachau, op. cit., p. 49 and Schaefer, op. cit., p. 31 sq. The old name of the diocese Perāt de Mašāin was still frequently used in place of Başra even after the transfer of the episcopal see. If we have on one occasion, c. 900 A.D., a mention of a bishop of Mašāin simply, we should refer it to Perāt de Mašāin rather than to Karkh de Mašāin (so Sachau, op. cit., p. 50) because the abbreviation Mašāin for Perāt de Mašāin is found elsewhere in the Syriac literature (cf. Schaefer, op. cit., p. 32-33). As to the coins of the Omayyad period of the mint of Mašāin, this is probably to be explained also as al-Farūt Mašāin and not as Karkh Mašāin (so Mordtmann, Z. D. M. G., xxxiii. 126) or Mašāin (al-Madhār) as Schaefer, op. cit., p. 34 thinks. Abu 'Abd-fida, Taqsim al-Buldān (ed. Reinaud, p. 295), also is obviously thinking of Farūt Mašāin not Mašāin (al-Madhār) when he says “Mašāin is a little town in the lower part of the land of Başra”.

* On the east bank of the Shāṭ al-`Arab about where the Eulautos or Dukdevil (the modern Kūrān [q. v.]) joins it, Alexander the Great built a new town on the site of an older settlement, which he called Alexandria after himself. After its restoration by one of the Seleucids, it was known as Antiocheia. When Spasines (Hyaspasines) created a kingdom of his own in Mesene-Charakene, Alexandria-Antiocheia became his capital and was known as Xapaz Erawain; under this name (Arabic Karākhā Aspasina or simply Karākhā) it is mentioned in the Palmyrene inscriptions. Another foundation of the town is ascribed to Ardashir I, hence its official designation in the Sassanian period as Astārābahār Ardashir (also abbreviated to Astābahār); cf. Noldeke, Gesch. d. Araber und Perser zur Zeit der Sassaniden (Leiden 1879), p. 14; Marquart, op. cit., p. 41; Herzfeld, Ist., xi. c. 10; Hamza al-Isfahānī, op. cit., p. 47, gives the (corrupt?) form of the name Inshā Ardashir. The older name Karākhā more exactly defined by the addition “of Mašāin” remained in existence. The Syriac texts always write Karākhā de Mašāin. There was a Nestorian bishopric here, which seems soon to have disappeared under Islam; see Sachau, op. cit., p. 49-50 and Schaefer, op. cit., p. 53. The Arabs took over the Syriac name as Karākhā [q. v.]; cf. e.g. Vajz, iv. 207, 1. The Persian traveller Naṣir-i Khūraw, who visited the ‘Irāq about 445 (1051) (cf. his Sefername, ed. Schefer, p. 89) mentions, besides Bāṣra, in the district of Mašāin a place called ‘Akr Mašāin, probably an inaccurate reproduction of Karkh Mašāin. The site of Karākhā Mašāin is usually sought on that of the Persian port of Muhammarā, which has only arisen since about 1812, or at least in its immediate neighbourhood; cf. Andreas in Paulus-Wissowa, Realsynk., i., 1394 sq.; Drouin, op. cit., p. 7; Herzfeld in Sylloge, Archaeologische Reise im Ennner- und Tigrisgebiet, i. 251. Sachau, op. cit., p. 50; Schaefer, op. cit., p. 33. This identification has, therefore, been absolutely certain: Karkh Mašāin is perhaps to be located farther to the north; cf. e.g. the objections of Mordtmann in S. B. Ak., 1875, vol. ii. Suppl. Heft, iii., p. 14. Cf. also on Alexandria-Charax Spasina-Karkh Mašāin the important article “Alexandria” by Andreas in Paulus-Wissowa, Realsynk., i., 1390 sq. and the article Charax Spasinu by Weisbach, ibid., iii. 2122; Drouin, op. cit., p. 7—8, 15; Schaefer, op. cit., p. 31 sq. On coins struck in Karkh Mašāin of the Arsakid and Sassanian periods cf. Mordtmann, Z. D. M. G., xxxiii. 126 sq. and G. F. Hill, Catalogue of Greek Coins of Arabia and Persia in the British Museum (London 1922); cf. also Muhammera and also vol. ii. p. 777.

* In the middle ages the most southerly town in the ‘Irāq was ‘Abbādān, which then lay on the coast — under the later ‘Abbādās it was already some distance from it — and was an important harbour. Cf. above and the article ‘ABBĀDĀN.

* At the beginning of the twentieth century it was still an insignificant little village. It is only since the last twenty years that it has undergone an unexpected development because of the Anglo-Persian Oil Company making it the terminus of their pipes from Shuster and Mādīnā-Nafūn (cf. ii., p. 779b). The oil is now pumped into tank steamers at ‘Abbādān; important factories, warehouses etc. have been built there. Bīrūm, five minutes west of ‘Abbādān proper, has developed into a flourishing town which bears the name Bīrūm ‘Abbādān or ‘Abbādān al-Hadhūla = New ‘Abbādān. On the meaning of the word bīrūm (a particular kind of date) cf. Lughat al-‘Arab, i. 125, 1 sq., 443, 5; iii. 502, 2, from below. In Bīrūm are the ruins of a palace or castle said to date from the time of the Caliph Hārūn al-Rashīd; cf. Lughat al-‘Arab, i. 126, 5 sq. ‘Abbādān is now next to Bāṣra-‘Abbādān and Muhammera the largest and most important town in the whole of the Shāṭ al-‘Arab. On the other places on the island of ‘Abbādān cf. Lughat al-‘Arab, i. 128, 3 sq. The island, which before the war belonged to the Shaikh of Muhammera who was under Persian suzerainty, was leased about 1911 by England for 99 years. On mediaeval ‘Abbādān cf. Lughat al-‘Arab, i. 121—129; on modern ‘Abbādān and the works of the Persian Oil Company, ibid., i. 176-184; W. Schweer, Die türkisch-persisch. Erdbaukoronnen, Hamburg 1919, p. 52, 112—115.

At ‘Abbādān close to the sea-coast there stood in the middle ages the lighthouses known as al-`Abdhabīb [q. v.].

As has already been pointed out, ‘Abbādān is now over 20 miles from the sea. The most southerly place in the ‘Irāq for about a century has been the important lighthouse and telegraph station at Fānā [q. v.], built on the shore of the Persian Gulf; on it and the district, cf. Cuinet, op. cit., iii. 268—270; ‘Abb al-Raṣāzā al-Hasani, op. cit., p. 118; Hāṣim al-Sādī, op. cit., p. 21, 155-3 from below; cf. above and art. SHĀṬ AL-‘ARAB. The Turks fortified this important strategic point (see Persian Gulf [Handbooks etc.], p. 54; Meso
The remarkable set of the Mandaeans (the Sābī'a of the Kurān, q.v.), now called Sabbē, had from their early times their headquarters in southern Irāk, in Maisān, especially in the swamp country. On their geographical distribution in the sixth century cf. Chwolson, Die Sehnsucht der Siwaianer (St. Petersburg 1850, i. 124—125) and Euting, in Das Ausland (1876), p. 224—225. According to enquiries which I made in 1872 of Mandaeans, the number of Mandaeans in the larger towns of the Irāk may be approximately estimated as follows: in Amūrā and Hawīza 1,000 each; in Kūhāt Shībī and Mümmeh 500 each, in Bāṣa 500 and in Kūn 100. The language of the Mandaeans, who represent a remnant of the original native Aramaic population of Babylon, is probably identical in the main with the Aramaic idiom which was once predominant in southern Irāk, the dialect of the old kingdom of Mesene-Charakene, the Mekkān dialect as it is called in the Targum; cf. Noldeke, Mandische Grammatik (Halle 1875), xxvi and Pognon, Inschr. mandäische des gesce der Khouhout (Paris 1898—1899), p. 13—14, 224.

On the Indian people of the Dūst (Arab. Zūt) and the Zindī from East Africa, who were settled on the soil of Maisān at the end of the first (seventh) or in the third (ninith) century, see above i.e., p. 676 and the articles zūt and zītyī.

As to the industries of the people of Maisān in the middle ages we need only mention the mats made here, which are praised as the best of their kind; cf. S. Franck, Die aram. Fremdspr. in Arabisch. (Leyden 1886), p. 92. The reed-beds of the marshes supplied excellent material for them in enormous quantities. Even at the present day the manufacture of reed-mats continues to give employment to many hands; for the people of the flat lands in southern Irāk like to use long, thin-shaped butts called zerifa's, the walls of which are made of reed-matting.

The history of Maisān since the introduction of Islam practically coincides with that of the Irāk, especially that of the northern part (the province of Bāṣa and the Bāṭah); the reader may therefore be referred to the articles Irāk, Nasra and Abū Qīra. Here we will only point out that the administrative district of the Tigris belonging to Maisān was conquered with Dāst-i Maisān in the year 14 (635) on this conquest of Baladūrī, op. cit., p. 340—346 and Caetani, Ann. dell' Islam, iii. 252, 301—304 (§ 6 and 81—86); vi. 108 (Index s.v. Maisān).

Al-Madīr, the capital of Maisān, was the scene of important military happenings at the time of the Arab invasion and frequently later also. In the year 12 (633) al-Khālid and al-Muhammad fought a great battle with the Persians at this town, the first in their invasion of the Irāk. This battle is sometimes called after an adjacent canal, called al-Thīn (Yāḵūt, i. 937, 5). The defeated Persians are said to have lost 30,000 men in this encounter; cf. Baladūrī, op. cit., p. 242 and Tāḥārī, op. cit., v. 2026—2029; al-Masūdī, op. cit., 209; Muller, Der Islam, i. 228; Caetani, op. cit., ii. 595—602 (§ 196—200). In the fighting with the Khāndis for whom the district of Dūst-i Maisān frequently served as a hiding-place, there was a desperate battle in 47 (664) in and around the town of al-Madīr. These rebels were forced to retreat by the Khāfūn under the leadership of Mākbīl b. Kais; cf. Wellhausen, Abb.
MAISÂN — MAISIR 155

MAISARA, a Berber chief of the Maghrib, who rebelled against Arab rule in 122 (739/40). He belonged to the tribe of the Maṭḥār, and the historians give him the surname of al-Ḥakīr "the low-born" because he was of humble origin and before his rebellion had been a water-seller in the market of al-Kairawān.

After the recall of Mūṣā b. Nuṣair at the end of the first century A. H., rebellion began to smoulder in North Africa. Umār b. Abī Allāh al-Marrādī, governor of Tangier, and a grandson of 'Uṣba b. Nāṣir, Ḥabīb b. Abī 'Urnadi, governor of Sūs, were inflicting grievances on the Berbers by treating them, as regards taxation, as a conquered people not converted to Islam, and by taking the fairest of their women to send as slaves to Damascen. The general Ḥabīb having been sent from Sūs with his troops to the conquest of Sicily, his departure was the signal for insurrection. A movement on a large scale broke out; at its head the Berbers put Maisār al-Maṭḥārī. With the related tribes of the Mīkānas and Baraghāwā [q. v.] Maisār advanced on Tangier and seized it. The Arabs tried in vain to withstand him; the governor of Spain, 'Uṣba b. al-Haddājī, even crossed the Strait to help Tangier but his efforts were in vain. It was not long before Maisār was disarmed and killed by his own followers but his successor Khalīd b. Ḥamd al-Zanātī was more fortunate: at the beginning of 123 (740) he inflicted on the Arabs on the banks of the Wādī Shalīf (Chelif) the disastrous defeat known as the "battle of the nobles" (ghawāzī la-tāghrīf). It required a great expeditionary force to be organised in the east in order to overcome finally this general rebellion, which was not done without considerable losses.

MAISIR, casting lots by arrows, a method by which a head of cattle was divided. This was the custom of the Arabs before Islam. The word seems almost to mean lucky chance, easy success, from yasīra, to be easy, yasara, to succeed; cf. maisara, comfort, riches. A group of ten Arabs used to buy a young camel, which was cut into ten portions and the yāhir presiding distributed the portions among his companions by means of arrows on which he had written their names and which he drew at random out of a bag. In another system 28 portions were made of the animal; there was one part for the first arrow, 2 for the second and 3 for the third and so on up to 7; the three last got nothing. These arrows were deposited with the guardians of the temple in Mecca.

The game was considered a pagan practice and the Kur'an (ii. 216 and v. 92) forbade it along with wine and idols as a major sin.

The word maisir has acquired a wider sense among the commentators and in certain traditions.
Zamakhshari gives it the same sense as *kimār* [q.v.]. According to a tradition of the Prophet, *maisir* is applied also to *dūce*: “these accused dūce are the *maisir* of Persia (*maisir* al-*fāṣid*)”; according to a tradition attributed to ‘Ali it is also to be extended to backgammon and chess (presumably in so far as dice were used in these games) and according to Ibn Sirin to every practice in which there is an element of chance.

Cf. the Dictionaries, the *Kāmil, Dajbari, Zamakhshari, Kochākhāb*, ed. Nasrān Līs, i. 380; al-‘Aṣākb, ed. Houtsm, i. 500 sqq.; Huber, *Über die: Māsur genannte Spieß; Freytag, Einleitung*, p. 170 sqq. (B. CARRA DE VAUX)

**MAISUN**, daughter of the Caliph Yazid I. We do not know if after her marriage with Mu’āwiyah she retained the Christian religion which had been that of her family and of her tribe. A few verses are attributed to her in which she sings for the desert and shows very slight attachment for her husband. But the attribution to Masun of this fragment of poetry, which is in any case old, has been rightly disputed. She took a great interest in the education of her son Yazid and accompanied him to the desert of Khul where the prince passed a part of his youth; this temporary separation from her husband gave rise to the legend of her repudiation by Mu’āwiyah. She must have died before Yazid became Caliph.

**Bibliography:** This is given in Lammens, *Iktisat, ou l’histoire du califat omeyyade Méziria I* (M 10, 6, ii.), p. 286–287, 305, 312–314 (II. LAMMENS).

**MAISUR** (Masore) (St. mabili-Cañor “buffalo town”), the premier Hindu State in India, is a principality in Southern India under the British protection, having an area of 29,492 square miles, between 17° 36’ and 15° 2’ N. and 74° 38’ and 76° 36’ E. Its Hindu rulers preserved their independence until the middle of the sixteenth century when Haidar Ali [q.v.] took possession of the territory in his and his successor, Tippa Sultan’s [q.v.], possession until the capture of Secangapatam by the British in 1714 (1790). Maisur was then restored by Lord Wellesley to the old Hindu dynasty. The majority of the Muslims are Sunnis, very few being Shi‘is. Of Muhammadan buildings the most noteworthy are the Ganjāb or Mas-djem of Haidar Ali and Tipu at Gandhām, and the Davā Dāwat, a summer palace at Secangapatam. The population at the census of 1911 was 5,866,193, of whom 314,014 are Muslims, mostly Sunnis. The capital of the principality bears the same name, Maisur. The languages spoken are Canaree, Hindustani, Tamil, and Telugu.

**MAITAI** (v.), feminine of *mais*, dead used of *sacred things*; as a substantive it means an animal that has died in any way other than by slaughter. In later terminology the word means firstly an animal that has not been slain in the usually prescribed fashion, the flesh of which therefore cannot be eaten, and secondly all parts of animals whose flesh cannot be eaten, whether because not properly slaughtered or as a result of a general prohibition against eating them.

In addition to Sura xxxvi. 33 where *maita* appears as an adjective, the word occurs in the following passages in the Kurān in the first of these meanings, xvi. 116: “He has forbidden you *maita* blood, pork and that over which another than Allāh has been invoked; if however anyone is forced (to eat these) without wishing to transgress or sin, Allāh is merciful and indulgent” (of the third Meccan period, since vi. 119 may refer to this context and the appearance of the same exception for cases of coercion in vi. 146 [cf. below] is then only easily explained in view of the whole trend of the passage, if there were an earlier passage, namely xi. 116, which is given full justification; cf. Noldeke-Schawly, Geschichte des Qurān, i. 146 sqq.; Grimm, *Mohammed*, u. 26 transfers the whole Sura to the later Meccan period; vi. 140, 146: “They have said: ‘What is in the womb of this cattle belongs to the males, and is forbidden to our females’; but if it is *maita* (still born), all have a share in it... Say: I find in what is revealed to me nothing forbidden, which must not be eaten, except it be *maita* or congealed blood or pork — for this is filth — or a slaughter that another than Allāh is invoked, but if anyone is forced (to eat it) without wishing to commit a transgression or sin, thy heart is merciful and indulgent” (of the third Meccan period; cf. Noldeke-Schawly, i. 161; Grimm, u. 26): u. 168: “He has forbidden you *maita* blood, pork and that at which another than Allāh is invoked but if anyone is forced (to eat it) without wishing to commit a sin or transgression, it is not reckoned as a sin against him; Allāh is merciful and indulgent” (of the year 2 of the Hijraj, before the battle of Badr; cf. Noldeke-Schawly, i. 178; Grimm, ii. 27): v. 4, 5: “Forbidden to you is *maita* blood, pork, that at which another than Allāh is invoked, and that which has been strangled, killed by a blow or a fall, or by the horns (of another beast), that which has been eaten by wild beasts — with the exception of what is made pure — and that which hath been vaunted to idols... But if anyone (in his) hunger is forced to eat of them without wishing to commit a sin, Allāh is merciful and indulgent” (in all probability revealed after the valedictory pilgrimage of the year 10; cf. Noldeke-Schawly, i. 227 sqq.; Grimm, ii. 28 dates the Sura to the year 7).

It is quite evident from Sūra, vi. 140 that the *maita* was of some significance for the Meccans in the many laws about food with which Arab paganism was acquainted (cf. Wellhausen, *Reise arabischen Heidentums*, 2nd ed. p. 168 sqq.). Although it is no longer possible to define exactly the part it played (even the statements recorded by Tabarī from the earliest interpreters of this passage, which moreover only refers to a detail, reveal the complete disappearance of any reliable tradition), it may be assumed without misgiving that the Kurānic prohibition contained a corresponding pre-Islamic prohibition, although it perhaps modified it. Both go back to the religious reluctance to consume the blood of animals, and indeed in all the Kurānic passages quoted, blood is mentioned alongside *maita*. It is unnecessary to assume that Muhammad was influenced by Judaism on this point and the suggestion may be rejected especially as the prohibition in its stereotyped form occurs again in Sūra ii. 168 just at the time of vigorous reaction against Judaism and Sura vi. 147 (Madinense, a
late insertion) which contrasts the prohibition of *maita* etc. with the Jewish laws relating to food. What Muhammad understood by *maita*, he tells us himself in the latest passage dealing with it, v. 4: in the second half of the verse the principal kinds of *maita* are given (with the exception of the animal that dies of disease), which had already been mentioned in general terms; the commentators were thus able to interpret the single cases given as examples wrongly as different from the *maita* proper. The purification (in the Kur‘ān only mentioned in this passage) must mean ritual slaughter, by which, even if done at the last moment, the animal does not become *maita* but can be eaten.

These prescriptions of the Kur‘ān are further developed in the Traditions. According to the latter it is forbidden to trade in *maita* or more accurately its edible parts; some traditions (mainly on the authority of Aḥmad b. Ḥanbal) even forbid any use being made of all that comes from *maita* in any moment of slaughter (in conformity with the usual code of *maita*). An exception from the prohibition of *maita* is made in the cases of fish and locusts; these are in general considered as the two kinds of *maita* that are permitted, i.e., no ritual slaughter is demanded in their case (because they have no "blood", cf. above). While some traditions, extending this permission by the earliest *ḥiṣāt*, say that all creatures of the sea, not only fishes, can be eaten without ritual slaughter, including even sea-fowl (in this case it is said that "the sea has performed the ritual slaughter"), others limit the permission to those animals and fishes which the sea casts up on the land or the tide leaves behind it in contrast to those which swim about on the water. But there is also quoted a saying of Abu Bakr expressly declaring what swims on the surface to be permitted. In this connection we have the story of a monster cast up by the sea (sometimes described as a fish) which fed a Muslim army under the leadership of Abu Ḫubaida when they were in dire straits; but in this tradition and in the interpretation that has been given it (that they only ate of it out of hunger i.e., took advantage of the Kur‘ānic permission for cases of need) is clearly reflected the uncertainty that prevailed about such questions as were on the border line. Sometimes we read that portions that cut out of living animals are also considered *maita*. The way is at least paved for the declaration that all forbidden animal-dishes are *maita*. The regulations found in the Kur‘ān appear again here, e.g., the permission to eat *maita* in case of need and slay properly dying animals at the moment to prevent them becoming *maita*.

Some traditions handed down through Ḥammād from Ibrahim al-Nakha‘ī bring us to a somewhat late period (in the Kitāb al-Aṯār); one says that of the creatures of the sea only fishes can be eaten; another, which is found in two versions, limits the permission to what is thrown up by the sea or left behind by the tide; ritual slaughter is not demanded in this case. The question whether the embryo of a slaughtered dam requires a special purification i.e., ritual slaughter, is raised in one tradition and decided in the affirmative.

The most important regulations of Muslim law about *maita*, which express the last stage of development are as follows: It is unanimously agreed that *maita* in the legal sense is impure and "forbidden" (ḥarām) i.e., cannot be eaten and also that fish are exceptions to this; the Mālikis and Ḥanbalis also except the majority of creatures of the sea, and according to the more correct Shi‘ī view, this applies to all marine creatures (the Ḥanbalis here hold the opinion of Ibrahim al-Nakha‘ī, except that the two ideas of "brought up" and "swimming on the surface" are later overlaid and destroyed by the to some extent synonymous "slain by another cause", "died of itself"). The edible parts of *maita* are also *maita*, as are the bones, hair etc. among the Shi‘īs, but not the Ḥanafis, and among the Mālikis only the bones; the hide when tanned, is considered pure and may be used. Emergency slaughter (*dhakāt* or *tašī‘iya*; ritual slaughter in general is *dhakī* or *naqr*) is according to the Ḥanafis and the better known view of the Shi‘īs (also according to al-Zuhri) permitted, even if the animal will certainly die, provided it still shows signs of life at the moment of slaughter. According to the view predominant among the Mālikis, such slaughter is not valid and the animal becomes *maita* (in contrast to Mālik’s own view). The question of the embryo (cf. above) is answered in the affirmative by the Ḥanafis, following Ibrahim al-Nakha‘ī and Abu Ḫanifa (al-Shaibāni himself held the Mālik view, to be mentioned immediately) but in the negative by the Mālikis and Shi‘īs (in this case it is said that "the ritual slaughter of the dam is also the ritual slaughter of the embryo") except that the Mālikis made it a condition that the embryo should be fully developed (Mālik himself also demanded its slaughter, "to do the blood from it" in the case where the embryo had been dropped). That anyone who is forced to eat *maita* may do so, is the unanimous opinion; only on the questions whether one is bound to eat *maita* to save his life, whether he should satisfy his hunger completely, or only eat the minimum to keep life alive etc., there is a difference of opinion. The Shi‘īs and Ḥanbalis further demand that one should not have been brought to these straits through illegal action (a different interpretation of the Kur‘ānic regulations).

A clear definition of *maita* and its distinction from other kinds of forbidden animal foods was never reached. Sometimes it is separated on the authority of the Kur‘ānic passage itself from its own 4 subdivisions given in Sura v. Sometimes its validity is extended over extensive allied fields. As is evident from the Fāk books, this terminological uncertainty has not infrequently caused still further confusion in the discussion of differences of opinion.

**MAIYAFĀRĪKIN, a town in the north-east of Diyarbakr [q. v.].** The other Muhammadan forms of the name are Mafarikin, Mafarikin, Ferkin (whence the name of origin al-Ferik) etc. The town is called in Greek Mattyropolis, in Syriac Mīphērēkē, in Armenian Xpherk (later Muharkan, Muphargin). According to Y sluggish, iv. 702, the old name of the town was Madur-salā (read *fūla* > "matur-khalakh in Armenian, "town of the martyrs"). On the identification of Tigranocerta with Maiyafarikin see below.
Geography. The town lies to the south of the little range of the Ḥzarq which rises like the first tier of the amphitheatre of the mountains, the higher parts of which consist of the summits (Maššū, Antioch) rising to the south of Mašš and separating the course of the eastern Euphrates (Maššu, Antioch) from those of the Tigris and its left bank tributaries.

Mayāfārīkīn lies 25 miles north of the Tigris and 12 west of the Batmān-šu. It is watered by a little river (now called the Fārshīn-su) which flows into the Batmān-šu 12 miles to the southeast, an important left bank tributary of the Tigris which drains the wild and mountainous country south of Mašš (the cantons of Kulh and Sā sân). The old names of the Batmān-šu are Nispoura (Roman period), Nympheia (Byzantine period), Symeia Kallath, Armēnak Sāhdān, a ward of Armēnak origin transliterated Shštthūnā in Armenian and explained as "tender of blood"; Armen. Geogr. of the seventh century, Marquart, *Landauf.,* p. 164, Armēnak Kallath and perhaps Mamshēsh (Faus). Of Byzantium) Some of these identifications, as we shall see, are still uncertain.

Marquart in *Landauf.,* the meeting-place of a number of wells from the north shedding the different streams which go to form the Batmān-šu: 1. Cāhāyūrī on the Minūn-usa, 1. Karqamūn-Lurdż-Bāshī, Marquart; 2. Mašš-Kulīp-Fārshī-Mayafārīkīn; 3. Mašš-Khūnt-Ingīrt (=. Sā sân) - Mayafārīkīn. Routes 3 and 4 passing Sādān are still little known. The distance between Diyarbakr and Mayafārīkīn is about 15 miles. The old road Diyarbakr-Biltis, which was used to run through Mayafārīkīn, now runs inside. It crosses the Batmān-šu south of Armēnak (Diyār-barku-Sūmān - Zok - Wasiš-kam - Biltis).

Mayafārīkīn has thus lost the advantage of being a stage on the road between Armenia and upper Mesopotamia. Since 1260 it has no longer been a political centre around which gravitated the interests of the country around. It retains only a small importance as a market for the produce of the mountainous and pastoral country drained by the Batmān-šu.

Ancient History. The mountains to the north of Mayafārīkīn have long sheltered the remnants of ancient aboriginal peoples. About 600 B.C. Georgius (Cyprus) (ed. Geiger, p. 48) mentions the Khorhakas and Sameos sahar there who gave their names to the districts of Khor and Same. Marquart (1916) supposes there are elements of the aboriginal language in names like Mašš, Khor, and Mamshēsh, which are, he says, "mixed with the Median ("sad-khun-kasch") prefixed. According to tradition (Vākān, iv. 703, the founder of Marāqspol, Marāqspā, Layšū was the son of a woman of the mountains, and Marquart sees in Layšū a mutilated form of the name of the Arzūn (Hawara, *Armāni, 1915,* f. 99: 1916, p. 126). The Marāqspā Aba Naṣr was married to the daughter of Sīnāshīr, lord of the Minūnī, cf. Amedroz, in *F.K.A.S.,* 1905, F.K.A.S. *Inflammaro* three points he can recognize at Mayafārīkīn traces of an ancient Aram科学技术 settlement, "von Haus aus asiatische Anlage" (Armēnak, f. 100, 309).

Tigranocerta = Mayafārīkīn (?). As early as 1838 Moltke had suggested that Mayafārīkīn from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus!) Tigranocerta = Mayafārīkīn was devoid of natural defences, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Biltis (the ancient *Klorēs* Bakələrn, cf. Tomashchik, taken by Lucullus after the victory won on the banks of the Nicopolis (Oct. 6, 69 B.C.) and again in the reign of Nero by the legate Corbul (e. 63 A.D.); it is regularly mentioned down to the middle of the fourth century A.D. Other scholars had sought Tigranocerta at Sīrīt (d'Anville), Arzān (H. Kiepert, 1834), near Kreft-Esche (Kiepert 1875), near Tell Arma west of Nispūn (E. Sachau, cf. Duvanny) etc. Late Armenian tradition gives the name Tigranocerta to Diyarbakr. Moltke's idea was taken up vigorously by Lehmann-Haupt and W. Beuck, after their expedition to Armenia in 1898-99.

On the north wall of Mayafārīkīn is a mutilated Greek inscription. It was deciphered and published by Lehmann-Haupt, who attributes it to the Armenian King Pap (369-374), which is quite in keeping with the known facts of the reign of this monarch. In spite of his criticism of the details of Lehmann-Haupt's hypothesis, Marquart (1915) has rather corroborated him by bringing forward new considerations.

In view of the many contradictions found in the classical sources regarding Tigranocerta the question comes to be, if Mayafārīkīn is not Tigranocerta, what other unknown town existed here in the time of Pap, unless the stones on which the inscription is engraved and which are now hopelessly disarranged ("in helioser-verwirrung") were brought from another place when Tigranes was building?

The main objection to the identification of Tigranocerta with Mayafārīkīn is that, according to Eutropius, vi. 9, 1, and Faustus, v. 24, Tigranocerta was in Arzanene (Ardnīkh); on the other hand the river Mamshēsh seems to have formed in the fourth century the western frontier of this latter province. From this fact (Huebschm, *Die altrum. Oryx. Inschriften, in: Indoger. Forsch.,* 1904, pp. 473-475), it seems that Tigranocerta ought to be placed east of the Batmān-šu if this river is identical with the Mamshēsh. This last name was connected by Marquart with the name al-Musūliyat, which Muṣāfadda, p. 144, gives to one of the tributaries of the Tigris (on the left bank) and apparently corresponding to the Batmān-šu. (A district of Musiliya (?) still exists farther east on the upper course of the Biltis, in the area of the ancient possessions of the Bāṭrīsh Mūshūš; cf. Kāsrawi, in *Yākūt,* ii. 551-552).

To reconcile the statements of Faustus, iv. 24 and 27, with the position of Mayafārīkīn (12 miles W. of the Batmān-šu), Marquart proposes to identify the Mamshēsh = Nicopolis with the Fārshīn-su while the Musūllūyāt would be applied to the whole system of the Batmān-šu (Nymphia, Sāhdān etc.). The insignificance of the Fārshīn-su, which rises in the hills about 3 miles north of Mayafārīkīn (Ibn al-Asrār calls its source Ra's al-Ain; the *Lūkān-vanūs,* p. 437: "Ain al-Hawd) and does not suit the description of the hermitage of Mābrē, which, according to Faustus, must have been on the right bank, makes Marquart's hypothesis less attractive. If finally we consider the position of Mayafārīkīn from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus!) Tigranocerta = Mayafārīkīn was devoid of natural defences, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Biltis (the ancient *Klorēs* Bakələrn, cf. Tomashchik,
Maiyāfārikīn = Martyropolis. The identity of these two towns is quite certain. The Christian sources (Syriac, Armenian and Greek) referring to the foundation of Martyropolis are numerous. A Syriac "history" (tasāʾīdā) kept in the Jacobite church of Maiyāfārikīn was translated for the historian of the town, Ibn al-ʿArāṣa, and is given in a synopsis in Yākūt, iv. 703–707 and Kāzīnī, ii. 379–380 (transl. with notes in Marquart, Handes Anthorvya, 1916, p. 125–135).

The town is said to have been founded on the site of a "large village" (kurya ʿaṣima) by the bishop Marūṭa (Mār Marūṭa) who had obtained a concession from Persia to do so. This ecclesiastical flourishing between c. 353 and 420 (on the sources for his biography cf. Marquart, op. cit., p. 91–92, 125). The town of Martyropolis to which Marūṭa brought the remains of the Christian martyrs of Persia is mentioned for the first time in 410. The etymology of the Syriac name Mēpērēt is uncertain (cf. above). In Armenian the town is mentioned for the first time in the Geography of the viiith century as Npērēt (once Npērēt).

By the peace of 297 with Diocletian, the province of Sophanene, within which Martyropolis lay, had become part of the Roman empire. Vincentius Jovian (363) Sophanene remained to the Emperor. Under Theodosius II (401–450), the new town, situated quite near the frontier, acquired considerable importance and became the capital of Sophanene (= Great Tsophkh). The town was still insufficiently fortified and in 502 the Sasanian Kavād b. Fērōz seized it and carried the inhabitants off to Khūzistan where he founded for them the town of Abāz-Kobād (Yākūt, iv. 707) (Wēh-Āmīdī-Kavād = Ṣarrājān; cf. Marquart, Erānīāhār, p. 41, 307). Anastasius began the fortification of Martyropolis but Justinian, after his accession (527), was the first to reorganise completely the eastern frontier between Dīrād and Trebizond. Martyropolis, the headquarters of a commander under the strategos of Theodosiopolis (Erzerūm), became one of the most important military centres. Procopius, De aedificiis, iii., gives a complete description of the walls of the town, the height and thickness of which were doubled and a full account of the system of defences (outer walls, advanced forts etc.); cf. Adnotz, op. cit., p. 10–12, 140–142. In 589 the town fell into the hands of the Sasaniān but in 591 came back to the Byzantines in return for the support given by the Emperor Maurice to Abū-Ḥāshīm II. Heraclius held it till the year 18 = 619 (Yākūt, iv. 73; cf. [year]). The date is not given in Muralt, Chronog. byz., i. 2.

The vicissitudes of Martyropolis probably explain the fact that in the Armenian Geography of the seventh century (ed. Patkanow, transl., p. 45; Marquart, Erānīāhār, p. 18 and 161) the Persian province of ʿĀbdānīk (Arzanene) is separated from Tsophkh (Sophanene) by the line of the Khāfīr (= Bāʾmān-su) while in the description of parts of Armenia Npērēt (= Npērēt) figures as one of the 10 cantons of Arzanene.

Christian legend as preserved by Ibn ʿArāṣa and Yākūt gives very full details of the building of the town in the time of Mār Marūṭa: the arches (fēkān) of the walls in which the remains of the martyrs were placed, the eight gates of the town, the names of which are carefully recorded in the convent of SS. Peter and Paul, the buildings erected by the three ministers of the Byzantine emperor, each of whom built a tower and a church. There is still to be seen in Maiyāfārikīn the ruins of a magnificent basilica and of the Church of the Virgin (al-ʿAdhrāʾ). Miss Gertrude L. Bell, who has studied these monuments, dates the basilica "not much later than the beginning of the fifth century", and suggests that the Church of the Virgin was one of the two built by Khusraw II in recognition of the assistance lent by Maurice; cf Abū ʿl-ʿArāṣa, Mukhtārat, ed. Pocock, p. 98.

Under Islām. In 19 (450) in the reign of the caliph ʿUmar, Maiyāfārikīn was taken by ʿĪyād b. Gāmn without a blow being struck (Balādhūrī, p. 175–6) and henceforth shared the lot of Diyarbakr.

The intermediate character of the position occupied by Maiyāfārikīn puzzled Arab geographers. Ibn Rusta, p. 106, puts the town in Īṣazīrī while the others (Ibn Hawqal, p. 246) regard it as belonging to Armenia. According to these authors, Maiyāfārikīn was a little fortified town having an unhealthy climate on account of the stagnant water but not without its amenities (Īsāghī, p. 76; Ibn l-Ḥawqāl, p. 131, 134, 135; Maḥāṣil, p. 54). The region (gūdā muqālā) of Maiyāfārikīn and Arzan in the time of Ibn Hawqal was however entirely depopulated.

The Hamānīds and the Būyids. Maiyāfārikīn formed part of the territory of the Hamānīds. They built a castle (kṣar) near the gate Bāb al-ʿArāṣa wa l-Ḥammān (Yākūt); its ruins are apparently mentioned by Ewliyā (1655), iv. 71–4 under the name Saṣīf al-Dawla Saṣīfī. The Bāb al-Malādān gate also dates from Saṣīf al-Dawla (333–356). This prince was buried at Maiyāfārikīn; cf. ʿĪyān-nunā, p. 437. In 352, Nāgā, a client of the Hamānīd, rebelled in Maiyāfārikīn. In 362 (July 4, 973) ʿAlībābā b. ʿAlībābā al-Dawī defeated the Byzantines in the vicinities of the town.

In 367 (978) the Būyids ʿĀdūd al-Dawī divided the Ḥamānīd who had supported his cousin Bakhtiyār and in 368 Abū l-Wafā, a general of ʿĀdūd al-Dawī, took Maiyāfārikīn (Ibn Miskwārī, ed. Amedroz, ii. 199, 266, 312, 324).

The Marwānī dynasty. After the death of ʿĀdūd al-Dawī (374), Maiyāfārikīn and the rest of Diyarbakr fell into the power of the Kurd Bādh [cf. KURDS and MARWĀNĪS] who had the Dalāroa garrison of Maiyāfārikīn massacred and was able to defend what he held against the Būyids ʿAbd al-Ṣāmān al-Dawī and the sons of ʿAlībābā al-Dawī, who had meanwhile returned to Māvaṣī. After the death of Bādh, his nephew, Abū ʿAli Ḥasan b. Marwān, established himself in Maiyāfārikīn and for a century this town remained the capital of the Marwānī dynasty (380–479 and again in 486). In 384 the governor Māmā, appointed by Abū ʿAlī, succeeded in checking the turbulence of the inhabitants who had been incited by Ḥamānīd intrigues. There is an inscription of Mumahhid
al-Dawla dated 391 (1000) on the wall of the town. In 392 an "Adid pretender again stirred up trouble in Mayyaşarıkçin. In 401 after the assassination of Muḥammad al-Dawla, his murderer Shahrwān, son of Māmā, with the help of his Georgian guards seized Mayyaşarıkçin but Saʿīd Abū Naṣr came from Arzān and began his long and brilliant reign (401–453).

A fine castle decorated with gilding was built in 403 on the little hill on which stood the convent and church of the Virgin. This Christian sanctuary (the connection of which with the al-Adhīr church is not quite clear, cf. above) was transferred to the Melkite church. Later were built a hospital, a mosque with a clock (baqā‘ān < Pers. pījān) and baths. Water was led to all the town from the spring of Ra‘s al-A‘īn. A palace was built on the banks of the Sāṭidāmā (Baṭmān-šū) and the water was raised to it from the river by a noria. A bridge spanned the river Haww (Hazzār?)

A tawfīq bequeathed by Shahrwān Abū Naṣr al-Manzār endowed the mosque(s) of Mayyaşarıkçin with a library. A fort was built to protect the town against the Sanā‘ān (people of al-Sanā‘ān). Information from Ibn al-Aṣrāq is supplemented by the statements of Nāṣīrī Khusraw, who visited the town under Abū Naṣr on the 6th Jumādā I 438. The Persian traveller speaks of its walls, built of huge blocks of white stone ( Ibn Miskawa'[i, n. 354: "strong walls of black stone"; Lehmann-Haupt: "gelbluchsweiser Kalkstein"), the western gate all of iron, the Friday mosque, the water-channel passing before each house (one uncovered with drinking water and the other covered serving as a sewer). Outside the town were the caravanserais, the hot baths, and a second Friday mosque. To the north of the town was the suburb of Muhāhā, also with a Friday mosque and baths. At a distance of 4 farshākh from the town (on the bank of the Sāṭidāmā) was a new little town called Nāṣīrāt built by the emir then reigning.

After the death of Abū Naṣr, who was buried in the town, the Salmāsīs began to interfere in the affairs of Mayyaşarıkçin. In 458 Sallār Ḫārāsānī sent by Tugh'ull arrived before the town with 5,000 horsemen. In 463 it was visited by the celebrated Ḫārīm al-Mulk. In 478 by orders of Malik Shāh the former viceroy of the Marwāns, Ibn Dūḥān, besieged the capital of his masters, which surrendered in Jumādā I 478. The treasures of the Marwāns valued at 1,000,000 dirhams were carried off by Ibn Dūḥān. In 482, ʿAmīd al-Dawla, son of Ibn Dūḥān, was appointed governor of Mayyaşarıkçin. After the death of Malik Shāh (485), the Marwānī Naṣīr al-Dawla succeeded in re-entering Mayyaşarıkçin but the Saldūq Tashūq of Syria took the town in Rabī‘ I 486; cf. Ibn Aṣrāq in Amaduz, f. R. A. S., 1903. In 532 (Ibn al-Adhir, n. 45) the last representatives of the Marwānī family disappeared from the neighbourhood of Mayyaşarıkçin.

The Orťukd̲s and the Aiyūbīs. In 575 (1181) the Salmāsī Sultan Muḥammad added to the possessions of Il-Ghānī, founder of the line of Orťukdz̲s of Mardin, theief of Mayyaşarıkçin, to which Il-Ghānī appointed his son Sulaimān (516–518); cf. Abū Iṭrādī, ed. Pocock, p. 240 and Katib Fardī, Mardin Muḥāled-ı Orťukdz̲l-ı (Arabic) Târīkh (written in 944–1537), ed. ʿAlī Emīrī Efendi (Constantinople, 1331, p. 20). Six successive Orťukdz̲s ruled Mayyaşarıkçin till 580 (1184). In 587 (1191) the last Orťukd̲ Yuluq Arslān again seized the town and held it for a time.

In 587 the Aiyūbīs had become masters of Mayyaşarıkçin and held it till 658 (1260). Saʿīd al-Dīn built a mosque there for which the columns of the Byzantine basilica were used (Gertrude L. Bell, op. cit., Pl. xi). Mayyaşarıkçin had a mint under the Aṭābeqs: the coins which they struck (dated 591, 599, 600, 612, 618) bear curious human figures which are portraits or symbolical personages (Gečišb Behrem, Catalogue des monnaies byzanto-turques etc., Constantinople 1854, p. 440–457; S. Lane-Poole, Catalogue of Oriental Coins in the British Museum, vol. iv., p. 255; see vol. iii., p. 24 for a Marwānī coin of this mint). On the walls of the town are inscriptions of the following Aiyūbīs: ʿAwād Nāṣır al-Dīn Ayyūb (of 600 A.D.), Malik Aṣḥāf Māsā (607–617), Malik Muḥaffar Gūzā (623), Malik Kāmil Muḥammad (654). A complete list of rulers at Mayyaşarıkçin from 515 to 658 prepared by van Biezen is given in the appendix to Lehmann-Haupt, Materialien, p. 134.

The Mongols. In 639 (1241) the Aiyūbī Shihāb al-Dīn Gūzā had received the summons from the Mongol Khāqān to submit and raze the walls of the town but gave an evasive answer. In 650 (1252) the Mongols pillaged the country round Mayyaşarıkçin. During Hülagū's expedition to Syria in 658 (1260) the army of the prince Yâshmut besieged Mayyaşarıkçin which was defended with great bravery by Malik al-Kâmil. The blockade produced a terrible famine in the town which was forced to surrender. Only 70 of the defenders survived. Kâmil was put to death in cruel fashion and his head carried on the point of a lance through the streets of Damascus (Rashīd al-Dīn ed. Quatremère, p. 330–331, 350–375; d'Ohsson, Histoire des Mongols, iii. 354). Before his death, in 662 (1264), Hūlagū gave the district of Diyarbakr to his general Tūdān (cf. sulūd). Three years later, Aḥāṣa allotted Mayyaşarıkçin to his father's widow, Kūtāy Shāhin. Mayyaşarıkçin later lost its independence and henceforth shared the lot of Diyarbakr [g. v.]

In 796 during Timūr's stay at Mardin, a number of Maliks including those of Arzin (ṭīr) and Baṭmān came to pay him homage but the Saʿfar-nāmeh (i. e. 665) does not mention the lord of Mayyaşarıkçin. After the conquest of Diyarbakr, Timūr on his way to Mūsī took the road via Mayyaşarıkçin (ibid., i. 685) and Sefīwar (the name of a summit in al-Sanā‘ān east of al-Antāk). This march is the only example of a considerable force following the direct road Mayyaşarıkçin–Mūsī.

The Şafawīds and the Ottomans. Our information about the rule of the Turkoman dynasties (Karā-Koyunlu and Ak-Koyunlu) in the region of Diyarbakr is still very deficient. In pursuit of his campaign against the last Ak-Koyunlu Murād, Shāh Ḫān I Şafawi in 915 occupied all the region of Diyarbakr, the government of which was entrusted to Kūhā Muḥammad Ṭatādjī (Şarfâr-nāmeh, i. 405; Ḫām-ārā, p. 23–25). The defeat at Šādihrān produced risings against the Persians throughout Kurdistan. The Kurd chief Siyād Ahmad Beg Rūzākī seized Mayyaşarıkçin and ʿAtāk (Hatūk, cf. the Kātīrāt ʿArṭăxšīs of Georgius Cyprus). Mayyaşarıkçin passed definitively under Ottoman rule after the battle (921) of Koč-Ḥışār (south of Mardin) in which the Persian general Kara-Ḫān was defeated (von Hammer, G.O.R. 3, i. 731–741).
MAKĀMA

MAKALLA. [See MUCALLA.]

MAKĀM (A.), place, place where šalāt is performed. As to Makām Ibnâikîm, see KĀBA I.

MAKĀMA (A.), a variety of Arabic prose of a highly elaborate and artificial nature. Makāma in the old language was the name for the assembly of the tribe, synonymous with nādî (e.g. Lebel, Divân, No. 46, 10; Salâma b. Djânu- d, Divân, i. 4 = Mufaddalîyât, ed. Thorbecke, No. 20, 50, ed. Iyâl, No. 123, 4; Hamânî, p. 95, v. 1 etc.; so also Hamadhânî, Maž. 16, 5 [Stamb. = 44 u. Bair]), hence the word was next applied to gatherings at which the Omayyad and early ‘Abbasid caliphs received pious men in order to hear edifying discourses from them, as Hîshâm for example did with Khalîl b. Salâman (Khitb al-Ash’în, ii. 15, 35, 33, 47 sqq.); Ibn Ḫuttaiba gives an account of it in the chapter Mufaddâlîyât (Sing, appears as Makām in the separate headings) al-Zâhin b. ‘Ibâlîsfa wa ‘L-Muljî in the K. al-Zâhid, 6 of the K. ‘Cûyûn al-Akhbâr (cod.

THE ENCYCLOPEDIA OF ISLĀM, III.
Kops. 1344, fol. 212v—213r), upon which Ibn ʿAbd Ḳallābi in ʿIṣā al-Faʿrīd (Cairo 1305), i. 286 sqq. and ʿAlī Frīḥūd, ʿṢārīṣ al-Muḥāḍa (Bāleq 1289), p. 32 sqq. have again drawn. The word then came to have the more general meaning of lecture, e.g. in Mašʿūdī, Muḥūd al-Dhakhāb (ed. Paris), v. 421, and perhaps also Djiḥīṣ, K. ʿAlī Frīḥūd, p. 218, 19, where it appears along with poetry, proverbs and tales of battles as an essential element in Arab education. In the third century A.H., however, the word began to sink from this higher sphere; it became the name for a beggar’s appeal, which had to be framed in carefully chosen language, the more the literary training of the adīb, once a privilege of court circles, became disseminated among the people; an example of these appeals is preserved by Djiḥīṣ in Bišāṣī, K. al-Muḥāḍa, p. 218 (ed. Schwally), p. 623 sqq. The appeals of beggars seem to have paved the way for the literary genre proper (cf. A. Moz, Mīn l-Ḳasīm, p. xxi/xxvii). This owes its existence to Hamadhanī [q. v.]. He created a typical representative of this literary Bohemianism to which he himself belonged, which entered upon the inheritance of the ḫāṣṣī poets of the early days of Islam, like al-Ḥaṯāma. The frequently very witty execution of the constantly changing part of his hero Abu l-Fath al-Iskandari and from the point of view of form the adoption for his tales of rhymed prose, which was already beginning to dominate the finer style of letter-writing, are the two special characteristics of Hamadhanī’s work. To the hero himself he gives a foil in the person of a narrator, Ḥaṣān b. Ḥaḍām, who serves sometimes in the role of a trickster, as in maṣākīna 12. In the 7th also — one of the poorest of the way — in which a certain ʿUṣma b. Badr al-Faḍlān records a meeting with Farāzādān not very creditable to Dhu l-Rummā, the principal hero takes no part. Six of these stories are only intended to glorify his patron, Ḳālaf b. Ahmad ruler of Sidjīstān, to whom as Margoliouth supposes (cf. HAMADHANĪ) the whole collection was dedicated. Sometimes he only uses the maṣākīna form to give expression to his own views on literary questions, as, for example, in the first on ancient and modern poets, in the fourteenth on the steeds of prose, al-Djīḥīṣ and Ibn al-Muṣaffā in the 25th maṣākīna, another in which al-Iskandari does not appear, he puts his polemic against the Muṭaridīs in the mouth of a maḏūm. He does not always make al-Iskandari appear as a rogue but in the 42nd maṣākīna he displays a knowledge of the world which is quite indifferent. No. 26 (Syrian, lacking in the Barīt edition) and 31 (the Ḩuṣaḥī, incomplete in the Barīt edition) contain specimens of erotic jargon and cant-language; of purely lexicographical interest is maṣākīna 30, selected and elucidated by Alwardi in Īṣāʾ al-ʿUṣma, v. 250 sqq., which deals with a competition instituted by Saḥ al-Ḍawalī for the best description of a horse. The 1st (No. 52 in the Barīt edition) is of quite another character and has only the rhymed prose in common with the maṣākīna proper; it is on this account classed with nine other anecdotes as muṣaffā in the Stamba edition and put in an appendix.

Hos for al-Ḥarīrī’s statement quoted above, s.v. ḲAMĀMA, that al-Hamadhanī got the idea from Ibn Durān. Al-Ḥarīrī is true cannot be ascertained as this work has not survived. In any case he is entitled to the credit of having created a new literary form, which might have proved very fertile in Arabic literature which is not exactly rich in forms. It is perhaps impossible to appreciate his talent fully if we may believe the tradition that the 51 specimens that have survived to us and which were apparently all that were known to al-Ḥarīrī represent only about an eighth of his whole output. His contemporaries and immediate successors were however not able to follow him on the path he had indicated. One only of his contemporaries, the court poet of Saḥ al-Dawalī ʿAbū Naṣr ʿAbd al-ʿAzīz b. ʿUmar al-Salṭ († 405 = 919), has left us a maṣākīna (Alwardi, Verz. der ar. Handschr. Berlin, in No. 8536). Not till a century later do Ibn Naṣīrī and al-Ḥarīrī again take up the form created by him. The former (Abu l-Kāsim ʿAbd Allāh or ʿAbd al-Bābī Ṭūḥī Muhammad b. Ḥusayn, b. 15th Dhu l-ʿKhāḍ 410 [March 14, 1020] in Baghdād, d. 4 Muḥarram 485 [Feb. 15, 1092]), of whose other poetic and philological work nothing has come down to us, does not keep strictly to the model created by al-Hamadhanī in the nine maṣākīnas preserved in a Stamba MM. (Fāṭīḥ 4097; M.O., vii. 112) in as much as he does not have one hero all through and also introduces various persons as narrators, but the main point is the polished form, in which he tells his otherwise not remarkable stories (cf. Ch. HUART, Les stances d’Ibn Naṣīrī, J. A., ser. 10, vol. xii., 1908, p. 435—454, and the edition by O. RESCHER, in Beiträge zur Magiûn-Literatur, Heft 4, Stambal 1914, S. 123—153). It is not till Ḥarīrī [q. v.] that the form appears in its most complete form, the latter at the same time considerably limited its subject matter in as much as he makes the anecdotes recorded by al-Ḥarīrī b. Ḥammān centre around a hero. Abū Zayd of Sārūdje, and relates the adventures of this Bohemian, whose wit is never at a loss and who is able to meet all difficulties, in a style sparkling with wit and full of all the tricks of language. That he owed the stimulus to his work to an encounter with an actual vagabond may be legend; al-Subkī, Ṭabākāt al-Shafi’īya, iv. 296, 10; and Ibn Taghībdīri, iii. 23, 1 sqq. say he was a Bāṣānī al-Muṭahār (Ibn Taghībdīri says al-Muṣaffā) b. Sallār (cf. C. DUMAS, Le héroïs des maṣākīnas de Ḥarīrī, Abu Zayd de Sărudji, Algiers 1917). The story at least may be quite true that the Maṣākīna al-Ḥarīmīya saḥīh to be inspired by this meeting was the first from his pen. In any case Ḥarīrī’s tricks of rhetoric (cf. the antithesis in Crusot, Études sur les stances de Ḥ., Paris 1913) so overshadowed his subject matter in the eyes of later generations that henceforth the form became the essential characteristic of the literary genre, and it could be used to clothe the very varied subject matter. Al-Ḥaẓāzī (d. 505 = 1111) and ʿAbd al-Karīm al-Samʿānī (d. 526 = 1137) in their Maṣākīna al-ʿUṣma bāina yadai al-Khalīfa wa ʿl-ʿUṣma (Alwardi, Verz. der Hess. Berlin, in No. 8537, 1) and Maṣākīna al-ʿUṣma bāina yadai al-ʿUṣma (Ḫalīfa Ḫalīfa, No. 12702) attempt to go back to the older form. But the Spaniard Abu l-Tāhir Muhammad b. ʿUsuf al-Ṣakhrīnī (d. 535 = 1143) in Cordova seems to have come nearer to Ḥarīrī in his al-Maṣākīna al-Sarāḥaṣṣa (in Stamba, Lille, 1928, 1333). He also set himself the classical number of 50. Al-Zamakhshāri (d. 538 = 1143) on the other hand disclaims any...
such affinity; his maḥkāmas are simply moral ad-
monitions and like their counterparts, the Naṣariyya
al-Kāmil and the Afsāf al-Dhakhāb, are intended to
be appreciated mainly as tours-de-force of rhetoric
(cf. the editions, printed Cairo 1313, 1325, and
the translation by Rescher, in Beiträge zur Maṣūma-
literatur, Heft 6, Greifswald 1913). Whether the
Maḥkāmat al-Ṣūfīya of Shīhāb al-Dīn al-Suhrawardi
(d. 587 = 1191), which deals with mystic terminology
(s. Cat. of MSS. Brit. Mus., No. 1349, 25), belong to
this class at all is doubtful. On the other hand the
Maḥkāmat al-Djawwāyī fi l-Maṣūmah al-wa’diya
(Leyden, No. 426, Cambridge, No. 1098, Escurial,
Dèrenbourg, No. 542), which the author Ibn al-
Djawi (d. 597 = 1200) himself provided with a
lexico-graphical commentary, are certainly modelled
on those of Ḥarīrī. The al-Maḥkāmat al-Muṣiliyya
of the Christian physician Abū ʿl-Abbās Vahiyū
b. Saʿīd b. Mārī (d. 589 = 1193; see Ibn al-Ḵīṭī, p.
361, 4) definitely profess to be a single imitation
of the latter. They have a hero and a narrator
but the subject manner is varied, usually of a learned
and technical nature (cf. Flügel, Vers. der Hs.
Wien, No. 384). To the end of the sixth A.H. seems to belong Abū ʿl-ʿĀliʿ Aḥmad b. Abī Bakr b.
Aḥmad al-Rāzī al-Ḥanafi who dedicated 30 maḥkāmas to the chief ʿdāl Muhīy al-Dīn Abū
Ḥāmid Mūḥammad b. Mūḥammad b. Aḥsīm al-
Shahrizārī (not the same as mentioned in Ibn
Khaliḳān, Balāq 1329, i. 597). The only indica-
tion of his date is the mention of the Kāh-
īn of Shīrwān (717); this title was first borne by
His aim is to imitate Hamadhanī, Ḥarīrī but his
language is much like theirs, he introduces his hero and a narrator and is fond of elaborate
descriptions, frequently dropping into the
obscure; a number of the maḥkāmas go together
in pairs, the one being supplementary to the other
(cf. the edition in O. Rescher, Beiträge zur Maṣū-
literatur, Heft 4, p. 1–115). Of the viith
century A.H. we only need mention an imitation of
Ḥarīrī’s maḥkāmas, 50 in number, dedicated to
the family of Dīwawīn (cf. his Taḥrīr-i Dāwāwīn, ed.
Mīrzā Mūḥammad, G. M. S., xvii, i, ii, note 2)
by Shams al-Dīn Maḥmūd (Mūḥammad) b. Naṣr
Allāh b. al-Saʿīd in 672 (1273) (s. Hādījī Khaliḳa
No. 17090) entitled al-Maḥkāmat al-Zamīmīya (s.
Brit. Mus., No. 609, 120, Stambul, Nāʿīn-ol-Mīnāyī,
No. 4273). The Syrian Egyptian poet Mūḥammad b.
ʿAfīf al-Dīn al-Tilimsanī al-Shāhī al-Zarī († 688
= 1289) applied the form in the field of love-poetry,
sometimes with lascivious subjects (Maḥkāmat
al-ʿUṣhāb, Paris, No. 3947; Faṣāḥat al-Maṣūfī fī
Maḥāhat al-Maṣūfī fī al-Maṣūfī wa l-Shārāsīya, Aḥwāl,
Vers. des Moscheen, Berlin, No. 8539, 4, 5). These
imitations become more numerous in the viiith
al-Maʿṣūm al-Rāzī composed al-
Maḥkāmat al-tishārī ʿaddara (tr. Tunis 1303, Les
dons sculpts du Comté A. B. M. al-Mohdakh, re-
print, Paris, 1855). The form is used for religious
subjects, e.g. by Abū ʿl-Fath Mūḥammad b. Sāli-
ḥ al-Nās († 1344 = 1334) in praise of the Prophet
and his companions in al-Maḥkāmat al-ʿalīya fi
l-Kārūmāt al-ʿalīya (s. Rosen, Notices sommaires
des miss. or. du Musée Asiatique, St. Petersboug
1881, No. 146, 19), for mysticism by Shams al-Dīn
Mūḥammad b. ʿAbd Allāh b. Dīnā Ṣalāḥ al-
Maḥkāmat al-tafassāfīa ʿadd la-Tardījamāt;
ṣūfīya, in number 50 (Cambridge 1912), and
again for the paraenesis in 749 (1349) by Zāin
al-Dīn ʿOmar b. al-Wardi in the maḥkāma on the
plague of which he died in the same year entitled
Abu ʿl-Abas Wāhid (Aḥwāl, Berlin, No. 8550, π, probably identical with the maḥkāma which Čiček put in his work on the plague). The maḥkāma
was adopted for the panegyric by the Meccan ʿAlī
b. Nāṣr al-Hijāzī in his al-Maḥkāma al-Ǧawwāriya
wa l-Tāṣīfīya al-Maṣūmīya in honour of the Mamlūk
Ṣūfān Kānṣūf al-Ghwāri (906–912 = 1500–
1516; s. Pertsch, Vers. der Hs. Gotha, No. 2773).
The great encyclopaedist of the ninth century,
Ṣūfā, naturally did not omit this form of
composition, which he used with complete contempt
for its traditional use to treat of subjects from
the most varied branches of knowledge, religious
as well as profane, e.g. the question of the fate
of Mūḥammad’s parents in the other world, the
merits of different perfumes, flowers and fruits;
for did he hesitate to use it for obscene subjects
(cf. the article suʾūfīa where the printed editions
are given). His contemporary, the South Arabi
Zaidī Ibrāhīm b. Mūḥammad al-Hadawi b. al-Wazir
(d. 914 = 1508), used the maḥkāma for theological
instruction in al-Maḥkāma al-ṣuṣuriya wa l-Fāțika
al-ḥabariya (Leyden, No. 438; Brill-Houtsmans,
No. 67), as did Ṣūfā’s rival Abī Mūḥammad b. Mūḥammad
al-Kaṭtālānī (d. 923 = 1517) in the Maḥkāmāt
al-ʿArifīn (Stambul, Koprunli, No. 784). Even in
the centuries when literature was at a low level, the
xith and xiiith, the maḥkāma was still used for the
most varied purposes. In 1078 (1667) Djamāl
Abu ʿl-Fath b. al-Kaḥān composed a maḥkāma on
the war then being waged by the lords of Baṣrā Ḥusain Pasha and Ṣulām Pascha
Afrāsīyāb on a Turkish army under Ibrāhīm
Pasha, which he elucidates in the commentary
Zūd al-Maṣūr (Brit. Mus., No. 1405–6, Baghdād
1924, used by R. Mignot in his History of
modem Bessarab, p. 269–286; s. St. H. Longrigg,
Four Centuries of modern Iraq, Oxford 1925,
p. 328). His compatriot ʿAbd Allāh b. Ḥusain
b. Mārī al-Baghdādī al-Suwarī (d. 1174 = 1760)
and his son Abu ʿl-Khaṭir ʿAbd al-Kaḥān (d.
1200 = 1786) used the form to string together
a series of old and new proverbs in a witty context
(Maḥkāmat al-Amīḥāf al-ʿawra, Cairo 1244
with the son’s al-Maḥkāma Ḟanāfī al-Amīḥāf azzīt
al-Azīzāl, Berlin, No. 4832–83). An imitation of
Ḥarīrī in 50 adventures, the scene of which is
laid in India, of an Abu ʿl-Zafer al-Ḥindī al-
Ṣāiyā, which al-Nāṣr b. Fattāḥ narrates was
finished in 1125 (1715) by Abū Bakr b. Muḥsin
Bābībī al-Awālī (lit. at the Maṭbaa al-ʿUmm Press
1264 entituled al-Maḥkāmat al-Hindīya, s. M. Hidayat
Ḥusain, Catalogue raisonné de l’hôtel Library,
i. 459).
Ḥarīrī himself had already allowed his art to
degenerate to mere juggling with words, when he
used in the Kārūmāt l-Ṣūfīya wa l-Shārāsīya,
not included among the maḥkāmas in the maḥkāmas
with ʿin and in the other only those with
ṣīn (just as a contemporary of Simonides had
written a Greek hymn without a sigma in it; cf.
V. Wilamowitz, Kultur d. Gegenwart, i, iii, 49);
also al-Ḥanafī’s maḥkāmas contain such jugglings
with words; ʿAbd Allāh b. ʿAbd Allāh al-Idkāwī
(d. 1184 = 1770) wrote al-Maḥkāma al-Iskandariya
wa l-Tāṣīfīya in which the words are arranged in
pairs only distinguishable by their diacritical points
Finally the metropolitans of Nisibî 'Abdîshko (<i>Emīdêshshêt</i>) who died in 1318, composed in 1290–91 on Harîrî’s model 50 Syriac poems, religious and edifying in their subject matter in two parts, called after Enoch and Elias, the artificial language of which himself elucidated in a commentary in 1316 (the first half: <i>Pardaisa dha Edên seu Paradisus Eden Carmina auctore Mer Eboleso Schemi</i>, ed. Gabriel Cardacli, Bâritû 1889).

**Bibliography:** given in the article.

(C. Brockelmann)

**Mâkan b. Kâki, Abû Mansûr,** like his father was a captain in the army of the <i>Alid</i> rulers of Tabaristan. Sâyîd Abû l-Kâsim Dîjarî b. Sâyîd Nâšr, son-in-law of Mâkan, who came to the throne after the death of Sâyîd Abû Muhammad Ḩasan b. Kâsim, known as the <i>Dâ’i</i> (“the summoner unto the truth”), appointed Mâkan to the governorship of Lurîdjon. Sâyîd Abû l-Kâsim died in 312 (924) and was succeeded by Sâyîd Abû ‘Ali Muhammad Abû l-Husnî Aḥmâd. Mâkan depôsed him, sent him as a prisoner to Abû l-Ḥusnî b. Kâki, his nephew, for safe custody, and placed his own grandson Sâyîd Ismâ’îl Abû l-Kâsim on the throne. Shortly after this, Sâyîd Abû ‘Ali Muhammad effected his escape and was joined by Asfâr b. Shurawâdî (<i>q.v.</i>) who had rebelled against Mâkan and made himself master of Lurîdjon. Mâkan took the field against them but was beaten and forced to take refuge in the hills in the neighbourhood of Sârî.

Sâyîd Abû ‘Ali Muhammad died in 315 (927), and was succeeded by his brother, Sâyîd Abû Dîjarî Ḥusnî. Mâkan now issued from his mountain retreat, overthrew Asfâr, who was the commander of the army of Sâyîd Abû Dîjarî, forced him to fly to Khurâsân, and declared the Dâ’i ruler of Tabaristan. In 316 (928) Mâhâmîd b. Sâlîk, the Šāhâbîl governor of Raîy, invited the Dâ’i and Mâkan to Raîy, delivered the province to them and retired to Khurâsân. During his absence of the Dâ’i and Mâkan, Asfâr returned from Khurâsân, conquered Lurîdjon, defeated and killed the Dâ’i, and became the ruler of Tabaristan. He then marched to Raîy, defeated Mâkan and put him to flight. But soon after this Asfâr came to terms with Mâkan and delivered Amûlî to him. Mâkan now gradually extended his sway to Lurîdjon and even conquered Nishâpûr in 318 (930). About this time Mâdâwîd revolted against Asfâr, and forced him to take refuge in Tabas in Kuhîsân, but Mâkan fell upon him from Nishâpûr and sent him flying back to Raîy.

In 319 (931) Mâkan evacuated Khurâsân at the request of Amir Nâyîr b. Aḥmâd and returned to Tabaristan, but he was soon turned out of it by Mâdâwîd who had become master of Raîy after the death of A-fâr. Mâkan tried to recapture Tabaristan with the help of Abû l-Fadîl l-Dîjan and later of Aḥmâd b. Mâhâmîd b. Mâhî, the commander of the army of Khurâsân, but Mâdâwîd proved too strong for him, and he was forced to fly for refuge to Khurâsân. Amir Nâyîr b. Aḥmâd now bestowed on him the government of the province of Kûrmân. He proceeded thither, defeated the former governor and took possession of the province. But when he heard the news of the murder of Mâdâwîd in 323, he returned from Kûrmân, procured the grant of the province of Lurîdjon from Amir Nâyîr b. Aḥmâd,
and asked Washmir, the brother and successor of Mardawij, to surrender the province to him which he did. Henceforth very friendly relations were established between them on the strength of which Makan threw off the yoke of Bukhara. When Amr Nasr b. Ahmad learnt this, he despatched Ammad, the commander of the army of Khurasan, against Makan who was defeated after a desperate struggle of 7 months and forced to flee to Washmir at Ray. Ammad followed him thither, and defeated the combined forces of Makan and Washmir at Ishakbadab (near Ray) on 21st Rabi 1, 329 (December 25, 940 A.D.). Makan was shot in the head by an arrow and fell dead. His head was cut off and sent to Bukhara.

Makan [see Makan]

Makedishu, a town in East-Africa on the shore of the Indian Ocean, capital of Italian Somaliland. Population: 21,000. Setting aside the question of some ruins perhaps South-Arabic, Makedishu arose in the 11th century A.D. as an Arabian colony. The immigrations of the Arabs reached Makedishu in different times successively, and from different regions of the Arabian peninsula; the most remarkable one came from al-Ahsa on the Persian Gulf, probably during the struggles of the Caliphate with the Karmatians.

Perhaps at the same time also Persian groups emigrated to Makedishu; and even to-day some inscriptions which have been found in the town demonstrate that Persians from Shiraz and Naisabur were dwelling there during the Middle Ages. These foreign merchants were, however, obliged to unite themselves politically against the nomadic (Somali) tribes that surrounded Makedishu on every side, and eventually against other invaders from the sea.

Therefore a federation was concluded in the same 11th century A.D. and composed of thirty-nine clans, divided in two quarters (Hamar-Wan and Shangani). The city was divided among the tribal federations, and the clans were treated as a separate tribe. The federation became extinct in the 13th century, when Makedishu was conquered by the Somalis.

In the 11th century A.D., the dynasty of the Muraffer succeeded to the dynasty of Fakhr al-Din. However, in the region of the Wabi Shabilla, viz. the true commercial hinterland of Makedishu, the Adjudann (Somali), who had constituted there another Sultanate friendly and allied with Makedishu, were defeated by the nomadic Hauyya (Somali) who conquered that territory. Thus Makedishu was cut away by the Bedouins from the interior of the land and began to decline from its prosperity. The colonial enterprises of the Portuguese and the British in the Indian Ocean hastened even more this decadence. Vasco da Gama, when he was coming back from India in 1499 A.D., as-sailed unsuccessfully Makedishu with his squadron; and even Da Cunha in 1507 A.D. did not succeed in occupying the town. In 1552 A.D. Makedishu was visited by Dom Estevam da Gama, son of Vasco, who came there to buy a ship. In December 5, 1700 A.D. a British squadron of men-of-war stopped threateningly before Makedishu but they did not land any force and after some days went away probably to India. During the wars between the Portuguese and the Imam of Oman, Makedishu and other towns on the Somali coast were occupied by the soldiers of Imam Sidi. Sultan (died 1116 = 1704); but after a little while the Imam ordered his troops to come back to Oman.

In the meantime the Sultanate of Makedishu was practically divided into two quarters (Hamar-Wan and Shangani) and was wasted by civil wars. The Somalis had so penetrated little by little, into the ancient Arabian town that the clan of Makedishu changed their Arabian names with new Somali appellatives: the "Akhali clan became the "Sheikh;" the "Lijaddati" were called "Shahshiyat;" the "Affis took the name of "Gudmanak;" and even the Murabi (Kalijam) changed their name for the Somali "Sheikh.

But in the 11th century A.D., the Bedouins (Somalis) Danandola, excited by exaggerated traditions of the wealth of Makedishu, assailed and conquered the town. The chief of the Danandola, who had the title of "Imam, established himself in the Shangani quarter; and the privilege of the "Imam, about the election of the "Kadi was again recognised by the new masters of the town. In the first half of the 12th century A.D. the Sultan Barghash b. Sa'id of Zanzibar occupied Makedishu and ruled the town by means of a "Wali. In 1180 the Sultan of Zanzibar leased the town to Italy, who afterwards in 1906 bought all the settlements of Zanzibar on the Somali coast.

MAKDISHU — MAKHZEN

(ENRICO CERULLI)

MAKDUM AL-MULK, whose real name is Mawlá Abú Alláh, was the son of Shaikh Shams al-Din of Sulţānāpur. His forefathers immigrated from Multán and settled at Sulţānāpur near Lahore. He was the pupil of Mawlá Ana Abu al-Kādir Sarhindī and became one of the most distinguished scholars and saints of India. He was a bigoted Sunnī and looked upon Abu l-Fadl (d. 1011 = 1602) from the beginning as a dangerous man. Contemporary monarchs had a great regard and respect for him. Emperor Humayūn (1537-98 = 1530-56) conferred on him the title of Shaikh al-лизām. When the empire of India came into the possession of Shāh Shāh (1546-52 = 1539-45) he also honoured him with the title of Saheb al-ilāh. He was also a man of great importance during the time of Emperor Akbar (1563-1605 = 1556-1609). Bairam Khan Khānān (d. 1596 = 1605) extorted his position very much by giving him the subdivision of Thānakadāla, which yielded an income of one lac of rupees, while Akbar gave him the title of Makhduum al-Mulk by which designation he has become known to posterity. When Akbar introduced his religious innovations and converted people to his "Divine Fath", Makhduum al-Mulk opposed the Emperor, who became very angry with him and ordered him to go on a pilgrimage to Mecca. He therefore stilled in 957 (1579).

He died or was poisoned in 990 (1582) in Almudalādāl after his return from Mecca.

He is the author of the following books:

1. *Ismat al-imāyā*, a work on the chrestiety of prophets (cf. Bādāʿini, ii. 70).

Biography: Abu al-Kādir Bahātūnī, Muntazzah al-Tarāzī, iii. 70; Shāhīm al-Mir Kān Arangābādī, Mārar al-mabādil, iii. 252; Khazzmat al-āsītān, p. 443-464; Alaʾ al-Akbar, transl. by Blochman, p. 172 and 544. (M. H. YABAT BOSAIN)

MAKDUM-I DJAHANIYAN. [See Djalīl BUKHARI]

MAKLAD (BAN), a family of famous Cordovan jurists who, from father to son, during ten generations, distinguished themselves in the study of Fikh. The eponymous ancestor of the family was Makhlad b. Yazid, who was_kāf_i of the province of Reiyadh (the_kāf_in the south-east of Spain, the capital of which was Malaga) in the reign of the Emir Abu al-Rahmān II, in the first half of the third century A.H. His son, Abu 'Abdu al-Rahmān Bahā b. Makhlad, was a great jurist and traditionist. He was born in Ramdān 201 (April 517) and after being in Spain the pupil of Malik b. Anas and of Yahya b. Yahya al-Latifi, he made a long journey to the East where he perfected himself in the sciences of Law and Tradition. On his return to Cordova his indisputable mastery earned him the hatred and envy of the chief Spanish jurists, especially of Abu Muhammad 'Abd Allāh Ibn Martanīl (cf. Ibn al-Farāhi, N. 245; al-Dābbih, N. 572) who tried to get him sentenced to death by accusing him of impiety and heresy. Bahā b. Makhlad only owed his safety to the intervention of the secretary to the court of Hāshim b. 'Abd al-'Aziz and was able to end his life under the protection of the Umayyad government, respected by the people of Cordova, where he died in 276 (889).

Baḥā b. Makhlad who, it is believed, was one of the first to introduce the Zādiya movement into al-Andalus [see the article ZĀDIYAH], wrote two celebrated books: a Tafsīr al-Qur'ān and a Musnad of Muhammadan traditions, the loss of which is greatly to be regretted if we may believe the laudatory judgment passed on them by Ibn Hazm in his *Kitāb* repeated by al-Makarrī (Analekta, ii. 115).

The direct descendants of Baḥā b. Makhlad devoted their scientific activity mainly to commenting on the masterpieces of their celebrated ancestor. A list of these scholars, with bibliographical references, is supplied in a small monograph devoted to the family of the Banū Makhlad by Rafael de Ureña y Menjauco, Familias de jurisconsultos: Los Beneméritos de Córdoba, Homenaje a D. Francisco Codina, Zaragoza 1904, p. 251—258. (E. LEY—PROVENÇAL)

MAKHZEN (A.), from khazana, "to shut up, to preserve, to hoard." The word is believed to have been first used in North Africa as an official term in the second century A.H. applied to an iron chest in which Ihābī b. al-Aḥlāb, emir of Ifrikiya, kept the sums of money raised by taxation and intended for the Abāsīd caliph of Baghdad. At first this term, which in Morocco is now in synonymy with the government, was applied more particularly to the financial department, the Treasury.

It may be said that the term makhzem meaning the Moroccan government and everything more or less connected with it at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the bit al-māl. Later, when the sums thus raised were kept for use in the countries in which they were collected and were no longer paid into the treasury of the Muslim community, and they became as it were, the private treasuries of the communities in which they were collected, the word makhesen was used to mean the separate local treasuries and a certain amount of confusion arose between the makhzem and the bit el-māl.

We do find in Spain the expression 'abd al-makhesen but it still means slave, of the treasury
rather than slave of the government, and it seems that it was only later in Morocco that in proportion as the state became separated from the whole Muslim community after being successively under the Omayyads of Damascus, the 'Abdids of Bagdad, the Omayyads of Spain and the Fatimids of Egypt that the word makhen came to be used for the government itself.

To sum up, the word makhen, after being used for the place where the sums intended for the bit al-nul of the Muslim community were kept was used for the local treasury of the Muslim community of Morocco, when it became separate under the great Berber dynasties: later with the Sharifite dynasties the word was applied not only to the treasury but to the whole organisation more or less administrative which lives on the treasury, that it is to say the whole government of Morocco. In tracing through history the changes of meaning of the word makhen, one comes to the conclusion that not only is the institution to which it is applied not religious in character but on the contrary it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries. The result of these successive usurpations is that the makhen which originally was only a chest in the treasury came to mean first the treasury itself, and the government and to represent to the Moroccan the sole principle of authority.

We know that the fundamental principle of Muslim society is that of the community: the head of this community is simply an administrator who has to exercise his functions, said the caliph 'Omar, like an honest teacher solely concerned with the interests of his pupils. Of this ideal the only part remaining in practice is that the members of the community are effectively in tutelage. In rapidly surveying the history of the Makhen, we can see how this arbitrary government became gradually established while using the prescriptions of Islam, and how it succeeded in forming in face of the native Berber element which surrounded it a kind of Arab façade, behind which the Berbers in spite of the slowness of their gradual Islamisation, have sustained their institutions, superstitions and their independence. In this connexion it cannot be too strongly emphasised that, in spite of their perhaps disputable orthodoxy, the Berbers are Muslims and consider that they belong to the Muslim community. No doubt they do not practise it very frequently but they have the pride of Islam and its intolerance; they have taken Muslim ostracism into the service of their native savagery and it would be a dangerous error to think that they could be open to anti-Muslim sentiments and particularly to imagine that their religious lukewarmness ought to make them favourable to us. The organisation was made at the first conquest by 'Oqba b. Nafi' 63 (682 a.d.). All the representatives of Arab culture had to do was to levy heavy tributes in money and slaves to satisfy their own greed and to enable them to send valuable gifts to the caliph of Damascus.

It was the same in 90 (708) with Musa b. Nu'air but the conquest of Spain brought over to Islam a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths. On the other hand the exactions of the Arabs and the desire to escape the demands of the caliphs facilitated the spread of Kharijite doctrines, the many schools of which made any unity of power impossible and on the contrary increased decentralisation.

The Idrisid dynasty, which its Sharifite origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islam only exercised its power over a small part of Morocco. Alongside of it the Barghawata [?c.] heretics and numerous Kharijite emirs continued to exist. The Zenata Mknaasia, Maghraowa and Banu Ifren at a later period were no more able to effect a centralisation of power. It was not till the fifth century A.H. (11th A.D.) under the Shanadi dynasty of the Almoravids that in the reign of Ya'kub b. Tashfin we can see the beginnings of a makhen which only becomes clearly recognisable under the Almohad dynasty. It was under the latter that religious unity was first attained in Morocco. The heresy of the Barghawata and all other schisms were destroyed and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues. It may be said that the organisation of the makhen which we found in Morocco is fundamentally based on this unification and the measures which resulted from it. The Almohads regarded theirs as the only true Muslim community. All who did not belong to it were infidels whom it was lawful to fight, to kill, to reduce their women and children to slavery and to seize their goods and lands for the benefit of the Almohads, the only orthodox community. The Almohads were thus able to apply to all the territory of their empire the ideal Muslim principle for dealing with land, i.e. that all the lands conquered by them from non-Almohads and even from Almohads whose faith was regarded as suspect were classed as lands taken from infidels and became habus of the Muslim i.e. Almohad community. These habus districts are those whose occupants have to pay the tax called kharaj. In order to levy this the Sultan 'Abd al-Mumin had all his African empire surveyed from Gades to the Wadi Nunn.

A few years later Ya'kub al-Manṣur brought to Morocco the Djasaam and Banu Hilaal Arabs and settled them on lands belonging to the Muslim community, which had been uninhabited since the destruction of the Barghawata, the wars of the Almohads with the last Almoravids and large despatches of troops to Spain. These Arab tribes who formed the gish (pronounced gish in Morocco) of the Almohads did not pay the kharaj for the lands of the Muslim community which they occupied. They were Makhen tribes who rendered military service in place of kharaj. We shall find later the remains of this organisation with the gish tribes and the tribes of nîtha. The efforts of the Marinids to reconstitute a gish with their own tribes did not succeed and they had to return to the makhzen of Arab tribes brought to Morocco by Ya'kub al-Manṣur and even added to it contingents of the Ma'kil Arabs of Sás.

Under the Banu Wat.?as this movement became more marked and Spanish influences became more and more felt in the more complicated organisation of the central Makhen and by the creation of new offices at the court and in the palace.
The conquests by the Christians by causing the development of the zayyus and the fall of the Banū Wattār brought about the rise of the Sa'dians [1:6] of Wādi Dār. The latter with their primitive manners as Saharan tribes and under the religious influence of the shāikhs of the brotherhoods began to try to bring back the exercise of power to the patriarchal simplicity with which it was wielded in the early days of 1-il. The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper makhzen with its military tribes, mini-ters, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials, which will be mentioned below.

The frequent intercourse between the Sa'dians and the Turks, who had come to settle in Algeria at the beginning of the eighteenth century brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the Makhzen.

It is from this time that really dates the existence of this entity, which is really foreign to the country itself, which lived by exploiting rather than governing it and is known as the Makhzen.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements, the ransoming of Christian slaves, largely contributed to give this Makhzen more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain the status quo in Morocco and the need to have a regular government to deal with them further strengthened the Makhzen both at home and abroad and enabled the Sulṭān Mawlāy al-Hassan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the Makhzen formed the facade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions preceded the prestige of the Sulṭān and the Makhzen in the eyes of the tribes. The envoy of the Christian powers, surrounded by the presents which he brought, appeared on foot in the court of the palace and seemed to have come to pay tribute to the emin of the Muslims, who was on horseback. All the theatrical side was developed to strike the imagination of the Makhzen with much care and succeeded in creating an illusion of the real efficiency of this organization in the eyes of both tribes and powers.

Under the Berber dynasty, the Amhods, the Marmāt, and the Banū Wattār, the military tribes, the Sīrī, were almost all Arab; under the Sa'dians they were entirely Arab; to the Hāshim and Banū Hātim, Arabs were added the Mālī Arabs of Sīrī. On the other hand, the Sa'dians had removed from the registries of the Qarādā a certain number of the Arab tribes who then paid in money the Ḫwajā for the Ḫwajā lands of the Muslim community which they occupied. These tribes, in contrast to the Qarādā, were called tribes of the mātir, that is to say, according to the etymology proposed for the word, they were under the tutelage of the makhzen (from nānib "tutor" or "substitute" for a father) or perhaps that they paid the tribes of the Qarādā a sum for replacing them (from nābā, to substitute).

From this time on, Morocco assumed the appearance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was, as it still is to-day, divided into two parts: 1. bilād al-makhzen or conquered territory; 2. bilād al-sīrāb or land of schism; the latter was almost exclusively occupied by the Berbers.

The bilād al-makhzen, which represents official Morocco, was formed of territories belonging to the ḥanīf of the Muslim community and liable to the ḥarāṣ. This land was occupied by Arab tribes, some Qarādā, others nātib. Morocco consisted of an Arab government (makhzen) which administered the regions liable to ḥarāṣ, and occupied by Arab tribes, the status of which varied according as they were Qarādā or nātib.

The Berber tribes of the bilād al-sīrāb not only refused to allow the authority of the makhzen to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the 'Alawī Shūrta of Tafṣīlāt, which succeeded the Sa'dians in the seventeenth century has been to oppose this movement of expansion of the Berber tribes. This is why Mawlāy Ismā'īl, the most illustrious Sulṭān of this dynasty, built 70 qāya's on the frontier of the bilād al-makhzen to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till quite recent years was the work of the Makhzen.

As we have already said, it was not a question of organizing the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the tribes of the Qarādā by extracting from the ports and from the tribes of the nātib all that could be extorted by every means. From time to time expeditions led by the Sulṭān himself against the unsolicited tribes asserted his power and increased his prestige.

The Makhzen, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy, seems to have attained its most complete development in the reign of Mawlāy al-Hassan, the last great independent Sulṭān of Morocco (1873–1894). The government of Mawlāy al-Hassan consisted in the first place of the Sulṭān himself, at once hereditary and also, if not exactly elected, at least nominated by the 'alavī and notables of each town and tribes from among the sons, brothers, nephews and even the consuls of the last ruler. This proclamation is called kāba. It is in general he who takes control of the Treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one vizier, the grand vizier: the grand vizierate, a kind of Home
Ministry, was divided into three sections, each managed by a secretary (kāīb):
1. From the Strait of Gibraltar to the Wādī Regreg;
2. From Wādī Regreg to the Sahara;
3. Tāīfilāt.

In the reign of Sidi Muḥammad (1859—1873), the more frequent and intimate relations with Europe and more particularly the working of the protectorate made it necessary to found a special office for foreign relations, and a waṣīr al-bahār, literally Minister of the Sea, was appointed. This does not mean minister for the Navy, but for all that came by sea, i.e., Europeans. This minister had a representative in Tangier, the nābī al-sulṭān, who was the intermediary between European representatives and the Central Makhzen. His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitrary rule of the Makhzen. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the Makhzen from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and from the point of view of resistance to European penetration, the Makhzen had everything to gain by keeping in an apparent political independence the greater part of the territory which thus escaped the influence which threatened in time to turn Morocco into a regular international protectorate.

By a conciliatory native policy and cautious dealing with the local chiefs, the šakhs of the šīwīs and the Sharīfi families, the Makhzen was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another.

It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels and sought to penetrate by spreading the Arabic language and the teaching of the Keblā and gradually substituting the principles of Mahometan law of the šīrā' for Berber customs. In a word, it continued the conquest of the country by trying to complete its islāmisation and making Islām permeate its customs.

In the reign of Mawlay al-Ḥasan, the Makhzen consisted of the grand vizier, the waṣīr al-bahār, minister of foreign affairs, the 'āliṣf — afterwards called minister of war —, the waṣīr al-ṣanā'ī, — afterwards minister of finance —, the kāīb al-tāīmī, kāīb of complaints, who became minister of justice by combining his duties with that of the kāīb al-ṣanā'ī, kāīb of Kasāf. These ministers had the offices (banīṣa, pl. banīṣā), in the mikhṣar at the Palace.

The offices were under the galleries which were built round a large courtyard. At the top of the mikhṣar was the office of the grand vizier, beside which was that of the kāīb al-ṣanā'ī, a kind of captain of the guard, who also made presentations to the sulṭān. The kāīb al-makhṣar was in command of the police of the mikhṣar and he had under his command the troops of the ġād, makhṣarīya, masākhirīya (hānīf — sg. hānīf) etc., as well as all the bodies of servants outside the palace: the maṭāla al-ruwā, grand-master of the stables, the frā'īya, who had charge of the sulṭān’s encampments.

In addition to these banīṣ of the mikhṣar, mention must be made of an individual, who as was shown in recent times could play a more considerable part in the government than his actual office would lead one to expect. This is the kāīb ('īqīn), literally the “curtain”, i.e. an official placed between the Sulṭān and his subjects like a curtain. His kāībī was situated between the mikhṣar and the palace proper and he had charge of the interior arrangements of the Sulṭān’s household. Under his orders were the various groups of domestic servants (hānīf, al-dakhīṣīn, makhṣarī al-sulṭān, al-makhṣarī who looked after the washing arrangements, makhṣarī al-frā'ī, who attended to the beds, etc., etc.; he also commanded the envoys and even was responsible for the discipline of the women of the Sulṭān, through the 'ārifīs ormistresses of the palace. The kāībī is often called grand chamberlain, although he does not exactly correspond to this office.

Around these officers gravitated a world of secretaries of different ranks, of officers of the ġād, then the kāīb al-ṣanā'ī, who was in theory in command of 500 horsemen, the kāīb al-makhṣarī who commanded 100 down to a simple mukhālī. All this horde of officials, badly paid when paid at all, lived on the country as it could, trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely. The influence of these court officials spread throughout the regions controlled by the organisation of Makhzen officials, which contributed to the centralisation of authority and its profits.

In this organisation it may be noticed that the authority of the Makhzen properly so-called, i.e. a lay power, continually increased at the expense of the religious power by a series of changes. No doubt the basis continued to be religious, but the application of power became less and less so and the civil jurisdiction of the kāšīs and of the Makhzen more and more took the place of the administration of the šīrā' by the kāšīs, which finally became restricted to questions of personal law and landed property.

The authority of the sulṭān was represented in the towns and in the tribes by the kāšīs, appointed by the grand vizier and by the makhṣarīs, who office owed its origin to the religious law of the šīrā'. The makhṣarī supervised and controlled the gilds, fixed the prices of articles of food and inspected weights and measures and coins.

The tax of the ūmrī, which represented the old khāna, was levied on the non-ġād tribes by the kāšīs of these tribes. It was one of the principal causes of abuses: the amount of the tax was never fixed on the spot which came from the tax was in reality divided among the kāšīs, the secretaries of the Makhzen and the vizier without the sulṭān or the public treasury getting any benefit from them.

The grand vizier also appointed the nāṣir officers, who from the reign of Mawlay ʿAbd al-Raḥmān had been attached to the local nāṣirs of the ġād of the mosques and sanctuaries. The kāšīs were appointed by the kāšī or ġād; at the present day they are appointed by the minister of justice.
They propose the 'raudl but do not actually appoint them. The financial staff, 'umanā', who control the customs, the possessions of the Makhzen (al-anṭāk), the ministīfādat (market-dues and tolls etc. called niṣba), the controller of the biṭ al-nāl (popularly abu-l-'mawāriḥ) i.e. the official who intervened to collect the share of the Muslim community from estates of deceased persons and who also acted as curator of intestate estates (ṣuṣūl al-gāyx) and these officers were appointed by the amīn al-umānā who was later known as the minister of finance.

This organisation was completely centralised i.e. its only object was to bring all the resources of the country into the coffers of the State and of its agents, but there was no provision for utilising these resources in the public interest. No budget was drawn up, no public works, no railways, no navy, no commerce, no port, nothing at all was provided for. Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military instruction, of a factory of arms at Fāṣ directed by an Italian officer and of the building at Ṭālah of a fort by a German engineer. These were really rather diplomatic concessions to the powers interested than a regular military organisation. In the spirit of the Makhzen the defence of the territory was to be the task of the Berber tribes, carefully maintained out of all contact with Europeans behind the elaborate display maintained by the court.

In the event of war, the Makhzen, faithful to its system of equal favour, purchased arms and munitions from the different powers and kept them in the maṣāna of Fāṣ to be able when necessity arose to distribute them to the tribes when proclaiming a holy war.

The expenses of the education service were limited to the very modest allowances granted to the šulāna of al-Karawun at Fāṣ. These allowances were levied from the ḫuṣara and augmented by gifts made by the Sultān on the occasion of feasts (ṣāda).

Nothing was done for public health and one could not give the name of hospitals to the few niṣrā-iṣān to be found in certain towns where a few miserable creatures lived in filth, receiving from the ḫuṣara and the charity of the public barely enough to prevent them dying of hunger and of course without receiving any medical assistance.

On the repeated representation of the Powers the Makhzen had ultimately delegated its powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission to infected vessels if necessary. In spite of its defects, the Makhzen constituted a real force; it formed a solid bloc in the centre of surrounding anarchy which it was interested in maintaining, to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it.

In short we may say that the Makhzen in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country. It was and still is a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, al-lughat al-makhzaniya, which is a correct Arabic intermediate between the literary and the spoken Arabic, composed of official formulae, regular cliches, courteous, concise and binding to nothing.

This Makhzen which was sufficient in the old order of things which it had itself contributed to create and maintain, was, forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate.

Various changes have always been made in the old regime, which has been a matter of regret to many as reducing sources of profit. The vizierate of foreign affairs and that of war have been handed over to the Resident-General, that of finance to the Director-General of finance who administers the revenue of the empire alike to those of a regularly organised state.

The director-generalships of agriculture and education, which are regular ministries are held by French officials as are the management of the postal service, telegraph and telephone and the trade of health.

Two new vizierates had been created, that of the regal domains (al-anṭāk) and that of the ḥubās. The vizierate al-anṭāk has just been suppressed and the domains are administered by a branch of the finance department. The vizierate of the ḥubās is under that of the Sharifian affairs. This organisation represents the principle of protectorate in the Moroccan government itself and in order to realise "the organisation of a reformed Sharifian Makhzen" in keeping with the treaty.

(M. BUKET)

MAKHZUM BÊNE) along with the Omaniyads, the aristocratic clan of Mecca. This asser- tion is contrary to the theory popularised by the Sîraj in virtue of which the ancestor of the aristocratic families was Kûshay [q.v.]. About the middle of the viith century A. H. we find that among the clans of Kûrâshî [q.v.] that held in most consideration was the Banû Ma'kûzûm, which traced its descent through Yakaî b. Murra to the legendary Fîrîr (Kûrâshî) without going through Kûshayî. At this period the Makûzûm controlled everything at Mecca except the sanctuary. They alone were able to counterbalance the growing influence of the Omaniyads. It is at this time that their name becomes occasionally synonymous with Kûrâshî (Ibn Durâdî, Kitâb al-Isbâtî, ed. Wustenfeld, p. 94 sqq.).

The Makûzûm seem to have owed their primacy to Mughîrâ b. 'Abd Allâh, a contemporary of 'Abd al-Mu'tazzî and grandson of the eponymous ances- tor of the clan. The adjective Mughîrî thus comes to be used for Makûzûm. His son, Highân b. al-Mughîrî, is even said to have had the title "lord (râbî) of Mecca" (Ibn Durâdî, Isbâtî, ed. Wustenfeld, p. 93 sqq.). The Kûrâshî are said to have dated one of their eras from the death of this individual, if the reference is not to Walî b. al-Mughîrî. Tradition hesitates between these two Makûzûms. The influence of the Makûzûm was preponderant in the nôla', or council of notables which decided affairs at Mecca. It is frequently a Makûzûm who speaks in name of the nôla', as for example in the discussion with Muḥammad, at the beginning of the preaching of Islâm. They are believed to have opened up to Meccan commerce the principal routes to foreign markets. For their intelligence, their activity — they were said to be "ardent as
bear no grudge against the Makhzūmīs. They even chose members of the clan for the office of governor of Madina, hitherto reserved for an Omayyad. After, as before, the Ḥāḍira, the Makhzūmīs continued to be reckoned among the richest capitalists in Mecca. They had about 5,000 mīrākāl of gold laid out in the caravan which was the cause of the battle of Badr. It was to them that Muḥammad applied on the eve of Ḥanain for a loan of 40,000 dirhams. Their systematic opposition to authority put them completely out of the running for any of the great administrative offices in which the members of the Kurāish clans enriched themselves. Their aristocratic pride did not prevent them however from seeking profit in commerce and even in industry. We know from the story of ʿOmar b. ʿAbd Ḥafīḍh [q. v., the most famous of the Kurāish poets. ʿOmar kept 70 of his slaves employed in the weaving-mills established in Mecca (Aḥqāfī, i, 37, 3). Another Makhzūmī, a contemporary of Ṣa‘dī, was known as “the monk (shahīb) of Kurāish” on account of his merit and his asceticism in prayer (Ibn Sa‘d, Tabakht, ed. Sachau, v, 153, 20). Much better known than this ascetic and continually quoted on questions of ʿIṣṣik and Ḥadhrāt is the Makhzūmī Sa‘d b. ʿAbd Ḥafīd. ʿAbd Ḥafīd [q. v., one of the most famous ʿAbdālā of the first century A.H.

With the coming of the ʿAbbāsid, influence passed over to the Iranians. Gradually the Makhzūmī, like other Kurāish clans, fell into obscurity. At the present day there are still families bearing the name Makhzūmī. It remains to be seen to what extent they are justified in claiming descent from the Makhzūmīs, if it is not in the female line as in the case of Ṣa‘d, Makhzūmī al-Ḥarmi (cf. Brockelmann, G. A. L., ii, 98). Kāšānī (Ṣabk al-Rūḥ, Cairo, i, 213) justly remarks that the tribe of the Banū Khālid which led a nomadic life around Hims has only the name in common with the great Makhzūmīs. The male line from Khālid b. al-Walid is said to have become extinct very early (cf. Ibn al-Athir, Usd al-Qaws, v, 249, [infra]), a statement disputed by the Ṣa‘dī of al-Dīn mentioned above.

here, we only give the dates of his birth and death, 602 (1205) and 675 (1273). The latter date is given by Ḥaḍḍū Ḫaṭīfa, ii. 104, No. 2103. His grandfather, according to J. H. Hottinger, Persianism, p. 75 sqq., died in 606 and his father in 636.

Al-Makin’s world-chronicle consists of two parts, the first of which deals with the pre-Islamic world from the Creation onwards and the second with Muslim history down to 658 (1260). The work is so planned that the whole history of the world is given in the form of successively numbered biographies of its most important men. Near the beginning the discussion of several cosmological questions and the several climes is inserted. Down to 586 B.C. it is based on Biblical history; the enumeration of the biographies begins with Adam as No. 1. For the period after the destruction of Solomon’s temple there come on the usual scheme the dynasties of Eastern Asia, which in turn are succeeded by Alexander, the Romans and the Byzantines. In this and in the second part, as the author himself tells us, he is following the model of al-Ṭabarī’s chronicle.

The work which is entitled al-Maḏjmūʿ al-mubāyak exists in numerous manuscripts. The first part is regularly quoted with a Latin translation by Hottinger, Synchronia Orientalis (1658) in the chapter De usum linguarum orientalium in theologiam historiam on various facts of history. The chapter on Alexander the Great has been edited in Ethiopic and translated into English by E. A. W. Budge, The Life and Exploits of Alexander the Great (1896). The second part was edited and translated by Th. Erpenius under the title Historia Saracenica... a Georgii Fudami, 1625; English and French translations appeared soon after. Many emendations were given by Kohler in Eichhorn’s Repertorium, vii–ix., xi., xiv., xvii. A critical edition of the whole work is an urgent desideratum. How important it is for Oriental church history has been shown by A. v. Gutschmidt, Verzeichnis der Patriarchen von Alexandrien = Kl. Schr., ii., 1896, p. 395–525.

This is sufficient to show how necessary would be a comprehensive investigation of al-Makin’s place in historical treasuries which could only be undertaken on the basis of a certain text. Besides it is evident that al-Makin used old sources independently which are not known to his immediate predecessors like Eutychius [q.v.] and his contemporary, much quoted by him, Ibn al-Rāḥib (Brockelmann, G. L. A., i. 349 where of course it should be 669 = 1270) with whom he agrees in the numbering of the biographies which are also used by al-Ṭabarī. In the chapter on Alexander the Great, the Ethiopic translation of which edited by Budge agrees very closely with the Arabic original, are found long word for word extracts from the very old Hebraic work in Arabic entitled al-Sayyidūkī (cf. Stein- schneider, Zur pseud. Lit., 1862, p. 375; Die arab. ērs., a. d. Griech., Centrall., f. Bibliotheks- turen, chap. xii., 1893, p. 88), which had been previously copied in the Ghiyāṯ al-Ḥikmāt of Ps.-Madjīṭt (Brockelmann, G. L. A., i. 243, cf. Ritter, Pictoris, ein arab. Handbuch hellenist. Magic, Vorträge d. Bibli. Warburg, 194 sqq.; ed. by Ritter and transl. by Ritter and Plessner in preparation for Studien d. Bibli. Warburg). In Budge’s work is also given the Ethiopic translation of Ibn al-Rāḥib’s account of Alexander which in contrast to the Arabic text in Cheikho’s edition (C. S. C. O. Arab., iii/6, 1903) is here not simply a brief list of events but is a very full account. Only general statements are given from the above mentioned Hermetic work and do not compel the belief that it was used independently so that in spite of all agreements between him and his Rāḥib, al-Makin must really have worked independently of him. That the reverse might be the case and Ibn al-Rāḥib be dependent on al-Makin is impossible because al-Makin expressly quotes Ibn al-Rāḥib (cf. Budge, ii. 380, note 7). Since Cheikho only published the Ibn al-Rāḥib text of Abūma Dāwūd, which is perhaps an abbreviation of the basic text while the Ethiopic translation perhaps reproduces the original form, the question of the relations between the two ecclesiastical writers cannot yet be definitely settled; but even the Alexander chapter shows that it is of the utmost importance to settle the problem.

M. MAḴḴAṈI, Abū l-Ḍaḏīl Ḥaḏīṯ b. Muḥammad b. Ḥaḏīṯ al-Dīn, a Maḏhabī man of letters and biographer, born at Tilmīn (Tlemcen, q. v.) c. 1000 (1591–92) d. at Cairo in Djamād Il 1041 (Jan. 1632). He belonged to a family of scholars, natives of Maḵḵā (about 12 miles S. E. of Misla, in the present province of Constantine in Algeria). One of his paternal ancestors, Muhammad b. Muḥammad al-Ḵaḵḵār, had been chief ḳādī of Fās and one of the teachers of the famous Ġīṣān al-Dīn Ibn al-Rāḥib of Granada. He himself received his early youth; his principal teacher was his paternal uncle Abī ‘Uṯmān Sa’d (d. at Tlemcen in 1030 [1620–21]; on him cf. Ben Cheneb, Ind. des. 103). He then left his native town and went to Marrakush and Fās where he became Ṣāḥib and Muftī of the great mosque of al-Ğarawīyīn from 1022 (1613) to 1027 (1617). He then set out for the East in order to make the pilgrimage to the Holy Places; after doing so he came to Cairo in 1028 (1618) where he stayed for some months and married. In the next year he made a journey to Jerusalem then returned to Cairo. In 1037 (1627) he again made the pilgrimage which he was to repeat several times later. At Mecca as well as at Medina on these occasions
he taught ḥadīth in a way that attracted much attention. He again made stays at Jerusalem and Damascus where he was received at the Madrasa ʿIṣṭaṣarīyya by the learned Ahmad b. Shāhīn. In this city also his lectures on Muslim Traditions were largely attended. He then returned to Cairo and while he was preparing to return to Damascus to settle there permanently, he fell ill and died.

In spite of his long stay in the East, it was in Morocco that al-Makrānī collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrākush in the library of the Saʿdīna Sultān (now in part in the Escorial); this is how al-Makrānī consulted among other works the unique copy of the Muṣnad of Ibn Marṣūd: cf. Ḥibṭīrī, v. 8 sq.). Indeed his masterpiece, written in the East at the suggestion of Ibn Shāhīn from materials collected by him in the Maghrib, is a long monograph on Muslim Spain and on the famous encyclopedia of Granada, Liṣān al-Dīn Ibn al-Khaṭīb, Naṣīf al-Tīb ma’ṣūm al-Andalus al-Kalīf wa-dāhir al-Wasirīn Liṣān al-Dīn Ibn al-Khaṭīb, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the Naṣīf al-Tīb an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the "reconquista". Even for the later period it is the only Arabic source that we still possess.

The Naṣīf al-Tīb consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Khaṭīb. The first part is divided as follows:

1. physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Omayyad Caliphs and of the petty dynasts (Muḥibb al-tāfarīf). 4. Description of Cordova, its history and its monuments. 5. Spanish Arabs who have made the journey to the East. 6. Orontes who have made the journey to Spain. 7. Sketches of literary history, the intellectual and moral qualities of the Spanish Arabs. 8. The "reconquista" of Spain and the expulsion of the Muslims. The second part contains 1. Origin and biography of the ancestors of Ibn al-Khaṭīb, 2. biography of Ibn al-Khaṭīb, 3. biographies of his teachers. 4. letters in rhymed prose of the chancellors of Granada and of Fās, sent or received by Ibn al-Khaṭīb (muḥāṣṣarāt), 5. a selection of his works in prose and verse, 6. analytical list of his works.

The Naṣīf al-Tīb was printed in full at Itīlāk in 1279 and at Cairo in 1302 and 1304 (4 vols.). The first part was published at Leyden from 1855 to 1861 under the title of 'Inlātāt sur l’histoire et la littérature des Arabes d’Espagne'; by R. Dozy, G. Dugat, L. Krebitz and W. Wright. In 1850, D. Pascual de Gayangos had published in English, at London, under the title The History of the Muhammadan Dynasties in Spain, a version adapted from the part of the first half which deals with the history of Muslim Spain. A critical translation of this monumental work in its entirety remains to be done.

Al-Makrānī also wrote other important works, among which special mention must be made of a lengthy monograph on the famous kāḥif ʿIṣād [q.v.] Aḥkāf al-ʿRūfī fī Aḥkāf al-ʿRūfī ʿIṣādī publ. at Tunis in 1322 in 2 vols. A list with reference to known MSS. will be found in Brockelmann and Ben Cheneb.

AL-MAKKI, ABU ṬALĪB MUHAMMAD B. ʿALI AL-ḤARĪTHI, d. in Baghdād in 386 (996), an Arab muḥādīth and mystic, head of the theological madhab of the Sālimiya [q.v.] of Baghda. His principal work is the Kitāb al-Kulūb (Cairo 1310, 2 vols.) whole pages of which have been copied by al-Ghazālī into his Ihyāʾ Ulum al-Dīn.

MAKRĀN, the coastal region of Balūcīstān, extending from about 59° to 65° 35′ E. and inland from the coast to the Sīyāhān Range, a little beyond 27° north. This tract was known to the Greeks as Gedrosia, and was inhabited by the Ichtiyophagi, or fish-eaters, the Persian translation (Maḥī-Khūnūn) of whose name supplies a fanciful derivation for its present name, which is traced, with more probability, to a Dravidian source.

In Persian legend Kaḵkhuṣraw of Iran captured the country from Afraṣiyab of Tūrūn, and both Cyrus and Semiramis marched through it. In 325 B.C. it was traversed by Alexander in his retreat from India, and fell, later, under the dominion of the Sāsānians, but was occasionally absorbed into the Hindu kingdom of Sind. It was annexed by the Arabs in the course of the rapid expansion of the empire of Islām in the early days of the caliphate, and it was through Makrān that Muhammad b. Kašīn invaded Sind in 711 A.D., and established the first Muslim settlement to the east of the Indus. Marco Polo mentions it in 1290 as the most westerly part of India, under an independent chief, probably a Muslim, who found it unnecessary to make any pretense of submission either to Persia or to India. Indigenous tribes ruled the country until they were ousted by the Ġūkīs from India, but the Persian monarchs reckoned Makrān as part of Balūcīstān, which was included in the great province of Kirmān. In the middle of the eighteenth century the Ahmād Khān of Kalat established their sovereignty over the country, and in 1879 Colonel Goldsmid demarcated the frontier between Persian Makrān and eastern Makrān, which remains subject to
the Khān of Kalāt, though British intervention has frequently been necessary to compose the disputes between him and the dominant tribes of the province, Gikhis, Nīshītrawānis, Branzdians and Mīnāris. Cultivators of the soil are Balāchis, and tribes of inferior social status and the fishermen form a class apart.

The climate of the country varies with the altitude. Near the coast it is uniformly hot, but not unpleasant; in Kīč or Kēf, from which eastern Makrān is known as Kēf Makrān, the winter is dry and cool, the summer intensely hot; and higher still Pindigir is bitterly cold in winter and moderately hot in summer (1844).

AL-MAKRIZĪ

(1. W. HAIG)

ABU 'AL-‘ABBĀS AHMAD B. 'ALI B. 'ABD AL-KĀDIR AL-HUSAINI TAṣĪ AL-DIN, Arabic historian, b. 786 (1330) at Cairo, grandson of the Ḥasanī Ibn al-Sā'īgh who educated him according to his school; but on attaining his majority he went over to the Sā'īghīs, attacked the Ḥasanīs and even showed Zāhirī tendencies. He began his career as deputy qādī in Cairo and rose to the highest positions in the government. He planned an encyclopaedic work, but they remained unfinished on account of the enormous scale on which they were planned. He intended to write the lives of all the rulers and famous men who had lived in Egypt in 80 volumes entitled al-Muḥaṣṣa but was only able to complete 16 of them of which 3 are preserved in autograph in Leyden (Cat. cod. ar., No. 1032, perhaps also 1103) and one in Paris (No. 2144). His revised number of historical questions in separate essays, some of which are preserved in two collected volumes, Paris, No. 4657 and Leyden, No. 2408 (the latter in part written by the author himself, and in part revised by him, see Dozy, Notice sur quelques ms. arabes, Leyden 1847, p. 8—16, a portion in van Vloten, Z. D. M. G., iii. 224. His collection of biographies of contemporaries entitled Durar al-Uṣūl al-faridā fi Tarājim al-Aṣnān al-mufidā intended to be arranged in alphabetical order also remained a torso (a portion of the autograph of vol. i., Alī and a part of 'Ain, Gotha, No. 1771). He also dealt with a number of historical questions in separate essays, some of which are preserved in two collected volumes, Paris, No. 4657 and Leyden, No. 2408 (the latter in part written by the author himself, and in part revised by him, see Dozy, Notices, p. 17). The most important of these deals with the history of the Umayyads and 'Abbasids (al-Niẓām wa-l-Tahāṣṣa fīr-mā hiyā hāni bani Umayya wa-bani Ḥāshim, ed. G. Vos, Leyden 1883, and 'Abū al-walā wālā wa-l-Muḥāsin, Vienna No. 1887; al-Durar al-mufidā fī Tarājim al-ʿĀṣirāt al-istiṣlāḥīya, Cambridge, Preston, p. 2), the Arab tribes who migrated into Egypt (al-Bayān wa-l-Farāḥ tawāmat bi-ʿArif Ṭaṣāwī min al-ʿArab, ed. Wustenfeld, Gottingen 1847), the geography of Hadramawt based on enquiries of pilgrims from there whom he met in Mecca (al-Tafsīr al-qurbīa min al-ʿĀṣirāt Wādir Hadramawt al-ʿAṣirīa, ed. P. Noskowy), Bonn 1866), the Muslim princes in Abyssinia (al-Ilmān bi-Abābār min bi-ʿArif al-Habshāna al-Mulik al-Islāmī, Cairo 1895; ed. Th. Rink, Leyden 1790, and I. Ghendi, Sut testo del Ilmān d'-M. in Contenuto della nascita di Mich. Amary, Palermo 1910, ii. 387—394), on the Ziyānids in Tunūn (Tarājim Mulik al-Qārī, Leyden, op. cit., according to Dozy's hypothesis, originally a portion of the Durar al-Uṣūl), Islamic coins and
Measures (Nabhāt al-Uṣūl fi ʿUmūr al-Nuḥāṣ, Cairo 1298, ed. O. G. Tychsen, Rostock 1977; Tarte des monnaies musulmanes, transl. by S. de Saucy in Mag. enc. by Millin, iv, 1797, p. 472; iii, p. 38; reprinted, Paris 1977, an edition revised by the author Shāhīr al-Uṣūl fi al-Ṣaḥīḥ al-ṣāhirāt; printed under the title al-ʿUṣūl al-Farāisiyya, Stamboul 1298 in a collected volume; Ksitan al-Mukātīl wa l-Musaytib al-Dhawīya, ed. O. G. Tychsen, Rostock 1800). He also wrote a geography under the title Dārāt al-Aṣhar min al-Rawḍ al-mushīr (Berlin, N°. 6049, Cairo, v. 40) what work he drew upon for this is still uncertain; in Paris, N°. 5919, al-Idrīsī's Nuzhat al-Mustagāf fi l-khārij al-ʿAṣāf is said to be the basis; Lévi-Provençal, Livres Historiques des Chosars, p. 361 identifies it with the al-Rawḍ al-mushīr fi Khābār al-Mukātīl mentioned by Hājīdī Khaliṣa, iii, N°. 6598 of Abū ʿAbd Allāh Muḥammad b. Abī al-Muṣāin al-Hīnjari, which is said still to exist in the Kārnavīn mosque of Fez. In some of these shorter essays he touches on theology, a subject he does not elsewhere deal with, dogmatics in the essay composed in 813 (1410) entitled al-Bayān al-mumīd li l-Fāṣik bimar l-Tālūkāt wa l-Talqōd the autograph of which is in Leyden. Amin, N°. 158 (cf. also Cairo, vi 565), Taṣrīḥ al-Tawḥīd (in Parīs) and tradition in lectures on the family and domestic arrangements of the Prophet, which he delivered in Mecca (Imrāʾ al-ʿAmīd fi maʿām al-ʿAllāh wa l-ʿAllāh), in 6 vols., Gotha 1830. Stamhul, Kurunth, N°. 1004. To supplement this work, towards the end of his life, he planned a work which beginning, with the Creation, was to be also a general geography to give the genealogies of the Arab tribes and the history of the Persians down to the Sāmāns under the title al-Khawār min l-Baḥrāt, at which he was still working in 844 (1441) (parts in the autograph Stamboul Aya Sophia, N°. 3562 and Fatḥ, N°. 4383–4341, others in the copy Aya Sophia, N°. 3393–3360, Strasburg, v. Nulke, Z. P. M. G., x 306, cf. Thaler in Islam, N°. 357–364). Even later than this work which he quoted in it was the essay Dārāt al-Aṣhar fi Māʾṣir il-Hūsaini al-Tamūrā (in the Leyden collected volume and also in Leyden, N°. 1080, Brit. Mus., p. 660).

Mārkūr. [see SHARĪʿA]

Māks, toll, customs duty, is a loanword in Arabic and goes back to the Aramaic mākis, cf. Hebrew mākēs and Arām mākēs: from it is formed a verb mākhān, mākhā, the collector of customs. According to the Arabic tradition preserved in Ibn Sula, even in the Duḥāliyya there were market-dues called māks, so that the word must have entered Arabic very early, and is found in Arabic papyri towards the end of the first century A.D.

Becker has dealt with the history of the māks, especially in Egypt, and we follow him here. The old law books use mākis in the sense of ʿāṣir, the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom. They still show some opposition to the māks, then give it due legal force, but the word continued to have unpleasant associations, cf. the ḫudūl: tāna gāḥārī ʿl-makāši fi ʾl-nār; “the tax-collector will go to hell”: Goldziher has suggested that the Jewish view of the publican may have had some influence here.

The institution of the customs duty was adopted by Islam about the beginning of the Omaiyad period or shortly before it. While theological theory demanded a single customs area in Islam, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties and no attention was paid to the position of the owner in regard to Islam. The laws of taxation were very complicated and graduated; the duties rose in course of time from the tenth (nār) to the fifth (khuwān).

The Egyptian māks was levied on the frontier at al-Arish and in the ports (surwāhḥā) Aṭīlahā, al-kuṣair, al-Tūr and al-Suways but there was also an octroi to be paid in al-Fusṭāṭ at a place called Māks. This name is said to have replaced an old ʿUm Dūnāin and then became identified with the Maks—custom-house of Cairo. All grain had to pass through here before it could be sold and two dirhams per ʿarba and a few minor charges had to be paid on it. Further details of the administration of the māks in the earliest period are not known but there are references towards the end of the first century A.H. to a gāḥār makās ʿmīr in papyri and in literature also.

The conception of the māks was extended in the Fāṭimid period when all kinds of small dues and taxes became known as mubākār, especially—emphasising the already mentioned unpleasant associations of the word—the unpopular ones which the people regarded as unjust. Such occasional taxes had been levied from time to time in the early centuries of Islam. The first to make them systematic was the dreaded financial secretary and noted opponent of ʿAbd al-Muṭṭalin, ʿAbd Allāh al-Muṭṭabi. The latter introduced not only an increase in the ground-tax and the three great monopolies of oysters, fisheries and soda (in connection with which it is interesting to note that a revulsion was made to old Roman taxes), but also a large number of smaller taxes which were called ṭalīqīn and mārnāq and included among the kāfēl, the taxes to be paid according to lunar years. Such attics (known as mubākār from the Fāṭimid period and later as maṣāqīn, ḥumṣīn, ṭuṣuṣ va maṣāqīn) were destined to develop in time into the main form of oppressing the people and to become one of the principal causes of the economic decline of Egypt, until under the Manūkhi a limit was reached where hardly anything was left untaxed and mubākār were even granted to ʿafs and “misfortune became general” (wa-anAwz al-Mubākār). These small taxes however (but not the monopolies) were repeatedly abolished by reforming rulers, indeed ḫudūl al-mubākār (other terms are xānd, maṣarquṭ, ṭuṣuṣ, waṣf, raʿʿ al-mubākār) even formed part of the style and title of such rulers. Thus it is recorded of ʿAbd Allāh b. Fāṭūn that he abolished some duties, and later of Salādīn, ʿAbbāsī, ʿAlāʾun and his sons Khalīl and ʿAlī Muḥammad, of ʿAṣhrāf ʿAlāʾun, ʿAbdūkīnt and Djak-
mak. Makrizi gives a long list of mukās abolished by Saladin and Kalkashandi gives copies of the texts of musāmahāt, which are decrees of the Mamlūk Sultāns abolishing taxes or granting exemption from dues which were sent to the governors and read from the mukās and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem. It would of course be wrong to deduce from such abolitions of taxes that the government was a particularly good one, while on the other hand the continually recurring extortation of the same taxes shows that the abuses had been restored in the interval. Makrizi, i. 111 concludes with the well-known jibe at the Copts: *even now there are mukās, which are in the control of the vizier, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage.*

Among the great variety of dues which were of course not all levied at the same place and at the same time were the following: *kitāb* taxes on houses, baths, ovens, walls and gardens; harbour-dues in Gizeh, in Cairo at *the corn-quay* (ṣāḥab al-khalla) and at the arsenal (jībā'a), also levied separately on each passenger; market-dues for goods and caravans (baqā'il wa-baqā'il) especially for horses, camels, mules, cattle, sheep, poultry and slaves; meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton; wood, earthenware, coal, halfa grass, straw and henna; wine and oil-presses, tanned goods; *brokerage* (samās) charges on the sale of sheep, dates and linen. Taxes on markets, drinking-houses and brothels which were euphemistically called *ṣu'in al-sūlya.* Warders deprive prisoners of everything they have; indeed this right is sold to the highest bidder; officers consume the fees of their soldiers; peasants pay their lords forced labour and give them presents (baqā'il, hadāya) and many officials (ṣāḥā, mutāṣib, muḥāṣirūn and wāli) also accept them; when a campaign is begun the merchants pay a special war-tax and a third of inheritances falls to the state; when news of victories is received and when the Nile rises, levies are made; the ḍimmānis, in addition to paying the poll-tax, have to contribute to the maintenance of the army; pilgrims to the Holy Sepulchre pay a tax in Jerusalem; separate special taxes are levied to maintain the embankments, the Nilometer etc.

Outside of Egypt we occasionally hear of the makās as toll or market-dues, e.g. in Djidda, in North Africa (cf. Dozy, Suppl., i. 606). Ibn al-Hadjdī, iii. 67 mentions a musāmahat magazine, but does not use the word mukās in this sense.

**Makṣūrā.** [See Musjadi.]

**Maktab** (A.), literally a “school in which writing is taught” in practice means a Kurānic school, the Muslims believing that the first thing that should be taught an infant is the Kurān. The word maktab, plur. maktabb belongs to the classical language. It is hardly ever found in the spoken dialects in this form. These prefer the word kutāb, especially in Cairo and Tunis. Kutāb is found in the middle ages used by Ibn al-Hadjdī al-Abbālari, a Moroccan author (see Bibliography), but it is not now used any longer in Algeria or Morocco.

The Kurānic school has also other names: *mīrād* in Algiers, Tlemcen, and in certain districts of the Algerian Tell, at Fez, Rabat and Sale; *djarnā* at Tangier, Larache, Constantine, in Oranā and some districts of Morocco and the Algerian Tell; *gūla* among the nomads of Algeria; *mīmmara* among the Moroccans of the Djellaba; *ṭimīmīr* among the Kabyls of the Djerda; *mahīfār* at Safi: Spain had *mukās,* now found in Senegal.

The position of the Kurānic school varies in different countries. Among the African nomads it is a tent placed in the centre of the dōrā which is also used as a mosque. In most towns it is a room on the ground floor, very often dark, damp and badly ventilated. In Cairo, the Kurānic school is placed on the first story of some public building, usually a fountain. In Fez, a number of mīrād are also on a higher level than the street. The schools of Fez and those of Cairo show architectural features which deserve special study. The façades, doors, windows, usually large, are adorned with carved woodwork.

Inside, the Kurānic school is as a rule bare of all ornament, mats of asfa grass or of rushes are stretched on the floor; the walls are also hung with mats of the same kind from the ground up to a height of 4 to 6 feet. A wooden or stone bench serves as a chair for the teacher. In one corner is a vessel of water (mīr) in which the slates of the pupils are washed.

The Kurānic schools are distributed through the different quarters of the town. There are none in the immediate vicinity of the mosques, the Prophet having recommended that children and lunatics should be kept away from mosques (cf. Madkhāl). On the other hand, it is not unusual to find Kurānic schools in sanctuaries built to the memory of some saint or in the zawiyas, the places of assembly of the religious brotherhoods. According to the Madkhāl, it is recommended to place schools in the most frequented streets and not to place them in isolated places or by-streets. Although the author of this book gives pedagogical reasons for this recommendation, it is quite clear at the present day that it is due to the desire to let as many passers-by as possible hear the divine word. In the village, the Kurānic school is held in one of the rooms of the building which is used as a mosque. The sites of Kurānic schools are *ḥabīis* or *wāzīf* properties. Rich individuals sometimes install Kurānic schools at their own expense in boxes fronting the street for the use of their children and of those of their servants and neighbours and friends.

The head of the Kurānic school is called *ṣāḥik* or *ṣāhī (classical *ṣāḥib)* in the towns of Morocco, *gālūt* in the country districts of North Africa, sometimes *ṣāḥā, mutādeb* at Tunis and in the Tunisian

**The Encyclopaedia of Islam, III.**

12
Säyl: at Tlemcen, we find the word derrar which again crops up in the Algerian towns.

The master in the Kur'anī school has as his only intellectual equipment as a rule a perfect knowledge of the text of the Kurān. He cannot understand or expound it; he hardly knows any grammar or any of the branches of religious knowledge. The most learned masters are those who have devoted themselves to learning a certain number of the seven ways of reciting the Kurānī text according to the principles laid down by the seven Brakh al-Kindīa.

In some towns there are Kurānī schools for girls but this is exceptional. The mistress is known as feihā or fīrīa (Morocco).

The pupils are called tānādī in the towns, gandī in the country districts and mīghādī in the towns of Morocco. Their ages run from six to eighteen. Where there are schools for girls, little boys are sent there also up to the age of six.

In Kurānī schools nothing is studied but the Kurān and without any explanation. The task of the pupils is to learn the sacred text by heart. Ibn Khaldūn in his Muqaddimah says that in his time the schools of Spain and Tunisia taught children reading and writing and the Arabic language before putting them to study the Kurān, which they then learned without much difficulty while in the rest of the Maghrib they were only taught to recite the Kurān and from the beginning of that study. It is this latter that is still the usual fashion in North Africa of our day.

The Kurān is not studied to know and understand it. It is learned by heart for the reward promised in the next world to those who know it and to benefit the virtuous or kurādī of the divine word. The latter point of view is very much in keeping with the mentality of Muhammadan peoples with a strong belief in magic.

When the boy begins his studies he is taught to smear a wooden slate with a fine white clay called ruṣāf steeped in water. When the slate is made dry, either by being exposed to the sun or held to a fire, the master traces on it the letters of the alphabet with the point of a ḫafīūsa (reed sharpened for writing) without any ink. He cuts into the clay by basting the letters on the slate and the pupil is then asked to go over them with the ḫafīūsa dipped in ink (which is made from burned wool). At the same time the child learns by heart the names of the letters and their declensions without the master however thinking it worth while to point out to him on the slate that a certain character corresponds to a certain name of a letter. It is therefore not surprising that with such a method a pupil has to devote two or three years to learning to read and to write.

When the child can write to dictation, the master dictates verses from the Kurān. The child writes them one by one. As soon as he has finished writing one he says, sam jā al jumla on reaching the last word he has to write. The master then dictates the next verse and so on till the slate is completely covered with writing. Then the pupil goes to the bottom of the class and begins to learn by heart what has been dictated to him aloud. When he knows the text by heart, he recites it to the master. If the latter is satisfied he orders the child to clean his slate. For this purpose the boy washes it in the wūlī, the vessel of water at the corner of the school; then he covers his slate with clay again and begins all over again.

If we reflect that the master has 30 or 40 pupils in front of him each of whom is at a different place in the Kurān and that his method of instruction is individual, we can see that to learn the whole of the Kurān, even the most intelligent pupil requires several years if he is not discouraged before reaching the last sūra.

The study of the Kurān begins with the first chapter, the jāthā. After this sūra the last and then the second last, then the ante- penultimate is learned and so on back to the second sūra, that of the Cow. The Kurān is thus learned in reversed order. This method is explained by the fact that the sūras have been classed, except for the jāthā, in order of length, the shortest being at the end. Since at the time of prayer, the believer repeats a sūra usually one of the last, there is some point in the study of the Kurān beginning with the sūras at the end of the book. When the pupil has learned the sacred text in the reverse order, he repeats it in the proper order.

For sixty years the Kurān is divided into sixty parts called kībch each kībch is divided in its turn into four ḥālīs or quarters, each quarter into two thānūn or eighths, and each eighth into two ḥālī al ḥālī. No recreation is provided for. The only relaxation is the recitation by the pupils in a body of panegyrics of the Prophet. In the Maghrib there is no school from Wednesday to noon of the Prophet's birthday. Tradition has it that the Caliph 'Umar (who founded the first Kurānī schools) prescribed the Thursday rest. It is said in explanation that the triumphal return of the Muslim troops after the conquest of Palestine took place on a Thursday; the pupils having had a holiday to take part in the festivities, the Caliph 'Umar decided that henceforth Thursdays should be a holiday in the schools.

In the Hijārā the holiday is Tuesday (cf. W. M帅气, Tizint Arabes de Tanger, p. 184, note 2).

The schools are also closed on the occasion of the religious feasts and the fast of Ramadān for one week or two, each country having its own special habit in this respect (cf. especially Michaux-Belain in Archäologie Maroc, 1897, p. 177).

When a child knows by heart a fixed portion of the Kurān, the first sūra, the first quarter of the book, the half, the whole, his parents give a feast in which all the pupils share, the master and frequently all the other masters of the quarter, needy men who take advantage of every occasion when good cheer is going. These feasts are called ṭabia or ṭabia or tābiya, sometimes ṭaibiya, according to the country; some of these titles are used on the occasion of the partial recitation of the Kurān and others of a complete recitation. For the feast the master decorates the boy's slate
with different colours. It is to be noted that the mixture used for this purpose always includes eggs. Some verses are written on the slate. A procession is formed to go to the house of the child, who is the hero of the occasion; a part of the Kur'ân is recited and a cup of milk is eaten. A collection made after the feast and also at the houses of the relatives and friends of the family procures the teacher a supplement to his salary which he much appreciates.

Discipline is maintained in the Kur'ânic school by corporal punishment. The master keeps in his hand a long stick with which he strikes more or less cruelly inattentive children on the head. To punish serious faults he inflicts a certain number of blows on the soles of the delinquent's feet. The boy is laid on his back, with his legs in the air and laid together; one of the older pupils holds his feet up to the master who beats them rhythmically with a rod of the wild quince tree. If the pupil is too strong for his comrades to be easily able to keep him in the desired position, his feet are fastened to a wooden bench (falekha) which two of his comrades hold up. These corporal punishments have been frequently condemned (cf. especially Mattakal) but they continue to be applied with the unanimous consent of the parents. Indeed the parents very often commission the master to punish children for faults committed out of school.

The master's duty is to give the children a good education; that is to say an education that is entirely religious. He generally does his duty very badly, at least from the European point of view.

The results obtained in the traditional Kur'ânic teaching are generally bad. After long and monotonous years spent in school, the child only knows a few sections of the Kur'ân and like his master is unable to write a letter correctly or read a book. Wherever general education has made some progress we find the Kur'ânic schools losing their importance in spite of the piety of the people. The child is often taken there to learn a few verses after which he is taken away and put at the primary school. Very often the child goes to the Kur'ânic school outside of the hours of the primary school and only for a year or two. On the other hand in cases where the people are at all backward but ardent in their faith, the Kur'ânic schools are numerous and largely attended.

The children at the Kur'ânic schools play a certain part in social ceremonies on account of the doubly magic character which their youth and knowledge of the divine word gives them. On Thursdays they go in a body under the conduct of the master to recite the Kur'ân over the graves of persons recently buried; when a woman's accouchement is difficult and threatens to be dangerous, the children from the neighbouring school go round the town chanting litanies behind a piece of cloth held by four of them; in the centre of the cloth is an egg; the passers-by throw coppers into the cloth and utter good wishes for the sick woman. The school-children, slate in hand are also sent to seek mercy from a conqueror for a conquered town or tribe; to appeal for rain in time of drought, the Kur'ânic schools are also called upon to take part in processions.

The organisation of Kur'ânic teaching is rudimentary. In the towns, it is the kâji who in theory supervises the schools; in reality he only interferes in cases where complaints are made against the teacher. In the tribes it is the kâli who takes the place of the kâji in this connection.

The teacher is very often a stranger to the country, more often from the country than the town, which is to some extent explained by the magic character common to the state of being a foreigner and to Kur'ânic study.

In the towns he receives a very small sum monthly from the parents of his pupils; on the Wednesday, the children pay him a few coins on leaving school; on the occasion of school-feasts and holidays he receives a few more gifts. He also makes annulets which he sells. In the country the fâlek is paid in kind. The relatives of his pupils feed him in turn, giving him, eggs, butter, cereals and lamb; sometimes the village or donor shares the labour of working a plot of ground and gathering its yield for him. Payment in kind of the services of the teacher is the subject of a regular contract between the representative of the village or of the donor and the fâlek. The latter is then called fâlek naskhâris. The teacher is also the imâm of the village; he washes the dead and prepares them for burial; he is also occasionally tailor and public letter-writer. In brief although he enjoys the respect of those around him he lives very poorly.

The choice of a teacher is often decided by the reputation which he enjoys. The consent of the parents in the towns, of the djama'a in the country gives him the right to exercise his functions. Tunisia however has endeavoured since the French occupation to regulate more carefully Kur'ânic instruction and to demand a certain standard of knowledge and morality in the teacher. Kur'ânic instruction by its very nature seems to have remained unchanged from the early days of Islam.

MAKTAB — MĀKŪ

 face of the transverse chain (Alāgān) which separates Aḵẖ-čai from Tīghnīt. The waters of the Aḵẖ-čai and its tributary irrigate the canton of Sogmān-āwāl, flow into the fertile plain of Čalpāta and flow into the Kōtūr-čai which waters the plain of Khoī. Below this confluence the Aḵẖ-čai receives on its right bank the waters of the district of Aland which rise near the Turco-Persian frontier to the south of the sources of the Aḵẖ-čai and the north of those of the Kōtūr-čai.

The town. The site of the town of Mākū is very striking. It lies in the short gorge through which the Zangīmār here runs. The cliffs rise perpendicularly on the right bank. The cliffs on the left bank rise to a height of 600 feet above the river. The little town lies in an amphitheatre on the slope. Above the town at the foot of the rocks, are the ruins of ancient fortifications and a spring. Then the mountain wall rises almost perpendicularly and at a height of 180 to 200 feet leans forward. There is therefore an incredible mass of rock suspended over the town. (According to Monteith’s estimate the dimensions of the cavern thus formed are: height 600 feet, depth of the cavern 500 feet, breath 1200, thickness at the top of the arch 600 feet.) For a brief period daily that the sun penetrates into this gigantic cave, just above is a cave which used to be entered by a perilous scaffolding. At a later date when the cave was used as a prison, the prisoners were hoisted up by a rope. (The only European who has been inside it is A. Iwanowski.)

The population. The population of Mākū consists of Turks and Kurds. The former, who are in the majority, occupy villages along the rivers of the khanāt. They are the remains of the Turkoman tribes of Bayat, Pornak etc. The canton at the foot of the Soḵḵār is called Kārāḵoyunlu. The people (about 900 houses grouped into 26 villages) belong to the Aḥl-i Ḥaḵḵ faith (R.M.M., xl, p. 66) which is indirect but interesting evidence of the character of the heroes of which the Turkoman dynasty of the Kārā-ḵoyunlu was accused (Munēdejīm-bāshī, iii, p. 155). The old eminence between the Turkoman tribes survives in the general name applied by the Kārā-ḵoyunlu to their Shefa “Twelver” neighbours: they call them Aḵḵ-ḵoyunlu (Gordlevsky, p. 9).

The Kurds of the khanāte are semi-nomads. The Ḯalātī (cf. on their supposed ancestors, Ḫamūḵ, p. 539 under the years 1017—1018) occupy the slopes of Ararat and in summer betake themselves to the pasturages along the Turco-Persian frontier. Many sections of them lead a troglodyte life in the caves of the Dambat region.

The Milan live between the Araxes and the massif of Soḵḵār where they pass the summer. At Kārā-ḵain (in Kurdish Ḫalānī) there are Hādānānūn.

Before the war there were only 1,200 Armenians left in Mākū. It is remarkable that the confidential servants in the houses of the khan are of this nationality. The celebrated and imposing monastery of St. Thaddeus—(Thadevos-Arakel = Kāra-Kilisa among the Muslims) rebuilt in 1247 (St. Martin, Ménaires de l’Arménie, ii, 463) is in the central canton of Babādjk. It is regarded with a certain respect even by Muslims who kiss the Gospels on entering it. A long inscription recording the firmān of protection given it by Shāh Ἀbābās adorns the doorway. At one time the villages at Mākū and
at Khoi belonged to the monastery and paid their rents to it. Another Armenian monastery (Surp-Stephanos; Dnini-Al-Beigembar among the Muslims) lies below the mouth of the Kotaur-caii on the borders of Măkū. The little village of Djambirā is inhabited by Yazidis.

Ancient history. The oldest monuments of Măkū go back to the period of the Khalid (Vannic) kingdom. The chamber carved in the rock near Sangar (on the Măkū-Bārzigān-Bāyzāy road) is one of a number of similar constructions in Bāynazād and in the country west of Umna (Minorsky, *Kela-šāin*, Zep., xxiv., p. 171). A Khalidic inscription known as that of "Măkū" seems to come from Bastām on the Akh-cāi (district of Cai-pāra). It is of king Rusia II, son of Argishtī (c. 680—645 B.C.; cf. Sayce, *A new Vannic Inscription*, J. R. A. S., 1912, p. 107—113; N. Y. Marr, *Napīs Rūzī II is Măkū*, Zep., xxv., 1921, p. 1—54). The inscription is important as showing that the power of the kings of Wān extended to the region of Khoi.

Măkū later formed part of Armenia. It corresponds to the canton of Artaz of the province of Vaspurakan (Armenian seventh century Geography). According to Moses of Chorene, the district was at first known as Shwarchan but was given the name of Artaz in memory of the old home of the Alān whom Artashēs transplanted hither (cf. Ardoz in Ossetia). The name Shwarchan may be explained from the rule of the Artashēs kings among whom the name Shavarth (Shošrūz = Shavarth = Mod. Pers. Shavāwash) was frequent (cf. Marguart, *Erān*, p. 4, 177). The suggestion of this scholar that Artaz is equated with the older Akarpaz etc., Strabo, xi, 14, 3, is untenable because Azara is above Artaxata which again is above the land of Artaz = Măkū. The Amatuni kings who later established themselves north of the Araxes must also have ruled in Artaz for the diocese of Măkū is called Amatunac-č-tan (Adontz).

The names Măkū and Hājījun (= Hasun) north of Măkū are mentioned in the *History of Thomas Arturuni* written in the tenth century, in the passage (ii. 3) describing the frontier of the lands ceded by the Sasanian Khusraw to the emperor Maurice in 591 (Brosset, *Coll. d'Hist. Arm.*, St. Petersburg 1874, i., p. 78). On the many Armenian monuments in the land of Măkū cf. the work of Minorsky on the antiquities of the khánate; cf. also Hübischmann, *Die allarm. Ortstennen*, 1904, p. 344 and Adontz, *Armenia v epokhu Juštiniama*, St. Petersburg 1908, index.

According to a legend recorded by Moses of Chorene (i. 30; ii. 49), Tigranes, having defeated the Medes (in Arm. Mār) Aḏāḏak settled his descendants all around Māsī (Araart). Neither the Arab historians (Tabari, Ibn al-Adhīr) nor geographers know this corner of Armenia although the names looks very old. It would be tempting to explain Măkū as Mār — Kāh = Mountain of the Medes (Pers. māk and Arm. mār go back to the old Iranian Mār); the former Mākū (Mākūya) which is found in Ḥamdollahi Muṣāwfi however presupposes a different final element.

History under Islam. Ḥamdollahi Muṣāwfi (*Nūchak al-Kūlāb*, ed. Le Strange, p. 89) is the first writer (740 = 1340) to mention Măkū among the cantons of the *mann* of Nakhtuwa: It is a castle in the cleft of a rock and at the foot lies a village which stands in the shade till midday. In this place lives the Christian chief priest (*kārbah*) whom they call Mar-Īṭāsiyā (this reading is preferable to Mārdzanīthā of Le Strange; cf. Aram. Mar-Kābān “the Lord Bishop”).

The Spanish Ambassador Clavijo who visited Măkū on June 1, 1401 still found it inhabited by Armenian Catholics ruled by their prince Noradin, who enjoyed practical independence. Timūr did not succeed in taking Măkū but by a treaty Noradin agreed to supply him with 20 horsemen when required. The eldest son of Noradin was taken to the court of ʿOmar Mirzā and converted to Islam when he was given the name of Sorgatimīx (Syurqhatmand); as to another son, Noradin intended to send him to Europe to be consecrated a bishop. Clavijo mentions a monastery of Dominicans at Măkū, "en el dicho lugar" (Frayles de Sancto Domingo, *Vida y haznada*, ed. Srezniewski, St. Petersburg 1851, p. 158—162 and 376; transl. Le Strange, London 1928, p. 144—145). Clavijo gives an accurate description of the town (a castle in the valley; on the slope, the town surrounded by walls; higher, a second wall, which was reached by steps cut in the rock).

On the death of Timūr, Kāra-Yūsuf the Kāra-Ḵoyūnlu reappeared on the scene and Măkū was one of the first places he conquered in 809 (1406) (Sharaf-nāma, i. 376). Henceforth the country must have become rapidly Turkised. According to the *Sharaf-nāma* (i. 295, 308), in 982 (1574) the Ottoman government ordered the Kur候选 Beg of the Maḥmūdī tribe (cf. above ii., p. 1145) to take Măkū (one of the cantons of Nakhtuwa) from the Persians and to restore the fortress. ʿĪwan was given Măkū as qeṣqā. After his death in 1002, Sulṭān Muḥammad II gave the fortress to Muṣṭafā Beg, son of ʿĪwan.

When in the summer of 1014 (1605) Shāh ʿAbbās was in the vicinity of Khoi the Maḥmūdī Kurs of the district of Măkū and Pasak (a village on the Alān-cāi to the west of Khoi) did not come to pay homage to the Shāh. ʿAbbās I transferred the clan of Mānūr-beg to the Irāk (Persian) and took the field in person against Muṣṭafā, beg of Măkū. The historian Iskandar-munḥī mentioned two forts at Măkū, one at the foot of the mountain (fār-i kāh) and the other on its side (muṣīn-kāh). The former was soon taken by the Shāh’s troops but the capture of the other was "not so easy". Orders were given to plunder the Maḥmūdī tribe which was done. The women and children were carried off and the Maḥmūd men executed. The booty was so great that cows were sold at 2 dirhams = 200 (Persian) dinārs a head. The royal camp remained for 10 days at Măkū but the upper fortress "in spite of the constreignedness of the place and the lack of water" held out and the Shāh left for Nakhtuwa without having obtained its surrender (*Alam-arā, p. 479*).

The Turks and Persians attached great importance to the position of Măkū. Mūṣafir IV in the chronicle of 1045 himself realised the importance of Kotor and Măkū and in the instructions given in 1048 to Kāra Muṣṭafā Pasha ordered him to demand that the Persians should destroy the two fortresses. Indeed by the treaty of 1049 (1639) the Persians decided to raze Kotur Măkū, (read Măkū) and Maḥgūbern (Tūrābī Ṭūmānī, i. 686). However Mūṣafir IV died and in the reign of Sulṭān Ibrāhīm the Persians reoccupied Kotur and Măkū (Ewlyā Čelebi, iv., p. 279).
The next stage is recorded in the Persian inscription engraved on the rock above the fortress (Minorsky, Brevevoti, p. 25). It tells us that Shah Ablâs II ordered the destruction of the fortress because it sheltered the unsubdued (naqsh-tishân). The fortress is compared to a Kalâ-yeKalân; the excavator of the Shah's order was a certain Akbar and the date is 1052 = 1641-1642 (Chronogram "Je-nr"). The history of Abbas II (Kâbog al-Khâyâm, ibbl. Nat. Paris, Suppl. Pers., No. 227) throws no light on the incident but as (fol. 74b) an Ottoman embassy to the court of the young Shah in 1052 is mentioned, it is probable that it was not without influence on the destruction of the fortress, on the preservation of which Persia had formerly laid stress.

Contrary to the tenor of the inscription, Ewyâh Šâdeh II, 337—339 claims that it was the Ottomans who, after the peace of 1049, destroyed Mâkû and at the same time recalled the Mâkûdî Beg who was their representative there. In 1053 (1647) the Kûrû Beg of Shûsh-îk (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protecting against his raids, seized the occasion to introduce to Mâkû 2,000 riflemen from Mârâmârân. The Ottomans sent an army of 3,000 men against Shûsh-îk. Murâjî Beg of Shûsh-îk was defeated and sought refuge in Mâkû. Ewyâh accompanied the Pâsa and the detachment that went to Mâkû to demand the extradition of the rebel. Satisfaction was given them and the war of Ewyâh Mehemîd Pâsha treated the Persian captives in a very friendly fashion. He told them however that if the Persians did not withdraw their troops from Mâkû and destroy the fortress he would attack Erivan and Nakhchivan. The result is not known but Persia's possession of Mâkû recognised in 1056 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mâkû from 1747 to 1923 belonged to the Bayat tribe. The clan settled around the Sâr-Kâr (on the Bayat cf. Kânpul-a-Khân-î Mehrâb) in the eastern part of the plain of Mâkû, in the service of Nâzir Shâh. After the latter's assassination, he seized one of his wives, and a part of his treasures and returned to Mâkû. Very little is known about him or his son Husân Khan (Monteith's 'hot') who died in 1833. It is possible under the Zand dynasty and at the beginning of the Kâdir, the real authority in the region N.W. of Adharbâdjan belonging to the family of Dumbûl Khan [cf. Kûrû], whose headquarter was at Khân (cf. Târîkh, the special history of the Dumbûl is not accessible in Europe). The disappearance of the Dumbûl must have opened the way to the Bayat. All Khan (1775—1805), son of Husân Khan, is often mentioned by Frascarelli (Fraser, Aliâbî, Flandin, Girikow, Likhâtin), an influential chief jealous of the prospective. We know that the his was entrusted to the guardianship of All Khan from June to December 1847 and that the latter treated him very kindly. The Bab in his esoteric language calls Mâkû Mâkû: (cf. Çâhrîk, cf. vâmis) where his imprisonment was more rigorous (cf. Brown, J Traveler's Naturalist, 1891, ii, p. 16, 271—277; Jâni-Kashân, Nâvâj-e-trav, G. M. S., vi, 1910, p. 151—152). During the war of 1853—1856 All Khan derived great material advantage from the neutrality of his territory which lay between Russia and Turkey. His son Timur Pasha Khan (1820—1895?) profited by a similar situation during the Russo-Turkish war of 1877—1878. In 1881, his appearance at the head of the Mâkû horsemen in the district of Sâmâyâs accelerated the collapse of the invasion of Kurds under Shâh iBâsidâlah [q. v.]. Timur Pasha Khan was hailed as the saviour of Adharâbâdjan and the people even called him Mâkû Pamâghâb.

His son and successor Mustâdâli Kûli Khan Ibyâl al-Sâlâmâ (1863—1923) at first continued the policy of isolation and agrarianism of the khânate but his activity aroused suspicion on all sides. At the beginning of the war of 1914 Russian distrust forced him a forced stay in Tiflis. In time Mâkû became part of the theatre of war. The Russian troops built a light railway from Shâh-takû (on the Araxes) to Bâyazid and the station of Mâkû became a busy centre. In 1917 the Sârdâr returned home and held his position until the coming of Râd-i Shâh Pahlây, when accused of intrigues, he was arrested on 25th Mrh 1912 (Oct. 17, 1923) and transported to the prison of Tabriz where he died suddenly. A Persian officer was appointed governor of Mâkû (Navâlkhâb, Shâhkhâb-i Pahlây, Târîkh 1342, p. 112).

Mâkû (A), means in the old language possession, property, referring among the Beduins particularly to camels, but also to estates and money, in any case to concrete things. The word is formed from mél and h and means properly anything that belongs to one's own. As a noun it is of course treated as a. adj. stem from which a
verb is then formed. In the meaning “money” the word is used in the expression māl gāmid “dumb property” in contrast to māl nāyīk “speaking property”, applied to slaves and cattle. There is a full definition of the conception in the introduction to the Ishāra lūli Mağārin al-Tūğrān of Abu l-Faḍl Dja’far b. ‘Ali al-Dimashqī (Cairo 1318, p. 2 sq.) studied and for the most part translated by H. Ritter, Ist., vii. (1916), 1—91. There and in the Mayţarīf al-‘Ulūm (see Bibli.), p. 59, the different classes of property are enumerated. As māl includes property in its different aspects the word can also mean “taxes”.

The attitude of the Muslim religion to money and its acquisition was of course a subject of discussion from the beginning of the literature. The authoritative religious and ethical point of view is that of al-Ghazzālī (so to be written, cf. Moh. ben Cheneb, R.A.A., vii., 1927, p. 224 sqq.) in the second decade of the îlyâr, especially book 13 (Ritter, op. cit., gives an analysis) and 14 (transl. by H. Bauer, Erlaubtes und verbotes Güt = Islamische Ethik, iii., 1922; cf. R. Hartmann in Ist., iv.).

The acquisition, guarding and disposal of property is one of the four main sections of economics (Tadbir al-Munifl), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islam with the rest of Hellenistic sciences. As the Politics of Aristotle, the first book of which deals with ethics was not translated into Arabic, the Muslims had to be content with the only translated work on economics, composed by the Neo-Pythagorean Ps.-Bryson which has had a decisive influence on the whole economic literature of Islam. The text, the Greek original of which is lost, was first edited by J. Chékeho in Mokhrī, xiv. (1921) and has been recently published with the Hebrew and Latin versions, and a German translation by M. Plessner (cf. Bibli.). The interesting chapter on māl in it was further expanded by Muslim authors of the school of Ps.-Bryson, particularly from religious literature. A standard work is the Akhbār al-Nāfi of al-Ṭūsī [q. v.] of which the economic section has been analysed and translated by Plessner. The view of the origin of money which Aristotle holds in the Nic. Ethics reached Islam direct, be-ides coming through Ps.-Bryson: it is first found in the Tadbir al-Akhbār of Miskawaih (this is his correct name and not Ibn Miskawaih [q. v.] e.g., Cairo 1322, p. 38 [cf. also Naẓīr’s and Elḥāb].

The word māl very early became a technical term in arithmetic. It is first found in exercises in dividing inheritance; applied to the property of the testator which is to be divided. We later find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by šayt [q. v.]. Used for the unknown in quadratic equations it became the word for the square of a number. The fourth power is called māl al-māl, the fifth māl al-šayt, the square of the cube. The history of this change of meaning has been elucidated by J. Ruska, Zur völkeren arabischen Algebra und Rechenkunst (S. B. Ak. Hild., Phil-hist. Kl., 1917, N° 2, esp. chap. vi., cf. also index, s. v. Māl).

ristan dated from about 550 (1155). The capital was [the city of] [Ishak] at times the power of these princes stretched eastwards as far as the vicinity of [Isfahan] and southwards to Basra and to the Persian Gulf. They owned the suzerainty of the caliphs or of the Mongol Khans who replaced the 'Abbasids; in practice they were fairly independent. Among the Atabegs of this dynasty mention may be made of Ahmad Nusret Al-Din (696–730 or 733 = 1226–1239 or 1332). According to Ibn Battuta, he built 160 madrasas in his kingdom, of which 44 were in Ibadh. He also improved caravan traffic by having roads through the rocks. Under his successor Afsaryad II, Ibn Battuta spent some time in Ibadh and gives an interesting description of life at the court in this town. The Timurids in 1277 (1424) put an end to the rule of the Faijali dynasty. On this dynasty cf. above ii., p. 48 sqq. and the genealogical tables in Justi, Iranisches Nomenclatur, Marburg 1895, p. 460 and E. von Zimmern, Manuel de Gérald et de Cheronal, pour l'Histoire de l'Islam, Hanover 1927, p. 234. On the later history of Ibadh nothing is known. The town probably became deserted after the fall of the Faijali. Its ruins are now represented by a large mound of earth, about 35 feet high, of irregular shape with smaller mounds of rubble around it. Cf. Layard in J. R. G. S., xxvi. 1856, p. 74 and Layard, Early Adventures in Persia, Susiana and Babylonia, London 1857, i. 493. and Jéquier, op. cit. (s. Bibl.), p. 134.

It may be mentioned that the Buryid Sultans struck coins in Ibadh; cf. Lindberg, Les Monnaies Centuries du Bani Yusef = Recherches de la Société des Antiquités du Nord, Paris 1830–1844, ii. 269 and above iii., p. 44 sqq. On coins of the Atabegs minted in Ibadh, cf. above iii., p. 48 sqq. The perfectly flat plain of Māl-Amīr out of which rise the mound of ruins of the Sasanian and Muslim town of Ibadh is about 4 miles broad and about 7 long according to Jéquier (see Bibl.) who has given a plan of it (cf. cit., p. 133). It runs from N. W. to S. E. c. 3100 feet above sea level and is surrounded on all sides by steep, barren but not high hills. The most important of these border ranges is in the S.E. and is linked up to the Māl-Amīr farther south by Rawlinson in J. R. G. S., ix. So–S1: de Bode, cf. cit., viii. 100: Layard, cf. cit., viii. 74 and de Bode, Toitère, u. 39) within which stood the town of the same name, which played an important part in the middle ages (Mungasti, Manckheri, Māndābšt; cf. also above iii., p. 46, 47 sqq.). The ridge which stretches in the plain of Māl-Amīr in the e. or N.E. is called Kūh-tchehmät According to Jéquier, there is a large artificial lake in the north (north-eastern) part of the plain, which finally disappears in the swamp. According to de Bode (J. R. G. S., xiii. 104) there were in his time two small lakes there, the so-called Yābdūni, which dried up in summer like the marshes and the small streams which run through the plain. The water of the latter came in the main from the lake of Perīghel Bandān, south of the plain of Māl-Amīr, behind which Hūtum-Schindler (see F. K. L.) ascended the steep wall of the Tarawāsh range. The lake called Fām al-Bawār described by Vīznī may be identical with this trench of water; cf. Le Strange, cf. cit., p. 245: Schwarz, cf. cit., p. 337.

Among the numerous ravines which are to be found among the hills that border the Māl-Amīr plain on the N. E. the most interesting from the archaeological point of view is that of Kūh-i Fārā (see the plan in Jéquier, op. cit., p. 135). Kūh, according to O. Mann means in Luri "little ravine"; cf. above iii., p. 41: Dieulafoy and Schindler have erroneously reproduced this to them unintelligible word by Kāl'a or Kūt = fortress: see Weissbach, op. cit., p. 743, note, whose suggestion about the meaning of Kūh is now ruled out. For Fārā, H. Schindler gives the form Ferra and Ferendí (Franks, Europeans), the latter apparently based on a Luri interpretation of the male costume in the relics there. Earlier travellers (Layard, de Bode) write Kūh-i Fārāwīn, apparently because their Luri authorities identified the name Fārā with Fārāwīn (Pharaoh) whom they knew from the Kūrān. The majority of the sculptures of pre-Iranian (Elamite) origin in the region of Māl-Amīr are to be found in Kūh-i Fārā. Quite close to the entrance to the ravine is a large stele with a large human figure in high relief, a row of smaller figures with a well preserved 24 line cuneiform inscription and 10 smaller inscriptions (the latter giving the names of the individuals represented). According to the large inscription it is a monument erected by a certain Hannī, son of Tāzhīhi. Opposite, on the other side of the ravine at intervals on blocks of stone and on the wall are five tablets with other reliefs of rude execution. Special mention must be made of a great procession with 67 figures. The total number of figures in Kūh-i Fārā is according to Layard 134.

Opposite the ravine of Kūh-i Fārā, in the hills which bound the S.W. side of the plain of Māl-Amīr is the cave with many corridors of Shīkhfetei-salmān, "the cave of Salmān." According to the Bakhṭyāris who hold this place in great honour, the name is derived from that of Salmān al-Fārisī (q.v.), the first Persian to adopt Islam, who is buried there, contrary to the modern Sunnī and Shiʿrī tradition which locates the tomb of this companion of the Prophet in al-Madāʾin (Salmān Pāk; cf. iii., p. 79). In Shīkhfetei-salmān have survived four primitive bas-reliefs of the Elamite period of which two are outside and two inside the cave. Among them is a figure, over life size with c. 36 lines of cuneiform inscription which also dates from the Hannī above mentioned. On a little esplanade to the south of the cave are the ruins of a little Muslim sanctuary, probably erected on the site of an older sanctuary. In the corner of the cave is a spring in which rises one of the little streams that water Māl-Amīr.

Apart from the monuments of Kūh-i Fārā and Shīkhfetei-salmān there are a series of other monuments and remains of the ancient and mediaeval periods in the plains of Shīkhfetei-salmān. For example, in the southwest part of the plain near a ruined mausoleum (saint's tomb) which the Lūrs call Shīk-Sawār (the king on horseback) on a slope of the hill is a small stele, obviously also of the Elamite period, with 6 figures and an inscription which has been destroyed. According to Layard, there are many popular traditions about this place. A little north of Shīk-Sawār at a place called Kūh Wān are the ruins of a palace. In the opposite direction in the N.E. section of the plain rises a round palace on the summit of a rock, called Kāl'a Gashūm (= Scorpion Hill) by the natives. A ravine near by is called Hōng; in it
may be seen a much weathered Sásánián rock-sculpture of great dimensions, probably of the earlier period (cf. Shāpūr I). That the plain of Māl-Amīr enjoyed comparative prosperity in the Sásánián period is evident from the remains of canals of this date.

In the S.W. of the plain a narrow road runs to the village of Hāllādān (de Bode: Hālegun). Near it are old ruins of the period of the Atābēg dynasty. There is an Atābēg citadel, an Atābēg bridge and well. The numerous traces of buildings probably date from a mediaeval town. Of recent date is the ruin (mentioned by de Bode) of a palace of Hasan Khān, a chief of the Bahā Girlī tribe of Cappadocia, who lived here about 1521. Here is another little river named Hāllādān or Shāh Rābi, which is probably connected with the lake at Derūdje-i Bandān already mentioned (cf. Layard, *J. R. G. S.*, vii, 74 and *Early Adventures*, i, 403; de Bode, *J. R. G. S.*, viii, 100 and *Travels* etc., i, 404).

In the N.E. of Māl-Amīr runs an old road paved with huge blocks of stone, which is now called Rāh-i Sūltān (the Sūltān’s path) or Dūdāt-i Atābēg (= Atābēg road) to the Sāri-Rāk (Kādji) some 3,500 feet high, the highest point, and thence to Isfāhān after several days’ journey. It has already been mentioned above that the Atābēgs did a great deal for the local people and their lands. But the original planning of the road probably goes back to a great antiquity: cf. the road de Bode, *J. R. G. S.*, xiii, 102—104, and *Travels* etc., ii, 6—8, 35—46. Perhaps, he suggests, the “ladder-road” (kālāyān ḡašāf) over which Enumen passed, as mentioned by Diodorus xix, 21, may be identical with the Atābēg road. Remains of old roads paved or hewn out of the rock are also found in other places in the neighbourhood of Māl-Amīr; cf. iii, 510. The natives ascribe them at once to the Atābēgs, as they do the ruined caravanserais found everywhere. Near the Sāri-Rāk pass about 12 miles east of Māl-Amīr is a place called Kālā-i Medrese, where chiefs of the Bahā Girlīs met every year. There are the ruins of two Sásānián buildings; cf. Uvulâ, in *Revue d’assyriologie*, xxv, 1928, p. 86—88, who gives a detailed description of them. Schwarz, (op. cit., p. 342) thinks that this Kālā-i Medrese—in spite of the discrepancy in the distances given—corresponds with the place Ḥalāfshān mentioned by Ibn Baṭṭūṭ (ii, 41). A ruined site of the same name, also with two Sásānián buildings is according to Uvulâ 24 miles S. E. of Mazdijal-sulaimān (cf. *Sasan*): 4—5 hours N.E. of Māl-Amīr are the ruins of Sūsan (q.v.). The Sasanian geographers of the middle ages reckoned the celebrated bridge (kālā) of Idrāhīm crossing the Djudjail (Kāfān) among the wonders of the world. It was also called Kānūra Khurrazād from the alleged (otherwise unknown) name of the mother of Ardashīr I, who is said to have built this bridge and another in the town of Shuwar (see Schwarz, *op. cit.,* p. 342).

Otherwise we only know the masculine form of the Iranian name Khurrazād (cf. Schwarz, *op. cit.* p. 338 note 4 and Justi, *Iranisches Nomenclatur*, Marburg 1895, p. 180). In the ivth (xth) century this bridge of Idrāhīm was restored by the vizier of the Bāyād Rūkh-al-dāshāh. This work after two years of work. De Bode identifies it with the kālā-i Medrese, probably however we should, with Rawlinson, *op. cit.,* p. 53 and Schwarz, *op. cit.,* p. 339, identify it with the "Old Bridge" crossing a small tributary of the Kūran N. E. of Kašāv-e Medrese. For further information on the bridge of Idrāhīm cf. Vāqīī, 416, iv, 189 and Schwarz, *op. cit.,* p. 338—339. The rulers who had the sculptures and rock inscriptions of Kūl-i Fārāb and Shīkete-i Salmān made, belong to the period of the later Elâmite kingdom, to the period between Nebuchadnezer I (1146—1123) and the rise of Assyria in the first half of the ivth century i.e. about 1000 B.C. It cannot be decided whether king Ḥannii, son of Tāhūghī, from whom the monuments and inscriptions date, and the Shūtar Naḵkhtune, son of Indada mentioned by him, ruled the whole of Elâm or whether they are to be regarded as members of a local dynasty ruling perhaps the district of Māl-Amīr. The inscriptions are in the Elâmite language but contracts written in the Babylonian language have also been found in Māl-Amīr; cf. the Bibliography.

Here it may be mentioned that following de Bode the town of the Uxians which Alexander the Great passed on his way from Susa to Persepolis after passing the "Susan Gates" has often been sought in the region of Māl-Amīr; cf. de Bode, *Travels* etc., ii, 47 sq.; Spiegel, *Ehrwürdige Alterthumsbunde*, i, Leipzig 1870, p. 409 and Kaerst in Pauly-Wissowa, *Realencykl. d. klass. Altertums*, ii, 142. Since the late middle ages (beginning of the vii/viiith century) the Bahā Girlī Lārs have settled in the district of Māl-Amīr (cf. above iii, p. 428, 45b). They spend the winter there on account of the fine green pastures. On the Bahā Girlīs see BAKHTIYĀRĪS and iii, p. 42b, 45b, 46a, 50a.

MALAM — MALACCA

MALACCA (from the Sanskrit amlaka through the Malay mālaka, Phyllanthus pectinatus Hook. fil., Euphorbiaceae) is the name of a town situated on the west coast of the Malay Peninsula in 2° 1' 30" N., 102° 1' 5" E. (Gr.), of a river which receives the sea at that spot, and of a territory of about 720 English square miles adjacent to and administered from the town. Formerly the name was often extended to the Malay Peninsula as a whole, but this usage is obsolete in English though still sometimes found in Continental works.

The earliest date in the history of Malacca occurs in Book 215 of the History of the Ming dynasty of China (1368-1643), which relates the sending of a Chinese mission to it in the year 1403, in consequence of which the local chief was shortly afterwards recognized as king by the Chinese Emperor. Previous to this time Siam had apparently claimed some kind of suzerainty over the country. Two alleged earlier references are very doubtful, one in chapter ix. of the lavoisian history Pararatan, and the other in the Siamese Kof Mouthierabkin (Mang/liba). The latter work certainly mentions Malaca as a vassal of Siam, but in its introduction it speaks of a Siamese king (Paramattraolokanatha) whose reign began about 1335. The oldest strictly contemporary notice of the place occurs in the Yo, vai sight of Ma Huan, which records a Chinese mission to it in 1409 and states that at that time the king and people of Malaca carefully observed the tenets of Islam. As Malacca had tradition history connects the rise of Malacca with the fall of Singapore (probably circa 1377), it seems likely that the establishment of Islam as the official religion in Malacca may have occurred between these dates.

Owing to its position on the trade route from India and Western Asia to the Malay Archipelago, China, and Japan, Malacca became in the xth century the most important of the Malay states; it was visited by traders from various countries, many of them being Muslims from Northern and Southern India, the Persian Gulf and the Red Sea, and it became the centre of a Muslim propaganda of which the earliest successes in this part of the world had already been registered by Marco Polo in North-Eastern Sumatra before the close of the
xiith century. After the middle of the xvth century Malacca territory was increased by the conquest of Pahang (on the East coast of the Peninsula); and for the whole kingdom included all the coasts of the centre and South of the Peninsula to about 4° N. together with a suzerainty over the parts of Sumatra and Java. It was made the scene of several unsuccessful attacks on Malacca during this period.

The growth of this incipient empire, which however already showed signs of decay in the form of internal divisions and bad administration, was cut short by the Portuguese conquest in 1511, whereby the town and its immediately adjoining territory, together with the command of the sea, fell into European hands. Though often challenged by the attacks of their Muslim neighbours (especially the new state of Acheh [Achin] in Northern Sumatra), the Portuguese maintained their hold on Malacca till 1641, when after a prolonged siege it was taken by the Dutch. In 1795 it was occupied by the British, in the name of the Sultan of Perak, and held until 1818, when it was returned to the Netherlands under the provisions of the treaty of Vienna. In 1824 it finally became British and in 1826 it was incorporated in one government with Penang and Singapore and made subject to the East India Company.

During the Dutch period the importance of Malacca as a trading centre declined; it was never allowed to compete seriously with Batavaria, and in the end it was quite overshadowed by Penang (founded in 1786) and Singapore (founded in 1819). In recent times it has shared in the general economic development that has been limited to only one-fifth of the population, as the fifth town in British Malaya, with a population (in 1921) of 36,071 (of whom about one-fifth were Muslims) in an area of 3.5 English square miles. In the whole settlement or territory of Malacca, including the town itself, the population was 135,322, of whom 83,635 were Malay; proper (including a considerable number of Minangkabau descent), 2,777 other Muslims (such as Javanese, Banjar, etc.) of similar Indonesian stock, 1,146 Muslim Indians, 257 Muslim Chinese, and 56 Arabs, making an approximate total Muslim population of 37,871, almost all of whom were Sunni of the school of Shafi‘i. Of the rest of the native population about 74,500 were Chinese and one-fifth Hindus.

(O. C. Blagden)

MALAGA. Arabic Malāgā (ethnic: Malājī), a large town in Spain on the Mediterranean coast and capital of the same name, has at the present day 135,600 inhabitants. It is built at the centre of a bay commanded by the hill of Gibralta (the Ejidal Fasoh of Idris). The town is traversed from north to south by the ravina (i.e. the bed. usually dry [Arabic ramill]) of the Guadalmedina (Aqidi ‘Umādina) which, while very often dried up, sometimes overflows in the rainy season. To the west of the town lies the Vega or Hoyá of Malaga where the vegetation is exotic and extremely luxurious.

Malaga, the ancient Malata, was founded by the Phoenicians and retained for long under Roman rule traces of a deep Syrian influence; its port under the Empire was one of the most important in the Iberian peninsula. At a later date it was the see of a bishop. It was taken from the Byzantines in 571 by the Visigothic king Leowigild. In 711 it was taken by a Muslim force sent from Ejea by Tarik. It soon became an important Muslim town and in time supplanted Archilhóma (Archidona, q.v.) as capital of the province of Reiya (Latin: regio) where in the time of the governor Abu ’l-Khayr al-Mu‘tim b. 'Abd al-Kaliq the Arab of Jordan (al-Qudma) was settled in 125 (742). Malaga welcomed the Masmara of the Umayyad dynasty of Omayya and the governor Abu Bakr al-Dājilb, after his landing at Almunecar and his triumphant progress through the district of Elvira. But, in the second half of the third (nineth) century, the province of Reiya including Malaga became closely involved in the troubles stirred up by the nationalist ‘Umar b. Hafṣūn. In the reign of the Emir Muhammad b. ‘Abd al-Rahmaan b. ‘Abd Allah, according to the historian Ibn Hafṣūn, the province supplied for a summer expedition (al-sifir) against Gueica an imposing number of horsemen: 2,000. Later, when the rebel was causing anxiety to the Emir ‘Abd Allah an expedition on a large scale was made against the province of Reiya. An army under the command of prince ‘Abd b. ‘Abd Allah took the field in 904 and inflicted a severe defeat on the troops of Ibn Hafṣūn. Three years later, the same general had to besiege Malaga which was held by the rebel Musawir b. ‘Abd al-Rahmaan. Another expedition was again led against Malaga in the reign of ‘Abd Allah in 909.

The great caliph ‘Abd al-Rahmaan III, on ascended the throne, had no peace until he succeeded in putting down the rebellion of Ibn Hafṣūn. In the early years of his reign several expeditions were again sent against the rebel in the province of Reiya of which the governor was the post but not yet the capital. Once order was completely restored by the sovereign, Malaga entered on a long period of prosperity which continued till the end of the Umayyad caliphate.

From being capital of a province, Malaga became the capital of an independent kingdom in the period of the muhāhid al-ma‘ṣir. The Ummāhidids after having had to renounce their claims to the caliphate of all Muslim Spain were able to hold out in a little principality in the S. E. of Spain with Malaga as capital. At the same time another branch of the same family founded a little kingdom around the town of Algeciras. The Ummāhidid dynasty of Malaga survived till 1497 (on it cf. the article Ummāhidids). The king of Gdara, the Zirid Badi b. Habbās, had hitherto been nominally their vassal. He decided to cast off their suzerainty and seize their principality. He did this with ease and exiled the last Ummāhidid to Africa: his son al-Mu‘izz was appointed ruler of Malaga. On the death of Badi in 1073 his kingdom was divided between his two grandsons ‘Abd Allah and Tamur and Malaga
fell to the latter. The town very soon passed to the Almoravids and then to the Almohads. When in 629 (1232) Muhammad I Ibn al-Ahmur founded the Nasrid kingdom of Granada, Malaga and its province formed part of his lands and remained in the power of the dynasty till the period of the Catholic Kings. Ferdinand and Isabella took Malaga from the Muslims on Aug. 18, 1487 after a close blockade.

The Arab geographers of Muslim Spain almost all give enthusiastic descriptions of Malaga. Idriṣ (ixth century) mentions two of its suburbs, praises the sweetness of its waters and the flavour of its fruits. Ibn Baṭṭaṭa in the second half of the xith century says much the same and adds that a fine gilt porcelain was made at Malaga which was exported to the whole Muslim world. Finally Ibn al-Khaṭīb frequently speaks of Malaga in his description of the kingdom of Granada; one of his minor works is devoted to a comparison of Malaga with Salé, the Muṣṭāhirra Mālaqī (the Arabic text has been published from two MSS. of the Escorial by M. Muller. W. v. der Spah, Wasch-Sale, in Beiträge zu Geschichte der zentralen Arabien, p. 1—13).

Very few monuments of the Muslim period survive in Malaga, which have not been very much altered. The old chief mosque has become the cathedral. According to the author of al-Rauṣ fī-maṣrūr, this dzāmi had five naves and five doors, two on the side facing the sea, one on the east front (Bāb al-Vahēd) and one on the north side (Bāb al-Khālīka). Another mosque of Malaga built in the Kūfīya is said to have been founded by the traditionists Mūniya b. Shihāb al-Fāsā (d. 158 = 775). The old Muslim citadel is still called Alcazaba.

There are very few relics of Islam in it, a vaulted gateway (Arco de Christo) and a tower (Torre de la Vela). This citadel was joined to another fortress by a double rampart built on the hill of Gibralfaro: it was restored at the end of the xith century by the Nasrid rulers of Granada.

Malaga in the Muslim period remained an important sea-port and an active centre of shipbuilding, less important however than its neighbour Almeria. The city al-Quṣna, the name of which has survived in the form Alcazaba, occupied the actual site of a market and one of the gates with the motto of the Nasrides (ṣā Kālīm Allāh). There is no victor but Allah) is still standing.

MALĀḤIM (A., sing. maḥāma) came, after a long and obscure development, to mean "destinies," either simply al-maḥāmah, or kutub al-maḥāmah or in the singular. The word was already quite adequately explained by De Sacy in his Christianisation 2, ii. 295—302, on the basis of several passages in Ibn Khaldun’s Muqaddima. These Ibn Khaldun defines al-maḥāmah as “numerous books on dynastic changes and events (bihḍān al-dawlah), written in verse and prose and rājūs, many of which are spread abroad amongst the people, some dealing with the changes in the Muslim people (al-nilīn) as a whole, and others with particular dynasties, but all ascribed to well known individuals,” although, in Ibn Khaldun’s opinion, it would be difficult to prove the correctness of any of these ascriptions (Quatremerè’s text, ii. 192 foot; De Sacy’s transl., ii. 226). The most famous case of these is the book called al-Dīnār (q.v. and the references there). Such predictions as to public affairs have close connection with, and were probably developed from, the Jewish apocalyptic. As there are many stories, both in sober historians and in popular tales, describing these books as securely preserved and consulted by dynastic leaders for their own guidance, they have also contacts with the Roman Sibylline books. The popular doctrine of the Mahdi [q.v. and of the Last Day (al-Kiyāma [q.v.]) became inextricably confused with this branch of Muslim literature.

The derivation of maḥāma and the development of its meanings are very obscure. The word does not occur in the Kurān which has the root only in leḥm and laḥm with the concrete meaning, "flesh." Yet the root lehm-like, the migrate Hebrew root, had apparently two very separate meanings, "beef" and "fighting." Further, the fact that the Hebrew word, lehm, means "breathe," while its exact equivalent in Arabic means "flesh" would suggest a separation very far back rather than a borrowing (cf. the comparative treatment and references in Browne-Briggs, Hebrew Lexicon, p. 535 sqq.). In old Arabic the meaning of decisive fighting, leading to defeat, pursuit and slaughter, seems to be certain (cf. the treatment in the Liḥāma, xxii. 9—11, and add to the quotations there Hamīd, ed. Freytag, p. 124, 724: Dīnār of Ṭaflāt b. ʿAwf, ed. Krenkow, p. 141, l. 29, with translation and note on p. 15). The Liḥāma endeavours to connect the meanings (flesh: warp and wool in weaving; close, entangled fighting) under the general idea "being intricate, mixed" (ṣābītik, ʿiḥīṣātik) or with the picture of the flesh of the slain on the battlefield. But, in view of the Hebrew usage, it is better to be satisfied with the meaning of maḥāma as "stricken field"; the Liḥāma (p. 10) reiterates the idea of war and fighting with much slaughter and especially in the Sifra (Fīṣṭāma), its only allusion to the prophetic and e-chatological usage. An epithet of Muhammad is "the prophet of the maḥāma" and of that the Liḥāma gives two explanations: (i) "the prophet who was sent with the sword" (as in another tradition, bikhīṣān bīḥlāf); (ii) "the prophet of union and good order" (ṭlīṣ, qalab).

There is very little general prophecy in the Kūra as to future historical events in this world; but in Tradition there is a great deal. Even the two Siḥa’s have sections on such future plan —
apparently the oldest word for them and frequent in the Kūrān — especially those leading up to the Last Day. In Bukhārī (Būlāk 1315, ix. 46–61; Book 92 in Wensinck, Handbook) the Prophet is quite explicit in foretelling such woes and trials to come and in warning how they must be met. In Musliin (Constantinople 1329–1333; vii. 165–210; Book 52 in Wensinck, Handbook) there is a similar series of hortatory predictions, but, also, an explicit statement (p. 172 vv.) that the Prophet foretold everything which would happen to his People until the Last Day. By Ibn Khaldūn (Muhaddidīna, ed. Quatremère, ii. 182 sqq.; transl. De Slane, ii. 212 sqq.) this tradition is cited and others, by later and less weighty authorities, which make the Prophet give a dynastic history for future Islam, with the names, fathers’ names and tribes of all leaders of revolts until the end.

The use of the term malaḥīm in connection with these prophecies appears first among the ‘Alids in their doctrine of the Dā’ir. The Dā’irīst gives two occurrences: ‘Abī b. Yākūn (d. A.H. 182; A.D. 294, 292) had a Kita‘b al-Malaḥīm. An other text is from ‘Abī l-Muhāsin ibn Mihān (p. 223, l. 20) had a Kita‘b al-Malaḥīm. But the use must have spread very rapidly. In the Maṣūḥ of al-Baghdāwi (Cairo 1318, ii. 128 sqq.) those traditions are classified and one section is Bāb al-Malaḥīm (p. 130–33). All these traditions bear on the wars of the Last Days but the word malaḥīm itself occurs only in the early part of the hikāt section (p. 132 middle) in such phrases as “the Malaḥīm,” “the great Malaḥīm,” connected with the capture of Constantinople and the appearance of al-Dā’irī. In the Hikāt al-Maṣūḥ of Dīhib (327, p. 396 sqq.) the text is practically the same, only adding the names of the collections from which the traditions are taken, ‘Abī Dāwūd al-Dinawarī. ‘Abī Dāwūd has a separate section on malaḥīm (N. 36 in Wensinck). In such a book of edification as the Tuhfahat al-Dinawarī of al-Kurtubi (d. 671 = 1272), in the Muḥtaṣar of al-Sha‘rānī (Cairo 1324) the sections on the Maṣūḥ have swallowed up the whole doctrine and the aid of whom there is an angel called Mādāma (I), ṣiḥḥ al-malaḥīm.

Ibn Khaldūn has recorded the final form which these prophecies took. Traditions put in the mouth of the Prophet were supplemented and largely disregarded by calculations of astronomers and by the speculations of pantheistic Sufis using the science of Siniyāt? [q.v.] in the interests of the ‘Alids. We have thus to distinguish sharply between (i) the malaḥīm-predictions registered in the canonical books of traditions and in the literature of edification based upon these and (ii) the malaḥīm-books based upon secret tradition and on astrology which went back to the ‘Alids and are represented best by the Dā’ir. For, besides the Dā’ir ascribed to Dā’ir al-Sādiq, there was also an astronomical Dā’ir, ascribed to Ibn Ishāk al-Kindi, dealing with the dynastic destinies of the ‘Abbāsid. An asserted fragment of this, called the Little Dā’ir, was in circulation in the Maghrib in Ibn Khaldūn’s time, but had apparently been composed in the interests of the Muwahhids. Further Ibn Khaldūn had known as in circulation in the Maghrib several poems of this class in the interests of different western dynasties. In the Orient he had heard of several such malaḥīm ascribed to Ibn Sinā and he had actually had knowledge of one such ascribed to Ibn al-‘Arabī. In Cairo he had found another, also ascribed to Ibn al-‘Arabī, giving a horoscope for that town. In the Orient, too, he had seen a matlama poem by a certain Shīr, Muḥammad al-Bāḍirī, of the Kārāndī Fraternity of darwishes, who left behind him a heretical sect, al-Bāḍirīkūya, and who died 724 (1324). Ibn Khaldūn gives a mass of details on this matlama and on its author, who calls himself al-Dā’ir. It dealt with the dynasties of the Mamluks and Ibn Khaldūn knew it in two recensions from which he quotes. For still more details on this genre of literature, based on Ibn Khaldūn’s personal knowledge, see Quatremère, text, ii. 193–201 (the Būlāk texts are not complete) and De Slane’s translation, ii. 226–237.

In stories, there are frequent references to the science of malaḥīm as one of the esoteric sciences along with astrology and ḍar al-ramāl. Thus, in Habicht’s text of The Root Nights (ed. Breslau, iii. 218) in the Story of Kamar al-Zamān and Badūr, a form closely akin to the version of Galland and different from that in the second Calcutta and the Būlāk editions. Marwāz, the foster-brother of Badūr, is described as learned in the sciences of astronomy and the sphere and reckoning and algebra and ramāl and malaḥīm.

Bibliography: is given in the course of the article.

(D. B. MacRAELD)

MAL’AK. [See MA‘AIRAKA.] MAL’AKA, angels, is the Arabic broken plural of an early Semitic (Cananëīt? ) word malāk, meaning “messenger.” The evidence would suggest that it is a loan-word, coming into Arabic from Hebrw; there is no trace of a verb in Hebrw (nor in Phœnic. with which the noun occurs in later inscriptions), and in Arabic the root, even, is in the greatest uncertainty, being referred to a dubious č-l-k (Lane, p. 81, b, c; Lisan, xii. 272 sqq.; Tafti. Taafsir, i. 150) and to a still more dubious č-k (Lisan, xii. 370). The singular in Arabic is normally malāk without hawā, and so always in the Kūrān; although the Lisan in two places (xii. 274, s; 371, 3) quotes the same verse as a proof that malāk does occur, as an exceptional form (chalif). Both singular and plural in Arabic are used only in the sense “angel.” In the Kūrān it occurs twice in the dual (malākān, ii. 96; v. 19); of the two angels Hārūn and Mūḥāf (q.v. and under sūkān), and of Adam and Eve being tempted in the Garden to believe that they may become angels. The plural occurs very often in the Kūrān (in Flugel’s Concordance under č-k, p. 171) but the singular only 12 times (Flugel under m-l-k, p. 183). These are of the people demanding revelation by an angel rather than a human being (bāṣkar, vi. 8, 9, 50; xi. 15, 33; xvii. 97; xxv. 8); women think Joseph an angel for his beauty rather than a human being (bāṣkar, xii. 31); and an angel’s intercession (chufa, lii. 20) does not avail; twice as collective for angels, besides the ārād (lxix. 17), and in rows and rows (lxviii. 23).

In xxxii. 11 “the angel of death” (malāk al-mawt) occurs but not by name; see article ‘IRĀK, and references in tradition in Wensinck, Handbook, p. 228. Dijbril, the angel of revelation, is named three times (ii. 91, 92; lxvi. 4); cf. traditions on him in Musliin, i. 109–111 of ed. Constantinople 1333, and other references in Wensinck, p. 59. In Kūrān xxv. 193–195; Dijbril, unnamed, is called
the Faithful Spirit" (al-rūh al-a'mīn); he brings down the revelation to the ʿālā of Muḥammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in Kurʾān liii. 5–18 and lxxxi. 19–25, as appearing plainly to Muḥammad in revelation. He, as "our Spirit" (rūḥuḥ), was sent to Maryam (six. 17). He is called "the Holy Spirit" (rūḥ al-qudūs) in xvi. 104 and Allāh aided 'Isā with the same (ii. 81, 254; v. 109). Mikāl (variant Mikāl) is named (i. 92) as an angel of the same rank as Dārūrā; see a long and apparently true story of how his name came about in Bairdāwī (Feišcher's ed., i. 74, 129); in traditions he, with Dārūrā, appears as a friend of Muḥammad and in the hadith: "two of the angels of the heavens" (Wilkins, p. 153); Muḥammad called the two his wāris of the angels. To Isāfī (q. v.), the angel with the trumpet of resurrection, there is no reference either in the Kurʾān or in canonical traditions but very much in eschatological legend. In Kurʾān xliii. 47, the tortured in hell call to the keeper of hell, "O Mālik!" and in lxxviii. 18, the guards of hell are called al-Zalāma, an otherwise unused word, meaning apparently, "violent thrusters" (Litān, xvii. 53); the number of these, Kurʾān lxxiv. 30, is nineteen and they are asserted specifically to be angels—apparently to guard against the idea that they are devils; the term is called "rough, violent" (zāhīrī, zāhīlī). Another class of angels are those "brought near" (to Allāh), ad-dārūrāt (iv. 170); these praise Allāh day and night without ceasing (xxi. 20); Bairdāwī calls them also al-dārūrizā' (on Kurʾān ii. 28; Feišcher's ed., i. 47, 21) and al-karrāfūlā (al-kāfūlā) on Kurʾān iv. 170 (Feišcher's ed., i. 245, 22) as those that are around the sūrah. The same term, muqarruš, is used of lās (Kurʾān, iii. 40) as he is in the company of the angels nearest Allāh; cf. note xvi. 18, above, for his semiangelic character. At the beginning of the sura of the Angels (Kurʾān xxxv.), there is a significant description: "making the angels messengers (mānaʾir), with wings, two and three and four; He increases in the creation what He wills"; this has had much effect on later descriptions and pictures. They are guardians (zāfūrīn) over mankind, cognizant of what man does and writing it down (kaʾī in; Kurʾān lxxvii. 10–12). In xvi. 94 the writing down is ascended to Allāh himself. In lxv. 4; lxvii. 38; xlviii. 4, there occurs the very puzzling phrase "the angels and al-qālūn". Bairdāwī on the first two passages shows how perplexing the distinction is found (Feišcher's ed. n. 356, 13; p. 383, 4); "the rūḥ is an angel set over the spirits (al-tahāwī); or he is the whole genius of spirits; or lighted; or a creation (zāfūrī) mightier than the angels"; cf. too, Kāzmi's Līlījī, ed. Wustenfeld, p. 50. For spirit and the conception spirit in Līlījī see article ruḥ. In the Kurʾān there is no reference to the two angels, Munkar and Nākrār who visit the dead man in his grave, on the night after his burial, and catechize him as to his Faith. Thereafter, if he is an unbeliever, his grave becomes a preliminary hell and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise; it may even, if he is a ¡min, be a preliminary paradise. This is called technically the Questioning of the grave (al-muḥâjībī aš-šāḥībī). This doctrine, similar to the Louter Judgement of Christian theology, is one of the sāʾūrāt (to be believed on oral testimony) and is based on the implicit meaning of Kurʾānic passages (xiv. 32; xi. 49; lvii. 25) and upon explicit traditions (Ṭafṣālīn's commentary on Nasaft's Ḥāfīd, ed. Cairo 1321, p. 109; Māwīfī of al-Iṣār with commentary of al-Dārūrī, ed. Bülāk 1266, p. 590 sqq.). There is a still fuller account and discussion by the Hanbalite theologian Ibn Kāyīn al-Dārūrī (Drockern, G. A. L., ii. 106, No. 23) in his Kitāb al-Līlījī, ed. Haidarābād 1324, p. 62–144, vii. 6–xii. The angels are, also, called the heavenly host, or multitude (al-munāmīd al-wāṣiṭīs) in xlviii. 66 and guarding the walls of heaven against the "listening" of the dīmūn and shāfīrūn's. See further on this under sīhr, iv. 410. The Kurʾān lays stress on the absolute submission and obedience of the angels to Allāh. "To Him belong those who are in the heavens and in the earth and those who are with Him (in-tābāb) are not too proud for His service (ţibābī) and they do not become tired. They praise, night and day, without intermission" (xxix. 19, 20). "They do not anticipate Him in speech and they labour in His command" (xxvii. 27). At the creation of Adam they are distinguished in this respect from him and his future race: "while we praise Thee and sanctify Thee" (xvi. 66). The Fire there are set certain terrible and powerful angels, "they do not rebel against Allāh as to what He commands them and they do what they are commanded" (lxvi. 6). But does this absolute obedience extend to imbecibility (līmān; q. v.)? The Kurʾān is emphatic as to their obedience, but is in contradiction to their created nature and to their relationship in that respect to the dīmūn and to the shāfīrūn. Thus, in several passages in the Kurʾān, the story is told of the creation of man out of clay and that the angels were hidden by Allāh to prostrate themselves to him. This they all did "except Iblīs" (līmān Iblīs; Kurʾān ii. 32; vii. 10; xv. 48; xviii. 74). Iblīs, therefore, must have been an angel; as Bairdāwī says, "If not, the command to them did not apply to him and being excepted from them was illegitimate" (Feišcher's ed., i. 51, 2). This would mean that the angels were not imbecible. But, again, in Kurʾān xviii. 43 the statement is expanded, "except Iblīs; he was of the dīmūn; so he departed from the command of his Lord" (fasuqah an amrī rabbihī). Further, in Kurʾān vi. 11; xxviii. 77, Iblīs, pleads in justification that man was created of clay (līmān) but he of fire (nāsīr); and the dīmūn are acceptably created of fire (al-munāmīd al-šāfīrūn) in Kurʾān xv. 27, "of a mūlāṣīf of fire" in Kurʾān iv. 14. The meaning of mūlāṣīf is unknown: the Līlījī (iii. 189, 13–14) gives a number of contradictory explanations, but it is probably an unidentifiable loc.-verb. Iblīs and the dīmūn, then, were created of fire; but there is no statement in the Kurʾān as to the material out of which the angels were formed. A tradition traced back to 'Abī Jābīr is the foundation of the accepted position that the angels were formed of light: "The Prophet said, 'The angels were formed of light (khitabat min nīr) and the dīmūn were formed of a mūlāṣīf of fire and I Allām of that which was described to you' " (Muslim, vi. 236 ed. Constantinople 1333: Bairdāwī, i. 52, 1). Another difficulty in the doctrine of the imbecility of the angels is the Kurʾānic statement as to Ḥārūt and Mūrūt referred.
to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Babil and there to teach magic to men. But, it is answered, the Kur'an says nothing of their fall; (ii.) teaching magic is not practising magic; (iii.) they always first warn those who come to them, “We are only a temptation (jima); so do not disbelieve” (Kur'an ii. 96); cf., further, Tafza'ani on the 'Isfahān of Nasafi, ed. Cairo 1521, p. 333.

In Baidawi on Kur'an ii. 32, there is a long discussion of the angelic nature (ed. Fleischer, i. 51, to p. 52, s) which, however, runs out in the despairing statement that knowledge on the point is with Allah alone (al-tīn 'inda-lāhī). Perhaps Iblis was of the djīn as to his actions (l-tārīkh), but of the angels as to species (nasūd). Also, Ibn 'Abbas has a tradition that there was a variety (qarib) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the djīn and of the shajān's as opposed to the angels) and who were called al-sānīn; and Iblis was of these. Or, that the term djīn brought amongst the angels and identified with them. Or, that they were among those commanded to prostitute themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but not against. Further, perhaps a variety of the angels are not essentially different from the shajān's but differ only in accidents and qualities as men are virtuous or evil, while the djīn unite both, and Iblis was of this variety. The tradition from 'Ali is no answer to this explanation, for light and fire in it are not to be taken too precisely; they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another; fire can be purified into light and light obscured to fire.

So al-Baidawi.

With this should be compared the scholastic discussion in the Mawdūkh of al-Iṣa, with the commentary of al-Durjānī (ed. Bālāk 1526, p. 576). In it the objector to the 'isma of the angels has two grounds: (i.) their urging upon Allah that he should not create Adam showed defects (shander, pride, malice, finding fault with Allah) in their moral character; (ii.) that Iblis was rebellious, as above. These grounds are then answered scholasically. Then various 'urfic texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, while the shajān's as a class were created for evil (shajān l-lā-şahr), there is a definite tradition (Zafur) by al-Māturidi on al-Farj al-bahar ascribed to Abū Hanīfah, ed. Ḥantarīād 1521, p. 25) of one Muslim shajān, a great-grandson of Iblis, who appeared to Muhammad and was taught by him certain sūras of the Kur'an.

The story of Ḥārūt and Mārūt suggests that the angels possess sex, although they may not propagate their kind. But “they are not to be described with either masculinity or femininity” (l-lāzim) of Nasafi, ed. Cairo 1521, p. 133). Tafza'ani and the other commentators in this edition explain that there is no authority (nasūd) on this point and no proof by reason (l-fikr); it should, therefore, be left unconsidered and that, apparently, was the course followed by al-Iṣa and al-Durjānī. They may have sex and use it. In that respect man who has in him the possibility of sin and must himself rule his appetites of lust (l-jāhān) and of anger (l-qādah) has a higher potentiality of excellency than the angels (Bādawī on Kur'an ii. 28, ed. Fleischer, i. 48, n sā'yī). This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and, especially, of angels and prophets. This is stated shortly by Nasafi (p. 147 of ed. cited above): (i.) “The Messengers (risāl) of mankind (al-bahār) are more excellent than the Messengers of the angels and (ii.) the Messengers of the angels are more excellent than the generality of mankind and (iii.) the generality of mankind are more excellent than the generality of the angels.” Tafza'ani develops that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, yet that the other two statements (i. and iii.) will bear argument. He urges (i.) the prostituting of the angels to Adam; (ii.) that Adam was taught all the names of things (Kur'an ii. 25); (iii.) that Allah “chose” (l-jāf) Adam and Nāhī and the family of Ibrāhīm and the family of ‘Imrān over all created things (lāla l-'ālimin; Kur'an iii. 30); (iv.) that mankind achieves excellences and perfections of knowledge and action in spite of the hindrances of lust and anger. But the Mu'tazilites and the philosophers (al-fātasīfī) and some Aṣhrā'ites held the superior excellence of the angels. They urged (i.) that they were spirits, stripped of materiality (mawjūd madgās al-qādah), complete actually, free of even the beginnings of evils and defects, like last and anger, and from the obscurities of form and matter (zulmāni al-bāyūl wa-l-'īra), capable of doing wonderful things, knowing events (ka-nālīn), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (ii.) That the prophets learn from the angels, as in Kur'an xxvi. 193; liii. 5. The answer is that the prophets learn from Allah and that the angels are only intermediaries. (iii.) That there are multiplied cases both in Kur'an and in tradition where mention of the angels precedes that of the prophets. The answer is that precedence is because of their precedence in existence or because their existence is more conceded (l-qīm) and, therefore, faith in them must be emphasized. (iv.) In Kur'an iv. 170, “al-mawṣūl does not disdain to be an 'abd to Allah nor do the angels” must mean, because of linguistic usage, that the angels are more excellent than ‘Isa. The answer is that the point is not simple excellency but to combat the Christian position that ‘Isa is not an 'abd but a son to Allah. In the 'Arbā'īy (p. 572—578) there is a similar but much fuller discussion which involves philosophical consideration of the endowment — mental, physical, spiritual — of all living creatures from immaterial spirits to the lower animals (al-bahār).

In the 'Arbā'īy al-Mas'ūdīy of al-Kuzmin (ed. Wustenfeld, p. 55—63) there is an objective description of the angels in all their classes, in which the statements of 'Umar and Sūma are adjusted to the Aristotelian-Neoplatonic universe
with its spheres (al-asfāk), in accordance with al-
Kazwini’s general aim to give a picture of the
created universe in its details and wonders. Yet,
apparently, while the angels possess the quality
“life” (hayy), and are the inhabitants of the heavens
and of the heavenly spheres (sukkān al-samāwārī)
they are not to be reckoned among the animals
(al-jawwān). Al-Damiri includes mankind and the
djinn, even the diabolical (mutaghażna) djinn, such
as the Šāhīn, in his Hayy al-Jawwān but not the
angels. Equally acute and philosophic is his
discussion in the Muwāṣṣif, and more spiritual
than that by Kazwini, is al-Ghazzâlî’s treatment of
the mystery of the angelic nature in some of his
specialistic smaller treatises. For him it is part
of the general question of the nature of spirit
in which his smaller Maṣūfān is devoted. See, too,
the larger Maṣūfān (ed. Cairo 1933) in Rukn, ii.,
p. 23 sqq., and the translation by W. H. T. Gairdner
of his Mshkat al-Awisūr (London, Royal Asiatic
Society, 1924), passim.

The above is a statement of Muslim ideas as
to the angels. But Muslim literature also takes
account of non-Muslim ideas on them, as those of
the philosophers: Christians, dualists, idolaters.
These will be found given shortly by Baḍrī on
Kūrān ii. 28 (ed. Feliście, i. 47, 18 vij.), and in
more detail in Dict. of tecken, termus, p. 1357 sqq.

(L. D. MACDONALD)

MALATYA, an old city, not far from the
upper Euphrates. It lies at the junction of
important roads (in antiquity: the Persian royal
road and the Euphrates route; in modern times
Samsun–Sivas–Malatya–Diyarbakr and Kars-Kağızman–
Malatya–Kartçum) in a plain, the fertility and
richness of which in all kinds of vegetables and
fruits was celebrated by the Arab geographers,
as in modern times by von Moltke and others,
as in the northern foot of the Taurus not very far south of
Tokhma–ā (Arab. Nahr al-Kurbākib) which is there crossed by the old bridge of Kkğöz. The
town was supplied with drinking-water by the
springs of Yûnûn Dâvidiya and by the Euphrates.
Weaving used to be a flourishing industry there;
according to Ibn al-Shijna there were once 12,000
looms for spinning wool in Malatya but they no
longer existed in his time.

The town appears as Moûdû in Assyrian
cuneiform inscriptions and two “Hittite” stelae
have been found there (to be more accurate: at
Arslan Tepe, a little south of Malatya; Messerschmidt,
Corpus Insr. Hittit. in M. T. A. G. 1900, part
iv, p. 13; 1906, part iv, p. 7). It is probably also
identified with the district called Mûzî-
(last letter uncertain) in the inscription of king
Zēr-ḫr of Hamat. (c. 800 B.C.) which Pogno found
in Afis near Aleppo. Pline (Nat. Hist., vi. 8)
calls the town Moûta a Simurakanda condito; the
name of the legendary foundress has perhaps
survived in that of the fortress of Shamrin which
Michael Syrus (Chronicle, transl., Chabot iii., 272)
mentions in the 6th century in the land of Sawid,
in the region of Malatya. To its position on the
Oriental lines Malatya owed its great prosperity
in the Roman period. From the time of Titus it
was the headquarters of the Legio XII Fulminata;
it was much extended by Trajan and under Justinian
raised to the capital of the province of Armenia III.
Anastasius and Justinian restored and beautified
it. After his severe defeat at Malatya in the autumn
of 575 Khosrow I burned the town (John of Ephesus, vi. 9; E. Stein, Studien zur Gesch. d.
Kuräns. Reichswelt, 1911, p. 66–8; 83
note 9; 200 Habib b. Maslama al-Fihri was sent
by Tâyy b. Ghanîm from Armenia VI
(Shmâghî) against Malatya and took the town;
but it was later retaken from the Muslims. When
Mu‘awiyah became wâli of Syria and al-Djazira, he
again sent Habib b. Maslama against the town.
He stormed it in 36, left a troop of cavalry in
it to guard the frontier and placed a governor in
it. Mu‘awiyah himself visited Malatya on his campaign
against Asia Minor and left a large garrison in
the town which henceforth became one of the
headquarters for the summer campaigns into Bâlân
al-Rûm. When the people abandoned the town in the
time of the caliphs ‘Abd al-Malik and ‘Abd al-Malik b. al-
Khâlid they were attacked by the Byzantines; on
their withdrawal, it and the whole of Armenia IV was settled by the Armenians and
and Nabataeans, that is, Arabian speaking peasants,
driven out of his kingdom by the emperor Philippicus.
(Noldke, Z. D. M. G, xxv. 125; al-Balâghirî, ed.
de Goeje, p. 185; Michael Syrus, transl. Chabot II,
482; according to Theophanes the Armenians were
settled in Malatya by Philippicus in 712 A. D.
They increased very much and were valuable
allyes of the Arabs in the wars against the Byzan-
tines (Michael Syrus, loc. cit.). The caliph
Omar settled the fugitive inhabitants of Turânda
(now Derende) in Malatya and made al-Djâwna
b. al-Harîth of the tribe of the Bani ‘Amîr
Sa‘îda governor. In 123 (740–741) a Greek army of
20,000 men under Askivâsh, the general of the
Thema Armeniakon, advanced against Malatya
and plundered the country round it. The inhabitants
closed the gates and sent a messenger to Hişâm
in al-Rûsîfâ but the latter soon heard that the
Greeks had withdrawn and sent the messenger back
with a body of cavalry. Later, when he himself took
the field against the Byzantines, he camped before
Malatya until the rebuilding of the town which
the enemy had destroyed was completed (Balâghirî,
loc. cit.; Michael Syrus, ii. 506; Theophanes,
ed. de Boor, year 743; Pâl Dîvûs, ed. Chabot, year
1051). The Emperor Constantine VI Copronymos
in 133 (750) advanced on Kamkân and Malatya,
whose inhabitants looked in vain for help to
Mesopotamia, as a civil war was raging there. As
the emperor knew this he demanded that the
inhabitants should abandon the town. After at first
refusing they finally agreed, being exhausted by
the siege, left the town with all their goods
and chattels and went to al-Djazira whereupon
Constantine levied Malatya to the ground; nothing
but a half ruined granary remained standing. Hişân
Kalawthîya was also destroyed and its inhabitants,
like those of the other villages in Armenia IV,
carried off into captivity (Balâghirî, loc. cit.; Michael
Syrus, ii. 518; Bæthgen, Abb. f. d. K. d. Morgenl.,
viii. 3, p. 54, 137; Well, Gesch. d. Chaliften, ii.
15). Six years afterwards (139 A. H.) al-Mansûr
wrote to Šâlih b. ‘Ali b. ‘Abd Allah who had in the
campaign in Asia Minor in Radjab 249 (863) by the valiant Petraonas (al-Bahrūmān), Michael III's general, with his whole army on the Mardj al-Usfā (Weil, op. cit., ii, 381; Tscherning, Saâgu u. d. Quellengebiet des Tigris, S. B. Ak. Wien, cxxiv., vol. iv, 1893, p. 23; on the site of the "Bishop's Meadow": Le Strange, Eastern Caliph., p. 138). The Emperor Basil I in 871 went against Tephrike and Taranton (Derende); he plundered Zibaţra and Sumaisašt and then encamped pēs ū ḫarābī ḫatāyū (Nahr al-Zamīn, now: Cirmiklî-Şū, bāṬa ṭa ṫa ṫa ṭī (Theophan. continuat., ed. Bonn, p. 268; Kaastro Karâmis in Barhebræus, Chron. eccl., ed. Abbeḷa-Lamy, i. 400; now: Cirmiklî, cf. Tomašek, Beitr. z. alten Gesch. u. Geogr., Forsch. f. H. Kirp. Berlin 1898, p. 141). But he was not able to take Malaty a which was fortified (Harenrocher, Phœbus, ii. 442; Weil, op. cit., ii. 471). His army suffered heavy losses during the siege and the emperor himself was nearly captured. Whether he undertook a second campaign against Malaty a is doubtful (Weil, op. cit., ii. 475).

The Arab general Mūnis in 304 (916–917) devastated Cappadocia from Malaty a (Weil, op. cit., ii. 635); similar invasions took place in 310 and the following years. It was not till 314 (926–927) that the Byzantines were able to exact their revenge. Under the brave Domestikos Joannes Kurkuas (Ibn al-Âṣhār, ed. Tornberg, vii. al-daunateh kāmirī; Michael al-Dāne, viii. 158: Kyriakos), they entered the district and advanced up to the suburbs of Malaty a, laying waste the country and going as far as Shimshāt (Arsamosata) (in 315 according to Ḥamza al-Isfahānī, Tuṭīṭa, ed. Gottwald, p. 205; transl. p. 158, wrongly "in fines Samosateni invasore"). Kurkuas forced the amir of the town to send his son, Abū Ḥaṣf (Abū Ḥaṭîf), and the general Abu l-Âṣbāḥ (Abu Āṣbū) to him and to acknowledge the suzerainty of the emperor (Symeon Magister, Bonn, p. 741 sq.; Georg. Monach., ed. Maralt, p. 834, while the Bonn edition p. 908 and Theophanes continu., ed. Bonn, p. 416 and Georg. Kedren., ii. 100 sq. wrongly write: "Abu l-Âṣbāḥ the son of an Armenian by birth, is meant to have granted the lands of Malaty a and Sumaisašt to the Armenian prince Mīhē (Arab. Malīk, Greek Μαλάκ) who was however again driven out of Malaty a and Sumaisašt in 320 by Saîd al-Dawla, uncle of the ʿHanāḏīndī Nāṣīr al-Dawla of Mawṣīl (Weil, op. cit., ii. 639; Zaǧīšī Imp. Akad. Nauk., xiv. 102 sq. following Džamāl al-Din b. Zahir). But in 934, after the death of the two friends of the Byzantines, Abu Ḥaṣf and Abu l-Âṣbāḥ, Kurkuas and Mīhē again appeared before the town, which at that time was protected by a double wall and a ditch full of water inhabited and found themselves forced by starvation to negotiate about the surrender of the town. During the negotiations the Greeks succeeded by a stratagem in forcing an entrance through the north gate of the town and taking it on May 19, 934. The inhabitants, in keeping with the promise that had been given them, were allowed to leave the town. The walls were razed so that the town was henceforth open to all attacks (Michael Syrus, iii. 122 sq.; Ibn al-Âṣhār, viii. 221; Rambaud, L'Empire Grèc au XIème siècle, Paris 1870, p. 423; ; Rosen, op. cit., p. 89 sq., 106, 108). In the next decade Saîd al-Dawla repeatedly raided the territory of Malaty a.
His mamlik Nadž in his campaign to Hanžit in 350 (961–962) encountered 'Abd Allah of Malatya and put him and his friends to flight (Freytag, Z. D. M. G., xi. 197; Rosen, op. cit., p. 88). Two years later he again ravaged the land of Malatya for 18 days with fire and sword (Freytag, p. 204, 206).

When the emperor Nicephorus conquered Syria, he wished to repopulate Malatya, which was defended and deserted. But the Greeks refused to live there for fear of Arab raizans. His advisers therefore recommended him to invite Syrian Jacobites to the country. He did this and promised the Patriarch Mār Yūhanān Sargiṭa, that if he repopulated Malatya, Hanžit and the passes (māsūrās), he would no longer persecute the Jacobites (Michael Syrus, iii. 130 sq.; Barhebraeus, Chron. eccl., ed. Abboele-Lamy, i. 411 sqq.; Markwart, Handb. Ammūya, xxx., 1016. p. 121 note). People now flocked to Malatya from all parts (c. 969 A.D.). Monasteries were built. About 1000 there were said to be in Malatya and district 53 churches and 60,000 Christians capable of bearing arms, including many Melkites (Michael of Tinnis in Renanod, Hitt. Patr. Alexandr., Paris 1713, p. 403: Barhebraeus, op. cit., i. 424, note 1). The emperor did not, however, keep his promise; persecution again became of everyday occurrence and drove the Jacobites more and more into the arms of the Arabs (Michael Syrus, iii. 131, 136, 147).

According to Ibn al-Aṣkārī (al-Ḳānīl, iii. 65), Malatya at this time was placed in the šīrāz 'Amīrāwīn (Arminius) which he says stretched to the Bosphorus (Khalīḍ al-Kustantiniyya).

The Emperor John Tīmūrids (Sīmḥāshัก) in 1218 (918) on his campaign to Nišābūr crossed the Euphrates at Malatya (Yabū al-Anjīkī in Kosen, ref. cit., p. 183 note; Schlimmerger, Lioofie Byzantins, i., Paris 1896, p. 255). The rebel Bardas Scleros in 366 (970–977) seised the town of Malatya, imprisoned the strategos who was governing it for the Emperor and had himself proclaimed strategos. When Scleros was fighting against the imperial general Michael Barze (al-Jurdu) there was with him a Shaikī ḥ had been converted to Christianity, the patriarch 'Ubad Allḥ al-Mutanāyarī of Malatya, who is perhaps identical with the 'Abd Allah mentioned in 350. Scleros made him magistros and sent him with one of his slaves, the eunuch Kantaṭīsh (.DALK: Alnst?) whom he raised to the rank of bāntīkās ("Count"), to Anjīkīya against the Ḫalīd Kulaib, the imperial governor of this town. Kulaib surrendered to them Anjīkīya, the Thugīyūn and the whole of the "Orient"; he and the most prominent citizens of Anjōch were then sent as prisoners to al-Kalbām (Cappadocia) (Kosen, ref. cit., p. 2 sq. and note: p. 81–90 sq.; Schlimmerger, Lioofie Byzantins, i., 359, 362, 376 sq.). Scleros however at once sent the Anjōch notables back to their homes and made Kulaib istiqlāsī of Malatya (Kosen, ref. cit.; Schlimmerger, i. 356) while on the other hand 'Ubad Allḥ soon went over to the emperor Basil (977–978). When after a seven years' interregnum on the Tigris island of Madīda near Baghdad, Bardas Scleros succeeded in gaining his freedom, he escaped Malatya with the help of Beduins, where he at once (in Shawwal 376 = March 987) seized the istiqlās Kulaib who had gone over to the emperor, and himself again proclaimed

fasīlus (Yabū, transl. Rosen, p. 22; Schlimmerger, i. 678). Bardas Phocas, who took Bardas Scleros prisoner by treachery and then claimed the imperial title for himself, passed through Malatya on Sept. 14, 987 on his way westwards straight through Asia Minor (Schlimmerger, i. 695). In 399 (1008) the Hmandān Abu 'l-Haidj ṭ fled to Malatya before the Miṣrān Mānṣūr b. Lūlū, where the emperor appointed him magistros (Rosen, ref. cit., p. 51; Schlimmerger, ii. 442).

The most important event during the Byzantine occupation of Malatya was the invasion of the Turks. Their first inroad into the area of the town was in 1058; the inhabitants fled before them mainly into the adjoining mountains where they perished of hunger and cold. The Turkish force 3,000 strong under the amīr Abū Dinār remained 10 days pillaging Malatya and laid the country waste for a day's journey round. On their retreat the Turks were surprised by the people of the Armenian district of Sansun (Arab, al-Sansūn; now: Sāṣān) and all slain, with the assistance of the prisoners and fugitives from Malatya (Michael Syrus, iii. 158 sq.), according to whose erroneous chronology these incidents took place in the 9th or in the last year of Constantine IX [i.e. 1050–1051 or 1054–1055]; Matthias of Edessa, transl. Duhaur, p. 107–109; Aristakēs Lastivei, in Tomaschek, Sasan u. das Ouestengebiet des Tigris, S. B. Ab. Wien, cccxiii., vol. iv., 1895, p. 29 sq.). One of the prisoners who survived, the Syrian monk Joseph, wrote three mnāmō on these events; the patriarch Yōhanān X bar Shēshāḥ also composed 4 mnāmō on the devastation of Malatya (Baumstark, Gesch. d. syr. Lit., p. 291 sq.). By the time of the Emperor Isaac I (1057–1059) we again find the Turks raiding the territory of Malatya and carrying off prisoners from it. His successor Constantine X Ducas (1059–1067) restored the two walls and the ditch at Malatya (probably in 1060–1061). When the imperial decree regarding this was published, a number of citizens of Malatya, who were in Constantinople returned home and arranged for a large number of workmen and builders to be brought from Asia Minor and Anjūkaya; in a very short time owing to the continual threat to the town, the fortifications were rebuilt on the old foundations (Michael Syrus, iii. 165 sq.). The Byzantine ūstānūrū Kinoites was afterwards killed with his wife and children and the town "henceforth knew no peace" (Michael Syrus, loc. cit.).

These constant invasions of the Turks, which specially affected the region of Malatya (Skyltizes in the ed. of Kedrenos, Bonn, ii. 660 sq.) met with very little opposition. Then the legions quartered around Malatya, whose pay and provisions had been withheld, refused to cross the Euphrates to meet the enemy along with the local volunteers. The Turks did not besiege the town but went on to attack Kūshāriya, which they stormed (Skyltizes, loc. cit.). When Romanus IV Diogenes attacked the Turks in 1068 he sent a general from Gökṣun, perhaps as Giūer suggests (Byz. Gesch. iii. 720), the Bulgar Alūbān, to Malatya to guard the frontier against the raids of the Turk Afšin (Afsāne). The general however did not leave Malatya so that Afšin was able to advance against the emperor undisturbed (Skyltizes in Kedrenos, ed. Bonn, ii. 671; Welh, op. cit., iii. 112, note 2). In the same year the emperor appointed the
succeeded in conquering Abulustain, the district on the Djiānān and the whole country round Malatya (Michael Syrus, iii. 193). The Atabeg of the Sultan of Malatya (probably Bālāk), in 1111 again deprived him of his lands on the Djiānān. Kīffīddj Arslān's widow left Malatya to marry the doughty amir Bālāk (Michael Syrus, iii. 200). A Turkish cavalry leader offered to sell Tughrīl Arslān the mother of Ziyād when the young sultan of Malatya wanted to take possession of it; however, it was taken from him by the son of the sultan of Khurāsān without a blow being struck. On the 11th March 1118 the amir Manguđān of Kamak pillaged the country round Malatya; the Khāṭīl of Malatya thereupon turned to Joselin of Edessa for help (Michael Syrus, iii. 204). In the following year the Sultan of Malatya conquered Abulustain and the lands on the Djiānān; the region of Kaṭīfā passed as a gift to Malatya (Michael Syrus, iii. 205). Tughrīl Arslān owed his success to the governor Bālāk, who advanced as far as Kamak, defeated the Greeks with the help of al-Ṣaḥābī b. Qāsim, and the Djiānān, again had been given in marriage to Baldwin of Edessa, summoned the Franks to his assistance (Michael Syrus, iii. 187, 192; Will of Tyre, xii. 4). When Gūmūṣhtaqān besieged the town and laid waste the country around, Bōmūnd came from Anfājīkā with his relative Riccardo del Principato and a troop of cavalry, but he was ambushed at Marāsh and sent a prisoner to Nīkār (or Swās) in June 1100. From there he appealed for help to Baldwin of Edessa who relieved Malatya and pursued Gūmūṣhtaqān for 3 days without overtaking him. He then returned to Edessa via Malatya which Gabriel surrendered to him and left 50 housemen for its protection. Gūmūṣhtaqān appeared before Malatya again in 1100, where Gabriel had in the meantime made himself so detested by the inhabitants that they handed him over to Gūmūṣhtaqān, who thereupon entered Malatya on Sept. 18, 1101 (Michael Syrus, iii. 188; Recueil. Hist. Or. Crois., i. 5, 203; iii. 522, 526; Mathias of Edessa, trans. Dulaurier, p. 230). The dynasty of the Djiānānids [q. v.] thus came to rule there (on them cf. also van Berchem-Kh. Ethem, C. I., iii., p. 2, note 3; p. 3, note 1; Zambar, Manuel d. Geniot. et de Chronol., Hanover 1927, p. 146 sq.). At the suggestion of the Emperor Alexios, Gūmūṣhtaqān in the summer of 1103 released Bōmūnd, who had been brought to Malatya, on payment of 100,000 dinars (Michael Syrus, iii. 189; Rohricht, Gesch. d. Kreuzer. Jermuel., p. 45). According to Michael Syrus (iii. 192), Taḵnūkīn i.e. Gūmūṣhtaqān b. Djiānān died within two years of the taking of Malatya (i.e. 1103—1104); he was succeeded by his son Aḡūsān (Yaghībīsān). Kīffīddj Arslān again began the siege of Malatya on June 28 and directed siege-artillery against the round N.E. tower of the town, which had to surrender after several onslaughts had been made on it. Kīffīddj Arslān I began his rule in Hezoum as co-Prince of it in 1094. The very next year in the battle on the Khābūr, he was succeeded in Malatya by his youngest son Tughrīl Arslān, in whose reign much evil fell upon the town as a result of the murder of the governor Fīzīmīš (Michael Syrus, iii. 194). During the fighting among the other sons of Kīffīddj Arslān, of whom Maṣʿūd sought refuge in Malatya about 1107 (Rec. Hist. Or. Crois., iii. 534) Bōmūnd
plotted against his life (Michael Syrus, iii. 305 sq.).

Maiden again (July 23, 1152) tried without success to
take the town. Dhu ʿl-Karnain was succeeded in
October 1162 by his minor son Naṣīr al-Dīn
Muhammad (Muḥammad) who made himself so detested
by his excesses that he had to leave Malātya (1170).
His place was taken by his brother Abu ʿl-Ḡāsim
(Fakhr ʿal-Dīn Ṣāʾīn; Michael Syrus, iii. 336 sq.).
In May 1172 when, 15, he married the daughter
of the lord of Ḥisn Ziyād. During the wedding
festivities he fell from his horse while jouusting and
died of his injuries (Michael Syrus, iii. 343). He
was succeeded by his younger brother Ferdīn
(Ferdūn) who had to marry the princess intended
for the brother. On the news of these happenings,
Kīldīj Arslān II attacked Malātya, where however
preparations were rapidly made for the defence
under the direction of the enmich Saʿd al-Dīn.
Kīldīj Arslān had to withdraw but carried off with
him 30,000 prisoners from the country round
(Michael Syrus, iii. 346). On Feb. 15, 1175, Ferdīn
was murdered by his brother Muhammad, who after
many adventures had returned in disguise to Malātya
by a secret agreement with the princess of Ziyād
whom he had left behind him at Michael Syrus, iii.
362–364). When Kīldīj Arslān II thereupon again
besieged Malātya, the discontent with Muhammad
was so great that he no longer felt safe in the
town but withdrew to Ḥisn Ziyād. Kīldīj Arslān
after a four months’ siege entered Malātya on Oct.
25, 1175 (Michael Syrus, iii. 373). He repaired the
two walls of the town (Michael Syrus, iii. 388).
The Turkomans, who since 1158 had been ravaging
wide tracts of Asia Minor also invaded and plundered
the district of Malātya (Michael Syrus, iii.
402). In 1189 (Michael Syrus; 1191 according to
Arabic sources) Kīldīj Arslān gave the town of Malātya
to his son Muʿīz al-Dīn Kaṣar Shāh
56; iii. 269). Kīldīj Arslān later found himself
forced to hand Malātya over to his other son Kaṭh
al-Dīn Malik Shāh; but Muʿīz al-Dīn went to
Ṣalāḥ al-Dīn (580 = 1191–1192) and regained his
position with his help (Rec. Hist. Ort. Crest., i.
57, 68 sq.; iii. 269; v. 44).

To strengthen the alliance he married the daughter
of Malik al-ʿAdil and accompanied Ṣalāḥ al-Dīn’s
117). In June 1200 Rukn al-Dīn Sulṭān of Dūkāt (Ṭūğāt)
deprecated his brother Muʿīz al-Dīn of Malātya;
the latter fled to his father-in-law Malik al-ʿAdil
(Barhebraeus, Chron. Sivrit, ed. Beijan, p. 406;
al-Zahir, who had only Sumaiʿa-al of his inher-
tance, submitted in 1207 to Rukn al-Dīn and of Malātya and
Konya (Barhebraeus, Chron. Sivrit., p. 408). In the next year Rukn al-Dīn took An-
gora; a few days later he died (Barhebraeus, p. 418 sq.).
He was succeeded by his young son Kīldīj
Arslān III, who was however soon thrown into
prison by Ḡūṣūlf al-Dīn Kāṭh-Khusraw I (Bar-
hebraeus, p. 419). After the latter (d. 1205) came
his son ʿĪz al-Dīn Kāṭh-Kāwā, who, while on
a campaign against Malik al-ʿAṣraf in Malātya
developed consumption from which he died on
his return (Barhebraeus, p. 437; Rec. Hist. Ort. Crest.,
i. 150 sq.). In the reign of his successor ʿAlī al-
Dīn Kāṭh-Kābūd, the Tupars in 1231 penetrated to
Ḥisn Ziyād and to the Ephrathes near Malātya (Barhebraeus,
p. 463). ʿAlī al-Dīn took Kāṭh from Malik al-ʿAṣraf in 1232. When in the next year
the latter along with his brother Malik al-Kāmīl
of Egypt occupied Ḥisn Mansūr, ʿAlī al-Dīn
collected an army of over 100,000 men, took Ḥisn
Ziyād (Barhebraeus, p. 467) and besieged al-Ruḥān
in the following year; the inhabitants of Ḥarrān
fearing an attack on Malātya sent him the keys
of their town (Barhebraeus, p. 468; Kāmil al-Dīn,
Kāṭh-Khusraw II (1237–1245) at the beginning
of his reign drove the Kāṭhī-Bīšārīs out of his
kingdom on their retreat they defeated the com-
mander (Sūlāhī) of Malātya Saʿīf al-Dawla and
crossed the Ephrathes at Masār (var. Muṣṭaṭ)
(Barhebraeus, p. 471). In 1241, the amir of Malātya
again suffered an annihilating defeat from fanatical
Turkoman hordes under the prophet Pāṭāb (Bābā)
(Barhebraeus, p. 474). When the news of
the victory of the Tupars at Kūzā-Dāgh (1243; Bar-
hebraeus, p. 475) reached Malātya, the Sūlāhī Rashīd
al-Dīn and the other court officials broke into
the royal treasury, shared the treasure among
themselves, and fled to Ḥalab. Many prominent citizens
followed them; but they were surprised by the
Tupars on the hill of Bīshāl on a day’s journey
from Malātya and some slain, some taken
prisoners. The inhabitants of the town, Muslims and Christians,
asked the Metropolitan Mār Dīniosios ʿAnġūr to
direct the defence of the town. After two months
during which Malātya was watchfully defended,
the Tupars withdrew. In 1244 the Tupar chief
Hūssār (var. Nasāwūr) Nuyin besieged Malātya and
ravaged the country round until Rashād al-Dīn
caused him to retreat by rich presents (Barhebraeus,
p. 477–479). After the division of the Sālāḥ
empire by Hūshār, there ruled at first ʿĪz al-Dīn
at Malātya; then, after his dethronement, his brother
Rukn al-Dīn (Barhebraeus, p. 482). At the end of
649 (1251–1252) and in July 650 (1252–1253),
the Tupars again besieged the town under Iṣāwūr
and wasted its surroundings (Barhebraeus, p. 491).
When in 1257 ʿĪz al-Dīn sent al-Tughr Ḥaṭā
into the district of Malātya to seek recruits and
the latter allotted the town to the Kurd chief
Ṣahrāf al-Dīn Aḥmad b. Bīhā; the inhabitants
would not have him because they had sworn fealty to Rukn
al-Dīn and feared his Tupar patron Bāḏīj. It was
not till ʿĪz al-Dīn had sent a second envoy, Bīhā-
ār, that the Tupars consented to admit him into the town;
the latter soon fled again before Bāḏīj and only
returned when he had gone, but again found the
gates closed against him and was only admitted
after famine had broken out in Malātya as a result of his
siege (Barhebraeus, p. 498–500). In 1260 Hūshār built bridges over the Ephrathes
for his vast host at Malātya, Kālʿar al-Rūm al-Bīra
and Kāršīya (Barhebraeus, p. 505). The Egyptian
ruler of al-Bīra Ḥīdar (Kāhīr) in 1282 laid
waste the country round Malātya (Barhebraeus,
p. 546).
The Mongol Khūz Āḫū (1265–1282) again
divided the kingdom of Rūm between two Sālāḏūk
consuls of whom Masʿūd received Artūḏān, Siwās
and Malātya.

In the 11th and 12th century lived the two
great Syriac historians, both born in Malātya, to
whose chronicles we mainly owe our knowledge
of the history of the town: the patriarch Michael I
(1126–99); son of the priest Eliya, who belonged
to the family of Kīndast in Malātya and
the Mār ʿīyān Gregor Abū ʿl-ʿAbārī called Barhebraeus
(1265–86; q.v.), whose father, the baptised
Jewish physician Ahrón had restrained his fellow citizens in Malatya from stupidly flying before the Tatars (Baumstark, Gesch. d. syr. Lit., p. 298—300, 312—20). Michael's principal authority, Ignatio (d. 1104), was also metropolitan of Malatya (Baumstark, op. cit., p. 291).

The increasing weakness of the Seldjûks about 1300 favoured the formation of local Turkomon and Armenian petty states, especially in the east of Asia Minor. According to Abu l-Fida', Christians and Muslims in Malatya in those days lived on the best of terms with one another; the town was the side of the Tatars and informed them of every thing that went on in the country. During his war against the Tatars, Sultan Malik al-Nâsîr in 715 (1315) decided to send a large army under the nâṣib of Damascus, Saif al-Din Tunguz who was joined by his vassal Abu l-Fida' of Hamat, against Malatya. The army went by Halab, Ain'atâb, Hissân Masûr and Zibatra to Malatya and encamped before the town on April 28. The inhabitants sent their lâkim Djamâl al-Din al-Khîdr, whose father and grandfather had filled the same office in their time, through the south gate, Bâb al-Khâtî, to Tunguz, who was willing to afford them protection and security, if they surrendered the town. But he was unwilling to let the soldiers could not be restrained from plundering and ravaging in the town. Among the prisoners was the Tarâb Ibn Kerbâghâ and the nårîl of Hissân Arkanâ, Shâhîd Minârû. The greater part of the town was finally burned down (Abu l-Fida', Annales Musulm., ed. Reiske, v. 286—92; ed. Stambul 1286, iv. 77 sq.; transl. also in Rec. hist. or., creis., i. 180; Wel, Gesch. d. Chalif., iii. 310 sq.). The Sultan made the territory of Malatya a separate frontier province, which included seven districts (Khâlîl al-Khîdr, Zâbdat, ed. Ravaisse, p. 52). There were seven citadels around the town: Mûshar or Mînshret, Kûni, Kârahâshîr, Kaddarî, Kâlîf al-Aqâdia, Kâlîf al-Nawhamûs (?) and Kâlîf al-Akrîd (Khâlîl, op. cit.; Gaudefroy-Demombynes, Le Syrie à l'Époque des Mamelouks, p. 97, i. 105).

Malatya for the next few decades belonged to the Mamlûk Sûlûns. As their remotest province, it was with Halab in 791 (1289) the scene of a great rebellion led by the governors Minsharî and Yelbogîhâ against Barkîq [q. v.]. About this time the Turkish family of the Dhû l-Kadrogîhâ [q. v.] began to rise to power in the region of Malatya and Albitân where they ruled till 1515 under Egyptian suzerainty. About 794 (1391/2) Hayyân I conquered the town and in 1400/1 Timur. By the battle of Kök Hüşür (1516) it fell into the hands of Selim I, who destroyed the Dhû l-Kadrogîhâ. This was the cause of his wars against Egypt, which was rapidly decided on the field of Mardj Dabiq. At a later date the eyalet to which the Sandjak of Malatya belonged was still called Dhû l-Kadrogîhâ; Malatya now forms a sandjak of the vilâyet of Ma'mûret al-Azîz (Khârîfît).

The town in 1383 was the headquarters of the Sereşker Hasan Pasha, with whom Molîke was attached. It is said to have suffered much at the hands of the troops quartered there for months before the battle of Nizib. After the earthquake of 1393 Malatya was rebuilt on the site of the suburb of Ashûra, one of the older sites now called Eski-Shehr, but the old town continued to be inhabited. It has now about 30,000 inhabitants, including many Armenians, Kurds and Kârîbîsh.

**MALAY PENINSULA** is a name sometimes rather loosely applied to the whole tract of land south of the Isthmus of Kra (Lat. 10° N.); but so far as the Northern part of this tract is concerned the name is a misnomer, the bulk of the population there being Siamese and Chinese, not Malay. Excluding from the total Malay population of Siam [q. v.] as a whole some 50,000 Malays scattered in Ayuthya, Bangkok, Chattabun and the rest of the Eastern shore of the Gulf of Siam, the remaining 350,000 are in Southern Siam and mainly in the parts South of Kra. But it is not till about 1 lat. 7° N. that one meets with districts where the majority of the inhabitants are Malays, viz. on the West coast of Peninsula and on the East coast the province of Patani (formerly an important Malay state, finally conquered by Siam in 1832). Of the approximate total population of 370,000 in these three districts the greater part consists of Malays. The Southern boundary of Siam, running irregularly between 6° 45' and 5° 45' N., separates them from the rest of the Peninsula, which is attached to the British Empire and with which we are here concerned. The area of this latter portion is about 52,500 English square miles.

The geological structure of the Peninsula includes calcareous rocks and limestone, schists, slates, quartzite, volcanic rocks, granite, alluvial deposits, and the ferruginous substance known as laterite. The most important minerals are tin and tungsten. The former has been exported for more
than a thousand years and is still a very important product.

Until about fifty years ago the rivers, though mostly small and only navigable for small craft, were the chief and almost the sole means of access to the interior, which was then an almost trackless forest of luxuriant vegetation, traversed by a number of mountain ranges, some running roughly north and south, others transversely or irregularly. A few of the highest points exceed 7,000 feet (roughly 2,100 metres). At sea-level the average temperature is about 82°F. (about 27°C) with a daily and annual variation of not more than about 10°F. (about 4.5°C) in each direction; the annual rainfall varies locally from about 60 inches (about 150 cm.) to four times that amount. The N.E. and S.W. monsoons prevail, but are subject to periods of slight or variable wind. The climatic conditions are therefore very favourable to the main staples of native agriculture, viz.: rice, coconuts and miscellaneous local fruits; to these, foreigners have added the cultivation of other products, such as tapioca and coffee (now almost abandoned) and especially Para rubber, in the cultivation of which the Peninsula has led the way. The economic development of the Peninsula may be said to date from the institution of the Residency system in three of the Western states in 1874, which led progressively to the making of a network of excellent roads and a State railway system now comprising a trunk line from Singapore to the western part of the boundary with Suma, where it links with the Siamese system, and a number of branches, one of which turning northward through the centre of the Peninsula is destined to join the same railway at a point near the eastern end of the frontier.

From the administrative point of view, the British portion of the Peninsula falls into: 1. the British colony styled the Straits Settlements (which is an abbreviation of "British Settlements in the Straits of Malacca"), comprising the three "settlements" or divisions of Singapore, Penang and Malacca: 2. the Federated Malay States, viz. Perak, Selangor, Negri Sembilan, on the West coast and Pahang on the East coast, which are united in an administrative union under a Chief Secretary to Government at Kuala Lumpur (in Selangor) and 3. the Unfederated Malay States, viz. in the extreme North and on the West coast, Perlis and Kedah, and on the East coast, Kelantan and Trengganu, and in the extreme South Johore, Administratively the Island of Labuan off the coast of North Borneo, and the Celebes-Keeling Islands and Christmas Island to the South-West of Java form part of the "settlements" of Singapore; and the State of Brunei (Brunei) in Borneo is an unfederated Malay State ranking with those of the Peninsula.

The Colony has the usual administrative machinery, consisting of a Governor (who is also the High Commissioner for the Malay States), together with executive and legislative councils, and a Court of Final Appeal. Each of the Malay States has a Malay ruler, who usually bears the title of Sultan, and also a British official, styled in the Federated Malay States the British Resident and in the unfederated ones British Advisor or General Advisor, and a State Council. For the Federated States there is in addition a Federal Council and a Judicial Commission. In these states the chief administrative departments are federalized under federal heads, and in one or two cases (such as Education) are linked up with the corresponding department in the Colony. Both the Colony and the States are divided into administrative districts, and the officials in charge of such districts in the Colony and Federated States are mainly Europeans. The same applies to the heads of the principal departments of Government. Many of their assistants are also European. In the unfederated States the administrative machinery is not so Incorporated: the proportion of Europeans is smaller. Government schools have been established in the principal villages and give elementary instruction exclusively through the medium of Malay. In towns there are also higher schools, supported but not founded or managed, by Government, which give instruction through the medium of English. The college at Kuala Kangsar, which is bilingual, is mainly for the sons of Malay rajas and chiefs though others are admitted. Female education has developed more slowly but is gaining ground.

The ancient history of the Peninsula is obscure. Palaeolithic and neolithic implements have been found in various places. The population of the Peninsula amounted in 1921 to about one per cent. of the total population, comprise in the extreme North a few thousand woolly-haired Negritos, generally termed Siames, in the centre a much larger number of wavy-haired light brown people known as Sakai, and in the South mostly straight-haired people of the Indonesian type, often referred to as Jakun. The first two groups and a portion of the third speak languages containing a strong Mon-Khmer element, the remaining Jakun speak Malay dialects with some alien admixture. From about the 17th century A.D. Sanskrit inscriptions on stone found in Kedah and Province Wellesley (opposite Penang) attest the presence of Buddhists using a South Indian script. An inscription of 775 originally set up at Ligur (Nakhon Sri Dhammaraj) about Lat. 8° N. indicates that before that date certain points on the isthmus were held by the Saliendra kings of Sri Vijaya (Palembang in Southern Sumatra), who controlled the trade route through the Straits and across the isthmus probably till near the end of the 12th century. It would appear from a notice in the History of the Liang dynasty of China (502-556 A.D.), Book 54, that this isthmus had formerly been controlled by the state of Fuman, which centred round the mouths and lower course of the Mekong river. An inscription found at Chaiya (Jaya, near Lat. 10° N.) and probably dated 1783 gives the king who presumably set it up a princely title which points to the Malay region of Southern Sumatra, adjoining Sri Vijaya to the North-West. Another inscription of Chaiya dated 1230 was set up by the local king Candrabahnu who according to the Mahavamsa and other sources raided Ceylon on two occasions (probably about 1235 and 1250) with his "Javakar" (i.e. Malay) forces.

It is plain, therefore, that between the eighth and the ninth centuries the settlement of the Peninsula by Malays from Sumatra had been going on. A few years later, but before 1280, the Siamese from Sukhothai (Sukhodhata) put an end to Malay rule in Ligur, thus beginning the extension of Siamese influence to the southward. In the Javanese poem Nagarakretagama (1365) a
number of places on both coasts, from Kedah and Sai (in the old Patani state) in the North to Singapore [q.v.] in the South are claimed as vassals of the Javanese empire of Majapahit. In the same century, but at a date which cannot be precisely fixed owing to the fragmentary condition of the record, the earliest Malay inscription in the Arabic character as yet discovered makes it plain that Islam had recently become the state religion of Trêngganu. In the xvi\textsuperscript{th} century Islam was being spread in the Peninsula under the influence of the most important state, Malacca [q.v.]; and after its fall in 1511 at the hands of the Portuguese its dynasty continued to rule in the extreme South (Johor) and neighbouring islands, while another branch held Perak, and Perak eventually came into the hands of a family claiming to descend from the senior line of the same stock. In or before the xvi\textsuperscript{th} century an immigration of Minangkabau settlers from Sumatra founded a number of small states inland of Malacca, which all eventually admitted the suzerainty of Johor, save the southernmost, Nanning, which was in theory at any rate a subordinate ally of the Peninsula. In the early 18\textsuperscript{th} century the Chinese raided Kedah, Perak, Johor, etc., and for a number of years exercised some sort of suzerainty over Perak. Meanwhile the Northern states came intermittently under Siamese influence, which varied with the strength of that power but retained the character of an external suzerainty till Kedah in 1821 and Patani in 1832 (this last finally) were conquered by Siam.

The Dutch tenure of Malacca (1641–1795), while it controlled to some extent the external trade of the Malay states, did not interfere with their internal affairs. In the eighteenth century Bugis adventurers settled in the Klau-Lingga Archipelago and made their influence felt on the mainland, ultimately establishing the new state of Selangor under a still ruling Bugis dynasty. British influence dates from the founding of Penang (1786), which was followed by a temporary occupation of Malacca (1795–1818), its final cession in 1824, the founding of Singapore (1819), and the incorporation of all three settlements in one government (1826), which in 1867 was transferred from the control of India to that of the Colonial Office. The policy of non-interference with the Malay states was maintained until long continued disturbances in Perak, Selangor, and Sungai Ujong (part of Negri Sembilan), due to Malay dynastic quarrels and civil war between unruly gangs of Chinese tin-miners, coupled with an increase of piracy in the Straits, led in 1874 to the inauguration of the Resident System. This ultimately developed into the present system whereby since 1895 Perak, Selangor, Negri Sembilan and Pahang form a federation administered under the direction of British officials. Perlis, Kedah, Trengganu and Patani were ceded by Siam in 1909 in return for certain concessions, one of which was the abolition of the extra-territorial privileges of British subjects.

The population in 1921 of the part of the Peninsula and adjacent islands under British administration was about 1,325,000, nearly half being immigrants, mainly Chinese, and to a less extent Indians, among whom males predominated very considerably. The great bulk of the native-born population consisted of Malays, and the total number of Malays, properly so-called (including, however, something like 100,000 persons of Minangkabau descent in Negri Sembilan and Malacca) numbered 1,418,198. The other Muslim Indonesians amounted to 171,315 (including 112,775 Javanese. 37,848 Banjarese, 9,772 Boyanese, 8,388 Bugis, 727 Achinese, 850 Korinchi, and 946 Mendeling). The 47,465 non-Indonesian Muslims comprised 41,337 Indians, 4,315 Arabs, 1,800 Chinese, and a few Persians and Turks; the total Muslim population was 1,636,978, the great majority being Sunnis of the school of Sh\textsuperscript{a}fi. Of the non-Muslim population roughly three-quarters were Chinese and about one-quarter Indians but there were also 32,448 so-called aborigines of the Peninsula (a few of whom may, however, have been converts to Islam), 18,178 Siamese, 14,583 Europeans (mostly British, but including Continental Europeans and Americans of European descent), 12,629 Eurasians, 6,989 Japanese, and 2,215 Sinhalese, besides several smaller communities.

MALAYS. People. In this article only the Islamic features of the Malay nation will be dealt with, so neither ethnographical nor anthropological questions will be discussed. It may be sufficient to say that the Malays originally — we do not venture to say: as autochthons — were established in the middle part of Sumatra, especially in Palembang, and spread over the eastern and northern part of that huge island, and settled in the Straits, mainly in Malacca [see MALAY PENINSULA], and founded colonies in Bornoe, along the great rivers, and elsewhere eastward. They belong to the widely dispersed Polynesian (or Indonesian) race, whose languages extend from Madagascar to the Philippines and from the peninsula of the utmost S.E. point of Asia to the remoter islands of Micronesia and Melanesia in the Pacific. The Malay chronicles, for the greater part mythical, and a few epigraphical data, make it clear that there was a highly cultivated Hinduised Malay kingdom in Palumbang, the seafaring people of which went over to several adjacent and more distant countries; it was along the way of commerce that they carried the Malay language to sundry ports and lands. It is not exactly known in what century Islam swept away Hinduism, but it is a fact that the new religion on its arrival in the Straits found Malay people settled in the Peninsula and the Malay language introduced there as the generally adopted speech of commerce and political intercourse.
Language. It is due to Islam that Malay, being already a language enriched with many Sanskrit words, became an idiom of very mixed lexicographical character. The Islamic current brought words of Tamil origin, innumerable Arabic words, some of them in Delicised or Persian-like garb, many Persian words, some of them with Indian characteristics, and a small quantity of Hindustani vocables. In that heterogeneous form Malay became the vehicular language of the new religion. Undoubtedly it had found its way already to the most visited ports in the Archipelago in a simplified form fit for intercourse with all kinds of natives and foreign merchants, later also with European, namely Portuguese and Dutch captains and ambassadors. It was Islam that gave Malay a literary character, and when it had established itself as a medium into which innumerable Arabic books were translated, its form became crystallised and its orthography was fixed systematically. That uniformity made it the appropriate language for literary and liturgical purposes and also a kawi for dogmatists and mysticism, as well as romantic and historical literature. It has to be borne in mind that there is a great difference between the patois or langacce heard in most of the sea-ports, and the cultivated literary language, which became highly developed in Malacca, once the seat of a Muhammadan court and a royal library. When Arabic and Indian learned men came to Acheh, they discussed theological questions in Malay and even wrote books in that language. The literary form is sustained uniformly to the present day, literary products being written in archaistic formulae, and the colloquial style being used in different parts of the Archipelago, the purest in Johore and Malaya in general and the East-coast-districts of Sumatra; the latter being pure in Java and more eastern islands. In the Moluccas, especially in Ambon (Amboyn), the preaching of Christianity availed itself of Malay; in those islands this language has therefore assumed an individual character. As to its linguistic character, it may suffice to notice that Malay, like all Polynesian languages, belongs to the agglutinative type, declension not existing, conjugation being limited within narrow bounds, and amplification of the mainly disyllabic stems with a quantity of prexes, infixes and suffixes giving opportunity of forming words for almost all grammatical and logical relations. There are some traces of the influence of Arabic grammar on Malay syntax, but on the whole the Muhammadan current has not essentially altered the character of the language; it has only enriched it with an enormous number of words, and given to its written literature an individual Islamic character.

Literature. Of pre-Islamic literature nothing is known A far as may be concluded from a few old mss. in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, written in Arabic lettering only. The oldest manuscripts are preserved in the Cambridge and Oxford libraries, they date from the last years of the xvth and the first decades of the xvith century. The only literary-historical evidence of the exisence of written literature in the xvith century is the mention, in a xvith century chronicle, of the use made of a royal library in Malacca at the time when the Portuguese endeavoured to capture that town (1511). Malay literature, as it presents itself now, is only for a very small part original. Hardy any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian, but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases, and ladeen with Islamic theory. There are, it is true, some indigenous farcical tales, and some fables, especially the sometime highly appreciated mouse-deer-tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islamic influence, but the very fact that all these books are written in Arabic characters makes them overfull with Arabic words, and in that way shows that they belong to Islamic mentality. In this short account there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features, will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic correction. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamised. To that class of works the chronicle Syarik Murb, and other tales, as the chronicles of Kutawaringin, Kutsa, Acheh and Pasai are to be reckoned, no partly historical, but for the greater part fictitious, romance is the Hibayat Hang Tuah. A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East-Indian World; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leyden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the Hiwarada-collection, another one to the Tuti-nama-series, a third one to the Bakhithar cyclce. By way of exception foreign authors have written in Malay; e.g. the Radjput Nur al-Din al-Raniri [q.v.], who wrote a great encyclopaedic chronicle at the instigation of an Achehnese queen. A very great number of texts deals with the old prophets, the Prophet Muhammad, his family and friends. Those works, like e.g. the romances of Amir Hamza and Muhammad b. al-Hanafiya, have Persian originals. The purely religious books cannot be regarded as Malay literature.

Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the pantun, i.e. popular quatrains, whose first two lines deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the 3rd and 4th lines, that contain the real meaning of the usually erotic poem. The other "genre" is the shair, its form is the stanza of four rhyming lines. Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances; moreover historical events, love-scenes, religious matters, mystical speculations etc. are dealt with in innumerable shairs, the titles of which may be seen in the following catalogues: Leyden Univ. Library, by H. H. Juyboll; Supplement thereto by Ph. S. van Ronkel; Batavia, the Hague and Brussels by the same; London (R.A.S.) and ibidem E. I. H. (India Office Library) by H. N. van der Tuuk.
MALAYSIA — MALÄZGERD

MALÄZGERD, district (Kağız) and town in Armenia, to the North of the lake of Wan. Of the name, there occur, in old-Armenian, the forms Manavazkert, Manavazkert and Manazkert. The middle-Armenian and Byzantine forms, Mandzgerd and Manavgüpert resp. as well as the Arabic form Manakard, belong to the same root as the original form, Manavazakert representing a popular etymological formation, from the name of the noble family of the Manavazen's, which, in old times, resided in the district. For it is phonetically impossible, that an old-Armenian form Manavazakert should regularly becomes Manazkert. This is the theory of Hubbschmann, who admits however the possibility, that an earlier Manavazakert may have been arbitrarily shortened in pronunciation, so as to become Manazkert, the word being otherwise too long. Welt Belcek has conjectured, that in the first part of the word, there may be hidden the name of the Urartæic (pre-Aramaic) word *Manaz* or *Manavaz*-kert. This conjecture is based on the fact, that an inscription of Menuas it appears, that this king founded a city, which was called Menaza('ina (== Menas-town); thus it would, according to Belcek, be very probable, that Malazgerd, in whose environs there have been found many inscriptions of Menuas, was this very town, named after him. If such be the case, then the old-Armenian form Manazkert must have originated from a later, popular etymology. From the fact, that names of towns formed with -kert (== -kar(t)a) seem to have originated not before the Parthian epoch, as Houbenschmann observes, it would follow, that the memory of the old king Menaza, or *Manaz* was still alive in late Parthian times. This difficulty, however, is not insoluble, for it seems, that the name of another Urartæic king of Wan may also survive in classical Armenian quasi-historical tradition as Aram.

The oldest and best Arabic spelling of the name of the town is Manadžor, with n; the forms with f are later, and on them is based the modern name (Malazgerd). The spelling with n we find e.g. in al-Iṣṭakhrī; Yāṣūṭ; the author edited by Houtsma in Rec. des textes reli. à l'hist. des Selçoukides, ii.; al-Nasawi (ed. Houdas); in a varia lectio of the text of the Rāḥūṭ al-Siddî (c.M.S., New Series, i. 119); and in the text quoted by al-Maqrīzī, pp. 576. The spelling with f, common in later texts, occurs, among others, in al-Mukaddasi; Ibn al-Athir; the Rāḥūṭ al-Siddî (the reading adopted by the editor); Dhuwain, and the Nuzhat al-Kiflîb. The terminations -gird and -kird also alternate in the spelling; this variation is already noted by Yāṣūṭ (Mīḍyam, iv. 648). As regards the form Manazav, cited by Marquardt (Einschr. p. 162) from Thomas Arruri, cf. Houbenschmann, Die alt-armenischen Ortnamen (in Idg. Forschungen, xvi.), p. 450.

For the year 1298 the number of inhabitants of the district Malazgerd is given as 21,000, viz. 12,000 Kurds, and the rest Armenians. The district belonged to the vilayet Bûlûs, sandjak Mûsh. In this hilly country, the highest elevation is the Sipan-Dagh (3,000 m.); perhaps the same mount as the Sengi Safid, which is, according to Yāṣūṭ (Mīḍyam, iii. 168), a mountain in these regions. The soil of the district is fertile; its main products are wheat, barley, mellet, lentils and peas, which are also exported, as are also sheep and horses, e.g. to Diyarbekr. The region of Malazgerd produces also salt and mineral stone, which becomes hard when brought to the day light. Its wild animals are the wolf, the fox and the stone-marten, which is hunted for its fur. Textiles are manufactured in and exported from the district.

The town of Malazgerd is situated on a tributary of the Murd Şu, called the Tuzl Şu; Hâddûji Khâlif (Zîkîn-numa, p. 426) reckons 2 marhafta between Malazgerd and Erzerum. The town lies, moreover, on the way from Siwâs to Arslâch, and also at the crossing of the two different ways, which connect Mûsh and Bayazed. The city it surrounded by a high wall and towers; at the East of the town there is the citadel, built from black volcanic stone. In the 16th (xviith) century, Malazgerd had a triple wall, and it was well furnished with drinking water from within (Cedrenus, ed. Bonn, ii. 590). More than one fruitless siege of this place is recorded in its history.

Belcek supposes, that the well-known battle between the Assyrian king Tigrathpîlesar I against the allied Nuri-kings took place in the plain of Malazgerd (Z.D.M.G., li. 510). If, at that remote time, the town of Malazgerd existed already, is not certain. That it existed in the time of the Urartæic kingdom Menuas, who, as Belcek thinks, gave his name to the town, is made probable by an inscription of that prince, from which it would appear, that he rebuilt an older citadel and an older palace on that place. The environs of the modern city of Malazgerd are remarkably rich in cuneiform inscriptions, which were discovered by Lehmann and Belcek during their stay there. They found an Assyrian inscription of Tigrathpîlesar I and several Urartæic inscriptions, among others, of Menuas (= 800 b. c.) and Arдейtis ii (114—ca. 690 b. c.). It appears from these documents, that Menuas devoted great attention to the irrigation of the land, by constructing several canals.

In the early Middle-ages, the town of Malazgerd (Manazkert), lying on the confines of the cantons Harkh and Apahunik, was sometimes assigned to the former, sometimes to the latter. That in old-Armenian times here resided the family of the Menuasen's, has already been remarked. For these matters, and also for the quotations from Byzantine and Armenian authorities regarding them, cf. Houbenschmann, Die alt-armenischen Ortnamen, p. 325, 330, 449 sq.

Malazgerd belonged, since the beginning of their dynasty, to the realm of the Bagratides of Armenia, who allowed it to be ruled, as well as Khilâj, Ardiq and *Perkri* (= Bergêri), by a family of their vassals. This family, whose members bear Arabic names, became in course of time independent of the Armenian kings, but, on the other hand, was obliged to pay tribute to the emperor of Byzantium (Constantinus Porphyrogennetus, De admin. imp., ed. Bonn, p. 192 sq.).

Yāṣūṭ says, that the inhabitants of Malazgerd are Armenian and Byzantines (*Kûnis*); a native of this town was *Abû Nâṣr al-Manâzî (this, therefore, is the nîsha of the name), who was wazir to one of the Marwanid princes of Diyarbekr. This Abî
Nasir died 437 (1045–1046) and, according to our authority, was a good poet; Yâqût cites two fragments from his poems (Ma'dâ'ir, iv. 648 sq.). Regarding another al-Manûzî, cf. J. R. A. S., 1902, p. 788, note 1.

Among political events connected with the town of Malazgird, it may be noted that, on the occasion of the campaign, which the great Hamdanid Saffar al-Dawla undertook into Armenia (328 = 940), there is mentioned one Abû al-Hamad, prince (al-khâlîq) of Malazgird and Shirawsh (Sewerik) (J. R. A. S., 1902, p. 779); the name Abû al-Hamad occurs among the princes of Malazgird; it is also recorded by Constantinus Porphyrogenetus, and this contemporary of Saffar al-Dawla doubtless belonged to that family. But he cannot be the Abû al-Hamad of the Greek text, who, from a chronological point of view, must have lived two generations earlier (cf. the genealogical table of the dynasts of Malazgird in Bardians und Aristokratien in Cent. Perlh. Ist. de Administra. Imp., in the Bonn edition of Constantinus, iii. 372). In 553 (964) a certain Nadâj, a ghaflum of Saffar al-Dawla, revolted against his master, after taking possession of that part of Armenia, which was left to him by one Abu'l-Ward. The latter was slain, and, among the places conquered by Nadâj, Malazgird also is cited (Ibn al-Athir, ed. Torbergh, viii. 408): in the year 559 (969–970) Malazgird was taken by the Byzantines (ibid., viii. 445); they must have lost it again before 582 (992–993), for in that year they besieged not only Akhlat and Ardijah, but also Malazgird, but this time they could not take it, but returned home after concluding a treaty for ten years with Abû 'Ali al-Hasan b. Marwân (ibid., ix. 67). In 450 (1058–1059) it must have belonged to the Byzantines, for the gazelle, which Ibrahim Topkûr Beg's brother, undertook into the Byzantine empire, affected also the territory of Malazgird (ibid., i. 372). And it is explicitly stated by Ibn al-Athir (iv. 411), under the year 446 (1054–1055), that Malazgird was in possession of the Byzantines, for there he relates, that this strong city resisted a siege by Topkûr Beg himself (cf. also Cedemenus, ed. Bonn, ii. 590 etc.). The most important historical event, with which the name of the town is connected, is the battle of Malazgird (463 = 1071) between Alp Arslân and the Byzantine emperor Romanus Diogenes, in consequence of which the eastern part of Asht Amûn, viz. Armenia and Cappadocia, was lost for ever to the Greek empire (Ibn al-Athir, iv. 44; Köch, dt. Texte i. 1. Selbst des Normannens, Herrschaft, ii. 39 sq. etc.; Köch al-Nadîm, G. M. S. New Series, ii., p. 119; Zanaras, ed. Dem-ı Rûfû, iv. 213 etc.; cf. also H. Geiger in K. Krumbacher's Geschichte der byzantinischen Literatur, p. 1010. After this event, therefore, Malazgird passed into the possession of the Bulgars. In 553 (1157) it was given by king Malik-shah, along with Erzerum and part of the territory of Akhlat, to his brother Sulâjî, as a kâtîf (Kev. d't. text., ed. Houtman, ii. 183).

In course of time, the city was besieged in vain (557 = 1161) by Taki al-Imâm Marâr b. Arîb. In 601 (1204–1205) it was occupied by the Crusaders, who came from the direction of Akhlat-Kisla (Ibn al-Athir, xii. 41, 154). During the disturbances, of which Armenia was the scene in the beginning of the sixteenth century, mention is several times made of Malazgird. In 603 (1206–1207), a former mansûh of the Shâh Arman took possession of Malazgird, and, after that, also of Akhlat. He had, in addition, control of Ardijah and other places. This man, whose name was Ballân (the vocalisation of the first syllable is uncertain), was assisted by the prince of Erzerum, Mughâb al-Dîn Topkûr Shâh b. Khâlid Arslân, against al-Malik al-Awdâd, son of al-Malik al-Ádîl of Egypt. Later on, Ballân was murdered by his ally of Erzerum, who tried to enter Akhlat and Malazgird, but in vain, so that he was obliged to return to his own states (Ibn al-Athir, xii. 168 sq.); in 618 (1220) he came to the court of Malazgird and was granted the title of Khârîzâmshah 'Alâî al-Dîn Muhammad occupied Malazgird, as he intended to attack Hûsâm al-Dîn 'Ali, the newwâb of al-Malik al-Áshraf, in Akhlat. But, since his attempt on this town did not succeed, and as the winter also set in (he had entered Malazgird on Dhu 'l-Ka'da 13, November 5, 623), and the Turkomans invaded his own realm, he was obliged to retire (Ibn al-Athir, xii. 301). In 626 (1229) however he succeeded in taking Akhlat, after which he besieged Malazgird, first in person, afterwards leaving one of his generals in charge of the siege, but on this occasion without success (al-Nasawi, ed. O. Houdas, text, p. 205, 208; translation, p. 342, 344, 347).

(V. F. Büchner)

MALDA (properly, Maldah or Malda), a district in Eastern Bengal, and in the Radjâshâh Division of the Presidency of Bengal. Area 1,899 sq. m. Pop. in 1901, 1,004,159, of whom 465,521 were Hindus, and 505,596 Muslims. In old times it was famous for its two capitals of Gaur [q.v.] or Lakhnauti, and Pandua, where there are many ruins of the mosques and other buildings of the Muhammadan kings of Bengal.

(H. Beveridge)

MALDIVE ISLANDS, a group of coral islets in the Indian Ocean, lying between 7° 6' N. and 0° 42' S. lat., and 72° and 74° E. long., and consisting of seventeen atolls with a great number of islands, of which about 300 are inhabited, the population being estimated at 70,000. The Mournish traveller, Ibn Battûta, lived for more
than a year (1543–1544) in the islands, but the first Europeans to visit them were the Portuguese, who established a factory in them in 1518. The Maldives were much harassed by Māppilla (Mophia) pirates from the Malabar Coast and in 1645 the king, who is entitled Sūliūn of the Thousand Isles, placed himself under the protection of the Dutch in Ceylon, with which island the Maldives have, since that time, been politically connected. The natives are Muslims and fall into three ethnographic divisions, (1) the northern, with a strong admixture of Dravidian blood from India, (2) the central, under the immediate rule of the Sultan who resides in Male, which has acquired from Arab traders and settlers a strain of Semitic blood, and (3) the natives of the southern clusters, who have had little communication with the central group, and preserve more of the primitive type, resembling the Sinhalese villagers of Ceylon. All are peaceful, intelligent and industrious, growing their own crops and weaving their own cloth and mats. The chief exports are copra, coir, and dried fish products. The language is a dialect of the Sinhalese, somewhat Muhammadanized, but many read Arabic more or less fluently.

(T. W. HAIG)

MALAHANA. [See MAŁAHI.]

MALI, a town, which no longer exists, the old capital of the Mandingo empire, in the western Sudan, also called Mali, Malî, Melli, Melle, Mani or Mané. All these names are dialectic or local variants of the same word which is the name of the country of origin of a people whom the French call Malinké, following the Pab and Tuculors, and the English “Mandingo”, following the form used by one section of this people on the Lower Gambia.

The name found in the Arab authors for this town was not the one used by the inhabitants themselves and the latter is not given us by the geographer Idrisi, nor the historian Ibn Khaldun, nor the traveller Ibn Baṭṭūṭa, nor Leo Africanus. It was only in 1913 that the translation of an Arabic manuscript not long before discovered in the Sudan, the Tārīkh al-Fattāḥ, enabled us to learn that in reality there were two successive capitals of the Mandingo empire or of Mali: the older was called Djarraba or Djirrha and there was later another called Niani.

Recent researches in the valley of the Niger have enabled the sites of these two towns to be discovered. The first was situated at the junction of the Niger and the Sankaran, and at the place called Mani or Mali Tombo, i.e. ruins of Mali. There are still traces of a very ancient and important town, which the natives regard, according to their traditions, as the ancient residence of their former sovereigns and the place where the latter are buried.

As to the second town, a抄ist’s error in the text of Ibn Khaldun concealed the true name till the publication of the Tārīkh al-Fattāḥ in 1913. It was recently recognised that the capital in question should be located on the left bank of the Sankaran, and at the level of Sigiri, not far from the place where there is still a town of the same name, Niani.

Djerba was no doubt the cradle of the Mandingo dynasty of the Keita of the xvi—xvii century. We have no information about it. We are more accurately informed about Niani. It is supposed to have been founded in 1238 after Sundjata Keita, ruler of the Mandingo, had defeated in 1235 at Kirina the emperor of Su-ṣu, Sumangurur Kante, his rival and enemy. Gongô Mūsā, often wrongly called Kankan Mūsā, was ruling there a century later, when on his return from a pilgrimage to Mecca, he attracted to his court an Arab poet named al-Sâlihî who belonged to a Granada family. By orders of Gongô Mūsā, this foreigner built in Gao a mosque with battlemented terrace and pyramidal minaret. According to tradition, this was the first building of the type, now so widely spread in the western Sudan, the origin of which is North African.

In 1532–53 in the reign of Sulaimān Keita, brother of Gongô Mūsā, the Arab traveller Ibn Baṭṭūṭa visited the town. It was then a completely Muslim metropolis, in which lived Egyptian and Moroccan legal authorities, students of Islam, readers of the Qur’ān in the mosques, and merchants. No description of the different quarters of the town has come down to us but we have a fairly detailed account of the sovereign’s palace. The ruler gave his audiences in a room looking out on a courtyard, with six windows of wood, three of which were covered with plates of silver and above these three covered with plates of gold. The windows were hidden by curtains, which were lifted to show that the hour of audience had come.

The empire of Mali retained its power down to the beginning of the xviii century when its decline began. According to Leo Africanus, who visited the Sudan in the first quarter of the xvii century, the capital Mali or better Niani was inhabited by about 6,000 families who included many arti-sans and traders. Islam was flourishing, the town had still a number of mosques and prosperous schools but it had lost its former glory.

In 1545, Duṭid, brother of the archer of Gao, marched to Niani; the ruler of the Mandingo having succeeded in escaping, Duṭid occupied the town which he plundered for a week before withdrawing, ordering his soldiers to defile the palace of the king with ordure.

In the xvii century the growth of the Bambara kingdoms of Segu and Kaarta contributed to overthrow what was left of the old Mandingo power, the last chiefs of which, leaving Niani, took refuge in Kangaba.

There is no doubt that Niani was visited on several occasions by the Portuguese. We know nothing of the expeditions which set out from there to take their factories in Lower Gambia to the interior; on the other hand, we have notes about the Mandingo capital on the journey made in 1485 of an embassy from Elmina (now the Gold Coast Colony). João de Barros describes it in his Book III of his Asia: “By the route of the fortress of Minas (Elmina) he (John II) also sent an embassy to Māhmūd b. Manzûgul, grandson of Mūsā, king of Songo. This city is one of the most populous of this great country which we usually called
land of the Mandingoos*. Another author, Barth, claims to identify the Songo of the Portuguese historian with the land of the Songhay in the Niger. This is clearly wrong. But is Songo a name applicable to the Mandingo capital? M. Delafosse does not think so; he calls attention to the fact that the country of the Mandingo is still known among the coast peoples of the Gulf of Guinea and in all the Fanti and Ashanti country under the name of Songo, so that among those with whom the Portuguese of Elmina mixed, the word was simply a synonym of Mandingo or Malli.

**Mali ‘Ambar Ḥabashi**, an Abyssinian slave who rose to great power and influence in the Decan. When Ahmadnagar was conquered by prince Dānīyūl in 1585 (n. C.), Mali ‘Ambar and Rādīās Minān, a Decan chief, divided the remaining territories between them. About this period owing to the rebellion of Sulṭān Salīm, the death of Akbar, and the revolt of Sulṭān Ḥusain, ‘Ambar found time to regulate his country and raised large armies, and even dared to seize several of the imperial districts. He introduced a new revenue system into the Decan, perhaps in imitation of Tōdar Mall. When the authority of the emperor Dālāṅgīr was established, he sent several expeditions to the Decan, but ‘Ambar could not be subdued. At last he restored the places taken from the Mughals (May 23) 1620 in *Akhkā* by Rādīās Minān, whom he became attached to and remained loyal to until his death, which occurred in 1625 (1626), in the 50th year of his age. He was buried in Daulatabad [q. v.].

On the news of their landing, al-ʿAdil [q.v.], who was then in Syria, sent troops to Egypt and al-Kāmil endeavoured to defend the land as best he could. The Christians gained the upper hand at first and by the end of Shabān 616 (beg. Nov. 1219), Damietta had fallen into their hands. It took nearly two years for al-Kāmil, who had had homage paid to himself as sultan of Egypt and Syria after the death of his father, to retake the town with the help of the other Ayyūbid, particularly his brother al-Malik al-Muʿazzam; the Christians by this time were tired of fighting and in Rajab 618 (the end of August 1221) they offered to abandon the town if given a free passage. Al-Kāmil, who feared not without reason that they would soon receive reinforcements from Europe, gladly accepted their terms whereupon the Franks left Egypt. But then troubles broke out within the Ayyūbid ranks. When al-Muʿazzam died (end of Dhu l-ʿKhāda 624 = Nov. 1227) al-Kāmil and his brother al-Malik al-Ashraf attacked his son and successor al-Malik al-Nāṣir Dāwūd and finally took Damascus from him (Shában 626 = June/July 1229); al-Kāmil next occupied southern Syria and Palestine and al-Ashraf was recognised as ruler of Damascus until the successor of the Ayyūbids, the Ayyūbīd, was established in Damascus, when their nephew Dāwūd received al-Karkh, al-Shawbak and some other remote fortresses as compensation.

Al-Kāmil had previously entered into negotiations with the Emperor Frederick II and concluded a treaty with him by which he ceded Jerusalem to him with a corridor to Jaffa and the Emperor in return promised to help him against all his enemies. After some time the Ayyūbīds came into conflict with the Saldāq, Kā-Ḥusayn [q.v.] had previously quarrelled with al-Ashraf and sought to bring against him a confederacy of petty Mesopotamian dynasties and under his brother and successor Kā-Ḥusayn [q.v.] it came to open fighting. The successes won by al-Kāmil in this war, however, aroused the jealousy of his relatives and they formed a coalition against him (cf. AYYĀBĪD). Al-Kāmil then set out for Egypt and advanced victoriously as far as Damascus. He succeeded in taking this city also but died very soon afterwards (in Rajab 635 = March 1238). As a ruler he was undoubtedly one of the most distinguished of the Ayyūbīds. He was a brave soldier and a skilful diplomat and rendered lasting services to the development of his country. He devoted special attention to irrigation and in his reign the defenses of the citadel of Cairo were completed. He also took a lively interest in the cause of learning.

**AL-MALIK AL-KĀMIL I.** [See SHABĀN.]

**MALIK SARWAR,** KHWAIDJAH DHIHĀN was a sūnna given by Sāfūr Radjab to his grandson Muhammad, son of Fīris Thughlak, in whose service he rose to be chief sūnna and controller of the elephant stables. He was faithful to his master in all his troubles, and in 1389 received the title of Khwāidjī Dhihān and was made wāzir. Muhammad's son, Mahmūd Shāh, sent him in March, 1394, to govern the eastern provinces, with his headquarters at Djiwānpūr, and conferred on him the title of Malik al-Shārūk, or lord of the east. He took thither with him Kāranfūl, a slave and water-bearer of Fīris Thughlak, whom he had adopted, and his brothers. His administration was most successful and his adopted son Kāranfūl served him loyally. On the disruption of the kingdom of the Thughlak dynasty after Timūr's invasion, Malik Sarwar assumed the title of Sultan al-Shārūk and established his independence in Djiwānpūr. Kāranfūl received the title of Malik al-Shārūk, and his brother Ibrahim was made commander of the fort and city.

Malik Sarwar died in 1400 and was succeeded by Kāranfūl, who ascended the throne of Djiwānpūr under the title of Mahārāk Shāh.

**MALIK b. ANAS,** a Muslim jurist, the imām of the madhhab of the Malikis, which is named after him, and frequently called briefly the imām of Medina.

**I. The Sources for Malik's Biography**

The oldest authority of any length for Malik, Ibn Sa'd's account (d. 250) based on al-Wāqīfī (d. 207) in the sixth class of the Medina "successors," is lost as there is a hiatus in the manuscript of the work, but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in Ṭabarī (iii. 2519 sqq.), in the Kibr āl-Ḥiyān (Frugm. hist. arīb., l. 297 sqq.), in Ibn Khalūkūn and al-Suyūtī (p. 7, 6 sqq., 12 sqq., 41 sqq.), from this it is evident that the brief biographical notes in Ibn Ṭaḥāfa (d. 276) and the somewhat more full ones in the Fihrist (compiled in 777) are based on Ibn Sa'd. The article on Malik in Tabari's (d. 310) Dīwān al-Muḥāsibiyāt is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities. Al-Samām (c. 550) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khalīfan (d. 672) and particularly in al-Nawawī (d. 676) the legendary features are more pronounced although isolated facts of importance are also preserved by them. Al-Suyūtī (d. 911) gives a detailed compilation from Ibn Sa'd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the Mawrid ʿAbū l-Munafīq of al-Faṣāri, the Hīta of Abū Nuʿaim, the Kibr al-Muṣafar wa ʻl-Muṣalaf of al-Ṭabāṭabāʾī and al-Ṭabāṭabāʾī, the Kibr Turīb al-Mudārib of al-Ḥusayn, the Fihrist of Malik of Abu ʿIsān Fihri. The bulk of the latter part is for example that of al-Zawawi, is of no independent value.

**II. Malik's Life**

Malik's full name was Abū ʿAbd Allāh Malik b. Anas b. Malik b. Abī ʿAmr b. ʿAmr b. al-
The date of his birth is not known; the dates given, varying between 90 and 97, are hypotheses which are not usually accepted as being approximately correct. As early as Ibn Sa'd we find the statement that he spent three years in his mother's womb (over two according to Ibn Kathir, p. 290), a legend, the origin of which is a wrong interpretation of an alleged statement by Malik in the possible duration of pregnancy is still evident in the text of Ibn Sa'd. According to a tradition preserved by al-Tirmidhi, Muhammad himself is said to have foretold his coming as well as that of Abu Hanifa and al-Shafi'i. His grandfather and his uncle on the father's side are mentioned by al-Sam'ani as traditionalis, so that there is nothing remarkable in his also being a student. According to the Kitab al-Ahkam, he is said to have first wanted to become a singer, and only exchanged his career for the study of Fiqh on his mother's advice on account of his ugliness (cf. Goldzirher, Mub. Studien, ii. 79, note 2); but such anecdotes are little more than evidence that some one did not particularly admire him. Very little reliable is known about his studies, but the story that he studied Fiqh with the celebrated Rabia b. Farrikh (d. 132 or 133 or 143) who cultivated ra'y in Medina, whence he is called Rabi'a al-Kayy can hardly be an invention, although it is only found in somewhat late sources (cf. Goldzirher, op. cit., p. 80). Later legends increase the number of his teachers to considerable figures: 900, including 300 tawba are mentioned. He is said to have learned fiqh from Nafi' b. Abi Nu'aim. He transmitted traditions from al-Zuhri, Nafi', the Mawalis of Ibn 'Umar, Abu 'l-Zaid, 'Abd al-Malik b. 'Amr, al-Shafi'i, 'Urwah, Yahya b. Sa'd, 'Abd Allah b. Dinar, Muhammad b. al-Munkadhir, Abu 'l-Zubair and others, but the isnaads of course are not sufficient evidence that he studied with the authorities in question; a list of 95 shaykhs is given by al-Suyuti, p. 48 sqq.

A fixed chronological point in his life, most of which he spent in Medina, is his being involved in the rising of the Allah sect in the year 145 in the reign of Muhammad b. 'Abd Allah in 145 (on the other hand the story of Malik's alleged dealings with Ibn Hurmuz in the same year gives the impression of being quite apocryphal). As early as 144 the caliph al-Manṣur sent to the Hasanids of Mecca through him a demand that the two brothers Muhammad b. 'Abd Allah be left alone; the story of being suspected of being pretenders should be handed over to him; this shows that he must have already attained a position of general esteem and one at least not openly hostile to the government: he was even rewarded out of the proceeds of the confiscated property of the captured 'Abd Allah, father of the two brothers above named. This mission met with no success. When Muhammad in 145 by a coup made himself master of Medina, Malik declared in a fatwa that the homage paid to al-Manṣur was binding, because it was given under compulsion, whereupon many who would otherwise had held joined Muhammad. Malik took no active part in the rising but stayed at home. On the failure of the rebellion (147) he was punished by flogging by Qa'far b. Sulaiman, the governor of Medina, when he suffered a dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abu Hanifa's ill-treatment in prison are based on this episode in the life of Malik. He must have later made his peace with the government: in 160 the caliph al-Mahdi consulted him on structural alterations in the Meccan sanctuary, and in the year of his death 179 the caliph al-Rashid visited him on the occasion of his pilgrimage. While this fact may be considered certain, the details in the Kitab al-Muqaddim are already somewhat legendary and in Suyuti, following Abu Nu'aim, quite fantastic. The story of al-Manṣur found as early as Ibn Sa'd, in a parallel version in al-Tabari of al-Mahdi, is quite fictitious and is given again with fantastic detail in al-Suyuti (from Abu Nu'aim) of al-Rashid, that the caliph wanted to make the Mawalta canonical and only abandoned his intention on the representations of Malik.

As early as Ibn Sa'd (certainly going back to al-Wâkiti) we have a fairly full description of Malik's personal appearance, his habits and manner of life, which however cannot claim to be authentic, nor can other sayings attributed to him which became more and more numerous as time went on. The few certain facts about him have been buried under a mass of legends: the most important facts have already been noted and the others will be found in al-Suyuti and al-Zawawi.

On the transmitters of his Mawalata and the earliest members of his madhhab see Sect. iii. and v.; here we will only mention the most important scholars who handled traditions from him. These were 'Abd Allah b. al-Mubarak, al-Awza'i, Ibn Dhiyâ'uddin, Hamadân b. Zaid, al-Lâbiq b. Sa'd, Ibn Salama, al-Shafi'i, Shu'ba, al-Thawri, Ibn 'Umayya, Ibn 'Umar, 'Abd Allah b. Zuhri and Yahya b. Sa'id (al-Suyuti, p. 18 sqq.) gives a long list of transmitters but most of them are not corroborated. We may just mention the apocryphal story of Malik's meeting with the young al-Shafi'i (Faqâm. hist. ar., i. 359; Wustenfeld, Gott. Abh., 1890, p. 34 and 1891, p. 1 sqq.), which is simply an expression of the view that was held of the relation between the two Imams.

III. Malik's Writings

Further sources for his teachings

1. Malik's great work is the Kitâb al-Mawala't, which, if we except the Corpus iuris of Zaid b. 'Ali, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice, ritual and practice of religion according to the ijmâ' of Islam in Medina, according to the sunna usual in Medina and to create a theoretical standard for matters which were not settled from the point of view of ijmâ' and sunna. In a period of recognition and appreciation of the canon law under the early 'Abbâsid, there was a practical interest in pointing out a "smoothed path" (this
is practically what al-muwaqta' means) through the far-reaching differences of opinion even on the most elementary questions. Mālik wished to help this interest on the basis of the practice in the Ḥijāz and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a means; the older jurists are therefore hardly ever quoted except as authorities for Mālik himself. As he was only concerned with the documentation of the sunna and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The Muwatta' thus represents the transition from the simple Ḥijāzi period to the pure science of Ḥadīth of the later period.

Mālik was not alone among his contemporaries in the composition of the Muwatta'; al-Mājdžahīn (d. 164) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the Muwatta' are recorded by several Medina scholars of the same time (cf. Goldziher, op. cit., p. 219 sq.) but nothing of them has survived to us. The success of the Muwatta' is due to the fact that it always takes an average view on disputed points.

In transmitting the Muwatta', Mālik did not make a definitive text, either oral or by muniṣṣaḥ, to be disseminated; on the contrary, the different riwāyāt's (recensions) of his work in places differ very much (cf. Goldziher, op. cit., p. 222). The reason for this, besides the fact that in those days very little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (Goldziher, op. cit., p. 221), lies probably in the fact that Mālik did not always give exactly the same form to the same lectures in different "classes". But the name Muwatta', which certainly goes back to Mālik himself, and is found in all recensions is a guarantee that Mālik wanted to create a "work" in the later sense of the term, although of course the stories which make Mālik talk of his writings reflect the conditions of a later period. In later times the Muwatta' was regarded by many as canonical (cf. Goldziher, op. cit., p. 213, 265 sq.; al-Suyūṭī, p. 47 and numerous legends deal with its origin in al-Suyūṭī, p. 42 sqq.).

Fifteen recensions in all of the Muwatta' are known, only two of which still survive in their entirety, while some five were studied in the sixteenth centuries A.H. in Spain (Goldziher, op. cit., p. 222, note 2 and 4) and twelve were still available to al-Rudānī (d. 1094) (Hefening, Freudenreich, p. 144, note 1):

a. the vulgate of the work transmitted by Yahyā b. Yahyā al-Maṣūmī (d. 234), often printed, e.g. Delhi 1216, 1296 (without iṣnāds, with Hindustāni translation and commentary), 1307, 1308, Cairo 1279-1280 (with the commentary of Māḥmūd b. 'Abd al-Bākī al-Ẓurkānī, d. 1122), Lahore 1889, Thā' al-Dschāfī, p. 1280; numerous commentaries, editions and synopses, cf. Brockelmann, G.A.N., 1: 176. This is called the Muwatta' of Māḥmūd b. 'Abd al-Ḥāfi al-Lakhnawī (Introduction to the edition of the recension b). Lucknow 1297, p. 21 sqq.; al-Suyūṭī, p. 3 and passim (work of al-Fāṭikī). p. 57 (on Ibn 'Abd al-Barr) and p. 58 (chief passage); Goldziher, op. cit., p. 230, note 2; Schacht, Abb. Manuel, 16: 194, 201; 'Abd al-Muwaqta' bi-Riḍāf al-Muwaqta', Delhi 1320 and Muhammad b. Ṭāhir al-Patnī, Madīnā biḥār al-ʿAnwār, Lucknow 1283:

b. the recension of Muhammad b. Ḥasan al-Shirāzī (d. 189) which is also an edition and critical development of Mālik's work, as al-Shirāzī at the end of most chapters gives his own views and that of Abū ʿAbd Allāh al-Ṭabarānī on the questions discussed, sometimes with very full reasonings; often printed e.g. Lahore 1211-1213 (with Hindustāni translation and notes), Ludhiana 1291, 1292, 1293; Lucknow 1297 (with introduction and commentary by Māḥmūd b. Ḥasān al-Ṭabarānī), Kasān 1910 (ibd.); several commentaries; cf. Brockelmann, op. cit.; Schacht, op. cit., N. 2, 2a, 2b; and the works quoted under a.

On the relation of these riwāyāt to one another cf. Goldziher, op. cit., p. 223 sqq.

c. The quotations from the recension of 'Abd Allāh b. Wāhba (d. 197) which are preserved in the two fragments of al-Ṭabarānī's Kitāb ʾiqlīm al-ʾaṣbāb (ed. Kern, Cairo 1902) and Schacht, op. cit., N. 22) are fairly comprehensive; this riwāya follows that of Yahyā b. Yahyā quite closely.

The other recensions of the Muwatta' are given by al-Lakhnawī, op. cit., p. 18 sqq.; further lists of transmitters of the Muwatta' are given in al-Suyūṭī, pp. 48, 51 and in al-Nawawī.

2. Whether Mālik composed other works besides the Muwatta' is doubtful (the statements in the Pihrist, p. 199, 199, 199, transmitted by Ibn Wahb or by 'Abd Allāh b. 'Abd al-Ḥakam al-Miṣrī, a Kitāb al-Manāsik (al-Suyūṭī, p. 40), a Kitāb al-Muḥājfalāt, transmitted by Ibn Wahb (ibid.), a Kitāb al-ʾAdhā, transmitted by 'Abd Allāh b. 'Abd al-Ḥaḍīl (ibid.), p. 41) and a Kitāb ʾi-ʾAtāfūqā, transmitted by Ḥāfīd b. Nazzār and Māḥmūd b. Muṣarrāt (ibid.). The genuineness of all these is, however, uncertain and even if they go back to Mālik's immediate pupils (sometimes they are actually attributed to the latter; cf. al-Lakhnawī, op. cit., p. 19) Mālik's own share in them would be still uncertain. A book (Gotha 1143) said to have been transmitted by 'Abd Allāh b. 'Abd al-Ḥakam al-Miṣrī and heard by him along with Ibn Wahb and Ibn al-Ḵāsim is certainly apocryphal and besides does not pretend to give any utterances of Mālik himself.

Of other titles are mentioned a Tafsīr, a Kitāb ʾi-ʾAnwār in al-ʾAbīd al-ʾĀṣrib, a Kitāb al-Vuqūm and a Kitāb al-Sūr (al-Suyūṭī, p. 40 sqq.) which are in the usual style of the apocryphal literature. The suspicion of falsity is also strong in the case of the Kitāb containing advice to the caliph al-Raḍīd, mentioned as early as the Pihrist alongside of the Muwatta' (printed Bābih 1311; cf. Brockelmann, op. cit.) which look like a Mālik counterpart of the Kitāb al-Aḥbarād of Abū ʿYūsuf; even al-Suyūṭī doubted its genuineness, although for reasons which are not convincing to us.

3. There are two other main sources for Mālik's teaching (setting aside the later accounts of the doctrine of the Mālikī madhhab):

The more important is the al-Mudawwana al-Kabīra of Saḥnūn (d. 240) which contains replies by Ibn ʾĀṣim (d. 191) according to the school of Mālik or according to his own rā'y to questions of Saḥnūn as well as traditions and opinions of
Ibn Wahb (d. 197) (cf. Brockelmann, op. cit., p. 177; Heffenigen, op. cit., p. 144; Krenkow, in the article Sahn"en).

Al-Tabari who in his Kitab Ikhtilaf al-Fikha has preserved fragments of the Musavatta recension of Ibn Wahb (cf. above), also quotes frequently traditions and opinions of Malik in his commentary on the Qur'an on the "legal" verses.

IV. Malik's position in the history of Fikh

Malik represents, in time, a stage in the development of Fikh in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islam has not yet become jurisprudence and, in place, Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the Musavatta is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islam is very clear, not only in the method of putting questions but in the structure of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medina, by no means primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law: it appears in Malik sometimes as sunna "use and wont", sometimes it is concealed under the Medina idjma which he ascertains with great care; broadly speaking this only means that objections on religious grounds have not been raised by anyone against a principle etc. of customary law. The older jurisprudence had another main object: the formation of a system which sets out from principles of a more general character, which aim at the formation of legal conceptions in contrast to the prevailing casuistry and is to some extent rounded off in a codification, if still a loose one, of the whole legal material. While the islamization of the law had been already concluded in its essential principles before Malik, many generations had still to work at its systematisation; therefore Malik's own legal achievement can only have consisted in the development of the formation of the system how his great share in it was cannot be ascertained with certainty from the lack of material for comparison.

The surprising success achieved by the Musavatta of Malik out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author's own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The Musavatta would in this case have to be regarded less as evidence of Malik's individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Malik aimed at (cf. Sect. iii. 1).

The high estimation in which Malik is held in the older sources is justified by his strict criticism of Hadith and not by his activity in the interest of Fikh (al-Tabari, iii. 2484. 2492; al-Sam'ani; al-Nawawi; Goldziher, op. cit., p. 147, 168; do., Zahiriten, p. 230); even this only means that with his hadiths he kept within the later consensus. That al-Shafi'i devoted special attention to him out of all the Medina scholars (cf. his Kitab Ikhtilaf Malik wa l-Shafi'i) is explained by the fact that he was a disciple of his.

As to the style of legal reasoning found in the Musavatta, Hadith is not by any means the highest or only court of appeal for Malik; on the one hand he gives the amal, the actual undoubted practice in Medina, the preference over traditions, when these differ (cf. al-Tabari, iii. 2505 sq.) and on the other hand in cases where neither Medina tradition nor Medina idjma existed, he laid down the law independently; in other words he exercises ra'y, and to such an extent that he is occasionally reproached with tar'uruk, agreement with the Ir"a"sid (cf. Goldziher, Mu#ah. Studien, ii. 217; do., Zahiriten, p. 4 sq., 20, note 1). According to a later anti-ra'y legend, he is said to have repented of it on his deathbed (Ibn Khallik\n). It is scarcely to be supposed that he had diverged seriously from his Medina contemporaries in the results of his ra'y.

V. Malik's Pupils

The Malik Madhab

In the strict sense Malik no more formed a school than did Abu Hanifa; evidence of this is found in the oldest names Abu al-Hijaz and Abu al-Ira^ab resp. compared for example with As'hab al-Shafi'i. These names at once indicate the probable origin of the Malik madhab; after a regular Shafi'i school had been formed, which in view of al-Shafi'i's personal achievement, is quite intelligible in the development of Fikh (cf. Bergstrasser, op. cit., p. 76, 80 sq.), it became necessary for the two other great schools of Fikh, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Malik or Abu Hanifa was regarded as head. In the case of Malik the high personal esteem, which he must have enjoyed even in his life-time (cf. Sect. II) no doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Hijaz school or as independent mujadidhs (cf. also Fihrist, p. 199, sq.).

Among Malik's pupils and companions who soon became known as Malikis may be mentioned: Abu Lailah b. Sa'd (d. 161 or 165 or 175), 'Abd al-Rahman b. Al-Kasim (d. 191), 'Abd Allah b. Wahb (d. 197), Mahb. b. Is"a (d. 198), As'hab b. 'Abd al-'Aziz (d. 204), 'Abd al-Malik b. 'Abd al-'Aziz (d. 212), 'Abd Allah b. 'Abd al-Hakam (d. 214), 'Abd Allah al-Ka"nab (d. 221), Isma'il b. 'Uwais (d. 226) and his brother Abu Bakr, Sa"fin (d. 240).

Sa"fin was too late to hear Malik himself; with him the formation of the Malik madhab is already concluded.

Of the later Malik Fikh literature two short compendia attained special fame as text-books: the Ruhul of 'Abd Allah b. Abu Zaid al-Kairaw\ni (d. 366) whom the author of the Fihrist mentions as an important contemporary (p. 201, sq.) and the Mu\t\ac\ha\'tar of Khallil b. Ishak (d. 767); numerous commentaries and editions of both exist and they have also been discussed in Euro-
pean languages (cf. *Bibl*). Their importance has sometimes been exaggerated in Europe; development did not stop with them (cf. Prost, *Zeitschr. f. vergl. Rechtswiss.*, xlii. 422 sqq.; Prost debates an important later jurist in *Islamica*, ii. 470 sqq.). His immediate pupils are not to be regarded as opponents of his; many more than Malik, and the Malikī madhhab is not at all more conservative or traditionalist than the Ḥanafī for example (B. Ducati in *Islamica*, iii. 214 sqq., even endeavours to show that it is the most juridical of the Muslim schools of law).

The Malikī madhhab spread mainly in the west of the Muslim world; after it had succeeded in driving out the madhhab of al-Awāzī and the Zahrī school, it prevailed not only in the Maghrib (Tunis, Algeria, Morocco, including Muslim Spain) but in all the rest of Africa, so far as it has adopted Islam. The Malikī school has many followers in Egypt: in Upper Egypt it occupies about the same position as the Shāfi‘ī in Lower Egypt. This geographical distribution seems to go back to corresponding conditions existing before the formation of the madhhabs. Particularly ardent on the dissemination of Malikī teaching were ʿAbd al-Malik b. Ḥabīb al-Sulamī (d. 230 or 239) and Ismā‘īl b. Ishāq (d. 282; *Fihrīst*, p. 200, 2) but there must also have been earlier scholars for whose time the existence of a regular school is doubtful.

The older Malikīs are given in *Fihrīst*, p. 199 sqq. Of the Malikī *Taḥāfūt*-works there have been printed e.g. al-Dībāqī of Ibn Farḥūn (d. 799) along with the *Taḥāfūt al-Dībāqī* of Ahmad Bāba (d. 1032), Fez 1898 and Nāṣr al-Dībāqī al-Naṭflīz al-Dībāqī of the same Ahmad Bāba, Fez 1317 (cf. Fagnan, in *Peschricht* Coquand, p. 105). On individual Malikī jurists cf. the articles on them. The spread of the Malikīs: Ahmad Paşa Taimūr, *Nayara tariqā bi Ḥadīth al-Malikī al-arba‘a*, Cairo 1344; *Juybunn, Handbuch des islamischen Gesetzes*, p. 28; do., *Handlungs* 2. 3. 212; Ibn Farḥūn, *op. cit.*, p. 17; Bergstrasser, *Z. d. M. G.*, 1914, 410 sq.

(J. Schacht)

MALIK B. ‘AWF, a contemporary of Muḥammad, called al-Naṣrī, to distinguish him from several men of the same circle in his time, and also because he traced his descent through Naṣr b. Mu‘awiyah to the eponymous ancestor of the powerful Ka‘īt tribe of the Banū Ḥazāwīn. We know very little about his history previous to the day of Ḥaṣān [q. v.] to which he owes his dubious fame. We may assume that he early found opportunities to display his personal bravery. He was still enrolled, “but dastardly” (*Agāhān*, xix, 81) — that is, barely out of his first years of adolescence — when he commanded a detachment of the Ḥaẓāwīs in the Fidjar [q. v.] war.

This distinction he perhaps also owed to the consideration which his clan, the Banū Naṣr b. Mu‘awiyah, enjoyed among the Banū Ḥaẓāwī. Allies of the tribe of Thaqīf (*Agāhān*, xii. 46), the Banū Naṣr found themselves in the same position with regard to the latter and the town of Tā‘if as the Al-Ḥāshībīs with respect to the Kurādīs and Mecca. They supplied mercenaries to Tā‘if and were given the task of defending the town and protecting against the depredations of marauders the fine gardens that covered the Thaqīfī territory. Their relations were, as a rule, peaceful and friendly, but occasionally it happened that the anarchical instincts of the Beduins, gaining the upper hand, drove them to encroach on the domain of their allies, the citizens of Tā‘if. This situation enables us to understand how in the struggle that was about to develop against Islam, the Tā‘ifs were ready to march under the banner of a Beduin generalissimo.

In the year 8, Muhammad at the head of a strong force was preparing to attack Mecca. This news disturbed the people who lived on the hills of the Sarāt. They asked themselves, if, once master of Mecca, the Prophet would not be tempted to invade their country. It was then that Malik b. ‘Awf succeeded in combining for their joint defence the majority of the Ka‘īt tribes, settled in the frontiers of Naṣrā and of the Hijāz. The Thaqīfs joined their forces to those of their Ḥaẓāwī allies. The only result was the defeat at Hunain. The commander-in-chief Malik had had the unfortunate idea of bringing the women, children and flocks along with the actual combatants. The whole of this enormous booty fell into the hands of the Muslims.

The defeated side did not distinguish themselves by bravery on the battlefield; the tradition of the Banū Ḥaẓāwī attempts the impossible when it endeavours to hide this failure and save Malik’s reputation. After the debacle, he is said to have bravely sacrificed himself to cover the retreat of his comrades-in-arms. This same tradition attributes
to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Beduin paladins he explains and excuses his flight.

The defeated leader tried to make a stand at 14 miles south of Ṭārif where he had a ʿāshra. What was a ʿāshra? In Medina at the time of the Ḥijrah the name was given to an enclosure commanded by an ʿāshra or tower. Malik had probably only brick walls like the little strongholds in Yemen described by the geographer Maḳdīsī (Alḥṣan al-Taḥfīzīs, ed. de Goeje, p. 84). A century ago, the traveller Maurice Tamiṣier (Voyage en Arabie, Paris 1840, ii. 5) passing through Liya saw there "une forteresse flanquée de tours" intended, as in the days of Malik, to guard the road. In any case, whatever the strength of the little building, Muḥammad easily destroyed it. When Malik learned of the approach of the Muslims, he thought it prudent to seek refuge behind the ramparts of Ṭārif.

In the interval all the booty taken by the Muslim at Ḥudayda had been collected in the camp at Ḫudayda including Malik's family and flocks. To the Ḥudayda deputies sent to negotiate the ransom of the prisōners, Muḥammad said: "If Malik comes to embrace Islam, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Malik, this declaration could not fail to compromise him with the Thaqafis. He rightly recognised that his position in Ṭārif had become untenable. He succeeded in escaping from the town and presented his submission to Muḥammad who fulfilled his promise to the letter. Malik then pronounced the Muḥammadan confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte of the Prophet had extensive connections and was remarkably well acquainted with the Thaqaf region. The Prophet was glad to use him against Ṭārif which he had been unable to take by force. He sent Malik at the head of the Khaṭṭ tribes who had adopted Islam. Malik therefore organised a guerrilla war against his old allies in Thaqif. No caravan could leave Ṭārif without being intercepted by Malik's men. Exhausted by this ceaseless struggle, the Thaqafis decided to sue for terms. Malik then became the representative of the Prophet among the Banū Ḥudaydah and the caliph, Abū Bakr, later confirmed him in the office. He took part in the wars of conquest, and was at the taking of Damascæus and the victory of Kādıya in the Inqār.

MALIK b. NUWAIRA, chief of the Banū ʿAbd al-Ḥafṣ, a considerable clan of the Banū Ḥamāla, who in turn bore a branch of the confederation of the Banū Tamīm [q. v.]. His liberality, magnanimity and especially his courage had earned him a great reputation before the Ḥijrah. His contemporaries said that in the last respect he was without a peer. There was a proverbial saying: ʿāshra tuwaḥ kāḏūr, "a hero no doubt, but not comparable to Malik". His fame, however, was principally from the impression made by his tragic death and from the collection of elegies, which his brother Mutammīm [q. v.] devoted to him.

Along with several otherTamīmīs notables he embraced Islam in the lifetime of Muḥammad. In return the latter appointed him to collect the canonical taxes, yāfārāt, from among of his fellow-tribe-men. By giving him an appointment like this the Prophet hoped to bring him definitely to his side. The death of the Prophet and the incident of the rīḥā [q. v.] served to show the foolishness of this hope. Like most of the nomads, Malik had joined Islam as a political organisation, having clearly made up his mind that he would not be absorbed by it to the extent of sacrificing the independence of his tribe and his own prerogatives.

When the Muslims, or more accurately the Kuraish of Medina gave their parishes for it, Malik refused to recognize the legitimacy of this election which had been carried through without his participation in it. He argued for the strictly personal character of the bāṣīt, as the Beduins interpreted it. He explained himself in verse, for he was also a poet: — "If the thing turns out badly, we shall bring a remedy, crying: — long live the faith of Muḥammad!" He did not stop at this but passing from words to deeds, he divided among the Tamīmīs the taxes which had been collected. An even graver step, he next plundered a caravan which was taking to Medina the contributions of those nomads who had remained loyal.

Then — an eminently Beduīn trait — he celebrated in verse this strange exploit, which was equivalent to a declaration of war. He finally compromized himself completely by joining his cause with that of the prophetess Sadīqah [q. v.].

In Medina, Abū Bakr had at first to shut his eyes to these things. But as soon as he felt himself master of the situation, he decided to act vigorously. Khaṭṭ b. al-Walīd was sent against the secessionists. His orders were to spare only those who declared themselves Muslims. The individualism of the Beduins singularly facilitated the task. He attacked separately the tribes, who were divided or hesitating, and succeeded without difficulty in debasing the rebels in small sections.

Thus he came to the Banū Tamīm. The chiefs were suspicious of one another and declined to combine for joint action. Surprised by Khaṭṭ and finding himself almost alone, Malik had to refrain from the fighting forces so markedly superior to his. He surrendered on an assurance that his life would be spared and finally declared a Muslim. The prisoners including Malik were new enemies, executed with refinements of cruelty. It was said there had been some misunderstanding of Khaṭṭ's orders for which dialectic differences were to blame: so say those authors who feel the need of exculpating Khaṭṭ. It was by no means the first act of the kind of the impetuous Makhdūm. Did he want to get rid of a rival or deal the last blow to a rebellion by sacrificing, even against the laws of nations and his own orders, a person so highly esteemed as the chief of the Banū ʿAbd al-Hafṣ? As he had been anxious to marry Laila, the vivacious wife of Malik, he was credited with the first aim. 'Omar demanded that the
Malik B. Nuwaira — Malikshah

Although he should be dismissed and brought to judgment, but Abú Bakr refused. “Never”, he replied, “shall I put back in the scabbard a sword which Allâh has brought out of it”. The elogies on Malik by Mutammim remained celebrated in literary tradition. “No dead man”, said the Arabs, “was ever lamented as Malik was by Mutammim”.

**Malik al-Ta’ī, Abū Walīd Malik b. Abī ’l-Samî’ī, was one of the great singers and composers of the Umayyad and early Abbasid period.** He was born during the reign of Mu’āwiyah I (40–60 = 660–680) in the land of the Ta’ī, his father belonging to the Banû Thâlî, a branch of the Ta’, whilst his mother came from the Banû Makhzûm. In this way Malik could claim to be one of the aristocracy of Isâm, and as a child he was adopted by Abūdâlah b. Daff, the famous art patron of Madîna, and was given a good education. In the year 64 (684), he became enamoured with the singing of the celebrated Mâbad [q.v.] whom he heard at the house of Hama b. Abûdâlah b. Abû Zabârâb, and the event changed his whole career. Taking lessons from Mâbad and Diamî [q.v.], in singing, he soon astonished everyone by his abilities, and he became very popular with the aristocracy. He thus came to be recognized as a professional musician, for indeed his protector, Abûdâlah b. Daff, had made his house a veritable conservatory of music (al-Mas̄ūdî, Murâdî, v. 385, text). On the death of Abûdâlah b. Daff, Malik attached himself to Sulaimân b. Abî al-Hâṣîm. In spite of this however (cf. J. S. Nov.—Dec., 1873, p. 499), Malik was favoured by the Umayyads Yazîd b. Abî Malik and Mâbad b. Yazîd. On the accession of the Abbasids (132 = 750) Sulaimân was appointed governor of the Lower Tigris, and Malik accompanied him to his seat at Baṣra. After a short stay in this city, Malik returned to Madîna, where he died over eighty years of age about the year 137 (754).

Malik was certainly a fine singer. In one place in the Aḥâmi at least (i. 98; cf. ii. 127), he is mentioned as one of the “four great singers”, by no less an authority than Ishaq al-Mawṣîlî, although the latter in another place ranks him after Ibn Surârî, Ibn Mulhîzî, Mâbad, and Abî al-Qâbir (Aḥâmi, ii. 151). He was apparently not an original composer but a good adapter it would seem (Aḥâmi, i. 173; xiii. 64). Certainly, he was at a disadvantage in not being a performer on the lute (‘ud), and Mâbad had to correct his compositions for him.

(H. G. Farmer)
bring Ḥalab under his rule also, but retired when he heard of the approach of Malikshah. The town was granted to Aḵsŏnḵor, father of Zangi, another general, but Ḥurān received al-Rūḥū and Yaghīṣyān. Arzāfīya which had just been retaken from Sulaimān while Sulaimān's son Kūlīḡ Ailān [967-994] who was still a youth was taken back by the Sultan to the Ḥarās. There was no further campaign in Asia Minor, Malikshah left the war against the Byzantines to be conducted by the above mentioned amirs, to whom should be added Buṣūḵ, although the author of the Zawād al-Tawādīq makes him besiege Constantinople in person. The fiction narrated in the Talāsh-ū Gūstā in and Mukhārī is well known, according to which Malikshah was taken prisoner by the Byzantines without their recognizing him, and only regained his liberty by the stratagem of the vizier, Niẓām al-Mulk. The story in al-Ruḍārī is more credible that the Byzantines had to pay the Sultan an annual tribute of 300,000 dinārs plus a lump sum of 30,000 dinārs. On his return from Ḥalab, Malikshah visited Baghdaḏ for the first time and he was received in ceremonial audience by the Caliph al-Muqtadī bi-Amr Allāh. The latter had previously in 474 brought a daughter of the Sultan in marriage but she had been then still a child, the opportunity was now taken to conclude the matrimonial alliance. The wedding took place next year with great splendour and amid the jubilation of the people of Baghdaḏ. The chroniclers give a full account of it and give no hint that this marriage was meant to be a source of trouble to the Caliph as well as to the Sultan. Before we deal with that, it must be mentioned that in 482 (1093) Malikshah undertook a second campaign against Bukhara, Samarqand and Kashghar as a result of the tyrannical conduct of the young prince Ahmad, a nephew of Shams al-Mulk who was now dead. He gained great successes, took Ahmad back to the Ḥarās and then forced the ruler of Kashghar to recognize adalāq suzerainty. Later however, he allowed Ahmad to return to his kingdom and resume his rule, probably at the instigation of his wife Tarkan Khatun (so to be read) Tarkan Khatun who was Ahmad's aunt. On the other hand, cf. Barthold Tarkan in the Mongol invaders, p. 316 sqq. Towards the end of the reign of Malikshah the Seljuq empire thus reached its greatest extent, especially when in 485 (1097) some Turkish amirs were sent even so far as Yaman, who subdivided the land for the Sultan, temporarily only, it is true. As regards the internal administration of the country, the Sultan left this in the hands of his vizier, Niẓām al-Mulk, who was given unlimited power by him at the very beginning of his reign, which he wielded till his death, as a result of his great age his prestige began to decline towards the end of the reign of Malikshah and to be threatened by intrigues in the palace. His services will be appreciated in the article NIẒĀM AL-MULK; here it is sufficient to characterize his policy briefly, which was to restore the dominion of orthodox Islam under its supreme head, the Caliph, with the help of the sword of the Seljuq. He had, therefore, to do all he could to maintain harmony between the Sultan and the Caliph, but the course of events led to a breach between the two. Malikshah had several sons by his wife Zulfiqar Khatun, and the eldest, Ahmad, had been designated successor to the throne but died in 481 (1093). The obvious thing was for Prince Barkyān to take his place as was desired by Niẓām al-Mulk and the Turkish amirs but Malikshah had in the meanwhile married another wife, the Princess Tarkan Khatun, who made every effort to secure the throne for her son Mahmūd born in 480. Malikshah, however, was more anxious about his daughter who had married the Caliph, for she was unhappy in Baghdaḏ and complained of being neglected by her husband, so that finally the Sultan demanded that she should be sent home with the little son whom she had borne to the Caliph. She, therefore, returned to her father but died soon afterwards in 482; her son Ẓalīfšāh however, became his grandfather's pet and he gave him the name of "Little Commander of the Faithful" in the hope that he would one day bear this title in reality. At the same time he decided to make Baghdaḏ his winter capital and had extensive building operations carried out in the N.E. of the town when he was there in the winter of 1091/92, including a great mosque, the Djamā' al-Sulṭān; he also ordered Niẓām al-Mulk and his amirs to build residences for themselves there. During this period the great amirs from the west, Aḵsŏnḵor, Ṭutuš etc., had come to Baghdaḏ, great hunts and other pleasure parties were held, but the Caliph was completely ignored. When in the autumn of 1092 he was on his way from Ḫaḡān to Baghdaḏ for the third time, the aged vizier Niẓām al-Mulk was stabbed by a ʿAdalī at Sahan. It was now for the first time apparent how much the existence of the Seljuq empire depended on this one man, for without the Sultan and his wife were no longer guided by his advice, they committed the gravest errors, which were very soon to plunge themselves and their empire into destruction. Sarcely had the Sultan arrived in Baghdaḏ than, with the intention of making his grandson Caliph, — which was contrary to Muḥammadan law as he was a minor — he announced to Muqtadī that he must at once abdicate and leave the town. With difficulty the Caliph obtained a few days respite which he was spending in prayer and fasting, when suddenly the news came that the Sultan was dead. The exact date is not certain but it was about the middle of Shawwal 485 (middle of November 1092). He was said to have caught a severe fever while out hunting, which they attempted to ease without success by bleeding, and he died soon afterwards. But it can hardly be doubted that he was poisoned, as some writers expressly state (cf. Houtsma, in Journal of Indian History, sept. 1924, p. 147 sqq.). The usual funeral ceremonies were not held; the body was sent to Ḫaḡān and buried there. The Caliph had no difficulty in coming to terms with Tarkan Khatun; he offered to recognize her young son Mahmūd as Sultan. If she would hand over to him his own son, the Sultan's grand-son. This was done. The little "Commander of the Faithful" died the very next year, when the course of events took a disastrous turn for the Caliph and Tarkan Khatun with the rçe of Barkyān. The tragic deaths of the Sultan and his vizier were celebrated in verse by Muṭīzī; cf. Schefer, Sissetnamakh, suppl., p. 62 sqq. Malikshah's was a highly honourable character, he was loyal to his relatives and to his servants, brave, just and gentle. His rule is, therefore, much praised by Christian as well as Muslim
The raids against Sicily and Malta began in the viiith century A.D., and it is not rash to believe that Malta fell before 800 A.D. under Muslim influence. This is also de Goeje's opinion (Z. D. M. G., lvi. 905, note 2).

In Malta the Muslim occupation was certainly more permanent and strongly established than in Sicily; the narrow island was completely subjugated by the conquerors; and this helped us to understand how the Arab-Berber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived.

The question of the origin of the Maltese dialect has occasioned many discussions between those who sustained its Phoenician origin (Vasalli, Bros, Bellermann, Cumbo, E. Cassana, Preca) and those who derived it from Arabic (Genesius, de Nacca, L. Bonelli, Stumme, Noldke). The conclusion must be accepted that Maltese is an Arabic dialect, which in some ways shows resemblances to the Eastern Arabic dialects, in many others recalls the Arabic dialects of the Maghrib. Peculiarities of Maltese phonetics are the inala of ṣ, which tends to become ṣ and ⟨ṣ⟩ at the beginning of words, as ṣināa for ʿināa, the pronunciation of ⟨ʃ⟩ as hamza, the existence of ⟨p⟩ and ⟨t⟩ sounds in neo-latin and arabic words; in morphology the use of ⟨t⟩ as prefix of the 1st person singular forms the main affinity with the Maghrib dialects. The accent tends to fall towards the beginning of words. In Malta itself are to be found dialectal varieties between town and country; in the country and in Gozo the dialect is nearer the original Arabic, sounds like ⟨k⟩ and ⟨g⟩ not heard in Valletta, are noticeable in the Gozo vernacular.

A study of the Maltese lexicon, to show how affinities with Arabic dialects, Eastern and Western, may be explained, and how word-fossils have been preserved in Maltese, is still to be undertaken. The prevalence of the Latin-Italian race and the flourishing of Italian civilization and culture in the island have influenced its dialect, both as to syntax and as to phonetics. The percentage of Latin, or rather Italian, words in spoken Maltese varies according to the area of individual Maltese.

The Maltese, up to a few centuries ago, had not chosen any particular alphabet for their dialect, as they did not use it as a written language. In the xvith century Agus de Soldamis, a Maltese, turned his attention to the dialect and began to study it; since his time several attempts have been made to systematize the writing of Maltese; it was also proposed to use the Arabic alphabet, and a diacritical transliteration, precise and scientific, was tried. In practice the use of the common Latin alphabet, with the modification of some few letters, was continued. The last attempt of this kind, which has not met with public favour nor with the approval of the vernacular press, was that of the Għajda tal-kittxa tal-malti “Association of the writers of Maltese”, which has published a small grammar, particularly concerned with the spelling, called Taghirif fagu Tekktia maltina. Malta 1924; the preface mentions the precedent systems of writing Maltese. The same Għajda, in 1925, began to publish a quarterly review called Il-Malti; it is mostly concerned with grammatical questions, and has promoted a movement in favour of pure Maltese (malti infi).
Since about 1850 the question of the Maltese dialect has also acquired a political character: the English rulers favoured the development of the dialect at the expense of the Italian language (which remains the language of culture, of the Church and of the Bar). Bibliographical information of Maltese literature to about 1900 is to be found in the works of L. Bonelli and H. Stumme.

Besides the Arabic dialect and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones; one of them, the celebrated inscription called of Mamun, dated 1173 A.D., was published more than a century ago, and repeatedly studied by orientalists (Itahnski, Luce, Amati, Nallino etc.); another one, found in Gozo, is to be seen in the Malta Museum: about twenty more have been found in the excavations made in 1922-1925 at Rubato (near the city Notabile); they are preserved in the Museum of the Villa Romana, near the place of excavation.

The Muslims lost Malta in 1569, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 1549. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organized there an important war navy. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Porte and of the Levant and Barbary pirates. The Turks attempted to occupy Malta in 1565, with then well-known expedition which ended in disaster, and again in 1644: more than once they threatened to invade it under Sultan Muhammad IV.

Considering the Order's relations with the Muslim East and the fact that an important portion of the regents of Rhodes was saved, the importance of the Order's archives for the history of the Mediterranean Levant and of North Africa in the eighteenth century is easily understood.

A few Arabic MSS. and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

(Enire Rott)

MALTHAI, or properly MAL'THAYA, the Arabic name of two villages in the kādā of Duhāk in the old wilayet of Mawṣil. They are about 40 miles N.N.W. of Mawṣil at the point where the river of Duhāk (left bank tributary of the Tigris) enters the plain, whence the Aramaic name Maal'ihat > Mal'thāi, "entrance".

The pass of Mal'thāyi giving access to the country to the south of Lake Van must have played an important part in ancient times. Its importance is indicated by the famous bas-reliefs carved on the rock half an hour's walk to the south of Ma'al'thāyi. They reproduce the same scene four times: a king standing in an attitude of adoration before a procession of seven gods, six of whom are standing, each on a mythological animal, and the seventh is seated on a throne placed on the back of a lion. There are no inscriptions accompanying them. Since, however, they are evidently connected with the similar bas-reliefs at Bāwiyān (30 miles N.E. of Mawṣil on the Khazīr, a right bank tributary of the great Zab) and these belong to the kings Salamassār II (860—825 b.c.) and Sennacherib (689—681), it is supposed that the bas-reliefs of Mal'al'thāyi were also executed in the time of Salamassār II. The figures of the gods are especially interesting as forming a link between Assyrian and Hitite art.

Among the Nestorian Christians Mal'al'thāyi gave its name to a diocese (also called Bīh-Nūhāchēh). A Nestorian bishop of Mal'al'thāyi is mentioned as early as the fourth century (Hoffmann, op. cit., p. 52, 210); there are other references to the years 497, 544, 554, 576, 585, 605, 962, 1063, 1074, 1092, 1263 (Chabot, Spieccy Orientale, Paris 1902, Index, and Hoffmann, o.c.). In the seventh century the Metropolitans of the Jacobites, Māthūh, still numbered among his subordinates a bishop of Mal'al'thāyi (Labourt, Le Christianisme dans l'Empire gréco, 1904, p. 240). At the present day Mal'al'thāyi is still inhabited by Nestorians (in part in union with the Catholic Church).

Malthai — Mławá

Målůla, a town in central Syria north-east of Damascus. It is mentioned as early as Georgios Kypros (ed. Geizer, p. 188, No. 993) as Māluwa (MSS. māluwa, māluwa) in Phoinike Libaniana. Yāqūt also calls Māluwa an ʿizzīm (ʿizzīm) near Dimashq with many villages. The modern Māluwa, a village of Christians, is picturesquely situated at the west end of a deep ravine of the Artilbanon, which splits into a western and southern entrance to the valley; and on the northern lies the monastery of Mār Tāklā built half into the rocks. The two ravines form the way to the other monastery of Mār Serkis, which stands on a rocky plateau above the village. Numerous caves, mostly ancient dwelling-places, have been found on the west and southern corner of the rock on the eastern slope of which the modern village is built in the form of an amphitheatre. Some Greek inscriptions have been found in the caves (Waddington, Inscriptions, No. 2553-2563, Moritz, p. 145-147, No. 3-8, including one dated 107 and 167 A.D.). Māluwa and the adjoining villages of Bakhīya and Djjubb ʿAdm are noted for the fact that the Western Arabic dialect still spoken there represents the last remnants of the Syrian spoken throughout Palestine and Syria in the time of Christ.

Mławá proper is an inland district of India bordered on the south by the Vindhya and the Lyndhurst, 25° 30' and 24° 30' N. and 74° 30'. To this tract, known in the age of the Maḥābārāta as Nishahrā, and later as Avantī, from the name of its capital, now Udjpān, was afterwards added Akara, or Eastern Mławá, with its capital, Bhilsā, and the country lying between the Vindhya and the Sēlpūra. The province formed part of the dominions of the Mauryas, the Western Satraps, the Gupas of Magadh, the White Huns, and the Kingdom of Kanawāj, and then passed to the Mówās, from whom it has its name. These, when Hinduized formed the Parmara tribe of Pāṇḍūra, which bore sway in Mławā from 800 to 1200, and was overpowered in 1053 by a confederacy of the Cakayas of Anhilvāla and the Kalačūris of Tripurī. In 1235 Shams al-Dīn Hūktīmish of Dhihl captured Ujjain, demolished the temple of Mahākālī, and sacked Bhilsā. Mławā became a province of Dhihl, and, with interludes of Hindu revolt, remained so until, in 1392, on the dissolution of the kingdom of Dhihl after Timur’s invasion, the Afghan governor, Dilawar Khān Ghūrī, made it an independent kingdom. He was murdered in 1405 by his son Aḥā Ḫán, who ascended the throne under the title of Hūḫ-sang Shāh. He transferred the capital from Dhar to Sūr Shāhī, and founded the town of Mówā. His death in 1435 was succeeded by his son Ḥaḍī Ḫān, who, after a reign of a few months, was succeeded by his infant son Mavīḍ Ḫān. The child was removed by his cousin and guardian, Māḥmūd Khālījī, who in 1436 ascended the throne as Māḥmūd I, and whose reign of thirty-three years was the most glorious in the annals of Mławā. He waged war successfully against the kings of Gudjarāt, the Dakhān, and Džawpur, the small state of Kalpī, and Khān Kumbhā of Citor; he retired, but without disgrace, before the superior power of Dhihl; and he extended the frontiers of his kingdom on the north, the east, and the south. On his death in 1469 his third son, Aḥā al-Kādir Chhībān al-Din, who succeeded him, surfaced with public business during his father’s strenuous reign, retired into his harem and left the administration of the kingdom to his son, Nāṣār al-Dīn, who in 1500 poisoned his father and ascended the throne. Nāṣār al-Dīn met his death in 1510 by falling, in a fit of drunkenness, into a tank or cistern, where his attendants, thankless to be rid of the monster, let him lie. He was succeeded by his son Māḥmūd II, who was as unfortunate in war as his father was fortunate in love. With the help of Mūzafrī II of Gudjarāt he rid him of his powerful Kādāpūt minister, Medīnī Khān, but in doing so embroiled himself with Sāngaram Khān of Citor, who defeated him in the field and took him prisoner, but generously released him. He then, with inconceivable folly and ingratitude, bitterly offended Bāḥdur Shāh of Gudjarāt, who invaded Mławā and, after giving Māḥmūd every opportunity of atoning for his error, carried Māḥmūd by assault on March 21, 1531. Māḥmūd and his sons were sent in custody towards Citor, but the officer in charge of them, apprehending a rescue, put them to death.

Mławā now became a province of Gudjarāt, and in 1535 the emperor Humāyūn, invading that kingdom, defeated Bāḥdur Shāh at Mandavā, and captured Māḥmūd, but was recalled to Hindūstān in the following year by the menacing attitude of Shir Khān in Bengal. Malik Khān, the officer of Māḥmūd II, established himself in Mławā and assumed the title of Kādir Shāh. Shujāʿī Khān and Hāḍī Khān, two officers of Shir Shāh, drove him from Mławā and assumed the government of the province. Shujāʿī Khān died.
in 1554, and was succeeded by his son Malik Bayzid, known as Bāz Bahādur, who, during the decline of the power of the Sūrūmperors, became independent. A severe defeat at the hands of the queen of the Gond kingdom of Garha Mandlaengendered in him a distaste for warlike enterprise and he devoted himself to music and to the eminences of the beautiful Rāmpatt. In 1561 Akbar’s army under Adham Khan surprised the vanguard at Sarangpur, defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror’s paramour. Bāz Bahādur fled into ḫândesheg and Pir Muḥammad Khan, second-in-command of Akbar’s army, who followed him thither, was defeated by Muḥarrak Khan. ḫândesheg and drowned in the Narbās. Bāz Bahādur returned and again reigned in Mandla, but in 1562 another army under ʿAbd Allāh Khan the Uzbek invaded Mālwa and compelled him to flee to Cītor. He remained a fugitive until 1570, when he submitted to Akbar and entered his service.

Mālwa was now a province of the empire, and remained so until, in 1743, the Mārāṯās extended their rule over it, and the Peshwā was made deputy-governor.

It was afterwards divided between the great Mārāṯā generals whose descendants, Sindhyā of Gwalior, and the Ponwars of Dhār and Dewas still hold most of it.

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Mārāṯā, and European contended for empire. Since then its history has been eventful, but sporadic risings took place at six military stations during the mutiny of 1857.

MĀMĀR B. A.L-MUṬHĀNĀ. [See ABDU "QADĪ.""

MAMLŪK (M., plural mamlūkūn and mamlūṭāt), participle passive I of mamlük "to possess," denotes the slave in the master’s possession. The term owes its origin probably to the current phrase of the Kur’ān: wa l-malākat umūnukmūn "what your right hands possess," a general designation of slaves without specialisation of gender. Mamlûk occurs only in the Kur’ān (sūrat xxi. 77), in the expression ʿabd mamlûk "a slave in the possession of his master," mamlûk alone not yet being a technical term for slave, to all appearance. In ḥadīth, ʿabd mamlûk occurs likewise (Dārīm, Siyāṣ, b. 34): but throughout the literature of ḥadīth mamlûk alone is already a technical term synonymous with ʿabīd. — The distinction between a slave born and a slave born from free parents, must be made by the addition of a genitive to ʿabīd, in the former case bīn ʿabīd kinsmen, in the latter mamlūk (mamlūk mamlūkīn).

It may be remarked that neither in ḥadīth nor, to all probability, in Arabic literature, has the term mamlûk ever received the religious meaning of devotee, as is the case with ʿabīd.

The Kur’ān enjoins the master to be humane towards "what his right hands possess" (sūrat iv. 40). Ḥadīth is copious on this point. It assures us that Muḥammad on his death-bed did not cease repeating "(I recommend to you) ʿabīd and what your hands possess" (Aḥmad b. Hanbal, Musnad, iii. 117; cf. i. 78). "Whosoever does not treat his mamlûk as he ought to do, shall not enter Paradise" (Aḥmad b. Hanbal, i. 12). "When the mamlûk performs ʿabīd, he is thy brother" (Ibn Māḏī, Ṭabāh, b. 10). "The mamlûk may claim his food and raiment" (Muslim, Aınān, trad. 41). "The Apostle of Allāh used.... to protect the mamlûk who appealed to his help" (Ibn Māḏī, Zakhd., b. 16). "The mamlûk who acquires himself of his obligations towards Allāh and towards his master, will receive double wages" (Bukhārī, Qoḥ. b. 31) and "one is bound to pardon his mamlûk even unto seventy times a day" (Aḥmad b. Hanbal, ii. 111).

For the legal position of slaves see ʿABD.

For the Egyptian dynasties called the Mamlûks, see the following article. — It may be finally remarked that in certain circles mamlûk had the special meaning of white slave. See Fagnan, Addition aux lexiques arabes, s. v.

MAMLŪKS, a dynasty of rulers of Egypt and Syria.

A. Period from 1250 to 1517. The history of this dynasty is dealt with under the separate rulers; the general questions of art, religion and economics of their time are also dealt with in these articles and notably in Becker’s article AEGYPT [q. v.] and Hartmann’s article DAMASCUS [q. v.].. Only a brief survey of the whole period is given here.

They were, as their name shows [cf. MAMLŪK], former slaves from the bodyguards of the sultāns and amirs who had distinguished themselves by ability and been given their freedom by their masters. A somewhat arbitrary distinction is made between two dynasties, the Bahri [q. v.], from 648—792 = 1250—1390 and the Burdji from 784—922 = 1382—1517. The name Bahri Mamlūks was given to the guards of Sūltān Nādir al-Dīn Ayyūb (637—47 = 1340—49), whose barracks were upon the island of Rūdā [q. v.] in the Nile (Bahri). Except for the first three the Bahri Sultāns were chosen by the Mamlūks from among the descendants of the Sultān. Thus after Bahri [q. v.] there ruled two of his sons, after Kulaʿīn [q. v.] two sons, a series of grandsons and a great grandson. It was different with the Burdji Mamlūks, a bodyguard founded by Kulaʿīn, who were quartered in the towers of the citadel of Cairo. The first Burdji, Barkūq, [q. v.], was able to secure the succession of his son and even a second son succeeded for a brief period to the throne, but after this the Mamlūk guards never tolerated hereditary succession again; no Sultān’s son, who was proclaimed heir-apparent, ever succeeded in keeping the throne (the only exception is al-Nāṣir Muhammad II who occupied the throne for nearly three years.) The Mamlūks did not always choose the ablest, but more often the oldest; a kind of system of seniority developed. The first Mamlūk on the throne was Ikīl al-Dīn Aibak (648—55 = 1250—57), the husband of Shajjar al-Durr [q. v.], a slave whom Ayyūb had married.

In the period of its greatest extension under the Mamlūks, the frontiers of Egypt were in the west the Lybian desert as far as Barka, in the
south Nubia as far as Massawa, in the north the Mediterranean Sea. The frontiers of Syria in the east stretched to the Euphrates to Der al-Żar through Raḥṣa, in the south to the Arabian deserts and in the north to the Taurus. The two countries met in Sinai and were separated by the Red Sea. The Mamlūks usually exercised suzerainty over the holy places in Mecca and Medina; Sultan Kāmil Ghūri [q.v.] even maintained garrisons in South Arabia for a time.

The first task of the Mamlūk sultans was to consolidate the kingdom. Their most dangerous enemy, the Tatārs under Hulāgū, was defeated in Syria in 658 (1260) at A‘in Djaḥlūt [q.v.]; the Crusaders were destroyed by Sultan Naṣr Baibars, Kāmil and Khālid, the remnants of the Alids and Assassins [q.v.] rendered harmless by Baibars. Their power was finally consolidated and justified to the Ayyūbid petty kingdoms left to them, by Baibars welcoming in Cairo the Caliph who had been driven from Baghādād by the Mongols, restoring the caliphate here in 659 (1261) and then having himself appointed by the Caliph participator in power (Kātim al-Dawla) and having the power ceremonially transferred to him. They had the position till the end of Mamlūk rule. The Caliph paid homage to the Sultan on his accession and ceded all his rights to him. He thus lost all authority and became the shadow of a ruler without power, without money and without influence; only now and then an Indian Sultan sought a diploma of investiture from the Caliph.

The rule of the Sultan was absolute. He was assisted by a council in which the chief commanders of the Mamlūks sat to the left and right of the ruler according to their rank (this sitting in order of rank dated from the early Mamlūk period): the representative of the Sultan (maḥbūb kāhir, later only appointed in case of absence of the ruler), the commander-in-chief (amīr kāhir), later combined with the office of Atabeg, the commander of the guards (rūs nawḥat al-nawṣal, see Al-Amīr al-Tabāris), the War Minister (amīr-iḥtīāt, ibid.), the president of the council who was the chief civil official (amīr muqāṭir); later the minister of the Ilāma (amīr al-kāhir [q.v.]) and the ministers of the palace and domains (māʾāʾir) gained more influence and became numbered among the highest officials, as did the chief military judge (ḥālīb al-khawāṣṣ [q.v.], properly high chamberlain) and at times the chief marshal (amīr aṣḥāb q.v.). The officers and their relative rank (cf. e.g. under Amīr al-Kāhir for the composition and order of precedence in later times) changed. These members of the council were military officers, the so called lords of the sword (ṣūḥāb al-suḥāf); they belonged to the class of amirs of 1,000 (muḥādīm al-suḥāf). From this class were chosen the governors of the Syrian provinces (Damascus, Aleppo, Tripolis, Hāmā, Ṣafad) and frequently also the governors of the citadels of Damascus and Aleppo who were appointed by the Sultan himself. The next class was formed by the Ṣalṭānīs, orphans of 40 Mamlūks, who had the right to be accompanied by a band. They were followed by the amirs of 10 and those of 5 Mamlūks. All the amirs of 1,000 were appointed by the Sultan himself; the other amirs in the provinces sometimes by the Sultan and sometimes by the governor. The administrative system at the Sultan’s court was reproduced on a small scale in the provinces. Every governor was a little Sultan who had to some extent the same routine as the Sultan in Cairo. The Syrian governors were in general independent of one another (very few like the Amīr Tengīz [see Damascus, §. ii. p. 908] had other governors subordinated to them). In the beginning the Mamlūks, perhaps influenced by the Mongols, had the tendency to make all offices secular and fill them with Mamlūks who, as lords of the sword (ṣūḥāb al-suḥāf), belonged to the military caste. They kept this up in the highest offices throughout the dynasty, but they had to create the important offices of private secretary (kāṭib al-ṣīr) and head of the chancellery (ṣūḥāb Dīwān al-imād) and fill them with civilians and even admit Christians, Jews, and especially convert to Islam to them, because the Turkish ruling caste was not suited for them. The above mentioned chief officers on the military and administrative side remained however reserved for the constantly increasing oligarchy, into which neither Arabs, nor the sons of Mamlūks were admitted. It had never happened (I only know of 3 cases of Arabs) that Arabs or sons of Mamlūks became amirs of 1,000, or rose to the highest pots in the legal and scholastic world and in the other branches of the civil service.

The Mamlūks were purchased on the government by a high officer, the purchaser of Mamlūks (ṣāqīr al-mamlūkī), educated in the first place in the Mamlūk School in Cairo, then distributed in the different branches of the corps of pages to act as amours-bearers, cup-bearers, carvers, polo-grooms, club-bearers etc., for further training and then placed in the service of the amirs or of the Sultan as vacancies occurred. The Sultan’s bodyguards were called khāṣṣī and the amirs had also similar bodyguards. The army consisted of a) the bodyguard of the Sultan, b) the gūnd al-khāṣṣa, enlisted troops, who were paid in money and with the yield of the crown estates, c) the guards of the great amirs and former Sultans. In later times there was a body of reserves, awṣāf al-ṣawī, who were only called up for service in times of war but also received pay in times of peace. Military expeditions were usually decided upon by the council of state; the amirs were given money to equip and maintain their troops, to be able to lead them into the enemy’s country.

In addition to the military officers there were civil officials, ẓuhūl al-kalām (lords of the pen): a) the religious officials (al-ṣīr); b) who filled posts in the legal and scholastic worlds and a series of other offices; b) the regular administrative officials (al-dīwānīya) for the rest of the civil service.

The Sultan’s revenue was made up of the ground, poll and poor-tax, from the yield of the fields (on the Egyptian system of appanages). p. 149 out of which he gave the necessary funds for the army and officials, the customs, the state factories and extraordinary taxes on goods and markets, which, not being laid down in the Kūfīn, were considered illegal and resisted. He also sometimes made money by forced purchases and sales. The government bought up goods at a fixed price and forced purchasers to take them at a definite price. Finally there were monopolies out of which the Sultan made profits. Another favourite means of raising money was for the Sultan to visit some great man from whom he extorted large sums while a guest (especially Kūfīn [q.v.]). Things
seem to have been similar in Syria but we know very little about the division of the feuds there. The importance of the Mamluks in history lay in the fact that, protected by the deserts and their armed armies they stemmed the flood of Asiatic conquerors; they conquered Cinglie Khan’s Mongols and later the hordes of Timur Lenk, who had conquered Syria for a short time, and other conquerors. After the defeat of the Timurid and the retreat of Timur, the Sultans were forced to concentrate on the struggle with the gradually increasing power of the Ottomans. The struggle was long avoided by the formation of buffer states on both sides; among these the most notable were the dynasties of Dhu ‘l-Ghadir and of the White and Black Sheep (so-called from their standards). The success of Kālidār’s policy postponed the end but the rulers who followed him were weak. The rule of the Mamluks lost its vigour. They were weakened in long wars; their finances became quite hopeless as a result of their immediate expenditure, not commensurate with their means and a defective system of taxation which in the later period enabled the owners of large estates to escape the taxes. They therefore could not permanently resist the Ottomans, especially as the lack of discipline among the Mamluk leaders and the weakness of their field artillery made the army useless. The well-equipped fortresses were not defended against the Ottomans; they fell through treachery. The hum-eligible Sulṭān Kanṣāl Ghūri was defeated and slain in 1222 (1516) at Mardj Dābik (in the province of Aleppo). The line to Egypt was thus opened to Sulṭān Solm: after six months’ resistance the last Sulṭān Ṭūmanabād had to surrender. He was hanged from the Bāb Zuwa in Cairo. A number of the great amirs and the Caliph were taken to Constantinople. The caliphate ceased as a new Caliph was appointed; the Sulṭān of Constantinople became the first ruler in Islam. The protection of the holy places also passed automatically to him. The period of the Mamluks was marked by great activity in building (ii. 23–). Of secular buildings, few palaces have survived; on the other hand, fortresses (Cairo, Aleppo, Damascus and Birejik) which were entirely rebuilt in the Mamluk period, as well as a large number of fine tombs, hospitals, baths, mountains and aqueducts, still exist. Of religious buildings, splendid mosques with schools attached to them were built. While even under the Mamluks, there had been only one “great mosque” in each town or independent suburb, where the Friday service was held, it became the custom under the Mamluks that many Sulṭāns and governors and occasionally even one of the guilds built “great mosques” for the Friday service in the large towns. Mention may be made of the mosques of Baibars, Khalīl. Muḥammad al-Nāṣir, Sulṭān Ha-ṣan, Barākā, Muḥ`ayyad, Kālidār in Cairo, as well as the mosque in the provincial capitals Aleppo, Damascus and Tripoli. While agriculture, industry and art showed great prosperity, trade suffered very much under the later Mamluk Sulṭāns through the extortionate taxes of the government. The trade through Egypt, based on treaties with Frankish and Oriental rulers, yielded huge sums. The customs and the treatment of merchants by the Sulṭāns finally became so intolerable that the European powers did everything possible to secure the sea-route to India in order to avoid the transit through Egypt with its enormous expense and the roguery to which it was exposed.

The object of the last wars of Sulṭān Kānṣāl Ghūri was to gain a footing in South Arabia and nearer India to secure the Egyptian share in Indian trade.

MAMLUKS

7. Medina: Samatlı, Wafı Qa'wafa, Cairo 1285 (1869); Geschichte der Stadt Medinät, transl. Wustenfeld, Göttingen 1861.

(M. Sobernheim)

B. Period from 1517 to 1798. It is a significant fact, that even this period of nearly three centuries, during which Egypt belonged to the Ottoman Empire, may still be designated as a third Mamluk period. The change brought about by the conquest of Sultan Selim I in 1517 was, after all, not a radical one, from the point of view of government. Egypt and its inhabitants remained under the rule of a powerful minority of foreign race. The antagonism that existed in the beginning between Ottoman Turks and Mamluks and which had led at first to much bloodshed (execution of 800 mamluks by Selim I in Cairo) did not last very long after the troubles of the occupation were over. The Turkish soldiers and officials who entered Egypt during Ottoman rule soon became mixed up to a large extent with the numerically more powerful class of the Mamluks, whose aid was, moreover, indispensable, for the government of the country. Besides, the number of Mamluks (al-Sharif) continued to receive additions by purchase of slaves from the Caucasus. An author of the xviiith century (Vansbdl, p. 13) says that Egypt, in his day, was inhabited by Copts, Moors (by whom he means the islamised population), Arabs, Turks, Greeks, Jews and Franks. The "Turks" were the governing class and the "Mamluks" the Ottoman element; the real Ottomanisation of the country belongs to the sixteenth century. In accordance with what is said, the history of those centuries never shows, among the parties and factions into which the Mamluks were divided, a pro- or anti-Ottoman party; those quarrels were only of local and personal character. Even the first governor of Egypt, Khairbek, was a Mamluk, although, after him, the Pašas were sent, without exception, from Constantinople.

During the first 100 years, it is true, the authority of the Pašas sent from Constantinople to govern the country was undisputed. The Pašas could rely on seven contingents of troops (sahib) six of which were instituted by Selim I, while a seventh contingent was added under Sulaiman I, composed of Mamluks. Their nominal strength was 20,000 men in all. They were not commanded by the Paša, but by their own commander, who belonged to the sahib of the janissaries and resided in the citadel of Cairo. Afterwards these troops behaved more and more independently and were even able to depose Pašas whom they did not like, until, in the xviiiith century, this military force became the instrument of some all-influential Mamluk beys. Important matters of administration were treated by a great Diwan or State Council, which only met in extraordinary cases and in which the high functionaries were represented, as well as the military chiefs and the high religious dignitaries. Local and special government functions were exercised by twelve Sağıq beys; these represented at the same time the feudal aristocracy; from the beginning however, the ties that linked them to particular provinces seem to have been rather loose, for among them are mentioned the Kheya of the
Pasha, the Daftardar, the Amir al-Hadjj and the Amir al-Khaza, the three first of whom were also members of the great Dziwān. The other Beys were commanders at Suze, Damietta and Alexandria, and governors of the five big provinces in the Nile delta. Besides these twelve Beys there were twelve other Beys with similar functions. The real provincial administration was exercised by a class of functionaries called Kāhīfīs. Their chief task was the collection of the revenues. They may be considered as a kind of governor; some of the great Beys themselves were also Kāhīfīs in their districts or had different Kāhīfīs under them. Vansleb mentions 36 Kāhīfīs. As to the revenues, they were collected in various ways, the local customs in different parts of Lower Egypt and Upper Egypt varying considerably. The most common form was the furnishing of revenues (litāqūn); the mudāraqas had different kinds of right of possession on the lands, which were hereditary. They collected the revenue, in taxes or in kind, from the fellāhīs, generally through the village notables called Shāhīs al-Balad. In the tax-collecting there were further employed, a host of subordinate technical and financial functionaries, many of whom were Copts. Some Kāhīfīs were at the same time mudāraqas. This system of administration showed the close relation between administration and landowning, which has always been characteristic of Egyptian conditions [cf. iv. 142]. It was the continuation of the system which had prevailed under the Mamlik Sulṭāns (regulation by Kāıt Bay) and was regulated again in the Kānīn-nâmê-i Mihr of Sulaimān I (cf. J. von Hammer, Die osmanischen Reiches Statutarverordnung und Staatsverwaltung, Vienna 1815, i. 101-142); here a special stress is laid on the rights and obligations of the Kāhīfīs.

In Cairo a large chancery, the chief of which was the Küzanīnâdī, had to collect these taxes and to keep the registers; the revenue collected were reserved partly for the pay of the troops and works of public utility such as irrigation, building of bridges and dikes, etc. partly for the yearly tribute to the Sultan, which was in the beginning 5,000,000 ducats and afterwards lowered to 600,000 and later to 400,000 ducats. In the xvith century the paying of tribute practically fell into disuse.

Besides the land-tax, there existed a great number of other taxes, under different denominations; they were collected more or less arbitrarily, and, in course of time, the anarchy in the government assumed greater proportions, they pressed ever heavier on the population. The rural population had as much to suffer from the exactions of their Mamlik administrators and proprietors as from the raids of Arab tribes, which the government was unable to control.

The history of Egypt during this period is a not very interesting succession of domestic intrigues, struggles and revolts. Until the beginning of the xviith century the Pashas could more or less maintain their authority, but they were replaced too often to have a lasting influence. No less than 117 Pashas governed Egypt until the arrival of the French (a complete list of them is given in Thureyia, Seljübi I. Čolmānî, iv. 355 sqq.). Many of them tried to make their short stay as profitable for themselves as possible, and several of them had to pay their creditors with their lives after their return to Constantinople. In the xviith century the real power in the country was exercised by the great Beys in Cairo, who had the troops in their hands and tolerated only those Pashas who did not interfere with their affairs. By this time the two most powerful positions in the country were those of the commander of Cairo, called the Shāhīs al-Balad and of the Amir al-Hadjj. Some of the Shāhīs al-Balad are reputed as good rulers, especially Ismā’il Bey, who held that office from 1707 to 1724. But the changes of power were always of a violent kind and prevented the forming of a dynasty; Ismā’il’s shāhīs al-Baladship itself had been preceded by a curious struggle between the two rival parties of the Dhu ‘l-Fikāriyya and the Khāsimiya, which had lasted for three months outside Cairo. In 1747 the Porte tried for the first time to reestablish its authority by ordering the governor Rāghib Pasha to exterminate the Mamlik Beys; this attempt failed, however, completely and the disorders continued until the appearance of the young Mamlik ‘Ali Bey [q.v.] who made himself for a short time independent Shāhīs al-Balad and ruler of Egypt, for the years 1770-1771. By this time the Porte began to take more serious measures to retain its hold on Egypt, but the regime of the Mamlik Beys did not end until a foreign power, France, temporarily occupied Egypt [cf. Kh. 120].

Under such a regime the conditions of living of the population could not be flourishing. It was not so much the position of Egypt as an Ottoman province that caused the suffering of the population, as the lack of a strong central power. European travellers like Vansleb and Lucas point to the fact that Egypt was, in the xviith century a rich country and that by the practical stopping of the payment of tribute, all the money remained in the country itself. But the riches remained only in the possession of the ruling minority, while the rural population was oppressed very hardly. The bad organisation caused, moreover, from time to time terrible famines, while, about the middle of the xviiith century began a yearly for the yellow plague and epidemics of plague. Since the last period of the Mamlik Sultans the country had lost, moreover, a rich source of revenue by the change of the trade-route to India. The transit trade was now restricted to inner African products and coffee and aromatics from Arabia, while the exportation of Egyptian products such as corn, cotton and sugar was limited. The timber that the country needed had to be imported from Turkey. Moreover, the trade with Christian countries often experienced serious hindrances from the arbitrary measures of the local authorities. At the same time the local industries declined rapidly; one of the causes may have been the transportation of a large number of skilled craftsmen to Constantinople by Salim 1; the once flourishing guild organisation was paralysed by this measure (cf. Thorning, Beiträge zur Kenntnis des islamischen Völkerverwesens, Berlin 1913, p. 81 and al-Donate, i. 20).

The decline of Egypt’s economic strength, on the other hand, made Egypt a relatively quiet possession for the Porte. Only in the very beginning of Ottoman rule, in 1524, a Turkish governor, Ahmad Pasha, tried to take the title of sultan of Egypt, but afterwards no attempts to recover independence were made until the time of ‘Ali Bey. Then, however, the political needs of the European colonial powers
made Egypt appear again as an important stage on the way to India and opened new possibilities of a more independent development, which were to be realised in the sixteenth century. In the meantime the possession of Egypt had been useful to Turkey in many respects; the Porte could always count on an Egyptian contingent of troops in its wars and the country itself was a base of action for the military operations in Syria, the Hijaz and Yemen. The reconquest of Yemen under Selim II was carefully prepared in Cairo. As soon as the tendency to independence appeared, however, as under Ali Bey, the Turkish hold on Syria and Arabia was immediately endangered seriously.

The predominant position of Egypt in Islam was not seriously affected by the Ottoman occupation. Al-Azhar [q.v.] remained one of the most important centres of Islamic learning; the Turkish Pasha and other dignitaries showed their acknowledgement of this fact by gifts and by the execution of restorations to the building, as they did occasionally for other religious institutions in the country. Though Islamic science continued to flourish, Egypt did not produce many prominent figures in this period. In the domain of the most important figure was al-Ramli (q.v.; d. 1506), the commentator of al-Nawawi, further the mystic al-Sha'wani (q.v.; d. 1565), and, as representative of Arabic philology, 'Abd al-Karim al-Baghdadi (q.v.; d. 1682). In popular mysticism the veneration of Ahmad al-Badawi [q.v.] by the Almadiya held a large place.

The period of Ottoman domination in Egypt is not wholly without interest from the point of view of architecture and art. Several governors, beginning with Khâ'iribek have constructed mosques; these mosques show a kind of transition from the Mamlûk to the Ottoman architectural style. There are also in Cairo several mosques founded by the Mamlûk Beys, like the mosque of Abu Dhabab, the traitor of 'Ali Bey, constructed in 1773. Some beautiful palaces have likewise been built by the Mamlûks, but only few of them are still extant (cf. on this subject: Mme R. L.Devonsch, L'Egypte musulmane et les fondateurs de ses monuments, Paris 1926, p. 115 sqq.).

Bibliography: The sources for the history of Egypt under Ottoman rule have not been much studied. Of the many Arabic works have to be mentioned (cf. Brockelmann, G. A. L., ii. 289 sqq.): Ibn Iyâs, Baddîl al-Zâhir fi Waḥīf i al-Dhâhir, iii., Bilâq 1312, p. 101 sqq. (until 1522); al-Mînhâdî, al-Baddûr al-ṣâfira fi man waḥlâ 'l-Ṣâhâra, MS. Vienna, No. 9152 (until 1549); al-Burgdjî, al-Rûyâ al-ṣâhâra fi Abû Shâmir, MS. Algiers, No. 1605; Ibn Zunbul, Fath Mîr, many MSS. (1517—1519); al-Îshâkî (cf. Babinger, G. O. W., p. 160 sqq.), Dawhat al-Îshâr fi man waḥlâ 'l-Dîwâr al-Mîrîya also called Lâlîfat 'Abd al-Uzâr fi man tâṣarrafi bi-Mîrî min Arab al-Dîwâl, several times printed in Cairo 1276, 1296, 1300, 1304 (until 1623); do., al-Rauwâl as-sâlim fi Abîhûr màna fi al-'Aţâwîl, MSS. Paris, No. 1562 and Brit. Mus., No. 1251 (until 1623); al-Ghumrî, 'Abbâhâr al-Fîlâm bi-'l-Târîkh Cmaîrâl 'l-Mîrî fi 'l-Islâm, only in MSS. (poem, until 1650); Muhammâd b. Muhammad b. 'Abd a-Sâtîrî, al-Ṭâfâs al-Bâhîya fi Tâmâlik Abî 'l-'Ummân al-Dîyâr al-Mîrîya, several MSS. (until 1634); do., al-Rauwâl al-Zâhiya fi Waḥlâ Mîrî al-Kâhira al-Mîrîsa, several MSS. (until 1651); do., al-Rauwâl al-Sâkîra fi Abîhûr Mîrî wa-'l-Kâhira, several MSS. (until 1645); al-Îbîfî, Târîkh al-Sâkîra fi Waḥlâ Abîl-Sâdîkî al-Sa'dîgî, several MSS. (treats of some events in the years 1658 and 1661); 'Abd al-Kâdir, al-Zâhir, MS. Berlin (G. A. L., ii. 299; the years 1603—1643); Ibrahim al-Khâhîîrî, Mabûa al-'Ajlî khâ tâbî al-Mîrî min al-Mu'mînîbî, MS. at Cairo (G. A. L., ii. 299; written about 1721); al-Damirâbâli, al-Dûrra al-Mâridâna fi Waḥlâ 'l-Khâhîrî, several MSS. (G. A. L., ii. 300; the years 1688—1755); Muṣâfî b. Ibrahimî, al-Zâhirî Mîrî, MS. Copenhagen, No. II59 (the years 1686—1739); al-Djâbâri, Târîkh Abîhûr al-Îslâm wa-'l-Târîkh wa-'l-Akkârî Cairo 1236, vol. i. and ii. (from 1694 up to the French occupation).

Among the Turkish sources all the great historical works of the Ottoman Empire since the time of Selim I should be mentioned, to begin with the different Sâlih namees; on the conquest of Egypt: Haidar Çelebi, Tegboek des egyptischen Feldherrn Sultan Selim, transl. by Khalil Edhem, Weimar 1916 (Deutsche Orient-bücherei, vol. xx). The following deal especially with Egypt: 'Abd al-Ålamîd, Namûdîr al-Åkhârî, several MSS. (G. O. W., p. 58 sqq.; Turkish translation and continuation of an older work, up till 1540); Sûlîb b. Djâlahî, Târîkhî Mîrî-i Qâdirî, several MSS. (G. O. W., p. 100 sqq.; written in 1546); Yusuf b. Ni'met-Allah, Târîkhî Mîrî, MS. Turin (G. O. W., p. 121; Turkish translation of an older Arabic work and continuation up till 1592); 'Ali, Hâdît al-Kâhîrî min Abî-Ådâl al-Zâhirî, several MSS. (G. O. W., p. 133; written in 1599); Muhammâd b. 'Abd Allah, Târîkhî Mîrî, several MSS. (G. O. W., p. 243 sqq.; up till 1679).

Vansleb, Nouvelle Relation d'un voyage fait en Egypte, Paris 1677; Evliyâ Çelebi, Sûrat-hâname, 6th part, not printed; Paul Lucas, Voyage dans la Turquie, l'Arabie, Soudan, Palestine, Haute et Basse Egypte, etc., Amsterdam 1720, 2 vols.; B. de Maillet, Description de l'Egypte, Paris 1735. Cf. also the articles EGYPT and KIBIT.

( J. H. KRAMERS)

AL-MA'MûN, 'Abû 'l-Abâs 'Abd Allah [B. Hurûs], 'Abbâsîd caliph, born in Rabî' I 170 (Sept. 786), son of Hûrûn al-Râkhîî and a Persian slave named Mardûqî. After a desperate struggle, which ended in the assassination of the Caliph al-Amin (q.v.) in Muharram 158 (Sept. 813), the latter's brother al-Ma'mûn ascended the throne; it was six years, however, before he could make his entry into Bagdad. On account of his sympathy for things Persian, which was stimulated by the vizier al-Fa'fî b. Sahl [q.v.], the Caliph was not
at all popular with the Arabs. An 'Alid Muham-
mad b. Ibrahim. usually called Ibn 'Abd Rabbah, there- 
fore set up as a pretender to the throne in Kufa 
in Djamā' II 199 (Jan.-Feb. 815) and was sup- 
ported by a former adherent of al-Ma'mūn, Abu 
1-Sarāyā. The rebels had some success at first 
but Ibn 'Abd Rabbah died suddenly and when the 
general Hārthama b. 'A'yan [q. v.] advanced against 
him, Abu 1-Sarāyā had to take to flight. Soon 
afterwards he was taken prisoner and put to 
death (Rabi' 200 = Oct. 815). In the meanwhile 
the movement had spread, but the 'Alids made 
themselves so hated that Hārthama's troops were 
able to enforce order with difficulty. The victorious 
Hārthama, however, was shamefully 
rewarded for his services. After he had occupied 
Merw, the suspicious Caliph had him thrown 
into prison where he soon died (Dhu 'l-Ka'da 
200 = June 816). This increased the general 
discontent. While al-Ma'mūn remained for the time 
in Merw, the people of Bagdad rebelled and 
placed al-Manṣūr, a son of the Caliph al-Mahdī, 
at the head of the movement. When in Ramādān 
201 (March 817) al-Ma'mūn designated an 1-Alid, 
'Ath al-Kidā [q. v.], as heir apparent and assumed 
the crown of the 'Alids instead of the black of 
the 'Abbāsids, the people of the capital elected 
Ibrahim, another son of al-Mahdī, Caliph (Dhu 
'l-Hijja 201 = July 817). Then there were 
trouble in Egypt and in Ashšab al-Dīn, the people 
were stirred up by the Khurram Bābak [q. v.] 
who terrorised the northern provinces for nearly 
20 years. In these circumstances al-Ma'mūn had 
finally to leave Merw and go to the 'Iraq (202 = 
817). But when the Arabs murdered the vizier 
al-Hādī who was, particularly hostile to them, 
'Ath al-Kidā died suddenly, and in addition, the 
governor of Wāṣīq, al-Hāsān b. Shāh, the vizier's 
brother went mad, or at least was treated as such, 
the people of Bagdad had really no longer rea- 
sion to support Ibrahim and in Safar 204 (Aug. 
819) al-Ma'mūn entered the capital and the 1-Alid 
colours were exchanged for the 1-Ahmad. Al-Hāsān 
b. Shāh was then restored to his government, 
and a few years later the Caliph married his 
daughter Būtain [q. v.]. As soon as the Caliph had 
left Khurasān, a rebellion broke out there among the 1-Jatān. At the end of 205 (June of 
820) or beginning of 206, Tāhir b. al-Husāin 
[q. v.] was appointed governor of Khurasān. He 
proved in every way fitted for his difficult post 
but carried his independence so far that in 207 
(822) he renounced his fealty to the Caliph. 
Although he died the following day, the Caliph 
did not dare to deprive his sons of Tāhir's go-
vernorship, and in this way the dynasty of the 
Jatān was founded in Khurasān. In 210 (825- 
826) 'Abd Allah b. Tāhir [q. v.] after defeating 
Nāyr b. Shāhārīb went by the Caliph's order to 
Jerusalem. Here the Yamanis, who were loyal to 
al-Ma'mūn, had begun to fight with the Kātib b. 
Anīn who sided with al-Amin, and the struggle lasted till 
the latter's death. A more peaceful period ensued, 
but soon new troubles broke out, and with the 
arrival of the Spanish Muslims banished by the 
Caliph al-Hakam I [q. v.] the situation became 
still more complicated. The latter seized the town 
of al-Kandārya, but when 'Abd Allah b. Tāhir 
arrived in Egypt the native rebels had to submit, 
and the Spanish intruders retired to Crete. When 
'Abd Allah was appointed governor of Khurasān,
AL-MA'MUN, nomarch of Seville and Cordova, died in 932.

At the death of Abū-Abd Allāh in 925, al-Ma'mūn was left to rule alone. He was a just and wise ruler, and his reign was marked by peace and prosperity. He was able to maintain friendly relations with the caliph of Baghdad, and his subjects were content with his rule. However, his death in 932 marked the end of the Umayyad dynasty in Spain.

At the time of his death, Al-Ma'mūn was negotiating with the Caliph of Baghdad to restore the Umayyad dynasty to power in Spain. He was also involved in a conflict with the Berbers in the south of the kingdom.

Al-Ma'mūn was succeeded by his son, Abū-Abd Allāh, who continued his father's policies of peace and prosperity. However, the kingdom was soon threatened by the invasion of the Almoravids from Morocco. The Almoravids were able to conquer the kingdom and establish their rule.

The reign of Al-Ma'mūn was characterized by peace and prosperity, and he is remembered as a just and wise ruler.

defeated the army of al-Mu'tasim in 627 (1230).

Enraged at the defection of the Almohad Malhūtun, so devoted to his predecessors, al-Ma'mūn took a decision at Marrākush, which was quite unprecedented in the annals of the dynasty. He stigmatised the memory of the Mahdi Ibn Tumart, denied him "impeccability" ('inma) and had a large number of Almohad shāhids executed whom he suspected of having betrayed him. The rest of the reign of al-Ma'mūn was spent in trying to put down several rebellions in the Maghrib; but he did not succeed in bringing his rival to terms for the latter was able to take and plunder Marrākush. On hearing this, al-Ma'mūn, then with the siege of Ceuta, hurried off to the capital at once (but fell ill and died on the way in the valley of the Wādī 'l-Abid at the end of Dhu'l-Hijjah 629 (Oct. 1232).

E. Leve-Provençal

MA'MŪNIS, name of a dynasty.

In the 12th (3rd) century Qādirīyā, to the north of modern Khiva, was a dependency of Bukhāra and was ruled by a line of princes called the Ma'mūnis. Nothing is mentioned about them by the Oriental historians till 382 (992) when Ma'mūn b. Muhammad b. A'īsul Rulof of Qādirīyā, is said to have assisted Amir Nuḥ b. Mansûr the Samānid in his exile during the temporary occupation of Bukhāra by Bughrā Khān, ruler of Kāshqār. In 385 (995) Ma'mūn attacked Abū 'Abd Allāh, ruler of Khwarizm, in order to punish him for his treachery to Abū 'Ali Sindiūrī, took him prisoner and annexed Khwārizm. Ma'mūn was assassinated in 387 (997). His son Abu l-Hasan 'Ali succeeded to the throne, and married a sister of Sultan Muhammad of Ghazna. Abu l-Hasan died about 399 (1000–1001) and was succeeded by his brother Abu l-Abbas Ma'mūn. Abu l-Abbas married his brother's widow, the sister of Sultan Muhammad. Shortly after this he gave offence to his army by doing homage to Sultan Mustūm. The commanders of the army organised a rebellion against him, put him to death on Shawaal 15, 407 (March 10, 1017) and raised one of his sons to the throne. On hearing this, Sultan Mahmūd marched to Khwarizm to avenge the death of his brother-in-law, defeated the rebels at Ḥazā'īn on Safr 5, 408 (July 3, 1017), and executed the leaders of the insurrection. All the seions of the royal house were taken prisoners and sent to Khvāsān. The kingdom of Khwārizm was annexed and placed under the command of Altūnāt with the title of Khwārizm-shāh. But after the return of Sultan Mahmūd to Ghazna, Abū Ishāq, father-in-law of Abu l-Abbas Ma'mūn, tried to establish himself in Khwārizm but was defeated by Altūnāt.

This dynasty was famous for the Tarīkh-i Gudīc and Tarīkh-i Dīghān Arā' of Kādī Ahmad Ghaffārī, with the Farīghūnīs who were the rulers of Dīghānānī.

MA'MŪRET AL-'AZĪZ, the name given to the new town of Mezz, built beside Kharpūt [q.v.] in honour of Sultan 'Abd al-'Azīz. In time the name became applied to the new wilāyet formed in 1879 around Kharpūt-Mezz; this consisted of three sandjaks: al-'Azīz, Khazāt and Ma'latiya. As a result of the administrative reforms of 1919 (1921) each of these sandjaks became an independent wilayet but later modifications were made. According to the official annual of 1925–1926, the wilayet of Ma'mūret al-'Azīz has an area of 11,299 sq. km. or 12,282,900 dunums, of which 3,124,596 are arable. It contains 6 kaḍās: the central kaḍā, Pulī, Kharpūt, Kebīn, 'Arabkūr, Kemālīye (this new name replaces the historical one of Egin).

The annual of 1926–1927 records an even more radical reorganisation. The area of the wilayet of al-'Azīz is given as 17,268 sq. km. with 1,562,296 dunums of arable land. The wilayet which lost the western kaḍās ('Arabkūr and Egin) has been extended on N. and E. It has 11 kaḍās subdivided into 32 nāḥiyāt with names little known and difficult to transliterate:

1. the kaḍā al-'Azīz, with the nāḥiyā: Khan-kendi, Mullā-kendi, Irm, Khudāsiya (?), Erenler (Ayunus), Bālū-bey, Kharpūt, Čengūdzh, Sarīn (Dishidi).

2. Kebīn, with only one nāḥiyā: Tahir.

3. Bāskūl: Mūshūr-Huyak, Izōli (Komur-khān), Karabekān (Meriwan), Seywan.

4. Pulī: Gök-dere (and Bulanık) Okhi (and Lower Bulanık), Kara-cor.

5. Khazāt (Dersim): Ballkan (Elghāzi), Kermit, Amutka, Sinu, Der-Aghzenik.

8. Čabakçur: Perkheŋuk (Kamran).

The kaḍās without nāḥiyā are:

10. Gendj-Merkez (Dāhrīn).

II. Madēn.

E. Leve-Provençal
The wilayet (without Cemish-gezek) has therefore 171,631 inhabitants. The events of the war and the suppression of the Kurd rising in 1925 must have had far-reaching effects on the ethnical aspect of this territory. Before the war the population was mixed: Kurd, Armenian and "Zazi" (a people speaking an Iranian dialect, q.v.).

Ma'n b. AWS, an early Muhammadian poet of the tribe of the Banu Muzaina. His period can be established with some accuracy. From the Kitâb al-Aghâni we know that he composed a panegyric on Omar I. and a lampoon on 'Abd Allah b. al-Zubair for his lack of hospitality; the latter is preserved in the Aghâni as is the beginning of the former. The panegyric survives also in the Divânî, where it is dedicated to 'Omar's son 'Asim. The Aghâni further records that Ma'n lived to the beginning of the fitna between 'Abd Allah and Marwân b. al-İskak, i.e. to 64 (684). The poet must therefore have been born about the beginning of the Muslim era. The Aghâni further gives details of his private life and the Divânî also gives similar information. He had an estate in Arabia and made journeys to Syria and the 'Irâq. One of his wives came from Syria. He also took part in the wars of his tribes. In his old age he became blind.

Up till recently all that we knew of Ma'n's poems were the fragments preserved in the Aghâni and elsewhere. P. Schwarz however discovered in the Escorial an incomplete manuscript of the Divânî with a commentary, the work of al-Kâlî [q.v.] which he published in 1903 with a short introduction and translation of the notices in the Aghâni. H. Reckendorf supplemented this. In 1927 Kamûl Mustafâ published an edition in Cairo. It lacks some poems given by Schwarz; on the other hand it has two fragments not given by him. The introduction is part a literal translation of Schwarz, who is mentioned by name. It is not clear from where the edition is based. It seems however to be based simply on Schwarz's edition with new manuscripts and, compared with it, only shows corrections of the text and omissions and additions from other sources.

(M. Plessner)

Ma'n b. Muhammâd b. Ahmâd b. Şûrûhû at-Tânûbî au-l’Awáq ou Abd Ya’bû, founder of a dynasty in the little principality of Almeria, in Eastern Spain in the middle of the 14th century A.D. The principality had been founded in 1025 by the two Amrîd "Slavs" Khârain and Zuhair. On the latter's death in 1037, their overlords "Abd al-'Azîz b. Abû 'Amir, king of Valencia, declared it his property and in 1041 placed his brother-in-law Ma'n b. Şûrûhû as governor there. The latter belonged to a noble family of Arab origin; his father had been one of the generals of the celebrated Hâdîjib al-Mansûr [q.v.] and was governor of the town of Huesca. Ma'n remained loyal to the king of Valencia for nearly four years, then cast off his allegiance and declared himself independent. He reigned at Almeria for a few years longer and died in Ramada'ın 443 (Jan. 1052).

Ma'n b. Zâ’îda, Abu l-Walîd al-Salîmî, a Muslim general and governor. In the Omayyad period Ma'n was in the service of the governor of the 'Irâq, Yazid b. 'Omar b. Hubâra, and took part in the fighting against the 'Abîd rebel 'Abd Allah b. Mu'âwiyah and the general of the 'Abâsîd bâdâhà Kâhumah b. Shabbîb as well as against his son al-Hasan. He thus gained the enmity of al-Mansûr and after the murder of Ibn Hubâra had to escape to the insignificance of the 'Abâsîds. But when the Râwândîs [q.v.] went to al-Hâshimîyya (probably in 141 = 758–759) and tried to storm the palace of the caliph, because he had had their ringleaders arrested, Ma'n came out of his retirement, drove back the rebels with his men and rescued al-Mansûr, who at once pardoned him and gave him the governorship of the Yaman. Here he favoured his fellow tribesmen, the Banû Rabî'a, while the Yamanis were treated with the greatest severity. He was transferred to Sidjûţ, according to the usual date, in 151 (768–769) and his son Zâ'îda followed him as governor of the Yaman. Soon afterwards, probably the next year, Ma'n was murdered in Burz by some Khârîjîs, who had gained an entrance to his house by pretending they were workmen doing repairs. 151 and 158 are given for the year of his death, in addition to 152.

(K. V. Zeitsestren)

Ma'n (Banû), Emirs of the Lebanon. Their political history begins with the Turkish conquest of Syria. We do not know if they were of Arab origin like the Banû Bohîr or Kurds like the Djinbîlî or Maghribî like the 'Abîd al-Yamîn, the Tallûk etc., who came to the Lebanon in the time of the Fatimids. While, in the 13th century, the biographer Mahbûbî (Khulafâ' al-Âthar âl'Amîn al-kârîn al-khâlî tâ‘arîkh, in 266) was collecting the records of the family of the Banû Ma'n, he found they were not agreed about the genealogy of their ancestors. But it is certain that they had long been in possession of the emirate of Shûf (Southern Lebanon). He is certain that they did not belong to the princely family of the Lebanon Taunîk. It is none the less surprising that in the monograph, which he devotes to the latter family (Târîkî Bellârît, ed. Cheikho) Sâ‘îh b. Yahyâ deliberately passes over the Banû Ma'n. The Banû Ma'n seem to have early adopted the teaching of the Druses. This step secured them the sympathies of the Druses of the Lebanon and
of the Wadi l-Taim at the foot of Hermon. In the latter district they were allied with the Shiḥbā emirs. Enfeebled by the struggles with the 'Alam al-Din—their relations and also their secular rivals—the Banū Tanūkh, themselves divided into Kaṣāf and Yamānī, underwent the fate of such exhausted organisms and ended by breaking up. The Maʿnīs were only waiting the opportunity to seize their political heritage. This was given by the Ottoman conquest of Syria.

On the eve of the battle of Dābīk (1516) between the Turks and the Mamluks of Egypt they divided in time to which side victory would incline and wiser than the Tanūkh declared for the Turks. Their chief at that time was the emir Fakhr al-Dīn I. He was one of the first of the Syrian chiefs to hasten to Damascus to congratulate Selim I on his victory. Favourably impressed by his protestations of devotion, the Sultan sent him back to the Lebanon with enhanced prestige and authority at the expense of the Tanūkh. In this accession of power, the Maʿnī emir was much assisted by Ghazālī, a traitor to the Mamluk cause, to whose fortune he had decided to link that of his family. We do not know how he escaped the catastrophe that overwhelmed him (Jan. 1521) his protector Ghazālī, who in the end played traitor to the Turks also.

In 1544 the emir Kurkās succeeded his father Fakhr al-Dīn and in 1585 there took place at Dārūn ʿĀkkār the plundering of the caravan which was taking to Constantinople the taxes collected in Egypt and Syria. The Ottomans accused the Maʿn of complicity and of having sheltered the criminals. Their troops invaded the Lebanon. The emir Kurkās shut himself up in the inaccessible rock of Shaṭīr Tiṣrin near Dārūn (Southern Lebanon) and died there of chagrin or poison (1585).

The most remarkable of the Maʿnīs was undoubtedly the son and successor of Kurkās, called Fakhr al-Dīn (1585–1635), like his grandfather. The partisans of the cause of independence in the Lebanon regarded him as a precursor and have never ceased to invoke the example of his efforts for his country. For an account of his career see the article on him (ii., p. 45). The conquests beyond the Lebanon and his relations with European powers brought down upon him the vengeance of the Porte. He had to go into exile in Italy and leave to ʿAli, the eldest and most gifted of his sons along with his own brother Yūnus, the administration of the Lebanon (1613). On a promise to dismantle the chief fortresses of the Lebanon the Porte recognised ʿAli and even, after five years of exile, allowed his father Fakhr al-Dīn to return to the Lebanon. His son ʿAli displayed no enthusiasm at his return (1618) The new conquests of his father soon began to disturb the Porte, who resolved to make an end of the troublesome Maʿnī vassal. Surprised by superior forces in the Wadi l-Taim his son ʿAli fell fighting bravely and Fakhr al-Dīn was taken to Constantinople and put to death (1635).

The Central and Southern Lebanon, “the Mountain of the Druses” as it was officially called, was then handed to the family of the ʿAlam al-Dīn, whose ambitions had never ceased from the beginning of the rise of the Banū Tanūkh, to thwart the efforts of all the rulers of the Lebanon. One of their first acts was to exterminate the last scions of the Tanūkh. This crime facilitated the rise to power of the Shiḥbā. Their excesses and the regret for the Maʿnīs soon made the ʿAlam al-Dīn unpopular. After their expulsion from the Lebanon the Maʿnī emir Muḥīm followed; his son Aḥmad succeeded in regaining a precarious authority under the jealous supervision of the Turkish Pashas. The more distinguished of the two emirs was Muḥīm, son of the emir Yūnus and nephew of the great Fakhr al-Dīn. He ruled for about 20 years. Both continued the liberal traditions of their illustrious ancestor. Like him they protected the colonies of Christian agriculturists whom he had invited from northern Lebanon and for whom he had built churches and monasteries.

Aḥmad, grand-nephew of Fakhr al-Dīn II, died in 1697 without leaving male heirs and the family of the Maʿnīs thus became extinct. Turkey could no longer have any illusions about the rebellious nature of the Lebanonese and their impatience under a foreign yoke. To assume the direct government of the Lebanon was not attractive to the Porte and would have forced it to undertake its conquest. The grave political crisis through which Turkey was then passing prevented a new expedition being undertaken, the risks of which were very well known. On the other hand the rule of the ʿAlam al-Dīn with official support had not given satisfactory results. On promise of the payment of an annual tribute, the notables of the Lebanon were authorised to form a general assembly at Sumkāntiya (province of Shuf) to elect a governor to inherit the legacy of the Banū Maʿn. Their choice fell upon the Shiḥbā emirs, allies and relatives of the old emirs.

### Bibliography:

See that of the article FAKHR AL-DIN and the notices of xvith century individuals scattered through Muḥīm's bibliographical work quoted above; among them i. 381–387: iii. 266 sqq. 209–303, iv. 396, 409, 426–427: Ḥidār Shībīn, Taʾrīkh, Cairo 1909, p. 709–717, 722–725, 731–741; Tanūkh Shīrāzī, Taʾrīkh al-ʿĀkām fi Ḥabl Lmjna, Bairūt 1859, p. 247–345: Ristelhueber, Les traditions françaises au Liban, Paris 1918, p. 18–21: H. Lammens, La Syrie, précis historique, Bairūt 1921, ii. 57, 66–94. (H. Lammens) MAʿN (A.) means in the old language sense, significance and is so used as a grammatical term. In philosophical language the use of the word varies from the most general to the most particular so that it is impossible to give a general translation for it. It occurs in quite untechnical connections as “thought”, “what is meant” or simply “thing” etc. but also has the special meaning of “conception” or as the Dictionary of Technical Terms, ed. by Spranger, has it “an image of the intelligence (ṭārā al-dhiḥna) in so far as a word corresponds to it, i.e. in so far as
it is meant by a word”. Horten has investigated the special meaning of the word in metaphysics (Was bedeutet als philosophischer Terminus; in Z. D. M. G., liv. 391 sqq.). According to him, manā is an “incorporeal reality” not merely a subjective conception. In this use it is regularly contrasted to sīfa.

The plural ma'nā is the name of a branch of study, namely, rhetorical style.

_Bibliography:_ in the article; cf. also the dictionaries and Tākhkoprūzdā, Misfāḥ al-Salātu li Min al-Ma'nāi. (M. Plessner)

_MANĀF_ is the name of an early-Arabian idol which was venerated by Kūrānā and Hadhālā, as may be concluded from the fact that among these clans the name ‘Abd Manāf “servant of Manāf” occurred. It is said that one of Muḥammad’s ancestors — the pedigree being Muḥammad b. ‘Abd Allāh b. ‘Abd al-Muttaṭāb b. Ḥādījim b. ‘Abd Manāf — received this name, because his mother consecrated him to Manāf, who was then the chief deity of Makkā.

Whether this last statement be true or not, it does not restore to life a deity whose individuality remains to us as dim as that of all its companions. Ibn al-Kalībī knows nothing of its whereabouts, except that menstruating women were bound to keep themselves at a distance from it.

The name does not occur either in the Kūrān or in classical hadīth. It derives from a root _n-z-f_, which in several Semitic languages conveys the meaning of “being elevated”.

_Bibliography:_ al-Tabari, ed. de Goeje, i. 1091 sq.; Wellhausen, Reise arabischen Heidentums, 2nd ed., p. 56 sq. (A. J. Wensinck)

_MANĀKĪB_ (A.), plural of manāka, means the merits and doings of a miraculous nature of celebrated holy persons of Islam, heads of schools, saints and founders of μανία. Other terms like karamāt, faḍā’il are used with the same meaning but less frequently. We have the titles or manuscripts of several works on eastern manākīb. Ḥāfīz Khalīfa gives a long list of them. Among the most notable may be mentioned the manākīb of ‘Umar b. al-Khaṭṭāb, of Ahmad b. Ḥanbal, of al-Shāfi’i and of Abū Hanīfa.

The literature of the manākīb assumed a special development in Morocco from the end of the middle ages. The majority of the shīfiʿkhs who played a part in the great renaissance of Islam in this country at that time had one or more monographs devoted to their manākīb after their deaths.

For a more detailed study of the place occupied by the genre of manākīb in the Arabic literature of Morocco cf. my Historiens des Chorfa; Essai sur la littérature historique et biographique au Maroc du XVème au XVème siècle, Paris 1922, p. 44—54 and 220 sqq. (E. Lévy-Provençal)

_MANĀRA, tower, minaret._

_Material, structure and adornment._ The use of brick or stone for manāras depended on the material generally used for building in the country in question. The manāras in Spain were therefore of stone so far as one can judge from those still existing in the African Maghrib mainly of brick, in Cairo of stone, in Arabia, Syria, Anatolia, Armenia and Mesopotamia of both, in the Ṭrāṭ, Persia and Fārgīstān of brick and in India of both. In Persia there are isolated exceptions, like the manāra in Kerāt, a structure of stone and lime with an outer covering of tiles; indeed stone and lime were very often used for the foundations and bases without affecting the character of the edifices themselves in brick. Of considerable importance from the artistic point of view is the outer covering of a layer of tiles in Persia and the Ṭrāṭ, from the variations and patterns of which the manāras receive their decorative exteriors; by alternating horizontal and vertical layers (hażirīhā, bonding), by alternating reliefs and depressions, ornamental areas are formed from which strips of ornament or script arise formed of tiles specially prepared for the purpose. The Turkestān and Timurī manāras are decorated with coloured glaze. In the post-Timurī period also the glaze continually appears, especially in the pair of minarets which now commonly flank the entrance to a mosque (Tabīz, Māghban, etc.). It is in the Guldesta, the balconies round the top, that the art of working decoratively in brick reaches its height. Here the necessary basis for the balcony was formed by brackets arranged in layers or rows of cells (stalactite-like cornices, maḥmānas).

_Object and Significance._ The term manāra or minār is applied to all Muslim towers. They were used not only for religious purposes as places from which to call to prayer and to mark mosques but also, as before the Muslim conquest, for profane purposes as watch- and signal-towers. The tower on the top of a hill at Kerāt in Khurasān (cf. below) is from its isolated commanding position intended as a signal-tower or column of victory and it shows that these towers were built in the Muslim period exactly like the manāras of mosques. In form and style these erection, serving different purposes, form one category, into which they also fall objectively from having the same name. There are a number of early references to such manāras, which were intended to be indicators for caravans and watch-towers (cf. Dict. Persien, Islam. Ik in Khurasān, p. 59). Such towers were however found all over the Asian plains and through China to the Pacific Ocean. Of course very few of them were works of art. There are a number of exceptions in the contemporary names for such towers, like that of Mahnuḏ of Gharzā which is called a _minare_ in an inscription (see below). One of the minarets of the mašūla in Ḫust is called simply _sumnart_ in the inscription (cf. Niedermayer-Diez, Afghanistan, p. 59). The _stanakhs_ or _litā_ erected by king Asoka in India between 250—232 B.C. may be claimed as precursors of the minarets of eastern Islam; although actually pillars of much smaller size than a minār, many of them already show the same division into a polygonal and a cylindrical section. Their object was also half religious and half monumental in character. They in turn came from the Indo-Aryan columns of wood which were put up from the earliest times as symbols of the deity. The Indo-Buddhist stambha of brick at Kābul of uncertain date is a connecting link between these and the earliest Muslim memorial towers in Gharzā (see below).

_Shape._ From this similarity just mentioned, it is evident that the manāras follow the traditional shape of the towers of the country in question. In the Mediterranean lands, as H. Thiersch has shown, it was the lighthouses and in Syria the watch-towers, dwelling- and church-towers that
were the predecessors in form of the manāras. The manwiyas of Sāmarrā and the manāra of Iba Ṭūlūn in Cairo again go back to old Oriental models. In Persia and Sijistān also, Nestorian church towers may have given the early manāras their square and polygonal shape (cf. Diez, Persien, 6. Ehe. in Kāhāsān, p. 75); but in the rivalry of shapes in the eastern empire the slender cylindrical manāra, which is often also called nil, won. It was the victory of the monumental building without windows over the western dwelling-tower with windows. Their earliest precursors were, as already mentioned, the Indian lāts. The observatory towers built by Sultāns Maḥmūd and Maṣʿūd III in Ghazna were built as memorials of victories like the Indian Ḍagastamāns. Their shape was suggested by India but remodelled by the spirit of Muslim Persia and given a character of their own (cf. Diez, op. cit., p. 76 and 151 sqq.).

The most monumental evidence of Indian inspiration is the Kūb Minār [q.v.] in Dehli (beg. of viith—xiith century; cf. M. v. Berchem, in Diez, Churasanische Baukunst, p. 109 sqq.). The fact that the Persians called them nil points to their ancestry, the primitive poles and pillars used as indicators. To such poles, which can still be found at the present day at saints' tombs, revered by the common people in the country districts of Persia, may perhaps be traced the square and octagonal decorative shafts of the city and mosque iwans, found in pairs in Persian towns with Turkish inhabitants and in Asia Minor. Although they are frequently in the shape of minarets and have a gallery, their object is as a rule merely decorative. Both groups of mansions, the square and the round, the hollow towers with a staircased winding up inside opening out on the gallery. In the old Persian minarets of brick, these galleries or guldest have been completely destroyed as they were made of wood. We must imagine them to have stood on arcades of cells with carved wooden railings, rafters and roofs such as may be seen everywhere in the surviving mināras at popular places of pilgrimage like Karbalā', Kūm and Maḥbād. A comparison with the galleries in the towers of the wooden churches of Eastern Europe (e.g. in Transylvania) points to the descent of the minaret galleries from wooden buildings of an everyday character.

Form and Significance of the Manāras.

In spite of the similarity of purpose there is a marked difference, indeed contrast, between the minarets of eastern and western Islam. The square and polygonal minarets of the Maghrib, Egypt and Syria are still essentially buildings for habitation; the cylindrical manāras of the eastern lands are on the other hand distinctly monumental buildings, pillars symbolic of the deity. The angular minarets of the west are divided into stories by moldings and have windows for communication with the outer world; they are usually heavy on a broad base, while in contrast the cylindrical minarets of the east incorporate the symbol of the absolute which has this form, the unique, the abstract; the irresistible ascension to the deity without transitions or stopping places. The minarets of the west remain individual towers, of which hardly two are alike; in the east of the viith (xiith) century the cylindrical form was already established as the absolute and only one, never to be altered nor made capable of ascension, as the only possible form of manāra. The minarets of the west thus remain ex-watch-, church- or lighthouse-towers without bells or lights, decorative survivals of a culture foreign to their nature; those of the east on the other hand were etherealized and became spiritual manāras. The Cairo minarets were an interesting sport in their shape; the Persian and Turkish on the other hand a confession of faith in monumental form. They soar up to the heavens with unimpeded vigour. The silhouette of their tiled decoration rises upwards on close inspection till finally the eye of the beholder is held by the marked effects of light and shade on the guldest. The form of the guldest however is chosen with an idea of magical effect. The spire rests on a gallery of cells, the secret of the construction of which the spectator cannot easily grasp and the decorative gallery of wooden rafters and railings glitters with bright colours above it. A coat of glaze and the gilt top reflect far and wide a magic reflection like the glazed domes.

Shape and Development of the Manāra in Different Countries—Syria is the original home of the square manāra, which there took over the old native form for watch-towers, dwelling-towers or grave-towers and the church-tower which succeeded them. Islam at first used the existing pre-Islamic towers as minarets, on to which mosques were frequently built, when old churches which already had towers were not taken over and adapted (cf. Bünnow in Thiersch, Pharas, p. 101). The oldest minarets of this kind are in Ḥarrān, the land of stone building ṣawt ḫayyām, which contained many old decaying stone-towers (Bosra, manāra of the mosque of Omar b. al-Ḳaṭṭāb, inscription of the time of the Caliph Omar, Dār al-Muslin etc.). In Damascus the two southern minarets of the Omayyad mosque begun by Walīd in 675 [765?] belonged to the old church of St. John, while the northern minaret was a completely new building of Walīd’s. This is therefore the oldest independent Muslim manāra. The manāras of the Omayyad mosque became models not only for Syria but through the Omayyad migration to Spain (Cordova) for the Maghrib also. Wherever we later find in Syria the Egyptian tower-form, there is always a definite Egyptian influence present and as a rule they are Mamlik foundations. It is still hardly possible to compile a chronological list of Syrian manāras (cf. Thiersch, op. cit., p. 99—110 and the illustrations).

Palestine. In this country on the borders of Egypt, the influence of the latter country made itself felt. The octagonal manāra on a square base predominates. The manāra of the chief mosque in Ghazza shows an octagon diminishing in width by successive stages, while the minaret of the mosque of al-Ḥāshim there has the same diameter throughout and is only divided into four stories with windows by large moldings. The smaller mosques have short squat octagonal towers. The manāra of ʿAlī Bakka in Hebron is half rectangular and half octagonal with a high mihrāb-like niche in the lower story. The octagonal tower is found as far as Jerusalem, where it meets with the northein Syrian square towers. The latter is again found at Ḥārām al-Sharif and in the mosque of Sīdī Omar beside the Church of the Holy Sepulchre and along the coast in Jaffa, Ḥaifa, Sidon, Tyre and Baitūt, and in the interior in Tiberias, Ṣafad, Nablus, etc. On the other hand
Khusrawgird near Sabzawar in Khorasan: Manara of 505 (1111)

Gharna: Manara of Mas'ud of 495 (1101-1102)
Cairo: Mināras of the Mamlūk period
Sangbast near Mashhad in Khorasan: Manara of a Ribat, 11th (xiith) cent.

Cairo: sketches of the two Manaras with outer covering of the Mosque of Hakim
the manāra in Ramla of the viith (xiiith) century is unique with its buttresses and pointed arches and dwarf pillars and columns. Thiersch takes it to be a copy of the most celebrated Christian tower of the country, the bell-tower of the Holy Sepulchre built in 1160—1180 in Jerusalem, of which only the base is still standing; (cf. Thiersch, op. cit., p. 119 sqq. and the pictures there).

Egypt. The oldest manāra in Egypt is the tower of the Djāmī’ b. Ṭullun. Like the Mahlīya of Sāmarrā, this minaret stands outside the masque and resembles them in form also, although it differs in its material which is limestone. The first storey is a square tower with a window with horsehoe arches, the second is cylindrical and an outer staircase leads up around them. The two upper octagonal stories are later in date, having been erected by the Mamlūk Sulṭān Lāḏīn. Nothing final can be said about this manāra, apparently erected by a foreign architect and combining a number of foreign influences. The manāras next to it in time are the five towers of hewn stone of the mosque of Hākim with their covering of tiles of a later date; they must be contemporary with the mosque, which was built in 393—404 (1002—1013), and were covered by Ballāris II and given new spires (703 = 1303—1304). They are of different shapes. The northern tower is cylindrical on a square base, the southern has a square lower half and four octagonal upper stories, each narrower than the one below it, the first of which has four semi-cylindrical cornices in the corners. The decoration in relief on the stone has analogies in the gateway of the same date (pictures in Diez, K. d. isl. Vulk. 1, p. 58; 2, p. 54). Of these two towers the southern one may be considered the ancestor of the minarets of Cairo. Its square-octagonal form, usually crowned by a cylindrical storey, survives. The further development is limited to the proportions, which aim at greater elegance and slenderness, and the breaking up of the surface with niches and muqarnāt cornices. Towards the end of the second Mamlūk period, say under Khalīfa ‘Abd al-Ḥamīd, it reached its culmination. The manāra of the mosque at his tomb was never to be surpassed in grace and wealth of ornament. A list of the most important minarets of Cairo between 1000—1356 a. n. is given by Thiersch with many illustrations.

Arabia. As in Palestine, in Arabia there was no native type of manāra and indeed Arabia never developed any sacral architecture with a character of its own. The minaret of the mosque of Walīd in Medina may have been Syrian in form. The manāras at present standing in Medina belong to the sixth restoration of the mosque by Kā’īr Bāy in 888 (1483). They are slender minarets of the Mamlūk type with octagonal and cylindrical stories. The seven manāras in Mecca, the sanctuary of which was ten times restored, only show modern forms of tower, frequently influenced by the slender Turkish form (cf. Thiersch, op. cit., p. 123). Two slender round minarets of the ixth (xvith) century still flank the ruined mosque on the island of Bahrain (cf. Diez, Jahrb. d. as. Kunst, 1925, ii. 2).

Maghrib. The oldest gawmā’s, as the manāras of the Maghrib are called, in Africa is in Kairūnā, the massive three storied tower of the mosque of Sidi Ẓokhā of 105 (724). The two upper receding stories with blind niches are probably of later date than the unadorned upper storey with loopholes on three sides and three windows only on the side that looks on the court. The cistern in the basement and the measurements of this tower which are exactly half those of the Pharas, suggested to Thiersch that it was an imitation of the Pharas. Another gawmā’s, also of the iiith (viiith) century was the minaret of the Djamī’ al-Zāhīna in Tunis before its restoration in the xviith century. Old pictures of it show a plain square lower storey with a narrower octagonal upper storey and the platform on top enclosed by a breez-high parapet with a pillared gallery. Of this probably only the lower part is old, while the second storey and the parapet date from the restoration of 1653 (pictures in K. d. O., ix.; Kuhn, Maurische Kunst, vi.). Egyptian influence, in so far as such existed, extended to Tunis. West of Tunis begins the Spanish sphere of influence, the model for which was the gawmā’s in Cordoba built by ‘Abd al-Rahlān III in 339—340 (951) and destroyed in 1593. A description of it is given by Idrīs (c. 548 = 1154). According to him, the minaret of Cordova was a high quadrangular tower, square in plan, the sides of which were richly adored with inscriptions in relief. The upper termination terminated in two rows of blind arcades probably like those still to be seen in the mosque of Cordova and on other minarets of the Maghrib. On the platform was a second, probably also square, storey with four doors and upon the dome which crowned it shone three balls of gold and two of silver and lily leaves (cf. Thiersch, op. cit., p. 127). This minaret however had a predecessor in a more modest tower built by ‘Abd al-Rahlān I, the model of which according to Marqāṣ (Rev. Afr., 1906) was Walīd’s minarets in Damascus. The second, imposing and splendid, minaret at Cordova seems to have served as a model for the gawmās of Seville and Morocco. At the same time we must consider the claims of the minaret of the Ka’āfa Bani Ḥammād built in 593 (1191), the only tower that survives of the Fatimid period, which was half destroyed by the Almohads in 1572 (cf. Saladin, Bull. arch., 1904, p. 243 sqq.). It is a high square tower of hewn stone, smooth on three sides and embellished on the courtyard side only with shallow blind niches and balcony doors in three layers above one another (pictures in Thiersch, op. cit., p. 150; Kuhn, op. cit., xviii.; Saladin, Manuel, p. 217; Marqāṣ, Manuel and op. cit.). This tower already shows the scheme of decoration of the Giralda and allied towers, namely the vertical combination of two windows or doors of the middle axis above one another by flanking double high shallow niches. The most contemporary Giralda in Seville of about 1290 a. d., the so-called Tower of Hassan in Rabāt and the Kutubiyah in Marrākush are allied to it, the two latter of the viith (xvith) century (pictures in Thiersch, Kuhn, Marqāṣ), all square with narrower square top stories, of which only that of the Kutubiyah still survives. These towers already show the system of decorating the surface now becoming typical in the later Maghribi manāras, the network of geometrical patterns in high relief and the beautiful windows with horsehoe and toothed arches and muqarnāt niches. In the other towers of Morocco, in Fez, Tetouan, Tangier, etc., are more modern minarets. The characteristic type of Algeria is best seen in the numerous minarets in Tlemcen, mainly of the xiiiith—xivth
century. They continue the form, characterized above, only the geometrical decoration in relief gains the upper hand and the windows disappear; their appearance is not quite so solid. On the other hand, the huge minaret of the great mosque of Manārā is highly thought of in Morocco for its size as well as its decoration, because it was built by a Moroccan Marinid (701–702 = 1302). The square tower therefore dominates the whole of the west. It is only later in the xvi century that we find the octagonal tower appearing in Tunisia, which Saladin attributes to Hanafi influence.

The 'Irāk and Syria give a picture of great development similar to that of Persia and the lands east of Persia. The oldest mināras still standing, the two mawlays in Sūmārūn of the viith (xvi) century, have remained the only examples of spiral towers but they are significant monuments of the early Muslim Arab variation of Babylonian architecture (the spiral as motif). These genuinely Arab buildings were followed by a reaction towards the Mediterranean style with square and octagonal towers and with the coming of the Turkish peoples and Seljūk rule the cylindrical minaret, usually on a polygonal base. The following list is given by Herzfeld (Arch. Reis., ii. 229): Raḥṣa, mosque extra muros, rectangular tower of the ivith (xith) or viith (xith) century; Raḥṣa, intra muros, a round tower. Nur al-Dīn 561 (1166); Abū Hurayra, round; Kūy, octagonal, 589 (1193) to 615 (1218); Ibīl, round on octagonal base 586–630 (1190–1232); Sūnḏār, round on polygonal base 598 (1201); Baghādād, Sūḥ al-Ghāzāl, round on a base (560–1232): Mūṣal, minaret of the great mosque, round on a cubical base: Mūṣal, minaret of the Kāfa, round on a cubical base: Mūṣal, Manārā al-Makāna: Tālūk, round shaft on a polygonal base. In addition there is the unique octagonal minaret built of small broken stones with a covering of plaster, on the island of Anā in the Euphrates of the viith (xvi) century (Herzfeld, op. cit., ii. 319, and PI. 137) and the bulk of the later minarets from the viith (xvi) century onwards, which repeat this type.

Persia. The oldest mināras of Iran and the countries adjoining on east and north, Afghanistan, Sūlījestān and Turkестān seem to have been usually octagonal, as the ruin of the minaret, possibly of the viith (xvi) century in Zāandād, Nād Aḥī, Sūlīj̣estān (now 25–30 feet, originally twice as high; cf. G. P. Tate, Scitūn, Calcutta 191o, p. 202 and Plate) shows. The models for these earliest mināras may have been the watch-towers found all over the Asiatic steppes, hence the blind window and the great diameter. Octagonal mināras still exist in Amīrin, Sūlīj̣estān (viith–xvith century): octagonal with cylindrical upper stoupy are the two observatory towers of Ghāna of about 410 (1019–1020) and 495 (1101–1102) (the original height was estimated at about 140 feet); the inscriptions on the two towers only say that their erection was ordered by Mālḡūr and Mašʿūd respectively, both with full titles; cf. Diez, Chur. Bdk., p. 162 sqq. Counterparts to these towers in two parts, which are the mināras in Sīrwān, east of Herāt (c. 100 feet high) and Herāt in eastern Khurāsān (c. 80 feet high), with octagonal bases and cylindrical shaft, both of the ivith (xith)–xvith (xvn) centuries. Cylindrical minarets of the ivith–xvith (xvn–xvith) centuries still survive in Persia and the land east of it in Sangbast, Fīrūzābād, Kāšān.
nāra in the Muslim world, are built of red sandstone, the two upper, which have been restored, of white marble with layers of sandstone. The pavilion which once crowned the top fell down in 1863 during an earthquake and was put up again on the ground. The exterior is of angular and round flutings and ornamented with inscriptions from the Kūrān. There is no reason to doubt that the numerous mosques of the Pathan dynasties also had minarets but most of them seem to be destroyed and so far as I am aware no one has yet studied the subject. Isolated surviving manāras like the detached slender round minaret of the Lat-ki-Masjid in Ḥiṣār show however that they were usual (cf. Arch. Surv. India, Annual Report, 1913—1914, Pt. I 1913—1914, Pl. 1). But their occurrence in India was confined to particular areas. The mos-ques of Djiwānpur, Sirkej, Manda, Kulīrbagh and other places usually of the xivth—xvith century have no minarets. On the other hand they are characteristic of the xivth—xvith century mosques in Aḥmadābād, built in pairs flanking the doors or at the corners of the surrounding wall, as in the Mongol mosques of Persia. In shape, the towers of Aḥmadābād are quite Indian with well marked outlines, many mouldings outside and three to six galleries. In the Moghul empire again the smooth round or faceted minaret of Persian origin again became predominant but was hindusted by the pavilion placed on the top and by other alterations.

Bibliography: The fundamental monograph on the manāra is Herman Thielsch, Phares en Antīke, Islam und Occident (G. B. Teubner, Leipzig and Berlin 1909); where references are given to the detailed literature. Further general works: E. Diez, Die Kunst der islamischen Völker (Supplement to Hölch. d. Kunstwissens- schaft, Wildpark-Postdam, 1 1915; 2 1927); Saladin, Manuel d'art musulman, Paris 1907; new ed. by G. Marçais, 1926; cf. also M. v. Berchem’s article ARCHITECTURE in this encyclopedia. — For the separate countries:

MANĀT, an old Arabian goddess. Her character can only be deduced from her name, which may safely be connected as a plural (for manātān) with the Aramaic monātā, plur. monātān, portion, lot, Hebrew manāth, plur. manāthān and also with the god of fate mani, Is. lv. 11 (cf. lxx.). In Arabic we have corresponding to it, maniyā, plur. maniyān, “a portion, fate, especially of death”. She was therefore a goddess of fate, especially of death. Her main sanctuary was a black stone among the Hudhailis in Kūdulādī, not far from Mecca on the road to Medina near a hill called Meššallāl. She was however worshipped by many Arab tribes, primarily by the Aws and Khazād in Yathrib. In Mecca she was very popular along with the goddess al-Lāt and al-ʿUzza [q. v.]; the three (according to the Kūrān) were regarded as Allah’s daughters, and in a weak moment Muhammad declared their worship permitted (cf. Sūra liii. 19 sqq.). The obscure expression “Manāt, the third, the other” is probably due simply to the rhyme. According to Ibn al-Kalbī, she was the oldest deity, whose worship gave rise to that of the others, because names compounded with Manāt occur earlier than other theophoric names. Another view is found in the poem of the two daughters of Ibn Ḥishām, p. 145, where “the two daughters of ʿUzza” are Manāt and al-Lāt. As an independent deity we find her in the Nabatean inscriptions of al-Hıdır, where ʿUzza (the Aramaic plural form; cf. above) is often found along with Dūshārā and others. Manāt is connected in a peculiar way by some writers with the great ʿūdṣī [q. v.], for we are told that several tribes including the Aws and Khazād assumed the ʿūdṣān at the sanctuary of Manāt and on the conclusion of the rīts cut their hair there and dropped the ʿūdṣān [q. v.]. Wellhausen sees in this an erroneous confusion of an independent pilgrimage to Manāt with the great ʿūdṣī, as later writers acknowledge none but the latter; it is however possible that some such confusion may really have taken place in pagan times.

That Manāt was also a domestic deity is evident from the story in Ibn Ḥishām, p. 350 (cf. Wākīdī, ed. Wellhausen, p. 350). The destruction of the
great sanctuary in Kudaid after the capture of Mecca is attributed by some to Abū Sufyān, by others to ʿĀli, according to Wādīdī, op. cit., Ibn Saʿd, tituli. 15, 25, to the Awst Saʿd b. Zaid.

MANAZERD. [See Malāgerd.]

AL-MANĀZĪL (A.), pl. of al-manāzil, more fully manāt al-kamar, the stations of the moon. Just as for the sun the zodiacal circle is divided into 12 stations each of 30°, so which it traverses in the course of a year, so the course of the moon is connected with 28 groups of stars, each of which corresponds to one day of its course, so that on an average each is an arc of 13° apart. The settings of the sun at these stations, Arabic now, pl. awār, are of decisive importance for the beginning and forecasting of the phenomena of the weather and the fertility or otherwise of a year which depends on them, i.e. for the peasant’s calendar. As regards the testimony of the Arab poets, the reader may be referred to the verses given by al-Kāwīnī. M. Steinschneider in particular has published very thorough investigations of the importance of the stations of the moon among the Hindus and Arabs from Arabic, Hebrew and late Latin sources. The Arabic names of the stations and the constellations belonging to them are as follows:

1. al-Sharrūt, “the two signs”, also al-ʿArāf, the horns of the Ram (γ Άριες).
2. al-ḥaṣrīn, “the little paunch”; the paunch of the Ram (δ Άριες).
3. al-Lāqūr liwā, “the pleiades” [q.v.]
4. al-Ḥabūrīn, “the Aldebaran” (α Tauri) with the Hyades.
5. al-Ḫakī, three small stars on the head of Orion.
6. al-Hiwa, the stars al-Zīr r and al-Maṣāṣ (ζ Geminorum).
7. al-Līgpūrī, “the Lion’s Paw”; Castor and Pollux (α, β Geminorum).
8. al-Nūhūrī, “the nostril” of the Lion or fence with asses (in Cancer).
9. al-Ṭūrī, i.e. Ṭūr al-ʾAṣd, “the eye” of the Lion (ξ Cancri = Leonis).
10. al-Dīyākha, i.e. Ḥabīl al-ʾAṣd, “the forehead” of the Lion (γ Άλεξ).
11. al-Zubrā, i.e. Ṣubrāt al-ʾAṣd, “the mane” of the Lion (δ Leonis).
12. al-Sarjū, “the weathercock” (β Leonis).
13. al-Sawwār, “the barker” or Dogs (α, β Virgins).
15. al-Gafr, “the cover” (φ, υ Virginis).
16. al-Zubr, i.e. Ṣubrāt al-ʿAṣrāb, “the pincers” of the Scorpion (α Scorp. Librae).
17. al-Riḥl, “the crown”, i.e. the head of the Scorpion, the three stars (α, β Librae).
18. al-Kālī, “the heart” of the Scorpion, the Antares (ξ Scorp.).
19. al-Shawla, “the tail” or sting of the Scorpion (α Scorp.).
20. al-Nāṣib, “the ostriches”, 8 stars in Sagittarius (γ, δ, ε, ζ, ξ, η, θ, ι Sagitt.).
21. al-Balda, “the town”, an area in Sag. without stars.
22. Saʿd al-Dāhili, “the luck of the slayer” or sacrificer (α, β Caprici).
23. Saʿd al-Bul̄ūs, “the luck of the devourer” (α, β Aquar.)
24. Saʿd al-Sāqīd, “the greatest luck” (β Aquar.).
25. Saʿd al-Aḥli, “the luck of the tents” (ζ, τ Aquar.).
26. al-Faṛq al-aṣwāl, “the fore socket” on the pail (α Pegasi).
27. al-Faṛq al-maḥthan, “the hinder socket” on the pail (γ Peg. + Androm.).
28. Bāṭn al-Hāt, “the fish-belly”, a number of stars in the form of a fish (Androm. the brightest).

MANBIDJ (Bambylue, Hierapolis), an ancient city in northern Syria, two days’ journey or 10 farsakh N.E. of Halab, about 3 farsaks from the Ephruses. It lay in a fertile plain, and had a double wall built by the Greeks. According to Ibn Khurad-ad-dībīhī, there was a very fine church there, built of wood (B. G. A., vi. 161 sq.). Ps. Dionysios (ed. Chabot, p. 47, 68) mentions a church of the Virgin and another of St. Thomas in Manbīdīj; there were no buildings in the neighbourhood of the town (Najīrī Khursaw, ed. Schefer, p. 31); Abu ’l-Fida’ mentions the many canals, fruit- and particularly mulberry-trees there, the latter for the silkworm culture. As K. Ritter (Erdkunde, x. 1057 sqq.) shows, the name Ṣubūrī for the silkworm can hardly be connected with “Bambye”, the old name of Manbīdīj; on the other hand, the Levantine trade-name bombaceo, bombagio, common in the middle ages for raw cotton, seems to be derived from Manbīdīj; it is perhaps also concealed in the name of the ancient Phrygian Hierapolis, Pambuk-Kale (as early as Michael Syrus, ed. Chabot, i. 148; Mabbug in Phrygia). The Arabs called the houses made in Manbīdīj, manbīdīnīya (Lammens, Fämita, Rome 1912, p. 71).

Kamāl al-Dīn b. al-ʿAdīm gives the following account of its origin: Khursaw [1] built it, when he conquered Syria (in reality the town in 540 A.D. ransomed itself from a threatened siege by paying tribute), built a fire-temple there and made a certain Yazdānī of the family of Ardashīr b. Bābak its governor. According to other authorities, Manbīh was the name of the fire-temple from which the town took its name (Ibn al-Shihāna, al-Daur al-muntakhab fl ʿārīkh Halab, ed. Sarkis, Biarūt 1909, p. 227). Ṣubūb (Agapios) b. Kustānjīn of Manbīdīj says in his history of the world written
in the tenth century, at the end of the history of the patriarchs (ed. Vasilev, Patrol. Orient., v. [1910], p. 664): "in the year 31 after the birth of Levi, the son of Jacob, queen Samrin built a great sanctuary for the worship of the idol Κύτταρα in a town on the banks of the Euphrates (?), installed 70 priests and called the town Hieropolis (Ḫarmābū; جمیع), i.e. the City of the Priests; this was the town Manbijī al-‘Āthā). For Κύτταρα Ḫarmābū should be read; on the coins of Hieropolis this deity seems also to be depicted (Wroth, Catalogue of the Greek coins of Galatia, Cappadocia, and Syria (Brit. Mus.), 1899, p. liii.), and the Armenian Epiphanius (ed. Finck, p. 12) says: "Erapolis consists of 3 towns: it is called Mappech; in it is the idol Kayana"; with Freuensch (Gotting. Gel. Anc., clxviii. [1903], II, p. 837, note 3) we should here also read Kayawan.

In reality Manbijī seems to have been known to the Assyrians (as Nappigi or Nampli in Salmanassar, Karhāh-Monolith, rev. 35; Johns, Assy. Bibl., xvii. 11, 82; cf. also Bambaki on the cuneiform tablet Brit. Mus. K 180, in Johns, Assy. Birds and Documents, No. 773; Chyerey's Encycl. Bibl., s. v. 'Carchemish'). If the name is of Semitic origin, it perhaps goes back to a Syriac word Ṣarmagē, "spring" (Noldeke, Nect. G.G.W., 1876, p. 5–8). The Greeks knew as the name of the town besides Hieropolis (on coins always Hieropolis) also the native form of Msābōn (rarely Bambōn; Papyr. Oxyrh. xi. [1915], p. 197, col. v., i. 100); in the common proper name Msapjaōs, etc., Nábataean Mambōgitā, the name of the town is concealed (for references see Pauly-Wissowa, Realen., suppl. vol., iv., p. 733). The town which at first was included in Kyrhirissēk and afterwards was made, probably by Constantius, the capital of the Syrian Euphratesia, played an important part in ancient times as the centre of the worship of Atargatis. Barḏaṣaṭīn was brought up here by a heretic priest Antiḏūbar and his son Kudūz. After the triumph of Christianity, the pagan cult was supplanted by the worship of holy relics, which also brought numbers of the faithful to Bambakte (Procopius of Gaza, Panegyr., ch. 18, in Migne, Patr. Grac., lxxxvii., iii, col. 2817). From the third century onwards the town is frequently mentioned as a place for the concentration of troops for campaigns against the east or for the defence of Syria. In the Byzantine period it was a great centre of the Monophysites, according to whose tradition Justinian married Theodora in Hieropolis; she is said to have belonged to the neighbourhood of the town (Michael Syrus, ii. 189). After the end of the Byzantine period, it was for a considerable period a stronghold of the Monorōites (Michael Syrus, ii. 412, 511).

In the year 16 Abū ‘Uthāda went to Halab al-Sāḏūr and sent ‘Uyāq b. Ghānim on to Manbijī. The inhabitants capitulated under the same conditions as the people of Antioch; when Abū ‘Uthāda reached the town, the agreement was ratified (al-Baladhuri, ed. de Goeje, p. 150; al-Yaḥyāi, ed. Houtsm, ii. 161; Ibn al-Šahīna, ed. Bairūt, p. 228; Gaetani, Annali dell’ Islām, ii., p. 792, § 251, p. 794, § 284, p. 797, § 290, p. 816, § 325). Manbijī seems to have enjoyed a certain degree of independence down to the time of Yazid I; the inhabitants of the town, for example, asked ‘Umar for permission to trade within the caliphate (Lammens, M. F. O. B., vi. 437, note 1). The vicinity of the town was settled by Yamani tribes (Michael Syrus, iii. 47), notably the Bani Taghlib (Lammens, op. cit., p. 445, note 1). Yazid, when he created the diwan of Khassarīn threw Manbijī into this military province (al-Baladhuri, p. 132; Lammens, p. 437 sgg.). Hārūn al-Rashīd separated it again, made it the capital of the frontier district of the "Awaṣim (q.v.) in 786 and appointed Abū al-Malik b. Ṣaḥīh b. ‘Alī as wali there in 173, to whom the town owed many buildings (al-Baladhuri, loc. cit.). In 131 (748) it was severely damaged by an earthquake, in which the church of the Jacobites collapsed during mass and buried many of the worshippers in its ruins (Pseudo-Dionysios, transl. Chabot, p. 42; Michael Syrus, ii. 510; Beethoven, Abb. d. J. Kundt d. Morgenl., viii/vii., 1884, p. 120). The brother of the caliph al-Muʿāṣim, al-‘Abbās, who had taken part in the mutiny led by the general Cdaif b. ‘Anbaa, was tortured to death by Ḥādar b. ‘Awdas the Ṣafān of Usrūšana, at Manbijī in 223 (838) (Tahari, iii. 1265; Ibn al-Asrīr, ed. Tornberg, vi. 349; Michael Syrus, iii. 101; Weil, Gesch. des Christl., ii. 320). The conquest of the town by Tullin in 264 (877–878) brought Manbijī also under Egyptian suzerainty (Ibn al-Šahīna, p. 228).

In the account of the évos êkhipiêw of Esdessa, said to have been compiled by the Emperor Constantine Porphyrogennētos, a miracle is mentioned that took place in the time of Christ at the kótroi Ἐραπόλος, ἦ τῷ κένοι Σαράκινοι ξώοι Μαμελίτη λεγεται, τῷ ἐν τοίς Σαράκινοι Λαμπρά (De imag. Esd., in Migne, Patr. Gr., cxiii., col. 432; better in von Dobschütz, Christusbilder, in Texte u. Unters. z. altchristl. Lit., xvii., 51ff.). Abgar's envoy, who was spending the night in a brickworks near Manbijī on his way back from Jerusalem hid there among the bricks the sacred handkerchief with the portrait of Christ Terrified by the bright light that issuing from fire, the heathen inhabitants of the neighbourhood carried next morning to the brickworks and found there a brick with a miraculous copy of the portrait, which they carefully preserved in their city.

The Ḡamīnī Saʿīd al-Dawla, soon after the capture of Manbijī in 947, made his cousin, the poet Abī Fīrīṣ, governor of Manbijī (Dīwān, Abī Fīrīṣ, p. 75). When the Domestikos Nīχēphōros Phocas invaded Syria in 962, Abī Fīrīṣ, who happened to be hunting outside the town, was taken prisoner by the strategos Būrus (Theodoros’ Petros’), a nephew of the emperor, and taken first to Khārēkhān and then to Constantinople (Dīwān, 98 sq.; Weil, ii. 17) where he wrote poems full of longing for Manbijī and his mother there (Dīwān, p. 300, 323, 323 sq.). In 966 when emperor, Nīχēphōros encamped before Manbijī and made the people of the town produce the sacred brick (m-Ḳirmand, i.e. m-Ḳirmand) but did them no other injury (Yahyā al-ʾAntīk, Kol. Parisin. Bibl. Nat., anc. fond ar. No. 151 A, fol. 96v; the translation by Freytag, Z. D. M. G., xi. 212, has been corrected by Rosen, Z. Zeit. Imp. Akad. N. i., 1883, pp. 97–98, note d.). The Byzantine writers who apparently did not know that Ḡamīnī was the Arabic name of Hierapolis and sought to locate it in Palestine or near Hims, wrongly make Nīχēphōros take Manbijī in 968 and carry off the brick and some hair from the head of John the Baptist (which was only done
by his successor (Leo Diaconos, Bonn, iv. 10, p. 71; John Skylitzes, ii. 364; Zonaras, xvi. 25, p. 503; Glykas, Bonn, p. 569 etc.) but this statement cannot be reconciled either with the route given for his campaign of 968 (cf. v. Dobschütz, op. cit., p. 172, note 1; Schümberger, Nicola Phocas, p. 704—706, note 5), nor with the bounds of his conquests given by Kamal-al-Din (in Freytag, Z. D. M. G., xi. 232). It was his successor John Tzinisis, who first took the fortress (ἀπολόγια) of Manbijid in 974, and found there Christ's sanctuary and some still bloody hairs of John the Baptist, which he brought as relics to Byzantium (Leo Diaconos, x. 4, p. 165).

In the year 1025 the Mirdâdis Şâlih took the town (J. J. Muller, Historia Jerusalemarum ex Halchensibus Compendiis annalibus excerpta, Bonn 1819; Rosen, op. cit., p. 68). By the treaties between Mahmund and 'Atiya [cf. 'Ali al, ii., p. 345] Manbijid passed in 456—457 to 'Atiya (Muller, op. cit., p. 56 sq.). In 472 (1079—1080) Tâdj al-Dawla Tuttuh occupied the town (Muller, p. 88). The emperor Romanus IV Diogenes took it on his Syrian campaign in 1068 and strengthened the defences of the citadel (John Skylitzes, Bonn, ii. 673, 675, 685; Michael Attaliates, Bonn, p. 168 sq., i. 106, 110: Zonaras, xviii. ii. 26, Bonn, iii. 691; Michael Syrus, ii. 168; Matthæos of U'hây, transl. Daularker, p. 162; Weil, iii. 112; Kamal-al-Din, transl. Muller, op. cit., p. 63 sq., where it is wrongly stated that Manbijid remained Greek for 70 years). It was not till 479 (1086) that Malik-shâh deprived the Greeks of Manbijid and al-Ruba', and gave the rule over Halab. Hamâ, Manbijid and al-Lâdihiyâ to Al-Sonkor (Ibn al-Athir, x. 98: Weil, iii. 131).

In 504 (1110—1111) the Franks conquered Manbijid, occupied and plundered the town and advanced as far as Bâlis which they burned (Rohricht, Gesch. d. Kyr. Jerusalem, p. 88; Weil, iii. 193, according to Michael Syrus, ii. 215, probably wrongly, in the year 502). But they lost Manbijid again in the same year (504) (Abu 'l-Fadâ', Annals Musulm., ed. K. E. iii. 370). Baldwin II in 513 (1119) invaded the lands east of Halab as far as Manbijid and al-Nûkra, and Joscassin, in the following year, on the pretext that one of his followers had been imprisoned in Manbijid and that no compensation had been given for him to it, plundered the lands of al-Nûkra and al-Ahâz (Recueil hist. or. crois., iii. 623, 625). When Nûr al-Dawla Balag enticed the amir of Manbijid, Hassân al-Balâbakkî, with his power and then imprisoned him in Fâli, Hassân's brother 'Isa seized the citadel of Manbijid, which Balag then attacked with siege artillery (1124). 'Isa then appealed for help to Joscassin and had him proclaimed lord of the town, but Joscassin suffered a severe defeat before the walls of the town. On the next day, however, Balag was mortally wounded by an arrow shot by an unknown hand (according to Kamal al-Din, by 'Isa himself: according to Matthæos of Edessa, by a certain archer). In 518 (1124) Hassân was liberated and returned to Manbijid (Ibn al-Athir, x. 436: Michael Syrus, iii. 211; Matthæos of Edessa, transl. Daularker, p. 311 sq.; Rohricht, op. cit., p. 161 sq.). The Crusaders never again took the town after the brief occupation in 504. Although we know of Frankish archbishops of the town (cf. William of Tyre, xiii. i. xv. 14, xvii. 17) one of whom Francesco took part in the Council of Antioch of Nov. 30, 1139 (Rohricht, op. cit., p. 223), we also know that they did not reside in Manbijid itself but in Dülük (Dolichè) (Michael Syrus, ii. 191). In the old French text of William of Tyre, the archbishopric is called Gerolpe (ed. Paris, i. 489: ii. 68, 167), a name which has often been identified with the modern Djeurâlis (Dirâlis) (Rey, Les colonies franques de Syrie, Paris 1883, p. 315; cf. also Bischof, in Aussenl. 1873, p. 136). This equation must however be rejected on general grounds (Hogarth, Annales of Archbishops, and Anthr., Liverpool, ii. [1909], p. 166, note 2) as well as historically (Djeurâlis = Syr. Agropoli, Euphoros).

The Atâbeg Imad-al-Din Zangi in 521 (1127—1128) seized the towns of Manbijid and Hîn Bîsa'n and entered Halab on the 17th Dümâda II, 522 (Recueil hist. or. crois., i. 17, 330; ii. 69). The emperor John II Comnenos on his campaign against Zangi (1142) only captured Bîsa'n (Tirat), while he passed by Manbijid (τὸ βῆματζ) because, as Niketas (Bonn, p. 37) disparagingly remarks, it was considered easy to take and lay in the hollow of a valley (ὡς ἐκταχθηκὼς κράτος καὶ τοῦ περίφορος κείμενος ὑπάρχοντος), a statement, which in view of the lack of success at the sieges of Halab and Shâiraz hardly seems credible. Anna Comnenus mentions (Bonn, i. 331) a certain Βεμπεμπέτζις (i.e. al-Manbijid), τὸν παρακότα ἀπὸ τῆς ἐλγεμένης καχουμ', as in the Byzantine service; but the Byzantines never occupied the town itself or its territory.

An amir Hassân of Manbijid, probably a descendant of the same name of the Hassân already mentioned, distinguished himself frequently in the fighting against the Crusaders, especially by the capture of Tell Bâshir on July 8, 1151 (Kamal al-Din, transl. Blochet, R. O. L., iii. 536 sq.; Rohricht, Gesch. d. Kyr. Jerusalem, p. 197, 268, note 3, 281). He was succeeded by his son Ghâzi (Kamal al-Din, op. cit., p. 543). He rebelled against Nûr al-Din from whom he had received Manbijid as a fief. Nûr al-Din sent troops to Manbijid, deposed Ghâzi and made his brother Kutb al-Din Imâl (in Kamal al-Din: Niyâl) his successor (R. O. L., iii. 543: Recueil hist. or. crois., iii. 121). After ruling for eleven years, this well beloved amir, who had built a Hamâni school in Manbijid (R. O. L., iv. 544), was deposed in 572 (1176—1177) by Saladin (Recueil ii. i. 46 sq.; iii. 241; iv. 132; Michael Syrus, iii. 266). According to a note in Kamal al-Din (R. O. L., iv. 147), in the same year (572) Ghars al-Din Khâlid set out with his followers to Manbijid against al-Duwaik to whom Malik al-Nâsir had granted the town as a fief; but this al-Duwaik is otherwise quite unknown. Taqî al-Din 'Umar of Hamâ, a nephew of Malik al-Nâsir who was in Manbijid in 577, wished to bar 'izz al-Din's way to Halab; when he failed in this, he retired to Hamâ, but was not allowed to enter it by the inhabitants (R. O. L., iv. 156). Imâd al-Din attacked Manbijid in 578 (1182—1183) and laid waste the country round it (R. O. L., iv. 162). Saladin made his brother Malik al-'Adil governor of Manbijid and he went there in Rama'dân 579 (1183—1184) (Rec. or. hist. crois., iv. 249). He seems to have spent most of his time in camp, for in 582 (1186—1187) the sultan gave Manbijid to Taqî al-Din along with other towns (Abu 'l-Fadâ', Annals Musulm., iv. 72). Among the leaders, whom Saladin sent in 1190 against the Germans who after Frederick's death were trying to reach 'Akkâ, was Nâ-ir al-Din b. Taqî al-Din of Manbijid (Recueil
MANBIDJ

Saladin’s third son Malik al-Zāhir Ghāzī in 589 (1193) was allotted Hāmid b. Sallum, Tell Bēshir, Manbij, A’azā and other forresses (Recueil, i, 76; Rohricht, Gesch. d. Kyr. Terr., p. 658). In 591 (1195) the latter set out from Kinnasrin to Ḫarā Ḥṣār in order to besiege Manbijd which then belonged to al-Malik al-Mansūr of Hāmā but on receiving disquieting news hastened to Damascus (R. O. L., iv. 209). Saif al-Dīn Tughrīl al-Zāhirī defeated a division of the army from Hāmā, which attacked Manbijd in 599 (1199), took many prisoners and brought them to Malik al-Zāhirī, who however released them again (R. O. L., iv. 218). The lord of Hāmā in 596 (1200), at the request of Malik al-Mādīl, gave 12 al-Dīn Ibrahim al-Muqadām the towns of Manbijd, Famiyā and Kafarjā in compensation for Bārin (Weil, iii, 434, note 4). When the latter died in Famiyā, Manbijd was to go to his brother Shams al-Dīn ‘Abd al-Malik whom however Malik al-Zāhirī in 597 deprived of his rule over Manbijd and Ḫal‘at Nādir and carried off a prisoner with him; he offered the two towns to al-Malik al-Mansūr of Hāmā, who once previously in 588 (1192–1193) had refused Manbijd (Rec. hist. or. crois., iii, 298), if he would assist him against Malik al-Mādīl, which however he declined to do (Rohricht, op. cit., p. 685). Al-Zāhirī thereupon destroyed the citadel of Manbijd lest it should fall into the enemy’s hands and gave the town, now deprived of its defences, in 597 (1201) to al-Haḍrājī as a fez (R. O. L., iv. 222) and in the following year to ‘Imād al-Dīn b. Saif al-Dīn ‘Alī b. Ahmad al-Maḥṣūb (Abu ‘l-Fida‘, op. cit., iv. 195). But very soon afterwards, al-Zāhirī had again to send the amir of Ḥalab, Mubāriz al-Dīn Aqīdā, to the siege of Manbijd; the latter however withdrew on the approach of Malik al-Fā‘iz, son of Malik al-Mādīl. Malik al-Fā‘iz entered Manbijd, rebuilt the citadel and fortified it. He then returned to his father al-Mādīl in Nābulus, while the Ḥalab troops avoided an encounter (R. O. L., iv. 223). Soon afterwards the Ḥalab army again marched on Manbijd but was recalled by Malik al-Zāhirī, who was besieging Hāmā. A little later, al-Zāhirī himself set out against al-Maṭla‘ī to avenge himself on the inhabitants who had taken the side of al-Fā‘iz; but he was appeased by his amirs, pardoned the town which submitted to him and gave it as a fez in 598 (1202) to Ibn al-Maḥṣūb (R. O. L., iv. 224). The Sāḥib Kākāṣī in 615 (1218–1219) went to Manbijd, which opened its gates to him, placed one of his officers, Sārim al-Dīn al-Manbijdī, as governor there and repaired the walls of the town; but when al-Malik al-Aṣhrāf approached, he left the town again and suffered heavy losses in his retreat (Recueil, hist. or. crois., ii. 145; Kassīr al-Dīn, in R. O. L., vi. 57; Abu ‘l-Fida‘, Amm. Mūsī, iv. 266). When the Shī‘ah of Ḥalab, al-Malik al-Nāṣir, concluded an alliance with the Shī‘ah of Rūm for their mutual defence against the raids of the Turkmans, he sent the Ḫāji of Manbijd, Awḥad al-Dīn, as a confidential envoy to him (R. O. L., v. 94). Al-Malik al-Mughṭīr of Harrān fled in 635 (1237–1238) before the Khwarzimians to Manbijd to seek protection with them (R. O. L., v. 103). When the Khwarzimians three years later invaded Syria, a Ḥalab army met them but suffered an annihilating defeat on the Nahr al-Dhabah (R. O. L., vi. 3). Thereupon the Khwarzimians advanced on Manbijd, the inhabitants of which retired behind its walls and barricaded the place where the walls were no longer standing. The town was stormed on the 21st Rabi‘ 11 of 638, numerous inhabitants put to death, the houses destroyed and rich booty taken; the enemy even entered the mosque where many women had taken refuge and violated them (R. O. L., vi. 6). After the Khwarzimians had been driven back, al-Malik al-Mansūr re-entered Manbijd (R. O. L., vi. 17). In the treaty between Sulṭān Kātūn and Leo of Armenia of the 1st Rabi‘ 11 of 638 (June 6, 1238), Manbijd is mentioned among the Egyptian towns (Makrīzī, ed. Quatremère, Hist. des Sultans Mamouns, i, 168; transl., p. 205).

According to Ibn al-Shihāna (Bairīt 1909, p. 228), Manbijd which previously, excluding its suburbs, had paid annually 510,000 dirhams to the Sulṭān’s Divān, was destroyed by the Tatars (who invaded Syria several times between the end of 699 [1203] and 702 [1302]); perhaps there is here a confusion with the Khwarzimians. According to Abu ‘l-Fida‘, the fortifications and the town were for the most part in ruins in his time: Kahlāt al-Zāhirī does not mention it at all.

After the Russo-Turkish War (1879) Ciezaans were settled in Manbijd, since that date the few remained of antiquity noticed by earlier travellers have almost completely disappeared.

The ruins of Bīnbīl, as the name of the place is now pronounced by the natives with a marked echo of the ancient Bambīke (Eutin in M. Hartmann, Zeitkrit. d. Griech. K. Einz., Berlin, xxix, 525; Littman, Amer. Archæol. Expedit. to Syria, i, 171, note 3), have been visited by Maundrell (1699), Pococke (1737), Drummond (1747), Sachau (1879), Cumont (1907) and Hogarth (1908). The old town walls, surrounded by a broad ditch which were several times restored in the middle ages, still survive almost in their entirety (Ainsworth, A personal narrative of the Ephraim Expedition, i, 1888, p. 238).

The town of "Kāmhul", the site of which is important to fix the limit of the habitations of the Mand, is sometimes located in Hind (Iṣṭakhrī, p. 176), sometimes between Hind and Hind (Idrisi). The form of the name is uncertain (Fāḥmil, Māhmāl, Amāl). Elliott, i. 363, identified it with Anahālāra; cf. al-Birrānī, p. 100. This last town (Anahīlāra, Nahrāra, founded in 746 A.D.) is identical with the modern Fāтан (on the Sarawsat in northern Barōda; cf. Imp. Gazzet. of India, 1906, vol. xx.; Cunningham, ep. cit., p. 290, places "Māhmāl" at this). In any case Kāmhul must mark the limit of the pasturages of the Mand to the S.E. of al-Mansūra (-fatāh eilādāb, on the Indus; cf. Elliott, i. 370).

Among the Muslim sources a special place is occupied by the Misqīm al-Tawārīḥ, written in Persian in 520 (1126). This work gives extracts from a book which was composed first in an Indian language, then translated into Arabic by Abu Ṣalīḥ b. Shuʿāb b. Dīmān in 417 (1028) and finally translated from Arabic into Persian by Abu 'l-Hasan 'Alī b. Muhammad al-Ḥalabī, librarian in Dūrījān. This source which is a very inaccurate resumé of the Māḥābārāta, begins with a chapter on the Mādī and the Zuṭtī, two peoples in the land of Sind, descendants of Ham (Ḥām), son of Noah. The Mādī had conquered the Zuṭtī, who withdrew to the banks of the river Pahn (or Bahr) and from there attacked the Mādī by water. Finally tired of fighting, the two peoples agreed to approach king Daḥūshān b. Dāhrān (Duryodhana, son of Dhīrāraghārā) to ask him to appoint a king over them. Daḥūshān sent them his sister Dusul (Duṣçalā), married to Bjdīrd (Jayadratha) who became a powerful king. At the request of Dusul, Daḥūshān sent 30,000 Brahmanos to people Sind. One part of the country was given to the Zuṭtī, who were given as a ruler (Dīfārt (Yuddhishthira, eldest son of Dhīrāraghāt). The Mādī (Mādyān) also were given a special area; cf. Reinsch, Fragments arabes et persans relatifs à l'Inde, 1845, p. 2–3, 25–29.

Here we have an attempt to connect the history of the Mādī and Zuṭtī with Indian tradition by quoting a passage in the Māḥābārāta which says that Duṣçalā was given in marriage to Jayadratha, "king of the lands watered by the Indus" (transl. Fauche, Paris 1863; i. 290, čloka 2742). Indian tradition however contains nothing definite of value about the Mādī. In the Bṛhat-Samhitā, transl. Kern, J. R. A. S., 1871, p. 81–86 which is one of the sources for the enumeration of the peoples of India in al-Birrānī (ed. Sachau, p. 150–157, transl. 199–303), we find a Māṇḍāvya people (located in the centre, north or northwest of India). The derivation of the Arabic Mādī from some such name may be suspected (cf. the name of the
modern town on the coast of Kāthiāwar; Mândvi). On the other hand in Central India alongside of the Māndaya the Medha are mentioned (al-Bīrūnī: Mādhā, the final a being only indicated by means of a fatha). The question of the Maid/Mand has been discussed by Elliot and A. Cunningham; the former (Hist. of India [1867]), i, 519–531) says that the Meds still exist on the borders of Sind and Fodhpūr, as well as to the west in the little harbours of Mārkān (the clans of Gazbur, Hornāri, Dājhar-za‘, Ĉełmar-za‘). The name *Mand has even undergone a phonetic change to Mer (which we find in the mountains of Arāvalli and in Kaṭhīwār). Elliot also thinks it possible that the Meds or one of their branches bore the name Mand of which traces can be found in place-names (Mand-ar, Mand-hro, etc.). Cunningham in his Report 1863–1864 connected the Zuṭ and the "Maid or Mand" with the Iattī and Mandrūni whom Pliny (Nat. Hist., vi, ch. xviii.) mentions near the Oxus and calls the "Med or Mer" the first Indo-Scythic invaders of the Pāndjāb. In The Ancient Geography of India, 1871, p. 290–294, Cunningham finds a variant of the name Mand in the name of the town Māvarīya of the Periplus mar. Erythrae. (cf. Prolemey, vii/i, § 63: Māvarīya to the east of Indo-Scythia,) which would be "the town of the Scythians, Min = Manjābara (Mandjābara in the Arabs = Thatha, etc.

The question of the Maid evidently deserves a new special study. Was there only one, or two peoples *Maid and *Mand? The statements of the Muslim authors seem to refer to a single people. The toponymy of the land south of the Indus reveals the presence of an old element *Mand; cf. Prolemey, vii/i, § 7: Mandāgara. When its origins have been studied, it will be interesting to compare its possible connection with the oldest name of the Aryans, Mandā, found in the cuneiform inscriptions of the third millennium B.C. according to E. Forrer, Die Inschriften und Sprachen des Hitites-Reiches, Z.D.M.G., lixvi, 1922, p. 247, according to E. Meyer, Die Volksstämme Kleinasiens, Sitzb. A. W. Berlīn, 1926, p. 244–261 (cf. do. Geich. d. Altertums, vol. ii, sect. i, p. 35, note 3); the name "Manda" meant the Scythians who in the seventh century B.C. had invaded nearer Asia and was sometimes transferred to the Medes alongside of whom the Scythians were settled. A diachronically opposite process would be to compare *Mand with the name of the Mundā language (of the Mon-Khmer family); cf. in this connection: Przyłęski, Un ancien peuple du Panjab, Les Dhamarā, J.A., 1920, N° 1, p. 53, where a theory is advanced according to which, before the arrival of the Indo-Aryans, the valley of the Indus was peopled by "Austro-Asiatic" from the zone of the continent to the sea. The influence of the Austro-Asiatic substratum, i.e. languages of the Mundā type, would also explain the preservation in Sanskrit of the aspirated sonants.

(V. Minorsky)

MAND (Mând, Mund), the longest river in Fārs (Nuchat al-Kulāb: 50 farsakhs; E. C. Ross: over 300 miles in length). The name. As a rule in Persia, sections of a river are called after the districts through which they flow. Mand is the name of the last stretch near its mouth. The name seems to appear for the first time in the Fārs-nāma (before 510/1116) but only in the composite Māndīstan (cf. below).

The old name of the river is usually transcribed in Arabic characters Sakkân (Iṣṭakhrī, p. 220; Ibn Hāḵalī, p. 191; Idrīsī, tr. Jaubert, i, 401) but the orthography varies: Thākān, Fār-nāma, G.M.S., p. 152; Nuchat al-Kulāb, p. 134; Zakān or Zakkān, Nuchat al-Kulāb, p. 217; Sitārān, Diṭḥān-nāma, p. 247; cf. also Sakkān in Ḡāsān Fāsī. The identification of the Sakkān with the Ernakōri mentioned in the Peripiu of Nearchus (Arrian, Indica, xxxvii. 8) is generally recognised. The identity of Sitakōn with the Sittagōn (Sitigōn) mentioned by Pliny, Nat. Hist., vi, 26 is also usually admitted (Weissbach 1927), but Herrfeld (1907) relying on the existence of another river, the Shājdīn (= Sittagōn ?), has suggested doubts about the identification of the Sittagōn with the Sitikōn. Now, according to Iṣṭakhrī, p. 119, the Shājdīn flows into the Persian Gulf at Daḵāl al-Dastāḵān (north of Būbhr). This Shājdīn must be identified with the river Shāpūr. The Fār-nāma, ed. Le Strange, p. 163, mentions Rūdbāl-i Siddādan (= the banks of the S.) as a station on the road from Shīrāz to Tawwād. From this fact and especially from the name, Siddādan seems to be applied to the left bank tributary of the Shāpūr. Pliny, who follows Onesicritus, adds that the Sitigōnus one reaches Pasargades in 7 days (quo Pasargarum septima die navigatur). Whatever be the identity of the Sittagōn, the exaggeration in this statement is evident (especially in the direction of the sea to Pasargades) and the waters of Pasargades (Māshādi Murchābi) do not flow into the Persian Gulf. But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter). According to Arrian, Nearchus found at the mouth of the Sittagōn large quantities of corn which Alexander had brought there for the army. Iṣṭakhrī, p. 99 places the Sakkān among the rivers of Fārs which are navigable at need (al-awāh al-kibūr allatī tāmīdī al-iş̄fūna īdān īdriyāt fi-hā). Another question is the phonetical identity of the names Sitakōn (Sitigōn ?) and Sakkān. According to C. F. Andreas, Ernakōri is a nominative restored from a supposed genitive *Ernakōri (Sitakōn ?); Sitigōn-us is a mistake for Sittagōn-us; lastly the peculiarity of the Arabic script could explain the change of Sittakōn to Sakkān. Here we may add that Ḡāsān Fāsī gives one of the stretches of the river the strangely written form Shālkān (š Kān). Iṣṭakhrī however derives the name of the river from that of the village of Sakk (Nuchat al-Kulāb: Zakān) in the district of Kāzin considerably below the Shājkān stretch of the river. To sum up the identification of the Sittagōn does not seem sufficiently established. The course of the river. The Sakkān (Mând) describes a great curve. At first it runs in the direction N.W.–S.E., to the northern base of the Kuh-i Marā-yi Shāftik, which separates it from the valley of the river Shāpūr. It follows this direction (c. 100 miles) to the end of Aṣmān-gird mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles).

The Sakkān (Mând) and its tributaries drain and irrigate a considerable area. Iṣṭakhrī says that
its waters contribute the largest share to the fertility of Fārs (akhar-ī sinārāt). The sources of the river (Kān-i Zard, Chīlqāshmā and Surkh-rag) rise in the mountains of Kūh-i Nār and Kūh-i Marajā-ī-Shikakta in the N.W. and W. of Shīrāz. These streams unite before Khān-ī Zīnya in the district of Māsarm on the great Shīrāz-Kāzān-Bāshā road. Iṣṭakhrī, p. 120, places the sources of the Sakkān near the village of Shāhīfār (S.) in the district of Ruwādīja (S.). In the same author, p. 130, Khān al-Asad on the Sakkān corresponds to the modern Khān-ī Zīnya. The Fardānāma (and the Nizhāt al-Kūlūb) places the sources of the Sakkān near the village of Čaṭīya (S.). Under the Turkish name of Karajgān, i.e. "the river of the elm", the combined stream flows through the districts of Māsarm (Kalvā-Mara-yī Shīkat), Sīyāh (Iṣṭakhrī, p. 120: Sīyāh and Kawār. In this last district, Rivadanevīra, in S.1, going from Shīrāz to Fīrūzābād crossed the river by a "substantial bridge". It is in the district of Kawār that Ḥasan Fāsā gives the river the name of Sāhkān. In Kawār (Ḥasan Fāsā) there used to be the barrages of Band-e Bahān, where, by a subterranean channel (kawār) part of the water was led into reservoirs (ṣāhī) and then to the fields. In the bulūk of Khār (Iṣṭakhrī, p. 105: Khār), which must be distinguished from the district of the same name in the kingdom of Kūhār, the river runs south. Aucher-Lido, who crossed the river on the road from Fīrūzābād to Dājūrin (Lajārum) calls it "Tengu Tačka" (= Tengi Taškākāi) and speaks of its "beautiful valley" Rivadanevīra continues his journey from Fīrūzābād to Dājūrin crossed the river by a ford between the villages of Tādvān and "Asun-Descheri" (Asmangird?). He also admires the pleasant and flourishing aspect of Khārī. Below the latter, the river enters the bulūk of Shinakān where, near the village of Sārkāl, it receives on its left bank, the brackish (ṣāhī) river of Dājūrum, and then flows through the ravine of Kārzān, and waters the bulūk of Kīrwa-Kārzān. Abbott coming from the river by a ford between Arābī-alāād and Lēfājīgān (cf. the name of the domain of Kūrd in Fārs al-Līwādānī, Iṣṭakhrī, p. 113), where it was 100 yards wide and the water rose up to the horse's belly. Further down below the ford, Stack, going from Kīr to Kārīyān crossed the river, here 60 yards broad, by the bridge of Arābā, built in a zig-zag and in two stories ("the queerest structure in the way of a bridge"). Near the village of Nimūnī, the river enters the bulūk of Aftār. After having wound round the fort of Kāl-yī Shāhrīyār the river receives (near the place called Čam-i Kālābā) the name of Baz and then irrigates the bulūk of Khunūd (cf. Ibn Baṭṭūta, ii. 241: Khunūd-bāl = Khunūd + bāl). In the district of Dīrāgh of the bulūk of Galla-dāi the river has two tributaries: near the village of Gabrī, the Dīr al-Mīrān, and two small others, lower, that of Dīrham. The Dīr al-Mīrān comes from the left (east) side of the bulūk of Asīr. The Dīrham much more important comes from the right side after watering the historic district of Fīrūzābād (the ancient Gūr, capital of Ardāshīr-Khurra; cf. the details in Le Strange, p. 250). Iṣṭakhrī, p. 121 makes this tributary come from Tārāk (of Siyāh) and water first Khunūd-gān and then Gūr (in place of the name of the river Tīra). Iṣṭakhrī, p. 99, 121, one should probably read Barāzā; cf. the Fardānāma, p. 151, Nizhāt al-Kūlūb, p. 117—118: Ḥakim Burdāz was the sage who dried up the Lake of Gūr.

After Dīr-gāh, the river enters the district of Sanā-wa-Shumba of the bulūk of Dāshīt, and near the village of Bāghān receives on the right bank the river Čāntīz which comes from the district of Taštdīj Dāshīt. Finally near the village of Dūmānī the river enters the coast district of Māndīstān and receives the name of Māndī. It flows into the sea near the village of Zīyārat, halfway between the old harbours of Nadījram (to the north) and Stīr (to the south).

Māndīstān. The district forms part of the bulūk of Dāshīt (which is to be distinguished from Dāshīt) to the north of Dāshīt up to Bāshīj). Dāshīt (36 × 18 farsakhs) is composed of 4 districts: 1. Bardāstān, the part of the coast which is the port of Dāshīt. 2. Māndīstān on the coast to the north of Bardāstān and the two banks of the river of Māndī. 3. Sanā and Shumba on the river above Māndīstān. 4. Taštdīj Dāshīt, a very narrow valley (11 × ½ farsakhs), watered by the Čāntīz and separating Sanā and Shumba from the bulūk Arūba (on the lower course of the river of Fīrūzābād).

The whole of the bulūk belongs to the torrent zone (garmasir) of Fārs. Māndīstān (12 × 5 farsakhs) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 40 villages. The capital of the district and of the bulūk is Kākī. There used to be two rival families in Māndīstān: the Shābkīyān and the Hādjiyānān. Under the disturbances under Afghān rule (1722—1729) the Hādjiyānān Lāzmān expropriated the Shābkīyān and founded a little dynasty of hereditary governors who were able to annex the district of Bardāstān through matrimonial alliances. One of his descendants, Muḥammad Khān (d. at Bāshīj in 1529 = 1581), was noted as a poet under the pen-name of Dāshīt. Ḥasan Fāsāi explains the name Māndīstān by a popular etymology: "the place where the water flows slowly (sāmāndāz)". Names in -stān are common in Fārs (Lārzān, Bardāstān) but even if such a formation was possible in a river-name, the element Mānd would still be a puzzle. It is curious that Ḥasan Fāsāi sometimes writes it Mānd (read Mānd) and sometimes Mund (read Mood). It might be suggested as a pure hypothesis that there is a connection with the people M N D (cf. Mānds), of which there might have been a colony in Māndīstān.

Mandingo, a people of the Western Sudan whose country of origin was on the Upper Niger stretching from Bamako to Siguri inclusive. This region includes the gold-bearing district of Boure, Bute, or Bito as well as the provinces of Lower Falime and of Bambuk which also produce gold. At the present time the Mandingo have spread into the mountainous country in which the two branches of the Senegal arise; they occupy Sangaran, Gangaran, Bambuk, and the valley of the Gambia to the South while to the North they extend as far as the Western Sahara. In the 17th century, they colonised a part of the modern Mauritania and, according to the Arab authors of this period, who mention them under the name of Gangaran (sing. Gangari) or Wangara — a word which seems to be a corruption of the name of their country of origin: Gangaran, Gangaram, organgar — they were to be met with in Holli. In our time the first of these names has been kept by the Moors and the Sarakole, the second by the Songhay, the Ful of Massina and the Hausa.

The country of these natives is called according to the different dialects: Manding, Mandi, Mani, Mandeng, Maneng, Mande, Mane. The inhabitants are called by the names of Mandinka, Maninka, Maninga, Mandenka, Manenka or Manenga in the dialects of the Centre and of the East and Mandingo or Mandinga, in those of the North, South and West. This last, which the British have possessed of Gambia and Sierra Leone has been adopted by the English while the French keep the term Manding or Mandingue.

The name of the country corrupted by the Ful has become in the language of these natives Mali, Malli, Malli, Melli, and that of the inhabitants has become Mallinke or Malinke. This last word has now come to stand for the South-Western portion of this people or for their dialect.

Ethnography. The Mandingo group constitutes a well-marked ethnological group, but it does not form an organised people under one rule. Three chief divisions can be distinguished, and these can again be subdivided into many sections. They are the Malinke, the Bambara, or Bamana, and the Diula or Giula.

A Sudanese historian of the 18th century, Mahmed Koti, who wrote the Tariikh al-Fattah in Arabic, distinguished in his time between the Malinke and the Wangara, regarding the former as warriors and the latter as merchants and traders. The Mandinka are the least advanced of the Mandingo from the social point of view, many of them remaining faithful to the matriarchal system and are still cultivators of the soil, hunters and gold-diggers.

An attempt has been made to derive their name from that of the hippopotamus: mali or meri; and thus “malinka” would signify the “people of the hippopotamus.” This explanation is erroneous, the suffix *ka*, signifying the nationality, can only be joined to the name of a country or of a tribe and never to that of an animal. It is possible however, that the name of the country which was the cradle of their race, could come from na, mother, and deng or dimg, child; this word then would signify “child of the mother”, in allusion to the descent by the female line which is customary amongst them.

The Bambara inhabit the valleys of the Niger and of the Bani as far as Lake Deblo, they are numerous in the Sahel. They are more advanced agriculturists than the Malinke and they recognize descent by the male line. An attempt has been made to derive their name from that of the crocodile: hamba or hama. Some authors on the other hand, have held that their name signifies “refusal to obey a master” (ban. refusal, ma: master, na: towards). This explanation, although it could be accepted linguistically, must, according to M. Delafosse, be rejected. He prefers that of “renunciation of the mother” (ban: refusal or renunciation; be or ma: mother; na or ia: to).

The Diula or Giula inhabiting some fairly important centres are chiefly merchants and traders. They are met with in small colonies, settled amongst the indigenous peoples to the East of Bani as far as the Upper Volta and the Gold Coast. Having been converted at an early date to Mahommadism they have remained fervent Muslims and there are amongst them quite a large number of learned men.

Their name is said to signify “from the foundation, from the stock” (dun). According to their own account, it was given to them because their ancestors belonged to families of noble birth.

At the basis of Mandingo society is an extended family (gba or gwa) comprising all the living descendants of an ancestor, sufficiently near in place and in time for all the ties of relationship to have been formed. In general, the extended family covers four generations: the patriarch, his brothers and cousins, their children, the children and grand-children of the latter, and an equal number of generations of slaves. Persons of the same generation placed on the same level are called by the same name: father, brother, son, without distinguishing the fathers from the uncles, the brothers from the cousins, the sons from the nephews, all are collectively sharers in the family property, which they have helped to acquire and to augment by their labours. This family property consists of crops, of animals, arms, surplus utensils and clothing, as well as treasure in gold, silver or cowries gathered together by the founder of the family. It is administered by the patriarch who cannot dispose of it without the consent of the majority of the other members. Each of those, man or woman, possesses in addition a private store of which he has the free use.

The chief exercises a political, domestic and religious authority. In this capacity he is charged with making sacrifices and offerings to his ancestors and to the patron deities of the family. A number of families observing the same religious prohibitions and bearing the same name (diamu) form a clan; the members, who form a clan are of the same origin, but so far removed by birth
that it is impossible to trace their back to a common origin.

The chief Mandingo clans are those of Keyta, Kante, Taraore, the Dembele, the Konate, the Kulubali, the Kuruma, the Diara, the Samake, the Mareko, the Kamara, the Bakayoko etc. None of them is either organised or under a single ruler.

There exists between persons of different clans a particular tie called senakuja, without doubt the remains of an ancient phrathy which obliges them to assist one another and to exchange presents on certain occasions; the same persons can also quarrel among themselves or fight with one another without involving any serious consequences.

The organisation which is lacking in the clan and in the tribe shows itself on the contrary in each inhabited centre in the form of the hierarchial brotherhoods, which combine all the young people and the men of the same age who have together submitted to circumcision and to the tests of successive initiation. The first is that of utome, grouping together the boys from the ages of 7 to 14 years, then there come the so-called secret societies, such as those of the kono or of the naka which consist of politico-religious groups within the village.

The village or dugu is the administrative unit, the union of a number of villages and the lands which surround it forming a district or kafe; a number of districts constitute a province or a kingdom, djanaka, at the head of which there was in former times the Mansa or Mass. The latter was surrounded by different ministers and assisted by a treasurer.

Although Musammanism has long penetrated amongst the noble families of the Mandingo, the greater portion of the population has remained faithful to the worship of natural forces and of protecting deities, dugu la siri, gana and boi. The great religious festivals are the agrarian feasts and the most important correspond to the periods of seed-time and harvest.

The Language. The Mandingo properly speaking are in number about 2,500,000 of whom 770,000 are in Senegal: 1,000,000 in French Soudan; 200,000 in the Upper Volta; 2,500 in Nigeria; 290,000 on the Ivory Coast; 550,000 in French Guinea; more than 680,000 live in Gambia, Sierra Leone, Portuguese Guinea and the Republic of Liberia. In addition to these natives, whose mother tongue is Mandingo, more than 2,000,000 other people speak this idiom; for this reason it is often spoken of as a language that is still spreading.

The Mandingo belongs to the African Negro language and more especially to the group which M. Delafosse calls Negro-Senegalese; D. Westermann; Mandingo, and A. Drexel: Nko-Nke: it is closely allied to Susu. Foreign idioms seem to have had little influence, although it has borrowed certain abstract and religious terms from the Arabic; from Phonician or Punic it has borrowed expressions relative to horse-Enterprise and cotton; from Berber about a dozen words, and finally during the space of the last fifty years it has further borrowed from several European languages.

The roots are monosyllabic or disyllabic and many of them can be traced to an ancient African Negro origin. For example: fara, the action of killing or being dead, seems to come from a root far or fa; cf. in Susu fak; Hausa: fano; Mosoi: far; Fang: war; Pul: war (de); Masagu: fada; Congo: fana; Swahili: fa and wa; Ancient Egyptian: fak. The nominal class does not exist in this language.

Mandingo uses derivative suffixes which are used to form distinct substantives used as substantives only; for example: ka, aku, or nga, the suffix for nationality: Mandenka; la or ra, the instrumental suffix: tege, to cut; toge, the instrument for cutting, axe. It employs also adjectival suffixes; for example: ma or ma indicating the possession of the thing mentioned: gyi, water; gyn-la, "full of water"; fe indicating on the contrary the lack of the thing: gyn n-fë, "without water". Certain suffixes, joined to a simple or derived root, indicate the possession of a quality or of a state; for example: safa, "short, little"; surn-au, "shortness" and also "to shorten or to approach". Suffixes also exist, indicating determination or relationship.

The Mandingo conjugation employs prefixes denoting the perfect, the aorist, the injunctive. Certain auxiliary prefixes serve to indicate time. It has a considerable number of verbal forms, affirmative as well as negative.

This language does not possess any trace of a system of syntax of agreement; the relations between one element of a sentence and another are entirely determined by the respective position of the two elements and their grammatical function is often determined only by the place which they occupy in the sentence.

In the syntax of this language, the complement of a noun, pronoun or verb always precedes the noun, pronoun or verb in question; the adjective qualifying or determining a noun always follows this noun; the noun of number always the noun of the thing numbered; an adverb modifying a word follows it. The order of the words in the sentence is subject, prefix or auxiliary of conjugation, direct complement of the verb, verb root or derivative, indirect complement of the verb, adverb modifying the statement.

Mandingo is divided into a fairly large number of dialects revealing differences more or less marked. We distinguish the Bambara or Bamana dialects, the Diula dialects and lastly the Malinke dialects, which were themselves divided into the Malinke of the East, the North (sometimes Khashonke), of the West and of the South.

History. The wide diffusion of this language is due to certain historical circumstances, and to the rise of the Mandingo hegemony which extended over almost all the Western Sudan from the year 1250 to 1500.

According to local tradition, the Mandingo sovereigns bore the title of Mansa or Mass; they belonged to the Keyta and married into that of the Konde orKone. In the beginning, they owed their influence to their knowledge of sorcery and magical practices and little by little they emerged from obscurity. Ibn Khaldun has transmitted to us the name of the first of them, Baramandua, who about the year 1050, was converted to Islam, in order to obtain, according to al-Bakri, the end of a drought, which was cruelly trying the country of Maadé; thereafter he made the pilgrimage to Mecca. Native tradition has kept the name of two of the descendants of this prince, Hamana and Dyigui-Bilali. The son of the latter, Mbabu, called Allakoy, reigned from the year 1200 to 1218. Four times he made a pilgrimage to Mecca,
MANDINGO

...and he extended the power of his dynasty. On the other hand, his son Nare Famaga (1218–1230) suffered a great reverse and was defeated by his neighbour, the king of Sosso, Sumanguru Kante, who annexed Mandingo in 1224 and put to death eleven out of the twelve sons of the conquered monarch. The last son, Son Diata or Mari Diata (1230–1255), who was weak and delicate suddenly recovered his health and strength after touching his father's sceptre. Little by little he got together a powerful army, with the help of which he conquered a part of Futa Djalon, the country situated between the Niger and Bani, in the region of Kita and that of Beledugu. In 1235 he attacked his enemy Sumanguru Kante and defeated him at Kirina, not far from the Niger. After having subdued shortly afterwards the whole of the Sosso, he advanced in 1240 as far as the celebrated city of Gana which he plundered. During the following years, Sun Diata took possession of Gangaran and of the gold-bearing district of Bambuk, without neglecting the good administration of his lands in which he encouraged agriculture and extended the cultivation of the cotton plant. Towards the year 1240 he abandoned the ancient capital of the Mandingoes, Djeriba, and transferred it to Niani, wrongly called Mali or Melli by the Arab historians. He died in 1255 in the vicinity of this town. One of his sons succeeded Sun Diata, whose name only is handed down to us, namely Mansa Ule or the Red King (1255–1270). After him the princes Walji, Khalifa and Abu Bakari between the years 1270 and 1285 about whom we possess no information. After the death of the latter, the power passed into the hands of a slave of the Keyta called Sakara or Sabakura, who kept it from the year 1285 to 1300. Then the Keyta regained the throne and under Gian, Mamada, and Abu Bakari they held it from 1300 to 1307. At the end of this undistinguished period, Kankan Massa, also called Gongo Misa (1307–1332), the son of the last of these sovereigns, seems to have raised to its zenith the power of his dynasty. We owe to Ibn Khalid an some details about his person and the events of his reign. He was an ascetic prince and full of piety, and he made a pilgrimage to Mecca in 1325 and on his return he brought back with him to the Sудan, al-Mamer, a descendant of the founder of the dynasty from the Almohads, as well as the Arab poet al-Sibli. When he was still in the Sahara, Kankan Massa learnt that his troops had seized Gao, Tumbuktu, Walata and the kingdom of Songhoy. He decided to visit the first two of these towns, and on the advice of the strangers who accompanied him, he built in each of them a mosque and a palace, thus introducing Arabic architecture into the country. When he died in 1322, his authority extended from the valley of the Bani to that of the Dahome, and from the Sahara as far as the thick forest, and he had entered into relations with the Sultan of Fez. His son and successor Maghani (1332–1356) was not able to keep intact the kingdom bequeathed to him by his father. During the reign of this prince the Mossi pillaged Tumbuktu, and Songhoy cast off the Mandingo yoke. On his death, Sulaimaun (1356–1359), the brother of Kankan Massa, ascended the throne. According to Ibn Khalid an, the first care of the new sovereign was to assert his authority in his possessions in the North. He was not successful in regaining Songhoy, but he established peace and security in his kingdom, which he reorganised. The traveller Ibn Battuta, who passed through Mandingo in the year 1351–1352 furnishes us with valuable information on the country, the administration, justice and the court.

Kamla, the son of Sulaimaun, succeeded his father but was deposed at the end of a few months by Mari Diata, the son of Maghan who kept his power until 1374. He died of sleeping sickness and is remembered as a cruel, debauched and extravagant prince.

His successors Misa I (1374–1387), Maghan II, Sandigui Maghan III, Mn-sa III and Mn-sa Ule II reigned until the beginning of the 14th century. From this time onwards exact information ceases, as our authority, the historian Ibn Khalid an, died in the year 1406.

The decline of the Mandingo empire was hastened during the 14th century by the attacks of the Tuareg, the Songhoy, the Mossi and the king of Tellem. In the year 1481 Mansa Mamadu feeling himself to be in danger, approached the Turks who were established on the coast of Africa and sought their protection. This move and others similar which followed it influenced the kings John II and John III in sending to the court of the king of the Mandingo two ambassadors, the one in 1483, the other in 1534, but without lending any military aid.

In the year 1545 the Askia Dug'd of Gao came and plundered the Mandingo capital. The Moroccans who had come from Tumbuktu some months before, joined in the year 1591 the enemies who surrounded the kingdom. The period from 1600–1690 marks the last stage of Mandingo power. But two new principalities were formed on its ruins at Segu and in Kaarta.

According to the legend, the Bambara under the guidance of two brothers, Baramango and Nangolo, were flying before their enemies. They were on the point of perishing under the blows of their enemies, since a river barred their route when they were saved by a miraculous fish which carried them to the opposite bank. After this miracle they took the name of Kulu "bali", that is to say the men "without boats".

In the middle of the 18th century the descendants of Baramango had spread into the valley of the Niger and of the Bani but they paid tribute to the inhabitants of Djenné and to the Moroccans of Tumbuktu; their capital was Segu. Biton Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liberated them from this Kulubali (1660–1710) liber...

(LE LABOURET)

MÂNDÛ, a fortress now in ruins, was formerly the capital of Málwâ [q.v.], and stands in 22° 21’ N. and 75° 26’ E. It has probably been a stronghold from time immemorial, but little is known of its history until the fortifications were erected in their present form by Dîlîvar Kân Râghi (1392—1405), the first independent Muslim king of Málwâ, and his successors. His son, Hâshang Shâh, made it his capital, and it remained the capital of the kingdom and province of Málwâ throughout the period of Muslim rule, and has stood many sieges. Its streets ran with the blood of 19,000 Râjîpûts, slain by Mâhmûd II of Málwâ when he recovered his capital from his rebellious troops.

Of the ten gates of the fortress (two on the south, two on the west, one on the east, and five on the north), the Tarâpur Gate was built by Dîlîvar Kân, the Dîhângîpara Gate by the emperor Dîhângîr, and the Alamgîr Gate by an officer of the emperor Awrangîz in A.D. 1668. The Bhâgwânîa Gate was built in 1514, in the reign of Mâhmûd Kâlîjî II, and the Songârî Gate is an old gate rebuilt early in the nineteenth century by Mânaî Bâi, the great Râni of Dâhî. The Lâwâni, Râmpol, Dîhîl, and Bhangî Gates are old, but bear no inscriptions. The last has
temporarily a token coinage in copper to be withdrawn from currency when the finances of the state improved. 500 māngirs were struck to the ounce of copper and put into currency as half aspers. When the situation did not improve, the value was raised to one asper; the remedy proved worse than the disease for very soon the country was flooded with copper coins and gold and silver driven out of circulation.

Māngir is also the name given to imitations of sequins in brass or other cheap metal worn as ornaments.

MANGISLAH, a mountainous peninsula on the eastern shores of the Caspian Sea, first mentioned under the Persian name Siyāh-Kūh ("Black Mountain"); cf. B. G.A., i, 218; the same name was given to the hills west of the sea of Aral (cf. cita., vii. 92; see AMUD-DARIJA). According to Istakhri (op. cit., i. 219), the peninsula used to be uninhabited; it was only shortly before his time (or that of his predecessor al-Bakfi) that Turks, who had quarrelled with the Ghur [q.v.], i.e. with their own kin, had come there and found springs and pastures for their flocks. Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks. Mūṣafīr (or Maḍris) mentions the mountain of Bīnjīshāla making the frontier between the land of the Khazars and Djarjān [q.v.] (cf. B. G. A., i, 355).

In the form Mankīshāla (vocalised Manqas jelgh) by Yākūh the name first appears in documents of the 8th (9th) century (W. Barthold, Turkestän, i. 34, 44 and 79) and in Yākūh (iv. 670). According to Yākūh, this name was borne by a strong fortress near the sea between Khwārizm [q.v.], Sānsr [q.v.] and the land of the Rus. The peninsula was evidently no longer, as it had once been, a place held in terror not only for its natural conditions but also for its inhabitants; via Mangishlak there ran, as later almost into modern times, an important trade route from the Volga territory to Khwārizm; goods were unloaded in the bay near Cape Tab-Karagan and taken to Khwārizm by caravans. Before its conquest between 1127-1128 and 1135 by the Khwā السيد Aǧā [q.v.], Mangishlak was a separate and practically independent principality on the frontiers of the Muslim world (it was of course regarded as within the empire of the Seldjūqis; q.v.). As the verse quoted shows, the conquest resulted in the destruction of the town. No permanent settlement is again mentioned on the peninsula until its occupation by the Russians, in spite of its importance for commerce.

For the last few centuries (perhaps even earlier) the peninsula has been inhabited by Turkomans. Towards the beginning of the 18th century these were the Salur [q.v.]; on the coast lived the "inner Salur" (āqš Salur), on the road from Khwārizm to the coast (about 500 miles; it took 20 days to traverse) lived the "outer (tābši) Salur" (Zaf., xvi. 208). Abu l-Chārī (ed. Dehnessons, p. 267) gives the Ersari for the Salur; towards the end of this century, this tribe was almost completely driven out by the Mangit [q.v.], i.e. by the Mograis; later we find the Kalmucks [q.v.]

MANGIR, the general name for copper coin under the early Ottomans, corresponding to altims (gold) and akçe (silver). As a particular denomination it was a copper coin struck in the reign of Sultan II during a period of financial stress. In 1596 (1687) it was resolved to issue
conquering here. On their rule in Mangīshlak, cf. Abu l-Ghāzi, p. 316; the name of the peninsula is written by Abu l-Ghāzi (see Index), Mangīshlak and Mangīshlāk. In addition to the regular traffic by sea with Astrakhan [q. v.], frequently mentioned in Russian sources, there was also a connection with Shīrāz mentioned by Abu l-Ghāzi (p. 257 and 273) and other sources. Three Turkoman tribes, the Āwd, the Iqīr and the Šomānqārd, were deported by the Kalmucks under Ayuqta (1670—1724), according to others as early as the reign of Punctu-Mošeq (1667—70) from Mangīshlak to the northern part of the Caspian, but a section of the Āwd continued to dwell in Mangīshlak. When, under Russian rule, the land of the Turkomans was organised as the "Trans-Caspian territory" (Zakaspiyskaia oblast), the "district of Mangīshlak" was included in it; the capital was the little settlement founded in 1839 as "Novo-Petrovskoye-ukreplenie" and known from 1839 as "Fort Aleksandrovsk" (now: Fort Urokogo). In the sixth century the Turkomans were gradually driven out of Mangīshlak by the Ḫazān [cf. Khorazm]; therefore after the Revolution the district of Mangīshlak was separated from the land of the Turkomans and now belongs to the republic of Kazakhstān.

After the western shore of the Caspian Sea had passed under Russian rule, it was recognised that the Gulf of Bakhchīsārā [q. v.] formed a better gateway to Central Asia than Mangīshlak. In 1819 the ambassador Muraviev proposed to the Ḫān of Khiva, Muhammad Qāhīm, that the caravan route from the Caspian Sea to Khiva should no longer start from Mangīshlak but from the port of Krasnograd on the Gulf of Bakhchīsārā. The Ḫān replied: "It is true, the road via Mangīshlak is much longer than the road via Krasnograd but the people in Mangīshlak are my subjects, whereas the Khomut as far as Astrakhan belong for the most part to the Ḫājī [q. v.]" (N. Muraviev, Puti geografiye v Turkményu i Khivi, Moscow 1822, p. 134). It was only after Russian rule was firmly established in Central Asia that this question could be settled in favour of the Gulf of Bakhchīsārā. Since Krasnograd became the starting point for the Central Asiatic railway, Mangīshlak has lost any importance that it had in favour of the Gulf of Bakhchīsārā. According to the census of 1897, the population of Krasnograd was 6,322 and of Fort Aleksandrovsk only 895.

MANGU-TIMUR, so on his coins, Mongol Mungō-Timur-Timur, as in the article BERKE, [q. v.], written Mungō (e.g. Rakhidi al-Din, ed. Blochet, p. 109), in the Russian annots Mengutimer and Mengutimer, Khan of the Golden Horde (1266—1280), grandson of the Khan Bāši [q. v.], son of Tūkān Khan. According to Egyptian sources, the death of his predecessor Berke took place in 665 (Oct. 1266—Oct. 1267); in 666 (Oct.—Nov. 1267) an embassy left Cairo, which was to bring the new Khan an expression of sympathy and congratulations from Sultan Baybars I [q. v.]. In 667 (Sept. 1268—Aug. 1269) an embassy from the Khan arrived in Egypt. The exchange of embassies was maintained throughout the whole of the Khan's reign. When in 670 (1271—1272) an embassy on the way to Egypt was captured by a Frankish ship from Marseille, the ambassadors and all their goods had to be released on the Sultan's demand. When in 680 (April 1281—1282) an Egyptian embassy left for the Golden Horde nothing was yet known of the death of the Khan. Only later did they learn that he was no more, having died in Kābū I 679 in the district of Nīshān (apparently nowhere else mentioned);
his death is said to have been caused by the unkind removal of a boil on the neck. In Rashid
al-Din (ed. Blochet, p. 142) the date of Mangū-
Timur’s death is given as 681 (Apr. 1282–March
1283); there are coins of his brother and succes-
sor Tādž-Mangū struck in this year.

The Egyptian government tried to induce the
Khān to resume the war on the Persian Mongols
began by his predecessor Berke; but soon after his
accession Mangū-Timur concluded peace with
Abāka and never again attacked Persia. Rashid
al-Din by an oversight attributes to Mangū-Timur
the campaign against Arghūn of the year 689 =
1290 (in Blochet’s edition in p. 40, we have
say for tīs); d’Ossor (Histo. des Mongols, iv. 42)
and Barthold (article A[Z]GHUN) have been misled
by this.

On Mangū-Timur’s participation in events in
Central Asia down to the Kūrūlūtā of 667 (1269)
(sending an army of 50,000 men under Berkedīr,
a brother of Bātū and Berke) see the article
A[Z]KHAN. Accounts of this are found in the
still untranslated parts of the Dīnārī al-Tatrāshī
of Rashīd al-Din (reign of Abāka, cf. d’Ossor,
op. cit., iii. 428). The alliance between Mangū-
Timur and Kāidū, whom he was then supporting,
is also mentioned later; when in 1277 two sons
of the emperor Kūbakī Kāidū were taken prisoners
in the war with Kāidū, the latter had the princes
sent to the court of Mangū-Timur, from which they
were later sent back to their father (Rashīd
al-Din, ed. Blochet, p. 8; d’Ossor, op. cit., ii.
452 sq.).

Russian rulers appealed to Mangū-Timur for
support as they had done to his predecessors and
successors. Lev of Galićz received assistance from
him against the Lithuanians but the Tatar auxili-
aries proved a great burden not only to his enemies
but also to their proteges. In 1277, a Russian arm-
ies was fighting in the Caucasus against the Alans
under the Khān’s orders. From Mangū-Timur dates
the earliest extant edict of a Khan of the Golden
Horde on the privileges of the Greek orthodox
church; it is dated in the year of the Hare (probable
1267). The bishop of Sāhī, Ḍezgūn, was sent by
Mangū-Timur as an ambassador to Constantinople.

In contrast to the last two decades of the xivth
century the Golden Horde under Mangū-Timur
was a great power, free from internal troubles.
Coins were struck only in the old commercial
city of Bulghār [q. v.] but, unlike those of
his predecessors, in his own name not in that of
the Great Khan. On his coins, the seal of the
Golden Horde appears for the first time.

MANI. [See Zendik.]

Mani is the name given in Ottoman Turkish to
popular songs in quatrains. The name is a corrup-
tion of the Arabic word mānū, meaning “thought, idea”, and is by no means found through-
out the whole area where Ottoman Turkish is
spoken. In many districts isolated quatrains, like
songs of several verses, are simply called mānu.
Songs in quatrains are known among almost all
Turkish peoples: they must therefore be considered
to have been known to the original Turkish stock.

The rhythm of the mani is, as in Turkish popular
poetry generally, sometimes purely syllabic (a de-
finite number of syllables without a fixed caesura),
and sometimes depends on the accented syllables
(with a fixed caesura and therefore with the order
of weak and strong syllables to some degree fixed).
The lines show as a rule 7 syllables (4–3, 3–4,
rarely 2–3–2). Quatrains with all four lines alike
are rare, the third line usually differs from the
others (3–4, 3–4, 4–3, 3–4, or 4–3, 4–3, 3–4, 4–3
and so on). The original arrangement of the
rhyme in Turkish quatrains is a b c a (two lines,
rhyming) which clearly shows the quatrains was
originally a distich. In the Ottoman mani we have
a development of this form, with three rhyming
lines (a b a). The rhyme however which
connects the second and fourth lines is often ful-
ler and more distinct than that which connects
the first and second lines. Alliteration, which is
highly developed among many Turks, especially
in the north, is only found sporadically in the
mani; it is found both as line alliteration (simi-
larly in the initial letters of the words of a line,
e.g. kara köynən bacır hursun, betimə bernine bal, etc.) and as verse alliteration (similarly in the
initial letters of the lines in a verse, e.g. ənənər greeting, senti insan sönri, seni bu kök sön-
rənədi, seni gənəl xoroqə). As regards matter, the majority of the mani fall
into two distinct parts, an introduction dealing
with nature, and a concluding part of a personal
character. Originally the two parts must have been
very closely connected. It would however be a
mistake to find such a connection in all the mani,
because the singers very often only improvise new
conclusions to ready made introductions taken
from older poems, without troubling in the least
about the train of thought. The great majority
of mani are tinged with eroticism, but we also
find satirical ones, also soldiers’ and robbers’
songs in the form of quatrains. The quatrains
composed on the Anatolian brigand Cakdyi have
been much admired by European scholars. Isolated,
originally independent mani are now often strung
together to form ballads of some length. It would
therefore be wrong to regard mani as two
fundamentally different classes of songs.

The number of mani current among the people
is enormous. They are sung at all kinds of fest-
ivals and ceremonies, and by people over their
work in the house in the long winter nights. On
Hedēles, St. George’s Day (April 23), they are
used as oracles by young girls.

Very popular also among the Ottoman Turks
are the so-called aznali mani: panning mani.
These are quatrains, the rhymes of which are
identical syllables but have each a different
meaning.

(T. KOWALSKI).

AL-MANISA, one of Allah's names. [See ALLAH.]

MANİSA, MAĞHİSNA (Mareńska), in Arabic Mağhūsiyya, capital of the district of Sārū-kitān in western Anatolia.

Maghūsna, in Al-Mağhūsiyya, a city in Mağhūsiyya, the capital of the district of Sārū-kitān in western Anatolia.

Maghūsna is a two hours' journey distant on the south from the river Gediz or Gedüs (the ancient Hermus); on its course, cf. Tschakid. Aust. Minor., ii. (1886), p. 272) on the northern slope of Mount Mağhūsdağl or Vamnlar (the ancient Sipilos) which separates it from Smyrna (the distance between the two towns is by rail 20 miles; by railway 40 miles). In ancient times the town ("Maghūsna ad Sipilos") was mainly noted for the victory won in its vicinity by the two Scætops over Antiochus the Great of Syria (190 B.C.). The town was then incorporated in the Roman empire. It flourished until the fifth century as its coins show. Magnesia is also often mentioned in Byzantine history; after the taking of Constantinople by the Crusaders in 1204 John Ducas retired to Magnesia where he held out till 1255.

The Türkman chief Sārū-kitān [q. v.] who had formed a principality for himself on the ruins of the Seldjük Kingdom of Konya, took Magnesia in 1313 and the town was the capital of his dynasty for 78 years. It was in the reign of Sārū-kitān that Ibn Baṭṭūra (ii. 312) visited the town and he stayed in a zāvīa of the brotherhood of the ābūna. The town was large and beautiful, rich in gardens and with a plentiful supply of water. On the buildings erected by the Sārū-kitān dynasty see the article on them.

After the battle of Angora (505 A.H.) Timur ordered his grandson Sułtan Muhammed to lay waste (yellet) the district between Brousse and Magnesia and to take up his winter quarters in the latter town. The author of the Fatih-nâma, ii. 466—467, 480, calls it "Maghūsna-i yellet in the Sārū-īlāb" [cf. Tschakid. ii. 322; Sārū-kitān] and comments on the excellence and abundance of its water-supply and the pleasantness of its climate. According to Turkish sources (cf. Tschakid. ii. 322; Oktoměh, ed. Babinger, p. 34—35; Aşkhič-pasha, p. 20; Munedž-i-djum-bāghi, etc., 113). Timur restored the feşes of Anatolia to their old holders (ژکچی-ژکچی) but by S13 (1410) Sułtan Muhammed I had retaken the region of Sārū-kitān [q. v.].

Maghūsna became the residence (Djihan-nâma, p. 635 dâr al-αlnun) of the Ottoman princes but for a time (1405—1425) its district was within the sphere of influence of the rebel Djinnef (son of the Ottoman governor of al-Aydın; von Hammer, op. cit., p. 271—327). Murād II having abdicated the throne in 1444 chose Maghūsna as his place of retirement. The Hungarian offensive drew him out of it but after the victory of Warna (Nov. 10, 1444) he returned to Magnesia (v. Hammer, GÖR., i. 351, 357) where the remains of his palace and gardens can still be seen. Murad III (1574—1595) and his wife also contributed to beautifying the town; cf. Djihan-nâma, p. 635. Chandler, Travels in Asia Minor, Oxford, 1775, p. 207—209 and 266—268 speaks of the palace and the magnificent hall of Murad III (I) and of his foundation (tekciye = college of archiwes, lunatec asylum, etc.). In 1633 in the reign of Murad IV, the governor of Karasi [q. v.] Ilyas Paşa rebelled and laid siege to Magnesia which was taken and plundered for three days. Ilyas was taken prisoner and the Sultan in ordering him to be beheaded reproached him with having devastated "the residence of his ancestors" (I.e., iii. 113—114).

In the xviii century Magnesia became the capital of the powerful family of the Karâ Othmaņ-OGHLU whose authority extended from the Maeander to the Propeant. It was not till 1814 that these hereditary chiefs, whose administration is praised by Keppel, Narrative of a Journey across the Balkans, London 1821, ii. 294—301, were replaced by a regular Turkish governor.

With the introduction of the system of wilayets, Magnesia became the capital of the sanjak of Sārū-kitān in the wilayet of Aydı̇n (Smyrna). Sâmīd, Kâmûs al-Aṭāim, Constantinople 1898, vi. 438 estimated the population of the town at 36,252 of whom 21,000 were Muslims, 10,400 Greeks, 2000 Armenians etc. Magnesia which is divided up by streams into 3 quarters had 25 djāms, 38 mosques, 25 medreses, 18 tekciyes etc. The kaļida of Magnesia had 4 naiye: Amlâk, Yost-daghli Palamut and Belbek. Cuinet, La Turquie d'Asie, iii., 1894, p. 523—534 gives the following as the naiye of the sanjak: Magnesia, Soma, Kırk-Ağacı, Aş-zişär, Kasaba, Gurdüs, Demirdşi, Şâlil, Kule, Ala-shehr, Bğam. After the reform of 1921 Sārū-kitān became a wilayet with 11 kaļida (the old naiye). The population of the new wilayet is 302,275 souls and of the kaļida of Magnesia, 75,021 souls; cf. the Turk. Djamhuri-yetiņni Sâkunesi, 1926—1927, p. 926—933. In view of the movements of the population the ethnic composition of the sanjak must have undergone profound modifications.

(V. MINORSKY)

MANSHR (A.) means literally "spread out" (as in the Kūrān xvii. 14 and lii. 31; opposite maʕil "folded"), or not sealed (opposite maˈkhtim) hence means a certificate, an edict, a diploma of appointment, and particularly a patent granting an appanage.

In Egypt in the early Arab period manshur seems to have been a name for the passes which the government compelled the felâh in to have in order to check the flight of colonists from the land, which threatened to become overflowing (Qālîta, cf. above, ii, p. 14 and 994). In many cases it is a phrase (Fahher durch die Ausstellung (Payyurs Ersther Rainer), N:o. 631 (cf. also N:o. 601—620) such a certificate of the year 180 (796) is called a manshur and in Makrīzī, Kâbaṭ, ii. 493, we are told
MANSUR 247

of the period of the financial controller Uṣāma b. Zad al-Tanūkī (104 = 722–723) that Christians who were found without identification papers (manṣūr) had to pay 10 dinārs fine (cf. Becker, Beiträge zur Geschichte Ägyptens, p. 104). In the texts of such proclamations themselves (cf. Becker, Papyri Schott-Rehder, l. 40, i) however, we have, so far as I can see, not the word manṣūr but only kalāt. This seems also to have a quite general meaning of public notice, for example in Kalkashandi, šakā al-maḍār, xii. 142, that it was written on an ‘Abbasid grant of a fief dating from the year 573 (983–984) that no one could demand for the holder that he should show a hadījya or a tawākī or a manṣūr.

The Egyptian Fāṭimids usually called all state documents, appointments, etc. by the general term ḥālī, but they had also special terms for particular diplomatic appointments, including manṣūr.

Thus, among the examples of Fāṭimid documents given by Kalkashandi, x. 452–466 there are several which in their texts are described as manṣūr. Among these are for example, appointments to the supervising officials (tāfir) to tax revenues (ṣir al-ṣirah; ṣir al-ṣirah) of the royal taxes (manṣūrat al-ṣirah), to a professorship (tadhir) etc. A grant of an appointment could also be called manṣūr at this time, so Kalkashandi, xii. 131 sq. from the lost Fāṭimid Ma‘wīdā b-Bayyān of ‘Ali b. Ḥāsaf and the regulation that the manṣūr must not have an address (ṭawāsīn) and that in place of this the head of the Diwān must write the date with his own hand seems to be first found in Ibn al-Saṣir, Kābūt Diwān al- Ṣirāfī, p. 113 sq. = Kalkashandi, vi. 198.

This is the Aliyūbīs also, manṣūr had quite a general meaning. Thus in Kalkashandi, xi. 49 sq. a “noble marshal” (mahbūb al-adhrāf) is appointed by a manṣūr and in 51 sq. governors (ṣulṭān) of different provinces. In the text of it the name manṣūr is given to the edict on the equation of taxation and lunar years (tawāwil al-ṣinān) which is quoted from the Mattahiddādinn of the Kādī al-Paḍīl for the year 567 (1171–1172) in Kalkashandi, i. 281, ed. Wiet, i. 292 (cf. also Kalkashandi, xiii. 71 sqq.), and according to a further quotation, for the year 584 (Kalkashandi, i. 269 = Wiet, i. 248) the so-called “lord of the new year” (amir al-nawwara) issued his manṣūr.

The term manṣūr became limited and specialised in the Mamakī period, for which we have very few full sources. The increasingly complicated system of the administration brought about a minute distinction between and special names for the various diplomas of appointment, edicts, etc. and the term manṣūr was henceforth used exclusively of the grants of appanages. These manṣūr were always written in Cairo in the chancellory (ṣirāw al-ṣināh) in the name of the sultan, only in exceptional cases they might be in the name of the nādī Kādī (see Kalkashandi, iv. 16; xiii. 157). According to the very full description in Kalkashandi, xii. 151 sq. and Maṣrí, i. 211, the procedure in granting a fief was as follows: if a fief became vacant (muḥāl) in a provincial town, e.g. in Damascus, the governor there (ra‘ī) proposed a new holder and had a document (nūkṣa, also called muḥāla or mu‘ālā) drawn up about his proposal by the inspector of the army (nāṣīr al-qādī; cf. Kalkashandi, iv. 190; xii. 97) in the military Diwan (diwān al-ṣirāf) of his town. This document was then sent by courier (baṣīr) or pigeon post (tā‘ī al-adwar al-hamām) to Cairo to the government (al-adwar al-ṣirāf). Here it was received by the postmaster (dāwādīr), later by the private secretary (ṣir al-adwar = šabū al-dawwār), who placed it before the sultan in audience (ṣirāf fī dawādīr) for approval, to receive the sultan’s signature (ṣirr al-adwar) and the note yutabāq (“let it be written out”; see Kalkashandi, iv. 51). The document then went to the Military Diwan in Cairo (diwān al-adwar), occasionally also called diwān al-ṣirāf, where it was filed, after what was called the mu‘āla had been made out. The latter was sent to the diwan al-ṣirāf and the private secretary, the head of this Diwan, wrote his requisition (ṣirr al-adwar) for the tā‘ī; writing concerned and now finally the patent of the appanage (manṣūr) proper could be made out in the diwan al-ṣirāf in Cairo, while the mu‘āla of the army Diwan remained filed in the diwan al-ṣirāf as šabīb (proof; cf. Kalkashandi, iv. 201).

Full particulars are given of the formulae used in these manṣūr and of their order in later Shībāb al-Dīn b. Fakhr al-Makbulī, in ‘Abd al-Mu‘ī tāfar al-ṣirāf, p. 88 sq.; Kalkashandi, xii. 153 sqq. and Quartemere, Histoire des Sultan de Mamlouks de l’Egypte, t. 200 sq. note 82. There are many variants of format (ta‘ī, q.v.) and script according to the military rank of the recipient. Thus manṣūr for the Muḥāfādīn ‘al-ṣirāf were written on hāf al-ṣirāf, for the Umara al-Tālbakīs on hāf al-adwar, for the Umara al-‘Abbāsīs on hāf al-ṣirāf and for the Manṣūrat al-sulṭānīya and Muḥāfādīn ‘al-ṣirāf on hāf al-ṣirāf. Many rules were laid down for the wording to be used; the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about service (wāsīn); an original “virgin” (mārkat al-adwar) is recommended as the finest form of a manṣūr. Special formulae are further required for grants of appanages which were concerned with renewal (ṣirr al-adwar), addition (ṣirr al-adwar) or substitution (ta‘ī al-adwar). A regular signature of the sultan, such as is usual on appointments as confirmation (ma‘ūn), is not found on the manṣūr; instead of this the sultan writes formulae like: God is my hope (Allāhu ma‘ṣūri); God is my Protector (Allāhu wāsī). God is sufficient for me (Allāhu la‘īk); To God belongs the rule (al-Mamlūk li ‘rīs); or: God alone has grace (al-Minān li ‘lākhi wāsīn)!

Occasionally the manṣūr for the highest ranks (Muḥāfādīn ‘al-‘Umarī and Muḥāfādīn ‘al-Tālbakīs) had a tawāqī [q.v.] at the top. The tawāqīs were prepared by a special official beforehand and gummed on to the finished diplomas. In Kalkashandi, viiii. 165 sqq. the tawāqīs of Nāṣir Muḥammad b. Ka‘īn (693–741 with interruptions) and Ashraf Shāhān b. Husain (764–797) are reproduced and described; they differ considerably from the better known form of the tawāqī of the Ottoman Sultans. After Ashraf Shāhān tawāqīs were no longer used on the manṣūr; these were only used for purposes of display on letters to infidel rulers.

The completed manṣūr was then again taken back by a courier from Cairo to the town concerned, e.g. Damascus and handed over to the tenant of the appanage. The inspector of the army there (nāṣīr al-qādī) however first entered it in his register for he had to keep a roll of the holders of fiefs in his province. Kalkashandi, xiii. 167–199 gives as examples of manṣūr no fewer
than 26 texts, beginning with one drawn up by Muḥyi l-Dīn b. ʿAbd al-Zāhir in the reign of Kālidā, for the latter’s son Nāṣir Muḥammad, which for its remarkable beauty he calls a regular ṣīlah al-mansūh. The other texts are for the sons of emirs (ṣawādʿ al-emīrī) and for emirs, of the Arabs, Turkomans and Kurds.

The term mansūh was also used for patents of appointment in the Ottoman empire, but it does not seem to have been used so definitely or exclusively in this sense; there are however mansūh for viziers, generals, and governors (ṣawādʿ muḥrīt, muḥrījat mansūh, ʿasād al-mansūh), and in the treaties of peace made after the Balkan War in 1913, it is still provided that the chief ministers to be appointed in Bulgaria and Greece are to receive their mansūh from the Şahīkh al-Islām in Stambol and they have also to put forward for approval the mansūh of the ordinary ministers subordinate to them (cf. e.g. K. L. Stampp, Auswärtliche diplomatische Abhandlungen zur orientalischen Frage, Gotha 1916, p. 295, 308).

The name mansūh was also applied to the pastoral letters and epistles of the Christian patriarchs and bishops. In conclusion it may be mentioned that mansūh in mathematical language means “prism” (varieties e.g. M. muʾāf oblique prism, M. kāʾīm straight prism, M. muwaʿṣiṣ ʿāqṣī parallel prism, M. manṣūm, regular prism, M. muṭalluṣi triangle prism, M. muʾāf truncated prism), and that in the language of the Persian poets the nightsong is called “the mensūh-writers of the garden” (mansūr-nawvāsī-i kāsh). In the letter against the Omayyad, which he distinguished himself and took part in the siege of Fārā, which had been fortified by Ibn Hubaira [q. v.], the last important supporter of Mansūr. The treacherous murder of Ibn Hubaira, to whom the two ʿAbbāsids had expressly promised a pardon, is however not out of keeping with ʿAbū ḫaṭṭār’s character. His brother gave him the government of Armenia, Aḥdarbaḏān and Mesopotamia, which he administered till his accession. On the way back from the pilgrimage, he learned that Abu l-ʿAbbās had died in Dhu l-Ḥijjah 130 (June 754) and that he himself had been proclaimed caliph. His uncle ʿAbd al-ʿAbbās b. Ali [q. v.] wished to dispute the succession but was defeated by ʿAbū Muslim [q. v.]. Soon afterwards the Caliph had the latter put out of the way, which led to a rising in Khurāsān. The leader of this was a Persian named Sunbāḥ; he advanced far into Media but was defeated between Hamadān and Raiy by the caliph’s troops led by Dāhwar b. Marrār and soon afterwards slain. When Dāhwar also cast off his allegiance to the caliph, the latter sent an army under Muḥammad b. al-ʿAshāb against him (138 = 755—756). Dāhwar was defeated and fled to Ṭabarqān, where he was put to death. About the same time the Khāridjīs rebelled in Mesopotamia under Muḥammad b. Ḥarmāl al-ʿAṭhabānī who inflicted severe reverses on al-Mansūr’s armies, until the rebellion was finally suppressed by Kālidā b. Ṭabarqān in 138 and 139. Dāhwar b. Marrār, the Turks and Kurds.

AL-MANSŪR, ʿAbī ḫaṭṭār ʿAbd Allāh b. Muḥammad, the second ʿAbbāsīd caliph. His mother was a Berber slave girl called Suḥāma, his brother the caliph Abū l-ʿAbbās al-Ṣaffār [q. v.]. In the letter against the Omayyad, he distinguished himself and took part in the siege of Fārā, which had been fortified by Ibn Hubaira [q. v.], the last important supporter of Mansūr. The treacherous murder of Ibn Hubaira, to whom the two ʿAbbāsids had expressly promised a pardon, is however not out of keeping with ʿAbū ḫaṭṭār’s character. His brother gave him the government of Armenia, Aḥdarbaḏān and Mesopotamia, which he administered till his accession. On the way back from the pilgrimage, he learned that Abu l-ʿAbbās had died in Dhu l-Ḥijjah 130 (June 754) and that he himself had been proclaimed caliph. His uncle ʿAbd al-ʿAbbās b. Ali [q. v.] wished to dispute the succession but was defeated by ʿAbū Muslim [q. v.]. Soon afterwards the Caliph had the latter put out of the way, which led to a rising in Khurāsān. The leader of this was a Persian named Sunbāḥ; he advanced far into Media but was defeated between Hamadān and Raiy by the caliph’s troops led by Dāhwar b. Marrār and soon afterwards slain. When Dāhwar also cast off his allegiance to the caliph, the latter sent an army under Muḥammad b. al-ʿAshāb against him (138 = 755—756). Dāhwar was defeated and fled to Ṭabarqān, where he was put to death. About the same time the Khāridjīs rebelled in Mesopotamia under Muḥammad b. Ḥarmāl al-ʿAṭhabānī who inflicted severe reverses on al-Mansūr’s armies, until the rebellion was finally suppressed by Kālidā b. Ṭabarqān in 138 and 139. Dāhwar b. Marrār, the Turks and Kurds.
recognise him. His career however was brief and his power unending: for when in 393 (1003) he died, his governor in Şan'a' had already gone over to Yūsuf al-Dā'ī. He was however the first since al-Nāṣir ʿAḥmad, and the fourth in all to be entered — although not by everyone — in the lists as Imām of Yemen (but cf. on the above claimants: Manādījūnbūzālī, in Suhay, Ein Viereinander muthemamscker Denkschrift, in Lib. Arb. u. W. d. phil.-hist. K., 1923, i. 22).

Only for an equally short time from 401-404 (1010-1013) his son al-Hāsim al-Mahdī was able to regain his father’s office. His early death in battle is noteworthy because it produced a quite un-Shi‘ī belief in his return and for a period founded a special sect, the “Haššinīya” in the name of this concealed imām. Some years later another son of al-Kāsim, Ya‘fā, began a struggle full of vicissitudes with the other ʿAlīd claimants to the imamate, which was complicated by a party grouping of the tribes of the country: about 453 (1061) Şan'a’ fell to the Ismā‘īlī Sulahjūs and then to Hamdān chiefs. Only in 545 (1150) Ṭahmāb b. Sulaīman al-Muṭawakkil, whose genealogy also goes back to al-Nāṣir ʿAḥmad b. al-Ḥādi b. al-Ḥādi but neither through al-Kāsim al-Mukhtar nor Yūsuf al-Dā’ī, succeeded in restoring the imamate for a long and brilliant period. For the history of the following centuries, which were full of incidents and individual imāms of importance cf. the article al-Makhtūr al-Muḥarrar bi-dh al-thamālī, in Suhay, Ein Viereinander muthemamscker Denkschrift, in Lib. Arb. u. W. d. phil.-hist. K., 1923, i. 22).

For the history of the following centuries, which were full of incidents and individual Imāms of importance, cf. the article “al-Makhtūr al-Muḥarrar bi-dh al-thamālī,” in Suhay, Ein Viereinander muthemamscker Denkschrift, in Lib. Arb. u. W. d. phil.-hist. K., 1923, i. 22.

order to leave his successor a full treasury. He took an active interest in literature and was a brilliant speaker; on the other hand he did not tolerate music and song at his court and in general led a very simple life. His nephew ʿIsā b. Mūsa [q.v.] had been destined by al-Saffāh to succeed al-Mānsūr but was induced by the latter to withdraw his claims on condition that he should succeed after al-Mahdī [q.v.]. Al-Mānsūr died in Lhū Ṭihādja 158 (Oct. 775) in Dir Māma, when on the pilgrimage to Mecca and was buried near the holy city [cf. the article al-Makhtūr].

was observed for about ten years with a few interruptions especially on the arrival of new governors in 1022 and 1025. After renewed fighting a formal peace in 1028 left the imām in possession of the four separate areas: around Shahāra, around Khājahb in the east, around Ša'da in the north, and lastly in the S.W. of Shāhā around Hāma [q.v.], the inhabitants were however for the most part not Zaidis but Shāfi'ī. Al-Kāsim died in Raš'ī I 1029 (Feb. 1620). In the middle of 1035 (beg. of 1629) Ḥaidar Pasha had to evacuate Shāhā because his son and successor al-Mu'ayyad Muḥammad was con entitled to succeed him.

(K. Strothmann)

AL-MANṣūR, the sixth ruler of the Ḥamādīd dynasty, succeeded his father al-Nāṣir in the year 481 (1088). The latter had witnessed the rise to the height of its power of the dynasty of somewhat artificial development of Kāla Bān Ḥamādī [q.v.], a result of the destruction of Kaitāwān by the Arabs. Two years after the accession of al-Manṣūr, the Arabs, who had advanced towards the west and who had spread over all the region adjoining the Kāla, began to make existence there difficult. The prince moved his capital from Kāla to Bougie which he considered less accessible to the nomads; it should be mentioned that his father al-Nāṣir had already made preparations for the exodus by transforming a little fishing port into a regular town, which he called al-Nāṣirīya and which was to become Bougie. While on the other hand, the Kāla was not completely abandoned by al-Manṣūr and he even embellished it with a number of palaces. The Ḥamādīd kingdom had therefore at this time two capitals joined by a royal road.

After taking up his quarters at Bougie, al-Manṣūr had in the first place to quell the revolt of one of his uncles, Belhar, the governor of Constantine. He sent against the rebel another Ḥamādīd Emir, Abū Yākni. The latter after his victory was given the governorship of Constantine but shortly after he in his turn as well as his brother, who had been given the governorship of Bone, rebelled. These risings over which al-Manṣūr, thanks to his energy, was triumphant, brought to the side of the rebel of the Ḥamādīd family the Zirids of al-Mahdiyya, who wished to get back some power in Barbary, the Almoravids of the Magribī, who wished to extend towards the East and the Arabs who were always ready to join in the feuds of their powerful neighbours.

Al-Manṣūr was, on the other hand, led to oppose the advance of the Almoravids who were curiously allied with the traditional opposition of the Zenātī [q.v.]. With the probable object of disarming the opposition al-Nāṣir and al-Manṣūr had married two sisters of Mākhkhiṭ, the chief of the Banu Wāmānī, at that time the most powerful of the Zenātī group. This alliance did not hinder the time-honoured feud from breaking out again. It became more acute when al-Manṣūr murdered his wife, the sister of his enemy. The latter then asked for support from the Almoravids.

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had after many attempts, endeavoured to expand towards the East at the expense of their brethren of the same race, the Šahāda b. Ḥammād. Al-Manṣūr had twice reduced them to impotence. It was at this time that the murder of the sister of Mākhkhiṭ by al-Manṣūr drove the Wāmānī chief into an alliance with the Almoravids of Tlemcen. The alliance formed in this way was a great blow to the Ḥamādīd kingdom. Algiers was besieged for two days; Ashīr was taken.

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Manṣūr. He got together an army of 20,000 men, composed of the Šahāda, the Arabs and even the Zenātī; he marched against Tlemcen, met the governor Tāshīfī b. Tāshīfī, marched against Tlemcen, met the governor Tāshīfī b. Tāshīfī, and put him to flight. Tlemcen was not spared even at the supplication of Tāshīfī's wife, who invoked the ties of relationship uniting them with the Šahāda (496 = 1103).

After the defeat of the Almoravids, al-Manṣūr severely punished the Zenātī and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia.

Thus al-Manṣūr seems on the eve of his death (498 = 1104) to have thoroughly re-established the power of the Ḥamādīds. According to a tradition, which is not above suspicion, recorded by Ibn Khuldīn, the two capitals owed very important buildings to him: Bougie, the Palace of the Star and the Palace of Salvation; the Kāla, the government palace and the Kasr al-Manṣūr, the beautiful donjon of which is still in part extant.

(Georges Marçais)

He was still a child when on the accession of his eldest brother 'Abd Allah (1557) he accompanied into exile his other brothers 'Abd al-Malik and 'Abd al-Mu‘min, who went for safety from Sulayman to Tlemcen. The fugitives were potential claimants to the throne of the Shāhīns, by virtue of an agreement concluded in the life-time of their father by which the one to inherit the power was not the Sultan’s heir but the eldest of the family. 'Abd al-Mu‘min was assassinated at the instigation of his nephew Mu‘ammad b. ‘Abd Allah called al-Mutawakkil and ‘Abd al-Malik retired to Algiers to join 'Abd al-Malik, who was already there. He was henceforth always a loyal lieutenant of his brother whose ability he fully realised. The death of ‘Abd Allah in 1574 gave the exiles the opportunity to assert their rights. Pretenders and rebels could always rely on the support of the natural enemies of every reigning shah: Spain and Turkey. Philip II had remained deaf to the repeated appeals of ‘Abd al-Malik, who appealed to the Grand Turk and in 1574 went to Constantinople where his marriage with the daughter of the sultan of the Ḥājjid Morato assured him of patronage. In Algiers, Aḥmad conducted successful negotiations with certain Moroccan notables, mainly in Fās. It was perhaps he who gave the signal when an expedition appeared to have some chances of success. He was at his brother’s side when the latter entered Morocco in 1576 with a Turkish army led by Rāmādān Pāsha and helped him to raise troops in the region of Tlemcen. We do not know exactly what part he played in the battles of al-Rukn and al-Sharrāt which gave Morocco to ‘Abd al-Malik but we know that he was given the task of pursuing the dethroned sultan on his flight to Marrakāš.

One of ‘Abd al-Malik’s first acts was to recognise his brother as his heir. It seems, however, that he did not show the latter as much esteem as affection and he had left in Constantinople, with his wife, his son Isma‘īl. But he was bound by his policy. In these circumstances Aḥmad naturally had the vice-royalty of Fās.

He did not stay there long, for he was recalled to save Marrakāš from a return of al-Mutawakkil. Taking command of one of the three armies charged with pursuing the vanquished sultan in al-Sās and the Atlas, he does not seem to have had the opportunity for a decisive military success; he returned to his governorship while Mu‘ammad was driven to seek refuge behind the walls of Cecta.

In June 1578, ‘Abd al-Malik summoned him with all his forces to Kaşr al-Kabir (Alcazarquivir, q.v.) to stop the advance of the King of Portugal’s army. The latter had foolishly sought to realise the dream of conquering Morocco cherished by John III. When Mu‘ammad b. ‘Abd Allah after vainly appealing for help to Philip II, turned to Sebastián, he at once received a favourable reply. A large army with about 20,000 effective fighters left Portugal in June, landed at Tangier, then went to Arzila, which ‘Abd al-Karim b. Tuda had just relieved, and proceeded by land towards Larache. The Moroccan forces coming from Marrakāš and Fās met them at al-Kaşr. Aḥmad found his brother seriously ill, poisoned by the kādīs of his staff, it is said. The battle was fought a few miles from al-Kaşr on Aug. 4. Sebastián’s men, absurdly led, having exhausted all their provisions, fought with their backs to the river of the Wād ‘I-Maḥkāz. The shah arranged his army in a crescent. In about 5 hours the Christians were annihilated by the Moorish cavalry. ‘Abd al-Malik died in his litter during the battle, Sebastian was killed or committed suicide and al-Mutawakkil was drowned. That evening, Aḥmad henceforth known as Aḥmad al-Mansūr was proclaimed emperor.

Elegant, cultivated, very learned in religious matters, more a man of the council-chamber than of the camp, he was succeeding a popular and fearless ruler, of exceptional energy, who having acquired a taste for innovations in Turkey had begun to introduce them, perhaps too eagerly, into Morocco. Designated as his successor by ‘Abd al-Malik, and benefiting by the great reputation left by his father, Aḥmad al-Mansūr was rapidly able to overcome the difficulties which awaited him, as they did every sovereign of Morocco on his accession: mutinies of the troops, demands from allied tribes and the Zāwīyas, and agitations among the Berbers. While in Spain it was feared that the Christian garrison would be attacked and swept away, al-Mansūr had to hurry to Fās to make himself recognised as ruler there, to put down unrest and behead a few notables. He edited the people by displaying the skin of Muhammad al-Maṣūlāk sheered with straw in the regions of al-Sās and the Atlas, where the influence of the former sultan had survived for a brief space his tenure of the throne.

Aḥmad al-Mansūr very soon sought means of enriching himself. The booty taken in the field of al-Kaşr, the work done by the prisoners reduced to slavery, the ransom extorted from the gentlemen gave the shah and his people enormous sums. The sultan kept the nobles for himself; So were soon brought to him and he set about bargaining about them. In a little time, less than a year, the ransoms had been arranged.

The haste displayed by foreign courts to congratulate the Moor on his triumph was remarkable. Ambassadors thronged to Marrakāš, those of Spain and Portugal bringing magnificent gifts. Aḥmad al-Mansūr had the sense to understand that these presents were the less the more he was likely to get from European action. For its neighbours, Morocco was a weak and troublesome state. The rapidity of its neighbours was its best protection. Many reasons urged the Turks to obtain a footing there: the capability of the beglerbegs of Algiers ambitious of extending their powers to the west, the naval basis of Mazagan of al-Ma‘ūrā and of Larache; the formal promises that had been given by ‘Abd al-Malik, when he was begging assistance, and there was always the troublesome question of spiritual supremacy, as the Turk-sultan did not admit that the Moorish shah had an authority in religious matters as great as his. To extirpate himself, al-Mansūr played the usual game, following the example of his brother, who had made advances to the kings of Spain, Portugal and France, to the Queen of England and to the Grand Duke of Tuscany; he turned without ceremony from the Grand Turk and threw himself into the arms of Philip II, overwhelming the Catholic King with demonstrations of friendship, of which the most significant was the return without ransom of the body of Sebastian; he was even promised Larache.

The quarrel with Turkey was soon to come to an end. ‘Ali, Beglerbeg of Algiers, exerted all his influence to get war declared. Aḥmad al-Mansūr
as a last resort had to send in 1581 an embassy laden with presents to Constantinople where the enemies of Eüdyl 'Ali were conducting an effective campaign against the Berglerbeg. The relations between the two Muslims resumed the appearance of a conflict which they usually had. In 1587, the death of Eüdyl 'Ali, the end of the regime of the Berglerbegs and the weakening of Turkish power in Algiers freed Morocco from a threat which had long weighed heavily upon it. There were still periods of tension: when al-Manṣūr ceased to send what he considered gracious gifts and what the Grand Turk received as tribute; when the conquest of the Süddan seemed to be about to threaten Ottoman interests, spiritual and material; and lastly in the periods of friendship with Spain. But there was never again a real crisis; even in spite of the efforts of Hassān who had married 'Abd al-Malik's widow, the Turk did nothing really serious to sustain the claim of Isma'īl.

When al-Manṣūr had peace on the Turkish side he showed Philip what negotiation meant; yielding nothing, breaking off nothing; playing enemies off one against another. It was no longer a question of handing over Larache but of an exchange and the pourparlers dragged along for four years with a decreasing seriousness of purpose. The Duke of Medin-Sidónia, supported by Philip II, to deal with Moroccan affairs was played with by the Moor who was able to reap considerable advantage from his hesitation on several occasions. The Sharif seems to have summed up very skilfully the character of the Catholic king and the needs of his policy. Spain, faced with a crisis at home and abroad, could not think of risking anything important in Africa. It was he interest that Morocco should remain weak, that is to say Moroccan, and especially that it should not fall under the influence of the Turks or of the English. Corsairs sheltered in the Atlantic ports, on the route to India. The garrisons, weak and badly provisioned, were periodically blockaded sometimes threatened, by the natural movements of tribes around them rather than by deliberate hostilities on the part of the Sharif. The policy of the two Phelips, one of distrust and fear, tried to limit the evil and to obtain by subtle means a neutrality as little malevolent as possible, by awaiting the favourable moment of the anarchy, which history showed to recur in Morocco with an inexorable regularity. The Spanish court did not attempt to make capital out of the presence in Spain of two pretenders, al-Nāṣir and al-Shakh, the brother and the son of al-Mutawakkil which disturbed al-Manṣūr; in 1589, Arzila was evacuated without a quid pro quo. The fear of seeing Moors and Moroccans draw closer to one another kept Spain from unfolding a liberal economic policy, the only one capable of affecting the Sharif in a sensitive part.

The latter by nature very cautious and far-seeing was not inclined to take risks. He had also to reckon with a public opinion, already irritated by the influence wielded by Jews and renegades: anti-foreign feeling definitely increased in the course of the reign; the fact that he had compromised himself with the Christianics weakened the prestige of the Sultan, while the wealth and power of the Marabouts and brotherhoods increased to a dangerous degree. The splendour-loving ruler of acovetous people, al-Manṣūr did not think of concealing the sympathy he had for traders. With the Grand Duke, who freely received Moors in Tuscany and did all he could to develop commerce between the two countries, with Elizabeth, with the English, French and Dutch traders, relations were close. Sugar was exported from the South and Morocco also supplied corn in good years, gold from the Süddan, salt petre, copper and hides. It imported principally cloth and for al-Manṣūr himself, the materials for his buildings. From the Sharifian court there went undefinable envoys, at once ambassadors, spies, procurers of jewels and of women. But contraband especially interested the Sharif, contraband of war and the sale, advantageous for every one, of the cargoes and slaves brought in by the corsairs. The English were the most punctilious contrabandists and the trade with Morocco developed so well that in 1585 the Barbary Company was founded with a monopoly and a regular constitution. But Ahmad al-Manṣūr was not too fond of regular traders. The many Christians settled in Morocco must be considered to have been adventurers. Quasi-prisoners of the Sharif and his people, they were able to realise precarious fortunes, always liable to exortion. In 1585 bankruptcies were numerous in Morocco and the royal company could not survive. The caprices of the sovereign drove off many other foreign traders.

These economic relations gradually developed into political ones. It was to exercise pressure on Spain that Ahmad al-Manṣūr pretended to submit to the wishes of a combination of Dutch and English. After the destruction of the Armada in 1588, he entered without hesitation into the English camp; he received at his court Don Christoph, son of the Portuguese pretend Don Antonio, and agreed to a loan to Elizabeth. Then he drew back again. The taking of Cadiz in 1596 again influenced his feelings; he spoke of an alliance and made definite offers. Nothing resulted from these demonstrations, except a painful impression left after deceptions. So long as he was alive, relations were friendly, for the two rulers had kindly feelings for one another, but James I, on his accession, at once showed a much less benevolent attitude towards the Sharifian court.

It was in the direction of the Süddan that Ahmad al-Manṣūr gave reign to his desire for glory and conquest. His troops had had some experience in the Sahara. In 1581, the oases of Tuat and Tigūrāra, which had long been free from the Sharifian yoke had been conquered brilliantly. In 1584 an unsuccessful expedition had ended in the disappearance in the desert of a large army which had not even reached Teghaza. In 1590, having sought a quarrel with the arzīta Išāq over the ownership of the salt mines of Teghaza, al-Manṣūr persuaded his Council to go to war; a little army under the Pasha Djawdar crossed the desert and destroyed the Süddane empire. The occupation of the conquered country was nothing but systematic plunder and massacre. The Sharif collected great wealth there; he received the congratulations of the Powers and gained a prestige which still survives; his lieutenants also enriched themselves. With remarkable regularity, almost every year, reinforcements set out for Gago and very often reached it; caravans brought gold, wealth and slaves back to Marrāḵush. The most famous of the prisoners was the legist Ahmad Bābā [q.v.], for whom Marrāḵush was a gilded prison where he taught quite freely. The
Südän was drained dry. In 1600 al-Mansûr saw the necessity of reorganising trade there but does not seem to have succeeded.

Morocco was, on the whole, prosperous during his reign. The first Sa’dians had done much for the development of commerce and agriculture, sugar factories were built up and down the country which were the Sul’tân’s private property but were farmed out by him to Jews and Christians. Trade was active at the ports. The profits from the sale of captives or their labour contributed to make the notables wealthy and through this to the peace of the country. Besides the industrial monopolies, the normal revenue came from the customs dues and the taxes established by Muḥammad al-Mahdî, which al-Mansûr heavily increased. The collection of these taxes provoked murmurs of discontent and served as an excuse for military demonstrations which maintained good order in the country. Al-Mansûr had also a considerable army (he never formed a fleet) composed of excellent troops, Moors from Spain and particularly renegades, a nursery for kâids and officers of ability and energy. He was rich enough to pay them well. All this contributed to make rebellions few and they were always quickly and harshly suppressed by the Sharîf’s lieutenants: the rising of the people of Sakkawa, stirred up by Mawli‘ı Dâwâd, son of Abîl al-Ma’mûn in 1581 and the rebellion of the Berbers of Amizîn in 1597. The throne itself was never seriously threatened except in 1595—1596 when Abîl-Nâzîr came from Spain and landed at Melilla. Starting without resources, for Philip II would do nothing for him, al-Nâzîr nevertheless proved a redoubtable enemy for he gathered round him all those who were dissatisfied with the rule of al-Mansûr and raised troops from the Barânis (Branes), always ready to rebel and who had until lately been vassals of the Turks. He took Tâza and tried to raise the Rif and the country around Fâs. Defeated at al-Ruka on Aug. 3, 1595, he held out till May 1596. Decisively defeated at Taghât, he was put to death.

Al-Mansûr had rarely need to leave Marrâkush and he did not like to do so. His mother had acquired a great reputation for her pious foundations. He himself, six months after his accession, began the building of the palace of al-Badî which was finished in 1602. Marble for it came from Italy and artists from Spain, and Marrâkush became one great workshop. A splendid palace arose, sumptuous pavilions surrounded by beautiful gardens in which stood numerous fountains. Foreigners were fêted there and the Sharîf displayed his generosity. Especially on the occasion of religious festivals he displayed great pomp and ceremony. His wealth earned him great fame abroad and it was no doubt to it that he owed most of his glory. At his court the principal posts were held by renegades: Jews who had charge of his finances, Christians who conducted his private trading for him, and the agents of foreign courts. Al-Mansûr was one of the richest and most courted rulers of his time. Spain kept a regular ambassador or a representative permanently at Marrâkush; France had a consul there; there was a constant passage of envoys between the Sharîf and the Sublime Porte.

The palace of al-Badî was destroyed by Mawli‘ı Isma’il. The mausoleum in it still remains, a very fine specimen of the art of a decadent period.

Towards the end of his life al-Mansûr was thinking of creating a new Marrâkush on the model of Fâs. Abûm al-Mansûr at first ruled as an autocrat. His orders were clear, his decisions rapid and sometimes, as might be expected, drastic to cruelty. His intimates, the kâids Rusîn, a Jew, whom we only know from European sources and ‘Azîzî, seem to have been his secretaries, like al-Fîghtî, his biographer and poet-laureate whose works have not survived. The Pasha Kirdîn, very powerful at the beginning of the reign, acquired such influence that the Sharîf had him beheaded in 1581. In time the notables acquired a great deal of independence and the Sul’tân hardly dared check their abuse of their power; two factors caused him much anxiety, the anti-foreign and audacious Abîl al-Karîm b. Tûdâ and his own son Abû Fâris. By a concubine, al-Khaizirîn, al-Mansûr had two sons, al-Shaikh and Abû Fâris, and by his wife Lalla ‘Aisha al-Shablabînî, Zaidân. His favourite son Abîl al-Hassan was killed in 1594. In 1579 he had designated as his heir al-Shaikh, called al-Ma’mûn who held the vice-royalty of Fâs. The remainder of Morocco was divided into governor-hips under other princes. These were several times rearranged; Abû Fâris, having considered everything, remained at Marrâkush near his father to be ready in case of his death. In Fâs, al-Ma’mûn, supported by his favourite Mugefî, conducted himself like an independent ruler. He had displayed his gifts of energy, leadership and bravery on the occasion of al-Nâzîr’s escape in 1595; living in great pomp, beloved by his troops, he was undoubtedly a cause of anxiety. His father allowed him-self to be led by Abû Fâris. The conflict broke out in 1598. Forced to sacrifice his favourite, thrown into prison and then half pardoned, al-Ma’mûn had to renounce all hope of winning in the struggle against Zaidân who was supported by Abû Fâris. After 1600 he sought support from Spain and Algiers. Under Abûm al-Mansûr, the dynasty attained its zenith. But it is hardly correct to say that the decline of the Sa’dians only dates from the death of the great Sul’tân. After the conquest of the Südân, the anarchy reigning in Algiers, the weakness of Spain in Europe, the death of al-Nâzîr, the conversion to Christianity of another pretender, al-Shaikh, Morocco was rich, seemed powerful and the Sharîfîan throne stable, Abûm al-Mansûr, by not being able to arrange for his own successor, nor even to keep his son in obedience, gave his country the chance to destroy itself. This process began under his own eyes. He had gone to Fâs to try to reconcile his children and put through the appointment of Abû Fâris as heir apparent when the plague carried him off in 1603. Civil war broke out over his dead body. He had passed the last few years of his life wandering about living in a tent, shifting his camp every ten days, driven from Marrâkush by the plague, which had begun to rage in Morocco in 1598.

(C. Funk-Brentano)

AL-MANṢŪR Ibn Abī 'Amīr, a famous hāḍījī of al-Andalus in the tenth century A.H., the Almanṣūr of the Christian chroniclers of medieval Spain; his full name was Abī 'Amīr Muhammad ibn Abī 'Amīr Muhammad b. 'Abd Allāh b. Muhammad. Ibn Abī 'Amīr belonged to an Arab family which had settled in the Iberian peninsula at an early date: one of his ancestors, 'Abd al-Malik al-Maṣṣūri, had landed there with Ṭāriq [q. v.] and settled at Torrox in the province of Algeciras where he had founded a family. Al-Manṣūr’s father, Abū Ḥafs 'Abd Allāh, was a jurist noted for his knowledge and piety who died on his way back from the pilgrimage to Tripoli in Barbary at the end of the reign of the Caliph ʿAbd al-Rahmān III al-Nāṣir (cf. Ibn al-ʿAblās, Taqīmilat al-Nīl, B. A. E., v.—vi., N. 1251, p. 437—438; al-Majār, Anṭāqāt, i., 894).

While still quite a young man, Muhammad Ibn Abī 'Amīr conceived great political ambitions: they were to dominate his whole career. After studying in Cordova and holding a minor office with the kādi of the capital, Muhammad b. al-Salm, he entered the service of the Omayyad court in 356 (967) as superintendent of the estates of a princess of Basque origin, Sulīf, the wife of the Caliph al-Hakam II and her son ʿAbd al-Rahmān, who had just been born. Ibn Abī 'Amīr was not long, thanks to his tact and courtesy and ability, in making himself persona grata with this princess and the Caliph without the intervention of the latter that the young superintendent found himself within two years the holder of the new offices of superintendent of the mint, treasurer and administrator of instrate estates. A few years later in 358 (969), he was appointed kādi of the district of Seville and Niebla. In 361 (972) the Caliph al-Hakam II gave him command of a section of his police corps (chārja).

All these offices, combined in the person of Ibn Abī 'Amīr assured him a considerable income and soon enabled him to lead a very luxurious life in Cordova. He built himself a palace in the aristocratic quarter of Kuṣāira and his generosity, courtly disposition and his splendour soon placed him in the forefront of the dignitaries of the Omayyad court. In a few years he had filled the first part of his programme: to become popular and indispensable, to make numerous friends, ready to support him on the day on which he would begin his attempt on the throne of the caliph.

Ibn Abī 'Amīr very soon realised that it was not sufficient to be popular in Cordova but that he had also to create reliable friends among the generals of the Caliph’s armies. The circumstances of the time were peculiarly in his favour. Al-Hakam II, following the example of his predecessor ʿAbd al-Rahmān III, had his North African policy and his armies were busy suppressing a Maghribi revolt which had broken out as a result of an expedition of regnal sent against the petty Islamic dynasty of Tangier, Ḥasan b. Gunān. The Omayyad troops, under the orders of the general Ghālib, were sent to dethrone all the petty Idrisid rulers of Morocco who were more or less vassals of the Fatimids. This expedition was crowned with success and Ḥasan b. Gunān was obliged to take refuge in a fortress of the Rif, Ḥaḍjrat al-Naṣr, in which Ghālib besieged him. But the Spanish army in Africa was a heavy burden on the treasury of the Caliph. Ghālib had distributed money recklessly among the chiefs of the Berber tribes of the North of Morocco in order to buy them over. Al-Hakam II decided to send over a controller-general of finance and he chose Ibn Abī 'Amīr who set off with the title of chief kādi (kādi ʿl-kawāf) and exact instructions. He carried out his very delicate task with unusual tact. He returned to Cordova at the same time as the army. When al-Hakam II died, leaving the throne to his young son Hishām in 366 (976), the new Caliph at the same time as he appointed kādi the favourite vizier of his father, Abū ʾl-Ḥasan Dāʾir b. Ṭāmān al-Muṣṭafī, appointed Ibn Abī 'Amīr as the latter’s vizier. The ambitious minister now worked unceasingly to get rid of his chief, al-Muṣṭafī. In the first place he was able to reduce to nothing the considerable power which the Slavs (Ṣaḥāḥa, q. v.) had in the Caliph’s entourage. In Cordova they formed a body of mercenaries who guarded the royal palace, and at this time their leaders were two of their number, Fāʾiq al-Niẓām, grand master of the wardrobe, and Djaḍwiḥar, goldsmith and chief falconer. On the death of al-Hakam they had attempted to oppose the proclamation of Hishām who was still a child and to put on the throne of Cordova his uncle al-Muqhirī. The latter was slain at the instigation of al-Muṣṭafī and it seems likely that Ibn Abī 'Amīr played an active part in the plot which ended in this murder. In any case very soon after the accession of Hishām II as a result of the rigorous measures taken against them, the Slavs lost all influence at the Omayyad court to the great satisfaction of the people of Cordova who had long suffered from their abuses. Ibn Abī 'Amīr also gained in popularity, still further increased when he displayed for the first time the possession of military talents which had not been suspected.

A little later he succeeded in getting the command of an expedition against the Christians of the North who had taken up arms against ʿIsām as soon as al-Hakam II had fallen ill. Setting out from Cordova in Radjab 366 (Feb. 977) he laid siege to the fortress of los Baños in Galicia and returned to the capital with considerable spoil. He then cultivated the friendship of the aged and
distinguished general Ghālib, governor of Madinat Sulm (Medinaceli, q.v.), and obtained his help to liquidate the fall of the ḥālid al-Muṣṭafī. Ghālib on the intervention of Ibn ʿAmīr received the much coveted title of ḥūn ʿl-ʿasāṣirātān and the command of the forces on the frontier in the expeditions against the Christians. This friendship was strengthened in a new campaign in which Ibn Abī ʿAmīr commanded the troops of the central region of Ghālib. This expedition was again crowned with success and earned Ibn Abī ʿAmīr a new and honourable office, that of commander of Cordova in place of the son of al-Muṣṭafī who was dismissed. Al-Muṣṭafī, conscious of the danger which threatened him, then tried to play off Ghālib against Ibn Abī ʿAmīr but the latter was labour lost. The young minister even became son-in-law of Ghālib who gave him the hand of his daughter Asmāʾ. A few months later, al-Muṣṭafī and the members of his family, who had held offices at the court, were dismissed and their property confiscated. On the same day Ibn Abī ʿAmīr was appointed ḥādījīb. With his father-in-law, Ghālib, he was at the head of the administration of the empire.

It was not only the plots he had woven with success in his personal ability that had enabled Ibn Abī ʿAmīr to advance so rapidly in his career. It seems very probable that the princess Suḥb, widow of al-Hakam II and mother of the reigning Caliph, was the mistress of the former superintendent of her son's estates. This liaison was not unknown to the Cordovans and produced bitter criticisms of the princess and her lover. Public opinion, which had at first been favourable to the ḥādījīb, began to be hostile to him. A plot to overthrow Hishām II and put in his place another grandson of Abū al-Rahmān III was prepared but nipped in the bud. The Cordovan prince then spread the rumour that Ibn Abī ʿAmīr was devoted to philosophy and that his orthodoxy therefore was quite nominal. He proved them wrong. Ibn Abī ʿAmīr did not hesitate to burn the splendid library formed by the cultured al-Hakam II and all the books dealing with branches of knowledge prohibited by the ʿUlamāʾ. He conciliated them by this act of vandalism the gravity of which can hardly have escaped him. But with his unparalleled ambition nothing which might prevent him attaining his object was allowed to deter him.

But the young Caliph Hishām II was now growing up. He had to be prevented from taking an active part in the conduct of affairs. Business was then conducted in the Caliph's palace in Cordova, in order to set aside the ruler finally. Ibn Abī ʿAmīr in 358 (968) decided to build near the capital a regular town for administrative purposes. This was al-Madinat al-Zahrāʾ [q.v.] which in a few years became an important city at the very gates of Cordova. As to Hishām, he then began the life of a recluse, either at Cordova or at Madinat al-Zahrāʾ, which was to last throughout his reign. At the same time as he settled the problem of the possible intervention of the ruling princes in the affairs of state in a manner energetic as it was unscrupulous, Ibn Abī ʿAmīr was reorganising the army and inaugurating a new policy in the country. The Omayyad army, in the form in which it was then constituted, was recruited in the country itself and the permanent bodies of mercenaries were not large. Ibn Abī ʿAmīr required new ones: this is why from now on till the end of his life, he appealed for Berber volunteers from the north of Morocco and Ifriqiyya. At the same time he realised that the occupation of certain parts of the Magrib by the Omayyads was only a source of expense to the Caliph's treasury and that any plan of territorial expansion in that direction would be disastrous to the ruler of Cordova. He therefore abandoned all these possessions, retaining in Africa only one of the keys of the Strait of Gibraltar, the citadel of Ceuta. The administration of the rest of the country he handed over to petty local dynasties under the nominal suzerainty of Cordova. Along with the Berber troops in his pay, Ibn Abī ʿAmīr formed other corps by recruiting Christian mercenaries from the north of Spain, from Leon, Castile and Navarre. He was able by his generosity and attentions to secure the complete devotion of his new soldiers.

Having thus a strong and veteran army at his disposal, Ibn Abī ʿAmīr renewed with ardour the old feud against the Christians on the frontiers of the empire. He first of all got rid of his father-in-law Ghālib, whom he had displeased by the manner in which he had upset the old military organisation of the country; then he undertook in 371 (981) an expedition on a grand scale against the kingdom of Leon. He took and plundered Zamora, where he took 4,000 prisoners. The King of Leon, Ramiro III, then made an alliance with Garcia Fernandez, Count of Castile, and the King of Navarre. But all three were defeated by the Muslim general at Rueda to the south-west of Simancas and this town itself was taken by him. Ibn Abī ʿAmīr continued his advance on the town of Leon and inflicted another defeat on Ramiro III. The return of the ḥādījīb to Cordova was a regular triumph and it was on this occasion that he took the honorific ḥālīf of al-Maʾṣūr bi-liʿlāh, “the victorious in God”.

All powerful at Cordova and a successful general, al-Maʾṣūr Ibn Abī ʿAmīr was to devote the rest of his life to an unceasing war on the Christian frontiers to the increasing considerably of the territory ruled by the Muslims in the Peninsula. After his defeat, the nobles of Leon had deposed Ramiro III and proclaimed in his place Bermuda II. The latter finally found himself forced to seek al-Maʾṣūr's help and to recognise him as suzerain. Al-Maʾṣūr then decided to make an expedition into Catalonia in 374 (985) he defeated Count Borrell and stormed Barcelona, which he sacked. According to Ibn al-Aụbāʾ, it was the ʿAmīrīd's twenty-third campaign.

Ibn Gannān, the petty Idrīsīd dynasty in the north of Morocco having again rebelled against Cordova, al-Maʾṣūr sent his cousin Ibn ʿAskālādja to subdue him. Ibn Gannān surrendered on being promised his life. But al-Maʾṣūr had him executed along with Ibn ʿAskālādja whom he accused of having plotted against him. This breach of faith and brutal execution having produced a reaction of feeling in the capital, al-Maʾṣūr to rehabilitate himself undertook a pious work: in 377 (987) he extended the cathedral mosque of Cordova which had become too small. Eight new naves were built on the east and the western wall of the hall of prayer and of the ʿabn was moved out 150 feet. The Arab historians say that al-Maʾṣūr made gangs of Christian prisoners do this work, for the greater glory of Islām.
In the same year the war against the kingdom of Leon was resumed. The Muslim troops, that al-Manṣūr had sent there, had oppressed the country and Bermuda II had finally driven them out. Al-Manṣūr punished his boldness with the greatest rigour. In two campaigns several months apart, he took Coimbra, which he had made waste, Leon which he had left completely in ruins, and Zamora. The Counts of Leon had then to lay down their arms and submit to al-Manṣūr and Bermuda II was only left possession very much reduced in extent.

The campaigns that followed were again directed against the N.-W. of the Peninsula. The best known is that of St. Jago de Compostella in 387 (997). This famous sanctuary of western Christianity [cf. the article Şancti Viet)i] was taken by the Muslim troops on the 2nd Šaḥbân (10th August) and only the tomb of the apostle was spared, by orders of al-Manṣūr.

The last expedition against the Christians dates from the year 1002. Its objective was Castile. Al-Manṣūr took Castrid and destroyed the convent of San Millán de la Cogolla. But on his return from the expedition, he fell ill and died at Medinaedd on the 27th Ramadân 392 (Aug. 10, 1002). He was buried in this town.

The last years of the life of al-Manṣūr in spite of his successful career and victorious expeditions had been marked by events which might have been fatal to him if he had not once again displayed an iron will and extreme violence in the suppression of plots hatched against him. The few attempts made on behalf of Hisbâm II to regain for him the power, which had been seized by his first minister were in vain. In 381 (991) al-Manṣūr gave up his title of Hisbêb in favour of his son ʿAbd al-Malik. Five years later he assumed with an audacity worthy of him the princely title of malik karim “noble King” and reserved for himself the title sajjīd “lord”. The only thing that he did not dare to do or could not do was to announce the overthrow of the Omanids caliphate and the constitution of an ‘Abdîrîd caliphate in its stead. He arranged however for the power to pass to his heirs after him, and it was his son ʿAbd al-Malik al-Maṣâfîr, who succeeded him on his death to control for a few more years the destinies of the Muslim empire in Spain.

Various judgments have been passed on al-Manṣūr. His lack of scruples has been emphasised and the often criminal means which he used to attain his ends. His career is nevertheless an extraordinary one. This dictator was undoubtedly one of the greatest men of affairs that Islam has ever produced and under his “reign” Muslim Spain remained the great nation, which in the caliphate of ʿAbd al-Râhîm III had shown itself one of the most remarkable centres of culture and civilization in the mediaeval west.

MANSÛR B. NUḤ, THE NAME OF TWO SAMÀNID RULERS

1. MANSûR b. Nuh I (Abu Shîhî), ruler of Khorasân and Transoxania (350—365 = 961—976), succeeded his brother "Abd al-Malik b. Nuh I [q. v.]. Ibn Hâwîl al-Mansûr is able to describe the internal condition of the Samànid kingdom under Mansûr as an eye-witness; cf. especially B. G. A., ii. 341: fi waqiyâna hâddîn; p. 344 sq.: on the character of Mansûr the “justest king among our contemporaries” in spite of his physical weakness and the slightest of his friends. On the vizier Bâshî, see Bâshî where also information is given about the Persian version of Tabari’s history composed in 352 (963) by or by orders of this vizier. On the rebellion of the commander of the Samânid bodyguard, Alp-Tegh, and the independent kingdom founded by him in Ghazna and on the establishment of Samânid rule there in the reign of Mansûr and the son and successor of Alp-Tegh, Išâkh (or Abu Išâkh Ibrahim) see AL-PUGINY AND GHANNA; in Barcelos, Turkestan, G. M. S. New Series v., p. 251, note 4. Abu Išâkh Ibrahim should be read for Išâkh b. Ibrahim (this passage is misunderstood in the Russian original). In other directions also in this reign the Samânid kingdom prospered in its foreign affairs: the fighting with the Bûyids [q. v.] and Ziyârids was as a rule victorious.

2. MANSûR b. Nuh II (Abu l-Hârijî), ruler of Transoxania (387—389 = 997—999). His father Nûh b. Mansûr, to whom out all the Samânid empire only a portion of Transoxania was left, died on Friday 14th Rabî' II (July 23, 997) but it was not till Dhu'l-Qa'da (November) that homage was paid to Mansûr as his successor. Bâshî (ed. Morley, p. 803) talks highly of his courage and eloquence; on the other hand he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to instil terror into any one. The last Samânids were quite helpless against the kings and generals who were quartering over the inheritance of the dying dynasty. One of these generals, Fâ'îk, succeeded even in taking Bukhara; the Samânids probably feared even for Išâkh b. Ibrahim (q. v.) but was called back by Fâ’îk. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the governorship of Khorasân, which
was claimed by various parties; but before the problem had been settled by force of arms, Manṣūr was deposed on Wednesday, 12th Safar 389 (Feb. 1, 999) by his generals Fāṭīk and Begaṭzūn, blinded a week later and sent to Baḥrān. Bibliography: cf. Sāmānīs, and add: W. Barthold, Turkistan down to the Mongol Invasion, Sec. Edition, London 1928 (G. M. S., New Series v), p. 251 sqq. — (W. Barthold)

AL-MANṢŪR ISMĀ‘IL, Abu ‘Abd Allāh b. Abū ‘Abd Allāh, third Fatimid caliph, was 32 when he succeeded his father Abū ‘Abd Allāh Al-Kāsim Al-Kāsim in Shawwāl 334 (May 946) under particularly difficult conditions: Abū Yazīd, the Khārijī agitator supported by many Berber tribes and by the people of Ka‘rāwan had failed before al-Mahdiyya, but was still besieging Sūs. Al-Manṣūr concurred in his father’s death and did not alter the formula of the khutba, of the coin-legends or of the standards lest Alī Yazīd should profit by the weakening of authority which was a regular feature of change of ruler. Sūs was relieved by the efforts of the reinforcements sent by Al-Manṣūr by sea. Abū Yazīd had to beat a hurried retreat. Al-Manṣūr, however, having returned to Ka‘rāwan and pardoned the inhabitants who had supported the agitator, had to prepare to meet a new attack. Abū Yazīd was not long in reappearing; repulsed he came again to the attack. Al-Manṣūr tried to make terms with him and gave him back his women captured in Ka‘rāwan but Abū Yazīd, in spite of his promise, attacked him again and was completely defeated in a pitched battle (Aug. 946). He was then pursued to the west. After a delay caused by the illness of Al-Manṣūr, Abū Yazīd mortally wounded was taken prisoner at Djebel Ayānā, north of Mīla, in Muharram 336 (Aug. 947).

This success established Al-Manṣūr securely. A section of the tribes of the Central Maghrib who had embraced the cause of Abū Yazīd made their submission, like the Maghārāwa under Muḥammad b. al-Khāṣbūn. Taking advantage of the difficulties of the Fatimids, the Omayyads of Spain had entrenched themselves more securely in western Bar- bary. A former Fatimid officer, Ḥamdī b. Yeseṭ, was ruling the Maghrib in the name of the caliphs of Cordova and laid siege to Tāhert. Al-Manṣūr relieved the town and appointed the Iṣra’āḥī Yazīd b. Muhammad to rule it. He invested with considerable authority the chief of the Ṣāhāqādī Ziri b. Manīd, who had proved a loyal auxiliary during his days of trial.

Returning to Ka‘rāwan, Al-Manṣūr had again to take the field against the sons of Abū Yazīd who was trying to stir up a rebellion again. Besides taking these vigorous steps in Barbary to put an end to the Khārijī movement, Al-Manṣūr developed the naval power of Ifriqiyya. His freedman Faḥā, supported by the governor of Sicily, won a striking victory over the Greeks in the south of Italy and came home laden with booty (340 = 951).

Lastly Al-Manṣūr holds a high place among the Fatimids of Ifriqiyya for his buildings. The capital was no longer Al-Mahdiyya nor was it Kairouān whose recent treatment made it suspect. From 647 Safar, also called al-Manṣūrīyya from its founder, was the capital. The town built at the gates of Ka‘rāwan was beautified by the palaces which he built and grew rich on the bazaars which he removed from the old city.

The Encyclopedia of Islam, III.

Al-Manṣūr was 39 and had ruled 7 years, when he died suddenly on a journey from a chill caught by taking a bath in cold weather (Shawwāl 29, 341 = March 953).

MANṢŪRA, founded by Manṣūr b. ljaymūh al-Kalābī, was from 258 (871) the capital of Sind under the Arabs. Iṣṭaqhrī described it as more fertile and populous than Multān. Before the arrival of the Arabs, Bhrmansād (probably identical with the modern Iṣṭaṁbūlam) was the capital of Sind, and its name was changed to Manṣūra after the Arab conquest. For notices of Manṣūra by early travellers to India, see Gazetteer of the Bombay Presidency, i, Part 1, p. 506, 507, 511, 525. Bibliography: al-Baladurī, Futūḥ al- Busān, p. 439, 444, 445; Abu ‘Abd Allāh, Tah‘rīm al-Busān, p. 62, 346, 350; and E. H. Atkīn, Gazetteer of the Province of Sind (Karachi 1907), p. 91, 96 and 508. (M. Hidāyat Hosain)

AL-MANṢŪRA, a large town in Lower Egypt, on the right bank of the Damietta branch of the Nile, capital of the province of Dāmilā. No other canal or branch of the Nile went from here to Asīmān in a north-easterly direction. It was originally a camping place for the army, founded in 616 (1219) by al-Malik al-Kāmil, when he tried to recapture Dimyāt, then occupied by the Crusaders. In 1249 the Crusaders were defeated in the neighbourhood of al-Manṣūra by al-Sultan al-Ma‘ṣṣāzīm Tārānah, on which occasion Lewis IX of France was taken prisoner. The town is now an important emporium for the cotton trade; in 1917 there were 49,238 inhabitants (Baedecker). It possesses no remarkable buildings; a railway bridge crosses the Nile at this place.

There are still various other places in Egypt, called al-Manṣūra.

AL-MANṢŪRA, the name of a town now in ruins built by the Sultan of Fās about 5 miles to the west of Tlemcēn. The very precise account given by Ibn Khallīkān enables us to reconstruct with exactitude the history of this typical town-camp. In the year 669 (1299) the Marinid Abī Ya‘qūb Yūsuf, who had come to lay siege to the capital of the Banū ‘Abd al-Wad,
which he had closely surrounded with entrenchments, set up his camp on the plain which stretches to the west. As it was a long drawn out blockade he built a few dwellings for himself and the leaders of his army and laid the foundation of a mosque. In the year 702 (1302) the “Victorious Camp”, al-Mahalla al-Manṣūra, was given the form of a regular town by the construction of a rampart. Besides the mosque, the dwellings of the chiefs, the store-houses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, al-Manṣūra or New Tlemcen, as it was called, naturally attracted to itself the business of the invested town. After a siege of eight years and three months the Marinids withdrew from Tlemcen, and al-Manṣūra was methodically evacuated under the direction of İbrahim b. ʿAbd al-Djalal, the vizier of the Sultan Abū Thābit. The people of Tlemcen were compelled, by the terms of the treaty made with the Marinids to respect the rival town for some time. Some time after, when the entente between the two empires had been broken, they demolished its buildings and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy.

Forty years later, in the year 735 (1335), the Moroccan army under Sultan Abu-Abd al-Malik was once more at the gates of Tlemcen. On this occasion the ʿAbd al-Wādī capital was forced to surrender (27th Ramaḍān 737 = 1st May 1337) Al-Manṣūra was rebuilt. It became the official capital of the Marinids during their occupation of the central Maghrib. It was in fact, during this time that the great mosque was built and that the “Palace of Victory” was erected (745).

After the retreat of the Marinids, al-Manṣūra, once more abandoned, fell little by little into ruins. At the present day the rampart of terre pisé flanked by square towers is still comparatively intact; but the interior land is under cultivation and contains a French village. There still exists there, however, the ruins of a palace no longer distinct, a section of a paved street, and probably the surrounding wall in terre pisé of the Mosque with half of the great minaret in stone, which arose above the principal entrance. Although the inlaid ceramic work has almost entirely disappeared, the facade of the square tower, which is 120 feet high, is one of the most perfect pieces of the Maghrib art of the sixteenth century that survives. The columns and the capitals in marble of the mosque are preserved in the Museums of Tlemcen and Alger.

**MANTİK (A.) Logic.** The logic of the Arab philosophers is that of Aristotle, here and there modified by the Stoic and Neo-Platonist tendencies of the Greek commentators. The Arab philosophers did not develop this logic but they gave reasons of it, reproduced it and wrote commentaries on it, often with success; they understood it very well and it is in logic that they came nearest to the authentic Aristotelianism. As to the manner, it was easier for them to grasp the exact sense of the logical writings of Aristotle than of his other works since the translation of the Logic had been made and remade with great care (cf. e.g. the two versions of the beginning of the Interpretation in J. Pollak, Die Hermeneutik des Aristoteles in arabischer Übersetzung, 1572 b. 1582 b. Heimann, Leipzig 1913). While the translation of the Metaphysics was defective and incomplete. The remark of the Ḥadīth al-Ṣafā’—who evidently did not care much for the subject of logic—at the beginning of their little treatise on logic “the ancient sages have dealt with these subjects and their works are in the hands of the reader, but they are very diffuse, for the translators did not understand the exact meaning” is then not justified.

To the six works of Aristotle, the Categories, Hermeneutics, the Prior Analytics and Posterior Analytics, the Topics, and the Sophistics, the Arabs—like the latest Greek commentators—added the Rhetoric and the Politics (as to the latter Aristotle himself had regarded it [Rhet., i. 2, 1356 a 23] as a lateral branch of the Dialectics and Politics). They explained the order of these works in the manner of the later Greek commentators (cf. Ehlai in Aristotelische Category. Comment., ed. Bus., p. 116 sqq., 293). The most important of these treatises was the fourth, the Posterior Analytics, to which the three preceding are only the preparation and introduction; in the Posterior Analutes Aristotle was thought to have treated of the absolutely True, in the Poetics of the absolutely False and in the intermediate treatises, according as they approach the Poetics, the element of improbability begins to preponderate. Then, still in the manner of the Greeks, they placed in front of these works the Logic of Porphyry which, as its name, Eiseigeticon tēs Ἀριστοτέλους καταργημα, Ἐκτὸς τοῦ Ἀλήθους καταργήσας, shows, is an introduction to the logic of Aristotle.

Among the Greeks there were two further kinds of introduction to philosophy or—since the study of philosophy began with logic—to the logic of Aristotle. In the one which preceded the categories, Prolegomena tōn katastropheōn, ten questions were put (among them: Whence came the names of the different “philosophical schools”? What is the division of the works of Aristotle?) to which a brief reply was given. Among the Arabs, we still find an introduction of this kind in a little work by al-Fārābī, Risāla fi-ṣūr yahayhi an yahdīdabibī Tāziyyan al-Farābīyya (ed. Schmoeller in Huxley, philos. arab.). The other kind of introduction, the prototype Prolegomena τῆς φιλοσοφίας of which is given by the pupil of Proclus, Ammonius Hermiae, was introductory to the Isagōg. In the first part definitions were dealt with, in the second divisions of philosophy. The Arabic treatises on the division of the sciences go back to this kind of introduction which they further developed. We still possess from the pens of the two of the greatest Arab philosophers, al-Fārābī and Avicenna, such treatises on the divisions of the sciences. Avicenna’s entitled Maḥbūba fil-Tafṣīl al-Hīma wa-l-Lūm was printed at Constantinople
among the Tammūṭiyya. For the manuscripts, the publication — in a little review, al-Barghūtī in 1921 at Sadra (Syria) — and the emendation of the text of al-Fārābī, Kitāb Ḥikmat al-Tabībīyya, cf. the excellent study by M. Bouyges S. J. in the Milanese de l'Université St. Joseph, vol. ix, fasc. 2, Bârût 1922. These two treatises were translated into Latin and that of al-Fārābī in particular, with the Latin title of De Sciencia since it was incorporated almost completely into the De divisione philosophiae of Gundissalinus, had a great influence on the European thinkers of the middle ages.

There were three opinions among the Greek logicians as to the relationship of logic to the system of philosophy: 1. To the Peripatetics, logic was simply a methodology, an introduction to philosophy; 2. except for its integral realist the structure of reality is in conformity with the structure of the mind; the rules of logic integral itself with realities themselves and logic would then be a true part of philosophy: this was the opinion of the Stoics and especially of Plotinus, Enna, i, 5, 3; 3. the combination of these two views in several Neo-Platonists: logic was at the same time an introduction to and a part of philosophy. Among the Arabs these three points of view were also represented (cf. Khwārizmī, Kitāb Majāmīh al-Ṭabībīyya, ed. van Vloten, p. 152) but the Peripatetic view was in the majority. The third view is found, for example, in Avicenna (cf. Logica, f. 2r, Venice 1508).

Logic, according to the Arab logicians, leads to a knowledge of the unknown from the known (cf. Aristotle, Post. Anal., at the beginning) but its supreme object, according to them and the later Greek commentators, is that, by making us distinguish good from evil, it can guide us to the greatest perfection of soul and the greatest happiness.

Although, on certain points in logic, there were differences among the Arab Aristotelians, they agree on the main lines and even Averroës, who frequently attacks his predecessors with vigour, in other passages of his works often expresses his support of their views that have been disputed; further, the solutions of problems in the Aristotelians and perhaps in other philosophers also sometimes consist of formulæ, the meaning of which on examination is not always quite clear. I may here note some general points which are connected with the great problems of Metaphysics.

As for Aristotle, knowledge for the Arab logicians is a representation, an image of reality: there are in the soul resemblances of things (κατασκευασμένα ἀντιλογικά), concepts, which in judgment are put together. According to this conception — a contradictory conception since it at the same time affirms and denies the knowledge of reality — thought would never be in contact with reality. Naturally implicit or explicit, this contact is often affirmed by Aristotle. A curious example of the conception of knowledge as an image, but in which at the same time the contact with reality is openly affirmed, is found in the theory of the duality of existence, a theory which the Arabs took over from the Greek commentators. The ten categories have a double existence, according as they are found in the outer world or as images in the soul and the word existence has therefore two meanings: 1. reality or objective existence and 2. subjective existence of the soul. The intelligence may direct itself in an intuizione prima (πρώτη έντυση) towards the exterior world of which the highest kinds are the ten categories, but it can turn inwards upon itself in an intuizione secunda (δεύτερη έντυση), upon its concepts, of which the highest kinds are the five "voices" of Porphyry. Everything has an existence, if not in the exterior world, at least in the soul. This theory gives rise to difficulties: in the first place the term "existence" becomes ambiguous; secondly, since the negation of each thing exists in the soul, "what is not in the soul" must exist in the soul. It is in the Kalām [q.v.] notably among the Ash'arīs and probably under the influence of Stoic discussions on the existence or non-existence of the "not things" (δότικα) that the existence of concepts like the impossible and the negative has been discussed. The Arab Aristotelians were very often content to admit a concept "thing" (šarāh, al-rāʾ of the Stoics) more general than being, without paying too much attention to the fact that by this they were contradicting the thesis that everything is. For the rest, in the Aristotelian philosophy the concept of existence or of being gives rise to grave difficulties; it was much discussed in Islam, not only among the philosophers but also among the metaphysical questions connected with it among the theologians and the mystics. Aristotle had already affirmed (e.g. 1040, b 18) that existence or being is neither kind nor substance and the Arab philosophers al-Fārābī, Avicenna, Ghazzālī and Averroes supported this view with the stereotyped reasoning that existence cannot express the essence of things, since being man implies being animal, being a living body, being a body etc., but it does not at all imply that man is being. On the other hand being (šarāh) and substance (al-sharīʿ) are synonyms in Aristotelian philosophy. How are these two views to be reconciled? Avicenna says that the theologians had already done better, that only in God substance (being) and existence coincide: for the other substances, existence must be added to them as an accident. For Averroes on the other hand, as before him for the Ash'arīs, being is always substance and never accident and he says that in judgments, in which being is predicated and thus apparently an accident, as when one says "substance is", "is" is an intuizione secunda.

As to the theory of ideas, the Arab logicians deny, with Aristotle and using his own arguments, the separate existence of the universals, but admit with Plato their supra-sensible existence. This is the theory very prevalent in the last period of philosophy (in the Middle-Platonism, Neo-Platonism and Neo-Platonism) according to which ideas or universal forms exist from eternity in God. The intelligibility of things comes from this, that their cause is an intelligence; as the idea of the statue in the soul of the sculptor is the cause of the existence and intelligibility of the statue, so the intelligence of the creator of the world is the cause of the intelligibility of natural things. Avicenna expressed this theory by the formula that the Universe is ante multiditudinem in multiplicitate (in things) and post multiditudinem (in our soul). It is the second element in this formula "in multiplicitate" that offers a difficulty (a difficulty already found in Aristotle); how to conceive of the existence of universals in things which are themselves individuals? Often a conceptualist or nomi-
Aristotelianism is seen in the Arab Aristotelians; it is explicitly stated that the universal is only found in the mind and following Aphraedias the forms in matter, the ἐννόησις, are regarded as individuals. But since in the system of Aristotle, forms are universals by definition, contradiction cannot be avoided, and the theories of the universals among the Arab philosophers are often very complicated and very obscure. Another nominalist or subjectivist tendency is found in their conception of the relation, which they call — with the Stoics — "what the mind puts into things". But it is the theologians who under the influence of materialist, nominalist and sensualist Stoicism have developed a nominalist system which only admits atomic and individual facts without a connection, in which all relation is regarded as subjective or even non-existent.

The ambiguous manner in which he deals with the concepts “possible”, “impossible” and “necessary” gives rise in Aristotle as well as in the Arab logicians, who follow their master faithfully, to grave difficulties. Aristotle (Prior Analyt., 32a, 18—23) — like the Arab logicians (cf. Avicenna, Kitāb al-ma’tūs, ed. Forget, p. 34) — distinguishes two aspects of the concept of the possible; the possible is the negation at once of the impossible and of the necessary, but he does not always observe these two aspects and thus the necessary and the actual are considered as possible since what happens is not impossible. On the other hand, the actual is considered as the necessary, since what happens, happens necessarily; and although the definition of the possible is “what may or may not happen”, for Aristotle “possible” is also “what will happen” since what never happens is not possible. These contradictions are occasioned by the fact that the problem which is at the basis of all this, that is to say, the objectivity or subjectivity of the possible and of the necessary, is differently treated by Aristotle. Aristotle hesitates between determinism and indeterminism. Of two future events, he says in the Hermeias (7) that one will be true and that which is not determined in advance. He says that necessity does not govern the celestial world and that the sublunar world is the reign of contingency, but he also says that God alone is absolutely necessary, that all the rest is hypothetically necessary, that is to say, contains an element of contingency. On the other hand, everything is caused, and goes back necessarily to a first cause. All these contradictions are found among the Arab Aristotelians. The Mutakallimun, who, like the Stoics, wish to exclude the possible from reality (but they sometimes regard, like certain Stoics, the “possible” and “necessary” as both subjective, thus affirming that everything is possible) have with justice declared that if there is a necessary cause, the effect of it must also be necessary and that there is therefore no contingency in the world.

Averroes in his polemic against al-Ghazālī seems to admit the justice of this argument but elsewhere he repeats all the theories of his master.

Although al-Ghazālī confesses that theology, while opposed to the metaphysics of the philosophers cannot however deny the evidence of their logical technique, certain arguments of Greek scepticism against logic are sometimes repeated by the Mutakallimun. Definition is, they say, not possible, because by the particular one cannot reach the universal, and the syllogism is a petitio principii since the conclusion is already contained in the major premises. These arguments are justified against Aristotelianism, regarded as an empirical theory which sets out from the particular fact. There is however a rationalist tendency in Aristotle and the Arab logicians; they admit that the intelligence can at once know first principles and that without induction from particular facts it can grasp relations between universals. But when the Mutakallimun say that knowledge and the Universal cannot give the truth, according to the definition of truth, agreement must exist between true knowledge and reality, and knowledge is universal and reality individual, they reveal by this argument one of the greatest contradictions in Aristotelianism.

Averroes tried in vain to refute it.

MANŪF, name of two towns, in the region between the two main Nile arms called al-Dirzah, generally distinguished as Manūf al-'Uūyā and Manūf al-Suflī. The latter was situated on the right bank of the western Nile arm, while the former lay more to the east on a smaller canal. Both are described by the geographers as large towns, surrounded by fertile districts and inhabited by wealthy people, especially Manūf al-'Uūyā, where, according to Ibn Hawkal (p. 92), there resided a governor. The kūra of Manūf al-'Uūyā is often called the kūra of Damis and Manūf, while the kūra of Manūf al-Suflī is designated as Ţawwa and Manūf (cf. e.g. al-Maqrīzī, ed. Wiet, i. 507). Both the ancient towns have been destroyed since the tenth century; Yāqūt only knows a village of that name. The name has survived, however, until our day, in the name of the province al-Manṣūfīya; the capital of the muḍirīya of his name is now Shībin al-Kawm, and the modern Manūf is a provincial town, situated to its southwest.

Manūf al-‘Uūyā is known in Greek sources as οὐκέτις οὐκέτω, the Coptic name being Panouf Rīs; the other Manūf is not mentioned in Greek documents and is called in Coptic Panouf Līs.

(J. H. KRAMERS)

MÄPPILLAS (Molapha), a group of Muhammadans, of mixed Arab and Hindu descent, on the west coast of Southern India, numbering 1,099,453 according to the Census of 1921. Their name is said to be derived from the Malayalam mā ("great") and pilla ("child"), an honorary title originally bestowed upon all foreigners and
first applied to Christians, Jews and Muslims, but now confined to the last; this derivation, however, is disputed (Thornton, p. 460—461). They owe their origin to Arab merchants, who were attracted to this coast by the trade in spices, ivory, etc.; settling in various commercial centres, they intermarried with the natives of the country and added to their numbers by proselytising; but fresh accessions of the Arab element having ceased long ago, the Moppilla were now approximate to the aboriginal type and exhibit no signs of any admixture of foreign blood. The earliest date of their settlements is uncertain, and the legendary accounts given by the Moppilla themselves are of no historic value (Zain al-Din, p. 21—25). The foreign traders appear to have been encouraged by the Hindu rajahs, who made use of them to man their fleets, and by the beginning of the xvith century the Moppilla were estimated to have formed one-fifth of the population of Malabar (Barbosa, p. 310), but the arrival of the Portuguese in this part of India checked the growth of Muslim power and ruined the Arab trade. The Moppilla are still successful traders, especially on the coast; inland, many of them are agriculturists. There are both Sunni and Shiites among them; the former belong to the Shariat school. Their religious leaders are called Tangal (an honorific title of the personal pronoun, commonly used in addressing superiors) and are treated with profound respect; many of them receive their training in a college attached to the Lijama mosque in Ponnani, the chief centre of their religious organisation; the Tangal of Ponnani is an Arab who claims descent from the Prophet; in accordance with local custom he inherits his sacred office in the female line i.e. his nephew and not his son succeeds him.

The history of the Moppilla is full of incidents of fanaticism and turbulence. In 1524 they attacked the Jews in Cranganur and massacred them without mercy, so that in 1565 the remnant of the Cherrikkal Jewish settlement that survives to the present day (Zain al-Din, p. 50—51; Francis Day, p. 351—352). The Moppilla also persuaded the Zamorin of Calicut to expel the Syrian Christians from his dominions (Francis Day, p. 357). Even their co-religionists found them to be turbulent subjects: they joined the Hindus in fighting Haider Ali [q.v.] after he had extended his power over the Malabar coast, and they rose in rebellion against Tipu Sultan [q.v.] in 1785, and frequently plundered his territories (Francis Day, p. 368). During the last hundred years as many as 51 fanatic outbreaks have taken place among them, especially in the Ernad sub-division of the district of Malabar. Some Moppilla generally begin by murdering a Hindu landlord and then seek martyrdom by slaying kafirs; others join them, after divorcing their wives, and clad in the white robes of the martyr (shahid, q.v.) go out to die fighting against the infidel, with a complete contempt for death. They desecrate and burn Hindu temples, and forcibly circumcise such Hindus as they do not murder. Some of these outbreaks appear to have been stimulated by agrarian discontent at the oppressive action of Hindu landlords, but the last (1921) was entirely political in character, and was excited by the Khilafat movement; it differed from all preceding ones in its wide extent and clear evidence of systematic preparation and organisation; the outrages committed upon Hindus were of a specially revolting character.

The Moppilla of South Malabar generally observe Muhammadan law but in North Malabar follow the local Marumakkattayam system of inheritance, according to which the sons of a man's sister inherit his property, and his wife is not regarded as a member of the husband's family but resides in her mother's home and only receives periodic visits from her husband. On the other hand, a man's self-acquisitions usually descend to his wife and family in accordance with Muhammadan law.

The Moppilla speak the Malayalam language, but use a modified form of the Arabian script in writing it. The majority of them are illiterate, and few only can read and write. Their literature is mainly composed of songs descriptive of religious war, and they are fond of singing them in order to stir up fanatical zeal. Their mosques are quite unlike those of other Muhammadans, having no minarets and often consisting of several stories, with two or more roofs; they often resemble Hindu temples in style, and in fact many Moppilla mosques were once Hindu temples.

The Moppilla are also found in the Laccadive Islands, Ceylon, the Straits Settlements and Burma.

MARBUT. [See MARRUBY.]

MARAGHA, the old capital of Arab badiyan.

Position. The town lies at a height of 5,500 feet above sea-level on the southern slope of Mount Sahand (11,800 feet high) which separates it from Tabriz [q.v.]. This explains the very considerable difference in climate between the two towns which are only 50 miles apart as the crow flies (by the high road 80 miles). The climate of Maragha is mild and rather moist (Hamid Allah and Meerupuru, 1904). The plentiful water supply makes the vegetation rich. The fruit of Maragha is celebrated in Persia and a good deal of it is exported to Russia via Arslab. The district is watered by the stream which comes down from the Sahand and then
turns west to Lake Urmiya which is 20 miles from Marāgha. The town is built on the left bank of the Soğanlı-čai which then courses into Bībī. A little distance to the east runs the parallel river Murdi-čai which waters the district to which Mecquenem gives the name Pahindur (Bayandur); on the left bank rise the heights of Manliders (= with head bound). The next stream is the Lešān which flows into the Daghhatu [cf. sawdī-bulāk]. The rivers farther east (Karanghū and its sources which water the Haşārdū district) belong to the system of the Saifūd-rud [q.v.], i.e. the basin of the Caspian Sea.

From the geographical point of view, Marāgha is quite independent of Tabriz. It lies a little off the great road from Tabriz to Kirmānshāh which runs near Lake Urmiya (via Bībī); the direct bridle-path Tabriz—Marāgha by the passes of the Sahand is only practicable in summer. There is also a direct route along the Sahand on the south and southeast side, joining Marāgha to Ardabīl and Zandān. This road has always been of importance whenever Marāgha was the capital of Ardharbādīān. The important place on the route was Kūltās (cf. below).

At the beginning of the 16th century, Marāgha had 6,000 families (Bustūn al-Sūrihā), in 1298 (1836) it had 13,239 inhabitants of whom 6,885 were men and 6,394 women (H. Schindler). Mecquenem (1904) gives Marāgha 15—20,000 inhabitants.

At the present day the inhabitants speak Ardhan Turkish but in the 16th century they still spoke “arabicised Pahlawi” (Nīchāt al-qulībī: pahlavī-yi mowārab) which means an Iranian dialect of the northwestern group.

The walls of the town are in ruins. Its gates have the following names: Aḩmad, Kūrā-Khānā, Aḵdāsh, Pul-i Būnā (or Gāšik) and Hādīj-mīnāz. The quarters are: Ağa-beg, Mīldān, Darwāsza, Sālār-Khānā.

Prehistory. The valley of the Murdi-čai is famous for its deposits of fossil vertebrates discovered by Khānūv in 1852. Excavations have been conducted by Goebeel (Russia), Strauss, Rodler, Pohlh (Austria), Gunther (England) and Mecquenem (France). On the Murdi-čai have been found remains of the hippopotamus, of the rhinoceros etc. dating from the period before the eruption of the volcano of Sahand. Cf. J. F. Brandt, Über die von A. Goebeel . . . bei der Stadt Marāgha gefundenen Seegehechte, in Denksti. d. Naturforsch. Ver. zu Ràgö, 1876, and the bibliography in Mecquenem. Contribution à l'étude du jurassique des côtes du Marāgha, Paris 1915; cf. Steinruck, Genterzyklogeosynkline, 1916, p. 135—160.

The name. According to Balādhūri, the town was at first called Aḵtāridī (Ibn al-Fākhrī, p. 284: Aḵtārīdī: Yaḵūt, iv. 476: Aḵtarābīdī). This name which means in Persian the “river of Aḵūšī” recalls very much the name of the town taḵšāz which Mark Antony besieged in this region on his campaign against the Parthians in 36 B.C. (Plutarch, Vīna Antonī, ch xxviii., Paris 1854, p. 1113 and F.-ed. Appian, Pamthūc, ed. Sweng-haner, Leipzig 1855, iii. 77—99). It has long been supposed that the name Oke in Strabo xii., ch. xiii. and Index, p. 935, taḵšāz, Ptolemy, v., ch. ii. 276, taḵšūz, Dio Cassius, xiii. 25 are variants of the same name which was probably that of the ancient capital of Arapotene; cf. Ritter, Erdkunde, ii., p. 770. If the identification of Yaḵūt (summer capital, Strabo) with Tālib Īlāhī, suggested by Rawlinson has been accepted (cf. Hoffman, Auszüge aus syrischen Acten, p. 252; Marquart, Erasm., p. 108; William Jackson, Persia, Past and Present, p. 136), the identification of taḵšāz is still uncertain. On general principles it is improbable that a town like Marāgha so advantageously situated by nature was not in existence in Roman times as the ancient name of Marāgha increases the probability of the identification taḵšāz = Marāgha (of course with a reservation as to the exact site of the ancient town).

A place-name Marāgha is mentioned in Arabī (Yaḵūt) and a little town of the same name is in Egypt near Tanī. The etymology “place where an animal rolls” (from m-r-g-) proposed itself to the Arabs here, but in Ardharbādīān (cf. also the village of Marāgha near Abarkhūr, Nīchāt al-qulībī, p. 132) the name is rather a popular Arab etymology of some name. It is local to be observed that Ptolemy, vi., ch. 2, calls Lake Urmiya Margiane (marghīnā; Margianā) and gives the same name to the country along the coast of Assyria. Lastly Marquart in Erasm., p. 143, 221, 313 retains the variant Marqīyūn but Marqīyūn seems also to be based on a good tradition (cf. Ptolemy, ed. Wilberg, 1838, p. 391).

The Arabs. Marāgha must have been among the towns of Ardharbādīān conquered by Maghārī b. Shaḵūr al-Ṭakāfi in the year 22 (Balādhūri, p. 325; Yaḵūt, Kitāb al-Bulān, p. 271). Marāghā b. Mughāmār returning from his expedition to Muṣān and Gīlān in 123 (740) (cf. Yaḵūt, Historia, ii., 365) stopped here. As the place was full of dung (ṣūraqīn Pers., sirīn) the old village (fārāz) was given the name of Marāgha (cf. above). Marwān did some building there. The town later passed to the daughters of Ḥārūn al-Rašīd. On the rebellion of al-Wādīn b. Rawwād, lord of Tabriz [q.v.], Khānūnā b. Kāsīm who was appointed governor of Ardharbādīān and Armenia (probably year 127) cf. Vasmor, Chronologia monarchorum Armeniarum, 293, 163, 1855, i. 397, built walls round Marāgha and put a garrison in it. When Bābā rebelled in 201 the people sought refuge in Marāgha. Maṭmān sent men to restore the walls and the suburb (rābaq) became inhabited again (Balādhūri, I.c.). In 221 Marāgha is mentioned as the winter-quarters of Afṣaf in his campaign against Bābā (Tabari, i., 1180).

In 280 (893) the Ṣājid Mūhammad Afṣaf b. Dīwād seized Marāgha from a certain Awld Allah b. Ḥasan, who was killed (Tabari, ii., 2137; Maṣḥūd, Maḥānī, viii. 143). In 296 (908) the Caliph confirmed Yūsuf b. Dīwād in possession of Marāgha and the whole of Ardharbādīān. A dhīman is known of this year struck by Yūsuf at Marāgha (Vasmor, O moneteck Sagitār, Baku 1927, p. 14). According to Ibn Hawqal, p. 238, there was at Marāgha a military camp (wašākar), a governor’s palace (dār al-imāra), a treasury (kūhān) and government offices (dārātān al-nāhilāyā) but Yūsuf razed the walls of Marāgha and transferred the capital to Ardabīl (cf. Iṣṭakhri, p. 131). Marāgha is only mentioned as the place where the last Ṣājid Abū l-Masāfīr al-Fātī was killed in 317 (929) (ʿArīb, Tabari contin. ed. de Goeje, p. 145).

The Dālāmīs. In 332 (943) (during the rule
of the Dailami Musâ'arids) the Russians (Rus) had taken Bardâ'â [q. v.]. Ibn Miskawaih (G. M. S., vi. 100) speaks of the diseases which decimated them because they ate too much fruit in Marâ'âghâ. This reference to Marâ'âghâ is quite unexpected in the text and Margoliouth has tightly proposed to read ٍطُرُعَةٍ in place of ۙحَرَّنَةٍ. A coin struck at Marâ'âghâ in 337 by Muhammad b. ʿAbd al-Razâk is a record of the brief conquest of Ṣâdâbâdîn by the general of the Bu yi'd Kûn al-Dawla (Vasmer, Žur Chronologie d. Gestaânîen, Islamica, iii/2, 1927, p. 170). Of 347 we also have dîhams of Marâ'âgha in the names of the two sons of the Dailami Marzuban, ʿAbd al-Ḥim and Ḳusârîn (ibid., p. 172).

The Rawâwâdi and the Sâldjâqs. After the disappearance of the Dailamis we find in Tabriz the family of Rawâwâdi Kûrds who seem to have been related with the Musâ'arids by marriage only. On the other hand, it is very likely that the Rawâwâdis are the descendants of the Arab Rawâwâdi al-ʿAzîd, lord of Ṣâdâbâdîn (Marâ'âghâ, p. 331) who became assimilated by their neighbours in Ṣâdâbâdîn. The best known of these Rawâwâdis is Mâlîmân b. Mâlîmân (= Muhammad: the change of d to t in Kurdish is common) who is mentioned between 420 and 446 (Ibn al-ʿAthîr, ix. 379, 351, 410) and who in addition to Tabriz possessed other strongholds in the mountains (Ṣahand). When in 420 the Ghuzz reached Marâ'âgha and executed there a great number of Ṣohâlî Kûrds, the latter united under Ṣahâdîn and drove out the Ghuzz (Ibn al-ʿAthîr, ix. 270–272). This incident shows that the district of Marâ'âgha was within the sphere of influence of Ṣahâdîn. In 445 Ṣahâdîn became a vassal of the Sâldjâqs, but Ibn al-ʿAthîr, ibid., p. 410 says nothing about the extent of his possessions around Ṣahand.

In 497 the peace between the sons of Malik-Shîh, ʿArikîrâk and Muhammad was signed near Marâ'âgha and in 498, Muhammad visited Marâ'âgha.

The ʿAkhâdîlîs. In 505 we have for the first time mention of the Amir ʿAkhâdîlî b. ʿAbdallîh b. Wahsûdân al-Rawâwâdi al-Kurdi, lord of Marâ'âgha and Kûtîb (Kûrsâra: Ibn al-ʿAthîr, x. 361). He was the founder of a little local dynasty, which lasted till about 624. We know very little of the history of the ʿAkhâdîlîs which has never been closely studied.

ʿAkhâdîlî was certainly the grandson of Wahsûdân b. Mâlîmân of Tabriz (cf. above) and explains the insistence with which the atâbegs of Marâ'âgha tried to retake Tabriz. Only intranscendental hereditary rights can explain the strange fact of the wish of a Kûrd to become the amirs of the Sâldjâqs. The name ʿAkhâdîlî is a peculiar formation; the name of Mâlîmân, a village to the south of Marâ'âgha, belongs to the same category of diminutives. The ʿAkhâdîlîs however very soon adopted Turkish names.

ʿAkhâdîlî with a large army took part in the Anti-Crusade of 505. During the siege of Tell ʿAjrī, Joscelin came to terms with him (ṭurâqīh) and he withdrew from the town (Kamal al-Din, Târikh Ḥalab, Rec. des hist. des croisades, ii. 599). ʿAkhâdîlî soon abandoned Syria entirely, for he coveted the lands of Sukmân ʿAbârî-ʿArman who had just died. We know that Sukmân had extended his sway over Tabriz [q. v.] and the reference is probably to this town. According to ʿAbî b. al-Dawza, ibid., p. 556, Ahmadî had 5,000 horsemen and the revenues from his fiefs amounted to 400,000 dinârs a year. In 510 (or 508) Almâdî was stabbed in Baghadât by the ʿIsâmîs to whom he had done much injury (ibid., p. 556; Ibn al-ʿAthîr, x. 561).

Akh-Sânedtyr I. In 514 Malik-ʿAbsâd, governor of Maʿsûl and Ṣâdâbâdîn, rebelled against his brother ʿAbsâd and gave Marâ'âgha to his atâbeg ʿAlînîn al-Dawla al-Bûsîkî but the rebellion collapsed and in 516 Ak-Sânedtyr al-Amadîlî (client of Ṣâdâbâdîn), lord of Marâ'âgha, who was in Baghdât, was authorised by Sulîn-ʿAbîd to return to his fief. As the amir Kun-tughîl, atâbeg of Malik Tughîl (lord of Arrân; Ibn al-ʿAthîr, x. 399), had died in 515, Ak-Sânedtyr expected to get his place with Tughîl. The latter ordered Ak-Sânedtyr to raise 10,000 men in Marâ'âgha and set out with him to conquer Ardabîl in which they failed. In the meanwhile Marâ'âgha was occupied by Djuysi- ʿAbîd, sent by Sulîn-ʿAbîd. The Geogian Chronicles (Boissot, i. 368) mentions under 516 (1123) the defeat of Ak-Sânedtyr (whom he calls, "Abgvan-thul, Atâbeg of Ram" = Arrân) during a demonstration against the Geogians carried out by Tughîl from Shurwân. In 532 Ak-Sânedtyr took a part but not a very active one in the suppression of the intrigues of the Marâ'âghâl lords. In 524 he was one of the promoters of the election of Sulîn-ʿAbîd, whose atâbeg he was. In 526 Tughîl, uncle of ʿAbsâd, defeated the latter and occupied Marâ'âgha and Tabriz (al-Bundârî, ed. Houtsma, p. 161). ʿAbsâd along with his uncle Maʿsûl and Ak-Sânedtyr sought refuge in Baghdât. With the support of the Caliph and the assistance of Ak-Sânedtyr, ʿAbsâd reoccupied Ṣâdâbâdîn. After the capture of Hamadân, Ak-Sânedtyr was killed there by the ʿIsâmîs (ibid.) instigated by Tughîl's viceroy (al-Bundârî, p. 169).

Akh-Sânedtyr II. The name of Ak-Sânedtyr's son is transmitted in different forms. Ibn al-ʿAthîr, xi. 366 and 177, calls him Ak-Sânedtyr (II); cf. also Taiûrî-i Gîzî, p. 472. The Bundârî, p. 231, calls him Al-Amir al-Kubrî Nusân al-Dîn Ḳâb-i al-Husaynî, p. 243, Nusân al-Dîn Ar-īlân Alâb (cf. al-Ḵâhîlî, Dârân Nuzhat al-Tawâṣ, i. 80). The Râwî al-Sânedtyr, p. 241, 244, 262 gives him the name of Atâbeg ʿAlâb Alâb. The Bundârî treats him as an equal of the great Amir Ḥâdîgūz [q. v.] whose family finally triumphed over the lords of Marâ'âgha. Ak-Sânedtyr II's adversary was the Amir Ḳâb-i al-Husaynî (qab-eri?) who was the favourite of Sulîn-ʿAbsâd and sought to establish himself in Arrân and Ṣâdâbâdîn. This Ḳâb-i al-Husaynî had besieged Marâ'âgha in 541 (al-Bundârî, p. 217). In 545 Sulîn Maʿsûl took Marâ'âgha and destroyed its walls (ṭaṣâwîr) but a reconciliation later took place between Ḳâb-i al-Husaynî and Ak-Sânedtyr II who renewed the alliance between them (al-Bundârî, p. 215). On his deathbed (554) Maʿsûl Mahammad entrusted his young son (Malik ʿAbsâd, cf. the genealogical tree in the Râwî al-Sânedtyr) to Ak-Sânedtyr. As Ḳâb-i al-Husaynî was furthering the interests
of his ward Sullivan Aıslən, Pahlawán b. Ildiguz advanced against Aı Sultan II but the latter with the help of Sühbə Arman defeated him on the Sef-i Rūd. In 556 Aı Sultan sent 5,000 men to the help of the governor of Rayy, Ianduj, who was fighting Ildiguz. The latter gained the upper hand and in 557 Aı Sultan II took part in the expedition of Ildiguz against the Georgians (Ibn al-Aatham, xi. 189). In 563 however, Aı Sultan II obtained recognition for his ward from Baghdād. Pahlawán b. Ildiguz at once besieged Aı Sultan in Maragha (ibid., p. 213) but a peace put an end to hostilities.

In 564 the amir of Rayy, Ianduj, was killed (Ibn al-Aatham, xi. 250). The Tārikh-i Givāda, p. 72, seems to suggest that the rebellion in Maragha of Kutluğ b. brother of Aı Sultan II), was due to Ianduj's influence. He was punished by the Aı Sultan Pahlawán b. Ildiguz and Maragha was given to his brothers 'Ala al-Din and Kūn al-Din.

Under 570 Ibn al-Aatham (xi. 250) mentions at Maragha Falak al-Din, son of Ibn Aı Sultan (i.e. son of Aı Sultan II), to whom his father had bequeathed his estates. Pahlawán besieged the fortress of Rūyindiz and Maragha. On this occasion peace was concluded on the cessation of Tābūz to the family of Ildiguz. This important detail shows that in 570 the seat of the Aı Mandat included the country round Mount Shandāh including Tabūz [q.v.].

In 602 the lord of Maragha 'Ala al-Din came to an agreement with the Aı Sultan of Arbil Mashāf al-Din Gok-buri to deprive the Ildiguz Aı Bakr of Adıbarzdijān on the pretext that he was incapable of ruling. From Maragha they marched on Tabūz but Aı Bakr called to his aid the former slave of his family Ay-doghmish (cf. Defrémyre, Rechercher sur le prince d'Hamadan, J.A., 1847, i. 160). Gok-buri returned to his own lands and Aı Bakr with Ay-doghmish came to Maragha. 'Ala al-Din had to surrender the fortress which was in the possession of the towns of Urmija and Hushū. In 604, 'Ala al-Din whom Ibn al-Aatham, xii. 157, 158, here calls Kara-Sultan died and left one son, a minor. A brave servent of 'Ala al-Din assumed the guardianship of the child but the latter died in 605. Aı Bakr then took possession of all the lands of the Aı Mandat except Rūyindiz where the servent already mentioned had entrenched himself with his late master's treasures.

It is not clear if 'Ala al-Din Kara-Sultan is identical with the brother of Aı Sultan II mentioned in 564. For the date of his accession and the title he bore we have a hint. According to the preface of the Haddżm-i Naqīm [q.v.], this poem (intended in 593) was composed at the request of 'Ala al-Din Kuba (7) Ar-Sal (the Kim and the Rūz paied him tribute [kurbād]; the Georgians suffered reverses at his hands). This manqabbah was definitely identified by Khan. Cattel, i, 577 and Supplement, 1895, p. 154 with 'Ala al-Din of Maragha. Naqīm mentions two sons of 'Ala al-Din, Naqīf al-Din Muhammad and Ahmad, but to reconcile this with Ibn al-Aatham we should have to suppose that both died before their father. The family of the Aı Mandat was continued for some time in the female line. In 618 the Mongols arrived before Maragha and the town was stormed on the 4th Safar. The Mongols sacked and burned the town and massacred the inhabitants (Ibid., xii. 246, 263) but the lady of Maragha (daughter of 'Ali al-Dīn), who lived in Rūyindiz escaped the catastrophe.

Djalal al-Dīn. In 622, the Khwārzmshāh Djalal al-Din came to Maragha via Dakhana. He entered without difficulty for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawi, Sirat Djalal al-Dīn, ed. Houjas, p. 110). Djalal al-Din tried to restore the prosperity of Maragha; cf. Ibn al-Aatham, xii. 280, 282.

In 624 (1227) while Djalal al-Din was in the Persian Trak, his vizier Sharaf al-Mulk was forced to reconquer Adıbarzdijān. In the course of his campaign he besieged Rūyindiz, the lady of which was a grand-daughter (min haşvāt) of the Aı Sultan 'Ali al-Din Karabā (7) (Nasawi, p. 129). This princess was married to the deaf-mute Khamiš, only son of the Eldiguzi Ozbek. The Aı Sultan Nasat al-Din, son of Khamiš, incidentally by Djawal, G.M.S., ii. 242, must have been his son. As a way out, she offered her hand to Sharaf al-Mulk. Djalal al-Din suddenly arrived from the Trak and married the princess himself. Rūyindiz was given to a certain Sa'd al-Din. The citadel contained some thousands of houses (aşār min dār) occupied by the former inhabitants of the town (kudamā). Sa'd al-Din decided to evacuate them but as a result of his tactlessness the fortress closed its gates again (to Sa'd) (Nasawi, p. 129, 157). Ibn al-Aatham, xii. 322 seems to deal with the course of these events. Under 627 he says that the troops of Djalal al-Din besieged Rūyindiz for some time. The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman amir Sewindji (Swendi) of the tribe of Kusi-yalwa. The domination of this chief and his relatives who succeeded him only lasted two years.

Rūyindiz. This fortress lay "near Maragha" (Ibn al-Aatham, xii. 322). According to Zakariya Kazwini who gives a very accurate description of Rūyindiz, it was 3 farahks from Maragha. Its proverbial impregnable position (kurba taĥistanatika al-ma'kād) suggests that it was built on the side of Shandāh. The Russian map marks on the Sofi-cāi 10 miles (c. 3 farahks) above Maragha a place called Yay-shahar (in Turkish = "summer-town") besides which two streams flow into the Sofi-cāi (on the left bank) and between them is written the corrupted name "Res or Eris". It is very probable that this is the site of the famous fortress on either side of which there was a stream (nahr); for Res one should read Dez i.e. Rūyindiz. The date of the final destruction of Rūyindiz is unknown. As late as 751 the Cobeind Aıfsah imprisoned his vizier there (v. Hammer, Gesch. d. Khs. ii. 357) but the Naqīf al-Kalbā, in 1340 only knows the other Rūyindiz, that of Sawalīn (there is still a Rūyindiz 4 farahks N.E. of Ardabil).

Kūlasra. Ibn al-Aatham, x. 340, calls Aı Mandat "lord of Maragha and of Kūlasra". This last name (Kūlasra) seems to be a corruption of Khūlasra (Kūsarr) or Kūsara, a little town well known to the Arab geographers on the Maragha-Arabdāl road (10-12 farahks from Maragha and 20-27 from Ardabil); cf. Ibn Kürdādshīh, p. 120; Kū-
Marāgha

265
dāna, p. 213; İstakhrī, p. 194; Ibn Hawkal, p. 252, in particular from his own experience talks of the importance of Kulâsra and its flourishing commerce. This place may correspond to the village of Kul-tâpa "hill of cedars" (popular Turkish etymology) which lies on the Karângah about 35 miles (c. 55 km) east of Marâgha. The fort of Kul-tâ-pâl-Zâbîl notable ruins of which were discovered by Momothu c. 15 miles below Kul-tâpa (cf. Morier, et. cit., p. 296), must have been a bulwark for Kulâsra and Marâgha against invasion from the northeast. Rawlinson, J.R.S.G., 1841, p. 120 sees a Sâsâniân fortress in Kulâ-yl-Zâbîl.

The Mongols. Marâgha was definitely taken by the Mongols in 628 (Ibn al-Athîr, xii, 3:4). After the taking of Bahgâdî in 656 (1258) Hü-lâgî took up his quarters in Marâgha and ordered an observatory to be built there from the plans of Naṣîr al-Dîn Tûsî (who had as advisers four astronomers one of whom, Fakhr al-Dîn, was a native of Marâgha) (Kashf al-Dîn, ed. Quatremère, p. 344). The observatory was built on a fortified hill to the west of the town where only traces of foundations of the walls are still visible. According to Schindler's plan (1883), the levelled area on the hill measures 137 X 347 metres. On the observatory cf. Jourdain, Memoire sur les instrumentes employés à l'observatoire de Marâghâ, in the Magacan encyclog, edifice par A. L. Millin, Paris 1809, vol. vii, p. 4:1-101 (transl. of an Arabic ričâla belonging to the Bibî National and attributed to Naṣîr al-Dîn's colleague Mu'ayn al-Dîn al-Attâr) and Ritter, Erdkunde, ix, p. 859-856. To contain his treasures Hü-lâgî built a castle on the island of Šâhî 1-2 days distant from the capital. Here he was burned. On the fortifications of Šâhî cf. Tabari, iii, 1171. The handsome sepulchral towers of which there are four at Marâgha (McGeogh, 1908) date from Hü-lâgî or his immediate successors: 1. the one at the entrance to the bridge of Šâfî-čâl is built of red brick on a square foundation and has a vaulted cellar (Gundad-čehâl); 2. similar, situated in the gardens to the south of the town on the road from Khângâ; 3 and 4 near the old cemetery in the interior of the town: the octagonal tower No. 3 is of red brick overlaid with blue enameled fac- ience (Gundad-čehâl) and No. 4 is round, covered with plaster which is decorated with arabic-persian (Koîh-bâdz, "Tower of the Ram"). There is a photo- graph of No. 1 in de Morgan (1890), p. 337 and Sarre, op. cit. text, p. 16; of No. 3 in Sarre, ibid. and of 6 in de Morgan, ibid. p. 340. II. Schindler claimed to have read on the Gundad-čehâl (No. 2) the name of Alî Bakr şâhâli Zangî (atâbeg of Fars. 623-638). According to Sarre, No. 4 is later than 1350. The monuments require to be again studied on the spot. Lehmann-Haupt says that inscriptions can still be seen in their interiors.

The early Mongol Ilkâns led a semi-nomadic life which explains the absence from Marâgha of any kind of memory. It was only with (Jaizân that a regular capital was built at Tabriz [v. v.]. Marâgha continued to be of some importance on account of its pastureage and was a station on the road between Adharbâjîn and Mesopotamia. Its name continually appears in the history of the Ilkâns. In 703 (1304) Elîjdâr received at Marâgha the ambassadors from the Khân of China and installed at the observatory the son of Naṣîr al-Dîn Tûsî.

In 1212 (1312) Kara-Sânkâr, amir al-nâwarî of Aleppo, fearing the wrath of the Sultan of Egypt, Naṣîr, sought an asylum in Persia with Elîjdâr who gave him Marâgha. Ibn Bajîtî who tells this (i. 179) sởs that this town was known as "Little Damascus" (Dornicî al-tâghînî). Kara- Sânkâr died in 728 (1328) (d'Ollson, Hist. des Mongols, iv, 69). The Geographers of the Mongol period. Zakârîya Kazwini (1257) seems to be personally acquainted with the town. According to him there were in the town menemouns of the pre-Islamic period. He describes the mineral springs (near the village of Kiyamât-âlâd) and a cave which must correspond to the Ĥaförhî visited by Morier, Lehmann-Haupt, Minorsky etc. Kazwini also mentions the mountain of Zandârân with a gar- cearose spring, the village of Lîbîdî (Gumbadî) with a bottomless well (p. 350) and gives a description of Kâyîm-dîr (p. 359).

The Nusrât al-Kulhâ (written in 1340), G.M.S., p. 27 estimates the revenues of Marâgha paid to the treasury at 70,000 dinârs (Arabâl paid 20,000) and those of its vilayat at 155,000 dinârs. The town of Marâgha comprised all the southern part of Adharbâjîn, in the north it was bounded by the town of Tabriz, in the west by that of Khân (Urmîyân), in the south by the lands of Kuran- dan (Daranar) and in the east by Irâk-î Adham (Zandârân, Sulâpî). All the lands now under the modern Savad-Jaulîk [v. v.] were then ruled from Marâgha. As dependencies of Marâgha, Hamd Allah gives the town of Dihî Khûsravân (in popular Turkish-Tukhorjîgan) to the south of Tabriz, Lulain on the right bank tributary of the Elâghatu (cf. Rawlinson, 1841, p. 39: the ruins of Khâ-ya-i Bâhîtâ and Pâwî in Lâhîdîn, in the valley of the Tigris [cf. savad-yalu]. The town comprised six cantons (the names are much mutilated): Sarâdân (i.), Nâshardo (ii.), Duzâbar (cf. the mountain Duzâbî on the middle course of the Elâghatu). Gâwîdî (at the confluence of the river of Lulain with the Elâghatu [the name is also read Gâwâlî, Gâwâdî. It is remarkable that Firdawsi (ed. Mohî, xii. 141, 151) mentions in these region- the inaccessible Dihî-Khûzî and Kûhî Dûr where Bahram Ghûr was defeated by Khusrawj), Bûhî-tân (probably the district of Bûhî on the Tatars, Hâshhâ- rîd to the east of Shâhâr on the Kuranlûn). The district of Angûzân on the Kish-lân was also a dependency of Marâgha.

Christianity at Marâgha. In the Mongol period, Marâgha had become an important centre of Christianity. The celebrated Mir Er Hebreus (Jacobe Molphian) located in 1208 on Euclid and in 1272 on Psalms in the "new monastery" of Marâgha; there he wrote the Kitâb al-Dawrâ. When he died on July 30, 1286, as a sign of mourning the Greeks, Armenians and Nestorians, closed their shops in the market-place (Assemani, Bibl. Orient. i, ii. 266; Wright, A short History of Syriac Literature, 1894, p. 267, 271, 276, 279). The history of Mar Yahbalâhî III (patarch of the Nestorians, 1281-1317, transl. Chabot, Paris 1895) contains valuable notes on Marâgha. Yahbalâhî rebuilt the already existing church of Mar Şâhî and built a house beside it. In 1289 Ar- ghân had his son baptized in Marâgha. In 1294 the patriarch laid the foundations of the monastery.
of John the Baptist 2/3 of a farsakh north of Marāgha. After the accession of Ghazān (1295) the persecution of the Christians began, instigated by the amir Nawrūz. The mob plundered the residence of the patriarch and the church of St. George built by the monk Rabban Šawmān (it had been furnished with articles from the portable church of Arūgān’s camp). The patriarch sought refuge in the suite of the Armenian king Hacet. On his return to Marāgha, Ghazān punished the fomenters of the troubles. In 1298 Vahābīlāh was confirmed in his rights. In Sept. 1301 he finished the monastery of St. John. His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chahot, ap. cit., p. 133). The village of Dālih (?) to the east of Marāgha was purchased to serve as a zāwī of the monastery (to the N.E. of the town there is still a village of Kīlī-ki-kāndī “village of the church”). Ghazān and his successor Ukhāvjāt visited the monastery. Vahābīlāh died and was buried there in 1317.

After the Mongols. In 1337 (1337) the Djalāyirīd Shaik Šahān inflicted a defeat on Tugha-Timūr [q. v.] near Marāgha (or at Hashūlād). The pretender Muhammad was buried at Marāgha in 1378 (Mīrāzī al-Attār, p. 315). Later the political struggles of the Turkmans had their principal arena in the northern part of Ardbarbādjan. In the same period the Kurid-Ichkhīliens discharged the kings of the六个 districts of the south of Lake Urmīa became consolidated and received reinforcements from the districts of Mawsīī (Mawson-nāmī, i. 288). The Mūkī Kurid amirs extended their influence over Marāgha and even as far as Dih-Khārākān. The Turks during their rule over Ardbarbādjan included Marāgha with Tabriz and levied 15 kharwats of gold per annum on it which caused its inhabitants to go away (ibid., p. 294). In 1502 (1503) the name of the fortress of Sūrsa-kurghān (demolished in 795 by Timūr; cf. Zafar-nāmā, i. 628 and rebuilt by the Mūkī) in the region of Marāgha often occurs in the Mawson-nāmā, p. 294—296; this name recalls that of the Nārū, the right bank tributary of the Dijlūt. During the second Ottoman occupation (1725) Marāgha was governed by Ṭubl al-‘Azn Pāda; this administrative unit consisted of 5 sandjaks, of which 2 were hereditary and 3 granted by the government (v. Hammer, iv. 228; according to Cebesbi-zade). In 1492 (1729) Nadir defeated the Ottoman at Miyanlūlī on the Dijlūt and occupied Dīmūn, Sawy-ul-bulāk, Marāgha and Dih-Khārākān (Mahdi-Khan, Tūrkēlī Nādīr, Tabriz 1284, p. 66; transl. Jones, i. 104). According to the recently discovered history of Nadir, the monarch transplanted 3,000 inhabitants from Marāgha to Kūlay (Rastbūd, in Zep., xxv., p. 88).

The Mukaddam. As early as the time of Nadir the Turkish tribe of Mukaddam is mentioned as settled in the region of Marāgha (Macdonald, Kinneir: 15,000 men). Ahmad Khān Mukaddam played a considerable part in the affairs of Ardbarbādjan. Jauber, Voyage, p. 160 knew him in 1805 as beztegboi of Ardbarbādjan under prince ‘Abbās Mirzā. In 1810 he exterminated the Bīlāshīs whom he had invited to Marāgha [cf. Sawdī-bulāk]. According to Morier, Second Journey, p. 293, this patriarch was aged 90 in 1815 (cf. Brydges, Dyesty of the Kajors, p. 90). The governor of Marāgha Šāmad-Khan, a partisan of Mūhāmmed ‘Ali Khān who besieged the town in 1809, was of the family of Ahmad-Khān. At the present day the Mukaddam are concentrated round Miyanlūlī.

In 1828 Marāgha was occupied by Russian troops. In 1881, the Kurid invasion by Shaik Ūbaidalī reached the gates of Marāgha. The town was not taken but the whole country round was in ruins when H. Schindler visited it in 1882. During the war of 1914—1918, Marāgha was within the zone of the Russo-Turkish operations [cf. Tanzt].

Bibliography: In addition to that sources quoted in the text: Samānī, Kitāb al-Ansār, G.M.S., xx, fol. 519; he also derives the nisba Marāghī from the clan al-Marāgh of the tribe of al-Azd); Hājjī Kahlīf, Diḵān-nāmā, p. 389; cf. also the rocok, 1295, 133, 333 (confused and of doubtful value); Zain al-Abīdīn, Būstān al-Siyāh, p. 555.

(Y. Minorsky)

MARAND (t.), a town in the Persian province of Ardbarbādjan.

Position. The town lies about 40 miles N. of Tabriz, halfway between it and the Araxes (it is 42 miles from Marand to Djulfa). The road
from Tabriz to Khoi also branches off at Marand. A shorter road from Tabriz to Khoi follows the north bank of Lake Urmia and crosses the Mishowdagh range by the pass between Tasādī [q.v.] and Dīyā al-Dīn. Marand, which is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about ten miles broad and sloping slightly to the west. To the south the Mishowdagh range (western continuation of the Sawsān) separates it from the plain of Tabriz and from Lake Urmia. The pass to the south of Marand often mentioned by historians is called Yam (Mongol = post-station). The pass between the plain of Marand and Tasādī [q.v.] takes its name from the village of Wadliyān. To the east of Marand lies the wild and mountainous region of Karādādagh (capital: Ahar). To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Karādādagh which is crossed by the defile of the Darādiz. The plain of Marand is watered by the river of the southern arm of which called Zilbir runs quite near Marand. The combined waters of Zunār and Zilbir flow into the Kūtor-lāi (an important right bank tributary of the Araxes) about 20 miles N. E. of Khoi. The length of the Zunār is about 40 miles (Hamd Allah Mustawfi: 8 farsakhs). History. A lofty tell which rises beside the town is evidence of the great antiquity of this site; it must have existed in the time of the Vannie (Khad) and Assyrian kings. Its Greek name Μεσσοδέα is perhaps connected with the people Μασουδ, who, according to Ptolemy VI. 2, occupied the lands as far as Lake Urmia. A legend of Armenian origin based on the popular etymology nair and "mother of" locates in Marand the tomb of Noah's wife (Hübischmann, Die altertümlichen Ortsnamen, 1904, p. 346 and 451; Ker Porter, Travels, i. 217). Moses of Chorene places Marand in the district of Bakurakert. There was another Marand mentioned by the Armenian historian Orbelian (c. 1300) in the province of Sinnik (north of the Araxes) and a village of Marand still exists east of Tīghāt in the khānate of Mālik [q.v.]. Ibn Baʿthī. After the Arab conquest a certain Halbas of the tribe of Rabīʾa took Marand. His son Baʿthī, a soldier of fortune (sulṭāni) in the service of Ibn al-Rawwād, fortified Marand. Muhammad b. Baʿthī erected castles there (kastār) (Baladhuri, p. 330). This had acquired considerable notoriety. In 200 (815) he had taken from the family of Kawsī, the stronghold of Shāhī and Tabriz (Tabari, iii. 1711). (In another passage, Tabari, iii. 1379, mentions Yaktur [?] in place of Tabriz). Ibn Baʿthī lived at Shāhī which stood in the centre of Lake Urmia (the peninsula of Shāhī, where at a later date Hūlāgh Khan kept his treasure and where he was buried). Ibn Baʿthī was at first on good terms with the Khurrami Bālbak, whose authority must have prevailed in the Karādādagh in particular, in the north-eastern corner of which was his residence al-Balābīh. Ibn Baʿthī suddenly changed his tactics and seized by a ruse Ḥanīa, one of Bālbak's generals whom he sent to the caliph al-Maʿṣūm. In 221 Ibn Baʿthī accompanied Bālbak on his expedition against al-Balābīh (Tabari, i. 1391). Under the caliphate of Mutawakkil, Ibn Baʿthī committed some crime (khīlaṣ) and was imprisoned in Surmanraʾa. On the intercession of Būhā al-Sharābhī, 30 people of repute became guarantors of Ibn al-Baʿthī's good behaviour and he must have been allowed considerable liberty. In 234 (848) he escaped to Marand. Ibn Khurādaḏībī, who wrote in 234, mentions Marand as being Ibn Baʿthī's fief. Tabari, iii. 1379—1380, gives a very graphic account of the expedition sent against this town. The wall which enclosed Marand and its gardens was a farsakh in circumference. The river flows within it. The dense forest outside was a further protection to the town. Ibn Baʿthī collected 2,200 adventurers who were reinforced by a number of non-Arabs (šālāt) armed with slings. He had ballistae constructed to repel the assailants. During the 8 months that the siege lasted, 100 individuals of note (mīrzā al-sulṭān) were killed and 400 wounded. When Būhā al-Sharābī (Baladhūrī, p. 330: Būhā al-Saghīr) arrived, he succeeded in detaching the men of the Rabīʾa tribe from Ibn Baʿthī. Ibn Baʿthī and his relatives were seized and his house and those of his partisans plundered. In Shawwāl of 235 Būhā arrived with 150 prisoners at the caliph's court. They had not been bestirred, but the latter recited verses in Arabic and the caliph was astonished by his poetic gift (raʾya maʾālūka lā-taḥal), and gave him his life. Ibn Baʿthī died in prison and his sons entered the corps of mercenaries (al-shahābīyān). According to one of Tabari's authorities (iii. 1388), the shaikhs of Marāqqa who praised the bravery and literary ability (ṣadūq) of Ibn Baʿthī also quoted his Persian verses (bi bīrāfīya). This important passage already quoted by Baṭthold, Bull. School of Oriental Studies, vol. ii., Pt. iv., 1923, p. 536—538, is evidence of the existence of the cultivation of poetry in Persian in the N.W. of Iran at the beginning of the ninth century. Ibn Baʿthī must have been incised to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his rustak (šālāt, raḵwāl). Later History. The Arab geographers of the tenth century (Iṣākhrī, p. 182; Ibn Hawāḵī, p. 239) mention Marand among the little towns of Aḏharbāḏjān where the material called ṭībāk was manufactured. Māḏāʾī, p. 51, 374, 377, puts Marand under Dābūl and notes its gardens, its flourishing suburb and a cathedral-mosque in the centre of the market. The same author, p. 382, mentions a direct road from Marand to Marāqqa (via Nūn [?], somewhere west of Tabrīz). Later, Marand must have shared the fate of Tabrīz [q.v.]. According to Yāḵtū, iv. 503, the town had begun to decline after it was plundered by the Georgians (Kurd) who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208—1210 (605—607) [cf. Tabriz and Tihār]. Among the theologians, born in Marand, Yāḵtū mentions one who died in 216 and another who had studied in Damaḵ in 433. In 624 (1226) Marand which had not sufficient defences, was occupied by the Ḥājī Ṭāhā b. Aḥmad of Akhūt. Sharaf al-Mulk, governor for the Khwārizmshah, retook the town and wrought great slaughter in it (Nasawi, ed. Houcha, p. 166). The only historical monument in Marand is the old mosque now in ruins with a miḥrāb in stucco bearing the date of rebuilding 731 (1331) (regnum of the Ilkhan Abī Saʿūd). Cf. Sarre, Denkmäler pers. Baukunst, Berlin 1910, p. 24—25 and pl. xvii.,
and the observations by Herzfeld. Die Gumbahth-i 'Allahyan, in the Volumes... presented to E. G. Browne, 1922, p. 194-195. In the same period, Herzfeld, Mir, ed. A. C. H. Kitchin, 1890, p. 58, counted 60 villages in the district of Marand. The walls (gūrā) of the town were 8,000 yards around but the town only occupied half the area.

Marand is several times mentioned in connection with the Turk-Persian wars. According to Ewliya Çelebi (1647), Siyahat-nâme, ii. 242, Marand was a hunting-resort of the Timurid Shâhrukh. In spite of the damage done by the invasion of Sultan Murad, the town looked prosperous and had 3,000 houses. Ewliya enumerates a number of celebrated theologians buried near the town.

In the autumn of 1724 Abd Allah Pasha Kopru sent the Kird Khan of Eltim Muhammad 'Abid to occupy Marand the inhabitants of which had fled. Resistance centred round the town of Zandis (10 miles N. of Marand) which had 7,000 houses and a castle called Diza by the Persians. To dispose of the threat to their flank, the janissaries before advancing on Tabriz fought a battle here in May 1725 with the Persians of whom a large number were slain. Diza was taken and dismantled (cf. von Hammer, G. O. R. 2, iv. p. 226, following Çelebi-i-sade).

Marand has been often mentioned by European travellers since Chardin (1811 edition, i. p. 318); cf. the notices by Ker Porter, Joubert, Morier, Ouseley and Montele who of which a résumé is given in Rutter, Edirne, iv. p. 907. Marand has recently gained in importance since it lies on the main high road from Tabriz to Dijlah built by the Russians in 1906 and replaced by a railway in 1915.

(2.) A town in the district of Khuttal, to the north of the Oxus; cf. Mukaddesi, p. 49, 290-291. (V. Minorsky)

**MARASH, a town in Syria near the Asia Minor frontier.**

It lies about 2,000 feet above sea-level on the northern edge of the hollow (Amik of Marash; now Çakal Owa and south of it Sheker Owa or Marash Owa) which lies east of the Dijlah and is watered by its tributary, the Nahr Harsh (Ak-Su). As a result of its situation at the intersection of the roads which run to Antakya, to 'Ain Zarba and al-Ma'as, to Abbisain (Ahlu-l-taim) and Alanya, via Guban (Kokovan) to Kaşıyra, via Beheita (Bahasa) to Sumale, and via al-Hadadi and Zibra to Malata, Marash was from the earliest times one of the most important centres of traffic in the Syrian frontier region. It is repeatedly mentioned as early as Assyrian texts as Maršas, capital of the kingdom of Gurgum (cf. the name Marashma), and several Hittite monuments have been found there (cf. Unger, Marash, in Ebert's Klio, v. 1908, p. 217 sqq.).

In the Roman imperial period it was called Germanicca in honour of Caligula (on the coins Cae-aera Germanicca; cf. Gregoire, Rev. de l'Inst. fr. en Bég., xi. 1908, p. 217 sqq.). The identity of Germanicca and Marash is certain from numerous literary, especially Syrian, references. The Armenians probably knew, but probably from a learned tradition only, the name Garšas (Kermang in Vahram; cf. Math. of Edessa, ed. Diakou, p. 487 infra; St. Martin, Mem. sur l'Arm., i. 200). The statement in a description of the district of Halab (Paris MS., Arab., no. 1683, fol. 721) that the Armenian name of the town was 'Amān (Blochet, R.O.L., iv., p. 552, etc., note 6) is wrong; this is a mistake for Garšas. The name later given to the neighbouring al-Hadath [q.v.] The Emperor Heraclius passed the town in 626 (Theoph., Chron., ed. de Boor, p. 313; Ramsay, Class. Review, x. 140; Gerland, Byz. Zeitschrifte, iii., 1894, p. 352). The Emperor Leo III came from Marash (Germanitikia); later authors (like Theoph., op. cit., p. 391) wrongly called him the "Isaurian" (a confusion with Germanikopolis; cf. K. Schenck, Byz. Zeitschrifte, v., 1896, p. 296-298).

In the year 16 Abîb 'Abid sent 'Abd Allah b. al-Wald from Manbij against Marash and the Greek garrison surrendered the fortress on being granted permission to withdraw un molested; 'Abd Allah then destroyed it (Caetani, Annali dell' Islam, iii., 1910, p. 794, 806). Sulaymân b. 'Awf al-Châmidî in 30 (650-651) set out from Marash against the Byzantines. Ma'âmâya b. Ma'âmâya revolted against Marash and settled soldiers in this "Arabi Cayenne" (as Lammens, M. F. O. B., vi., 1913, p. 437 calls it). After 'Aziz I's death the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muhammad b. Marwan in 74 (693-694) had broken the truce concluded by 'Abd al-Malik with the Greeks, in Diyâmadî I of the following year the Greeks set out from Marash against al-A'âmâk (= 'Amâk of Antakya; cf. Le Strange, Palestine etc., p. 391) but were again driven back in the 'Amâk of Marash. Marash was restored by al-'Abbas, son of al-Walid I, and fortified and repopulated; a large mosque was also built there. The people of Kinnassin (i.e. probably of the "kingdom of Kinnassin") had to send troops every year to Marash. During Marwan II's fighting against Hims, the Emperor Constantine again besieged Marash, which had finally to capitulate (746) and was destroyed (al-Baladhuri, ed. de Goeje, p. 139; Theophanes, Chron., ed. de Boor, p. 422; Georg. Kedrenos, ed. Bonn, ii. 7). The inhabitants emigrated to Mesopotamia and the Djund of Kinnassin. After the capture of 'Umar, Marwan sent troops to Marash, who rebuilt the town in 130 (747); the castle in the centre of the town was henceforth called al-Marwâni after him (Vâkit, ed. Wüstenfeld, iv. 498 sqq.). But by 137 (754) the Greeks again sacked the town. Al-Ma'arî then had it rebuilt by Sultan b. 'Ali (d. 150 = 767) and gave it a garrison which al-Mahdi strengthened and supplied with ample munitions (al-Baladhuri, ed. de Goeje, p. 139; Theophanes, Chron., p. 445: ε Σιη β η λ ε τ τ ώ τ ης περι τ ω τ ης της Παλατίνης). The Arabs in 769 (780) entered the 'Amâk of Marash and depopulated the inhabitants of the region who were accused of espionage on behalf of the Byzantines, to al-Ramla (Michael Syrus, Chron., ed. Chabot, ii. 526). According to the Syrian inscription of 'Eneh on the Euphrates, in 776-777 A.D. (1088 Sel.) the people of the hollow (Amâk) of Marash invaded Asia Minor (Beth Rhöymâ) to plunder ('Abî Chabot, J. t. s., ser. ii., 1901, p. 286 sqq.; Pogou, Invent. scir. de la Syrie et de la Mesopotamie, i. 148-150, no. 84). A Greek army of 100,000 men in 161-162 (775-779) under Michael Lachanodrakon besieged Marash which was defended by 'Isâ b. 'Ali (Theoph., op. cit., p. 451), grand-uncle of the Caliph al-Mahdi, destroyed al-Hadath and laid waste the Syrian frontier (Weil, Gesch. d.
Chalîf, ii. 98). In 153 (799) Hârûn al-Raşîd built the town of al-Hâsûniyâ near Marâsh (al-Baladhûri, op. cit., p. 171; Yâkıî, iv. 498, wrongly calls it a suburb of Marâsh); he also raised the prosperity of Marâsh and al-Maštûsa (al-Maṣûsî, Mursîd al-Ḍhâhâb, ed. Barbiere de Meynard, vii. 295). The amir Abû ʿAbd Allâh Muhammad b. Yûsuf in 841 invaded Asia Minor; the Greeks drove him back however, and took al-Ḥadâbah, Marâsh, and the district of Malatya (Michael Syrus, iii. 102; Weill, Gésch. d. Chalîf, ii. p. 315 sqq., note 1; considers this story unhistorical). The emperor Basil I in 877 passed via Konstânos (Gokçun) and the Taurus passes (στεμένα τοῦ Τάουρου) against Marâsh (Γεμφακασία) but could not take it and had to be content with burning and plundering the suburbs: the same thing happened at al-Ḥadâbah (Alârâz; Georg. Kedrenos [Bonn], ii. 214; Theophan. continuat., ed. Bonn, p. 280). According to the tariqāʾiyyaʾīs polémico (de victinione bellica, Migne, Patr. Græc. cxvii. 1000) shortly before the attack on Germanikeia he crossed the Παραβάτον ποταμός (cf. Pline, Nat. Hist., v. 93: one of the 'Taurian rivers' current in the 9th–11th centuries). The Byzantines under Abû Dhâr al-Ḥabbân, the cantator Meşmeçi, and Tomaschek, S. P. Ab. Wûn, cxxiv. 1891, Alâb. viii. 66, is therefore presumably wrong). The Byzantine Andronecus in 292 (904–905) invaded the region of Marâsh, defeated the garrison of Târús and Malatya and destroyed Kûrûs (Ibn al-ʿΑṭîr, ed. Torbern, vii. 378; al-Jâlâri, iii. 2298; Weil, op. cit., iii. 533; Vasilev, Vicintia et Arabi, i., 1902, p. 154). The Armenian Meḥr (Arab. Malîh) plundered Marâsh in 916; 50,000 prisoners were carried off from it and Târús (Weil, op. cit., ii. 634; Vasilev, op. cit., p. 203 sqq.). In the fighting against Saïf al-Dawla, the Greeks under John Kurkuas took Marâsh in the spring of 537 (949) (Kamal al-Dîn in Freytag, Z. D. M. G., xi. 187; Weil, op. cit., iii. 14, note 1; Vasilev, op. cit., p. 268). In 341 (952) the Ḥmadânî defeated the Domestikos at Marâsh and in June rebuilt the defences of the town (Freytag, op. cit., p. 191; Vasilev, op. cit., p. 291). When the Ḥmadânî Abû ʿl-ʾAṣghârîn in 956 was taken prisoner by the Byzantines, his father-in-law Abû Fîrâs followed as far as Marâsh in the attempt to rescue him but could not overtake his captors (Dâvûtî, Abû Fîrâs, Leyden 1895, p. 31; Vasilev, op. cit., p. 297). Nicephoros Phocas in Rabî I 535 (Aug. 962) occupied Marâsh, Dulûk and Rabîn (Freytag, op. cit., p. 199; Rosen, Zur Archiv Inst. Aabat, Nahal, xiv. 152, note 100). Bandjatkin in 582 (992) carried out a raid on Marâsh and came back with prisoners and loot (Freytag, p. 248; Rosen, p. 250, 263). The Armenian Philipatos Brachamios (Filaretos al-Ramî) who in the second half of the 13th century, as leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of Shrabâz in the district of Marâsh (Michael Syrus, iii. 173, 174 note). After the Franks under Godfrey de Bouillon had taken Marâsh in 540 (1097), they installed a bishop there (Michael Syrus, iii. 191). Boemund of Antioch was taken prisoner in June 1100 in the 'umâq of Marâsh in the village of Gafnî (Michael Syrus, iii. 188) on his campaign against Malatya by Qumâšîgîn b. Dânisîmâd (Kaukût eis. hist. or. des crois., i. 589; Rohricht, Gesch. des Konigreich. Turks., p. 9; Weill, op. cit., i. 179). The emperor Alexandra later sent the general Butumius against Marâsh (το Μασσιο) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monasteries there as ψηφιάζων (Anna Commena, Αφικαίδα ed. Reifferscheid, i. 152, sqq.; F. Chalandon, Les Comm., i, Paris 1900, p. 234). The town of Marâsh was placed under the Armenian prince Thathil, who had distinguished himself in its defence against Bohemund (Mattheos Ubrayeçî, ed. Dulaire, ch. xxxv., p. 110; Anna Commena, Les Comm., i. 104 sqq.). But by 1104 he had to abandon it and surrender it to Joscelin de Courtenay, lord of Tell Bashir (Mattheos, op. cit., p. 257, ch. clxxxvii.; Raoul of Caen, ch. 148; Rohricht, op. cit., p. 49, note 8; p. 52, note 4). Thathil is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, x. 1, he is called Tafuric; in Albert of Aix, iii. 31; v. 18; Tafurâz; cf. Chalandon, op. cit., p. 103). By 1105 Tancred of Antioch seems to have been in possession of Marâsh (Rohricht, p. 56) to whom it was allotted in the treaty of Sept. 1108 (Kaukkûs bih kheiz, ch. cxlv; Anna Commena, ed. Reifferscheid, i. 217; Rohricht, p. 66). In 1114 the widow of the recently deceased Armenian prince Kogh Vaast (γιος του τιθεν) of Marâsh submitted to Akg Sonkor of Mawûl (Weil, op. cit., iii. 199); on the 28th İmûnâdî (Nov. 27) of the same year, Marâsh was devastated by a disastrous earthquake in which 40,000 lost their lives (Michael Syrus, transl. Chabot, ii. 200; Recueil hist. et écréi, iii. 607; Mattheos Ubrayeçî, p. 259, ch. cxxvii.). King Baldwin granted a monk named Godfrey (Godfridus Monachus) a lieb consisting of Marâsh, Kašfan and Rabîn (Michael Syrus, iii. 211; Rohricht, op. cit., p. 161). In 1124 Godfrey was killed at the siege of Mamelîk in the train of Joscelin of Edessa. The Dânîshmand Muhammad b. Āmm Ghaîî in 1136–1137 laid waste the villages and monasteries near Marâsh and Kašfan (Mattheos, iii. 320, ch. cxxii.). The Sâljuq sultan Masûd in 1138 advanced as far as Marâsh, plundering the country as he went (Michael Syrus, iii. 216) as did Malik Muhammad of Malatya in 1141 (Michael Syrus, iii. 249) and Kilidj Arslân II in 1147 (Michael Syrus, iii. 275). The town then belonged to Raynald, son-in-law of Joscelin II of Edessa, who fell in 1149 at İnibî (Rohricht, op. cit., p. 260). On Sept. 11, 1149, Kilidj Arslân and his father Masûd set out from Abûlaitân against Marâsh, plundered the country around and besieged the town. The Frankish garrison capitulated on being promised a safe retreat to Anţiqîya; but the sultan sent a body of Turks after them, who fell upon them on the road and slew them. On this occasion the treasure of the churches of Marâsh was lost, which the pries-who had rebelled against the bishop had appropriated (Michael Syrus, iii. 290; Mattheos Ubrayeçî, p. 350, ch. cclv.; Chalandon, op. cit., p. 421; Rohricht, op. cit., p. 263). After the capture of Joscelin, Nûr al-Dîn of Halâb in 546 (1151–1152) took a large part of the country of Edessa including the town of Marâsh, Tell Bâshêr, Ṭiāzûr, Dâlûk, Kýrûs etc. (Recueil hist. et écréi, 29, 281; i. 54; Weil, op. cit., iii. 296; Rohricht, op. cit., p. 265, note 5). The district was then divided: the Sûlûn received Marâsh, Barzaman, Rabîn, Kašfan and Bahûnîa; the Urûkîd Kara Arslân of Ḥîm Ziyâd got Bûnhûlî, Gargar, Kûkhtâ
and Hüs-en Mansūr; Nūr al-Dīn kept the rest (Michael Syrus, ii. 297; Will. of Tyre, xvii. 16). When Marāš’s son Kīltīd Arsānūs, lord of Marāš (Michael Syrus, iii. 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thūros, in 1156 revenged themselves by setting Marāš on fire and carried off the whole population into captivity, during the absence of the Sulfūn and his Turks (Michael Syrus, iii. 314 [expanded from Barbehaeus, Chron. syr.], differently in Abū Sha‘ib, Rec. hist. or. croiz. iv. 92; F. Chalandon, Les Commune., ii. [1912], p. 434).

Among those carried off was the bishop Diosýsios bar Sallīth, who escaped to the monastery of Kālsūr (according to Chaton, loc. cit., the kārērā Kālēzēṃ of Anna Comnena, ed. Reifferscheid, i. 219) and wrote three mūnṛ about the devastation of his former diocese of Marāš (Michael Syrus, loc. cit.; Baunstatt, Gesch. d. syr. Litt., p. 298), Thoras of Little Armenia in 1165 plundered Marāš (Barbehaeus, Chron. syr., ed. Bejgian, p. 331; Rohricht, op. cit., p. 319, note 8; Chalandon, op. cit., ii. 531, note 1). Nūr al-Dīn again took Marāš from Kīltīd Arsānu II when he was content a campaign against the Dhinshamandī Din lūn (Michael Syrus, iii. 350) in the beginning of Dhu ‘l-Ka‘dā 668 (June 14, 1173) and Bahānūn in Dhu ‘l-Hijdāja (Rec. hist. or. croiz., i. 43, 592; i. 158; Matthaeus Urahaye, ed. Dulaurier, p. 360; Abu l-Fīdā‘, Annal. Maml., ed. Reiske, iv. 4; Rohricht, op. cit., p. 303, who is followed by Chalandon, Les Commune., i. 465, wrongly puts these events as early as 1159).

Nūr al-Dīn perhaps handed Marāš over to his ally Mīhē of Little Armenia. When the dynast of Marāš raided the district of Kāṣān, al-Malik al-Zahrī in 592 (1195–1196) took the field against him, whereupon the lord of Marāš sought forgiveness and recognised his sovereignty (Kamāl al-Dīn, trans. Blochet, R. O. L., iv. 212). The Armenian ruler Rūpen III took Bohemund III of Antīkīya prisoner in 1185 and forced him to cede the territory from the Djināhūn up to Kāstīnūn (Michael Syrus, iii. 396 sq.; Rohricht, op. cit., p. 403, note 7, 661). Kīltīd al-Dīn Kātāshūr, son of Kīltīd Arsānūn II, in 605 (1208), when on a campaign against Little Armenia took Marāš (Abū l-Fīdā‘, Annal. Maml., ed. Reiske, iv. 232) and made Šānu—all al-Dīn Ḡānan governor of the town. He was succeeded in this office by his son Ḥāfrīnu, who in turn was succeeded by his son Nūrī al-Dīn, who ruled Marāš for 50 years. The long reign of his son Muẓaffar al-Dīn was followed by that of his brother İmād al-Dīn who however in 656 (1258) abandoned the town which was much harassed by the Armenians and Georgians, after failing to find support either from İzāl al-Dīn Kāl-Kābi of Rūm or al-Malik al-Salīt of Egypt. The town then surrendered to the Armenians (Ibn al-Shī‘a, Barūt, 1909, p. 192).

Marāš did not escape during the great Mongol invasion of Asia Minor. Baibars I of Egypt in his campaign against them in 670 (1271) sent from Ḥalāb a division under Ṭamānuṣ and Šāh bīl al-Maṣāḥ, who drove all the Tatārs from there and slew them (Rec. hist. or. croiz., ii. 246; Maṣrīn, ed. Quatremère, Hist. de Sult. Maml., i. 101). In the wars with the rulers of Little Armenia troops from Ḥalāb went as far as Marāš in 673 and destroyed the gates of the outer town (Weil, Gesch. d. Chal., iv. 77). In the next few years Baibars negotiated with envoys from Sīr, from whom he demanded the surrender of Marāš and Bahānūn; but he was satisfied instead with a considerable sum of money (Maṣrīn, ed. Quatremère, op. cit., i. 104 [year 673 = 1274]; i. 104 [688 = 1289]). It was not till 692 (1292) that sūltān Kāhilī by a treaty received Bahānū, Marāš and Tell Ḥamūnūn (Maṣrūfī b. Abū l-Fāqī‘ī, Hist. des Sultans Mamlucks, ed. Blochet, in Patrologia Orientalis, xiv. 357; Venet. Or. 1865, iv. 86; Lane-Poole, Hist. of Egypt in the Middle Ages, London 1901, p. 287). But the Armenians must have retained the two last named towns not long afterwards (Weil, iv. 213, note 1), for in 697 (1297) Marāš was again taken by the emir Bilbān Tabāshī, Nābis of Ḥalāb, for Lāḏūn. A treaty was then concluded with the ruler of Little Armenia by which the Djināhūn was to be the frontier between the two countries; Ḥamūnūn, Tell Ḥamūnūn, Kūbārū, al-Nukārī (on its position cf. L. Alīṣān, Siyānūn, p. 493–496), Ḥādār Shughlān, Šīrāzdākār and Marāš thus passed to Egypt (Maṣrīn, op. cit., i. 106; Abu l-Fīdā‘, Ann. Maml., v. 140).

In the second half of the viii (xivth) century Zain al-Dīn Karadja and his son Kāhilī, the founders of the house of the Dhu ‘l-Kadrāgūsh, conquered the lands along the Egyptian Asin Minor frontier with Malāṭyā, Abīṣīn, Marāš, Bahānūn and Ḥārīfū [cf. ib. ‘l-Kadr]. In the mosque of Marāš one of his successors, Malik Arslān, was murdered in 870 (1465–1466); his portrait with the inscription sūltān Arslān” and that of his sister Sittī Kāṭān with the legend ʿayyūn Xawrī are painted in the Codex Venetus 516 of the Geography of Ptolemy, which he apparently intended to dedicate to his father-in-law Mehmedīn II (Olahusen, in Hermes, xv., 1880, p. 447–448).

Conquered by Selīm I, Marāš became Ottoman; on his campaign against the Dhu ‘l-Kadrīya in 1515 he encamped on his way back before Marāš and then returned via Kar; Marāš (now Kar; Baṉūr or Kar Dhu ‘l-Kadrīya) and Goksun to Kaisanya (cf. Taeschner, Türk. Bibl., xxiii, p. 36, note 4).

From 1522 belonging to Egypt, Marāš passed finally in 1540 back to the Turks. The town was occupied by the French from 1915–1920; after its evacuation it was the scene of massacres of Armenians (F. Tournebière, in Dict. d’hist. et de geogr. eccl., iv., Paris 1925, col. 360–362).

Marāš is now the capital of a vilâyet which in 1928 had about 65,000 inhabitants; the town itself has about 50,000 inhabitants.

The extent of the territory belonging to Marāš was liable to vary considerably with the vicissitudes of the town in the middle ages. The following places are mentioned as belonging to the territory of the town.

Gabaldus (= Gerhaldus, Itin. Anton., ed. Parthey, p. 85; Kleyn, Jacobus Baradoseus, p. 191; corrupted in Michæl Syrus, ii. 256 to ‘Arbādis, in Barbehaeus, Chron. syr., ii. 707 to Gerbīd), 28 Roman miles from Nicopolis (Istāfiya) and 15 from Doliche (Tell Dūluk near ‘Aintāb).

Bebedin “which is now destroyed” was the
birthplace of Nestorios near Marash (Patrol. Orient., viii. 162 sq.).

Shiraz, the birthplace of Philetares (see above).

The monastery of Mar Shinaga (Michael Syrus, iii. 148).

The modern wilayet (formerly sanjak) of Marash consists of four kazas:

Zaitun, north of Marash, scene of the Armenian rising against Turkey in 1804-1805, noted for its rich iron mines (Aghassi, Zodiac, Paris 1897; Anatole Latino, Armi e Zestan, Florence 1897).

Albasian [q. v.], also north of Marash.

Andarin, west of the town and the Djahlpin (not to be confused with the Armenian steppe); the capital of the kaza is Koheun (Armen. [Zabah]), the capital of Leo of Little Armenia.

Razadik, between Marash and Antab; the capital is Baghdir.

(Homberg)

MARASH. [See SHISHIYARI.]

MARATHA, commonly misspelt in Hindit and in Indian Persian Maratha, is the name of a people of Western India inhabiting Maharastra, the country lying to the east of the Western Ghats between the seventeenth and the twenty-first parallels of north latitude and extending at one point as far east as the seventy-ninth degree of east longitude. The Maratha caste is an agricultural caste, of common origin and nearly identical with the great Kumbi caste, but sometimes claiming a Kabaritva descent. The Marathas served in the armies of the Muslim Kingdoms of Southern India, and there gained military experience, but their opportunity came with the decline of the power of the Mughal Empire in the seventeenth century, when their national hero, Shivadji Bhonsla, converted the peasant population of Maharastra into a military nation. Shivadji was born at Shiwmar, near Dhamra, in 1627 and while his father was conquering a great part of the Carnatic for Bidjapur obtained possession of many hill forts in the Western Ghats. The Sultan of Bidjapur was unable to subdue him, and in 1659 he slew Afsal Khan, commander of the army of Bidjapur, at a friendly conference. In 1664 he sacked the city of Surat, and was obliged to contend with an imperial army sent by Awrangzib to punish him. In 1666 he was induced to pay homage to the emperor at Dilli, but was so disgusted by his reception that he escaped and, returning to the Deccan, extended his authority there until, in 1674, he assumed the title of Raja, and was ennobled at Ravgarh. He gained possession of the grants of lands in the Carnatic which his father had received from Bidjapur, and in 1680 his eldest son and successor, Sambhaji, fell into the hands of Awrangzib, who put him to death, but preserved his infant son Shishir, whom he retained at his court, and Raja Ram, Shivadji's younger son, became the ruler of the Marathas, now a nation. On the death of Awrangzib in 1707 Shishir was liberated, and mounted the throne of his grandfather, but was never more than a puppet-king, and left all business of state to his Brabman minister, or Pishwa, Balaji Vishwanath, who reduced his sovereign to the condition of a state prisoner and founded the dynasty of the Pishwas. He led an army to Dilli and extorted from an effete government recognition of the Marathas as the power to be reckoned with, or one quarter of the revenue, throughout the Deccan. In the time of his two successors, Badji Rao I (1720-1740) and Balaji Rao (1740-1761), the Marathas conquered Gujerat, Malwa, Berar, Gondwana, and Ujara, and raided the Carnatic, Bengal, and the Paundjets. They seemed to be on the point of superceding the Mughal power in India when Ahmad Shah Abdali or Durrani [q. v.] crushed them at the battle of Panipat in 1761. The Maratha power survived, however, in the hand of the Pishwa's generals, Sindhya in Gwalior, Bhonsla in Nagpur, Holkar in India, and Gekwawa in Gwalior. The power of the Pishwas survived at Panja, and a disputed succession in 1775 tempted the Bombay Government to intervene. In 1778 the Marathas surrounded the Bombay army near Puna and compelled its leader to sign a humiliating convention, but the army sent from Bengal by Warren Hastings humbled Gekwawa and the Pishwa, and another force defeated Sindhya and captured Gwalior. Peace was restored on terms favourable to the Marathas, but their confederaoy was much weakened. In 1802 Badji Rao II, who had fled to Puna, took refuge with the Government of Bombay and entered into a subsidiary alliance with the Government of India. He was reinstated in Puna by
Major General Arthur Wellesley, but Sindhya, Bhonsla and Holkar, resenting the Pishwa's subservience to the British, took up arms, and the third Marathi War began. In the Deccan Arthur Wellesley captured Ahmadnagar, won the decisive victories of Assaye and Argadon, and stormed the strong fortress of Gawil. In Hindustan General Lake defeated Sindhya's army at Laswari, and occupied Dhub. Bhonsla lost Ursara and Berar, Sindhya his possessions in the Dhub and his guardianship of the emperor, and Holkar was humbled, but after the peace the freebooters known as the Fandars, whom the Marathas had employed, continued to ravage states under British protection, and even in the Maratha territory annexed to the British domain by the Marathas. The Marques of Hastings concentrated troops to deal with these marauders, the Pishwa, Bhonsla, and Holkar rose against the British Residents at their courts. The first was defeated at Khulf, the second at Sitalal, and the army of the third was destroyed at Mahipuri. The dominions of the Pishwa were forfeited and annexed to the Bombay Presidency, and Holkar and Bhonsla lost much territory. Bhonsla died in 1853, and his dominions lapsed, in default of male issue, to the British Government. The dethroned Pishwa also lived until 1853, and his adopted son, Bhonsla Pant, was the Nana Sahib of the Indian Mutiny. This was the Maratha state at this day: those of Sindhya in Cevilliyar, Holkar in Indur, and Gekwir in Gujjarat, but not one of them is in Maharseshtra.

MARDATES. These are the Djardjima [q.v.] singular Djardjumani, of the Arabs; they are sometimes confused with the Djardumika, singular Djarmeja, so called from the name of their town Djardjima. They occupied the rugged regions of the Amanus and of the Taurus, separating Syria from Cilicia, as well as the marshy districts of Antiochene [see NIGA]. They enjoyed a semi-independence nominally under the Byzantines to whom they furnished recruits and irregular troops. When the Arabs seized Antioch the Mardates agreed to serve them as auxiliaries and scouts and to supply this facility to pass the, so-called, "Palai" of the Amanus. In the small forts built on the heights beside the defiles, commanding, the entrance to or the exit from Syria, they, in conjunction with the Arabs, supplied the garrisons. Exempt from the poll-tax, they obtained the right to spill on the field of battle. They were in every sense of the word irregulars, living by war and by raids and asking only to fight for whoever paid for their services; half-nomads, they came and went again like a flash. Very lukewarm Christian Monomithites or Monophysites—we do not know exactly—towards the loyalty either to the Byzantines or to the Muslims; this quite intermittent. "Sometimes", says Baladuri, “they obeyed our officials, at other times they betrayed us for the benefit of the Greeks". The precarious nature of the Arab conquest in the North of Syria—a varying frontier region continually devastated by the Muslims and by the Byzantines—and the difficulty of gaining access to the land of the Mardates, made it impossible to chastise such fickle allies.

Towards the year 46 (666) the Greek Emperor succeeded in sending them against Syria. This was not a raid of the type usual to the mountaineers of the Amanus, but a regular invasion supported by a few squadrons of cavalry and led by officers of the Imperial army; their bands penetrated into the heart of the Lebanon and occupied its chief strategic points as far as Palestine. The natives, discontented with Arab rule and also the thousands of slaves whom the Muslim conquerors had collected in Syria, hastened in a body to take refuge with the invaders. The highlanders of this country, who had kept their independence, also threw in their lot with the Mardates. At all costs the Omayyad government had to put an end to this dangerous movement, limit the extent of the invasion and to make sure at once of the neutrality of Byzantium who had let loose this hurricane. Not for a moment did Mu'awiyah hesitate to subscribe to the onerous terms of the Emperor—an annual tribute of 3,000 pieces of gold, the liberation of 8,000 prisoners, the delivery of 50 thoroughbred horses. In return the Emperor agreed to withdraw from the Mardates his support in men, arms and money. There is, however, no evidence that these adventurers definitely evacuated from that time their strong positions in the heart of the Syrian mountains. The neutrality of the Empire, the partial checks sustained by them and finally the establishment on the border of the Mardatta territory of a strong colony of Zut [q.v.], reduced for the moment to inaction the Djardjima, abandoned by the Byzantines.

A quarter of a century later, they once more attracted attention. This was under 'Abd al-Malik, who was engaged in an interminable war with the anti-Khilafah of the Kharijites. He was taken by surprise by the sudden rising of the Omayyad Amr al-Ash'ail [q.v.] in the year 69—70 A.H. (688—689). The Emperor Justinian II took advantage of these difficulties to let the Mardates once more loose against Syria. The result was a repetition of the movement in the reign of Mu'awiyah I. Byzantium furnished them with subsidies and with arms. At the same time he sent the army of Anatolia to advance and support the irregulars. In the same manner as in the first invasion their ranks were swollen by the accession of thousands of slaves, fugitives and malcontents, amongst whom one could probably reckon the Maronites [cf. UMAR]. Taken unaware, 'Abd al-Malik's army followed the policy of Mu'awiyah. The Emperor increased his demands. In addition to the conditions previously agreed to by the Sufyani Caliph, the Arabs were forced to abandon to the Byzantines half the tribute of Cyprus, of Armenia and of Iberia. In return for this, Justinian agreed to withdraw the Mardates. The majority of the invaders agreed to evacuate Syria. One of their chiefs, who persisted in continuing the war on his own account in the mountainous massif in the districts of Homat and of Damascus, perished, treacherously assassinated by a partisan of the Caliph. A few Mardate bands remained in the country, where we find them again still feared
and handled carefully in the caliphate of Walid I. Entrenched in their manors, protected by the great marshes and the lake region of 'Umk in Antiochene, the Djarādājm lived in practical independence of the Empire and of the Caliphate. They chose their masters and their rulers at their own convenience. At the same time some of them were quite ready to put their swords at the service of the Arabs. Amongst these must be named a leader of a band called Mātima or Maimūn. He with his contingent (about a thousand men, probably all Mardaïtes like himself) perished at the siege of Tyane. His compatriots in the Amanus seem to have wished to profit by the death of 'Abd al-Malik to renew their raids upon the Syrian provinces. Maslama, the son of the Caliph, resolved to put an end to these rebels. He penetrated into their country, laid siege to their capital Djurdjuma, and forced it to capitulate. Thousands of Mardaïtes perished in this campaign. To the remaining few was granted the right to retain their Christian faith, to serve in the Muslim armies, in fact he gave them the same terms as were obtained by their ancestors at the beginning of the Arab conquest. After this severe lesson the Mardaïte peril, which had been the cause of incessant trouble during the reign of the preceding caliphs, was practically at an end. The people of Antiochene saw emigration begin to thin their ranks, many of them having decided to emigrate to Anatolia or to enter the service of the Emperor. This resolution, however, did not prevent the Mardaïtes, who remained in Syria, from fighting under the flag of the Caliph. We still meet them under Caliph 'Abd al-Malik and 'Abd al-Rahmān II when they co-operated with the Syrian army in the suppression of the troubles of the 'Irāq.

**MARDĀWĪD** b. Ziyār, Abu 'l-Harīrīādīn, the founder of the Ziyārid dynasty, was descended on his father's side from the rulers of Gilān and on his mother's side from the Isphahān of Kūyān. He had taken service under the 'Abid rulers of Tabaristān and was a captain in the army under 'Afsār b. Shihāb. In 948 Mardāwīd submitted to Sa'yid Abū Muhammad Hāšim b. 'Ali b. Dā'ūd, and shortly after that rebelled against 'Afsār, made himself independent at Zanjān which he held in ṣurūr and captured Kazwin. He then defeated 'Afsār, forced him to fly to Tabas in Kūhustān and put him to death in 319 when he was attempting to reach the castle of Alamut [q. v.].

Mardāwīd thus became master of Ray and Tabaristān. He then defeated Mākān [q. v.] and annexed Tabaristān. Mākān attempted twice to capture Tabaristān, with the help of powerful allies, but Mardāwīd defeated him on each occasion and forced him to take refuge in Khūrāsān. At this time (319 = 931) 'Ali, Hasan and Ahmad, the three sons of Buwālī, who were commanders of the army of Mākān, deserted to Mardāwīd who conferred on 'Ali the eldest the governorship of the province of Kārādīn.

Having consolidated his power over Tabaristān and Gurgān, Mardāwīd next turned his attention to Djibāl, defeated Hārūn b. Gharib the governor, in the neighbourhood of Hamadān in 319 (931) and conquered the whole of Djibāl up to the confines of Ḥulūl. In the following year Muqtadir, the Caliph, formally recognised him as ruler of the provinces which he had conquered on condition that he evacuated Isfahān, but as Muqtadir was assassinated shortly after this Mardāwīd evaded compliance. About this time 'Ali b. Buwālī, the governor of Kārādīn, rebelled and took possession of Isfahān. Mardāwīd sent his brother Waṣqūnūr against 'Ali who abandoned Isfahān and retired to Arradān. To deal more efficiently with 'Ali, Mardāwīd made an alliance of friendship with Yākūt, governor of Shīrāz, marched to Isfahān and threatened to take the field against 'Ali. 'Ali now offered submission and, as a guarantee of good faith, sent his brother Ḥasan as a hostage to Mardāwīd.

In 322 (934) the Caliph Kāhir confirmed Mardāwīd in his government on the condition of his evacuating Isfahān. Mardāwīd obeyed and sent instructions to his brother Waṣqūnūr, the governor of Isfahān, to deliver the province to the Caliph's agent, Muṣaffār b. Yūsūf, but as Kāhir was deposed shortly after this in Djuumādā l of the same year (April-May 934 A.H.) Mardāwīd again evaded compliance.

In Saḥāf 323 (Jan. 935) Mardāwīd was assassinated by his Turkish slaves at Isfahān. He was loved by his soldiers, who, it is stated, carried his coffin on their shoulders all the way to Kayrā for burial. Mardāwīd was a man of high ambition and had drawn up a plan for the conquest of Baghdad and the restoration of the Persian Empire in his own person, but he was murdered before he could carry out this scheme.

(M. Nazim)

**MARDĪN** (written Mārūdīn in Arabic, Syriac Marde), a town in upper Mesopotamia (Diyār Rabā').

**Position.** In upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Karradaq (5,000 feet) S.W. of Deh-e-Var-bakr. This lofty massif continues eastwards in the direction of Diyarbakr. Ibn O'mar by the limestone chain known in ancient times as Masius and later as Izala ('Izāla). The eastern part of this ridge forms the district of Djabal-Tūr or Tūr Aبدīn [q. v.] the capital of which is Midya. From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of 'Abd al-Ariz (in the west) and Tell-Kawkab and Sinjar (in the east); their combined waters form the river Khabūr [q.v.].

**The Encyclopaedia of Islam, III.**
Mardin lies near the point where there is an easy pass through the Marisias from the lands south of the Tigris [the rivers Gok-su and Shakhân] to the lands round the sources of the Khabûr [the stream called Zuwârak which rises north of Mardin], in other words Mardin commands the Diyar-bakr-Nisîrân road (which then turns towards Iṣszæta b. ʿOmar and Mawṣil). On the other side towards the west several (Ritter, xi. 356, gives three) direct roads connect Mardin via Urtâ with Biređik (on the Euphrates); to the S.W. a road runs from Mardin to Raʾs al-Ain (there is now a railway) and to Harrân. The direct distances are as follows: Mardin-Diyarbakr 55 miles; Mardin-Nisîrân 30 miles; Mardin-Sawur-Midyât 75 miles; Mardin-Biređik 160 miles; Mardin-Adana (by rail) 450 miles.

The advantages of this position at the intersection of important roads are enhanced by the very strong natural situation of the town, built at a height of 4,000 feet on an isolated eminence on the top of which is a fort 300 feet above the town (cf. the sketch in Cernik, pl. ii., No. 17.). Buckingham compares its position with that of Quito in South America. All travellers (cf. Ibn Hawâkî, p. 152) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see. Only a hundred years ago Mardin was still considered impregnable, but the difficulty of access sensibly affected its commerce. According to Cernik loaded camels could not ascend right up to the town. A modern line 15 miles in length now connects Mardin with the station of Darbaziya on the "Baghdîd" railway, but the station for Mardin is five miles from the town.

Ancient History. It is noteworthy that in spite of its remarkable situation Mardin does not seem to have been mentioned in the cuneiform sources. Ammianus Marcellinus (vi. 9, 4) is the first to mention two fortresses "Maride and Lorne" between which the road passed from Amid (Diyar-bakr) to Nisîrân. Theophanes Simokattu (iii. 1, 9) mentions τὰ Μαρίδης ἡπείρας and (v. 3, 17) τὸ Μαρίδης 3 para-ranges from Dérâ. Procopius, De Aedificiis, (ii. 4) mentions Σακραγέ (or Σακραγίς) and Ἀσσυρία and Georgius Cyprius, ed. Geller, 1826, p. 46: Μαρίδης της Ασσυρίας. This name in Ptolemy, vi. 1, however, refers to another place in Assyria to the east of the Tigris.

Muslim Conquest. The Muslims under ʿIyâǔ b. Ghaṃ occupied the fortress of Mardin along with Târ ʿAbūn and Dârâ in 940 (Baladurî, p. 176). In 133 Mardin is mentioned in connection with a rebellion in Upper Mesopotamia. The town formed part of the possessions of Burâka chief of the Kafān who was defeated by the Ābâbad ʿAbû Diŋfâr (Ṭâbur. ii. 53). In 279, Ājmâd b. Ṣâk took Mardin from Muhammad b. Iṣḥâq b. Kânsâk (ibid., i. 213). Hâmûn b. Hâmûn occupied it in 280 (873); seized Mardin in 284 the caliph ʿAlî made his march on the town. Hâmûn fled and left Mardin to his son. The latter surrendered the fortress which was dismantled (cf. l. c., ii. 716). The "grey fortress" (al-bâr al-abâqât) was later restored, for Ibn Hawâkî (356) attributes its erection to the Hâmûn b. Hâmûn Nâṣr al-Dâwâl b. ʿAbd Allâh b. Hâmûn. On the death of his father in 358, Hâmûn was dispossessed by his brother Faḏl Allâh Abu Taḡlıb. By the peace of 363, concluded between the Buṭûd Bâkhṭîyâr and Abu Taḡlıb, Hâmûn recovered his possessions with the exception of Mardin (Ibn Miskawaih, ed. Amedroz, ii. 254 and 319).

The Arab geographers give few details about Mardin but they emphasise its importance. According to Ibn al-Fâṣîh, p. 132, 136, the khabûr of Mardin was equal to that of Mâyârâfikân (865,000 dirhams). Ćstâḵrîrî, p. 76k, says that it is a large town on the summit of a peak the ascent of which is a farsâlî in length; Dunaïsar [q.v.] was one of its dependencies. Ibn Ḥâwâkî, p. 143, gives the ascent at two farsâlîs. The quarter of Mardin itself was flourishing, thickly populated with large markets. The water supply was brought by subterranean canals from the springs to the town. The rain-water was also collected in cisterns (jâhârdî yâb-biḥrâ). Yâqûtî, iv. 390 (cf. al-Kâzîmî, p. 172), speaks of the splendid of the quarters outside Mardin (i.e. below the town itself) and its many madasas, hâkâmâbâds, etc.; as to the ḫâlta there was nowhere in the world so strong a defence; its dwelling-houses rose in terraces one above the other.

The Mârwanî and the Saʿîdîs. It is probable that Mardin was within the influence of the Mârwanîs, for according to their historian (cf. Amedroz, J. R. A.S., 1904), their ancestor Bâdî (d. 380 = 990) had extended his power over Diyar-Bakîr (Nisîrân, Ṭîr ʿAbîn). The Saʿîdîs ruled there next. After the death of Malikîshâh, Tâṣbûh b. Alp Aṛān seized for a time all the lands as far as Nisîrân. Under Bârî-yârû Mardin was given to his old bard (muḫgâhîn).

The Ortoķîs. At this time arose the dynasty whose fortunes are especially associated with Mardin. The son (or grandson?) of Ortoķî called Yaḵāṭtî took by stratagem the fortress in which he had been imprisoned but it was taken from him by his brother Sukmân b. Ortoķî who died in 405. In 502 we find at Mardin Il-ḫâzî b. Ortoķî (Ibn al-Aḫtr, x. 269, 321) whose line ruled there till 811 (1405) (cf. the art. ORTOķîS). (On their coins struck at Mardin in 599, 600, 654, 657, 648, 655, 656 etc., cf. Qâhillî Edhem, Catalogue des monnaies turcomanes, Constantinople 1894 and S. Lane-Poëte, Catalogue of Oriental Coins in the British Museum, vol. iii. and x. [Index, s.v. Mardin].)

In 579 (1183) Salâdîn came to Harrâm (6 miles S.W. of Mardin) but was unable to take the town. In 594 Malik ʿAdîl b. Ayyâb seized the outer suburb which was pillaged but the siege of the town itself was abandoned in the following year. In 599, ʿAdîl sent against Mardin his son al-As̄hâf who appointed governors (ḵūmān) in its dependencies. The Ayyâbî of Aleppo al-Zâhir b. Šâhā al-Dîn offered his good offices and ʿAdîl was content with an indemnity of 150,000 dinars and the acknowledgment of his suzerainty by the Ortoķîd of Mardin (cf. Abu ʿI-Iṣfârâdî, ed. Pecocke, p. 425, 427).

The Mongols. In 657 the Mongol Hâllûs Kâhân demanded the homage of the prince of Mardin, Nâḍîn al-Dîn Gâḥît Sauṭî, who sent his son Muṭâfîr to him but maintained a neutral attitude. In 658 the town was besieged for 3 months by the troops of Yâshmût, son of Hâllûs. Famine and an epidemic raged in the town. Ac-
cording to Rashid al-Din (ed. Quatremère, p. 375), Muzafrar killed his father in order to put an end to the sufferings of the inhabitants (Abu l-Faraj and Wasiṣf give different versions, cf. d’Ohsson, ii. 308, 335). Muzafrar was confirmed as lord of Mardin; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Ṣalih b. Mansūr (769 — 1367) whose sister Duniya Khatūn was the wife of the Khaṭūn Khudāshuda, Ibn Batūta (ii. 142—143) visited Mardin.

Timūr. The Otoqkād Sultan Ṣāla (778—809) was king of Mardin at the invasion of Timūr in 796. Sultan Īsā came to pay his homage to the conqueror but the citizens attacked those of Timūr’s men who ventured into the town. Malik Īsā was put in chains and taken to Sulṭānīya (Zafar-nāma, i. 663, 671—672). In April 1304, Timūr returned to the attack and the town was taken by storm. Then the siege of the upper fortress (qal’at al-shakhla) was begun but it was never taken. Timūr was content with presents and promises of kharājī and returned westward to the Verenian circuit who travelled there in 1507 (sp. cit., p. 140), Mardin was occupied without bloodshed. The same traveller mentions the fine palaces and mosques of the town; there were more Armenians and Jews in Mardin than Muslims. The battle of Calibrān (914) shook the power of the Persians. In place of Ustādjūl Muḥammad killed at Calibrān, his brother Karakhan was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Dayārak and then the town of Mardin, but the Persians who never lost the fortress restored the status quo.

Persian conquest. In 913 (1507) all the lands as far as Malayān were conquered by Shāh Isma’il who appointed his general Ustādjūl Muḥammad as commander to the Verenian circuit who travelled there in 1507 (sp. cit., p. 140), Mardin was occupied without bloodshed. The same traveller mentions the fine palaces and mosques of the town; there were more Armenians and Jews in Mardin than Muslims. The battle of Calibrān (914) shook the power of the Persians. In place of Ustādjūl Muḥammad killed at Calibrān, his brother Karakhan was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Dayārak and then the town of Mardin, but the Persians who never lost the fortress restored the status quo.

Ottoman conquest. Finally in 922 (1516) Karakhan was defeated and slain in battle at Karghan-dede near the old town of Koc-ţur, 10 miles S.W. of Mardin. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mardin still remained in the hands of Sulaimān Khaḥ, brother of Karakhan. The siege lasted a year and not till Bākli Muḥammad Pāsha arrived from Syria with reinforcements was it stormed and its valiant defenders put to the sword (Ajam-ţarā, p. 24; 32; this Persian source mentions Oğuz-i Pārāk’i in place of Koc-ţar) (s. Hammer. G. O. R. 2, i. 736—749, quoting Abū l-Fidā’ī, son of Ḥakīm Idrīs and continuator of his Hatib-e-bāalik). In the Baghdad campaign of 941, Mardin was created a sanjak and included in the vilāyat of Djiyarbāke. Ellyas Celebi, iv. 59 gives Mardin 36 timarlı and 465 timar notes; Mardin could put in the field 1,600 armed men (ayebeti). In the xvith century Mardin became a dependency of the Pāshā of Baghdad: Otter (1757) found at Mardin a rizāda appointed by Ahmad Pāsha. As late as the time of Kinnir (1810), Mardin was the frontier town of the pāshālik of Baghdad and was governed by a mārerān sent from Baghdad.

The reforms of Mahbrūd were badly received in Upper Mesopotamia. In 1832 (Anjwār) Mardin rebelled. Fāṭer in Mardin had passed to the Kurd bey, the ruler of the Khowār (1816) speaks of a here- diced family who ruled in Mardin. The two brother of the ‘ruling boy’ seized the power and refused to recognise the authority of the Porte. (It may be asked if these boys were not of the Mutt tribe; on their chiefs cf. Buckingham, op. cit., p. 156) Rashid Fāṭeh, the pachir of Kurdštān, besieged the town and blew up the great mosque.
Among the religious sects of Mardin the Shevita would merit a special study. In the time of Niebuhr (1766) there were about a hundred families in the town, and Buckingham (cf. cit., p. 192) and Southgate (1837) also mention them. The Shevita probably represent the last survivors of a local pagan cult. Towards the middle of the eighteenth century they were led to declare themselves Jacobite Christians but only formally (cf. Ritter, II, P. 303-305).

Christianity at Mardin. The district of Mardin has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which begins in 755 is closely associated with Mardin. Towards the end of the eighth century numerous monasteries were established round the town by the bishop John of Mardin. In 717 the Jacobite patriarchate was transferred from Diyarbakr (Amid) to Mardin. In 1207 it was moved to Deir-Za'far, an hour's journey from Mardin, to return to Mardin in 1555 (Assmann, Bibl. Orient., in 1861 p. 74; Wright, A Short History of Syriac Literature, 1891 [Index] On the position of the Christians before 1914 cf. the works of Southgate, Parry, Cuinet etc.).

Antiquities. According to Niebuhr, there are many Arabic inscriptions at Mardin. Those of the Ortokids have been studied by ‘Ali Emiri Efendi who also examined the webk documents relating to the principal buildings of this dynasty at Mardin (cf. Kātib Fereidh [944], Mardin Mutlûk-Ürikevi Türkeli, ed. and annot. by ‘Ali Emiri, Stambul 1334). For the list of buildings cf. the article ortokios. The monuments of Mardin which must be of considerable artistic interest have never been described in detail. Buckingham (p. 191) gives a few details about the minaret of the “great mosque” (a cylinder decorated with carved arches, on a square base, etc.; a stone gallery with a pointed roof on the top) i.e. the Mosque of Naq$m al-Din Alp built in 568-573; but the buildings have never been studied. We do not know if the madrasa of Ka’sim Pāshā A.Koyunlu (Niebuhr) is still in existence. The domes of the mosques of Mardin are “ribbed and guttered”, their vertical ribs radiating from the summit.

The Travels of Josef Babaru (1431) and The Travels of a merchant in Persia (1517), in the vol. of the Hâkimî Society, publ. in 1873: P. della Valle, Viaggi, Brignon 1843, i. 515 (the traveller’s wife was a native of Mardin); Tavernier (1644), Les six voyages, 1602, i. 187; Niebuhr (1766), Reisebeschreibung, Copenhagen 1778, ii, p. 391-398, and plate xlviii; Oliver (1795), Voyage, ii, Paris 12, p. 242; Dupré (1808), Voyage, i. 77-82; Kinnell, A geogr. The wilāyat now marches with the zone of the French mandate.

Population. Niebuhr (1766) counted 3,000 houses in Mardin (of which 1,000 were Christian) with 60,000 inhabitants. Dupré (1808) estimated the population at 27,000 of whom 20,000 were Turks (i.e. Muslims), 3,300 Jacobites, 2,000 Armenian, and 500 Shem-yan. The statements of other travellers are as follows: Kinneir (1814): 11,000 of whom 1,500 were Armenians; Southgate (1837): 3,000 of whom 1,700 were Muslims, 500 Armenian Catholics, 400 Jacobites, 250 Syrian Catholics, 100 Chaldaen: Mullbach (1838): 12-15,000 inhabitants; Sachau (1879): 20,000; Cuinet (1891): 25,000 of whom 15,700 are Muslims.

According to Southgate, Arabic and Kurdish are the predominating languages in the town. The rural population of Kur Abdin speaks the “Toftani” dialect of Aramaic; cf. Prym and Soci, Der neumaronische Dialekt der Tur Abdins, Gottingen 1881.
MARDIN — MARDJ RĂHĬT 277

(M. V. MINORSKY)

MARĐ DĀ’BĪK, a battlefield near Dābīk [q.v.] on the Nahr al-Kuwaïk in northern Syria. On the history of the town of Dābīk, which was known to the Assyrians as Dabgyn (Sachau, Z. A., xii. 47) and is called Dabou by Theophanes (Chron. ep. de Door, p. 431, 451) cf. above vol. i., DABIK.

When in 941 (998) the Franks conquered Ḍāqīyā, Kerbhōlā of Mawsil assembled a large army on Mard Dābīk, with which he laid siege to Ḍāqīyā (Ibn al-Athir, ed. Tornberg, x. 188; Abu ʿl-Fidāʾī, Kamāl al-Din etc., in Rev. hist. or. crois., i. 3, 194; iii. 580). In the spring of 513 (1119) Ḥighāz on his campaign against the Franks crossed the Euphrates at Baddāyā (now Beldā on Sachau’s map) and Sandja and advanced via Tell Bahrī (q.v.), Tell Khālīd, Marj Dābīk and Musahmiya against Kiūsmān (Kamāl al-Din, in Rev. hist. or. crois., iii. 616). In the beginning of 1124 (1674) Marj Dābīk b. ʿAbdāl was defeated by Ḥusam al-Din Timūr, on the field of Dābīk (Rev. hist. or. crois., v. 645). On his campaign against Leo II of Little Armenia, al-Malik al-Zahīr encamped in 602 (1530–1536) on Mard Dābīk (Rev. hist. or. crois., v. 155). On Saif al-Dīn Tunguz’s campaign against the Tatars to Malṭaya [q.v.] in which Abu ʿl-Fidāʾī of Ḧamā took part, a halt was made on the way back on the field of Dābīk from the 3rd Āfṣar to the 2nd Rabīṭ 277 (May 9–July 6, 1315) (Abu ʿl-Fidāʾī, Rec. hist. or. crois., i, 335).

On the 25th Radjab 922 (Aug. 24, 1516) was fought at Mard Dābīk the battle which gave Selim I a decisive victory by which Syria passed for the direction four centuries under Ottoman rule (H. Jansky, Mitteil. u. ausm. Geschicht, ii., 1923–1926, p. 214–224).

(E. HONGMANN)

MARĎ RAḤĪT, the name of a plain near Damascus. On leaving Damascus in the direction of Homs, just before crossing the pass of the Eagle, al-ʿUḏāb, one reaches the village of Marjd ʿAḥrīt. To the east of this place stretches the plain, Marjd Raḥīt, which extends as far as the desert. It was here and not in the “High place of Qaṭīfa” (l. mora) that the Kūš of the Omajyads after the death of Muʿaṣṣa II was settled. This decisive battle since it was fought in the neighbourhood of Marjd ʿAḥrīt was named by the poet al-ʿRāfī after this place. With greater exactitude the contemporary poet al-ʾAkhṭal, who was more cognisant with Omajyad history, places this battle “between the ʿUḏāb and Raḥīt” namely in “the vast plain of Marjd” mentioned by the poets (Aḡīrtn, xvii. 112).

During the discussions of the congress of Ḥābiyā [q.v.] the concentration of the Kūš forces was taking place under the command of Darāb b. Kāis [q.v.] supported by the Yemen contingent and the Kūšā’s mercenaries to the south of Damascus. Their total—which has probably been exaggerated—has been placed at 30,000. Marwan b. al-Jakum had at his command about ten thousand and combatants, the majority of whom were Kalbi. The Kāisins seem to have taken up their position first at Marjd al-Ṣuṣfār [q.v.] to the north of ʿUḏāb. After an engagement in this place had ended to their disadvantage, they were forced to double back to the north. In the meantime a sudden attack launched against Damascus which was cleared of troops, had delivered into the hands of the Omajyads the treasury and the arsenals of this town. The Kāisins in order to avoid being caught between the capital and the Kalbi army advancing from Ḥābiyā retreated, while harassed at close-quarters by their adversaries. These engagements occupied nearly twenty days. On arriving on the heights of Marjd Raḥīt, trapped between the defiles of Qaṭīfa and the desert, they accepted battle. One must ask how the Kalbi succeeded in making up for their glaring inferiority in numbers. Maṣḥūd, without explaining further, speaks of a stratagem devised by Marwan. This stratagem, which is mentioned by the author of
the Ṣalṭ al-farād, should be described not as a ruse of war but as a crime. After the advantage gained at Mardj al-Ṣuffar, the Omayyads had had the time, and without doubt made use of it, to detach from the Kāisīs their temporary allies, the Yemenis and the Kuftās. The treasure of the state seized at Dūrūy and the immense amount of wealth brought from the ʿIrāq by the family of Ziyād b. ʿAbīth may have been of assistance in doing this. The Syrian Arabs, not at their ease in the camp of ʿAbīth, no doubt understood how much the triumph of Ibn al-Zubair would be prejudicial to their hitherto privileged position and to the hegemony wielded since the days of the Ṣufyānids by the Syrian tribes. Their defection must, we think, have determined the issue of the engagement at Mardj Kāḥīt and hastened the triumph of the Omayyad arms. Whatever was the cause this victory was decisive (the middle of July 684). 3,000 Kāisīs are said to have been killed. The death of ʿAbīth seems to have been the signal of defeat, which became a regular disaster, in which the principal chiefs perished. Flight alone saved the most prominent among them, Ziyād b. ʿAbīth and his men.

The memory of Mardj Kāḥīt was deeply impressed upon the Kāisīs. It detached them en bloc from the Omayyad cause. Under the first two Marwānī caliphs, their battle-cry became "Vengeance for the victims of Kāḥīt." From this time a smile is said never to have appeared on the countenances of the surviving chiefs. Between them and their ancient rivals of the Timāmīs the split became much deeper. The latter's songs of victory answered the cries of rage of the Kāisīs. In celebrating the battle of Kāḥīt the Kalbī poets gave more emphasis to their triumph than to that of the Omayyads. Their compositions compositely develop this theme without regard to the Marwānīs, their debtors rather than their sovereigns. This great victory afforded the aged Marwānūs the opportunity of proclaiming themselves as Caliph of Damascus before beginning the conquest of the old Ṣufyānī lands now under the authority of Ibn al-Zubair. In the bosom of the Caliphate, it nourished the most dangerous rebellion; it inaugurated a savage war of extermination between Kalb and Kāisūs. The tribes of Kufta's first, then the Yemenis and lastly the Taghlib saw themselves in turnfallaciously involved. These internal feuds in which the members of the Marwānī family had the impudence to take part, to the satisfaction of their maternal connections, precipitated the fall of the Omayyad dynasty by destroying the agreement and the unity amongst the Arab tribes, which had been but imperfectly realized by the Marwānī Caliph.

(MARDJ al-ṢUFFAR, a plain situated 20 miles south of Damascus near the modern Tell ʿArām; a stream called the Wādi Ṣarīran runs through it. The place plays a part in the military history of the first century A.H.; first, in the accounts of the Arab conquest of Syria, and later at the beginning of the Marwānī dynasty. The name has been sometimes confused with that of Mardj Kāḥīt [q. v.]. For the history of Syria in the first century A.H. we are exclusively dependent upon the ʿIrāq annalists. Forgetting that the name "Mardj" abounds in the topography of the Damascus region, writers have confused two distinct battles and made them one and referred them to Mardj Kāḥīt, a name which occurs frequently in the poets of the Marwānī period.

At the close of the year 13 A.H. the Arabs, victorious at Ṣifīl, endeavoured to reach Damascus by cutting across the ʿIrāq. One of their bands, under the command of the Omayyad Kāḥīt b. Saʿīd, encamped at Mardj al-Ṣuffar and allowed themselves to be taken by surprise by the Byzantine troops. The Arab leader was killed and his men dispersed. The presence of Muslim reinforcements enabled them to regain the advantage. The Greeks then proceeded to shut themselves in Damascus, to which the Arabs at once laid siege.

In the month of May 684 (64), supporters of the Omayyads joined with Dābiya [q. v.] in order to elect a successor to Muʿāwiya II. ʿAbīth b. Šaṣī, the leader of the rival section of the Zubairis and the governor of Damascus, was invited to the conference. He promised to come to the conclave and marched out of Damascus at the head of imposing forces. But, having gone about half way on the road to Dābiya, on the heights of Mardj al-Ṣuffar, he determined to await events there. The presence of water and of forage made it suitable for the encampment of an army. An excellent opportunity of observation, the site not only commanded the congress of Dābiya, but also commanded the road leading to Damascus. ʿAbīth b. Šaṣī brought about at this point the concentration of the Kāisīs of Syria, who were in revolt against the Omayyads. At Dābiya after 40 days' deliberation, the Kalbīs and the Omayyad partisans elected Marwān b. al-Hakam [q. v.] to be Caliph. Then in their advance upon Damascus, they attacked ʿAbīth and the Kāisīs encamped at Mardj al-Ṣuffar and succeeded in defeating them.

Of this campaign the ʿIrāq annalists and their copyists have only recorded and have only desired to record the decisive battle, namely that of Mardj Kāḥīt, to the north of Damascus. For a quarter of a century no mention is made of any battle between the Kāisīs and the Kalbīs but Mardj Kāḥīt. The extraordinary prominence given to this latter battle by the poets of both sides helped to throw into oblivion the preceding engagements commencing with that of Mardj al-Ṣuffar. Certain texts have however preserved its memory. Yākūt (Muḥdjam, iii. 400) locates in this place a "battle celebrated in the history and poetry of the Marwānī period". Otherwise there is no reference to Mardj al-Ṣuffar in the military history of the younger branch of the Omayyads. As regards poetry it has kept for us the testimony of the Taghlibī poet al-ʿAḥdāl [Dirāsh, ed. Salīh, p. 224, v. i.]. This contemporary poet, who was a habitué of the Omayyad court while praising the glorious deeds of his
tribe, claims for it "many victories even before Mardj al-Ṣuffār". As we know that the Ṭaghūbīs fought in the ranks of the Omayyads, for whom they showed themselves at all times strong partisans, the reference must be to this battle. Moreover the manner in which al-Akhṭal praises this victory suggests that he was not dealing with a small skirmish.

In the meanwhile an Omayyad partizan residing at Damascus had seized the capital. The position became untenable at Mardj al-Ṣuffār for the Kaisīs. It was to avoid being caught between Damascus and the victorious Khalībīs that Dājjāl fell back precipitously to Mardj Kāštīr where he was defeated and killed. On the 22nd June 681, the election of Marwān b. ʿAbd al-Ḥakam was proclaimed at Dājjībī. It is probable then that the battle of Mardj al-Ṣuffār must be located in the early days of ʿAbd al-Ṣuffār. The situation became untenable at Mardj al-Ṣuffār for the Kaisīs. It was to avoid being caught between Damascus and the victorious Khalībīs that Dājjāl fell back precipitously to Mardj Kāštīr, where he was defeated and killed. On the 22nd June 681, the election of Marwān b. ʿAbd al-Ḥakam was proclaimed at Dājjībī. It is probable then that the battle of Mardj al-Ṣuffār must be located in the early days of ʿAbd al-Ṣuffār.
3. 'Omar Niẓām al-Din al-Farqānī. Two works by him are recorded: 1. Fawā'id (II. Khb., No. 9305); 2. Dīwān al-Fikhr, which he compiled from the Mutḥaṣṣar of Taḥawī and other works (II. Khb., No. 4291; MSS. in Brockelmann, G. A. L., i. 376, note 2, where the mark of interrogation should be deleted; cf. Kurāshī, ii. 394; Laknawī, p. 149).

Th. J. Arnaud (1843), J. Halévy (1869) and E. Glaser (1888), is situated in the plateau of Sāba, 3,900 feet above sea-level, which runs east of the Balaq range and is traversed by the Wādī Dženné (Adhāna) which in the course of millennia has deposited a thick layer of silt and thus made a luxuriant vegetation possible. The modern village of the same name stands on a large mound of ancient rubble within the old city walls and is situated about exactly in 15° 26' N. Lat. and 45° 16' East. Long., about 10 days' journey from the Red Sea and the same from the Gulf of 'Aden. This favourable situation destined Mārib to be the centre of the Sabean kingdom, the heart of which was the southwestern corner of the Arabian Peninsula and which at times also included the eastern hinterland of the Gulf of 'Aden including Ḥḍraṃwīt and Mahrā (E. Glaser, Reise nach Mārib, p. 18, 185). Mārib also lay on the important caravan-route which connects the lands which produced frankincense with the

II. Another family of Ḥanafī lawyers goes back to 'Abī Abī 'Alī b. 'Abī Abī 'Rāyāb b. Șādīr b. Djaṣār b. Sulaimān al-Marghīnānī, who died in 477 (1084-1085) in Marghīnān at the age of 68. Of his six sons who attained fame as multās we may mention Abū 'l-Ḥasan Ṣāhir al-Din 'Ali († 506 = 1112-1113). His son and pupil was Ṣāhir al-Din al-Ḥasan b. Abū Abī 'l-Ḥasan b. 'Ali Abī 'l-Marghīnānī. Four works by him are recorded: Akdīyya, Fawā'id, Fawā'id and Shārī'a, only the last of which survives in manuscript. He was the teacher of the famous Fakhr al-Din Kālidkhān († 592 = 1196) and of Burhān al-Din al-Marghīnānī (q.v.).

Mārib (Mārīb), a town in the southwest of Arabia, formerly the capital of the Sabaeans and now the capital of the amirate of the same name.

The ancient town of Mārib, which so far has only been visited by three European travellers, Mediterranean (Gaza-Ghazze) and which ran from Shajwāt-Sabata via Thobma-Tumma near Darb Kōlān in the Wādī Bālān, through Wādī Ḥālib via Mārib into the Minaean Dīwaf, to Nadjiya and from there via Thirmālā, Abā al-Khadār, Ḥalālī, al-Qīṣa, Djalīl, Bedr, Wādī 'l-Ḥāfiz, Wādī 'l-Hāfizī, Wādī 'l-Pāīd, Ḥārādje, Kōtba, Banāt Ḥarb, Djaḥrā, Tēhā, Kān al-Mānūzil, Mēkā, Yathērīb (al-Medīna), Fakdū, Kḥībār, al-'Ula, Tāmā, Akra, Ūbah, al-Hijr, Maḏnā, Ḥamād, al-Ḥašī, Atām, Aḏhrūb to Petra and thence to Gaza while Mārib was also connected with al-Ṭaymān, the coast of the Persian Gulf and Babylonia, via Nēqrān by the route which followed the Wādī 'l-Dawāsir (cf. A. Grohmann, Historie-geographische Bemerkungen zu Gt. 418, 419, 1000 A. B., p. 116 sq.). It still forms an important junction and has good connections with Ḥadrāmōt, Redā, Verim, Šānṣa, al-Djaflāw, Šāfīd, Nēqrān and the Wādī 'l-Dawāsīr (E. Glaser, Reise nach Mārib, p. 26).

The ancient city wall, 3 feet thick, enables us still to recognise with more or less certainty 8 gates — not only 2, as Th. Arnaud (Plan de la ligne et de la ville de Mārib, in J. A., ser. vii,
vol. iii. [1874], p. 12) thought — distinct gate-like breaks in the stone wall. They are now called Bâb al-Ākîr (W.), Bâb al-Hâdî (S.W.), then along the south wall to the east and from here to the north, Bâb al-Nâṣr, Bâb Aḥâl Qâr, Bâb al-Mah-ram, Bâb al-Darb, Bâb al-Qibla, Bâb al-Majdîn. The names Bâb al-Nâṣr, Bâb al-Darb and Bâb al-Hâdî are still borne by the gates of the modern village of Mârib but the modern Bâb al-Nâṣr corresponds to the Bâb al-Ākîr of the ancient town, since from the latter by traversing the whole of the old town the village is reached through the Bâb al-Nâṣr.

The old town forms at the present day a considerable mound or rather a number of mounds of ruins, out of which project remains of walls and portions of columns. Excavations conducted here would, as Glaser pointed out, bring to light most unexpected things. Four distinct areas may be distinguished in the site: 1. The mound on which stands the modern village which stands in the eastern part, almost in the S.E. corner, of the old town and seems to consist entirely of refuse and rubble, beneath which at a considerable depth one comes upon old buildings. Glaser believed that these old buildings represent the oldest part of the town upon which in the later centuries the Sabaic wall was built. It is also possible that the town of Mârib or at least many of its buildings have been several times destroyed. The topmost stratum is of course of comparatively recent date if we exclude the many old stones with Sabaean inscriptions. The village, which, according to Glaser, can hardly have more than 600 inhabitants, consists of about 80 houses, usually in several stories on a rectangular plan narrowing a little as they ascend. Only the lower parts are of stone, the rest is of clay. Only the two fort-like houses of the amir are built entirely of hewn stone. The outer wall of the village consists simply of the walls of the outermost houses, which are built on to one another or linked up by connecting walls. The village has two gates of some size, one facing west and the other south, and several small doors. There is an old well outside the village between this and the eastern gate of the old town, and also the chief mosque (Masjid Sabâlim). 2. The Majdân Umm al-Kîs identified by Glaser in his Kartênbuch, p. 8 with Umm Billîs, in the S.E. corner with great mounds of ruins, which perhaps come from castles. 3. The S.W. area which apparently contained temples and castles. 4. A large round open space (Majdân) in the N.W. and western part of the mound which does not seem to have been built on in ancient times either. It stretches almost to the modern village and particularly on the south side is surrounded by portions of columns and other ruins (E. Glaser, Reise nach Mârib, p. 48 sq., 73). These faceted columns which still protrude 3—4 feet out of the ruins, one of which lying on the ground measured 12—15 feet, are also mentioned by Arnaud (p. 12). The place is probably identical with the "Champs de Mars" mentioned by the French traveller in his report to Frenzel (J. A., ser. iv., vol. i. [1845], p. 335).

The place in any case was at one time surrounded by large buildings which are now in ruins and form great mounds, which are also dotted with fragments of columns and Glaser leaves the question open whether there were here the palaces of the kings and notables or the temples of the ancient Sabaean. To the south of the Maidân in particular may still be seen the foundations of a colossal building which Glaser wanted to identify with the famous royal citadel of Sahîn celebrated by later tradition.

The old town which occupied an area of about 1,000 yards square, a calculation by E. Glaser, which agrees with Th. Arnaud's plan of the town (J. A., ser. vii., vol. ii. [1874], p. 11) [Glaser gives the distance between the two opposite gates as 1/4 hour], is built entirely on the left bank of the Wâdî Dhenne. It seems, to conclude from the remains of the 3 feet thick wall around it, which has only survived in places, to have practically formed an oblique angled parallelogram the longer sides of which follow the line of the Wâdî Dhenne while the eastern and western sides (breadth) run practically due north and south. The southern wall which runs parallel to the river bank turns from north to east at an angle of 60° and runs almost E.N.E. This fact is clear not only from E. Glaser's description of his Reise nach Mârib (p. 36 sq., 45) and the Mârib Tagebuch but also from Glaser's Skizzen (No. 51) upon which is based the appended plan of Mârib and vicinity. It is a striking contrast to Th. J. Arnaud's description and map (J. A., ser. vii., vol. ii. [1874], p. 11) [Glaser gives the wall around Mârib described a circle and also to Glaser's earlier sketches in his large Kartênbuch, p. 8 sq. and the map drawn up after investigations in the year 1888, which forms fol. 4 of E. Glaser's collection I. The foundation of the wall consists of cement blocks 5 feet long, 15 inches high and 2 feet thick. On the top of 8—10 layers of these blocks are placed regularly hewn blocks of marble of the same size. The wall which unfortunately is almost completely destroyed does not run in a straight line but at regular intervals there are rectangular projections, as is clearly shown in E. Glaser's already mentioned sketch No. 51 and in that of his Tagebuch, xi., p. 125, which moreover gives the plan of the town as a rectangle — Glaser notes here "the city wall was apparently built as a quadrilateral" —, while No. 51 shows rather a trapezium the base of which lies away from the river while the shorter side parallel runs along the river. The rectangular projections found at regular intervals were probably towers, which strengthened the defences and stood out at regular intervals in the style we know from Assyrian fortifications (cf. the similar quadrangular plan of a fortress in the Sulaymān inscription). Near the corner and towers covered by steplike battlements in B. Meiser, Babylonien und Assyrien, i., Kulturgesch. Bibliothek, i. 3, Heidelberg 1920). That the city walls of Mârib had towers is also evident from the great inscription (Glaser 418—419) which is older than the great Sirwâh inscription Gl. 1000. In this we are told in line 4 that the unknown ruler built "the two gates of Mârib (Mârib) and built towers for Mârib of Balâq stone" (cf. N. Rhodokanakis, Altabarische Texte, i. 6 sq.).

Rhodokanakis suggests, presumably rightly, that this king was continuing the work of the unnamed son of the Sabaean mukarrab Sumuhr-Salāya Yânît (الللاه يانيت) who, according to the inscriptions Glaser 412 = Arnaud 41. 413 = Arnaud 42, 414. 427, 445. 500. 510. 537. 589. 600. 634 and perhaps also 751, "built a wall around Mârib
(Alqārā) by command of and with the help of 'Alqārā'. Whether the son of Sumuḥ-‘alayya Yanāf was the builder of Mārib seems uncertain; in any case he is the oldest builder of the town whom we know from the inscriptions.

Nor is it known who founded Mārib. That it was Saba‘, son of Yabhūb, as the Arab genealogists think, is of course quite an unfounded supposition (cf. Yāqūt, Muḥtabak, p. 239; Abu 'l-Fath, Historia antemelica, p. 114 sq.; A. v. Kremer, Uber die sudarabische Sage, p. 26 sq.; E. Osiander, Z. D. M. G., x. 68).

That the city wall was frequently restored is evident from the fact that inscribed blocks of the earliest period of Sabaean history were used as building material in any order without heeding the context of the inscription (cf. Glaser, Reise nach Mārib, p. 48 sq., 51, 74) which is the case e.g. in the texts Glaser 695—707, and as there were no inscriptions of a later period in the lower strata the renovation must have begun after the reign of the three Sabaeans mukarribas Yidr‘-Ibu-Bayn, Sumuḥ-‘alayya Yanāf and Yidr‘-Ishā‘a Watar. To the same period as these inscriptions must belong the old Sabaean boustrophedon text, Glaser 926 = 1350 + 1351 = 1736, which comes from al-Meshdāḥ, not far east of Sīrūḥ, in the second line of which there is mentioned the building of a road up to the gate of Mārib (Alqārā) (cf. E. Glaser, Allgemeine Nachrichten, i., Munich 1908, p. 98 sq. and N. Rodokanakis, Kitabīm An-Nasrī Texte zur Bodenwirtschaft, ii. 49, and note 3, 54—56). Of the three Sabaeans mukarribas mentioned here Yidr‘-Ishā‘a, Yidr‘-Ibu and Sumuḥ-‘alayya, the first, as N. Rodokanakis himself states, is identical with Yidr‘-Ishā‘a Watar, Yidr‘-Ibu with Yidr‘-Ibu-Bayin, the conqueror of Nashik, while Sumuḥ-‘alayya is perhaps the same as Sumuḥ-‘alayya Yanāf, in whose reign the inscription Glaser 926 was set up. Glaser must also be right in assuming (Stitzer, i. 68) that the town of Mārib is considerably older than the wall and a number of decades must have passed away before the town attained the extent indicated by the oldest remains of walls. This is also evident from the mention of independent kings of Mārib in the inscription Glaser 302 which is older than Glaser 418—419. A memory of this earliest period in Sabaean history seems to be preserved by the poet ‘Alqama Dhu‘ Di‘adan, who mentions kings of Mārib along with kings of Sīrūḥ (cf. D. H. Muller, Sabatische Denkmäler, p. 99).

According to al-Hamdāni (Kitāb, viii., in D. H. Muller, Burgen u. Schlosser, ii. 949 sq., 1038 sq.), there were in Mārib the three citadels Salḥin, al-Ka‘shib and al-Hadājir. For the former which is expressly stated to have been the royal capital and palace of Bilkis, cf. the article Salḥin. The question where this castle is to be located in Mārib has been very variously answered. D. H. Muller, Burgen u. Schlosser, ii. 968 thinks that Salḥin was on the site of the modern village of Mārib, which, as Arnaud had already suggested, had been occupied by an old citadel (J. As., iii. 1907, vol. iii. [1874], p. 12). Glaser (Reise nach Mārib, p. 73) on the other hand identifies Salḥin with the colossal building the foundations of which lie south of the Maidān. In connection with Salḥin, al-Ham-dānī also mentions the lower pillars of the throne (of Bilkis) — so D. H. Muller translates arq — which became celebrated in the Muslim world through Kurān xxvii. 23 and were still standing in his time and so firmly rooted in the ground that they could not be overthrown. Glaser, Reise nach Mārib, p. 139 however assumes that the reference here is to the Ḥaram of Bilqis with its pillars but admits the possibility that a citadel of the town proper is being described, since Salḥin is talked of immediately afterwards. Djiṟdí Zaidān, Kiṭāb al-‘Arab Ǧabīl al-‘Iṣlām, p. 143 also assumes that the palace of Salḥin is referred to. Sprenger, Post-u. Reisenreisen, p. 140 also tells of this throne of Bilkis that it stood on stone pillars 29 ells high which were still intact and the foundations were as deep as its height (this statement is erroneously attributed by Sprenger to Bakri but presumably comes from Ibn al-Mudjāwis). The Ḥaram-Ǧanāma also (cf. Jomard in F. Mengin, Histoire de l’Egypte, p. 344) says that the throne of Bilkis was built on columns 28 ells high in Saba‘ (Mārib). This sounds very improbable if we should really understand by arq a throne, which according to Nashwān al-Himyari, p. 50, stood in the palace of Bilkis in Mārib. When however we are told by Nashwān, p. 70, that arq is a castle which was built on columns of stone and the verse of As‘ād ‘Ibība‘ quoted gives the name arq to the palace of Bilkis, we may then in the above passages take it to mean a citadel rather than a throne and with Glaser, Reise nach Mārib, p. 73, look for it in the S.E. corner of the old town. Legend has associated the name ‘Arq Bilkis with other localities also. According to Abu ‘l-Rabi‘ Sulaymān b. al-Raiḥān in Yāqūt, Mu‘jam, ii. 640, it is the name of a day’s journey from Dhamār on which stand six marble columns and the principal group of pillars of the old ruins of Sīrūḥ still bears this name (J. Halēvy, Rapport, J. A., ser. vi., xix. [1872], p. 67 sq.; Glaser, Reise nach Mārib, p. 179). On the other hand, it is an open question where the two other citadels al-Kaṣhib and al-Hadjar mentioned by al-Hamdāni and Bakri (Mu‘jam, ii. 502) are to be located. According to Yāqūt, Mu‘jam, iv. 104, al-Kaṣhib was built by order of king Shahribol b. Yabhūb, who put up on it a copper plate inscribed “They who built this castle are Thwāib and Sīhar; its building was entrusted to them by Shahribol b. Yabhūb, the king of Saba‘ and of the Thāma and its Arabs”. D. H. Muller in Burgen u. Schlösser, ii. 1039, notes that he has already identified Shahribol b. Yabhūb with king Ilīshārah Yabīl of the Sabaean inscriptions (Glaser, N. 424, 220; Bibl. Nat., N. 2) and for Thwāib compared the Sabean Thwāib and for Sīhar (so to be read, not ḫwāb) the similar Sabean name. If the inscription given by Yaḥūf really goes back to a genuine muṣanāt inscription, Kaṣibb must have been built about the first century A. D. If the Sabean king here mentioned whose epithet in the Ḥimyar kaṣīṭa (verse 109) publ. by A. v. Kremer is to be read Ǧabīl, in the Sabean inscription Bibl. Nat., ii. 2 [cf. article Salḥin] speaks expressly of Salḥin, Glaser, and Sīrūḥ only and does not mention al-Kaṣhīb, this is not itself proof that Yaḥūf’s foundation inscription is not genuine. The building might easily be later than the inscription Bibl. Nat., N. 2. A difficulty however is raised by the fact that al-Hamdāni (in Muller, Burgen und Schlösser, ii. 1039) and Nashwān al-
HI fair (quoted ibid., note 1) give al-Khashib b. Dhi Hazfar as the builder. Glaser, Reise nach Marib, p. 139, goes so far to say that the name Khashib is derived from the verb khash, which occurs in dedicatory inscriptions, and the form of the king's titles points to the last period of Himyarite rule, and the king is to be identified with Sha'rubil Yaffur; indeed it must be conceded that the style and titles are quite unusual for a king of Saba' and Dhi Ridain and for this reason the muqadd inscription must be regarded as a forgery. This does not mean that al-Hamdani's note is to be rejected as worthless. F. Hommel (Ethnologie u. Geographie d. alten Orienten, p. 666 and note 2) has shown the possibility that the castle of Hadjar (the name means "the town") was perhaps the principal castle, on the ruins of which the modern village of Marib was planted and the older and more celebrated Salhin was a smaller castle. If we remember the meaning "new" given in Yaghi, iv. 104 and Nashind, p. 86, we khashib, al-Khashib might also be an epithet of the citadel as the "new" which came to be erroneously differentiated from al-Hadjar as the name of a third castle. Al-Bakri, Minhaj, ii. 502, 754 explains the difficulty by saying that al-Khashib was the last of the castles to be built in Marib and therefore called the "new". The Masjidul Sulaiman lies to the west, just below the village which is built on a great mound of rubble. This Masjidul Sulaiman b. Dabud, now the principal mosque of Marib, according to Arnaud (J. A., ser. viii., vol. iii. [1874], p. 13) an obviously modern building, square with a flat roof and built of hewn stones, is of interest because, according to E. Glaser (Reise nach Marih, p. 41, 73 sq.), its north side is built against 7 or 8 colossal columns (monoliths) which correspond exactly to those of the Haram Bilkins and the Aramid to be discussed below. Glaser suggests that there was once a temple here similar to the Haram Bilkins. F. Hommel, Ethnologie u. Geographie d. alten Orienten, p. 666) doubts this as well. The Masjidul Sulaiman was the temple of the chief deity. This principal temple in his opinion formed a group with the second temple, which lay on the south side of the Masjid — according to Arnaud (plan of Marib) local tradition thinks this was the site of an ancient temple. The length (2,000 yards), suggested by F. Hommel (op. cit., p. 666) for the distance of this second temple from the Masjidul Sulaiman, is however too high, as both Glaser and Arnaud put the distance between the two opposite city walls at only 1,000 yards. J. Halevy's figure (Kapiteln, J. A., ser. viii., 1872), p. 66, which puts the diameter of the Marib ruins at about 500 yards would give a much shorter distance but the estimate is certainly a very casual one and hardly to be taken seriously.

In the south and west outside the old town walls lies an old cemetery with a number of tombs, some vertical and some horizontal, the latter of which have a small opening at the top. It is now called Medjennat (or Djibat) Ghara. It is probably from here that have come a number of old Sabaean tombstones (Glaser, No. 654, 745). Glaser found the bust let into the stone still in its place (cf. Reise nach Marib, p. 75, 92; Tagteuch, xi. 59). We may probably find the models for these tombstones in the steles of Asur. Stone sarcophagi are also sometimes found. Glaser believes that Marib was before the great well of Marib as a drinking-trough for animals (Reise nach Marib, p. 74).

In the southwest of the old town outside the city walls, Glaser found a remarkable building still partly preserved (G on the plan of the immediate vicinity of the old town of Marib) which was probably used for distributing the water and has on its north side the inscription Glaser 474 = 1671. It consists of two huge stretches of wall running due east and west in one line with a gap in the centre. The two corners of the northern entrance of this passage are angular while at the south side the two are rounded. The inscription, which is placed on the north side of the eastern wall states that Dimiri-ayya Watar, Makariib of Saba', son of Karaba-iln, built a WB (fist) opposite (or in front of) the sanctuary of Atharar. Glaser actually found some 300 paces N.W. or N.W.W. of this building, also outside of the old city walls but quite close to them, a ruin unfortunately reduced to a heap of rubble, which from its plan suggests a sanctuary, since on the N.E. side (the right stretch of wall) the niches, for an idol can still be seen (Reise nach Marib, p. 40; Tagteuch, xi. 47: H on the plan of the immediate vicinity of the old town of Marib).

S.S.E. of the modern village of Marib (D) at a distance of about 3 miles between the Wadi Dhene and Wadi 'Feledg is the Haram Bilkins (D) which was visited by Th. J. Arnaud on July 20, 1843 and by E. Glaser on March 25, 1888 (cf. J. A., ser. vii., vol. iii. [1874], p. 14 sq.; Glaser, Reise nach Marih, p. 41, 44 sq., 73, 157, 141); the latter corrects Arnaud on a number of essential points. The Haram is a large building, elliptical in form, the length of the long axis of which 300 ft can still be seen (Reise nach Marih, p. 44-46). The short axis runs N.E. to S.W. and is 250 ft in length. It is built of regularly hewn square blocks which are placed one above the other in 31 layers up to the frieze so that the height of the wall is 31 ft. This wall is finished off with a double cornice at the top which consists of two rows of blocks which follow one another at short intervals and look like dice on the top of the wall, the result being a mural crown-like frieze which recalls the relief found by Th. Bent in Jeha in Abyssinia (cf. Th. Bent, The Sacred City of the Ethiopians, London 1893, p. 141) and the top of the Sabean relief in D. Nielsen, Hamilok de alto-african Altertumskunde (p. 157, fig. 44). The row of blocks below the lower cornice form a simple and effective decoration by placing the blocks four to six inches apart so as to leave little gaps. A similar kind of mural decoration is known from the Sabaean temple of Jeha (cf. Deutsche Akademie-Expedition, ii. 80, fig. 165). The frieze is still quite intact in place, especially on the east side. There is no trace of a roof. But it cannot be asserted definitely that there never was one. Glaser assumes; the windowless building could have been lit by skylights. There are two doors in the wall, the larger (a) at the northeast end of the shorter axis and the smaller (b) at the N.W. end of the building at the end of the larger axis.
Exactly N.E. of the centre of the building there are four other monolithic pillars in the wall itself. Originally there were a larger number here so that the main gateway (a) had a pillared way leading to it. N.E. of these at a distance of 32 paces are 8 columns which are also erected in a line running from S.E. to N.W. (E). They are rectangular prisms, smooth, 15 feet high without capitals and terminate in dice-shaped tops 4 inches long on which stood the architrave. On the S.S.E. side of the Haram just outside the

wall, four small pillars form a little square the sides of which lie W. to E. and S. to N. (c). Perhaps we have here the pillars for the canopy of a throne which was probably similar in appearance to the Aksumite king’s throne illustrated in Deutsche Aksum-Expedition, ii. 65, fig. 139. The floor of the building never seems to have been levelled, as a natural rock was almost in the middle. Unfortunately in the interior the walls are nowhere clear, so that Glaser could form no deductions as to what it must have looked like.

inside. He expressly states however that he could discover no chambers in the walls as he had expected. On the other hand, the fine inscriptions on the outside of the walls give us information as to the purpose of the building — it is a temple of the Sahaeen moon-god Almahah — as well as the history of its erection. Arnaud was only able to copy 3 of these inscriptions, two others whose existence he established were covered by sand, which has since made further progress, so that he could not copy them. The oldest in-

Plan of the immediate vicinity of the old town of Maryab.

A the modern village of Marib, B Umm al-Ks, C Masjid Sulaiman, D Haram Bilakis, E Amari, F Pillars E.S.E. of al-Merwath, G old Building not given a definite name, H Temple, L-K old city-walls of Maryab, L Wadi Dhene.

inscription Glaser 184 is on the 28th layer from above on the east side. It records that Yidi-lu Bahr, son of Sumaha-ka’an, makarrib of Soba’, built the wall of the temple of Almahah ‘Awm (cf. the latest definitive edition of the text in N. Rhodokinakis, Studien, ii. 7 sq.). Since the brilliant E. Osiander had previously recognised (Z. D. Jr. G., x. 70) that the Haram Bilakis was a temple of Almahah, Glaser (Skizze, i. 68) was able to deduce rightly from this inscription that the sanctuary ‘Awm frequently mentioned here
and in other Sabaean inscriptions was this very temple. From it the god Almahkah is called "lord of ‘Awm (אום)". The completion of this temple which was begun by Yidī-ilu Dharīḥ, by ‘Iššāriḥa, son of Sumuhu-‘alaya Dharīḥ, king of Saba, is recorded in the inscription Glaser, 475 = Arnaud 55, which is on the west side of the Haram on the 14th layer of stones (cf. N. Rhodokanakis, Studien, i. 12 sgg.) Glaser 481 = Arnaud 56, which is on the 13th and 14th layer on the north side records the completion of the wall from the inscription to the top by Tubakarib a prominent official and general of three Sabaean kings (N. Rhodokanakis, Studien, ii. 15 sgg.). Connected with this are two inscriptions of similar content, Glaser 482 = Arnaud 54 on the south side of the 13th layer and Glaser 483 = Arnaud 54 on the east side at the same height. They record the restoration of a ruined part of the wall (presumably the part of the temple) under King Karib-‘ul Uwar Yahudim of Saba and Dhū Rādān, the son of Dhimir-‘alaya Bayin, and his son Hulik-amara. Whether this concludes the history of the building of the Haram seems doubtful since, according to Glaser, Keit nach Mārib, p. 46, inscriptions may still be concealed under the sand on the north and west sides also.

The orientation of the building is of interest. The little door of the Haram (φ) faces that temple of the old town of Mārib on the site of which now stands the Masjid Sulaimān. On the prolongation of the shorter axis to the N. E. lies the ruin called al-Mikrāb, and Glaser has, perhaps rightly, suggested from this arrangement of the two buildings that there was some connection between their purposes. Both buildings are moreover oriented by the course of the Wādi Dhenne. On the south side of the old city wall may still be seen the remains of a bridge which was built almost exactly in the direction of the Haram and, according to the local tradition, once reached to it. Even if this is an exaggeration it is nevertheless probable that a bridge was built over the river Dhenne, and in the rainy season the floods must certainly have inundated the fields; the continuation of this bridge to the Haram was probably only a dam of which no trace now remains.

However unusual the elliptical form for the plan of a temple may appear, this is certainly not an isolated example in Southern Arabia. F. Fresnel (J. A., ser. iv., vol. vi., p. 223) mentions the great ruins of Kharib (Sirwah) which cover an even greater area than those of the Haram Bilḥis and include a semi-ellipse and long rows of pillars still in position. According to Arnaud, this elliptical plan has also been found by Halley (J. A., ser. vi., vol. xix., p. 67) and by Glaser, Keit nach Mārib, i. 110; also by Skizze, i. 67 sgg.). According to the inscription Glaser, N° 901-903, its builder was the Sabaean mukarrab Yidī-ilu Dharīḥ, who also built the temple of ‘Awm and the round temple of al-Masajidād.

F. Hommel (Ethisologie, p. 664 sgg.) has endeavoured to show how this temple came to have its modern name of Haram Bilḥis. In analogy to the Assyrian and Babylonian temples extra murus which were always dedicated to the wife of the chief deity and in which in the month of the new year his wedding ceremony took place, Hommel sees in the Haram Bilḥis the wedding house of Almahkah, the sanctuary of his wife Harimat and seems to assume that the name is also connected with this. D. H. Müller (Jüngen und Schlesier, ii. 972 sgg.) has shown how the Arab archaeologists transformed the god Almahkah into Yalmaḥak and then gave this name to the legendary Blikis and also made a haram (women's apartments) out of the sanctuary (sanctuary) of the god. F. Fresnel's reasoning moves on similar lines (J. A., ser. iv., vol. vi., p. 226 sgg., 334 sgg.). He assumed that Blikis was not the correct name of the queen of Saba but rather Balkamah (so Ibn 'Abd Rabbih, in the Iḥāl al-ḥarīd and Ibn al-Djawzi in the Miṣrī al-Zamān) which was formed from Almahkah. The queen of Saba was in this way deityed by the Sabaens and became the Isis of the Arabs.

In the S. S. E. of Mārib and according to Arnaud 1/2 hour E. S. E. of the Haram Bilḥis — while the latter, according to Glaser, Keit nach Mārib, p. 41 lies almost due east barely 1/2 hour from the five pillars — there stand on the opposite bank of the Wādi Dhenne, 1/2 hour or 1/2 miles (according to Glaser, Skizze, N°. 51) from the town, the pillars called 'A‘mā‘īd. Five are still upright; these are 25–30 feet high, 32 inches broad and 24 deep, pinnate, rectangular monoliths which were erected perpendicularly to the direction of the Wādi Dhenne. Two which have been overthrown lie beside them on the ground. The pillars had no capitals and were just like the other pillars (at the Haram Bilḥis and other ruins outside the town). On the fragments of the two fallen pillars Glaser discovered incriptions on each (Glaser 479 and 480 = Arnaud 53) from which it appears that a sanctuary Barān (בַּרוֹן) dedicated to the god Almahkah or some such sanctuary stood here. This name occurs not only in this inscription but is mentioned in Ottom Mus., N°. 17 (D. M. Gr., xxxi. 486, N°. 1, 3) where J. H. Mordtmann reads [הָרָון] and the name of this place is also found in Halley, N°. 43, 48, 4 (בַּרוֹן) and 534, 4 (בַּרוֹן). To the west just beside the pillars lies a mound of ruins, which perhaps represents the remains of this sanctuary. Arnaud (J. A., ser. vii., iii. [1874], p. 15) describes these pillars as pilasters of the Haram Bilḥis and puts their height at 28 spans. In contradiction to Glaser, Arnaud says they have square capitals. His illustration under the plan of the Haram Bilḥis shows a pillar with a stepped capital like those from Aksām and Kohato in Abyssinia (Deutsche Akimin-Expedition, i. ed. by D. Krenke, Berlin 1913, p. 102, fig. 224 and p. 155, fig. 319). Which of the two explanations is right, it is difficult to say as Glaser is usually very accurate, in his observations. On the other hand, Arnaud cannot possibly have invented this rather unusual but nevertheless typical form for ancient South Arabia and made his drawing accordingly. The only way out of the difficulty is to suppose that in Glaser's time the capitals — of which Arnaud says he cannot say definitely that they belonged to the pillars — had been broken off. According to Arnaud, the pillars stand close together at intervals corresponding to their thickness. That the pieces of stone on the ground near the row of pillars once belonged to the pillars was noticed by Arnaud (p. 16) although he copied one of the inscriptions on them (Arnaud 53 = Glaser, N°. 480) (cf. E. Glaser, Keit im Mārib, p. 401, 141).
The numerous separate finds made by Glaser in the neighbourhood of Mārib, sacrificial altars, masons’ workshops etc. cannot be discussed here. On the other hand, there is one erection which demands a rather thorough discussion as it surpasses all these already mentioned in magnitude and preserved the fame of Mārib down to the late Islamic period, namely the dam and works connected with it, known in Muslim tradition as Sudd Mārib or Sudd al-‘Ardim.

The Wādī Ḍhinne in the course of time had cut a way through the Bālah hills here and divided the two parts Bālah-Ṣa’il and Baḥr-Ḥay’al-Awsat. The Sabaean had built a dam of earth across the gap some 770 paces long behind which the water was collected. The dam, which Glaser (Reise nach Mārib, p. 58 sqq., 173 sq.) describes minutely, rises some 20—25 feet above the present level of the Wādī and is simply a mound of earth the section of which is an isosceles triangle the angle at the top of which is quite sharp. The angle of inclination of the two surfaces to the base is about 45° and the breadth of the base about 50 feet. The proper base and the height of the dam cannot be accurately ascertained as the mud has accumulated to the depth of many feet. But it can be assumed that the dam rested on a foundation of rock as the narrow passage between the two Bālah hills has a rocky foundation which comes up very nearly to the surface. But for this firm foundation of rock it would have been impossible to build the dam at all. The side of the dam which met the water (the western) is covered with small sharp unhewn stones, held together so strongly by mortar that it is impossible to detach one of them. The dam, which is 1½ hours from Mārib, is flanked in the north and south by two great sluices, the southern one of which is known as Marbaq al-Dīm. Here on the site of the dam a great rock (A) 95 paces long and 15 yard in width, at the narrow places 8—10 has been detached from the Djebel Bālah al-Awsat; it runs to the N.E. with a slight tendency to E.N.E. The main body of the rock, the northern wall, of which runs eastwards forms with this isolated rock a pair of lines converging towards the S.W. end of the latter. The two rocky walls do not meet here but are separated by a gap spanned by a wall six paces long and 12 feet high (C).

In the opening of the angle but within the eastern ends of the two walls is another detached block of rock (D) the north side of which runs parallel to the first mentioned detached rock and the south side parallel to the main rock (C) but quite close to the latter. All three rocks, particularly the main body (C) and the loose block (E), have steep sides, not however over 12 feet high. On the north side the great isolated rock (A) is very irregular in shape. It almost looks as if we had an artificial cleavage here; but Glaser does not think this possible because an earthquake is quite sufficient to account for the remarkable cleavage of the rocks. In any case it looks as if human hands had worked a good deal on the natural lines of fracture. The great block of rock (A) rises 20—25 feet above the present level of the river bed and has two inscriptions engraved on its south side (Glaser, No. 516, 523).

On all three rocks there are or were great buildings of hewn stone. The large block of rock (A) seems to have supported the main building.
which comes to be exposed. The square blocks in the dam are also held together by little blocks of lead about 10 cm. high and about 10 cm. in the section. These little rods of lead were placed in holes specially made for them about 4-5 cm. deep and the next block above was placed over with the corresponding cavity filled with the top half of the little rod. The Sabaeans only used mortar in the stone work of the dam as a top covering to prevent damage being done by the rain-water.

The northern system of sluices consists of three walls of which the northern and largest a kind of railing of masonry. The whole wall is coped with excellent cement.

Almost exactly S. E. about 11 paces from the S. W. end of the part, 114 paces long already described (b) runs to the S. E. a wall 38 paces long and 21 broad at its N. W. end, the S. E. end of which is narrow and rounded. This wall is exactly the height of the long wall. At the present there is on it a modern ḥērān (stone-house) built by the amir 'Abd al-Kalīmān which probably existed in Arnaud's time and certainly in Halevy's.

Between the two walls, four paces from either,

b Staircase.

c Barrier between the tower and southwestern rocks.

d Tower exactly similar to a.

(a, b) with one end built against the rocks of Balāk al-Kibāl runs northeast, a little towards E. N. E. This wall, which is in all 184 paces long and 15 thick at the broadest point, although the average is about 11 and 15—20 feet high consists of two parts: The southwestern part 70 paces long (a) is somewhat lower (quite low beside the Balāk rocks, about 16 feet high at the point where it joins the N. E. part) and quite flat on the top. The N. E. part (b) 114 paces long and somewhat damaged towards its west end is not quite flat on the top and towards the south side the top shows stands a north wall only 18 paces long, 3 broad and of the same height as the others, the base of which forms a perfect rectangle. This wall somewhat damaged on the north side and now joined to the S. E. wall by two modern slight walls, which the Beduins use as a stable, stands back a little at its S. W. end as compared with the two neighbouring walls and like the S. E. wall shows a prism-shaped cutting about a yard from the west end, now filled in about 2 feet broad and deep which was intended to take the boards. On the northern side this groove is no longer to be seen. The three
walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20—25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

Similar distributing works existed throughout the whole plain of Marib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (manāṣīḥ) from which it was taken direct to the palm gardens and fields. The most of the manāṣīḥ are in the form of cubes or shallow prisms and are rarely more than 6 feet high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the manāṣīḥ with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The great barrier of the dam between the two Balak mountains seems however not to have sufficed for the strain upon it. A second dam called Mābnā al-Hashrādī was therefore built N.E.
of the dam and west of Mārib which seems to have been intended to regulate the water of the Wādī ‘I-Sā‘īla (cf. Glaser, *Reise nach Mārib*, p. 49 sq.), which carried the waters of the north Balaq hill, the Djabal Hailān and the Khashab hills into the plain of Mārib and joined the Wādī Dheene below the village of Mārib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sā‘īla and runs 240 paces E N. E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (d) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (b). 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (g, h) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Sabean texts at al-Hashrād which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N°. 509).

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrīb period. Sufah-šārīya Jāfārī, son of Dhu‘n-‘alaya, Mukarrīb of Sufā, according to the inscription Glaser, N°. 513–514, made here an outlet in the barrage at Rāḥāb, which was extended two generations later by the unknown author of the inscription Glaser, N°. 418–419 (cf. N. Rhodokanakis, *Altästatische Texte*, i. 7; Studien, ii. 97, 99 sq.; Glaser, *Skizze*, i. 70 sq.; *Reise nach Mārib*, p. 59 sq.; Hommel, *Ethnologie*, p. 666). Where the barrage at Rāḥāb was not certain. Perhaps we should assume with Rhodokanakis, *Studien*, ii. 100 sq. that it was built on the rib of rock (e) between A and B. About a generation later than the Rāḥāb barrage is the similar con-
walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20—25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

Similar distributing works existed throughout the whole plain of Marib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (manâštih) from which it was taken direct to the palm gardens and fields. The most of the manâštih are in the form of cubes or shallow prisms and are rarely more than 6 feet

d a large intervening wall standing by itself.

S.S.W. of Mabnâ al-Hashral, (see below) lies Haṣn al-Aṣfal, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices. It lies at about exactly the same level as the dam and several yards above the surrounding country. It consists of several walls, some of hewn stone and of ordinary stones and cement, which sent the water out in eight different directions. The aqueduct runs practically westwards up to the northern sluices of the dam. Although perfectly preserved the bed of the canal has been in many places filled up with blown sand.

high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the manâštih with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The great barrier of the dam between the two Balak mountains seems however not to have sufficed for the strain upon it. A second dam called Mabnâ al-Hashral was therefore built N.N.E.
of the dam and west of Mārib which seems to have been intended to regulate the water of the Wādi 'l-Sā'īla (cf. Glaser, Reise nach Mārib, p. 49 sq.), which carried the waters of the north Balāt hill, the Djabal Hālān and the Khasab hills into the plain of Mārib and joined the Wādi Dhanne below the village of Mārib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sā’īla and runs 240 paces E. N. E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (B) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (d). 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (g, h) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied to Sabean texts at al-Hashradj which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N°. 509).

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrīb period. Sumu'ah-‘alayh Yānāt, son of Dhimri-‘alaya, Mukarrīb of Sāb'a, according to the inscription Glaser, N°. 513-514, made here an outlet in the barrage at Raḥāb, which was extended two generations later by the unknown author of the inscription Glaser, N°. 418-419 (cf. N. Rhodokanakis, Altertumsische Texte, i. 7; Studien, ii. 97, 99 sq.; Glaser, Skizze, i. 70 sq.; Reise nach Mārib, p. 59 sq.; Hommel, Ethnologie, p. 666). Where the barrage at Raḥāb was is not certain. Perhaps we should assume with Rhodokanakis, Studien, ii. 100 sq. that it was built on the rib of rock (e) between A and B. About a generation later than the Raḥāb barrage is the similar con-

THE ENCYCLOPAEDIA OF ISLAM. III.
How we are to interpret these statements of al-Hamdānī, we learn from the description of the reservoir of Kohaito in Abyssinia (Deutsche Aksum-Expedition, ii. 150 and pl. 23). There a central wall is flanked by two side walls, one of which is at right angles to a third. That the stones were bound together by iron is evident from Glaser's description. When Yākūt (Maḏjam, iv. 383), who pays very little attention to the dam itself, tells us that it lies among three hills, the reference is probably to the massif of the Dībel Balaḵ split into the three hills of the Wādīs Adhana and Masila. He also mentions that the blocks are bound together with lead and says that the water accumulated behind the dam is led as required to the fields by strong sluices and cunningly con-trived arrangements. According to al-Maṣafdī (Murūd al-Dhahab, iii. 368 sq.), the barrage was one parasang in length and breadth and contained 30 round openings, each of 1 ell in diameter through which the water was led to the fields.

Like many buildings in Arabia, the dam of Mārub is dated by later tradition to remote antiquity and attributed to Luḏmān b. Ād (al-Bakrī, Maḏjam, ii. 502; Yaḵūt, Maḏjam, iv. 383; al-Maṣafdī, Murūd al-Dhahab, iii. 366; cf. A. v. Kremer, Sūgūf, p. 19 sq; Dīḏḏī Zaidān, p. 151) or Sābā b. Yāḏḏūb b. Yaḏḏūb (Yaḵūt, iv. 382; cf. E. Osiander, Z. D. M. G., x. 68; E. Pococke, Specimen hist. Arabum, p. 498). Al-Hamdānī (Ikhān, viii.) mentions, besides Luḏmān, also the Himyar and al-Azd b. al-Ghawth as builders of the dam. Al-Maṣfdī, Murūd al-Dhahab, p. 369 sq., says that the dam was built by a wise king of the advice of learned men.

The importance of the dam for the prosperity of the country is evident from the descriptions of the Arab historians and geographers, who in this connection usually quote the reference in the Kurān to the two gardens of the Sabaeans, while, according to al-Hamdānī, this irrigated area included not only the plain of Saba but stretched to the borders of the desert of Saiḥad; Glaser (Reise nach Mārib, p. 52) held the view that the water accumulated by the dam would suffice to irrigate only all the land on the borders of the desert as far as Ḥadramāt, and transform it into a vast garden. It is therefore perhaps not to be regarded as an exaggeration when al-Maṣfdī (Murūd al-Dhahab, p. 366 sq.) describes the land of Saba as the wealthiest of all the lands and fields, broad meadows and extensive irrigation system as the most fertile part of Yemen, the beauty of which had become proverbial throughout the world.

According to him, a man on horseback would take more than a month to cross the rich cultivated country and any one travelling on foot or on horse need not fear the sun from one end of the land to the other, as he could always travel in the shade, so rich was the vegetation (cf. A. v. Kremer, Sūgūf, p. 10, note 1). According to ibn Rostā (I, 314), who also waxes eloquent over the fertility of the land of Saba, a basket on the head of a man walking between the fruit trees would very soon have filled itself with fruit without one pulling or gathering them.

Under such circumstances it was natural that the catastrophe of the bursting of the dam, known as silāl al-arīm throughout the Muslim world, should have the most far-reaching effects. The migration of Ḥimyar tribes to the north is con-
nected with the catastrophe and the Banū Qhashān took this event as the starting point of an era of their own (Cūm al-sa'il; al-Maṣūdī, Kitāb al-
Tanbih, p. 202). There is hardly any historical event of pre-Islamic history, that has become em-
bellished with so much that is fanciful and related in so many variations that are lacking. Besides, the bursting of the dam. Al-Maṣūdī alone (Maṣūdī al-Dhakāb, iii. 370 sq.) dared attribute it to natural
causes; he thought that the water had worn away the foundations of the dam and in tune under-
mined them without its being noticed. When the Masonry of the dam and the barrage had be-
come so weakened that they could no longer resist the force of the water, the waters when
unusually big broke through and flooded the plain. But even al-Maṣūdī sees in the catastrophe a
punishment for the arrogance of the Sabaeans and gives a good deal of space in his history to the
legendary version of this event (ep. cit., p. 375 sq.), which in the main agrees with that of
Yākūt, Muṣṭafā i.v, 485 sq. The name of the Sabaeans, according to Springer, Post- und Reisentr.
p. 153 sq.) tells the history of the destruction of the dam in quite a different way from the older
historians. According to al-Maṣūdī the story is briefly as follows: the king 'Amr b. 'Amir who
lived in Maṣūb was warned of the imminent catastrophe by his brother ʿImrān, who was a
soothsayer and by his wife Ẓarifat al-Ḥairān, also skilled in prophecy. ʿImrān foresaw that his people
would be scattered in different directions and told this to his brother. Ẓarifat on the other hand
dreamed of a great cloud which covered her country and sent forth thunder and lightning. It
burst and burned up everything upon which it fell. All this pointed to a terrible inundation and
Ẓarifat was confirmed in her idea by other signs that the catastrophe was imminent. She warned
ʿAmr and urged him to see to the dam. If he saw a mouse there tearing out holes with its fore-
paws and throwing out big stones with his hind feet, the misfortune was inevitable and imminent.
ʿAmr went to the dam and actually saw a mouse which turned over with its feet a stone which
50 men could not have moved from the position. ʿAmr himself then dreamed of an inundation by the
dam and now decided to realise his possessions and leave the country with his family which he
was able to do surreptitiously without arousing
suspicions. Soon afterwards the collapse came,
which destroyed the whole country, even high
lying fields and places a considerable distance off.
While there are considerable differences in detail
in the different versions of the story—the col-
lapse took place for example, according to Yākūt
not under ʿAmr but under his brother ʿImrān—,
there is still greater disagreement about the date.
Ḥamzah al-Iṣḥāḥī, for example, puts it 400 years
before Islam, i.e. in the third century A.D. Ac-
dording to Ibn Khaldūn, the catastrophe took place
under Ḥassān b. Ṭhūbān Azād, who (with A. v. Kremmer, Soge, p. 120 sq. and note 4) is to
be identified with Abū Karīb Asād and according to Glaser (Skizze, ii. 542) reigned from 385-420.
Among European scholars Gosselin goes farthest
back in putting the date at 374 B.C. While Reiske
thinks it took place 30-40 B.C. and Schulten
puts it at 30-40 A.D., Perron 553 years before
Muḥammad and Silvestre de Sacy 210 or 170 A.D.
Yākūt, iv. 383 comes nearest the truth; he says
it took place in the period of Abyssinian rule.
As the terminus post quem is 542 A.D., according
to the inscription Glaser, No. 618, we may put
the last disastrous breach in the dam as occurring
between 542 and 570 A.D. An exact date unfor-

unfortunately cannot be obtained as the necessary data
are lacking. Besides, the stories of the bursting
of the dam in Maṣūdī, p. 393 sqq., and Ibn Rosta,
p. 114 sqq. which speak of the land being twice
devastated by the waters of the dam, may contain
a memory of the actual course of events, and the
final collapse of the dam may have taken place
after the catastrophe of 542 A.D. when the dam
was carried away for the first time.

The various attempts to explain the etymology of Mārib are not satisfactory. When, for example,
Yākūt, Muṣṭafā i.v. 582 sees in Mārib, a place-
name from Arābān = aḥalatun or from araba or
aruba, this clearly shows what difficulties the
explanation of this name gave the philologists.
His further statement however that Mārib was
the name of the Sabaeans is worth of note (cf. H. Fleischer, Abuṣūbula hist. antiislamica,
p. 114), especially as in Naṣūhīn al-Himyarīa, a
gloss is preserved according to which Māriṣ in
Himyarite means "lord" (cf. Blau in Z. D. M. G.,
xxv. 591, note 7). Dīrūjī Zaidān, Kitāb al-Arab
kalb al-Islām, p. 142 explains Mārib as a loan-
word from the Aramaic, a compound of mūl and
rāb. E. Osander, Z. D. M. G., xix. 162 takes
Mārib to be connected with the root of the Sabean
proper name ḫuṣṭ to which Riṣāb and Riʾāb
correspond in Arabic. J. H. Mordtmann, who deals
in Z. D. M. G., xxx. 322 sq. at length with the
etymology of Mariaba, points to the ḫuṣṭ and
خطر of the inscriptions which he connects with
the Arabic raʾbaʿ = "dominus crassus, magus gentis".
D. H. Muller does not accept this derivation
(Burgen und Schlösser, ii. 968 sq.). Al-Bakri,
Muṣṭafā, ii. 502 says, following al-Hamdānī, that
Mārib was the name of a tribe of the ʿAd after
whom the town is called and in fact al-Hamdānī in
Ikhlī, viii. (Muller, Burgen und Schlösser, ii.
960, 1040) says that Mārib and Mārib are the
names of two Arab tribes. In the older Sabean
inscriptions the town is called ḫuṣṭ to which
the Greeks added an ζ to give it a Greek form.
Eratothenes and Artemidoros (Siraito, xvi. 768,
778) call the town Muṣṭafā. The later inscriptions
mention it under the name ḫuṣṭ in which we
have, with Rhodokanakis, to see a later contracted
form, from which comes the Mārib of Muslim
tradition. The Sabean capital is however known
to the classical authors and Arab geographers by
another name, viz. ḫuṣṭ (Agatharchides, p. 100
in Geogr. Gr. min. i. 188 and in Steph. Byz. s.
ḫuṣṭ and ṭaṭṭuʿ; cf. Tkač in the Art. Sabāʿ,
No. 1, R. E., ii. A., col. 1516). and Sabāʾ Tkač
(col. 1391 sq.) sees in contrast to J. H. Mordt-
mann (Sahājische Denkmaler, p. 3, note 1), E.
Glaser (Skizze, ii. 15, Sudarabische Stelzfragen,
p. 10) and A. Springer (Die alte Geographie Ara-
bieni, p. 159, 162) in this double name of the Sabean
capital not an error but believes that Sabāʾ, while not the usual, was not a wrong name
for the capital.
Against this Glaser, Skizze, ii. 15, rightly em-
phasised that the capital of the Sabean kingdom
Maryyab or Mārib was never known as Sabāʾ,
Sabāʾ was—so far as the inscriptions are con-
ceived — never anything but the name of the land or kingdom and of the tribe which had the hegemony in this land, to which the name Saba' has remained attached to the present day. This is quite clear from the inscriptions. Thus, in the inscription from the town of Saba' in the reign of King Shemar Yuharif, 'king of Saba' and Iby Ralifan, the name of the tribe of Saba', the reference is always to the "lords of the town of Mārib and its valleys."

Ancient Mārib. The association of the origin of the town of Mārib with Saba' b. Yashubh probably led to the name of this legendary ruler being transferred to the town or Saba' as a tribe being identified with Mārib, as Agatharchides had already done. The varying forms in which the name is handed down, sometimes town of Saba' and sometimes Saba' alone, makes this development very probable. Besides al-Hamdānī (Sīfa, p. 7, 1) identifies the Saba' of Ptolemy with Mārib and always calls the town Mārib.

The earliest history of the town is unfortunately wrapped in obscurity. The mention of kings of Mārib in the comparatively late inscription, Glaser, No. 302, 7, shows, it is true, that the town was still independent in the time of the older Sabean Mukarrabs — for these "kings of Mārib" are their contemporaries — but gives no clue to the date of its foundation. It probably arose about the same time as the old royal city of Sīrāwī. The great inscription Glaser, No. 418—419, shows Mārib already in possession of the Sabean Mukarrabs and not long afterward it became their capital; this at least seems evident from the inscription Glaser, No. 481, 2 where we are told that the founder of the inscription "brought as far as Maryab the peace between Saba' and Katabān". This we can only interpret with Rhodokanakis (Studien, ii. 24) as meaning that the general (he is called Tūbah-kariba, son of Dhamaryedah of the clan of Daiyalmun) returned to the capital of Saba' after the conclusion of peace. Not long after the foundation of the great Sabean kingdom, of which the inscription Glaser, No. 1000 A B relates, it must have replaced Sīrāwī, the oldest capital of the Sabean kingdom; indeed there seems to be evidence that this had already taken place in the reign of the king who set up the two great Sīrāwī inscriptions Glaser, No. 1000 A B, Kariba-lu Watar, founder of the great Sabean kingdom. For when we are told in Glaser, No. 1000 B, 5 (N. Rhodokanakis, Alterthalische Texte, 189) that he had built the upper part of his palace Slīm (Slīm) which is probably identical with the famous citadel Salām at Mārib, it may be assumed that this Mukarrab resided here in the great palace which went back to the older generation of Sabean Mukarrabs, must have then transformed Mārib and the country round it into the flourishing oasis which made the town the centre of a great kingdom. The Mukarrabs Sunamu-alaya Yansāf and his father Yidī-sīlu Dharīf as well as Yithī-amara Baysān also did much for the development of the town and the country around it.

We do not know exactly when Mārib ceased to be the capital of the Sabean kingdom. Glaser (Zeitschrift für die Dömmbruch von Mārib, p. 29) supposes that the capital was removed to Zafār (near Yarm) at latest towards the end of the third century A.D., but probably as early as the first century A.D., since the Peripitus maris Erythraei, § 25 already knows Zafār as the capital.

Indeed the evidence of the Peripitus which is supplemented by Pliny, Nat. Hist., vi. 104, who knows Sophar as a royal residence, can hardly be interpreted otherwise than meaning that Zafār was already the residence of the Sabean kings about 60 A.D. With the transfer of the capital to Zafār, the cause of which Glaser finds in the attacks of the Axumites on the independence of the Sabean kingdom, while M. Hartmann (Die arabische Frage,
p. 469) supposes the reason to have been the victory of the Hamadânids over Hisyar (cf. C.I.H., 347 and M. Hartmann, op. cit., p. 146 sq.), Mārīb's glory had passed away: the decline probably did not set in at once but Glaser must be right in assuming that Mārib was now neglected and this is how the dam, so important for the cultivation of the land, fell into disrepair. Isolated references in Muslim sources show that the town had however not yet lost all its importance. Al-Bakri, Mu'ājam, i. 308 (cf. A. v. Kremer, Sage, p. 138) knows Mārib as one of the treasuries of the Ḥimyar, and according to the Ḥimyar čaṣṭa, verse 56 (A. v. Kremer, Sage, p. xii, note 1 and p. 69), Shamma Qūršah (c. 281 a.d.) kept his prisoners in Mārib. The two breaches in the dam which took place in 450 a.d. and under Byzantine rule in 542 a.d. must have done grave injury to the prosperity of the town. In this last period of its brilliant history Mārib was for a short time (certainly in 542 a.d.) the capital of the governor of the Ethiopian king Rambsu Altfrähmā, Adhra, and even had a Christian church (cf. Glaser, Zwei Inschriften über den Damburuch von Mārib, p. 47). The final catastrophe sealed the fate of the town. Its inhabitants left the sore tried town and migrated to the Ḥijāz.

Mārib was resettled in the Muslim period. The favourable situation of the place and perhaps the rich deposits of salt in the neighbourhood (5 days' journey east of Mārib at Sāfīr, mentioned in the time of the Prophet, who appointed Abū Mūsā al-Ąṣhāri governor of Mārib; E. Glaser, Reise nach Mārib, p. 26; al-Bakri, Mu'ājam, ii. 202; al-Ḥamadānī, Śīfā, p. 87, 102, 155, 201; A. Sprenger, Post- und Reisereisen, p. 139) also kept the place from being quite forgotten. Ibn Khudrādbihī (B.G.A., vi. 138) and al-Muṣaddasī (B.G.A., iii. 89) mention the village of Mārib: al-Ḥamadānī, Śīfā, p. 199 says the sesame of Mārib is a specialty of the Yemen. Al-Iṣrī, Géographie, p. 149 calls Mārib a bāyda, according to Ibn al-Mudjahwīr (in A. Sprenger, Post- und Reisereisen, p. 140), Mārib (c. 630 a.h.) had a market and a mosque and was of some importance as a resting-place for the night and fruit could be obtained there at any time of the year. Since Yākūt, Mu'ājam, iv. 436, also says, the district of Mārib is rich in palms, it seems to have in part at least regained its old fertility.

doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look like intentions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrahim", after whom the maghrafa was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muhammad after the Hijra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paterinity of Ibrahim, and that this actually happened is evident from some traditions the object of which is to defend Maryia from this suspicion.

On the other hand, it is not so easy to justify the part which Kur'anic exegesis makes Maryia play in the exposition of Sura lxi. In this Sura, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time Allah blames him, because in order to please his wives, he has bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allah to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. xxxiii. 28 sq.). According to the usual explanation, the two wives are Hafsa and A'isha and the revelation is said to have been provoked by the fact that Hafsa, on returning unexpectedly to her house, found Maryia and the Prophet in an intimate tête-à-tête and that on a day which by rotation belonged to her (or A'isha). In his embarrassment he pledged himself by oath to have no more intercourse with the Copt girl. But after Hafsa's breach of faith, Allah tells him to release himself from his oath. This explanation fits very well in some respects and that the promise of continence is connected with marital complications is illuminating. That there are hadiths, which explain his quarrel with his wives quite differently, does not mean very much, for they are not such intently or drive out of currency the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muhammad could call the situation in which Hafsa caught him and Maryia a secret that he trusted to her. Sachau, l./ii. 10 sq.; viii. 131-158, 153-156; the commentaries on Sura lxvi; Nöldeke-Schwally, Geschichte der Qu'ranen, i. 217; Caetani, Annali dell' Isla, ii. 211 sqq., 237, 311 sqq.; Lammens, Faïlama, p. 2 sq. — On the eclipse of the sun: Rhodokanakis, W. Z. K. M., xiv. 78 sqq.; Mahler, ibid., p. 100 sqq. (Fr. Bohl). Al-MARKAB (the Magrat, Merghatun of the Crusaders), a fortress near Baniyas on the coast of Syria. According to the chronicle of Abu Ghālib Humān b. al-Fadl al-Muhadhdhab al-Ma'ātrī (quoted in Yāʾṣūb, Muṣṭafā, ed. Wüstenfeld, iv. 500) and the Ta'dīkh al-Khitāba l-Hāfiẓ of Usāma b. Muḥammad (in Abu l-Fīḍā', ed. Reinaud and de Laine, p. 255); it was built by the Muslims in 454 (1062). Al-Dimashki (ed. Mehran, p. 208) wrongly attributes its foundation to Hārun al-
Raḥiḍ (van Berchem, *Voyage*, p. 304, note 7) when the reference to Raḥiḍ (rather Raḥiḍ) al-Din in *Le Strange*, *Palestine* is shown to be wrong; his statement seems to be correct, however, that the citadel was built out of material from ancient ruins. The Byzantines occupied al-Maṣṭarab and other fortresses in the vicinity under the general Kantsukzenos in 1104 (Anna Comnena, *Διαλόγος*, ed. Reifferscheid, ii. 138: τὸ τ' Ἀργυ- ρικέστρον [= Σάλια] τὸ καλούμενον Μαρκατό [al-Maṣṭarab], τὰ Τάβαλα [Διάβαλα] καὶ ἄλλα τεύχη). When in 1111 (1117–1118) the Crusaders approached the fortress, its lord Ibn Muhirz surrendered it on condition that he and his family were allowed to remain in it; but after a few days the Franks expelled him and allotted al-Manṣūr to him in exchange for al-Maṣṭarab; Franks and Armenians were settled in the latter. The first recorded lord of the fortress was Raimund Mansur, the constable of the prince of Antioch. After the earthquake of 1170, from which the fortress must have suffered damage, Bertrand of al-Maṣṭarab, perhaps out of fear of Saladin’s threats, handed it over on Feb. 1, 1186 to the Knights of St. John. In July 1186 Saladin passed below the watch tower (now Burdā al-Saḥbi), which from ancient times had commanded the road along the coast (cf. Dussaud, *Topogr.*, p. 127, note 5) below the fortress and was connected with it by a wall which protected a subterranean passage, but did not dare to attack Maṣṭarab any more than Taṣbīs (q.v.). Prince Isaac of Cyprus, a descendant of the Comnenos (not the Emperor Isaac Comnenos as van Berchem, op. cit., p. 296 sq., note 5 says), was taken prisoner by Giacomo de’Conti, seigneur of Saint-Louis, on May 31, 1191, and imprisoned in Maṣṭarab till his death (Neophytos, in *Recueil hist. crois., hist. grecs*, iii. 562 with note, ii. 489: en καστελλίῳ καλουμένῳ Μαρκατότη). Sultan al-Malik al-Zahir Ghazi of Ḥalab whose lands adjoined those of the Knights of St. John sent in 601 (1204—1205) troops against the fortress, who are said to have just succeeded in destroying the towers of the walls when their leader fell and they again retired without accomplishing their object. In 628 (1231) and 638 (1240—1241) the Knights were again at war with Yūsuf, Sultan of Ḥalab. From this period (1212) dates the very full description of the strong fortress by Willbrand of Oldenburg. Built on a high hill and surrounded by a double wall and many towers, it was regarded in the period when the power of the Crusaders was beginning to decline, as *maximum totius terrae illas solacium*; the bishop of Valenia (Baniyas) had moved into the fortress by 1212 out of fear of the Muslims. King Andreas of Hungary in 1217—1218 gave funds for the maintenance of the fortress which had given him an honourable reception (Rohricht, *Regesta Hierosolym.*, p. 243, No. 908). The straits to which the humiliating treaties with Baibars had reduced the Knightsly Orders is lamented by the Grand Master Hugo Revel in 1268 in a letter in which he says that the possession of its last two fortresses, Λωρίδαν and Mαργατόμ (= Ḥiss al-Akrād and al-Maṣṭarab) was one of the main grants of the Order on payment of oppressive taxes (Rohricht, *Regesta Hieros., Addi- mentum*, Oeniponti 1924, p. 91, No. 1535a). After the loss of Ḥiss al-Akrād, the Templars and the Knights of St. John in 669 (1271) by a treaty which they concluded in Ḥarka with Saif al-Dīn Balbān al-Dawāddār ("the secretary") al-Rūmī, the Sultan’s plenipotentiary, had to cede half of the coastland (gūlī) of Amurās, al-Maṣṭarab and Bāniyas and bind themselves not to build any new defences (Mufaḍdall b. Abī ‘Ibād al-Ḥaṣā, *Gesch. d. Mamlukkenskult.,* in *Patrol. Orient.*, xii. 536). After a raid by the Franks (Dec. 1279), the Emir Saif al-Dīn Balbān al-Tābāṣlāḫī, the governor of Ḥiss al-Akrād for Kālātun, in the beginning of 1281 sent troops against al-Maṣṭarab, but they were driven back with heavy losses (Mufaḍdall, *op. cit.*, xiv. 484, and the sources quoted in van Berchem, *Voyage*, p. 301, note 5). In the treaty between Kālātun and the Templars of 681 (1282) al-Maṣṭarab is mentioned among the districts half of which were to be ceded (Mufaḍdall, *op. cit.*, xiv. 443; van Berchem, *op. cit.*, p. 302, note 2). The pilgrim Burchardus de Monte Sion in 1283 mentions the "Custum Mariyaé fratriam hospitalis sancti Johannis"; it was still at this date the see of the bishop of Valenia (*Peregrina- natorum*, ed. Laurent, p. 36, 170). On 10th Safar 684 (April 17, 1285) Kālātun appeared before al-Maṣṭarab and began the attack as soon as the siege artillery arrived. On the 19th Rabiʿ I (May 25) the Emir Fakhr al-Dīn Muḥrūq received the surrender of the fortress. On account of its strategic value for defence against possible attacks from the sea, it was not destroyed but included in the "royal province of the fortunate conquests"; the capital of till 688, when Ṭarabulus was taken, was the Castle of the Kurds, still governed by Saif al-Dīn Balbān al-Tābāṣlāḵī al-Maṣṣūrī. Kālātun in 684 ordered him to repair the defences of the citadel as an inscription found *in situ* (van Berchem, *Inscriptiones de Syria*, p. 71 sq.). Among those present at the capture of the fortress were the 12 years old Abu ‘Īsā, who was then on his first campaign with his father, and the historian Ibn ‘ʿAid al-Ḵaṣām, the continuator of Ibn Wāṣīl’s chronicle. The best account of the taking of al-Maṣṭarab is in Kālāṭun’s biography entitled *Taṣḥīf al-Ayām wa l-Cīṯr bi-Sīrat al-Sulṭan al-Malik al-Mansūr* (Paris, Ms. ar., No. 1704, fol. 149 sqq., and transl. in van Berchem, *Voyage*, p. 310—320).

In the viiith (seventh) century al-Maṣṭarab belonged to the province of Taṣbīs (’Umar, *Tarif*, transl. by R. Hartmann, *Z. D. M. G.*, lx. 1916, 36; Kādī al-Zahrā, *Zubdat Knig al-Mumālik*, ed. Ravaisse, p. 48, Kāṣāshāndi, *Ṣabḥ al-ʾAbī*, ed. Cairo, iv. 145 sq); at this time it was used as a state prison (van Berchem, p. 305, note 2). Its harbour is mentioned in documents of 1193 and 1299 (van Berchem, p. 309, note 3); it was presumably at the mouth of the Wādi ʾAin al-Khraib (in Walpole: *al-Mīm*). As al-Maṣṭarab lies on the outer spurs of the Ansariye range it has often wrongly been included among the fortresses of the Ḥimṣīl (Kitāb al-Dalʿa wa) (so ’Umar, *op. cit.*, in the Berlin and Göttingen Ms. but not in the others; Hartmann, *Z. D. M. G.*, lx. 36, note 7). So far as we can judge from the brief visitor’s note, it was not till about the middle of the 19th century that it began to fall into ruins. About 1885 at the request of the kāṣmaš of the ʾadār of al-Maṣṭarab the seat of the government was transferred from the ruined ʾAyn al-Maṣṭarab to Bāniyas (M. Hartmann, *Z. D. P. V.*, xxii., p. 153, No. 27).

MARRAKESH

(M. MARAKSH, popular pronunciation Marākisch), a town in Morocco, and one of the residences of the Sultan.

The town, Marrakesh, adopted by the administration of the protectorate, is of recent origin in French. Town about 1890 the town was always known as Marrakech (Morocco) in French. The kingdom of Morocco, in a strict sense, is a state which was formed in 1912 by the union of the two parts, Marrakesh and Fès, finally gave its name to the whole empire.

At one time it only consisted of the country south of the wādi Umr Khabīr as far as the range of the Great Atlas.

Marrakesh is situated in 31° 17' 35" N. Lat. and 7° 50' 42" E. Long. (Greenwich). Its mean height above sea-level is about 1,510 feet. The town is 150 miles south of Casablanca. It is through the latter that almost all the traffic with the coast passes at the present day. It used to go via Sah which is the nearest port (100 miles). Sidi Muhammad b. Abd Allah in 1765 tried to supplant it by Mughdar (115 miles), where he built a town and harbour through which at the end of the 18th century most of the trade between Marrakesh and Europe passed.

Although Marrakesh is only 235 miles from Fès as the crow flies, it is over 330 by Casablanca. Rabat-Meknes which is the only road that has been used for over a century, the direct road by the Tâdia having been rendered impracticable by the traditional in-security of the country.

The temperature which is very mild in winter is very hot in summer. The average maxima of 30° 6 in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm. in 1927, against 706.5 in Rabat and 1,007.3 in Tangier). But water fed by the snows of the Atlas is found at no great depth. It is collected by a system of long subterranean galleries (khaṭāfā, plur. khaṭāfīr) which bring it to the surface by taking advantage of the very slight slope of the surface. This method of obtaining water, which is described in the 12th century by Idrisi, has enabled the vast gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until recently believed, Marrakesh is by far the most thickly populated town of the empire. The census of March 7, 1926 gives 140,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews.

The probable growth of the population is not sufficient to explain the difference between the present day figures and the old estimates, almost all far below the truth and varying greatly among themselves: from 20,000 (given by Diego de Torres in 1585 and Host in 1768), 25,000 (Saint Olen, 1693), 30,000 (Ali Bey el-Abbâsî, 1804), 40 to 50,000 (Gatell, 1854 and Eug. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumont, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles N. of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Hâwz which slopes very gently towards the wâdi Tânsîf, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the N.W. by two rocky hills called Gillîz (1,700 feet) and Kudayat al-Abîd. In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh. The modern European town called the Gueliz lies between this hill and the walls of the old town.

The wâdi Issâl, a left bank tributary of the Tânsîf, a stream often dried up but transformed into a raging torrent after storms, runs along the walls of the town on the east. To the north of Marrakesh as far as the Tânsîf and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 13,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly.

The town is very large. The walls which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this vast area. The part built upon forms a long strip which starting from the zawiya of Sidi bel Abdâs in the north runs towards the kasha which stands at the southern end of the town. On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped like so many villages around their sîk and their mosque.

The town consists mainly of little low houses of reddish clay, often in ruins, among which are scattered huge and magnificent dwellings without particularly imposing exteriors built either by the vicars of the old makhzen (e.g. the Bâhiya, now
the Résidence Générale, the old palace of the Bā Ḥmast, vizier of Mawlid al-Ḥasan or by the great ḥāris, chiefs of the tribes of the country round. The narrow and overhung streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads. The colour, the picturesque architecture, the palm-trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan ḥṣar of vast dimensions.

The centre of the life of the city is the Djāmaʿ al-Fnā, a vast, irregular, ill defined open space, surrounded until quite recently by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubiyya Mosque. Its name comes, according to the author of the Tarīkh al-Sudān, from the ruins of a mosque which Aḥmad al-Mansūr had undertaken to build there "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (al-ḥanā); but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (djāmaʿ al-fnā)." This origin having been forgotten; an attempt was later made to explain the name of the square from the fact that the heads of rebel leaders was to be exposed there (mosque or place of assembly of ruin, of death). It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, and close to the suks, connected with the principal gates by direct and comparatively quiet roads, Djāmaʿ al-Fnā is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cloggers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (ḥarira); in the evening, it is filled with acrobats and jugglers (Awdā Sidī Aḥmad u Mās of Tazerwālt), sorcerers, storytellers, fire-eaters, snake-charmers and zhikkh dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the diversions of the town for a few hours before going back. These are the always numerous foreigners in Marrakesh. Besides the regular inhabitants there is a floating population the number of which has been put at 20,000 to 25,000. For Marrakesh is the great market for supplying not only the Ḥwaw but also the mountain country, the Sīls and especially the extreme south, Dades, Darra (Drâa) and the Anti-Atlas. A portion of this traffic will probably be diverted via Agadir when this port is opened to trade. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Sudanic slaves for whom Marrakesh was an important market. The conquest of the Sudan by France has put an end to this traffic.

To the north of the Djāmaʿ al-Fnā begin the suks which are very large. As in Fas and in the other large towns, the traders and artisans are grouped by trades under the authority of the muḥāsb, a kind of provost of the merchants. The most important suks are those of the cloth merchants (ṣikārīya), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths. An important Thursday suk (al-ḵamis) is held outside and inside the walls around the old gate of Fas which has taken the name of the market (Bāb al-Khāmis). This suk was already in existence in the xvith century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupies 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. The war interrupted communications and did great damage to this industry. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast fondāk in which are warehoused the products of the country, almonds, caraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters: Zāwiya Abū Bāṣṣa, Sidī Ben Slimān, Aswal, Riyād al-ʿArūs, Sidī Abī ʿAmīr, Bāb Dukkāla (divided into two quarters), Sidī Abū al-ʿAzm, Rāḥbat Azḥbat, Dašābī, Kannāriya, Riyād al-Zītūn al-jadid, Djann al-Shogra, Ḫṣir, Mawṣān, Riyād al-Zītūn al-kadim, Arṣa Mawlitu Mās Khāra, Arṣa Mawli Mīsa Sīghira, Bāb Hallāna, Sidī Mimūn, Ben Śālah, Sidī Arūb, Bāb Zakāt, Kābat ben Moṣʿar, Bāb al-Dāblāgh, Ḥarāt al-Sūra, Makāfī, Arrattin, the kaṣaba containing the royal palaces (again subdivided into several sections: al-Badi', Kaṣbah al-Muṣīla), Berisma, Bāb Aḥmār, Maskinat Sidī ʿAmāra and the mellāḥ or Jewish quarter. We may further mention outside the walls near the Bāb Dukkāla, a quarter called al-Hāra where the lepers live. Until recent years the gates of the town were closed during the night. The superintendents of the quarters (muḥāsmin) have watchmen (ṣurāsā) under their orders. The old custom still survives of firing a salvo at midnight on the Djāmaʿ al-Fnā as a curfew.

Marrakesh being an imperial town, the sulṭān who only stays there at long intervals is represented in his absence by a ḥālīl or a prince of the imperial family (usually the son of the sovereign). The role of this khālfah is purely representative. His main duty is to preside at the ceremonies during the ritual celebrations. The governor of the town is a pasha, assisted by a delegate (māʾīl) and several khāhs. One of the latter supervises the prisons and the administration of justice. Another has the title of pasha of the kaṣba. He governs the southern part of the town which includes the imperial palace and the Jewish quarter. Formerly the pasha of the kaṣba was independent of the pasha of the town and served to counterbalance the power of the latter. He commanded the gish, an armed contingent furnished by the warlike tribes (Cīdāya, Aṯ Imnār etc.) settled in the vicinity of the town by the sulṭāns on the domain lands. At the present day the gish is under the control of the pasha of the town and the pasha of the kaṣba only retains of his former powers certain rights of precedence and honorary privileges.

Muslim law is administered in Marrakesh by three kadis: one is established at the mosque of Ibn Yūsuf; the other at the mosque of al-Mwāsin and the third at the mosque of the kaṣba. The latter's competence does not extend beyond the limits of
MARRAKESH

his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local kāḍī.

Marrakesh is not numbered like Rabat and Tetuan among the ẓāhirāt iwaṭ towns, i.e., it has no, like them, an old established citizen population, not of rural origin, with a bourgeoisie whose tone is given by the descendants of the Moors driven from Spain.

In the eighteenth century however, Marrakesh did receive a colony of Moroccans large enough to give one quarter the name of Ẓāhirāt aḥrāf from which they came. The foundation of the population consists of people of the tribes for the most part berber or Arabs strongly mixed with barber blood. Ẓāhir is much spoken in Marrakesh although the language of the tribes around the town (Rhamna, Ldaya) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population and the old Masmūdīan race which mixed with Almoravids into the Berbers.

The primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on: the newcomers come less from the valleys of the Atlas than from the Sūs, the Drāa, and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town, but the Études sur les corporations marocaines, conducted by L. Masuzumon in 1923–1924 (Paris, 1925), yields some very curious information about the survival in Marrakesh of vigorous groups of provincials, specializing in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of azméhitin to the fact that originally they came from Tāmgūt in Sūs; the Mesfiwa are charcoal-burners and greengrocers, the Ghābīya, salters; the people of the Toghba, gatherers of dates and salt. Also the diggers of wells, who specialize in water-channels (īdāṭī), the Tōffīla, porters and paviors; those of Warrāzāt, water-carriers, and of ‘Attā (Anti-Atlas), restaurateurs; of the Ḳara, water-carriers and ẓāhirātī, etc.

This division is not the result of specialization in their original home nor of privilege granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations have lost much of their power under the pressure of the Māghūzen. Some of them however still retain a certain social importance: in the first place that of the shoemakers which is the largest (1,500 members); then come the tanners (430), the cloth (237) and silk (100) merchants; the Ḳāẓīs wholesalers, then some groups of skilled artisans (highly esteemed but of less influence), embers of the saddles, makers of mosaics, carpenters, sculptors, plasterers, etc.

Religious and intellectual life. Mosques are numerous in Marrakesh. Some of them will be the subjects of brief archaeological studies. Those which play the most important part in the religious life of the city are the mosque of al-Mawsīn, the mosque of ‘Ali b. Yūsuf, both close to the sūqs, that of Sīdī bel ‘Abbās and that of the kāba. Then come the Kutnūdīya, the mosque of the Bāb Duk-kāla, of the Bāb Aṭlān, of Berrima, and the Djāma’ Ibn Sālah. There are also many little mosques in the various faubourgs. But although it can claim illustrious men of learning, Marrakesh is not like Fās, a centre of learning and of teaching. The Almohads built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn Tufail, Abū Marwān Ibn Zuhīr (Avempace) and Abu ʾl-Walad Ibn Rūghī (Averroes) who died at Marrakesh in 595 (1198). These great traditions did not survive the dynasty.

In the beginning of the sixteenth century, in the time of Leo Africanus, the library of the Almohad palace was used as a pottery house and the madrasa built by the Marinids was in ruins. At the present day in the town of the Kutubiyah there is not a single bookseller. A certain number of tālīf still live in the madrasas (Ibn Yūsuf, Ibn Sālah, Sīdī bel ‘Abbās, Berrima, Ḳaṣba) but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Karawīn and Fās, much decayed as it is. They attempt to imitate the customs of Fās (they celebrate notably the festival of the sūltān of the tālīf) [cf. Fās] every spring the students are far from holding in Marrakesh the position their comrades enjoy in Fās.

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berbers. Their town has always been famous for the great number of wāḥāli who are buried in its cemeteries and who justify the saying: ‘Marrakesh, tomb of the saints’. It was built at the time of Mawlān Ṭāhir, Abū-ʾl Ḳaṣr al-Saṣār, Ali al-Ḥasan al-Yāʿīnī, by order of the prince organized, in imitation of the old established cult of the Sabʿatū Rujjāl (the seven saints of the Rāgrās, around the Djabal al-Ḥadīl, among the Ṣhāṭima) a pilgrimage to the Sabʿatū Rujjāl of Marrakesh including visits to seven sanctuaries and various demonstrations of piety. The following are the names of the seven saints in the order in which they ought to be visited: 1) Sīdī Yūsuf b. ‘Ali al-Sanhājī, a leper, d. 595 (1196–1197), buried outside the Bāb Ṭāḥmūt on the spot where he lived; 2) the kāba Ḳirīt, 1147–1144 (1053–1149), Ḳādī of Cuta, then of Granada, a learned theologian, author of the Shīfā, a celebrated collection of traditions, buried beside the Bāb Aṭlān; 3) Sīdī bel ‘Abbās al-Sahhīfī, patron saint of Marrakesh and the most venerated of the saints of the region 524—601 (1130–1204). He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the Djabal Gilhīt where a hisba dedicated to him can still be seen. But the principal pilgrimage is to his tomb at the northern end of the town over which Abū Fāris b. Ahmad al-Manṣūr built a zāwiyah and an important mosque at the beginning of the xvii century; 4) Sīdī Muḥammad b. Simān al-Djaṭʿūlī, d. in 870 (1465) at Arjaghul among the Ṣhīʿa, a celebrated Sufī, founder of the Ḳaṭṭālī brotherhood. His body was brought to Marrakesh in 930 (1523) by Ahmad al-Najdī, the Saʿdī, d. 919 (1516). The Saʿdīs, a pupil of al-Djaṭʿūlī, d. in 914 (1508); 5) Sīdī ‘Abd al-ʿAzīz al-Tabbāh, a pupil of al-Djaṭʿūlī, d. in 914 (1508); 6) Sīdī ‘Abd Allāh al-Ghawzanī, popularly called Mawla Ḳurīf, d. in 935 (1528); 7) Sīdī Abd al-Raḥmān al-Suhailī, called the Imām al-Suhailī, a native of the district of Malaga, d. 581 (1185) and buried outside the Bāb al-Rabb.
MARRAKESH

It is quite an arbitrary choice that these seven individuals have been chosen as the Sab‘atu Rûdâl. Others could equally well have been chosen, as the town of Marrakesh and the country which the stretch before it, contain a very large number of other venerated tombs. The principal are mentioned in the article by H. de Castries, Les Sept Patrons de Marrakesh (Heptâria, 1924). Legend of course plays a great part in the cults of the various saints. We may mention for example the sayings and songs which perpetuate the memory of Lullûr ‘U’dâ, mother of the Sulûn Ahmad al-Mansûr, a real personage much transformed by the popular imagination. The various trade corporations have chosen patron saints. Thus Sidi Yiś’âbû is the patron of the tanners, Sidi Bel ‘Abbâs of the soap-makers and lacemakers, Sidi Mas˘‘ûd “slave” of Sidi Muhammad b. Sulmân is the patron of the masons, Sidi ‘Abd al-Azîz al-Tabbûs of the dyers, etc. The majority of the artisans are also affiliated to the religious brotherhoods. In Massignon’s investigation will be found details of the attraction which some of the latter have for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmât Aïlân where they lived. Al-Idrîsî relates that under ‘Ali b. Yusuf they had not even the right to spend the night in Marrakesh and that those, who were caught within the walls after sunset, were in great danger of being plundered. Their settled there at a later date. At the beginning of the xvth century there was, according to Marmol, in Marrakesh a ghetto of over 3,000 houses. It lay near the sîk on the site now occupied by the mosque of al-Mawâsin. When this mosque was built by Sulûn ‘Abd Allâh al-Ghâlibî, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery. It was ‘Abd Allâh al-Ghâlibî who, about 1560, settled the Jews on the site they still occupy, along the wall of the kasha to the east, where the stables of the palace had been. In the beginning of the xviith century, there was here, according to the French traveller Mocquet, “like a small rural character without a wind and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute.” A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called mellâh after the example of the Jewish quarter of Fès (the name mellâh is attested for Marrakesh as early as the end of the xvth century), has 12,000 inhabitants at the present day. As regards policing, it is under the authority of the pasha of the kasha but otherwise is administered by an elected Jewish committee. Questions of personal law are judged by a rabbinical tribunal of three members nominated and paid by the Makhzen. The Jews of Marrakesh are beginning to leave the bounds of the mellâh. For the most part they wear the ritual costume: gaberine, skullcap and black slippers, but the younger generation shows a tendency to emancipate itself from this dress. They have little influence on the corporations of Marrakesh and are not allowed to settle in the sîkis. They are limited to certain trades (jewellers, tin-smiths and embroiderers of slippers) and share with the people of Fès the wholesale trade. They trade particularly with the Shûh of the mountains.

History. The Roman occupation never extended so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmât or at Marrakesh the site of Beqûnûn Entûrûn (Béquen ‘Hissârim), the town of Tingitana, the site of which is now unknown. The earliest historians agree that the place where Marrakesh was built by the Almohads was a bare marshy plain where only a few bushes grew. The name Marrakesh gives no clue to the origin of the town. The etymologies given by the Arab authors are quite fanciful: according to al-Marrakushi, it was the name of a negro slave who escaped and set up as a brigand there. Another writer explains it by a punning interpretation: “the meaning of the name in the language of the Maâmûdîs is “go away quickly!”! The place was actually a place of ambush, i.e. for brigands.” It was, it appears, in 449 (1057–1058) that the Almohads advanced from Sûs north of the Atlas and took Aghmât Warika. It was there that they settled at first. But after the campaign of 452 (1060) in the course of which they conquered the country of Fazza, Meknes and of the Laâwata near Fès, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and would threaten the Maâmûdî of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fès. Yusuf b. Tâshûf therefore purchased from its owner an estate on the frontier between two Maâmûdî tribes, the Hâlâmûn and the Hâzmûn, and pitched his camp there. So far he was from thinking of founding a great capital, a thing for which this So the nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little kasha in which to keep his treasures and his weapons; but he did not build a surrounding wall. The native Maâmûdûs built themselves dwellings surrounded by palisades of branches beside the Almohadj camp. The town grew rapidly to a considerable size, if it is true, that in the reign of ‘Ali b. Yusuf it had at least 100,000 hearths, but it did not lose its primitive aspect, without the threat of the Almohad movement revived by him forced ‘Ali b. Yusuf to defend his town and surround it by a rampart which was built in eight months, probably in 520 (1126). Some historians give the date 526 (1132) but it is certain that the walls were already built in 524 (1130) when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tûmart had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of Shaikh al-Bashîr, who, after defeating the Almoravids in the vicinity of Aghmât, pursued them to the gates of Marrakesh. The Almohads could not enter the town but established themselves before its walls. After 40 days’ siege, ‘Ali b. Yusuf received reinforcements and made a successful sortie which forced the attackers to retreat. This was the battle of al-Bebâira (524 = May 1130) from the name of a large garden, Bebâira al-Râdzîkî, near which it was fought. It lay to the east of the town before the Bab Dabbâsgh and the Bab Aïlân. Al-Bashîr was slain and Marrakesh repeated for 17 years. Ibn Tûmart died a few months
later. It is hardly likely that ʿAbd al-Muʾmin should have made soon after his accession, as the Kūfīs say, a new attempt to take Marrakesh. The memoirs of al-Bahāḵ which give such full details of all the events of this period make no mention of it. They show on the contrary the Almohad armies based at first on conquering the country before occupying the capital, taking Tadla, Sale, Taza, Tfrān, Tinjen and Fās and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the doomed dynasty. It was in the summer of 1146 that ʿAbd al-Muʾmin laid siege to Marrakesh. He made his headquarters at Gillīz and, seeing that the siege would be a long one, he once had houses built in which to install himself and his army. The siege lasted eleven months. An unsuccessful sortie by the Almoravids seems to have hastened the fall of the town. Disputed by lack of success and by famine, a number of the chiefs of the besieged went over to the enemy. ʿAbd al-Muʾmin had scaling-ladders made and distributed them among the tribes. The assault was made and, according to Ibn al-Athir, the defection of the Christian soldiers facilitated its success. The Almoravid Sultan, ʿIṣḥāq, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almoravids. This event took place in the month of Shawwal (March 6—April 3, 1147). according to the majority of the historians.

The Almohad dynasty which came from the south naturally took Marrakesh as its capital. It was here that ʿAbd al-Muʾmin and his successors usually resided when they were not in the country. The town prospered exceedingly under their rule. They gave it many important public buildings: the ḵāba, mosques, schools, a hospital, aqueducts and magnificent gardens. During this period of prosperity, there were very few events of particular interest in the history of Marrakesh. In 547 (1152—1153) according to Ibn Khaldūn, in 549 (1154—1155) al-Bahāḵ and the Almoravid Sultan, ʿIṣḥāq, brother of the Mawlid Ibn Tumart, entered the town and tried to raise the inhabitants against ʿAbd al-Muʾmin who was away at Sale. The rising was speedily put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e. after the battle of Las Navas de Tolosa (1212) and the death of al-ʿAsir, son of al-Manṣūr, Marrakesh became the scene of the struggle between the royal family decended from ʿAbd al-Muʾmin and the Almohad shāhīs descended from the companions of Ibn Tumart who, quoting traditions of the latter, claimed the right to grant investiture to the sultān and to keep them in tutelage Abū Muhammad ʿAbd al-Wahhāb, brother of al-Manṣūr, was strangled in Sept. 1211 (1224). His successor ʿAlī was drowned in a bath in the palace (Oct. 624 = 1227) and the Almohad shāhīs appointed his successor the young Yahyā b. al-Naṣr, while Abu Tūb Idrīs al-Maʾmūn, brother of ʿAbd al-ʿAwwāl was proclaimed in Spain. The whole country was soon in the throes of revolution. Yahyā, fearing the defection of the nobles Almohads, fled to Tinmal (April—May 626 = 1228). Disorder reigned in Marrakesh, where a governor named al-Maʾmūn was finally appointed. But four months later, Yahyā returned to Marrakesh with fresh troops, put al-Maʾmūn's governor to death and after staying seven days in the town was forced to go to Gillīz to fight a battle (Feb. 1230). For al-Maʾmūn had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Maʾmūn defeated Yahyā and his followers, entered Marrakesh and handled the anti-Almohad regime there, marked not only by a terrible massacre of the šāhīs and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Maʾmūn mounted the pulpit of the mosque of the ḵāba, recited the ʿIrāq, solemnly cursed the memory of Ibn Tumart and announced a whole series of measures, some of which are given by the Kūfīs and Ibn Khaldūn and which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (1232) while al-Maʾmūn and his militia were besieging Ceuta, Yahyā again occupied Marrakesh and plundered it. Al-Maʾmūn at once turned back to the rescue of his capital but died on the way (Oct. 17, 1232 = 629 a. H.). His widow, ʿAbd al-ʿHabbāb, succeeded in getting her son al-Rašīd, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultān. The latter had to grant them the amīrūn and pay the Christian general and his companions the sum they might have expected from the plunder of the capital — according to the Kūfīs, 500,000 dinārs.

In 633 (1235—1236) a rebellion of the Khāṭīb drove al-Rašīd out of Marrakesh and he took refuge in Sidīlmāsa while Yahyā recaptured Marrakesh. Al-Rašīd however succeeded in retaking it and Yahyā finally was assassinated. It was in the reign of the Almohad al-Saʿīd (1242—1248) that the Marinids who had arrived in the east of the country in 1216, seized the greater part of the kingdom of Fās. His successor ʿUmar al-Murtādā, proclaimed in 646 (1248), found himself in 658 (1260) reduced to the solitary kingdom of Marrakesh, to the south of the Lāfīm Rāfī. In 660 (1261—1262) the Marinid Abū ʿUṯuf Yaḥyā, b. ʿAbd al-Ḥāṣib came to attack Marrakesh. He encamped on mount Gillīz whence he threatened the town. Al-Murtādā sent his cousin, the satyiʿd Abū Tūb Idrīs, surnamed Abū Dabbūs, to fight him. The emir ʿAbd Allāh b. Abū ʿUṯuf was slain in the battle and his father lost heart, abandoned his plans on Marrakesh and returned to Fās at the end of Kadjas 661 (beg. June 1262).

From this time one feels that the dynasty is lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute; but they were not to destroy themselves. Falling into disfavour with his cousin al-Murtādā, Abū Dabbūs, this great-grandson of ʿAbd al-Muʾmin, who in the preceding year had defended Marrakesh against the Marinid sultan, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtādā, on condition that he shared the spoils. Victorious and proclaimed sultan in October 1266, Abū Dabbūs forgot his promises. Abū ʿUṯuf Yaḥyā came in person to remind him of them. He laid siege to Marrakesh in 1267 but Abū Dabbūs had a stroke of good fortune for
the Marinid had to raise the siege to go and defend the kingdom of Fāṣ against an attack by the sultan of Tlemcen, Vaghmūrān. The campaign being over, Abū Yusuf Ya‘qūb returned to Marrakesh. He entered it in Muharram 668 (Sept. 1269). The fi ḫāṣ tells us that he gave the amān to the inhabitants and to the surrounding tribes, whom he overwhelmed with gifts and ruled with justice and remained seven months to pacify and organise the country. By accepting Marinid rule, however, Marrakesh lost for two and a half centuries its position as a capital. The new dynasty made Fāṣ its capital.

Its sūlāns however, did not neglect Marrakesh especially during this period (end of the xiith and first half of the xivth century). The chronicles record many sojourns made by them there but its great days were over. The town began to lose its inhabitants. Abu l-Ḥasan ‘Alī was the only Marinid to undertake buildings of any importance at Marrakesh (a mosque and a madrasa). In the absence of the sovereign, the marābāt of Abū ‘Ianā became very strong and entrusted to powerful governors as befitted a large town remote from the central authority. For nearly 20 years, from 668 to 687 (1269–1288), this office was held by Muhammad b. ‘Ali b. Muḥallī, a chief greatly devoted to the Marinids, says Ibn Khaldūn, and allied by marriage to the family of their ruler. But in February 1288, fearing treachery from Muhammad b. ‘Ali, Abū Ya‘qūb Yusuf threw him into prison and gave his office to Muhammad b. ‘Atīū al-Dānnī, a client and confidant of the royal family, to whom the sūlān further entrusted his son Abū ‘Amīr. Abū Ya‘qūb had not left Marrakesh since Muhammad b. ‘Ali had rebelled there and proclaimed himself sovereign at the instigation of the governor Ibn ‘Atīū (Nov. 1228). Abū Ya‘qūb hastened to Marrakesh which he took after several days siege. The young Abū ‘Amīr had time to escape and seek refuge in the mountains among the Maṣmūdī tribes, after plundering the treasury.

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of May 1307, under the walls of Tlemcen, sūlān Abū Ḥabīb gave his cousin Yusuf, son of Muhammad b. Abū ‘Iyāq b. b. Abū al-Ḥāq, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yusuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Ḥādji Maḥmūd. Defeated by the imperial troops on the banks of the Umam Rabī, the rebel fled to the mountains, plundering Marrakesh on his way (Jan. 1308). The punishment inflicted on the rebels was severe. Yusuf b. Abū ‘Iyāq, handed over by a shaikh with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Sa‘īd Uṯmān stayed at Marrakesh on several occasions. He did much rebuilding in 720 (1320). Peace and comparative prosperity seem to have reigned there under the rule of Abu l-Ḥasan until this prince, as a result of reverses suffered in his struggle with the Ḥafṣids, found his own son, the ambitious Abū ‘Ianā, rebelling against him. During the troubles which now broke out, Ibn Khaldūn tells us, the town was seriously threatened with being sacked by the Maṣmūdāt of the mountains led by Abū ʿAllāh al-Saḵṣī. Abū ‘Ianā was able to consolidate his power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abu l-Ḥasan, defeated at the end of Safar 757 (May 1350) near the town, sought refuge in the mountains with the emirs of the Ḥafṣids and died there just after becoming reconciled to his son and designating him his successor (June 1352).

During the course of the xivth century, the emirs of the Ḥafṣids played a very important part in the country. The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Maṣmūdāt. Abū ‘Ianā took no steps against the emir ‘Abī al-ʿAzīz who had given asylum to the fugitive Abu l-Ḥasan. He retained him in the command of his tribe, which he gave a few years later to his brother ʿAmīr. In 1353 the latter, becoming chief of all the Maṣmūdāt tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Musṭamid, son of Abū ‘Ianā, very mostraɪnly resisted the attempt at enfeoffing himself completely independent. He received and for a time held as hostages two rebel Marinid princes Abu l-Fadl, son of the sūlān Abū Sālim, and ‘Abī al-Raḥmān, son of Sūlān Abū ʿAlī. Quarrelling with his protégé Abu l-Fadl whom he had made governor of Marrakesh, he retired into his mountains and for several years defended the armies of the sūlān. He was in the end captured and put to death in 1370.

After the death of Sūlān ‘Abī al-ʿAzīz, the pretender Abu l-ʾAbbas, son of Sūlān Sālim, had himself proclaimed in Fāṣ with the help of his cousin ‘Abī al-Raḥmān. Abu l-Fadl was named a pretender to the throne. The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (June 1374). The empire was thus completely broken up. The two rulers soon began to quarrel but then signed a treaty of peace in 1378. There was a new rupture and a new truce two years later after Marrakesh had been besieged for two months without result. Abu l-ʾAbbās in the end took Marrakesh in Djamād 584 (July–Aug. 1352), and ‘Abī al-Raḥmān was slain. Abu l-ʾAbbas, dispossessed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 1387 and sent to Marrakesh as governor his son al-Mutaṣir. This event is the last recorded by Ibn Khaldūn. From the time his record ceases and throughout the xivth century we are incredibly poor in information about the history of Marrakesh. The south appears to have continued to form a large governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415—1418), Morocco was a prey to the struggles among the pretenders. While Abu Saʿīd Uṯmān was ruling in Fāṣ, Mawlyy Bāʾ Alī, king of Marrakesh, was fighting against another Marinid prince called Fāris. The “kingdom” or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fāṣ for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco and their name is not found among the opponents of the Portuguese,
Marrakesh by 1430 seems to have become de facto if not de jure independent; but we do not know within fifty years at what date the Hunfta emirs established their power; they were descended from a brother of 'Amir b. Muhammad. They were "kings" of Marrakesh when in 1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hunfta emirs hardly extended beyond the environs of their capital and they could not effectively protect their tribes against the attacks of the Christians. In July 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awdâd Maqû) and the town lived in fear of the raiders which on several occasions brought the Portuguese cavalry and their Arab allies into the district. The king of Marrakesh, overawed, entered into negotiations in 1514 but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh. Agreement could not be reached. The occupation of Marrakesh remained the dream of the Portuguese soldiers. An attack on the town led by the governors of Safi and Azeitur failed (April 23, 1515). This was the period when the reaction against the anarchy and foreign invasions of the Sahid sharifs began to come to the front in Sâs. Ahmad al-Ajudj, who appeared in 1513 to the north of the Atlas, had himself recognised as leader of the holy war and accepted as such by the local chiefs, even by al-Nâzi, king of Marrakesh. In the month of April 1514, it is recorded that he was in Marrakesh with the king. At the end of 1521, al-Ajudj established himself peacefully in Marrakesh which he found partly depopulated by famine and marred the daughter of the king Muhammad b. Nâzi, called Bî Shenûfî. The latter in 1524 having tried to kidnap against the tutelage of his too powerful son-in-law, al-Ajudj and his brother Muhammad al-Shâhîk, seized the kašîla, which seems till then to have been held by Bî Shenûfî. They disposed of the latter by having him assassinated in the following year (1525). Marrakesh became the Sahidian capital. The king of Fas, Ahmad al-Wâfî, tried unsuccessfully to take it in June 1527. It remained in the hands of al-Ajudj till 1554, when it was seized by his brother Muhammad al-Shâhîk, up till then king of Sâs. After the ascension of Muhammad al-Shâhîk in 1557, al-Ajudj was put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawly 'Abd Allah al-âdîlî. The whole of the latter part of the century was for Marrakesh a period of great prosperity. 'Abd Allah al-âdîlî built a series of important public works: rearrangement of the palace and of the provision storehouses in the kašîla; in the town, the madrasa Ibn Yûsûf and the al-Maâzîn mosque etc. Ahmad al-Manûr finished his brother's work by building in the 69-82 from 1578 to 1591 the famous al-Badi' palace. The Sahid, enriched by several years of peace and good government, and by the gold brought from the conquest of the Suliûn (1591-1592) lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the sixteenth century. But the death of al-Manûr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast" to use the expression of the historian al-Îfrîînî. While Âbu Fâris, son of al-Manûr, was proclaimed at Marrakesh, another son, Zidân, was chosen sultan at Fas. A third brother, al-Shâhîk, came and took Fas, then sent against Marrakesh an army led by his son 'Abd Allâh, who seized the town in Dec. 22, 1606. But Zidân, who sought refuge first in Temenç, then made his way to Sûs, via Tâfîlât and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allâh b. al-Shâhîk while escaping with his troops was attacked in the midst of the gardens (qayâna Ro‰îkûr) and completely defeated (Feb. 25, 1607). In October of the same year, 'Abd Allâh returned after defeating Zidân's troops on the Wâdî Tâfîlât (Oct. 2, 1607), fought a second battle with them at Râs al-'Ain (a spring in Tânsîfî), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the populace having sought refuge in the Gillîz, proclaimed as sultan, Muhammad, great-grandson of Ahmad al-Ajudj, 'Abd Allâh was forced to fly (Jan. 25, 1608). Zidân, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zidân and his brother al-Shâhîk, in the near future, centred round the possession of Fas. Zidân failed in his plan to retake it and henceforth Fas, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tâfîlât, named Abu Mahâlî, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on May 20, 1612. Zidân took refuge in Sâs and succeeded in again gaining possession of his capital with the help of an influential marabout in Sûs, called Yâhyâ b. 'Abd Allâh. After a battle near Gillîz, Zidân withdrew into Marrakesh on Nov. 30, 1613. But Yâhyâ, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained. Zidân had again to take refuge in Sûs. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. 'Abd al-Malik (1627-1631), son and successor of Zidân, has left only the memory of his cruelty and debauchery. He was murdered in May 1631. The renegades, who killed him, also disposed of his brother and successor al-Wâlid in 1636. A third brother, Muhammad al-Shâhîk al-Askâhar, succeeded him but had only a semblance of power. He managed however to reign till 1655, but his son Ahmad al-Askâhar was completely in the hands of the Shab-ãnûn, an Arab tribe who assassinated him and gave the throne to 'Abd al-Qârim, called Karrâm al-Hâjûdû, in 1659. "The latter", says al-Îfrîînî, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abû Bakr succeeded him in 1668 but only reigned two months until the coming of the Filâli Sultan al-Kâshid, already lord of Fas, who took Marrakesh on July 31, 1668. Called to Marrakesh by the rebellion of his nephew Ahmad b. Mufrûz, al-Kâshid met his death there in the garden of al-Agâdî, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled.

Mawly Ismâ'îl had some difficulty in getting himself proclaimed at Marrakesh, which preferred
his nephew, Ahmad b. Muḥiriz. Ismaʿil forced his way in on the 9th Safar 1083 (June 4, 1672). In the following year, Marrakesh again welcomed Ahmad b. Muḥiriz. After a siege of two years (March 1675—June 1677), Ismaʿil reoccupied Marrakesh and plundered it. He passed through it again in 1683 on his way to Sūs to fight Ahmad b. Muḥiriz who was still in rebellion. Marrakesh was no longer the capital. Mawlay Ismaʿil took an interest in it and destroyed the palaces of the ḥāṣba to use the materials for his works in Meknes. In 1114 (Feb. 1703), a son of Mawlay Ismaʿil, Muhammad al-ʿAlīm, rebelled against his father, seized Marrakesh and plundered it. Zīdān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ismaʿil. Its centre was Meknes. Mawlay al-Mustadī, proclaimed by the Abīd in 1738, was disowned by them in 1740 and replaced by his brother ʿAbd Allāh who sought refuge in Marrakesh. His brother al-Nasīr remained his khālitja in Marrakesh till 1745, while al-Mustadī tried in vain to reconquer his kingdom. Marrakesh finally submitted in 1746 to Mawlay ʿAbd Allāh who sent his son Sīdī Muḥammad there as khālitja. The governorship and then the reign of the latter (1757—1790) formed one of the happiest periods in the history of Marrakesh. Sīdī Muḥammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnon in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named Qamar, who at the head of a few rebels attempted to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Sīdī Muḥammad b. ʿAbd Allāh, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlay Yazid (May 3, 1790) the people of Marrakesh took in his brother Mawlay Ḥishām and proclaimed him. On hearing this, Yazid abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Ḥishām, supported by the ʿAbda and the Dukkala, marched on Marrakesh. Yazid, wounded in the battle, died a few days later in the palace (Feb. 1792). Marrakesh remained faithful to the party of Mawlay Ḥishām, but very soon the Ḥāmma Ḧishām entertained the idea of capturing the kaṣba (1800 = 1794—1795). While the partisans of the two princes were exhausting themselves in fighting, Mawlay Slimān, sulṭān of Fās, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before. The last years of the reign of Mawlay Slimān were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shārda. He died at Marrakesh on Nov. 28, 1822. Mawlay ʿAbd al-Rāḥmān (1824—1859) did much for the afioresation of Agdāl and restored the religious buildings. His son Muḥammad completed his work by repairing tanks and aqueducts. This two reigns were a period of tranquillity of Marrakesh. In 1862 however, while Sīdī Muḥammad b. ʿAbd al-Rāḥmān was fighting the Spaniards at Tetuan the Ṣāḥma rebelled, plundered the Sīk al-Ḥamīs and closely blockaded the town, cutting off communications and supplies, until the Sulṭān, having made peace with Spain, came to relieve the town (June 1862). Mawlay al-Ḥasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Ṣāḥma and the Bū ʿIṣāba, who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sūs.

During the last years of the reign of Mawlay ʿAbd al-ʿAzīz (1894—1908), it was at Marrakesh that the opposition to the European tastes and experiments of the Sulṭān made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (March 19, 1907), and the spirit of separatism in the proclamation as sulṭān of Mawlay ʿAbd al-Ḥaḍīz, brother of ʿAbd al-ʿAzīz and governor of the provinces of the south (Aug. 24, 1907). But ʿAbd al-Ḥaḍīz becoming ruler of the whole empire (Aug. 24, 1907) and having signed the treaty of March 24, 1912 establishing the protectorate of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Ḥiba had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sīdī Bū ʿUṭmān on Sept. 6, 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on Jan. 16, 1220, for having attempted to convert Muslims and having insulted the Prophet Muḥammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sulṭān's army. In the Almoravid period, the sulṭāns had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages. In 1227, Abu l-ʿUla Idris al-Maʿmūn having won his kingdom with the help of Christian troops sent by the king of Castile found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This was called Notre Dame and stood in the kaṣba, probably opposite the mosque of al-Mansūr: it was destroyed during a rising in 1232. But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled an episcopal board at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the xvth century. The title of Bishop of Marrakesh was borne till the end of the xvth century by the suffragans of Seville (cf. Father A. Lopez, Los obispos de Marruecos desde el siglo XIII, in Archivo Ibero-Americano, N.º xli., 1920). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1631 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the kaṣba. It was destroyed in 1659 or 1660 after the death of the last Sulṭān. Henceforth the Franciscans were obliged to live in the mellah
where they had down to the end of the xvith century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the xviith century, 'Abd Allah al-Ghālib had a ζουνταλ of bonded warehouses built in the sīrār where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. This was also that foreign ambassador usually lodged, at least when they were not made to encamp in one of the gardens of the palace.

Monuments. The present enclosure of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bab Aghmat, Bab Mâbrouk, Bab Dhabbâgh which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1130). Bab Vintâna, Bab al-Makhzen, mentioned at the same time, have disappeared. Bab al-Sâliha (no longer in existence: it stood on the site of the mellâk) and Bab Dukkala (still in existence) figure in the story of the capture of the town by the Almohads (1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name. According to Ibn 'I-Fida (xviith century), there were in Marrakesh seventeen gates, twenty-four at the beginning of the xvith century according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others altered, since the date of the names have been altered. Ibn Faṣūl Allah al-'Umarî (beginning of the xvith century) adds to the names already mentioned those of Bab Nisîr, Bab Muhîrî, Bab Mecûshî, Bab al-Kaṣâb all four of which have disappeared, Bab Taghātî, Bab Fâs (now Bab al-Khumes), Bab al-Khâbî which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kaṣâb in the south and in the north the creation of the quarter of Sidi bel-'Abbâs. The râsîya, which as late as the xvith century stood outside the walls beyond the Bab Taghātî, was taken into the town with all its dependencies.

The Kaṣâb. The little kaṣâb and the palace of Dâr al-Kâmima built by Yaṣûf b. Tâshfin, lay north of the present "Mosque of the Book-sellers" of Kutubiyya. 'Ali b. Yaṣûf added in the same quarter other palaces called Sûr al-Ḫâdîjar, or Kast al-Hâdjar because they were built with stones from the Gilâk, while all the other buildings in the town were of brick or clay. It was here that the first Almohad took up their quarters. According to a somewhat obscure passage of the 'Irâqâ, Ābû Yaṣûf Yaṣûf seems to have begun the building of a kaṣâb in the south of the town but it was Yaṣûf al-Manṣîr who built the new kaṣâb (1189-97); that is to say he joined to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow the old wall, at least on the north end the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the kaṣâb is now entered, must be one of al-Manṣîr's building, its modern name of Bab Agnâû (the Negro's Gate) is not found in any old text. It probably corresponds to Bab al-Kûllî (Gate of the Negroes), often mentioned by the historians.

Ibn Faṣūl Allah al-'Umarî, in the xivth century, Leo Africanus and Marmol in the xviith, have left us fairly detailed descriptions of the kaṣâb, in spite of a few obscure passages. In the Almohad period, the kaṣâb was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Manṣîr which still exists, contains the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bab al-Tûbâb, a second enclosure in which around a huge open space, the "Cercueil" of Marmol (âbârây), were grouped the guardhouses, the offices of the minister of the army, a guest-house, a madrassa with its library and a large building called al-sâqîf (the porticoes), the "Acequie" of Marmol, occupied by the principal members of the Almohad organisation, the "Tea", the "Fifty" and the jîlâ, the pages (âhî al-dâr). The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Asârâg and occupied the whole area east of the kaṣâb. The palaces of al-Manṣîr were still in existence at the beginning of the xviith century when the Sa'dîans took possession. Ābû Allah al-Ghâlib incorporated them in the new palaces which he was building. Āhmad al-Manṣîr added, in the gardens to the north, the famous al-Bâdi' palace celebrated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawlây Isâmîl had it destroyed in order to use its materials. The kaṣâb remained so completely in ruins that Sidi Muhammad b. Ābû Allah when he became governor of Marrakesh in 1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, 'Arṣat al-Nil. Other works were later undertaken by Mawlây Slimân and his successors. Some large unfinished buildings date only from Mawlây 'Abd al-Hafîz. A number of gates, in addition to the Bab Agnâû give admittance to the kaṣâb: these are Bab Berrima and Bab al-Ahmâr in the east, Bab Ighîl and Bab Kaṣâb in the west. The palace has vast gardens belonging to it: Dînân al-Âfîyâ, Agdâl, Dînąn Râwât, Mânîâyîn, Mânârâ. The latter, two miles wide, was a pleasure house of the sultans. The palace of Dâr al-Ba'idâ, situated in the Agdâl, took the place of a Sa'dîan palace. It was rebuilt by Sidi Muhammad b. Ābû Allah and has since been restored. As to the gardens of the Agdâl, they seem to have been created in the xith century by 'Abd al-Mu'min.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which Yaṣûf b. Tâshfin himself worked along with the masons as a sign of humility. But the cathedral mosque of 'Ali b. Yaṣûf, where Ibn Tûmârt had an interview with the sultan, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly
oriented. The mosque of 'Ali b. Yūsuf was only partly destroyed and was rebuilt. ‘Abd Allah al-Ghālibī restored it in the middle of the xviith century. The present buildings and the minaret date from Mawlāy Sulaymān (1792–1822).

Kutubiyya. When the Almohads entered Marrakhes, Abd al-Mu'min built the first Kutubiyya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiyya, in prolongation of the first but with a slightly different orientation. It takes its name from the 100 booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (minbar) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by ‘Abd al-Mu'min, was only finished in the reign of his grandson al-Ma'nūr (1215). It is 230 feet high and its powerful silhouette dominates the whole town and the palm-groves. It is the prototype of the Giralda of Seville and of the tower of Hassān al-Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the kāba or mosque of al-Ma'nūr is the work of Ya'qūb al-Ma'nūr. It was begun in the xviith century by the general for the great mosque. It has been profoundly altered, first by ‘Abd Allah al-Ghālibī the Sa'dīn, then in the middle of the xviith century by Muhammad b. ‘Abd Allah, then more recently by Mawlāy Abd al-Raḥmān (1822–1859). The minaret of brick is intact and magnificently ornamented with green ceramics. The lamp-holder supports a ǧāmūr of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes. This legend is often wrongly connected with the ǧāmūr of the Kutubiyya.

Among the religious monuments of Marrakesh of architectural interest, may be mentioned and the minarets of the mosque of Ibn Sahl (dated 731 = 1331) and of the sanctuary of Mawla b-93, built in the Marinid period in the Almohad tradition, and two Sa’dīn mosques: the mosque of al-Mواسم or mosque of the Sharifs, which owes its origin to ‘Abd Allah al-Ghālibī, and that of Bāb Dukkalā, built in 965 (1557–1558) by Lālā Maṣ‘ūda, the mother of the Sulṭān Ahmad al-Мa’nūr.

Madrasas. An Almohad madrasa, built "to teach the children of the king and others of his family in it", formed part of the buildings of Ya'qūb al-Ma'nūr. This royal school was presumably different from what later were the Marinid madrasas. It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus. The Marinid Abu l-Hasan in 1347 built another madrasa, also described by Leo. It lay north of the mosque of the kāba, where traces of it can still be seen. The madrasa of Ibn Yūsuf is not, as is usually said, a restoration of the Marinid madrasa. It was a new building by ‘Abd Allah al-Ghālibī, dated by an inscription of 972 (1564–1565), the only surviving example of a Sa’dīn madrasa.

Sa’dīn tombs. The two first founders of the dynasty rest beside the tomb of Sīdī Muhammad b. Sulaymān al-Djazālī in the Rīyāḍ al-Ārus quarter. Their successors from 1557 were buried to the south of the mosque of the kāba. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the xviith century. The magnificent kubbah which covers the tombs of the Sa’dīn dynasty must have been built at two different periods. The one on the east under which is the tomb of Muhammad al-Shaikh seems to have been built by ‘Abd Allah al-Ghālibī. The other, with three chambers, seems to have been erected by Ahmad al-Ma'nūr (d. 1603) to hold this tomb.

MARRAKESHI — MARTHIYA

with many new instruments for the Mongol Khan Hüläğü (1259) and the observatory of Samarqand, there Ulugh Beg employed the astronomers of his time. Following him in many points but also stimulated by European astronomy Dājī Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Dājīpur, Ujjain, Benares and Mathura.

MARTHIYA (A., plur. marlīb), translated variously by elegy or dirge, is a poem in Arabic (and other languages following Arabic tradition) in memory of a deceased person. The word elegy is hardly applicable in most cases as such poems differ somewhat from the style of Greek and Latin poems bearing this name; some notable exceptions exist and the finest example of a real elegy is perhaps the poem of a woman named Bara al-Kinawayi preserved in the Kitāb al-kītiyārīn, and still unpublished. It was the custom of the ancient Arabs after the usual nānūd or lamentation of women [1-v.] that a member of the family, gifted as a poet, should commemorate the noble qualities and deeds of the departed in a poem by enumerating them. These poems as a rule do not contain the taḥkīb or amatory introduction like ordinary ḵaṣādas and in many cases have a peculiarity in their diction, the introduction of a kind of internal rhyme resembling sadī, called tarsī. This has been fully discussed by Rhodospanax in his analysis of the poetry of al-Khānsī, but is found in many other marthiyas. Many poets, remembering the widespread, nay universal, belief of the ancient Arabs in fatalism, embellish their poems with descriptions to show that nothing can escape inevitable fate. A typical example is the long poem by Abū Dhu‘āb (Dīwān, N. 41, Muṣḏafat al-qādīn, N. 125) in which the sadī and pictures are drawn of the impossibility of escaping death, both for man and beast. This tradition has been followed by Arabic poets from the times of paganism to the present date and the quantity of poems produced for example upon the death of the Egyptian statesman Zaghīlī Pāsha proves that the taste for them has not abated. The collected poems of al-Zahwāwī, the most prominent living poet of
the 'Irāk, contain several pages mourning Zahgālū. As regards the earlier period, poems have been preserved in considerable numbers and from the Ḥamāma of Abī Tammām downwards nearly every anthology has a special chapter devoted to marṭūrī. Several early scholars in addition made special collections of this class of literature and one such collection has come down to us, made by the Kūfī grammarian Ibn al-'Arābī, and published from an incomplete manuscript by W. Wright. The poet par excellence in this class of poetry however was a woman, al-Khānṣā' [q.v.].

(F. Krenkow)

**MARTOŁOSEN.** Lexicons explain marṭūrī and marṭūlī as "Christian soldiers, volunteers in the Ottoman army." The word apparently is not to be found in Turkish authors, but is often met with in Western books and documents.

Leunclavius (Annales, p. 142) says that marṭoūlī means "robber"; Ricaut (Italian translation by C. Belli, Storia stato presente dell'Impero ottomano) relates that Buda was garrisoned by 300 marṭoūlī "who are like infantry"; M. Sanudo (Diziarī, xxxvi. 271) mentions one Sbolo-vach "a very brave man and great marṭoūlī", who served the Turks and was killed in action near Zara in Dalmatia. According to Lazzaro Soranzo (L'Ottomano, 4th ed., Naples 1600, p. 110–111), marṭoūlī means spy and thief.

Sathas (Monum. Historiae Helmincas, iv., lvi., No. 4) derives the word (martorle, martorale, martorlēs, martolaili, armatolō) from ḥāmlābād and says that they were soldiers of fortune serving the Turks, often opposed the "Stradiottī", who fought for the Venetians.

Von Hammer (G.O.R., iv. 211–212) observes that the martorlo were bands of brigands, armed by the Turks on the frontiers towards the Venetians and Dalmatians; while, quoting Pouqueville, who favours the etymology ḥāmlābād, he inclines to an etymology from the Hungarian.

Pouqueville's and Sathas' explanations seem to us the most probable. The appellation was not limited to brigands on the western frontiers of the Ottoman empire, but was also given to armed bands of volunteers (xvith–xvith centuries) in the Danube region (Jorga, Geschichte der ömn. Reiches, iii. 419; Hurmuzzaki, Documente etc., xii., p. 130).

**MARUF AL-KARKHI.** Aṣṣīr, M.; Flüüz or Frużen, who died in 1200 (815–816), was a celebrated ascetic and mystic of the Baghdād school. The niḥa al-Karkhi probably refers to Karkh Bāḏjadda, a township in eastern 'Irāk (Šamˈān, Anāb, 478b, l. 10; cf. Vāqā, Mūṣhtarīk, ed. büstenfeld, p. 369, l. 8 ssg.), though some authorities connect him with the Karkh quarter of Bagdad. His parents are generally said to have been Christians; according to Ibn Taḥhirībdī (ed. Juynboll and Matthes, i. 575), they were Šabīˈāns belonging to the district of Wāsīt. Bār b. Ṣhunais al-Kūfī and Farkād al-Sābahī, also of Kūfā, are named as his teachers in Šīʿism (Abī Tālīb al-Makki, Kūt al-Kulāb, i. 9; Fihrist, p. 183).

Of those whom he taught or influenced the most famous was Sāri al-Saḵṣī [q.v.], who in his turn became the master of Djiunaid. The story that Maʿrūf was a client of the Shīˈī Imām, "Ali b. Mūsā al-Kīdā, before whom he made profession of Islam and induced his parents to do the same, deserves no credence. Among the sayings attributed to him are the following: *Love is not to be learned from men; it is a gift of God and comes of His grace*. "The saints 269, known by three signs: their cares are for God, their business is in God, and their sight is unto God". "Šīʿism consists in grasping the realities (duckāˈīḵ) and renouncing that which is in the hands of created beings". Maʿrūf was venerated as a saint, and his tomb at Baghdād on the west bank of the Tigri is still a great resort for pilgrims. Kūshārī relates that the people used to go there in order to pray for rain, saying: "The tomb of Maʿrūf is an approved remedy (tīryāz muqarrāb)".

(R. A. Nicholson)

**MÁRUF RŪṢAF.** One of the best of contemporary Arab poets, born in Baghdād of a Kurd father and a Beduin mother in 1292 (1575). His kojūdā have been collected in a Dīwān and edited by Muḥyī al-Dīn al-Khāyātī, Bāirūt 1910, following quite an original classification. I. Kānrātī, II. ʿIṣmaˈā′lī, III. Taʿrīkh, IV. Waṣīfāt. Ruṣayl Būṭū has devoted an excellent study to him (in al-ʿArab al-Afīfīt al-ʿArabī, Cairo, Salābīya 1922, p. 67–95).

(L. Massigion)

**MĀRŪT.** [See HĀRUT and MĀRUT.]

**MARW.** [See MERK.]

**MARWA.** [See AL-SAFI.]

**MARWAḤ B. AL-ḤAKAM.** The father of the Marwaḥī Caliph, was born at Mecca or at Tāʾīf, probably several years before the Hijra. Tradition, by placing his birth 2, 4, or 5 years later than the beginning of this era, aims at depriving him of a right to the title of "Companion" by showing that he could not have effectively accompanied the Prophet, as he must have followed his father who was exiled to Tāʾīf. Further, it endears it in its hostility to give him the epithet of tafīr ibn al-ṭarīf, "the banished son of the banished man". After becoming Caliph, his grand-uncle ʿUṭman adopted him as his secretary and under this title he is said to have governed in his absence. Seriously wounded on the "day of al-Dār", at the siege of the palace of ʿUṭman, he took part later in the battle of the Camel in which he received fresh wounds. All his life his health suffered from these terrible shocks. Muʿṣawī I heard him alternately with ʿAlī b. al-ʿĀṣ [q.v.], his cousin, to govern Medina and the Ḥijāz. He showed in this function a capacity and vigour, far above the ordinary.

Finally dismissed from office, he passed into obscurity during the later years of Muʿṣawī who dreaded his ambition. When Ḥusayn b. ʿAlī refused
to recognize the Caliph Yazid, Marwan advised Walid b. 'Uthman, his successor at Medina, to employ force against the rebel. The revolt of the people of Medina caused him to be expelled with all his followers from this town. He returned to it in the train of Muslim b. 'Uqba [q.v.] whose military operations he was supporting. Put to flight once more after the death of Yazid I, he took up his residence in Syria and attended the court of the Caliph Mu'awiyah II. After the disappearance of this prince, Marwan, desiring of the fortunes of the Omeyyads, was disposed to recognize Ibn al-Zubayr, when 'Abdallah b. Ziyad persuaded him to set upon himself as candidate. Acclaimed at the assembly of 'Abd Allah he defeated the Kaisi under 'Abd al-Rahman b. Massud [q.v.] at Marj al-Khaṭṭ [q.v.]. The submission of the whole of Syria was the first result of this victory.

The reign of Marwan may be epitomized as an uninterrupted series of battles. Immediately after his official installation at Damascus he was forced to take up the gauntlet. He laid it down only to die in his capital. His chief task was the conquest of Egypt. A rapid campaign gave him possession of it, while his lieutenant repelled a rapid Dalilain raid by Ibn al-Zubayr. At Djahiyah he was compelled to recognize as his eventual successor, Khalid the son of Yazid I and the Omeyyad Amr al-Ashtar [q.v.]. After laborious negotiations, he was able to end them to the advantage of his own son 'Abd al-Malik and 'Abd al-Ashtar, the latter being nominated by him governor of Egypt. This was the last success of his adventurous career. Worn out, the septuagenarian caliph died at Damascus on the 27th Ramadan 65 (7th May 685). He is said to have been murdered by the wife of Yazid I, the mother of the Sufyanid Khalid, whom he had married after Marj al-Khaṭṭ.

The estimates of the length of his reign vary between 8 and 11 months, according as they count the first recognition of him at Djahiyah or the second — the exact date is not known — more ceremonious one at Damascus. We do not know his exact age any more definitely. The two extremes 61 and 51 years reveal the inconsistency of tradition. The 63 years sometimes given to Marwan are merely a lucky number which has been much abused to give the age of the other caliphs. It has the advantage that it takes us back to the year 2, often said to be the year of his birth Qur'an deserts him as an old man, kahiti kahit, when he ascended the throne and contract him with the Isma'il, middle-aged man, i.e. Ibn al-Zubayr who, however, was nearly sixty. There must therefore have been an appreciable difference of age between the two competitors. Marwan, therefore, seems to us to have been over seventy. The last five years of his life, filled with rebellions, his two exiles, his share in the campaign against Medina, and in those of Syria and Egypt and reconquest these provinces of his empire finally wore out the constitution of this vigorous old man, who had never been completely cured of the effects of his terrible wounds he received in his youth. This long slain wizened old man — these physical characteristics earned him the nickname kahiti kahit — was destined to fall a victim to the great epidemic that swept over the East. In 65 it the plague reached Syria from the 'Iraq; it had begun by carrying off Mu'awiyah II. the}

decreept predecessor of Marwan, as well as Walid b. 'Uthman, a relative of both; it ended by laying low the first of the Marwānī caliphs.

Marwan showed himself a statesman worthy of the highest rank. A contemporary of the great Mu'awiyah, he had under the Sufyanids to accept — without ever resigning himself to it — the part of a brilliant second. He attained the caliphate, ever the object of his wishes, at the moment he had ceased to care about it. He allowed himself to be raised to the throne, rather than mounted it himself. But once at the top he regained that power of lucid decision and spirit of initiative which had earned Mu'awiyah's appreciation, though he feared his ambition. The new ruler remained on the throne just long enough to save the Omeyyad fortunes from an imminent collapse and to save the future of the younger branch of this dynasty which bears his name. The work was continued by his favourite son 'Abd al-Malik. He early recognised the merits of this, the elder, man, and with a brutality and absence of scruple which was thoroughly Arab, he put him in the place of the young Khalid b. Yazid I, who was less well fitted for the difficulties of the restoration. This is sufficient to characterize his place among the Syrian caliphs. It will explain the hatred of 'Abd al-Malik and 'Abd al-Malik, a hatred adopted by Muslim tradition. In energy and knowledge of the art of government, Marwan, recalled his illustrious relative Mu'awiyah. He would have equalled him, if to these eminent qualities he had been able to add that variety of political knowledge, a mixture of cunning and bonhomie, so appreciated by the Arabs, which they call kālim. He became Caliph in most critical circumstances and had to display firmness above all things, to put down rebellions, and to defend himself against the ambition and resentment of his relatives, frustrated in their attempts on the throne, or spoiled by him of their rights to it. If it had been given to him to live longer, we may well believe that he would have rivalled the first of the Omeyyad Caliphs in nobility of soul.

(H. Lammers)

**MARWAN II b. MUHAMMAD**, the last of the Omayyad caliphs in Damascus. He was the grandson of the caliph Marwān b. al-Hakam. As governor of Mesopotamia and Armenia his
father Muhammad for several years directed the campaigns against the Byzantines. His mother was a Kūrish slave-girl, Maimama b. 'Abd al-Malik [q. v.]. She was one of those who followed Muhammad b. Marwan to war; it is not till 115 (733–734) that we find Marwan coming to the front as governor of Armenia and Adharbidjān. In this position, which he held for 12 years, he fought with success against the peoples of the Caucasus and thus acquired military experience which enabled him to reorganize the Muslim army. In place of divisions consisting of the different tribes he created regular, paid troops under professional commanders; the men levied for military service were divided up into smaller divisions (kāridis) which possessed much greater mobility and strength than the long Arab battle-lines. After the death in 126 (744) of Yazid III the succession passed to his brother 'Uthmān b. al-Walid; the latter however was only recognized in the southern part of Syria. Under the pretext of protecting the interests of the sons of the murdered Walid II, Marwan crossed the Euphrates into Syria where the Kaisis at once joined him. At Ain al-Djarr between Lebanon and Anti-Lebanon he encountered the Kalbids under Sulaimān, a son of the caliph Hishām. In spite of his years of experience in war with the Byzantines the latter was no match for Marwan. He was defeated and fled to Damascus, where he put to death the two sons of Walid II. He then went with his father, the nominal caliph 'Abīraham to Palmyra, the capital of the Kalbids, whereupon Marwan entered Damascus and received the homage of the people (Safar 26, 127 = Dec. 7, 744). After arranging matters in the capital he made his headquarters in Ḥarrān, where he could rely upon the support of the Kaisis who were devoted to him. The result was a rising of the Kalbis in Syria. Marwan soon succeeded in restoring order; but when in the following year he was preparing a campaign against the 'Irāk not yet subject to him, he made the mistake of levying Syrian troops also who were to join the rest of the army on the march. On reaching al-Ruṣafa where Sulaimān b. Hishām lived, the Syrians deserted from Marwan and proclaimed Sulaimān commander of the faithful. When Sulaimān occupied Kummair, Marwan had to come back. A battle took place near the town. Sulaimān was defeated and fled first to Ḥums and then to al-Kūfa. After a siege of several months Ḥims was forced to surrender; Marwan tided its walls to the ground and also those of Ba‘albek, Damascus, Jerusalem and other large towns of Syria. In the summer of 128 (746) peace was finally restored in Syria.

In the eastern provinces however complete anarchy reigned. The governorship of the 'Irāk had been given by Yazid III to a son of the caliph 'Omar b. 'Abd al-'Aziz, named Abū Allāh [q. v.]. The latter of course did not recognize the claims of Marwan to the caliphate and the 'Abd Allāh b. Ma‘wiya [q. v.] also rebelled in al-Kūfa. Marwan appointed a new governor Nādir b. Sa‘īd al-Harashi to restore peace and security; the latter however soon fell in battle with Abū Allāh b. 'Omar and only the approach of a danger that threatened both sides, the Khāridj movement brought the two opponents to terms. The Khāridjīs a little later seized the town of al-Mawālī: Abū Allāh, the son of the caliph, was defeated and had to retreat. In the late summer of 28 (746) however the Khāridjī leader al-Dāhīt b. Kais al-Shalībī [q. v.] fell in battle with Marwan himself and in the following year the power of these dangerous rebels was finally broken after one of Marwan’s generals Yazid b. 'Omar b. Ḥubaira had taken the 'Irāk from them.

Soon afterwards however a cloud that boded evil appeared in another direction. Nār b. Sāyīr al-Lātibī, governor of Khorāsān, had long before warned the caliph of the seditious activities of the 'Abbāsidū and urgently appealed for assistance to render their cunning agitators harmless. Marwan however had his hands full and could devote no attention to the distant east. In Kūmarān 129 (June 747) the long prepared rebellion broke out in Khorāsān. Apart from a few isolated successes, the government troops were defeated by the rebels and after the fall of al-Kūfa, Abu 1-'Abbās who with his brother 'Abī al-Djīfar had taken command of the 'Abbāsidū party had himself proclaimed caliph on the 12th Kabi I, 132 (Nov. 28, 749). In Djamād II of the same year (Jan. 750) Marwan was defeated on the upper Zāb. He then fled from one place to another till he was overtaken at Būṣir in the district of Gšmūsin in Upper Egypt. Here the last Damascus caliph of the Omayyad dynasty fell fighting bravely (end of 132 = Aug. 750).

(M. V. Zeiβerseeīnne)
success. In 402 (1011–1012) Abu 'l-Manṣūr was poisoned by one of his generals, whereupon Abū Naṣr was recognized as lord of Dīyār Bakt. During his rule of fifty years, peace and quiet as a rule prevailed, and poets and learned men found a hospitable welcome at his court. In 433 (1041–1042) the Ghurz (q.v.) who had invaded Mesopotamia in the previous year, raided Djuzarat Ibn Ommar; but Sulaimān, son of Abū Naṣr, succeeded in outwitting and capturing their leader whereupon the others dispersed; they soon returned however and continued their plundering, although Abū Naṣr released their chief and gave them a considerable sum to induce them to withdraw. They then occupied al-Mawzil, which was completely sacked while the emir was there. Karwāsh b. al-Maḫkallād (q.v.), saved himself by flight. In 435 (1044) he finally succeeded in driving out the Ghurz whereupon they withdrew to Dīyār Bakt and thence to Māhrūkān. When the Saljuq Sultan Ṭoghra Beg in 448 (1056–1057) advanced against Djuzarat Ibn Ommar, Abū Naṣr gained him over by gifts and a friendly relationship was established between them Abū Naṣr died in 453 (1061–1062) aged over 80. He was succeeded by his son Nuẓām al-Dawla Naṣr, who had however to go through a hard struggle with his brother Sa'id. The former was victorious in Mājīfānḳīn, while the latter had to be satisfied with Amid. In 463 (1070–1071) Naṣr submitted to the Saljuq Sultan Alp Arslān. After Naṣr's death (472 = 1080) his son Manṣūr was recognized as his successor. Soon afterwards the Saljuqs overthrew the Māyrānī dynasty. In 478 (1085–1086) Ibn Djujarat, Malik Sha'rī's vizier, and his son Za'im al-Ra'as Abū 'l-Kāsim conquered the towns of Amid, Mājīfānḳīn and Juṣżarat Ibn Ommar and then brought the whole province of Dīyār Bakt under the rule of the Saljuqs. Manṣūr, the last Māyrānī, died in Muharram 489 (Dec. 1095–Jan. 1096) in Juṣżarat Ibn Ommar.

Martyr, a tribe in the Western zone of Eritrea They are — for the most part — shepherds and inhabit the middle valley of the 'An-ábib river in the district of Karan. Their tribe is formed by two sections of nobles: Māryā Kayīh, "the Red Māryā" and Māryā Ṣallīm, "the Black Māryā"; and the families of the vassals. The "Red" Māryā have been traditionally in a lower position than the "Black" and they were obliged to pay on certain occasions special gifts to the "Black" as, for instance, when the chief of the "Black" died. The vassals were practically divided between the Red and the Black as every family of them lived under the patronage of the chief of a noble family. Both the paramount chiefs of the sections had some particular rights over all the vassals of the noble families of their sections as they had, for instance, the power to order that every vassal may give to them the same gift as to his individual patron or to oblige the patrons to pay, as a duty to the highest representative of the tribe, the tenth part of every gift or duty of their vassals.

The Māryā claim to be descendants of a warrior, Māryā, born from Saho stock, who emigrated with seventeen soldiers to the borders of the 'Ansbāb and was received there as a guest by the natives. But, afterwards, the sons of Māryā had so greatly increased that they were able to occupy the whole country and to drive the native tribes who became their vassals. These natives, who are called uṣrās on account of their origin, were really Abyssinians and Bedja. However, the Māryā and their vassals to-day speak only the Tigrē language; and the Saho, as the Bedja, has been wholly forgotten.

The Māryā were Christians but, about half a century ago, they were converted to Islam. Even their clans (as the 'Ad Te-mikātāl, a section of the "Red") and their ancestors till recent generations bore Christian names. In any case, Islamic law has gradually gained great influence, among the Māryā; and this has been from many points of view a real profit to the population, as the laws of Islam may moderate in a good way the ancient rough customs which entailed the privileges of the nobles and their mastery on the vassals. As a matter of fact, in the hereditary law, the prevalent right of the first born son and the exclusion of the daughters from the succession of their father's estates became gradually disused on account of the Islamic influences. In the same way, the custom of declaring slaves those vassals who could not pay their debts to the nobles and the great differences, in the penal law, as to the punishment of crimes perpetrated by the nobles or by the vassals, had already been diminished after the conversion of the Māryā to the Islam, when the occupation of Eritrea by Italy caused the complete abrogation of those rules.

MARYAM, Mary. The Arabic form of the name is identical with מרים and מריה which are used in the Syriac and in the Greek Bible in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew מרים. This name, like other ones with the same suffix, such as Amram, Bil'am, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation the name means "the pious" (al-‘āhid; cf. the commentaries on sūra iii. 31). It occurs frequently in the Qur'ān in the combination [Ths] Ibn Maryam "[Jesus] the son of Mary" (sūra ii. 81, 254; iii. 31 sqq.; iv. 156, 169; v. 19, 50, 76, 82, 109, 112, 114, 116; ix. 31; xii. 35; xxiii. 52; xxxii. 7; xlii. 57; lvi. 27; lxi. 6, 14), no father being mentioned, because, according to Muslim tradition also, Ḥsād had no earthly father. In the majority of these passages Ḥsā is clearly regarded as the higher of the two. Yet Maryam's place is important from a dogmatical as well as from a historical point of view.

Maryam is mentioned in the Qur'ān, from the oldest parts down to the later Madinese sūras. To the first Makkān period belongs sūra xxiii. 52: "And we made the son of Maryam and his
mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs". Here is possibly the first allusion in the Kurân to the virgin birth. This idea is accentuated in sura xix. 20, where Maryam gives the spirit (i.e. the angel) who announces to her the birth of a male child, this reply: "How should I have a male child, no human man having touched me?" In sura lxi. 12 the conception is ascribed to this divine spirit (cf. Luke i. 34 sq.) Then said Mary unto the angel, How shall this be, seeing I know not a man? And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee).

The virgin birth is also mentioned in sura lxi. 12 (Midianian): "And Maryam bint 'Imrân who kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient'.

A third mention of the annunciation and the virgin birth is in sura iii. 37: "When the angels said, O Maryam, verily Allâh has elected and purified thee and elected thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down" (cf. Luke i. 28). Maryam is indeed reckoned as one of the four best women that ever existed, together with Asiya [q.v.], Khadijâ [q.v.] and Fâtima [q.v.]. (Âmâd b. ʿHanîbî, Musnad, iii. 133), and the chief of the women of Paradise (Ibn ʿHanbîl, iii. 64, 63). According to tradition the annunciation took place in the following way: Djjibrîl appeared to Mary in the shape of a beardless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement; but, on the angel's reassuring answer, she complied with the will of God.

Thereupon the angel blew his breath into the fold of her skirt, which she had put off. When the angel had withdrawn, she put on the skirt and became pregnant. The announcement took place in the cavern of the well of Silwân, whither Maryam had gone, as usual, to fill her pitcher; she was then 10 or 13 years of age; and it was the longest day of the year. In Christian tradition also the voice of the angel was heard by Maryam for the first time when she had gone to fill her pitcher. According to a different tradition ʿIsâ's spirit entered Maryam through her mouth (Tabarti, Ta'hîrî, vi. 22).

A second important dogmatical feature is that Maryam belongs to the Trinity according to the Kurân. A glimpse of this conception is given in sura v. 79: "al-Masîb, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother an upright woman; and both were wont to take food". This verse is apparently meant as a refutation of the Christians who venerated ʿIsa and his mother as divine persons, elevated above human needs. With this verse may be compared sura v. 160: "O people of the book, beware of exaggeration in your religion and say of Allâh nothing but the truth. ʿIsâ b. Maryam is only the Apostle of Allâh and His word, which He conveyed unto Maryam, and a spirit that came forth from Him. Believe therefore, on Allâh and his Apostles and say not 'three'. Beware of this, this will be better for you. Allâh is but one God" etc.

Clearer is sura v. 116: "And when Allâh said, O ʿIsâ b. Maryam, hast thou said to the people, Take me and my mother as two Gods besides Allâh? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, Thou wouldst know it" etc.

The commentaries also derive the Trinity as consisting of Allâh, ʿIsâ and Maryam. Al-Baidâwî, however, admits that in sura iv. 169 there could be an allusion to the Christian doctrine of one God in three hypostases: Father, Son and Holy Ghost.

The question how Muhammad had come to conceive of Maryam as one of the persons of the Trinity, has often been asked. Maracci has made a reference to Epiphanius, Adv. Haereses, Haeres. lxxviii., § 23, where this author speaks of women in Arabia who venerated Mary as God, and offered to her cakes, from which the heresy is often called that of the Collyridians. Sale, in his Preliminary Discourse, p. 45, mentions the Martiâtes, who worshipped a Mary called Mary, the Son of God, Christ and Mary, referring to a passage to the work of al-Makîn. It may, however, be that Muhammad's conception was not influenced by any sect, but by the veneration of which Mary was the object in the Church itself. Or it may be an inference due to the identification of ʿIsâ with the Holy Ghost (cf. sura iv. 169 as translated above), which made a vacant place in the Trinity, which Mary seemed entitled to occupy. A different explanation is attempted by Sayous, l.c., p. 61 (see Bibliography).

A comparatively large place is occupied in the Kurân by the story of Maryam and ʿIsâ. Many of the features narrated agree partly or wholly, with narratives in the apocryphal Gospels. Sûra xxiii. 52 (see above) mentions the elevated place that was prepared for ʿIsâ and his mother. It is not clear which tradition is here alluded to. According to St. Luke i. 39, Mary went to the mountains to visit Elisabeth. In the Protevangelium Jacobi (chap. xxi; Syriac text, p. 20) it is Elisabeth who flees together with John to a mountain, which opens to protect them against their persecutors. The Muslim commentators mention Jerusalem, Damascus, Ramla, Egypt as being possibly meant by the "elevated place". Maracci thinks of Paradise.

In two passages of the Kurân there is a fuller narrative of ʿIsâ's birth and what is connected with it, viz. in sura xix. (which bears the title of Maryam), vs. 1–35, and in sura iii. 31–42.

Sûra xix. opens with the story of Zakariyâ and Yahyâ (vs. 1–15); on this follows the story of Maryam and ʿIsâ (vs. 16–34). Sûra iii. 31–42 contains a. the birth of Maryam; b. the annunciation of Yahyâ (vs. 33–39); c. the annunciation of ʿIsâ (vs. 37–41). The comparison of sura xix. with sura iii. makes it probable that Muhammad became acquainted with the story of the birth of Maryam later than with those of Yahyâ and ʿIsâ. The birth of Maryam goes back to a Christian tradition corresponding closely with that which is contained in the Protevangelium Jacobi and De nativitate Mariæ. Mary's father is called ʿImrân in the Kurân, Ioaichim in Christian tradition; Ibn Khaldûn (Iaur, ii. 144) is also acquainted with the name Ioaichim. It has been supposed that the name of ʿImrân, which apparently corresponds with the Biblical 'Amram, the father of Moses, as well as the fact that Maryam is called
a sister of Hārūn (sūra xix. 29), is due to a confusion between the two Biblical Maryam’s. Sale, Gerock and others think such a confusion improbable. At any rate Muslim tradition assures us that there is a distance of 4,500 years between the Biblical ‘Amram and the father of Mary.

‘Imrān’s wife, ‘Īsā’s grandmother, is not mentioned by name in the Kurān. In Christian as well as in Muslim tradition she is called Hanna. It is only in Muslim tradition that her genealogy is worked out. She is a daughter of Fākhūd and a sister of ‘Īshār, the Biblical Elisabeth.

Fākhūd

Hanna

married ‘Imrān

married Zakariyā’

Maryam

‘Īsā

Yahyā

According to a different genealogy ‘Ībāh and Maryam were sisters, daughters of ‘Imrān and Hanna (Mas. Hārūn, l. 120 sq.; Tabari, Ṭafsīr, iii. 144).

‘Īmran

1-ibāh

Maryam

Yahyā

‘Īsā

‘Īmran and Hanna were old and childless. One day the sight of a bird in a tree, which was feeding her young, aroused Hanna’s desire for a child. She prayed God to fulfill her desire and vows, if her prayer should be heard, the child to the temple. She had however forgotten that, according to the Jewish law, it would be impossible, to accomplish her vow, if she should give birth to a female child (cf. Protes. 1:20, chapters iii., iv., Syr. text, p. 4). Compare with this Sūra, in. 31: “How the wife of ‘Imrān said, O my Lord, I have vowed to Thee what is in my womb. Now accept [this vow] from me. Thou art the hearing, the knowing.” And when she had given birth to the child, she said, O my Lord, I have given birth to a female child... and I have called her Maryam.”

Then the Kurān relates how she invoked on behalf of Maryam and her posterity Allah’s protection from Satan. On this verse is based the well-known 3:40: “Every child that is born, is touched (or strung) by Satan and the touch makes it cry, except Maryam and her son (Dakhārī, ‘Arwāh, k. 44: Ṭafsīr, Sūra 3: 21: Muslim. Ṭafsīr: trad 140, 147; Ahmad b. Ḥanbal, Musnad, ii. 233-274, 303-378, 420, 368, 524). This tradition is used in support of the impeccability of Jesus of ‘Īsā, Maryam and the Prophet, in general of al-Nawawī of Muslim, i. c. and al-Bajjawi of Rāz in 31.”

The Kurān further relates (vs. 32) that the child grew up in a chamber in the temple (mubālā’): of the mubālā’ in Protes. 1: 20, etc.; Syr. text, p. 5 (c.) under the divine grace and under Zakariyā’s care. According to Muslim tradition, ‘Imrān had died before the birth of Maryam, and Zakariyā claimed authority over her on account of his being her uncle; the rabbis did not recognize his claim; his right was proved by an ordeal, consisting in the parties throwing their pens or arrows in a river; the only one that floated was that of Zakariyā. Sūra iii. 39 refers to this. Christian tradition knows of an ordeal only in the case of Joseph, who, because a dove comes forth from his staff, is recognized as Maryam’s guardian.

As often as Zakariyā enters Maryam’s mikrā, he finds her being provided with food in a miraculous way (vs. 32). This feature also belongs to Christian tradition (Protes. 1:20, chap. viii.; Syr. text, p. 7). The person of Joseph is not mentioned in the Kurān. In Muslim tradition he takes care of Maryam, his cousin, because Zakariyā is no longer able to do so, on account of old age. Maryam stays however in the temple, which she leaves during her monthly period only. According to Christian tradition, Joseph takes her into his house when she attains to womanhood, lest she should defile the temple.

b. The announcement of Yahyā. See this art. and Zakariyā.

c. The announcement and birth of ‘Īsā. The more detailed narrative is that of sūra xix. 16 sqq. Maryam retires to “a place situated eastward,” where she hides herself behind a curtain. The commentators do not know whether a place to the east of Jerusalem is meant, or the eastern part of her house, to which she retires every month. It is said that this is the origin of the biblia of the Christians.

In vs. 17—21 the story of the announcement is given (cf. above), followed by that of ‘Īsā’s birth, which, according to some Muslim traditions, followed the conception either immediately or very soon. The pains of childbirth came upon Maryam when she was near the trunk of a palm. “She said, would to God I had died before this, and had become a thing forgotten, and lost in oblivion. And he was beneath her [i.e. the child, or Dībril, or the palm] called to her, saying, Be not grieved; God has provided a rivulet under thee; and shake the trunk of the palm and it shall fall ripe dates upon thee, ready gathered. And eat and drink and calm thy mind.” This story may, perhaps, be considered as a variant of the Christian tradition in which it is related that, during the flight to Egypt, the babe Jesus ordered a palm in the desert to bow down in order to refresh Mary by its dates; whereupon the palm obeyed and stayed with its head at Mary’s feet, till the child ordered it to stand upright again and to open a vein between its roots in order to quench the thirst of the holy family (Apcryphal Gospel of Matthew, chap. xx.). The Kurān goes on (vs. 26): “And when thou seest any man, say, I have vowed a fast unto the Merciful; so I may speak to any man to-day.” The commentators say, this was meant to avoid importunate questions. This feature is not in Christian tradition; yet in the Protes. 1:20 it is said (chap. xii.; Syr. text, p. 11) that Mary, who was then 16 years of age, hid herself from the Israelites. According to Muslim tradition, she stayed in a cavern during forty days. “Then she brought him,” continues the Kurān (xix. 28), “to her people, carrying him. They said, O Maryam, now thou hast done a strange thing. O sister of Hārūn, thy father was not a bad man, neither was thy mother a harlot. Then she pointed to the child.” Then the child begins to speak, one of the wellknown
miracles ascribed to 'Isa. The "very shameful calumny" which the Israelis brought forth against Maryam, is also mentioned in sūra 145.

As to the words "O sister of Hārūn" (cf. above), it may be added that, according to the commentators, Hārūn was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi, is mentioned by al-Ma'sūdī, iv. 79 sq.

The flight to Egypt is not mentioned in the Korān, unless the "elevated place" (sūra xxii. 52; cf. above) should be an allusion to it. According to Muslim tradition which is acquainted with it, the abode lasts 12 years. After the death of Herod the holy family returns to Naṣrā.

After his alleged death 'Isa consoles his mother from heaven. According to others it was Mary Magdalene. The stories of the Transtilus Morias have not obtained a place in Muslim tradition. Instead of these, there is a narrative of how Maryam went to Rome in order to preach before Mārūt (Nero), accompanied by John (the disciple) and Šimʿūn, the coppersmith. When Šimʿūn and Tadhāwus (Thaddeus?) were crucified with their heads downward, Maryam fled with John. When they were persecuted the earth opened and withdrew them from their persecutors. This miracle was the cause of Mārūt's conversion.

(A. J. Wensinck)

**MARZUBĀN**, Arabic form of the title of provincial governors in the Sasanian empire, especially of the "wardens of the marches", the "markgraves". The word is derived from Marzūb, which still means in Persian a frontier district (Horin Grundriß der neuzeitischen Etymologie, p. 218) and is found in Pehlevi in the form marzptān (in the Kūrān; cf. H. S. Nyberg, Hilschau der Pehlevi, i., Upsala 1928, p. 54) which suggests a north Iranian origin (cf. Lentz, Z.I.R., iv. 255, 295), as we find alongside of marzā also marzī in Persian (Horn, loc. cit.). The title is not found, however, before the Sasanian period and in the great inscription of Paikuli, the warden-s are called bīdhakht (Arm. bēdakht), also a north Iranian title (Herzfeld, Paikuli, Berlin 1924, p. 155; cf. also Marguer, Érannahr, p. 165 sqg.). In Syriac we find the forms marzēh and marzēbānā (Payne-Smith) and the Armenian has marzēp and marzēn (Hubschmann, Armenische Grammatik, p. 193). Persian finally has kept the word as marzēh, marzēbān or marzēvān (cf. e.g. the Burhān-i Kāṭi'). It is from Arab sources that we are more particularly informed of the duties of the marzēbān. Al-Yaʿqūbī (Taṣfīr, ed. Houtsma, i. 201) says that it was the title of the ūrīs al-balad, while the four great divisions of the empire were governed by ūrīs ghaṣṣān. The historians al-Ṭabarī and al-Baladhuri tell us of the different marzēbān encountered by the Arabs in their conquests (cf. the list of provinces ruled by a marzēbān, drawn up by Baladhuri, and given by Noldeke in Gesch. d. Perser und Araber, Leyden 1879, p. 446). In this period we find these governors independently of any higher authority and concluding truces and treaties. They sometimes retained their offices after the Arab conquest. Under the Sasanians the marzēbān were far from having such an independent position. We sometimes find them acting as generals under the command of the ṣāḥib al-ṣafar (e.g. Joshua Stylites, ed. Wright, p. 61).

Although the title gradually fell into disuse, Muslim Persia still retained the word, used in its original sense of "warden of the marches". It is frequently found in literature (cf. Saʿdī, Ṣudān, ed. Graf, p. 73). On the other hand after the Sasanian period, marzēbān and its variants became the proper name (in Arabic sometimes al-Marzēbān) among Muslims and also among Persis (cf. the names of the copyists of Pahlavi manuscripts; cf. especially Justi, Iranisches Namengebuck, s. v. Marzēbān).

(J. H. Kramer)

**MARZUBĀN b. RUSIAM**, a prince of the Bawand dynasty of Tabaristan [q. v.] regarded as the original author of the Marzubān-nāma, a work in Persian prose containing a series of short stories and fails to be of a moral and didactic character. This book is known in two versions in elegant Persian of the sixteenth century, the author of one of which was Saʿd al-Din al-Warāwī; he dedicated it to Abu ʿl-Kāsim Ribāb al-Din, vizier of Uzbek b. Muhammad b. Idlegiz, Atabeg of Adharba içīan from 1210 to 1225. These dates give us probable limits for the composition of the book. The other version is the work of Muhammad b. Gāzī al-Malayawī, secretary and later vizier of Rukan al-Din Sulaiman-Shāh, Saddūkī of Rūm, who reigned from 1192 to 1204. It is called Rukn al-ʿāzīl and differs a good deal in form and contents from the other, which is called the Marzubān-nāma.

In the preface by Saʿd al-Din al-Warāwī we are told that the original work had been written in the language of Tabaristan and the ancient Pārsī, the popular language, but that thanks to him this valuable work had been given a new life after 400 years (p. 6 and 33 of Muṣṭa Muhammad Karwāni's edition). In the first chapter Marzūbān b. Sharīw, descendant of Kayūs, brother of the Sasanian king Anušīrwan, is mentioned as waḍīl
The Rawdat al-ʻUkāl on the contrary attributed the original book to a descendant of the Ziyārid Kābūs b. Wadhīqir and says simply that it is written in a coarse style. Apart from these, there are very few references to the book in Persian literature. The author of the Kābul-nāma (composed in 1082) says that the grandmother of his mother was the daughter of the prince Marzubān b. Rustam b. Shahrān, author of the Marzubān-nāma. Ibn Isfandiyār in his Tārīkh Tabaristān (written in 1216) speaks of the Isfahān Marzubān b. Rustam b. Shahrān Parīm as the author of the Marzubān-nāma, a work which is in every way better than the book of Kābul-nāma. He adds that this same Marzubān composed a Dīwān in Tabarī verse called the Nīkīn-nāma (cf. An abridged Translation of the History of Tabaristan, by E. G. Browne, London 1905, p. 86); finally the Persian bibliographer Rifāʿa Kulli Khān in the Foroughi-Nāṣirī speaks of the Marzubān-nāma as having been written by Marzubān b. Rustam and dedicated to (muntazāmī) the emir Kābul Shams al-Maṣūlī; in the Majmuʿ al-ʻUkālī the same author incidentally mentions the Marzubān-nāma.

These very incomplete and sometimes contradictory statements have caused Mirzā Muhammad Kazwini to suggest that the individual who gave the book its name was Marzubān, son of the "king" of Tabaristan, Rustam b. Shahrān b. Shahrān b. Rustam b. Sarīšt, a descendant of Bāb, son of Kayās, brother of Anushirwān. This genealogy is based on Ibn Isfandiyār’s work and seems more probable than that given by Schefer (Christ. pers., iv, p. 194), who thinks that Marzubān was the son of the son of Rustam. The date of Rustam b. Shahrān b. Shahrān, who was in all probability the father of Marzubān, is only known from a coin of the year 355 (966) (H. L. Rabino, Marzubān and Astarābād, London 1928, G. M. S., N.S. vi, p. 136); Marzubān must have therefore flourished about 1000 A.D., i.e. during the period of the Persian renaissance.

In the first chapter of the Marzubān-nāma Marzubān is described as the brother of the reigning "king" (peydaft Darā b. Rustam, who reigned for 8 years; cf. Rabino, loc. cit.) who begged to be allowed to live a life of seclusion and to compose a book containing "wise counsels and useful directions for the conduct of life in this world". In this connection he has a dispute with the king and his vizier in the course of which he relates several anecdotes. The other chapters continue in the same style. Several of the fables and anecdotes are found in other books just as we find similar stories in the book of Kābul-nāma and in the Arašīn Nāṣirī. The collection therefore belongs to an essentially Persian literary type, which has had considerable influence on Arabic literature. Since its contents have not been examined for comparison, it would be too hazardous to express an opinion on its relation to similar collections and popular Persian stories. It is very possible that a number of the stories are of Turanian origin. On the other hand, we ought perhaps not to credit the statement that originally it was written in the Tabarī dialect; for then we should have to believe that the two authors of the new recension knew this dialect, about which however, we only have the notes in the Tārīkh Tabaristān of Ibn Isfandiyār. Perhaps the reference is to a text in archaic Persian like the probable language of the Khudā-nāma which Firdawsi used (cf. Noldke, Geschichte des Artachsrī Pāhpān, Gottingen 1879, p. 27) and the source of a poem like Wīs u-Kārūn, a text which no longer pleased the taste of the literary connoisseurs of the sixth century.

The Marzubān-nāma was published by Mirzā Muhammad Kazwini in 1908 (G.M.S., vii.) from a manuscript in the British Museum (Or. 6476) with the help of two other MSS. in the same collection, one in the Bibliothèque Nationale and another sent from Persia. The Paris manuscript had already been used for the publication of extracts from the Marzubān-nāma (Ch. Schefer’s Christliche Persen, Paris 1885, p. 172—199). The Rawdat al-ʻUkāl is represented by a manuscript in Leyden (cf. M. Th. Houtsma, Eine unbekannte Bearbeitung des Marzubān-nāma, Z. D. M. G., li, 359—392) and another in Paris. Mirzā Muhammad has given extracts from it in the preface to his edition. There is also an Arabic version of the same work from the pen of Ibn ʻArabshāh, based on a Turkish version of Sa’d al-Warāwīn’s recension; this Arabic text was lithographed at Cairo in 1278.

Bibliography: The philological data have been collected by Mirzā Muhammad Kazwini in the preface of his edition; Schefer’s observations (p. 194—211) are to be utilised with caution. Cf. also: H. Ethé, Neupersische Litteratur, in Grundris. d. iran. Phil., ii, 328 sqq., and E. G. Browne, A Literary History of Persia, ii, 115, 489.

(M. KRAMERS)

MASCARA. [See SA‘IY.]

MASAGAN. [See MAZAGHĀL.]

MASCARA, a town in Algeria (department of Oran), 50 miles S.W. of Mostaganem and 60 S.E. of Oran. Its position is 35° 26' N. Lat. and 8° 16' E. of Greenwich. It lies on the southern slope of the Beni Shīrīn range, called by the Arabs Shārīb al-Rīh and is built on the edge of a ravine at the bottom of which runs the Wādī Sīdi Tūdjman on the other side of which to the N.W. lies the native faubourg of Bāb ʻAli. Mascara commands the plain of Egbrīn, which measures 25 to 50 miles from W. to E. and 10 to 12 miles from N. to S. and is one of the most fertile regions of Algeria. The natives have grown cereals here from the earliest times and the Europeans have introduced tobacco and created vineyards, the production of which is celebrated. It is the market for a region, becoming more and more prosperous, and by the census of 1926 had 30,669 inhabitants of whom 16,630 were natives.

Mascara is of considerable antiquity. According to Bakri (Masālīk, transl. de Slane, rev. by Fagnan, 160), it included among its inhabitants people who came from Tihert (Tīret) some of whom went and settled at Iqaq, a day’s journey S., when this town was founded by Yaḥyā b. Mūḥammad, son of Sallāh the Irānīd, in 338 (949—950 A.D.). Ibn Hawqal (Description de l’Afrique, transl. de Slane, Journ., Av., 1842) and Idissi (transl. de Goeje, p. 96) mention Mascara as a large well watered village rich in fruits. The Almohads seem to have built a fortress there. The Ziyānids of Tlemcen kept a governor and a garrison there. Leo Africanus (Bk. iv, ed. Schefer, vol. iii, p. 34) notes the importance of the market which was held at Ma-cara "one of the towns of the Beni Rasi‘ (Rāsā Rażīd) where one could buy, along with cereals in large quantities, cloth and articles of
harness manufactured in the country. The rulers of Tlemcen drew considerable revenues from it: 40,000 pistoles, according to Marmol (Africa, vol. ii., p. 350).

The Turks established themselves at Mascara in the xvith century and placed a garrison there. In 1701 they made it the capital of the beylik of the west, which had hitherto been Mazmûn in Dabra. The beys lived there till Oran was reoccupied by the Algerians in 1792. During this period, Mascara, which had hitherto only been an insignificant place, began to look like a regular town. The beys built two mosques and a madrasa, a wall and a kasaba and brought in a water-supply. The manufacture of burnouses and háls, celebrated throughout the Regency, enriched the inhabitants. This prosperity began to decline after the beys left Mascara and especially after the risings, which broke out in the province of the west in the beginning of the xith century. The Darkâwi Ben Sherif seized the town in 1805 and held it for a time. In 1827 it was attacked by the marabout Muhammad al-Tijjâni. Supported by the Hashim he gained possession of the faubourg of Bâb 'Ali but was killed by the Turks when preparing to storm the town itself. At the end of Turkish rule, 'Abd al-Kâdir [q. v.] who had proclaimed Şulfân by the tribes of the plain of Egiris, established his seat of government at Mascara, but barely lived there. An expedition, in the month of December 1836 led by Marshal Claudel, occupied Mascara which the French abandoned next day, after burning down part of it. The emir returned to the town and held it till May 30, 1841, when a column under Bugeaud occupied it finally for the French. Mascara, then half in ruins, had only a population of 2,840 inhabitants.

Architecture.

A. Origin of the Mosque.

The word MASDID is found in Aramaic, the earliest occurrence being in the Jewish Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. Schwally, Z.D.M.G., lii., 1898, p. 134; Liddel, Handbuch d. nordem. Epigr., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from הדר "to prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papry (ed. Sachau, pl. 32, ed. Ungnad, No. 35; Cowley, Aramaic Papry of the Fifth Cent. E. G., No. 44), also frequently in Nabatean (Corp. Inscrip. Semit., ii. 161, p. 179, 185, 188, 190, 218; ed. ship of God in "God's own mosques" (Sūra ii. 108). The result was that it was revealed in the year 9: "It is not right for polytheists to frequent the mosques of God" (Sūra ix. 17 sq.) and the opponents of the new religion were therefore excluded from the sanctuary. The Sūra agrees with the Kūfān, that the sanctity of al-Masjid al-Haram, on which it had been used from childhood was always regarded by him as indisputable. Like other Meccans, he and his followers regularly made the ḏāwīf around the Ka'ba and kissed the Black Stone (e.g. Ibn Hīšām, p. 183, 12 sq.; 239, 8, 251, 13); it is frequently stated that he used to sit in the masjid as his fellow-citizens, alone or with a follower or disputing with an opponent (Ibn Hīšām, p. 233, 61: 251, 13: 252, 14: 259, 260, 294, 15 sq.). It is related that he used to perform the ʿalāf between the Yamūn corner and the Black Stone, apparently from the narrator's context very frequently (Ibn Hīšām, p. 196, 13 sq.). After his conversion, 'Umar is said to have arranged that behind the Ka'ba he performed the ʿalāf; and in the Kūfān (Ibn Hīšām, p. 224, 43 sq.; 17 sq.) it is strongly Muhammad felt himself attached to the Arab sanctuary is evident from the fact that he took part in the traditional rites there before the ḥijra (Sūra xviii. 21; in the year 1, one of his followers, ʿAbd b. Muṣā'īd, took part in the pilgrimage ceremonies and in the year 2 he himself sacrificed on the rost Dhū al-Ḥijja on the muʿāṣa of the Bani Salīma. He therefore, here as elsewhere, retained ancient customs where his new teaching did not directly exclude them. But when an independent religion developed out of his preaching, a new type of divine service had to be evolved.

In Mecca, the original Muslim community had no special place of worship. The Prophet used to perform the ʿalāf in secret in the narrow alleys of Mecca with his first male follower 'Abī Ali and with the other earliest Companions also (Ibn Hīšām, p. 159, 160, 1 sq.). The references are usually to the solitary ʿalāf of the Prophet, sometimes beside the Ka'ba (Ibn Hīšām, p. 190, 9 sq.), sometimes in his own house (Ibn Hīšām, p. 203, 15 sq.). That the believers often prayed together may be taken for granted; they would do so in a house (cf. Ibn Hīšām, p. 202). Occasionally also 'Umar is said to have conducted the ritual prayer with others beside the Ka'ba (Ibn Hīšām, p. 224) because 'Umar was able to defy the Kūrāsh. When the Prophet recited in the mosque the revelation, later abused, recognising al-Lāt, al-ʿUzza and Maʿāṣir, according to the legend, not only the believers but also the polytheists present took part in the sujud (Tabari, i. 1192 sq.). 'Abū Bakr is said to have had a private place of prayer (masjid) in Mecca in his courtyard beside the gate; the Kūrāsh, we are told, objected to this because women and children could see it and might be led astray by the emotion aroused (Ibn Hīšām, p. 246; Bukhārī, Šaīlāt, B. 86: Kāfī, B. 14 etc.; Missed, B. 22).

In the dogma taught by Muhammad a sanctuary was not a fundamental necessity. Every place was the same to God and humanity in the presence of God, of which the ritual prayer was the expression, could be shown anywhere; hence the saying of the Prophet that he had been given the whole world as a masjid, while earlier prophets could only pray in churches and synagogues (Wāqid, transl. Wellhausen, p. 403; Corpus juris di Zaid b. ʿÂli, ed. Griﬃni, p. 50 and clixix; Bukhārī, Šaīlāt, B. 56; Taʾwīrūn, B. 1; Muslim, Masjid, B. 11; Thabrānī, Tr. 1) and also the saying: "Wherever the hour of prayer overtakes thee, thou shalt perform the ʿalāf and that is a masjid." (Muslim, Masjid, Tr. 1). That he nevertheless remained firmly attached to the traditional sanctuary of the Ka'ba, produced a confusion of thought which is very marked in Sūra ii. 136 sqq. When in Medina he was able to do as he pleased, it must have been natural for him to create a place where he could be undisturbed with his followers and where they could perform the ritual ʿalāf together.

2. The Foundation of the Mosque in Medina.

According to one tradition the Prophet came riding into Medina on his camel with Abū Bakr as ṣibāf surrounded by the Banū Nadījarra. The camel stopped on Abū Aiyūb's ṣuqān. Here (according to Amma) the Prophet performed the ʿalāf and immediately afterwards ordered the mosque to be built and purchased the piece of land from two orphans, Sālih and Siyāh, who were under the guardianship of Muqādī b. Aʿfā', for 10 dinārs, after declining to accept it as a gift; he lived with Abū Aiyūb until the mosque and his houses were completed. During this period he performed the ʿalāf in courtyards or other open spaces (Bukhārī, Šaīlāt, B. 48; Muslim, Masjid, Tr. 1; Ahmad b. Ḥanbal, Muṣnad, iii. 212 above; Ibn Hīšām, p. 336; Tabari, i. 1258 sq.; Masʿūdī, Muqādī, iv. 140 sqq.). According to this tradition, the building of the mosque was intended by the Prophet from the first and the choice of the site was left to the whim of his mount. According to another tradition the Prophet took up his abode with Abū Aiyūb, but during the first period of his stay in Medina he conducted the ʿalāf in the house of Abū Umāma Aṣād, who had a private masjid, in which he used to conduct ʿalāfs with his neighbours. The Prophet later expressed the desire to purchase the adjoining piece of ground and he bought it from the two orphans, who, according to this tradition, were wards of Aṣād (Bahlūl, Fustāt al-Bulūš, ed. de Goeje, p. 6; cf. Wustenfeld, Gesch. d. Stadt Medina, p. 60).

The site was covered with graves, ruins (khirāt; also barth, Tabari, i. 1259, 17; 1260, 1; cf. Ahmad b. Ḥanbal, Muṣnad, iii. 212, 7, perhaps due to an old misreading) and palm-trees and was used as a place for keeping camels (and smaller domestic animals, Bukhārī, Wudā', B. 66). The site was cleared, the palms cut down and the walls built. The building material was bricks baked in the sun (latīn) (Ibn Hīšām, p. 337; Bukhārī, Šaīlāt, B. 62, 65; according to one tradition they were baked at the well of Fāṭima, Wustenfeld, Stadt Medina, p. 31); in places it was a courtyard surrounded by a brick wall on a stone foundation with three entrances: the gateposts were of stone. On the šībāa side (i.e. the north wall) at first two, the stems of the palm-trees which had been cut down were soon set up as columns and a roof was put over them of palm-leaves and clay. On the east side two cuts of similar materials were put for the Prophet's wives Sawāda and Aʿīsha; their entrances opened on to the court and were covered with carpets: they were later increased so that there were nine
little houses for the Prophet's wives. When the *kibla* was moved to the south, the arbour at the north wall remained; under this arbour called *ṣaffa* or *ṣula* the homeless Companions found shelter (Bukhārī, *Ṣaḥīḥ*, B. 48, 62; Wustenfeld, *Medina*, p. 60 sq., 66; Dīyārībāriz, *Ṭairīḥ al-Ḳamīs*, Cairo 1302, i. 387 sqq.; on the *ṣaffa*, p. 387 in the middle; 391 after the middle; cf. L. Caetani, *Annales dell’Islam*, i. 377 sqq.). In seven months the work was completed (Wustenfeld, *Medina*, p. 59), according to others in the month of Safar of the year 2 ( Ibn Ḥishām, p. 339, 18 sq.). The mosque was very simple. It was really only a courtyard with a wall round it; the *ṣaffa* already mentioned supplied a shelter on the north side, while on the south side, later the *kibla* side, an arbour was probably built also, for the Prophet used to preach leaning against a palm-trunk and this must have been on the *kibla* side. How large the arbours were cannot be ascertained. The mosque was the courtyard of the Prophet's houses and at the same time the meeting-place for the believers and the place for common prayer.

According to the sources, it was the Prophet's intention from the very first to build a mosque at once in Medina; according to a later tradition Gabriel commanded him in the name of God to build a house for God (Khamīs, i. 387 infra); but this story is coloured by later conditions. It has been made quite clear, notably by L. Caetani (*Annales dell' Islam*, i. 432, 437 sqq.) and later by H. Lammens (*Mecca*, p. 8, note 5, 62 etc.; do., *Ziād*, p. 30 sqq., 93 sqq.) that the earliest mosque had nothing of the character of a sacred edifice. Much can be quoted for this view from Ḥadīth and Sira (cf. *Annales dell' Islam*, i. 440). The unconverted Ḥaḍākhīs were received by the Prophet in the mosque to conduct negotiations and he even put up three tents for them in the courtyard (Ibn Ḥishām, p. 916; Wāṣīkī-Wellhausen, p. 352) and envoy's from Tamīm also went freely in the mosque and called for the Prophet, who dealt with them after he had finished prayers (Ibn Ḥishām, p. 933 sq.; Wāṣīkī-Wellhausen, p. 356). Ibn Unais brought to the masjid the head of the Hudhaylī Sufyān, threw it down before the Prophet and gave his report (Ibn Ḥishām, p. 981 sq.; Wāṣīkī-Wellhausen, p. 225). After the battle of Uḥd the Medina chiefs spent the night in the mosque (Wāṣīkī-Wellhausen, p. 149). The Awsīs tended their wounded here (ibid., p. 215 sq.; Tābārī, i. 1491 sqq.); a prisoner of war was tied to one of the pillars of the mosque (Bukhārī, *Ṣaḥīḥ*, B. 76, 82; cf. 75). Many poor people used to live in the *ṣaffa* (Bukhārī, *Ṣaḥīḥ*, B. 58); tents and huts were put up in the mosque, one for example by converted and liberated prisoners, another by the Banū Ghifār, in whose tent Sa'd b. Muʿādh died of his wounds (ibid., B. 77; *Uṣd al-Qāhiba*, ii. 297). People sat as they pleased in the mosque or took their ease lying on their backs (Bukhārī, *Ṣaḥīḥ*, B. 63; Saḥīḥ, bāb 85; Ibn Sa'd, i. 124, 14); even so late as the reign of 'Umar it is recorded that he found strangers sleeping in a corner of the mosque (*Kāmil,* p. 118, 13 sqq.); the Prophet received gifts and distributed them among the Companions (Bukhārī, *Ṣaḥīḥ*, bāb 41); disputes took place over business (ibid., bāb 71, 83) and in general people conducted themselves as they pleased. Indeed, on one occasion some Sudanic or Abyssinian with the approval of the Prophet gave a display with shield and lance on the occasion of a festival (do., *Ṣaḥīḥ*, bāb 69; *Idāīn*, bāb 2, 25; Līḥādh, bāb 81) and on another a stranger seeking the Prophet rode into the mosque on his camel ( do., *Ṣaḥīḥ*, bāb 6). So little "sanctified" was this, the oldest mosque, that one of the Munājahīm, ejected for scoffing at the believers, could call to Abī Ayyūb "Are you throwing me out of the *mīrqāb bani Thā'labah*?" (Ibn Hishām, p. 98).

All this gives one the impression of the headquarters of an army, rather than of a sacred edifice. On the other hand the mosque was used from the very first for the general divine service and thus became something more than the Prophet's private courtyard. Whatever the Prophet's intentions had been from the first, the masjid with the increasing importance of Islam bound to become very soon the political and religious centre of the new community. The two points of view cannot be distinguished in Islam, especially in the earlier period. The mosque was the place where believers assembled for prayer around the Prophet, where he delivered his addresses, where he carried on transactions. It not only appeals for obedience to God but regulations affecting the social life of the community (cf. Bukhārī, *Ṣaḥīḥ*, bāb 70, 71); from here he controlled the religious and political community of Islam. Even at the real old sanctuaries of Arabia, there were no restrictions on what one could do; what distinguished the mosque from the Christian church or the Meccan temple was that in it there was no specially dedicated ritual object. At the Ka'ba also people used to gather to discuss everyday affairs and also for important assemblies, if we may believe the Sīrah (Ibn Ḥishām, p. 183 sq., 185, 1, 229, 3, 248, 257, 12). Here also the Prophet used to sit; strangers came to visit him; he talked and they disputed with him; people even came to blows and fought there (Ibn Ḥishām, 183 sq., 185 sq., 187 sq., 202, 13, 257, 259; *Chron. d. Stadt Mecka*, ed. Wustenfeld, i. 223, 11). Beside the Ka'ba was the Dūr al-Nadwa, where important matters were discussed and justice administered (ibid., see index). From the Medina mosque was developed the general type of the Muslim mosque. It depended on circumstances, whether the aspect of the mosque as a social centre or as a place of prayer was more or less emphasised.

3. Other Mosques in the time of the Prophet.

The mosque of the Prophet in Medina was not the only one founded by Muslims in his lifetime and according to tradition not even the first, which is said to have been the mosque of Kūba. In this village, which belonged to the territory of Medina (see Wustenfeld, *Geschichte der Stadt Medina*, p. 126), the Prophet on his Hajj stayed with the family of 'Amr b. 'Awf; the length of his stay is variously given: 3, 5, 8, 14 or 22 days. According to one tradition, he found a mosque there on his arrival, which had been built by the first emigrants and the Ansār and he performed the salah there with them (see Wustenfeld, op. cit., p. 56; Baladhurī, *Futūḥ al-Buldān*, p. 1; Dīyārībāriz, *Ṭairīḥ al-Kamās*, Cairo 1302, 1, 380 sqq.). According to another tradition, the Prophet himself founded the mosque on a site, which belonged to his host Kūhām and was used as a *mīrqāb* for drying dates or according to others,
to a woman named Labba, who tethered her ass there (Wüstenfeld, Medina, p. 131; Ibn Hisham, p. 335; Tabari, i, 1260; 6; Ibn Sa'd, i, 1, 6; Masudi, Muruj, iv, 139; Diyarbakr, Khamsi, i, 381; al-Sira al-Halabyya, Cairo 1920, ii, 58 sq.).

But of this tradition arose a legend based on the story of the foundation of the principal mosque in Medina: The Prophet makes (first Abū Bakr and 'Umar without success), then 'Ali mount a camel and at the place to which it goes builds the mosque with stone brought from the Hara; he himself laid the first stone, and Abū Bakr, 'Umar and 'Uthmān the next ones (Khamsi, i, 381). The Prophet is said to have henceforth visited the mosque of Kūba' every Saturday, either riding or walking and the pillar is still shown beside which he conducted the service (Bukhārī, Fadl al-Salāt fi Masjid Makkah zai 'l-Madina, bāb 2, 4; Muslim, Ḥadīṯ, tr. 94; Khamsi, i, 382. Bādhur, p. 5). We are occasionally told that he performed his salat on the Sabbath in the mosque at Kūba' when he went to the Banū Salām in Kūba' 1 of the year 4 (Wākidī-Wellhausen, p. 161).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque. The only question is whether the old tradition that the mosque was founded either by the Prophet himself or even before his arrival by his followers is also a later invention. We thus come to the question whether the Prophet founded or recognised any other mosques at all than that of Medina. I. Caetani, in keeping with his view of the origin of the mosque, is inclined to deny it, pointing to the fact that there was later an obvious tendency to connect mosques everywhere with the Prophet and that 'ūmarī 108 strongly condemn the erection of an opposition mosque' (M. al-Dīrārī). The Kūrān passage is as follows: 'Those who have built themselves a masjid for opposition (dīrār) and unbelief and division among the believers and for a refuge for him who in the past fought against God and his Prophet, and they swear: we intended only good. God is witness that they are liars! Thou shalt not stand up in it, for verily a masjid which is founded on piety from the first day of its existence has more right that thou shouldst stand in it; in it are men who desire to purify themselves and (God loves) those who purify themselves' (Sūra, iv, 108–109). According to tradition this was revealed in the year 9: when the Prophet was on the march to Tabābīk, the Banū Sālim said to him that they had built a mosque to make it easier for their feeble and elderly people, and they begged the Prophet to perform his salāt in it and thus give it his approval. The Prophet postponed it till his return, but then this revelation was made, because the mosque had been founded by Maaṣira al-Qāhi, at the instigation of Abū 'Amir al-Kāhīb, who fought against the Prophet. According to one tradition (so Ibn 'Umar, Zu'd) the mosque was founded on piety' was that of Medina from which the people wi-hed the penitent themselves: according to another (Ibn 'Abbas) the reference was to that of Kūba'; Abū 'Amir and his followers were not comfortable among the Banū 'Amir b. 'Awwīf and therefore built a new mosque. According to some traditions it was in Dūh Awān. The Prophet however had it burned down (Tabari, i, 1704 sq.; Ibn Hishām, p. 357 sq.; 906 sq.; Ibn Sa'd, i, 1, 6; Wākidī-Wellhausen, p. 410 sq.; Tabari, Tafrīr, xl, 17 sqq.; Wüstenfeld, Medina, p. 131; al-Sira al-Halabyya, ii, 60; Bādhur, p. 1 sq.; Muslim, Ḥadīṯ, tr. 93). If the connection with the Tabābīk campaign is correct, the Masjid al-Dīrārī is to be sought north of Medina; 'the mosque founded on piety' would then be the mosque of Medina rather than that of Kūba' which lies to the south of it. There is in itself nothing impossible about the rejection in principle of any mosque other than that of Medina. We should then have to discard the whole tradition, for, according to it, the Prophet is at first not unfavourably disposed to the new mosque and his wrath, according to the tradition, arises from the fact that it had been founded by a refractory party. But as a matter of fact there are indications that a number of mosques already existed in the time of the Prophet; for example, the verse in the Kūrān: in houses, which God hath permitted to be built that His name might be praised in them, in them men praise Him morning and evening, who neither business nor pleasure nor praising God and performing the salāt and the giving of alms' etc. (Sūra xxiv. 36 sq.). If this revelation, like the rest of the Sūra, is of the Medina period, it is difficult to refer it to Jews and Christians, and this utterance is quite clear: "Observe a complete fast until the night and touch thou them (i.e. women) not while ye are in the mosques" (Sūra ii. 183). This shows that there were already in the time of the Prophet, several Muslim mosques which had a markedly religious character and were recognised by the Prophet. That there were really public places of prayer of the separate tribes at a very early date is evident from the tradition that the Prophet in the year 2 offered his sacrifice on the 10th Dhu 'l-Hijja on the Musallā of the Banū Sālima. In addition there are constant references to private masjid where a few believers, like Abū Bakr in Mecca, made a place for prayer in their houses and where others sometimes assembled (Bukhārī, Sīrāt, bāb 46, 87; Tahādīḏīna, bāb 30; cf. also Aisha, bāb 50).

B. Origin of Mosques after the Time of the Prophet.

1. Chief Mosques.

What importance the Medina mosque had attained as the centre of administration and worship of the Muslims is best seen from the fact that the first thought of the Muslim generals after their conquests was to found a mosque as a centre around which to gather.

Conditions differed somewhat according as it was a new foundation or an already existing town. Important examples of the first kind are Bāṣra, Kūfa and al-Fusṭāt. Bāṣra was founded by 'Utb b. Nāfi' as winter-quarters for the army in the year 14 (or 16 or 17). The mosque was placed in the centre with the Dār al-Imārā, the dwelling of the commander-in-chief with a prison and Diwan in front of it. Prayer was at first offered on the open space which was fenced round; later the whole was built of reeds and when the men went off to war the reeds were pulled up and laid away. Abū Ṣa'id al-Asbāhī, who later became 'Umar's Wali, built the edifice of clay and bricks baked in the sun (lāhin) and used grass
for the roof (Baladhouri, p. 346 sq., 350; B.G.A., v. 187 sqq.; Yākūt, Muddām al-Dīlānā, i. 67, 6 sqq.; cf. Tabari, i. 2377, 4 sqq.). It was similar in Kūfah which was founded in 17 by Sa’d b. Abi Waqqās. In the centre was the mosque and beside it the Dār al-Isfārār was laid out. The mosque at first was simply an open quadrangle, jawb, marked off by a trench round it. The mosque was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Sa’d used tabin. On the south side (and only here) there was an arbour, zulūl, built (cf. Baladhouri, p. 348, 1; zuffā). The Dār al-Isfārār beside the mosque was later by ‘Umar’s orders combined with the mosque (Tabari, i. 2481, 7 sqq.; 2485, 16; 2487 sqq.; 2494, 14; Yākūt, Muddām, iv. 323, 10 sqq.; Baladhouri, p. 275 sqq.; cf. Annali dell’Islam, iii. 546 sqq.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in Tabari, i. 2489, 4 sqq.); the importance of the mosque was also expressed in its position and the commander lived close beside it. There was no difference in al-Fusṭāt, which, although there was already an older town here, was laid out as an entirely new camp. In the year 21, after the conquest of Alexandria, the mosque was laid out in a garden where ‘Amr had planted his standard. It was 50 dhūra long and 30 broad. Eighty men fixed its kibla, which however was turned too far to the east, and was therefore altered later by Kurra b. Sharik. The court was quite simple, surrounded by a wall and had trees growing on it; a simple roof is mentioned; it must have been identical with the above mentioned zulūl or zuffā. ‘Amr b. Abi ‘Asi lived just beside the mosque and around it the Ahl al-Ra’aya. Like the house of the Prophet, the general’s house lay on the east side with only a road between them. There were two doors in each wall except the southern one (Yākūt, Muddām, iii. 898 sqq.; Makrizi, Khatīb, iv., Cairo 1326, p. 4 sqq.; Ibn Duqmāt, K. al-Inṣār, Cairo 1893, p. 59 sqq.; Suyūṭī, Ḥusn al-Muddāhara, i. 63 sqq.; ii. 135 sqq.; cf. Annali dell’Islam, iv. 554, 557, 563 sqq.). We find similar arrangements made in al-Mawsil twenty years earlier (Baladhouri, p. 331 sqq.).

In other cases the Muslims established themselves in old towns either conquered or surrendered by treaty; by the treaty they received a site for their mosque (e.g. Baladhouri, p. 116, 14, 147, 5). But the distinction between towns which were conquered and those which were surrendered soon disappeared and the position is as a rule not clear. Examples of old towns in which the Muslims established themselves are al-Madā’in, Damascus and Jerusalem. — In al-Madā’in Sa’d b. Abi Waqqās after the conquest distributed the houses among the Muslims and Kisra’s Iwān was made into a mosque, after Sa’d had conducted the Salāt al-Fath in it (Tabari, i. 2443, 15 sqq.; 2451, 7 sqq.). In Damascus which was occupied in 14 or 15 by capitulation, according to tradition, the Church of St. John was divided so that the eastern half became Muslim from which Muslim tradition created the legend that the city was taken partly by conquest and partly by agreement (Baladhouri, p. 125; Yākūt, Muddām, ii. 591; Ibn Dhubair, Kifah, p. 262; J. A., ser. 9, vii. 376, 381, 404). As a matter of fact however, the Muslims seem to have laid out their own mosque here just beside the church [(cf. Damascus); and close beside it again was the Khāṣa’, the commander-in-chief’s palace, from which a direct entrance to the maqṣūra was later made (B.G.A., iii. 159, 4)]. Conditions here were therefore once more the same as in Medina. But the possibility of an arrangement such as this, by which tradition cannot be rejected, for there is good evidence of it elsewhere; in Hims for example, the Muslims and Christians shared a building in common as a mosque and church, and it is evident from al-Iṣṭākhri and Ibn Hawkal that this was still the case in the time of their common authority, al-Balqhi (309 = 921) (B.G.A., i. 61, 7 sqq.; ii. 117, 5; iii. 156, 139), and a similar arrangement is recorded for Dābil in Armenia (B.G.A., i. 188, 3 sqq.; ii. 244, 21; cf. iii. 577, 3 sqq.). There were special conditions in Jerusalem.

The Muslims recognised the sanctuary there, as is evident from the earlier Kibla and from Sūrat xxvii. 1 (in the traditional interpretation). It must therefore have been natural for the conquerors, when the town capitulated, to seek out the recognised holy place. Indeed we are told that ‘Umar in the year 17 built a mosque in Jerusalem on the site of the temple of Solomon (F. Bachtgen, Fragmenta syr. n. arab. Hist., p. 17, 110, following Ishū’dīnāh, metropolitan of Baṣra after 700 a.d.; cf. for the viiiith century Theophanes quoted by Le Strange, Palestine under the Moslems, 1890, p. 91 note). That the Kubbat al-Sharḥa (q.v.) which the Mosque of ‘Umar replaced, stands on the old site of the Temple is undoubted. How he found the site is variously recorded (cf. al-Qādisī). The building was, like other mosques of the time of ‘Umar, very simple. Arculf who visited Jerusalem about 670 says “The Saracens attend a quadrangular house of prayer (domus orationis, i.e. masjid) which they have built with little art with boards and large beams on the remains of some ruins, on the famous site where the Temple was once built in all its splendour” (Itinerar Hierosolimitana, ed. P. Geyer, 1898, p. 226 sqq.; transl. by P. Mickley, in Das Land der Bibel, ii/2, 1917, p. 19 sqq.). It is of interest to note that this simple mosque, like the others, was in the form of a rectangle; in spite of its simple character it could hold 3,000 people, according to Arculf.

As late as the reign of Mu‘awiya we find a new town, Kairawān, being laid out on the old plan as a military camp with a mosque and Dār al-Isfārār in the centre (Yākūt, Muddām, iv. 213, 10 sqq.). As Baladhouri, for example, shows, the Muslim conquerors even at a later date always built a mosque in the centre of a newly conquered town, at first a simple one in each town, and it was a direct reproduction of the simple mosque of the Prophet in Medina. It was the exception to adapt already existing buildings in towns. But soon many additional mosques were added.

2. Tribal mosques and Sectarian mosques.

There were mosques not only in the towns. When the tribes pledged themselves to the Prophet to adopt Islam, they had also to perform the salāt. It is not clear how far they took part in Muslim worship, but if they concerned themselves with Islam at all, they must have had a Muslim place of meeting. Probably even before Islam they had, like the Meccans, their madda‘ or nādi or dār shūrā, where they discussed matters of general importance (cf. Lammens, Mo‘awiya, p. 205; Zād
t. 576, p. 30 sqq.) and the fact that it was also used for the common zakat found to be natural for tribal mosques to come into existence. Thus we are told that a, early as the year 5 the tribes to the east b, later formed mosques and used the aqsha (Ibn Sa'd, (n. 44, 9 not mentioned in Ibn Hisham, p. 945 sqq.) Tabari, i. 1722) it is also recorded of the Banu Udhaima who lived near Mecca that they built mosques in the year 8 and introduced the aqsha (Wakif-Wellhausen, p. 351). How far one can rely on such stories in a particular case is however uncertain. A late writer like al-Diyarbakri says of the Banu-6-Mustaklik that they aslum webanu masjidhina (Tariikh Khamis, i. 132, 20; cf. Annali dell' Islam, u. 221): in the early sources this is not found. Nor is the story, told by Ibn Sa'd at all probable, that envouts from the Banu Hanifa received orders to destroy their churches, sprinkle the ground with water and build a mosque (Ibn Sa'd, j. ii. 56, 11 sqq., while Ibn Hisham, p. 945 sqq.: Tabari, i. 1737 sqq. and Baladhuri, p. 86 sqq. say nothing about it). But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Kufa was the mosque of the tribe of 'Amr b. 'awi (Ibn Sa'd, j. ii. 6, 6, and cf. above) and according to one tradition the Banu Ghannam b. 'awi were jealous of it and built an opposition mosque (Baladhuri, p. 3, 6, 21 infra). A companion who had taken part in the battle of Badr, 'Abd an-Nasir b. Majah, complained to the Prophet that he could not reach the masjidh of his tribe in the rainy season and wanted to build a mosque for himself (Bukhari, Sahih, bab 46, Muhammad, Masjid, bab 47). The Prophet himself is said to have visited the masjid of the Banu Zaraka (Bukhari, Djrash, bab 56-58) and in the masjid of the Banu Salama during the prayer, there was revealed to him Sura ii. 139, which ordered the words kafir therefore it was called Masjid al-Kubbatul (Wustenfeld, Medina, p. 62).

The tribal mosque was a sign that the independence of the tribe was still retained under Islam. Indeed we hear everywhere of tribal mosques, for example around Medina that of the Banu Qua'afa, of the Banu Hanija, of the Banu Zafar, of the Banu Awl, of the Banu Harim, of the Banu Zaraka, said to have been the first in which the Koran was publicly read, that of the Banu Salama etc. (see Wustenfeld, Gesch. d. Stadt Medina, p. 29, 37 sqq. 44, 50, 57, 136 sqq.); the mosue of the two Kifahs belongs to the Banu Sawad b. Ghannam b. Ka'b b. Sa'd (Wustenfeld, Medina, p. 41). This was the position in Medina the tribes had usually their own mosques and one mosque was the chief mosque. This was probably the position within the Prophet's lifetime: for in the earliest campaigns of conquest, mosques were built on this principle. 'Umar is said to have written to 'Abi Musa in Basra telling him to build a mosque at and Mondays and Fridays the tribe, and on Fridays the people were to come to the chief mosque. Similarly he wrote to Sa'd b. Abu Waqas in Kifas and to 'Amr b. al-Asi in Mi'raj. On the other hand in Syria where they had settled in old towns, they were not to build tribal mosques (Maktab. Kitab. iv. Caro 1326, p. 4 infra). It is actually recorded that the tribes in each city had their own mosques around the mosque of 'Amr in al-Fuqaydh (cf. Ibn Dujinha, p. 62 infra sqq.) and even much later a tribal mosque like that of the Rashida was still in existence (Maghrir. Kitab. iv. 64, 4 sqq.). Even in the chief mosque, the tribes had their own places (ibid., 9, 12 sqq.). We have similar evidence from the 6th Ibr. In Basra for example there was a Masjid Banu 'Ubad (Baladhuri, p. 356, 8), one of the Banu Kifa'a (B. G. A., vii. 201, 16), one of the Banu 'Adi (ibid., v. 191, 4) and one of the Ansar (cf. Goldziher, Mukhammadanische Studien, i. 77, note 5); in Kufa we find quite a number such as that of the Ansar (Tabari, i. 284, 13 sqq.), of the Aba al-Kais (ibid., ii. 657, 29), of the Banu Duhman (ibid., p. 670, 4), of the Banu Makhdum (ibid., p. 734, 15), of the Banu Hilal (ibid., p. 1687, 4), of the Banu 'Adi (ibid., p. 1703, 4), of the Banu Dhuhal and Banu Hudhir (ibid., p. 532, 8 sqq.), of the Dhuqaina (ibid., p. 533, 8), of the Banu Hilal (ibid., ii. 2509, 10) and the Abas were on the Banu Masjid (Baladhuri, p. 278, 12 sqq., also p. 285 and Goldziher, loc. cit.).

During the wars these tribal mosques were the natural rallying points for the various tribes; the mosque was a madressa, where councils were held (Tabari, i. 532, 6 sqq.) and the people were taught from its minbar (ibid., p. 284); battles often were centred for this reason round these mosques (e.g. Tabari, i. 130, 148, 6, 960). The people of your mosque, al-masjideq, ibid., p. 532, 10) became identical with your party. Gradually as new sects arose, they naturally had mosques of their own, just as Musilins before them is said to have had his own mosque (Baladhuri, p. 90, 4 from below) (Ibn Hanzal, Aynar, p. 404 infra). Thus we read later of the mosques of the Hanbalis in Baghdad, in which there was continual riot and confusion (Hilal al-Salihi, Kitaab al-Wusara, ed. Amdeuss, p. 335). It sometimes happened that different parties in a town shared the chief mosque (B. G. A., iii. 102, 5 sqq.) but as a rule it was otherwise. In particular the Sunni and Shi'a as a rule had separate mosques (cf. Mez, Die Renaissance des Islams, p. 63). It sometimes even happened that Hanafis and Shafiis had separate mosques (Yakut, Hist. ijamam, v. 509, v; cf. B. G. A., iii. 323, 11). These special mosques were a great source of disruption in Islam and we can understand that such mosques should be permitted at all. But the question whether one might talk of the Masjid Banu Fu'ah was answered by saying that in the time of the Prophet, the Masjid Banu Zaraka was recognized (Bukhari, Sahih, bab 41; cf. Dhishak, bab 56-58 and Tabari, Tafsir, xi. 20 after the middle of the page).

3. Adaptation to Islam of Older Sanctuaries; Memorial Mosques.

According to the early historians, the towns, which made treaties with the Muslims, received permission to retain their churches (Baladhuri, p. 121, in the middle; Tabari, ii. 2405, 2407) while in the conquered towns the churches fell to the Muslims without any preambles (cf. Baladhuri, p. 120 infra). Sometimes also it is recorded that a certain number of churches were received from the Christians, e.g. fifteen in Damascus according to one tradition (ibid., p. 124, 8; otherwise p. 121; cf. F. A., 9 Ser., vii. 403). It is rather doubtful whether the process was such a regular one; in any case the Muslims in course of time appropriated
many churches to themselves. With the mass- 
conversions to Islam, this was a natural result. 
The churches taken over by the Muslims were 
occasionally used as dwellings (cf. Tabari, i. 2405, 
2407); at a later date it also happened that 
they were used as government offices, as in Egypt 
in 146 (Makrizi, iv. 35; cf. for Kufa, Baladurgy, 
p. 286). The obvious thing, however, was to 
transform the churches taken into mosques. It is 
related of 'Amr b. al-Asi that he performed the 
Salat in a church (Makrizi, iv. 6) and Zaid b. Ali says 
regarding churches and synagogues, "Perform 
the Salat in them; it will not harm thee" (Corpus 
inscriptionum, p. 417, ed. Grifoni, No. 364). It is 
not clear whether the reference is to 
conquered sanctuaries; it is evident, in any 
case, that the saying is intended to remove any 
misgivings about the use of captured churches and 
synagogues as mosques. The most important example 
of this kind was in Damascus where al-Walid 
b. 'Abd al-Malik took in 86 (705) the 
took of St. John from the Christians and had it rebuilt; 
he is said to have offered the Christians another 
church in its stead (see the references above, B. 1, 
and also J. A., 9 Ser., vii. 369 sqq.; Quatremere, 
Hist. Sult. Maml., l/ii. 262 sqq. and the article 
DAMASCUS). He is said to have transformed into 
mosques some of those churches which had been particularly in the villages, with 
the gradual conversion of the people to Islam, that 
the churches were turned into mosques. In the 
Egyptian village there were no mosques in the 
earlier generations of Islam (Makrizi, iv. 28 sqg., 
30). But when al-Mamun was fighting the Copts, 
many churches were turned into mosques (ibid., 
p. 30). It is also recorded of mosques in Cairo 
that they were converted churches. According to 
to one tradition, the Khidima mosque was an unfinished 
Jacobeite church, which was surrounded by Jewish 
and Christian graves (Makrizi, iv. 63, 64) and in 
the immediate vicinity al-Hakim turned a Jacobite 
and a Nestorian Church into mosques (ibid., p. 265). 
When Djawhar built a palace in al-Kabura, a djer 
was taken in and transformed into a mosque 
(ibid., p. 269); similar changes took place at later 
dates (ibid., p. 240) and synagogues also were transformed in this way (Masjid Ibn al-Banna', 
ibid., p. 265). The chief mosque in Palermo 
was previously a church (Yahya, Mi'dam, i. 719). 
After the Crusades several churches were turned 
into mosques in Palestine (Sauvage, Hist. de Jérusalem et d'Iléron, 1876, p. 77; Quatremere, Hist. 
Sult. Maml., i/ii, 40). 

Other sanctuaries than those of the "people of the 
scripture" were turned into mosques. For example, a 
Masjid al-Sham between the two 
was the successor of an old temple of Samas (see Goldziher, Muh. Stud., ii. 331 sqg.) 
Not far from Iṣṭakhr was a Masjid Sulaimān which 
was an old "fire-temple", the pictures of which 
would still be seen in the time of Mas'udi 
and al-Maḳdisi (10th century) (Mas'udi, Murūdīj, iv. 
77; B.G.A., iii. 444). In Iṣṭakhr itself there was 
a džamī', which was a converted fire-temple (ibid., 
p. 436). In Miṣṣa, the ancient Mopsuestia, al-Mansūr in 
146 built a mosque on the site of an ancient 
church (Baladurgy, p. 165 sqg.) and the chief mosque 
which the Dāhlī were originally a temple (Ibn Batūtā, iii. 
154); as to Tāʾīr cf. Abū Dāwi, Salāt, b. 36; 
Thus also the old rule holds that sacred 
places survive changes of religion. It was especially 
easy in cases where Christian sanctuaries were 
associated with Biblical personalities who were also 
recognised by Islam: e.g., the Church of St. John 
in Damascus and many holy places in Palestine. One example is the mosque of Job in Shēkh Sa'id, 
associated with Sūra xxxi. 83, xxxviii. 40; here 
in Silvia's time (fourth century) there was a church 
of Job (Mas'udi, i. 91; Baezler, Paäst. u. Sprich., 
1910, p. 147).

But Islam itself had created historical associations 
which were bound soon to lead to the building of 
new mosques. Even in the lifetime of the 
 Prophet, the Banū Sālim are said to have asked 
him to perform the Salāt in their masjid to give 
it his authority (see above A. 3). At the request of Ibn b. Malik the Prophet performed 
the Salāt along with Abū Bakr in his house and thereby 
consecrated it as a musallā, because he could 
not get to the tribal mosque in the rainy season 
(Bukhārī, Salāt, bāb 47; Tirmidhī, bāb 56; 
Muslim, Masājd, tr. 46; a similar story in 
Bukhārī, Aṣbān, bāb 47, Tirmidhī, bāb 33 is 
perhaps identical in origin). After the death of the 
Prophet, his memory became so precious that 
the places where he had prayed obtained a special 
importance and his followers, who liked to imitate 
him in everything, preferred to perform their Salāt 
in such places. But this intensification of what had existed in his lifetime; and so it is not easy to decide how far the above 
stories reflect later conditions. Mosques very quickly 
 arose on the road between Mecca and Medina at 
places where, according to the testimony of his 
Companions, the Prophet had prayed (Bukhārī, 
Salāt, bāb 59; Wāṣsid-Wellhausen, p. 421 sqq.); 
the same was the case with the road which the 
Prophet had taken to Tabuk in the year 9 (Ibn 
Hishām, p. 907; Wāṣsid-Wellhausen, p. 394; 
there were 19 in all, which are listed in Annali dell'Islam, ii. 246 sqq.). Indeed wherever he had 
taken the field, mosques were built; for example 
on the road to Badr, where according to tradition 
the Prophet himself built a mosque in Khāibar during the campaign of 
the year 7 (Diyārbakrī, Taʾīrīs al-Khamm, ii. 49 sqq.; 
cf. Annali dell'Islam, ii. 19). Outside Taʾīr a mosque 
was built on a hilltop, because the Prophet 
had performed the Salāt there during the siege in 
the year 8, between the tents of his two wives, 
Zainab and Khawtham (Ibn Hishām, p. 872; 
Wāṣsid-Wellhausen, p. 369): In Iṣṭanbul the 
Prophet is said to have himself built a mosque 
while on the campaign against Taʾīr (Ibn Hishām, 
p. 852; Wāṣsid-Wellhausen, p. 368 sqq.). Mosques 
 arose in and around Medina, “because Muhammad 
prayed here” (Wustenfeld, Gesch. d. Staats Medins, 
p. 31, 35, 132 sqq.). It is obvious that in most 
of these cases later conditions are put back to 
the time of the Prophet; in connection with the 
war of the Istāḥ they are told that: “he prayed 
everywhere where mosques now stand” (Wāṣsid- 
Wellhausen, p. 208). Since, for example, 
Masjid al-Fāṭih is also called Masjid al-Shams 
(Wustenfeld, Medins, p. 132) we have perhaps 
here actually an ancient sanctuary.
Masjid became associated with the Prophet in many ways. In Medina, for example, there was the Masjid al-Baqi’ where footprints of the Prophet’s mule were shown in a stone, the Masjid al-Dirya where the Prophet’s appeal was answered, the Masjid al-EPark which received the victory over the Ikhshidis, etc. (see Wustenfeld, Medina, p. 136 sq.). In Mecca there was naturally a large number of places sacred through associations with the Prophet and therefore used as places of prayer. The most honoured site, next to the chief mosque, is said to have been the house of Khadijida, also called Masud al-Sa’aya, in Medina, because the daughter of the Prophet was born there. This house, in which the Prophet lived till the Hijra, was taken over by ‘Abd, ‘Ali’s brother, and bought by him through Munawiya and turned into a mosque (Chen, Mecca, iii. 112, 440). She also purchased the Prophet’s burial-place, Masjid al-Nabii, and made it into a mosque (ibid., i. 422; ii. 439). It Munawiya really bought the Prophet’s house from his cousin, it was probably the right one, but the demand for places associated with the Prophet became stronger and stronger and we therefore find more and more places referred not only to the Prophet, but also to his Companions. Such are the burial-places of Hamza, ‘Aban and Ali (Chen, Mecca, iii. 445), the house of Mariya, the mother of the Prophet’s son, ‘Abdullah (ibid., i. 447, 490) which also had a mosque at Medina (Wustenfeld, Medina, p. 153). There were also a Masjid Khadijida (ibid., i. 324) and a Masjid ‘Aisha (ibid., ii. 454), a Masjid of the “granted appeal” in a narrow valley near Mecca, where the Prophet performed the jadid (ibid., ii. 453), a Masjid al-Najm, where the Djinn overheard his preaching (ibid., i. 424; in 453), a Masjid al-Najmah, where he planted his standard at the conquest (ibid., i. 68 infra and 71 supra; ii. 453), a Masjid al-Baqa’ where the first homage of the Medinees was received (ibid., i. 428; ii. 441). In the Masjid al-Kharif in Minma is shown the mark of the Prophet’s head in a stone into which visitors also put their heads (ibid., iii. 438). Persons in the Bible are also connected with mosques, Adam, Abraham and 1-Ma’i with the Ka’ba, besides which the Masjids Ibrahim is shown and ‘Arafah there is still a Masjid Ibrahim (ibid., i. 475, 475) and another in al-Zahir near Mecca (Ibn Dubair, Khefa, 1927, p. 113). To these memorial mosques others were later added, e.g., the Masjid Abu Bakr, Masjid Bilal, the Mosque of the Splintering of the Moon (by the Prophet) etc. (Ibn Dubair, Khefa, p. 114 supra; B.G.A., iii. 192 sq.; Snouck Hurgronje, Mecca, ii. 27; al-Batani, al-Khefa al-Jahdigen, Cairo, 1339, p. 52 infra). In al-Hijaz the Muslims thus acquired a series of mosques which became important from their association with the Prophet, his family and his Companions, and made Muslim history live. On the other hand, in lands formerly Christian, they took over sanctuaries which were associated with the Biblical history which they had assimilated (see Le Strange, Palestine, p. 145). Other mosques soon became associated with Biblical and Muslim story. The mosque founded by ‘Umar on the site of the Temple in Jerusalem was, as already pointed out, identified as al-Masjid al-Aqsa mentioned in Sura xvii. 1 and therefore connected with the Prophet’s Night Journey to Paradise. The rock is said to have greeted the Prophet on this occasion and marks in a stone covering a hole are explained as Muhammad’s footprints (sometimes also as those of Idris; cf. Le Strange, Palestine, p. 136; al-Batani, Khefa, p. 165; Baedeker, Palestine, 1910, p. 52 sq.; cf. Ya’qubi, ed. Houtsma, ii. 311). The name al-Masjid al-Aqsa was used throughout the early period for the whole Haram area in Jerusalem, later partly for it, and partly for the building in its southern part (B.G.A., v. 160; Sauvage, Hist. Jérusalem, p. 95, 121; cf. Le Strange, Palestine under the Medimeens, p. 96 sq.). Then there were the mosques which had specifically Muslim associations, like the Masjid of ‘Umar on the Mount of Olives where he encamped at the conquest (B.G.A., ii. 172). In Egypt not only was an old Christian sanctuary called Ma’bad Masi (Ma’kri, iv. 269), but we are also told, for example, that the Mosque of Ibn Talun was built where Masi talked with his Lord (Ma’kri, iv. 36); according to al-Ku’ahi there were in Egypt four Masjids of Masi (Ibn Dukmakh, ed. Volland, p. 92); there was a Masjid Ya’kub wa-Yusuf (B.G.A., ii. 209) and a Joseph’s prison, certainly dating from the Christian period (Ma’kri, iv. 315). There was also a Mosque of Abraham in Masy in Syria (Ibn Dujair, p. 58). The chief mosque of San’a was built by Shem, son of Noah (B.G.A., vii. 110). The old temple near Iṣaakhan mentioned above was connected with Sulaiman (Mas’udi, Muradi, iv. 77; Ya’qubi, i. 299). In the mosque of Kufa not only ‘Ishaq but one thousand other prophets and one thousand saints, described as wa’af, are said to have offered their prayers; here was the tree Yakta (Sura xxxvii. 146); here died Yaghuth and Ya’qub, etc. (Ya’qubi, iv. 325; also Ibn Dujair, p. 311 supra; and in this mosque there was a chapel of Abraham, Noah and Idris (Ibn Dujair, p. 212); a large number of mosques were added with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which ‘Umar declined to perform the A’la’ in the Church of the Resurrection in Jerusalem, lest the church should afterwards be claimed as a mosque.

4. Tomb Mosques

A special class of memorial mosques consisted of 1097, which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they were generally adopted into Islam. In addition there were the saints of Islam itself. The general tendency to distinguish places associated with the founders of Islam naturally concentrated itself around the graves in which they rested. In the Kurra, a tomb-masjid is mentioned in connection with the Seven Sleepers (Sura xviii. 20) but it is not clear if it was recognised. As early as the year 6, the companions of Abu Bakr are said to have built a mosque at the place where he died and was buried (Ya’qubi-Wellhausen, p. 262). The Prophet is also said to have visited regularly at al-Madina in Medina the tombs of the martyrs who fell at Uhud and paid reverence to them (ibid., p. 143).
Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abū Basir is ante-dated. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves which led to the erection of sanctuaries at them. The progress of this tendency is more marked in al-Wāqidi, who died in 207 (623), than in Ibn Ishaq, who died in 151 (768).

The collections of Ḥadīth made in the third century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The Ḥadīths answer both questions in the negative, which certainly was in the spirit of the Prophet. It is said that “Salāt at the graves (jā ‘maḥārīr) is makrūh” (Bukhārī, Sahīl, bāb 52); “sit not upon graves and perform not salāt towards them” (Muslim, Qawātul Inbān, tr. 33); “hold the salāt in your houses, but do not use them as tombs” (Muslim, Sahīl al-Musāfīrīn, tr. 29). On the other hand it is acknowledged that women performed the salāt at the cemetery (Bukhārī, Sahīl, bāb 48). We are also told that tombs cannot be used as masjīd (Bukhārī, Sahīl, bāb 48; Qawātul Inbān, bāb 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as masjīd. Ḥadīth explains this by saying that the tomb of the Prophet was not at first accessible (Bukhārī, Sahīl, bāb 48, 55; Qawātul Inbān, bāb 62; Ahbāb, bāb 50; Muslim, Masāḥid, tr. 3); as a matter of fact its precise location was not exactly known (Qawātul Inbān, bāb 66).

The attacks in Ḥadīth insist that tomb-mosques are a reprehensible Jewish practice: “When a pious man dies, they build a masjid and set up his tomb” etc. (Bukhārī, Sahīl, bāb 48, 54; Muslim, Qawātul Inbān, bāb 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Taimiyya, the Wahhābi), the old pre-Islamic custom soon became a Muslim one. The expositors of Ḥadīth like al-Nawawi (on Muslim, Masāḥid, tr. 3, lith. Dīlī 1319, 3. 201) and al-Qaṣīṣī (Cairo 1329, 3. 354) explain the above passages to mean that only an excommunicated mujāhīn of the dead is forbidden so that tombs should not be used as a khāla; otherwise it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often khāla, a word which is used of a tent (Bukhārī, Qawātul Inbān, bāb 62; Ḥadīth, bāb 64; Fard al-Khums, bāb 19; al-Qaṣīṣī, bāb 15; Tārafa, Dīlī, vii. 1), but later came to mean the dome which usually covers tombs and thus became the general name for the sanctuary of a saint (cf. Ibn Djbair, Rīḥā, p. 114, 115; cf. Dory, Supplement, s.v.). Maṣjīd also means a little chapel and a saint’s tomb (v. Berchem, Corpus Inscriptionum Arabicum, 3. 72, etc.; cf. index). The custom of making a khāla at the tomb of a saint was firmly rooted in Byzantine territory, where sepulchral churches always had a dome (Herod-Hauch, Réalités chrétiennes, 3. 784). The usual name however for a tomb-sanctuary was maṣjīd; this is applied to places where saints are worshipped, among Muslim tombs particularly to those of the friends and relations of the Prophet (v. Berchem, Corpus Inscriptionum Arabica, i., 3. 32, 63, 417, 544; Makrīzī, iv., p. 265, 309 sqq.) but also to tombs of other recognised saints, e.g. Mashhad Diyarjīsa in Mawṣil (Ibn Djbair, Rīḥā, p. 236) etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muhammad, Abū Bakr and ʿUmar are said to have been buried in the house of ʿĀisha; Fāṭima and ʿAli lived beside it. ʿĀisha had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet’s wives remained as they were until al-Wāqidi rebuilt them. He thought it scandalous that Ḥasan b. Ḥasan b. ʿAli should live in Fāṭima’s house and ʿUmar’s family close beside ʿĀisha’s home in the house of Ḥafsa. He acquired the houses, had all the houses of the Prophet’s wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was called al-Rawāya “the garden”; it was not till later that a dome was built over it (Wustenfeld, Medina, p. 66 sqq., 72 sq., 78 sqq., 89). In the cemetery of Medina, al-Raṣāʿ, a whole series of Mashhads came to be built where tombs of the family and clan of the Prophet were located (Ibid., p. 140 sqq.; Ibn Djbair, Rīḥā, p. 195 sqq.). It is often disputed whether a tomb belonged to one or the other (e.g. Tābarī, iii. 2436, 2 sqq.). Such tomb-mosques were sacred (makādīs; Ibn Djbair, Rīḥā, p. 114, 13, 17); they were visited li ʿ-‘arabā. The name al-Rawāya of the Prophet’s tomb became later applied to other sanctuaries (Ibn Djbair, Rīḥā, p. 46, 56, 52, 11). Separate limbs were revered in some mosques, like the head of al-Ḥusain in Cairo, which was brought there in 491 from ʿAskānān (ʿAlī Pāšā Muṣṭafā, al-Khiṭat al-Qudūd, iv. 91 sqq.; cf. Sauvage, Hist. Jérusalem, p. 16); his head was also revered for some time in the Mashhad al-Ra’s in Damascus (according to Ibn Shākir, J., 9th ser., vii. 385).

Gradually a vast number of Muslim tombs of saints came into existence; and to these were added all the pre-Islamic sanctuaries which were adopted by Islam. No distinction can therefore be drawn between tomb-mosques and other memorial mosques. It was often impossible to prove that the tomb in question ever really existed. In the Mashhad ʿAli for example, ʿAli’s tomb is honoured but Ibn Djbair leaves it in doubt whether he is really buried there (Rīḥā, p. 212) and many located his grave in the mosque of Kufa and el-Merere (Masāḥid, tr. 289; v. 68; B. G. A., ii. 162). In Ḥanǧa, a part of the mosque near ʿAkkā there was also a Mashhad ʿAli (Yāqūt, iii. 759) and also in the Mosque of the Umayyads (Ibn Djbair, p. 267); on this question see R. G. A., ii. 46. Names frequently became confused and transferred. In Mecca between Safa and Marwa there was a Khāla, which was associated with ʿUmar b. al-Khaṭṭab but Ibn Djbair says that it should be connected with ʿUmar b. ʿAbd al-ʿAzīz (Rīḥā, p. 115, 11 sqq.). In Êṣa there was a Mashhad Abū Hurayra, where the memory of this Companion of the Prophet was honoured; it is said to have been placed in the grave of another Abū Hurayra (Makrīzī, i. 335, etc.). Wherever Shiʿi is ruled, there arose numerous tomb-mosques of the Abī al-Bait. In Egypt Ibn Djbair gives a list of 14 men and five women of the Prophet’s
family, who were honoured there (Rikhl, p. 46).

Islam was always creating new tombs of saints and had been distinguished for learning or asceticism or miracle-working, e.g. the tomb of al-Shāfi’ī in Cairo and Aḥmad al-Badawī in Taṭṣ. There were mosques, chiefly old established sanctuaries, of Biblical and semi-Biblical personages like Kūbal (Reuben) and Ṣayyida the wife of Pharaoth (ibid., p. 46). In and around Damascenus were a number of mosques, which were built on the tombs of prophets and unnamed saints (Ibn Dujbair, Rikhl, p. 273 sqq.). In Palestine could be seen a vast number of tombs of Biblical personages (cf. Le Strange, Palestine under the Moslems, Index and Conder in Palestine Explor. Fund, Quarterly Statement, 1871, p. 89 sqq.), usually mosques with a kubah.

After the sanctuaries of persons mentioned in the Bible came those of people mentioned in the Qur‘ān. For example, outside the Djemāliyya in ‘Akkā was shown the tomb-mosque of the prophet Ṣallāh (Nasirī Khurraw, Sefer Namech, ed. Schœfer, p. 15, 49), and in Syria that of his son (Ibn Dujbair, p. 49); that of Hūd was also shown near ‘Akkā (Sefer Namech, p. 16, 52), farther east that of Shu’ab and of his daughter (ibid., p. 16, 49); the tomb of Hūd was also pointed out in Damascus and in Hadramawt (Yākūt, ii. 595, 6); then we have peculiarly Mu‘āmmar saints like Ḥujj al-Kabīr, the son of Job (ibid., p. 16, 52). Then there are the sanctuaries of saints who are only suprahumans, but who have their origins in old popular superstitions, like al-Khājiqī, who had a masjid in Damascus (Yākūt, ii. 595, 9), or a saint like ‘Akkā, the tomb of whose town Nasirī Khurraw visited outside the town (Sefer Namech, p. 15, 49, from below = 52). Such tombs were much visited by pious travellers, and are therefore frequently mentioned in literature on Maḥājil al-shajā‘a, the kinds mentioned here in the Islām, see B.G.A., ii. 130; for Mawsil etc. ibid., p. 146). In this way ancient sanctuaries were turned into mosques and it is often quite a matter of chance under what names they are adopted by Islam. (cf. Goldziher, Moh. Sitten, ii. 325 sqq.). It therefore sometimes happens that the same saint is honoured in several mosques. Abī Hurayra, who is buried in Medina, is honoured not only in the above-mentioned tomb-mosque in Dīrā but also at various places in Palestine, in al-Kamāla and in Yubnā south of Lābraṭayn Khallī ed-Dāhirī, Zoubid Kuchf al-Mamlik, ed. P. Ravaise, p. 42, from below; Sefer Namech of Nasirī Khurraw, ed. by Ch. Schœfer, p. 17, 49, from below = 59; Yākūt, iii 512, ztd. iv. 1007, 12. cf. Simḥalī Osayyas, Ent. Sūfīyīt, ii. [1928, 31]. The tomb of the Prophet ‘Isā is revered not only in the ancient Nīnveh but also in Palestine.

Just as the kubah under which the saint lay and the mosque adjoining it were sanctified by him, so vice-versa a kubah and a mosque could cause a deceased person to become considered a saint. It was therefore the custom for the mighty not only to give this distinction to their fathers but also to prepare such buildings for themselves even in their own lifetime. This was particularly the custom of the Mamūkūl sūlūn, perhaps stimulated by the fact that they did not want dynasties in which power passed from father to son. Such buildings are called kubah (van Berchem, C.I.A., i. N°. 82 sqq., 96, 126, 138 etc.), exceptionally zāwiyā (ibid., N°. 98), frequently turba (ibid., N°. 38, 88, 106, 117, 116 etc.); the formula is also found: “this kubah is a turba” (N°. 67); the latter word acquired the same meaning as masjid, partly saint’s grave and partly sacred site (cf. Ibn Dujbair, Rikhl, p. 114, 199); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of saints often disappeared. In these kubahs the regular recitation of the Qur‘ān was often arranged and the tomb was provided with a kūrwa. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yākūt, iv. 509, 6 sqq.).

5. Mosques deliberately founded.

In the early period the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques and prominent leaders built mosques which were the centres of their activity, for example the Masjid ‘Aṭī b. Hātit (Tabari, ii. 130), the Masjid Simak in Kūfah (ibid., i. 2653), the Masjid al-Shābath etc. As old sanctuaries entered Islam, the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a hadith, according to which the Prophet said: “for him who builds a mosque, God will build a home in Paradise”; some add “if he desires to see the face of God” (Corpus juris di Zaid b. ‘Ali, ed. Griffith, N°. 276; Buḫṣārī, Sūrūt, bāb 65; Muslim, Masjid, tr. 4: Zark, tr. 3; Maḳṣīri, iv. 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of such a kind of the year 557 is given by al-Saḥmādī for Medina (Wastenfeld, Medina, p. 91 sqq.); and a similar one is a mosque in Damascus (F. A., Ser. 9, vii 354); a mosque was also built out of gratitude for seeing the Prophet (al-Maḍarṭa al-Sharī‘īyya, Maḳṣīri, iv. 209). It was of course particularly an obligation on the mighty to build mosques. Even in the earliest period the government took care that new mosques were built to keep pace with the spread of Islam (cf. Balāḏurī, p. 178 sqq.). About the year 1000 the governor of Media, Badr b. Ḥasanawalīj, is said to have built 3,000 mosques and hotels (Mer, Die Renaissance des Islāms, 1922, 24). The collections of inscriptions, as well as the geographical and topographical works, reveal how the number of mosques increased in this way.

In Egypt, al-Ḥākim in the year 403 had a census taken of the mosques of Cairo and there were eight hundred (Maḳṣīri, iv. 264); al-‘Uṣayrī’s (d. 454 = 1062) also counted the mosques and his figure is put at 30,000 or 36,000 (Yākūt, iii. 901; Ibn Dujbair, ed. Voller, p. 92; Maḳṣīri, iv. 264) which seems quite a fantastic figure (there is probably a vacating between B.I.D. i.e. 1098). Ibn al-Mutawwād (d. 730) according to al-Maḳṣīri counted 480 and Ibn Dujbair (about 550) gives in addition to the incomplete list of djémāli a list of 472 mosques, not including madrasī, khanāqāhs etc.; the figure given by Maḳṣīri is smaller. The fantastic figure of 30,000 for Baghdad is found as early as Yaḳūt (B.G.A., vii. 250). It is also an exaggeration when Ibn Dujbair was told in
Alexandria that there were 12,000 or 8,000 mosques there (p. 43). In Bāṣra where Ziyād built 7 mosques (B. G. A., v. 191), the number had also increased rapidly; but here again an exaggerated figure (7,000) is given (B. G. A., vii. 261). In Damascus, Ibn Asākir (d. 571 = 1176) counted 241 within and 148 outside the city (J. A., Ser. 9, vi. 383). In Palermo Ibn Hawkal counted over 300 and in a village above it 200 mosques. In some streets there were as many as 20 mosques within a bowshot of one another; this multiplicity is condemned: everyone wanted to build a mosque for himself (Yaḵtū, i. 719; iii. 409, 410). As a matter of fact, one can almost say that things tended this way; Yaḵtū mentions in Baghdad a mosque for the Anbārī officials of the tax-office (B. G. A., vii. 245) and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672 Ṭādh al-Dīn built a mosque and a separate chamber in which he performed the ṣalāt alone and meditated (Maḵrīzī, iv. 90). The mosques thus founded were very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (Maḵrīzī, iv. 97, 265 sqq.) and a madrasa might be called after its head or a teacher (ibid., iv. 235; Yaḵtū, Ilaḵī, vii. 82). Lastly a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallā. In addition to the mosques proper, al-Maḵrīzī mentions for Cairo 8 places for prayer (muṣallā) mainly at the cemetery (iv. 334 sqq.). The word muṣallā may also mean any place of prayer, therefore also mosque (cf. Sūra, ii. 119; cf. Maḵrīzī, Khiṭāt, iv. 25, 16; do., Iṣṭiʿāż, ed. Bunz, p. 91, 17; Yaḵtū, Muṣṣāwa, iv. 326, 2 sqq.) or a particular place of prayer within a mosque (Tabāri, i. 2408, 16; Bukhārī, Ghusl, bāb 17; Ṣalāt, bāb 91). In Palestine, there were many open places of prayer, provided only with a miḥrāb and marked off, but quite often in the open (cf. for Tiberias, Sīfer-Nāmeh, transl. Schefer, p. 36). It is recorded of the Prophet that he used to go out at the two festivals (al-Fitr and al-Aḍḥa) to the place of prayer (al-muṣallā) of the Banū Salima. A lance which the Negus had presented to al-Zubair was carried in front of him and planted before the Prophet as suṭra. Standing in front of it, he conducted the ṣalāt, and then preached a khutbah without a minbar to the rows in front of him (Tabāri, i. 1281, 14 sqq.; Bukhārī, Ṣaḥīḥ, bāb 6; Ṣalāt, bāb 90; Ḥadīth, bāb 6). He also went out to the muṣallā for the ṣalāt al-istiqbā (Muslim, Iṣtikā, tr. 1). This Muṣallā was an open space and Muḥammad is even said to have forbidden a building on it (Wustenfeld, Medina, p. 127 sqq.). This custom of performing the ṣalāt on a muṣallā outside the town on the two festivals became sunna. There is evidence of the custom for several towns. In Medina however, a mosque was later built: the muṣallā (ibid., p. 128 sq.) which also happened in other places. An early innovation was the introduction of a minbar by Marwān (ibid., p. 128; Bukhārī, Ḥadīth, bāb 6). When ʿAbū Wāqīṣa built a mosque in Xisrā’s Iwan in al-Madrīʾin, at the festival in the year 16 it was expressly stated that it was sunna to go out to it: Sa’d, however, thought it was a matter of indifference (Tabāri, i. 2451). Shortly after 300 a muṣallā outside of Hamadān is mentioned (Maṣṭūḥ, Marāj, i. 25). There was al-Muṣallā al-ʿAtīq in Baghdad; here a dakka was erected for the execution of the Karmaṭian prisoners (Tabāri, ii. 2244 sq.; cf. 1569, 18; in Kūfa, several are mentioned (ibid., ii. 628, 16; 1704, 5; iii. 367, 8 sq.), two in Merv (ibid., i. 1931, z. 1964, 15; cf. Sīfer-Nāmeh, transl. Schefer, p. 274), one in Farghāna (B. G. A., ii. 393, 16). In Tārīm, the muṣallā was within the walls (B. G. A., ii. 349, 16) which also happened elsewhere (ibid., 378, 6 sqq.). In Cairo the two festivals were celebrated on the Muṣallā Khawālan (a Yemen tribe) with the Ḫūṭa of the Mosque of ʿAmr as leader: according to al-Ḳudāʾi the festivals were to be celebrated on a muṣallā opposite the hill Yalḥūm, then on al-Muṣallā al-Ḳadīm where ʿAbdād b. Ṭullūn erected a building in 256. The site was several times changed (Maḵrīzī, iv. 334 sqq.; cf. B. G. A., ii. 200, 11 sqq.). In 302, 306 and 308 the salāt al-ʿid was performed for the first time in the Mosque of ʿAmr (Maḵrīzī, iv. 20, 8 sqq.; Ḥasan al-Muṣṣāwa, i. 137 infr.; Ibn Taghribirdī, ii. 194, 9 sqq.). Ibn Butṭūtā notes the custom in Spain (420) and Tunis (i. 22) and also in India (iii. 154). Ibn al-Ḥadīdī (d. 737) says that in his time the ceremonies still took place on the muṣallā but condemns the biṭaʾa’s associated with them (K. al-Madkhāl, ii., Cairo 1320, p. 82 sqq.). It is also laid down in Muslim law, although not always definitely (see Juynboll, Handbuch d. islam. Ges., 1910, p. 127; I. Guidi, Il Meḥtaṣar, i., 1919, p. 136). The custom seems in time to have become generally abandoned. In the ninth century the Masjid ʿAṣḵonkor was expressly built for the khuta at the Friday services and at festivals (Maḵrīzī, iv. 107, 16).

C. The Mosque as the Centre for Divine Service.

1. Sanctity of the Mosque.

The history of the mosque in the early centuries of Islam shows an increase in its sanctity which was intensified by the adoption of the traditions of the church and especially by the permutation of the cult of saints. The sanctity already associated with tombs taken over by Islam was naturally very soon transferred to the larger and more imposing mosques. The expression Baṭt al-Aṭāʾah “house of God”, which at first was only used of the Kaʾba came now be applied to any mosque (s. Corpus iruri d. Zaid b. ʿAbi, N. 48, cf. 156, 983; Chron. Mekk., ed. Wustenfeld, iv. 146, 19; Balūm, Corpus Insr. Arab. 1, N. 10, i. 18; Ibn al-Ḥadīdī, K. al-Madkhāl, i. 20, 23; i. 64, 68; cf. Bait Rabīḥ, ibid., i. 23, 73; ii. 56). The alteration in the original conception is illustrated by the fact that the Muḥammad al-Malik al-Zahrāʾ Baḥbars declined to build a mosque on a place for tethering camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (Maḵrīzī, iv. 91; Abū Dāwud, Ṣalāt, bāb 22).

In the house of God the Miḥrāb and the Miḥnar (see below) enjoyed particular sanctity, as did the tomb, especially in Medina (Bukhārī, Fadʾ al-Ṣalāt fi Masjid Maṣṭūḥ wa ʿl-Madīna, bāb 5). The visitors sought ṣanāʾa, partly by touching the tomb or the railing round it, partly by praying
in its vicinity: at such places "prayer is heard" (Civ. Mos. ii. 441, 442). In the Masjid al-Kabir in Medina the visitor laid his head on the print of the Prophet's head and thus obtained "siadik kurni" (iii. 435). A mosque could be built on a site, the sanctity of which had been shown by the finding of hidden treasure (Maqāmir, iv. 75). There were often places of particular sanctity in mosques. In the mosques at Kufah and Medina, the spots where the Prophet used to stand at prayer were held to be particularly blessed (Baladurri, p. 5; Bukhari, Sunan, bāb 91; Wustenfeld, Medina, p. 65, cf. 82, 109). In other mosques, places where a saint had sat or where a divine phenomenon had taken place e.g. in the Mosque of 'Amr and in the Aḥār Mosque (Maqāmir, iii. 14, 52) or the Mosque in Jerusalem (Masjid, B. G. A., ii. 170) were specially visited. Pious visitors made tawaf between such places in the mosque (Maqāmir, iv. 20). Just as in other religions we find priests dedicating their children to the service of a sanctuary, so we find a Muslim woman vowing her child or child yet unborn to the mosque (Bukhari, Sunan, bāb 74; Maqāmir, iv. 20). The fact that mosques, like other sanctuaries, were sometimes founded after a revelation received in a dream has already been mentioned (B. 5).

This increase in sanctity had as a natural result that one could no longer enter a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians were still allowed to enter the mosque without molestation (cf. Lammens, Mosquée, p. 13). But after the tenth century, forbidden to Christians and this regulation is related to 'Umar (Lammens, op. cit., p. 13, note 6). A strict teacher of morality like Ibn al-Haddād thought it un-earnly that the monks who were the masters of the mosques should be allowed to lay them in the mosques (Maqāmir, ii. 57). Conditions were not always the same. In Herat, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 1204 (1892) Barbarus forbade it (Quatremere, Histoire, iii. 22, 27).

Although in some traditions, a person in a state of ritual impurity could not enter the mosque (Abu Dawūd, Tabarī, bāb 92; Ibn Mādhaja, Tabarī, bāb 123) and in any case only the pure could acquire merit by visiting the mosque (Muslim, Maqāmir, tr. 49: Coque I. iv. 65, 66, 68), and in a later period it is specially mentioned that the zujāf cannot enter in the mosque itself (Maqāmir, ii. 47 infra) nor could slaves (ibid., p. 58, etc.)

It is always necessary to be careful not to spilt in a mosque, although some traditions which are obviously copies of the old state of affairs, say, "not in the direction of the kibla, only to the left" (Bukhari, Sunan, bāb 53 sq.). The custom of taking off one's sandals in the mosque is found as early as the time of Abu 'Ubayda (second century). (Ya'qūb, Istīlāb, bāb 272, etc.) and according to an Maqāmir (see below) is also mentioned by Abu Dawūd. Al-Tabarī puts the custom back to the time of 'Umar (i. 2405). That it is based on an old custom observed in sanctuaries is obvious (cf. on the history of the custom, F. Cumont, Fouilles de Doura-Europos, 1926, p. 60 sq.). The custom however seems not to have been always observed. In the viiith century in the Mosque of the Umayyads the shoes were taken off only in the mawqūf, because the khurūf was covered with mats; but in 827 an Egyptian superintendent ordered that the mosque should only be entered with bare feet (f. A., ser. 9, vii. 211, 217). The visitor on entering should place his right foot first and utter certain prayers with blessings on the Prophet and his family (which Muhammad is said to have done) and when he is inside perform two raka's (Bukhari, Sunan, bāb 47; Tahāfudzī, bāb 25; Muslim, Sunan al-Musāfīrīn, tr. 12 sq.; Tabarī, iii. 2464, 2532). Certain regulations for decent conduct came into being, the object of which was to preserve the dignity of the house of divine service. Public announcements about stray animals were not to be made, as the Beduins did in their houses of assembly, and one should not call out aloud and thereby disturb the meditations of the worshippers (Bukhari, Sunan, bāb 83; Muslim, Maqāmir, tr. 18: more fully in Maqāmir, i. 19 sqq.). One should put on fine clothes for the Friday service, rub oneself with oil and perfume oneself (Bukhari, Dāmūs, bāb 3, 6, 7, 19) as was also done with ṭīb for the Ḥadījī (Bukhari, Maqāmir, bāb 143).

A question which interested the teachers of morality was that of the admission must not enter to the mosques. That many did not desire their presence is evident from the hadīth that one cannot prevent them as there is no ābu with it, but they must not be perfumed (Muslim, Sunan, bāb 29; Bukhari, Dāmūs, bāb 13; cf. Chron. Moskova, iv. 165). Other hadīths say they should leave the mosques before the men (al-Nāṣir, Sahih, bāb 77; cf. Abu Dawūd, Sunan, bāb 14, 48). Sometimes a special part of the mosque was railed off for them; for example, the governor of Mecca in 856 had ropes tied between the columns to make a separate place for women (Chron. Moskova, ii. 197 infra). According to some, women should not enter the mosque during their menstruation (Abu Dawūd, Tabarī, bāb 92, 103; Ibn Mādhaja, Tabarī, bāb 117, 123). In Medina at the present day, a wooden grille shuts off a place for women (al-Batanūnī, Al-Khīla al-Hājīzīya, p. 240). At one time the women stood at the back of the mosque (Yākūb, Cāblah, vi. 400). In Jerusalem there were special maqāmas for them (B. G. A., vi. 100). Ibn al-Haddīd would prefer to exclude them altogether and gives ‘Ābās as his authority for this.

Although the mosque became sacred it could not quite cast off its old character as a place of public assembly and in consequence the mosque was visited for many other purposes than that of divine service. Not only in the time of the Umayyads was considerable business done in the mosques (Tabarī, ii. 1118; cf. Lammens, Ziyād, p. 68) which is quite in keeping with the ḥadīth (Bukhari, Sunan, bāb 70 sq.) which, actually found it necessary to forbid the sale of wine in the mosque (ibid., bāb 73), but a writer in the viiith century, Ibn al-Haddīd, records with disapproval that business was done in the mosques: women sit in the mosques and sell thread, in Mecca hawkers even call their wares in the mosque. The list given by
This author gives the impression of a regular market-place (Mashhāl, ii. 54). Strangers could always sit down in a mosque and talk with one another (see B.G.A., iii. 205); they had the right to spend the night in the mosque; according to some, however, only if there was no other shelter available (Mashhāl, ii. 43 infra, 49 supra; see below D. 18). It naturally came about that people also ate in the mosque; this was quite common, and regular banquets were even given in them (e.g. Makrīzī, iv. 67, 121 sq.; cf. in Hadīth: Ibn Māqdūla, Fāmina, bāb 24, 29; Āhmūd b. Hāmil, ii. 106, 109; from below). Ibn al-Hādhājī laments that in al-Ăskās people even threw the remains of their repast down in the mosque; animals were brought in, and beggars and water-carriers called aloud in them etc. (Mashhāl, ii. 53 sq.). It is even mentioned as a sign of the special piety of al-Shirāzi (d. 476 = 1083) that he often brought food into the mosque and consumed it there with his pupils (Wustenfeld, Der Imam Schārī, iii. 298). Gradually the mosque became the center of religious and social activity (see D. 20). In the Azhar Mosque it was the custom with many to spend the summer nights there because it was cool and pleasant (Makrīzī, iv. 54). This was the state of affairs about 800 A.H. Similar conditions still prevail in the mosque.

2. The Mosque as a Place of Prayer.

Friday Mosques.

As places for divine service, the mosques are primarily "houses of which God has permitted that they be erected and that His name be mentioned in them" (Sūra, xxiv. 36), i.e. for His service demanded by the holy ceremonies of worship (maṣlāh), for assemblies for prayer (dīnār) and other religious duties (cf. Chron. Akhbar, iv. 164). The mosques were mawla bāb (Makrīzī, iv. 119, 140). In Medina after a journey, the Prophet went once to the mosque and performed two rakās, a custom which was imitated by others; and became the rule (Bukhārī, Šāfīt, bāb 59 sq.; Muslim, Šāfīt al-Musnadīn, tr. 11; Waḳīdī-Wellhausen, p. 412, 436). In this respect, the mosque played a part in public worship similar to that of the Ka'ba in Mecca at an earlier date and the Kaaba sanctuary in Ẓūfīn. The daily salāt, which in themselves could be performed anywhere, became especially meritorious when they were performed in mosques, because they expressed adherence to the community. A sala al-dīmā'a, we are told, is twenty or twenty-five times more meritorious as the sala of an individual at home or in his shop (Muslim, Masājid, tr. 42; Bukhārī, Šāfīt, bāb 87; Būyā', bāb 49). There are even hadiths which condemn private sala: "Those who perform the sala in their houses abandon the sunna of their Prophet" (Muslim, Masājid, tr. 44: but cf. 48 and Bukhārī, Šāfīt, bāb 52). If much rain falls, the believers may, however, worship in their house (Bukhārī, Dīmā'a, bāb 52). In this connection a blind man was given a special sala: it is particularly bad to leave the mosque after the adhān (Muslim, Masājid, tr. 45). It is therefore very meritorious to go to the mosque; for every step one advances into the mosque, he receives forgiveness of sins. God protects him at the last judgment and the angels also assist him (Muslim, Masājid, bāb 49-51; Bukhārī, Šāfīt, bāb 87; Adhān, bāb 36, 37: Dīmā'a, bāb 4, 18, 31; Corpus juris di Zaid b. 'Ali, N. 48, 156, 983).

This holds especially of the Friday sala (salāt al-dīmā'a), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Juyuboll, Handbuch, p. 86; Guidi, Sommario del Diritto Malechita, l. 125 sq.). According to Ibn Hishām (p. 290) this sala, which is distinguished by the kūfīiya, was observed in Medina even before the Hijra. It is hardly probable and besides is not in agreement with other sources (see Bukhārī, Dīmā'a, bāb 11) but the origin of this divine service, referred to in Sūra lxxvi. 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. Bukhārī, Dīmā'a, bāb 1). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the general. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of al-Masājid al-dīmā'a (Tabari, i. 2494; ii. 734, 1701, 1702, Kâfar, Bahā' al-Dīn, Taťūr, xi. 21, centre; ibid. also al-Masājid al-akhbar, Medina; cf. al-Masājid al-kabīr, B. G. A., v. 245) or Masājid al-Dīmā'a (Yākūt, iii. 896, al-Fusūr; also Tabari, i. 1119; Ibn Kutabba, Mawāfi, ed. Wustenfeld, p. 106; Masājid li-l-Dīmā'a (Makrīzī, iv. 4); Masājid Dīmā'an (Bahā' al-Dīn, bāb 259, Madā'īn; Yākūt, i. 643, 647, Bāṣa); then Masājid al-Dīmā'a (Yākūt, iii. 899; iv. 895; B. G. A., ii. 295, 315, 387; vii. 110 etc.). As an abbreviation we find also al-Dīmā'a (Yākūt, i. 400; Ibn Batūţa, iv. 343; cf. Masājid al-Dīmā'a, Bâddurri, p. 348) and especially Dīmā'an. As the kūfīiya was the distinguishing feature, we also find Masājid al-Khūţa (Makrīzī, iv. 44, 454, 87); Dīmā'an al-Khūţa (ibid., iv. 55) or Masājid al-Minbar (B. G. A., iii. 316 for Dīmā'an, l. 8).

Linguistic usage varied somewhat in course of time with conditions. In the time of 'Umar there was properly in every town only one Masājid Dīmā'an for the Friday service. But when the community became no longer a military camp and Islam replaced the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the country, in the villages on the one hand and several Friday mosques in the towns on the other. This meant in both cases an innovation, compared with old conditions, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province; on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islam had been used to a solemn weekly service. As to the villages (al-kusur), 'Amr b. al-Ănais in Egypt forbade their inhabitants to celebrate the Friday service for the reason just mentioned (Makrīzī, iv. 7). At a later period then the kūfīiya was delivered exceptionally without minbar, and only with stāl, until 'Marwān in 132 introduced the minbar into the Egyptian kūfi also (ibid., p. 8). Of a mosque in which a minbar had been placed, we are told Dīmā'a masājid li-l-Dīmā'a (Tabari, i. 2451) and a village with a minbar is called kūfrah Dīmā'a (Bukhārī, Dīmā'a, bāb 15; cf. Madīna Dīmā'a, B. G. A., iii. 321), an idea which was regarded by Bukhārī (d. 256 = 870).
as quite obvious. In introducing minbars into the Egyptian villages, Marwān was apparently following the example of other regions. In the fourth century, Ibn Hawkāl mentions a number of μηναί in the district of Isfahān (R. G. A. ii. 152 sq.) and a few in the vicinity of Marw (ibid., p. 316) and in Transoxiana (ibid., p. 378; cf. p. 384), and al-Maḥdī does the same for different parts of Persia (R. G. A., iii. 309, 317) and he definitely says that the kūtas of Palestine are ِبَنْتُ النَّاسِ (ibid., p. 176; cf. i. 58): Bāldūšari (p. 331) also uses the name minbar for a village mosque built in 230 in general, when speaking of the ِمَنْذَة, one talks of ِمَنْذَة and not of ِفَلَوَامِنْ (cf. R. G. A., n. 63) Later however the term Masjīd ِبَنْتُ is used for a Friday mosque (Ibn Djabār, p. 217). The conditions of primitive Islam are reflected in the building of the ِهَمَامَس, who only permitted the Friday service in large towns (cf. al-Mawardi, al-İṣlaḥ al-falsafī, ed. Enger, p. 177).

As to the towns, the ِشَفَّقات on the other hand have retained the original conditions, since they permit the Friday service in only one mosque in each town (cf. ِجُمِائد and of. cit., p. 178 sq.), but with the reservation that the mosque is able to hold the community. The distinction between the two sites was of importance in Egypt: When in 859 ِال-'Amr became supreme in Egypt, he appointed a ِشَفَّقات chief ِكَبَّر and the Friday service was therefore held only in the ِهَكِمَس mosque, as the large; but in 865 (1266) al-Malik al-'Alā' ِبَعْر ِلَدَار  gave the ِهَمَانَس preference and many mosques were therefore used as Friday mosques (McKrizi, iv. 52 sq.; al-Baysūnī, Ibm. ِلاْ-ِمَكِرْتِ, n. 1305; Quatremere, Hist. Sulf. Maml., n. 39 sq.). During the Umayyad period and to some extent in the ِأَبَعَسَد period, the number of ِفَلَوَامِنْ in the towns was still very small. The geographers of the third and fourth centuries in their descriptions of towns as a rule mention only ِبَنْتُ (Ibn al-Fakhri, c. 200 (903), sometimes ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ ِبَنْتُ, R. G. A. iv. 304-306, also ِبَنْتُ, simply, p. 305. In keeping with the oldest scheme of town planning, it was very often in the middle of the town surrounded by the business-quarters (R. G. A. ii. 298, 325; iv. 274 sq., 275, 280, 314, 316, 375, 376, 413, 426, 427 etc.; cf. al-Maqrizi, ed. Schefer, p. 35, 41, 56) and the ِبَنْتُ was still frequently in the immediate vicinity of the chief mosque (R. G. A., ii. 208, 314; iii. 426).

Iṣṭakhrī mentions as an innovation in Isfahān that al-Hādijī built a ِبَنْتُ in the western part of the town, although there was already one on the east bank (R. G. A., i. 82 sq.; cf. iii. 118; viii. 329). Ibn Djabār (R. F. A., p. 211 sq.) mentions only one ِبَنْتُ in Kūfsa, called Masjīd al-Kūfsa by Ibn al-Fakhī, although he also mentions other mosques (R. G. A., v. 173; cf. 174, 183 and iii. 116). In Kūfa where Yāʾkīn (278 = 891) already mentions 7,000 mosques (T. G. A. vii. 361), al-Maḥdī 575 = 958 gives 2 ِفَلَوَامِنْ (R. G. A., iii. 117). In ِنَماَرَة among many mosques, there was one ِبَنْتُ (R. G. A. vii. 258, 259), which was later replaced by another ِبَنْتُ (p. 360 sq.); al-Mutawakkil also built one outside the original town (ibid., p. 265; see also P. Schwarz, Die 'Ahl-ʿɪn-Kisā in Sīrāj, 1909, p. 32). In Bālid d, Yāʾkīn (278 = 891) mentions only one ِبَنْتُ for the eastern town and one for the western R. G. A., vii. 240, 245, 251, 253, the almost contemporary Ibn Rosta just mentions the old western town and its ِبَنْتُ, ibid., p. 109) although he gives the fantastic figures of 15,000 mosques in the east town (ibid., p. 254) and 30,000 in the west (or in the whole town; ibid., p. 256). After 280 there was added the ِبَنْتُ of the eastern palace of the caliph (Mez., Renaissance, p. 388 quoting al-Khaṭṭāb al-Baghdādī, ِطَرِيقَ بَغْدَادِ; a private ِبَنْتُ of Hārīn al-Rashīd in the ِبَنْتُ عَامُ مَسْجِد is mentioned by Ibn al-Kīfī, ِطَرِيقَ al-ʿIṣlam, ed. Lippert, p. 433 infra). These ِفَلَوَامِنْ are mentioned about 340 (951) by Iṣṭakhrī (R. G. A., i. 84), who also mentions one in the suburb of Kābāl wādī. Ibn Hawkāl in 367 (977) mentions the latter and also the ِبَنْتُ al-Bārāthī (R. G. A., i. 164 sq., of 329; Mez., loc. cit.), a fifth was added in 379, a sixth in 383 (Mez., p. 389); thus al-Khaṭṭāb al-Baghdādī in 460 (1058) gives 4 for West Bagdad, 2 for the east town (cf. Le Strange, Bagdad, p. 324). Ibn Djabār in 581 (1185) gives in the east town 3 ِفَلَوَامِنْ (Rīhā, p. 228 sq.) for the whole of Bagdad. For Cairo, Iṣṭakhrī gives two ِبَنْتُ: the ِأَمَر and ِتَلْوِيَان mosques (R. G. A., i. 49) besides that in al-Kārāfa, which was regarded as a separate town (cf. Ibn Rosta, c. 290 = 903; R. G. A., vii. 116 sq.). Al-Maqrīzī, who writes 586 = 985 shortly after the Fātimid conquest, mentions the ِأَمَر and ِتَلْوِيَان mosques, the new mosque in al-Kārīrah (al-Azhar), also one in al-Djizra, in Dīṣa and in al-Kārāfa (R. G. A., iii. 198—200, 209; the ِبَنْتُ in al-Djizra, also ِبَنْتُ Miṣrūn (cf. al-Maqrīzī, iv. 75), is mentioned in an inscription of the year 485; see van Berchem, Corpus i., n. 39). As these places were all originally separate towns, the principle was not abandoned that each town had only one ِبَنْتُ. The Fātimids however extended the use of Friday mosques and, in addition to those already mentioned, used the ِبَنْتُ al-Ḥākim, al-Maṣrūn and ِكَبَّر al-Maqrīzī, iv. 2 sq.). Naṣirī al-Khuṣraw (p. 439 (1047) mentions in one passage the ِفَلَوَامِنْ of Cairo, in another seven for Miṣr and fifteen in all (ed. Schefer, p. 134 sq., 147). This was altered in 569 by ِال-'Aṣār (see above) but the quartier, being still regarded as separate towns, retained their own Friday mosques (cf. for the year 607 in al-Kārīrah: Naṣirī al-Khuṣraw, p. 86).

After the Friday service in Egypt and Syria was freed from restriction, the number of ِفَلَوَامِنْ increased very much. Ibn Dukmāk (about 800) gives a list of only eight ِفَلَوَامِنْ in Cairo (ed. Völlers, p. 59—78), but this list is apparently only a fragment (in all he mentions something over twenty in the part of his book that has survived); al-Maqrīzī (d. 845 = 1442) gives 13 ِفَلَوَامِنْ (iv. 2 sq.). In ِDamascus, where Ibn Djabār still spoke of the ِبَنْتُ, al-Naʿīmī (d. 927 = 1521) gives twenty ِفَلَوَامِنْ (T. A., ser. 9, vii. 213 sq.) and, according to Ibn Bāṭīṭa, there were in all the villages in the region of Damascus ِبَنْتُ (i. 236). The word ِبَنْتُ in Maqrīzī always means a mosque in which the Friday service was held (p. 76, 115 sqq.) but by his time this meant any mosque of some size. He himself criticizes the fact that since 794 the ِال-'اَبَعَسَد al-ʿAṣār was performed in al-Akmar, although another ِبَنْتُ stood close beside it (iv. 76; cf. also 86).

The great spread of Friday mosques was reflected in the language. While inscriptions of the viiith century still call quite large mosques ِبَنْت, in
the ninth most of them are called ġāmi⁵ (cf. on the whole question, van Berchem, Corpus, i. 173 sq.); and while now the madrasa begins to predominate and is occasionally also called ġāmi⁵ (see below, F. 4), the use of the word masjid becomes limited. While, generally speaking, it can mean any mosque (e.g. Maģāri, iv. 137, of the Mu‘ayyad mosque), it is more especially used of the smaller unimportant mosques. While Ibn Dūbagai gives 472 masjid in addition to the ġawām‘i, madarīs, etc., al-Maţārizi only gives nineteen, not counting al-Karāfa, which probably only means that they were of little interest to him. ġāmi⁵ is now on the way to become the regular name for a mosque of any size as is now the usage, in Egypt at least. In Ibn al-Hādji (d. 737) al-Ċawām‘i is occasionally used in this general meaning in place of al-masājid (Madkhal, ii. 50). Among the many Friday mosques one was usually distinguished as the chief mosque; we therefore find the expression al-Ċawām‘i al-ţir‘am (Ibn Bāṭrīq, ii. 54, 94; cf. the older al-masājid al-ţir‘am, ibid., p. 53). The principal ġāmi⁵ decided in such questions as the beginning and ending of the Fast of Ramaḍān (Madkhal, ii. 68).

3. Other religious activities in the Mosque.

"The mentioning of the name of God" in the mosques, was not confined only to the official ritual ceremonies. Even in the time of the Prophet, we are told that he lodged Thākīfī delegates in the mosque so that they could see the rows of worshippers and hear the nightly recitation (Wāṣālī-Welhausen, p. 382). Although this activity (which is not given in Ibn Hādji, p. 96) may simply be a reflection of later conditions, the recitation of the Kur‘ān must have come to be considered an edifying and pious work at quite an early date. In the time of al-Maţārizi the ġurra‘ of Nisābūr used to assemble on Fridays in the ġāmi⁵ in the early morning and recite till the ġūfah (B.G.A., iii. 328), and the same author tells us that in the Mosque of ‘Amr in Egypt the ā‘immat al-ġurra‘ sat in circles every evening and recited (ibid., p. 205). In the time of Ibn Dūbagai, there were recitations of the Kur‘ān in the Umayyad mosque after the Şalāt al-ţabih and every afternoon after the Şalāt al-ţā’ir (Rīhā, p. 271 sq.). Besides the recitation of the Kur‘ān there were praises of God etc., all that is classed as ġhibr, and which was particularly cultivated by Şūfīsm. This form of worship also took place in the mosque. The Akh al-Tawḥīd wa l-‘A‘ma‘īfa formed niyājdīs al-ţāhkr, who assembled in the mosques (al-Makkī, Kūt al-Kūlih, i. 152). In the Mosque of the Umayyads and other mosques of Damascus, al-ţāhkr held the day before Friday (Maţārizi, iv. 49). In the Masjid al-ţāhkr the ġanāfis held al-ţāhkr, and recited at the same time from a book (B.G.A., ii. 182). In Egypt, Ahmad b. ‘Ullān and Khamārāwālah allowed twelve men to form a chamber near the minaret to praise God, and during the night four of them took turns to praise God with recitations of the Kur‘ān and with pious ġasādām. From the time of Šalāb al-Dīn an orthodox ġasādām was recited by the mu‘ājdīs in the night (ibid., iv. 48). Ibn al-Hādji demands that the recitation of the Kur‘ān aloud should take place in a mosque for the special purpose (masjid ma‘ājdī) as otherwise pious visitors are disturbed (Madkhal, ii. 53, 67). Mosques and particularly mausoleums had as a rule regularly appointed reciters of the Kur‘ān. In addition there was, e.g. in Hebron and in a mosque in Damascus, a šāhik who had to read Būkhi‘ (or also Muslim) for three months (Sauvain, Hist. Jum. Hul., p. 17; J.A., ser. 6, iii. 261). In Tunis, al-Būkhāri was read daily in a hospital (Zarkashi, transl. Fagyan, Rec. Soc. Arch. Constantin, 1894, p. 188).

Sermons were not only delivered at the Şalāt al-ţam‘a‘. In the Īrāk, even in al-Maţārizi’s time, one was preached every morning, according to the tımn of Ibn ‘Abbās (B.G.A., iii. 130), it was said. Ibn Dūbagai, in the Niţāmīya in Bagh- ādī, heard the Şāhi‘ ra‘is ‘preach on Friday after the ‘a‘ir on the minbar. His sermon was accompanied by the skilled recitation of the Kur‘ān which sat on chairs; they were over twenty in number (Ibn Dūbagai, p. 219, 222). In the same way, the calls of the mu‘ājdīs to prayer to the Friday khatba were delivered to a musical accompaniment (see below, H. 4). The unofficial sermons, which moreover were not delivered in mosques alone, were usually delivered by a special class, the kūṣā (plur. of kūṣ), on these cf. Goldscheber, Muh. Stud., ii. 161 sqq.; Mek, Die Renaissance des Islams, p. 314 sqq.; and the article kūṣa). The kūṣās, who delivered edifying addresses and told popular stories, were early admitted to the mosques.

Tamīn al-Di‘rī is said to have been the first of these; in Medina in the caliphate of ‘Umar before the latter’s decease, he used to deliver ‘in the minbar at the Fridaysalat and was not allowed to talk twice a week in the mosque; in the reign of ‘Alī and of Mu‘āwiyah the kūṣās were employed to curse the other side (Maţārizi, iv. 16 sqq.). In the Mosque of ‘Amr in Cairo by the year 38 or 39, a kūṣ was appointed, named Sulāmn b. İtr al-Du‘ābi‘, who was also kāji (ibid., iv. 17 wrongly: Sulāman; Kindi, Governors and Judges, ed.Guest, p. 303 sqq.). There are occurrences of the combination of the offices (Ibn Hādji, d. 83), Kindi, p. 317; Khair b. Na‘ām in the year 120, ibid., p. 348; cf. Hān al-Maţārī‘a, i. 131, Dīr, according to Thawba b. Nimr, Hān, i. 130 infra; Ibrahim b. İbāsh al-Kārī (d. 204), Kindi, p. 427; see also Makṣīrī (d. 18), which shows that the office of kāji was quite an official one. There is also evidence of the employment of kūṣās in the mosque of the ‘Irák in the ‘Abbasid period (Yākūt, Cs‘ahī‘, iv. 268; v. 446). The kūṣ, read from the Kur‘ān standing and then delivered an explanatory and edifying discourse, the object of which was to instill the fear of God into the people (Maţārizi, iv. 18).

Under the Fātimids also, kūṣās were appointed to the mosques; for example, in 403 the umm undertook the office in the Mosque of ‘Amr (Maţārizi, iv. 18 infra) and the rulers had also a kūṣ in the palace. The kūṣās were called asḥāb al-ţāhkr, because they delivered their discourses on the kur‘ān (al-Makkī, Kūt al-Kūlih, i. 152; Ibn al-Hādji, Madkhal, i. 159; cf. Makṣīrī, i. 121). Their discourse was called ġāhbr or wūz‘ or me‘āṣa‘, whence the kūṣ was also called mu‘ājdīkīr (B.G.A., iii. 205) or wūz‘ī. Specimens of their discourses are given by Ibn ‘Abd Rabbībi (al-Fīrās al-farq, Cairo 1321, i., p. 294 sqq.). It was not only the appointed officials who delivered such discourses in the mosque. Ascetics made
public appearances in various mosques and collected interested hearers around them (cf. e.g. Makrizi, iv. 135). In the Džamija al-Karšâ, a whole society, the Imam Ijawhari, delivered wâqî discourses on a kurd for three months on end; their servant collected money in a begging-bowl during the discourse and the šâkî distributed some of it among the poor (ibid., i. 121).

The šarî'ah was completely taken over by popular ši'ism and later writers would hardly reckon, as al-Makki does, the “story-tellers” among the mu'takallimin (Kâtât al-Kuliûb, i. 152). The whole system degenerated to trickery and charlatanism of all kinds, as may be seen in the Makâma literature (cf. thereon Yâ'qûb, edchi, vi. 167 sq., and see also Hider and Goldhâr, op. cit.). Al-Makrizi therefore distinguishes between al-šarî'ah al-šajâ'ah, the regular and seemingly edifying discourse in the mosque, and al-šarî'ah al-dînâmi, which consisted in the people gathering round all kinds of speakers, which is šekebî (Makrizi, i. 17). Others also have recorded their objections to the šarî'ah. Ibn al-Hadjîj utter a warning against them and wants to forbid their activities in the mosque completely, because they deliver “weak” narratives (Mudâkhil, i. 138 sq.; ii. 113 sq., 50). He says Ibn Umar, Makki and Abu Dâwûd rejected them and “Ali ejected them from the madjûl of Başân. It is of little significance that al-Mu'taqlîj in 284 forbade them to sit in the mosques and forbade people to gather round them, for he issued a similar interdict against the fâhîsh and the reasons were evidently political (Tabari, iii. 2165); it was for political reasons also, but with a very different motive, that 'Abd al-Dawla forbade their appearing publicly in Baghdad shortly before 400, because they increased the tension between Sunnis and Shi'is (Maz. op. cit. p. 319). As late as 580 the ʻu'wâ' still flourished in the mosques of Baghdad, as is evident from the Kifâ of Ibn Djaibar (p. 219 sqq.; 224), and in the ninth century there was in the A'har mosque a madâjîya al-wâ'â as well as a hâlî al-dâlî (Makrizi, iv. 54).

When Ibn al-Hadjîj denounces speaking aloud in the mosque, it is in the interest of the pious visitor who are engaged in religious works and meditation. Fâlîn [q. v.], retirement to a mosque for a period, was adopted into Islam from the other religions.

The word šarî' means in the Kûran the ceremonial worship of the object of the cult (Sûra vii. 134; xv. 91, 97; xxi. 53; xxxi. 71; cf. H. St. J. Toynbee, ed Horovitz, p. 86, 15) and also the ritual stay in the sanctuary, which was done for example in the Meccan temple (Sûra ii. 119; xxi. 25). In this connection it is laid down in the Kûran that in the month of Ramadân believers must not touch their wives “while ye pass the time in the mosques” (âkîf in l'marâj, Sûra x. 153), an expression which shows, firstly, that there were already a number of mosques in the lifetime of the Prophet and secondly that these had already to some extent taken over the character of the temple. The connection with the early period is evident from a ḥadîth, according to which the Prophet decides that ‘Umar must carry out a vow of ṣīmaf for one night in the Mâjdîd al-Harîm made in the Džahlîya (Bukhari, ṣīmaf, báb 5, 15 sq.; Fard al-Khamsa, báb 19; Makrizi, báb 54; Alman 54; A'bardhî, báb 29). It completely agrees in keeping with this that the Prophet, according to the ḥadîth, used to spend ten days of the month of Ramadân in ṣīmaf in the mosque of Medina (Bukhari, ṣīmaf, báb 1; Fard lâlîl al-Kâdâr, báb 3), and in the year in which he died as many as twenty days (ibid., ṣīmaf, báb 17). During this period the mosque was full of booths of palm branches and leaves in which the fâkîn lived (ibid., báb 13; cf. 6, 7). The Prophet only went to his house for some very special reason (ibid., báb 3). This custom was associated with the asceticism of the monks. The faithful were vexed, when on one occasion he received Ṣafîya in his booth and chatted for an hour with her (Bukhari, Fârîd al-Khamsa, báb 4; ṣīmaf, báb 8, 11, 12). According to another tradition, his ṣīmaf was broken on another occasion by his wives putting up their tents beside him and he postponed his ṣīmaf till Shawwâl (Bukhari, ṣīmaf, báb 6, 7, 14, 18). According to Zaid b. ‘Ali, the ṣīmaf can only be observed in a chief mosque (dżamû). Corpus iuris di Zaid b. ‘Ali, n. 1047). During the early period, it was one of the initiatory rites for new converts. In the year 14, ‘Umar ordered the retreat (al-ṣiyâm) in the mosques during the month of Ramadân for the people of Medina and the provinces (Tabari, i. 2377). The custom persisted and has always been an important one among ascetics. “The man who retires for a time to the mosque devotes himself in turn to salaât, recitation of the Kûran, meditation, ḥikîr etc.” says Ibn al-Hadjîj (Mudâkhil, ii. 50). There were pious people, who spent their whole time in a mosque (aḥmâma fîhi; Makrizi, i. 87, 97); of one were told that he spent his time in the madjûl of the Masjûd (Ṭustâfa, ibid., p. 44). Al-Samâhî says that during the month of Ramadân, he spent day and night in the mosque (Wustenfeld, Medina, p. 95). Sa’d al-Din (d. 644) spent the month of Ramadân in the Mosque of the Umaiyyads without speaking (Ibn Abî ʻUshâfîbî, ii. 192). Nocturnal vigils in the mosque very early became an established practice in Islam. According to Hadîth, the Prophet frequently held nocturnal salaats in the mosque with the believers (Bukhari, ḥijâmâ, báb 29) and by his orders ʻAbd Allâh b. Ūnaï al-Ansârî came from the desert for twenty-three successive nights to pass the night in his mosque in rites of worship (Ibn Kutaiba, Maśrîf, ed. Wustenfeld, p. 142 sq.). Out of this developed the taḥâdîjâdn [q. v.], salaat, particularly recommended in the law and notably the tarâviqâ salaat [q. v.]. In Dihlî on these occasions women singers actually took part (Ibn Bâṭîqâ, iii. 155).

During the nights of the month of Ramadân there were festivals in the mosques and on other occasions also, such as the New Year, sometimes at the new moon, and in the middle of the month. The mosque on these occasions was illuminated; there was eating and drinking; incense was burned and ḥikîr and kirâa performed.

The Friday salaat was particularly solemn in Ramadân, and in the Fârîdî period, the caliph himself delivered the khitâba (see Makrizi, ii. 345 sqq.; Ibn Taghribîrî, ii/ii., ed. Juybû, p. 452–456 and ii/i., ed. Popper, p. 331–333). The mosques associated with a saint had and still have their special festivals on his mawlid [q. v.]; they also are celebrated with ḥikîr, kirâa etc. (cf. Lane, Manners and Customs, ch. xxiv. sqq.). The saint’s festivals are usually local and there
are generally differences in the local customs. In the Maghribi for example in certain places the month of Ramadan is opened with a blast of trumpets from the manâbî (Madkhâl, ii. 69).

The mosque thus on the whole took over the role of the temple. The rulers from 'Umar onwards dedicated gifts to the Ka'ba (B. G. A., v. 20 sq. and GI., sv. Starâ), and as in other sanctuaries we find women vowing children to the service of the mosque (Bukhârî, Salât, bâb 74; Makrîzî, iv. 20). jâwâf was performed, as at the Ka'ba, in mosques with saints' tombs as is still done, e.g. in Hebron; Madjîr al-Din sees a pre-Islamic custom in this ('Savaire, Hist. jérâr. et Hébr.), p. 5). Especially important business was done here. In times of trouble the people go to the mosque to pray for help, for example during drought, for which there is a special Salât (which however usually takes place on the qunâlîa), in misfortunes of all kinds (e.g. Wustenfeld, Medina, p. 19–20; Makrîzî, iv. 57); in time of plague and pestilence, processions, weeping and praying with Kur'ân uplifted, were held in the mosques or on the qunâlîa, in which even Jews and Christians sometimes took part (Ibn Taghibirdî, ii/I., ed. Popper, p. 67; Ibn Ba'tîta, i. 243 sq.; Ch. Quatremère, Hist. Sult. Maml., ii/I., 35; ii/I., 199) or for a period a sacred book like Bukhârî's Saheb was recited (Quatremère, op. cit., ii/I., 35; al-Dâhâbî, Miroullis Biographiques, French transl., vi. 13). In the courtyards of the mosques in Jerusalem and Damascus in the time of Ibn Ba'tîta solemn penance was done on the day of 'Afâra (i. 243 sq.), an ancient custom which had already been introduced into Egypt in the year 277 by 'Abd al-'Azîz b. Marwân (Afâra after the Ayr); cf. Kindi, Wulât, p. 50). Certain mosques were visited by barren women (Wustenfeld, Medina, p. 133). An oath is particularly binding if it is taken in a mosque (cf. Joh. Pedersen, Der Eid bei den Semiten, p. 144); this is particularly true of the Ka'ba, where written covenants were also drawn up to make them more binding (ibid., p. 143 sq.; Chron. Mekka, i. 160 sq.). It is in keeping with this idea of an oath that Jews who had adopted Islam in Cairo had to take oaths in a synagogue which had become a mosque (Makrîzî, iv. 266). The contracting of marriage (jâd al-'nîzâh) also is often concluded in a mosque (Santillana, II. Muâsârî, ii. 548; Madkhâl, ii. 72 infra; Snouck Hurgronje, Mekka, ii. 163 sq.), and the particular form of divorce which is completed by the Lâb[q.v.] takes place in the mosque (Bukhârî, Salât, bâb 44; cf. Joh. Pedersen, Der Eid etc., p. 114).

It is disputed whether a corpse may be brought into the mosque and the Salât al-qâmilî performed there. According to one hadîth, the bier of 'Sâ'd b. Abî Waqâs was taken into the mosque at the request of the Prophet's widow and the Salât held there. Many disapproved of this, but A'sîsha pointed out that the Prophet had done this with the body of Suhail b. Bâdî' (Muslihî, Pynain, tr. 1. 1/1. 504). The discussion on this point is not connected with the discussions regarding the worship of tombs. In theory this is permitted by al-Shâhî, while the others forbid it (see Juynboll, Handbuch, p. 170; I. Guidi, II. Muâsârî, i. 151). The matter does not seem to be quite clear, for Abû al-Din says that only Abî Hanîfa forbids it, but he himself thought that it might be allowable on the authority of a statement by Abû Yusuf (Chron. Mekka, iii. 208–210). In any case, it was a very general practice to allow it, as Abî al-Din also points out. 'Umar conducted the funeral Salât for Abû Bakr in the Mosque of the Prophet and 'Umar's own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet's tomb and in Mecca at the door of the Ka'ba; some even made a sevenfold jâwâf with the corpse around the Ka'ba. This was for a time forbidden by Marwân b. Abî al-Hakam and later by 'Umar b. 'Abî al-'Azîz (Abû al-Din, loc. cit.; Wustenfeld, Medina, p. 77). The custom was very early introduced into the Mosque of 'Amr (Makrîzî, iv. 7, 1 sqq.). That later scholars often went wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever increasing tendency to found mosques and tombs. Even Ibn al-Hashî, who was anxious to maintain the prohibition, is not quite sure and really only forbids the loud calling of the fu'ûrî, dhâkirûn, mukâkhirûn and maridûn on such occasions (Madkhâl, ii. 50 sq., 64, 81). When a son of Sulîn al-Mu'ayyad died and was buried in the eastern qubbah of the Mu'ayyad mosque, the khatib delivered a khatûba and conducted the Salât thereafter and the fu'ûrî recited for a week at the grave, while the amirs paid their visits to the grave (Makrîzî, iv. 246, 2 sqq.). In Persia, it was the custom for the family of the deceased to sit in the mosque for three days after the death and receive visits of condolence (B. G. A., iii. 440 infra).

4. Mosques as Objects of Pilgrimage.

As soon as the mosque became a regular sanctuary it became the object of pious visits. This holds especially of the memorial mosques associated with the Prophet and other saints. Among them three soon became special objects of pilgrimage. In a hadîth the Prophet says "One should only mount into the saddle to visit three mosques: al-Masjid al-Hârâm, the Mosque of the Prophet and al-Masjid al-Aqâ'a" (Bukhârî, Fadî al-Salât â Masjid al-Mekka wa l-Madinah, bâb 16; Tâfarî al-Clinton, bâb 26; Sarrûm, bâb 67; Muslim, Hadîd, tr. 93; Chron. Mekka, i. 303). This hadîth reflects a practice which only became established at the end of the Umayyad period. The pilgrimage to Mecca had been made a duty by the prescription of the Hadîdj in the Kur'ân. The pilgrimage to Jerusalem was a Christian custom which could very easily be continued, on account of the significance of al-Masjid al-Akâ'a in the Kur'ân. This custom became particularly important when 'Abd al-Malik made it a substitute for the pilgrimage to Mecca (Yâkîbî, ed. Houtsma, ii. 311). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of increasing generation for the Prophet. In the year 410 Abî Dâ'fân, Ma'nî, on his hadîdj visited the three sanctuaries (Tabari, i. 129) and this became a very usual custom. Mecca and Medina however still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, Masâ'dî, tr. 1: Chron. Mekka, i. 301), the Prophet however is reputed to have said "A Salât in this
mosque is more meritorious than 1,000 šālāts in others, even the Al-Masjid al-Harām (Bukhārī, Bāqi al-Ṣaḥābī fi Masjid Makka wa 'l-Masīna, Bāb 1; Muslim, Ḥadīṣ, tr. 89; Chron. Mecka, i, 303). The ḍādhir is aimed directly against Jerusalem and therefore probably dates from the Umayyad period. According to some, it was pronounced because someone had committed performing the ḍādhir against Jerusalem, which the Prophet was against (Muslim, loc. cit.; Wāḥidī-Wellhausen, p. 349). The three mosques however retained their pride of place (Ibn Khūlān, Kitāb al-Madā'ī, fasc. 4, 6; Ibn al-Hadīdī, Madā'ī, ibid., p. 55), and as late as 662 (1264) we find Balbars founding ʿawāfī for pilgrims who wished to go on foot to Jerusalem (Quintemère, Hist. Sult. Maml., i, 1, 248).

Although these three mosques officially hold a special position, others also are highly recommended, e.g. the mosque in Kāfā (see Al-Madhīa). A šālāt in this mosque is said to be as valuable as an ʿawāfī or two visits to the mosque in Jerusalem (Ibn Khūlān, Kitāb al-Madā'ī, p. 381 sq). Attempts were also made to raise the mosque of Kāfā to the level of the three. ‘Abī is said to have told someone who wanted to make a pilgrimage from Kāfā to Jerusalem that he should stick by the mosque of his native town, it was "one of the four mosques" and two ʿawāfī's in it were equal to ten in others (B. G. A., i, 173 sq; Yākūt, Muṣūm, iv, 525); in another tradition, šālāts in the provincial mosques are said to be generally worth as much as the pilgrimage (Maṭrīz, i, 4), and traditions arose about the special blessings associated at definite times with different holy places of Islam (B. G. A., iii 183) and especially about their superior merits (B. G. A., i, 174). The Meccan sanctuary, however, always retained first place, which was marked by the Ḥadījī. It was imitated by al-Mutawakkil in Sūmarīya, he built a Ka'bah as well as a Mihrāb and an ʿArafār there and made ʿAbī anṭūr perform his ḍādhir there (B. G. A., iii, 122).

D. Equipment of the Mosque.

1. The Development of the Edifice.

Except in the case of Mecca the earliest mosques as described above (B. 1) were at first simply open spaces marked off by a ʿawāfī. The space was sometimes as in al-Ṭā'if, planted with trees and usually covered with pebbles, e.g. in Medina (Muṣūm, Ḥadīṣ, tr. 95; Baladāhuri, p. 6) and al-Ṭā'if (Maṭrīz, iv, 8; Ibn Ḥukmāk, iv, 62; Ibn Ṭaghrībirdī, i, 77) which was later introduced in Bāṣrā and Kūfa the courtyards of which were otherwise dusty (Baladāhuri, p. 277, 348). These conditions could last only so long as the Arabs retained their ancient customs as a closed corporation in their simple camps. The utilisation of churchyards was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with older cultures.

ʿUmar made alterations in the mosques in Medina and in Mecca also. He extended the mosque of the Prophet by taking in the house of ʿAbbās, but like the Ḥerām, he still built of ṣawāwī, palm-trunks and leaves and extended the booths (Bukhārī, Ṣawāwī, fasc. 62; Baladāhuri, p. 6). In Mecca also his work was confined to extending the area occupied by the mosque. He brought the surrounding houses and took them down and then surrounded the area with a wall to the height of a man; the ʿArab was thus given its firāz like the mosque in Medina (Baladāhuri, p. 46; Chron. Mecka, i, 306 sq.; Wustenfeld, Medina, i, 68 sq). ʿOthmān also extended these two mosques but introduced an important innovation in using hewn stone and plaster (ṭībī) for the walls and pillars. For the roof he used tekī (ṭībī). The books, which had been extended by ʿOmar, were replaced by him by pillared halls (arwaṭī, sing. riwaṭī) and the walls were covered with plaster (Bukhārī, Ṣalāt, Bāb 62; Baladāhuri, p. 46; Wustenfeld, Medina, p. 70 sq). Saʿd's abī Ṣajāḥ is said to have already taken similar steps to relieve the old simplicity of the barely equipped mosque in ʿArab. The ʿawāfī consisted of pillars of marble adorned in the style of Byzantine churches (Tabari, i, 2498; Yākūt, iv, 324).

This was little in keeping with the simple architecture of the original tents for Bāṣrā and Kūfa had originally been built of reeds and only after several great fires were they built of ṣawāwī (see above Bāb 1; cf. Ibn Khutbā, Muṣūm, ed. Wustenfeld, p. 279). As to Kūfa, Saʿd by 'Omar's orders extended the mosque so that it became joined up with the Dār al-Ināra. A Persian named Ṭuṣbēb b. Buzqurjmiśr was not only against the Khība. The original plan of the mosque was therefore still retained although the pillared hall, which is identical with the ʿawāfī already mentioned (200 ʿawāfī broad), replaced the simple booth and the materials were better in every way (Tabari, i, 2491 sq.; 2494). Already under the early Caliphs we can therefore note the beginnings of the adoption of a more advanced architecture.

These tendencies were very much developed under the Umayyads. Even as early as the reign of Muʿawiyah, the mosque of Kūfa was rebuilt by his governor Ziyād. He commissioned a pagan architect, who had worked for Khīsā, to do the work. The latter had pillars brought from al-Ahwāz, bound them together with lead and iron clamps to a height of 30 ʿawāfī and put a roof on them. Similar halls, built of columns (here like the old booth in Medina called ʿawāfī: Tabari, i, 2492, 14; but also ʿawāfī, plur. ʿawāfī: Tabari, ii, 259 sq.) were added by him on the north, east and western wall. Each pillar cost him 180 dirhams. The mosque could now hold 60,000 instead of 40,000 (Ṭabarī, i, 2492, 6 sqq., cf. 2494, 71; Yākūt, Muṣūm, iv, 374, 376; Baladāhuri, p. 276). Al-Hajjāj also added to the mosque (Yākūt, iv, 325 sq). Ziyād did similar work in Bāṣrā. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Ahwāz, which were faced with teak. We are told that he made al-ṣafta al-muṣākadda, i.e. the khība hall, with 5 columns. This seems to show that the other sides also— as in Kūfa—had pillared halls. He erected the Dār al-Ināra close to the khība side. This was taken down by al-Hajjāj, rebuilt by others, and finally taken into the mosque by Ḥārūn al-Kaṣhāb (Baladāhuri, p. 347, 348 supra, 349; Yākūt, i, 642, 643). In Mecca also in the same period
similar buildings were erected. Ibn al-Zubair and al-Hājiqādī both extended the mosque, and Ibn al-Zubair was the first to put a roof on the walls; the columns were gilt by ʾAbd al-Malik and he made a roof of takaft (Chowan. Mekkā, i. 307, 309). The Mosque of ʾAmr was extended in 53 with Muʾāwiyā's permission by his governor Maslama b. Mukhballāt to the east and north; the walls were covered with plaster (mūrā) and the roofs decorated; it is evident from this that here also the original booth of the south side was altered to a covered hall during the early Umayyad period. A further extension was made in 79 in the reign of ʾAbd al-Malik (Maqrizi, iv. 7, 8; Ibn Duʾlāmah, iv. 62). Thus we find that during the early Umayyad period and in part earlier the original simple and primitive mosques were some extended, some altered. The alteration consisted in the old simple booth of the Mosque of the Prophet being gradually enlarged and transformed into a pillared hall with the assistance of the arts of countries possessing a higher degree of civilisation. In this way what had originally been an open place of assembly developed imperceptibly into a court, surrounded by pillared halls. Very soon a fountain was put in the centre of the court and we now have the usual type of mosque. The same plan is found in the peristyle of the houses and in the atrium of a basilica like that of Tyre (Herschel-Haufl, Realencyclopaedie, x. 780).

The great builders of the Omayyads, ʾAbd al-Malik and his son al-Walid I, made even more radical progress. The former entirely removed the old mosque in Jerusalem, according to Byzantine architects erected the Dome of the Rock as a Byzantine building (cf. Sauvain, ʾIrūr, et ibn Hārūn, p. 48 sqq.). Al-Walid likewise paid equal attention to the most ancient form of mosque, when, in Damascus, he had the church of St. John transformed by Byzantine architects into the Mosque of the Omayyads. As al-Maʾādī distinctively states, they wanted to rival the splendid churches of the Christian churches (B. G. A., iii. 159). The new mosques, which were founded in this period, were therefore not only no longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Hājiqādī, for example, used materials from the surrounding towns when building his foundation of Wāsif (Tabaki, iii. 321; Balādhuri, p. 290). Columns from churches were now used quite regularly (e. g. in Damascus: Masʿūdi, Murādī, iii. 408; Ramla: B. G. A., iii. 165; cf. Balādhuri, p. 143 sqq.; for Egypt see Maqrizi, iv. 36, 124 sqq.). Sometimes remains of the older style remained alongside of the new. In Ṣanāʾah, al-Maʾādī found in the chief mosque wooden columns of the time of Abū Muslim along with round columns of brick of the time of ʾAmr b. al-Lath (B. G. A., iii. 316). The building activities of al-Walid extended to al-Fuṣāl, Mecca and Medina (cf. B. G. A., v. 106 sqq.) where no fundamental alterations were made, but complete renovations were carried out. With these rules, the building of mosques reached the level of the older architecture and gained a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Ṣanāʾah, for example, there was a djāmi in the style of the Syrian mosques with round columns, on which was a kabara (B. G. A., iii. 436 sqq.; cf. Shīrāz, p. 430). Al-Walid also rebuilt the Mosque of the Prophet, in part, in the Damascus style (B. G. A., iii. 88; Ḥaẓwini, ed. Wüstenfeld, ii. 71).

This revolution naturally did not take place without opposition any more than the other innovations, which Islam adopted in the countries with a higher culture which it conquered. After the Mosque of the Prophet had been beautified by Christian architects with marble, mosaics, shells, gold etc. and al-Walid in 93 was inspecting the work, an old man said: "We used to build in the style of Mosques; you build in the style of Churches" (Wüstenfeld, Medina, p. 74). The discussions on this point are reflected in Ḥāḍīth. When ʾUmar enlarged the Mosque of the Prophet, he is reported to have said: "Give the people shelter from the rain, but take care to make them red or yellow lest you lead the people astray", while Ibn ʾAbbās said: "You shall adorn them with gold as the Jews and Christians do" (Dhahār, Šalīh, bāb 62). Ibn Ṭabrān here takes up the Omayyad attitude and ʾUmar that of old-fashioned people, according to whom any extension or improvement of the zulla was only permissible for strictly practical reasons. The conservative point of view is predominant in Ḥāḍīth. It is said that extravagant adornment of the mosques is a sign of the end of the world; the works of al-Walid were only tolerated from fear of the ḥīna (Ibn Ḥanbal, Minhāj, iii. 134, 145, 152, 230, 283; al-Nasawī, Masjid, bāb 2; Ibn Madja, Minhājī, bāb 2). The lack of confidence of pious conservatives in the great mosques finds expression in a Ḥāḍīth, according to which the Prophet (according to Anas) said: "A time will come over my umma when they will vie with one another in the beauty of their mosques; then they will visit them but little" (al-ʾAshqālānī, Fath al-Bārī, i. 562). In the Fikr, we even find divergence from the oldest quadrangular form of the mosque condemned (Guide, ʾIl-Muhājir, i. 71). Among the types which arose later was the "suspended" (mawlaṭak) i. e. a mosque situated in an upper storey (e. g. in Damascus, ʾIl A., ser. ix., vol. v. 409, 415, 422, 424, 427, 430).

2. Details of the Equipment of the Mosque.

a. The Minaret (see also MANARA).

The earliest primitive mosques had no minaret. When the adhān call was introduced, Bilāl is said to have summoned the faithful in Medina to the early ʾāshūr from the roof of the highest house in the vicinity of the mosque (Ibn Hisāb, p. 348; Wüstenfeld, p. 75); on the day of the conquest of Mecca, the Prophet instructed Bilāl to utter the call to prayer from the Kaʿba, according to al-Azraqī, from the roof (Chron. Mekkā, i. 192: cf. Ibn Hisāb, p. 822). During the early days of Islam, the muʾaddhin did not however utter his summons from an elevated position (cf. below G 2 d). It is doubtful in the first place when the minaret was introduced, and in the second whether it was adopted into Islam, expressly for the call to prayer.

The Omayyad caliph al-Walid (86–96) undoubtedly had considerable influence for the history of the minaret, although even earlier in 84 (703) Sīdī ʿUkba in Kairawān had been built by Ḥassān b. Nuʾmān with a minaret (so according to Bakri: H. Salādim, La Mosquée de Sidi Oktba, 1899, p. 7, 19). There was also a minaret in the
Omayyad mosque in Damascus. At the present day, the mosque has 3 minarets as was the case in the time of Ibn Dhibair, who mentions two on the west and one in the north (Rīḥā, p. 266), while Ibn Mākki also says there were three, and adds that one was in the west, another in the east and another in the north (i. 203), which agrees with present day conditions. One of the earliest authorities, Ibn al-Ṭaligh (d. 289 = 902), however mentions only one minaret (miṣḥana) and says that in the days of the Greeks it had been a watch-tower (ṣāfūr), which belonged to the church of St. John and was left standing by al-Walid (B. G. A., v. 108, 5). Al-Makdisi (d. 375 = 955) mentions only one minaret, which was above the Bāb al-Farādisi: when he calls it a manāra unāqi láti'a (B. G. A., ii. 159) he may perhaps mean a renovated minaret (cf. U. Stranger, Palæstina under the Moslems, p. 229) and besides, his description does not exclude the existence of other minarets. The tradition that the minaret of the Omayyad mosque was taken over from the predecessors of the Muslims long survived: for Vāqūr, who mentions the east and west minarets, says that the western belonged to a fire-temple and a flame used to be visible on it (Miṣḥām, ii. 596) and according to Ibn Bagdādi, the east and west minarets were built by the Byzantines while only the north one was built by the Muslims (ib. 203 sq.; a story also given by al-Bozairi [d. 1003 = 1394] quoting Ibn Asākir [d. 571 = 1171], see J. A. var. vii. 423; Quatremère, Histoire des Musulmans, p. 273). In Mecca also, al-Walid built turrets (ṣāfūrāt; Cāsim, Mekkā, i. 510), sometimes minarets (a) is evident from ibid. (p. 310, 311). They were later increased so that Kubl al-Din mentions 7 minarets (ibid., i. 424-426). According to al-Samhūdi, he also built in Medina 4 towers, but Sulaimān b. 'Abd al-Malik, in the year 979 had the southwestern tower taken down, because the shadow of the muqarnān from it fell upon him, when he was in the house of Marwān b. al-Ḫakam. While al-Samhūdi says that there were no minarets in Medina before al-Walid, he asserts on the other hand that Omar had already built towers in the four corners of the mosque (Wustentfel, Medīna, p. 75; cf. Ibn Bagdādi, i. 272). In the time of Ibn Dhibair (d. 580) there were still only 3 minarets there (Rīḥā, p. 195). It was not until 706 that Muhammad b. Khalīfa rebuilt the fourth minaret (Wustentfel, op. cit., p. 76).

After the time of al-Walid, minarets became more and more numerous. In Ramla his brother al-Hašem built a beautiful minaret (B. G. A., i. 165, v. 1). For the mosque in Jerusalem Ibn 'Abd al-Kabīr relates about 400 mentions 4 minarets (Iṣf. Cairo 1331, iv. 274 sq.) which al-Malān al-Din claims to go back to the time of al-Malik (Sauvage, Histoire, iv. 288. iv. 289, 125). Ibn Hawqāl (367 = 977) expresses notes of the 'Adhamī in Fārāyāh in Khirbād that he did not have a minaret (B. G. A., i. 321) and he seems to consider it būta'a to build two minarets: (iv. 13, 14). Apart from the isolated reference by al-Samhūdi to 'Omar's building activities, to which very little importance can be attached, it is probable from this evidence that al-Walid was the first to introduce the minaret into Syria and the Hijāz. That he introduced it into Islam itself, however is not certain. According to al-Baladhurī (d. 279 = 892), Ziyād b. Bahāra, when he was governor in 45, built the minaret of stone, when he built the mosque of brick (p. 348). This seems to suggest that there was already a minaret there. According to the Egyptian historians, al-Maslama b. Muḥammad in al-Fuṣāṣ'ī's orders in 53 built a tower at each corner of the mosque to 'Amur (ṣawwānā'a), which had not been done before (Makrizī, iv. 7 sq., 44; Ibn Taghribirdī, i. 77). The staircase leading up to the minaret was originally outside the mosque, but was later put inside it. Maslama is said to have introduced the minaret into other mosques in al-Fuṣāṣ'ī (i.e. in all except those of Ṭūbāb and Khawlān; cf. Makrizī, iv. 44; Ibn Taghribirdī, loc. cit.). How old this story is, cannot be ascertained, but the view often put forward that al-Walid was the first to introduce the minaret (cf. Schwauly, in Z. D. M. G., ii., 1898, p. 143-146), is in any case not certain.

There are three names in common use for the minaret Miṣḥana or Miṣḥāna, "place of the adhan call", which is in general use in Egypt and Syria at the present day, is frequently found in literature and inscriptions (B. G. A., iii. 225, 15; v. 108, 5; Makrizī, iv. 13, 20, 4, 25, and pass.; Ibn Asākir, ii. 204, 2 from below; v. Berchem, Corpus, i., No. 25, 63, 88, 89 and others from the 8th century onwards). Sawwānā'a, especially used in North Africa (Mārqaṣ, Les Monuments arabes de Tlemcen, 1903, p. 45), is frequently found (Ibn Dhibair, Rīḥā, p. 91, 100, 145, 195, 266; Ibn Bagdādi, i. 203, 272; ii. 2, 12, 13; Makrizī, iv. 7 sq.; Ibn Taghribirdī, i. 77). This word means also cloister or cell and in the older literature is used as the equivalent of dāir (Sūr xxii. 41; Ibn Hāšim, p. 115; Bagdādi, al-Manā Initialization 35; Arragā'ī, bah. 48; B. G. A., ii. 154; Makrizī, iv. 389; Ibn al-Farraj, Tafsīr v. 561). Manāra is the most usual word in literature (Makrizī, iv. 7; manār; cf. v. Berchem, Corpus, i., No. 63; K. al-Maslama, ii. 63, 67). This word has the same meaning as Syr. maṣīna but is probably an analogous, independent formation. The word means light, position in which a light is put (Inmārāṭ, Dīwān, 148, 37; Abū Dha'aib, Dīwān, ed. Bell i. 60; B. G. A., iv. 132); also lighthouse (B. G. A., i., 177; Kindi, Wulūd, p. 64; Ibn Dhibair, Rīḥā, p. 41). Maṣīna (a) also means a boundary stone or a signpost (Ṣalām, Lisān, 99, from below; Kās al-Rukāyāt, p. 377; 70.; Ibn Surī, i. 135; Fraẓn. Hist. Arab., ii. 12 and 42) or a watch tower (Ṭabarī, i. 864; 878); the boundary stones of the barak area, for example, are called Manār al-Furān (B. G. A., ii. 25) and Abraha was called Dān 'īl Maṣīna, because he put up signposts (Ṣalām, vii. 105, 4; Dīwān Barhāsh, i. 410); obelisks are also called maṣīra (B. G. A., vii. 117, 30, 118, 8). The derivation of the last named maṣīra from milliārion (Franke, Frommata, p. 283) is likely little and still less probable is a derivation from a Persian building for fire-worship (v. Berchem in E. Diez, Der alemannisch Brandenmüler, i. 1908), 131 sqq. also distinguishes rather ingeniously between maṣīra "light", from nār and maṣīra "fire-tower" from nār). Probably there is only a single word in question and the signpo-sts received their name from the watch-tower (note that ṣalām also is used of the minaret: Ibn 'Arabshāh, Visī Timūrī, ed. Manger, 1767, i. 704). There are a number of references to the exi-ence on the coasts of a series of maṣīra and each maṣīra gave warning by light-signals of the movements of the enemy (B. G. A., ii. 177). According to al-Baladhurī
architect, Maslama b. Mukhallad, used it for the *Fitqaf (ibid., p. 44).* An ascetic who died in 469 lived in the manara of the Mosque of ‘Amr (Yākūt, *Culāb*, iv, 274). This suggests the meaning of minaret expressed by the word *sawmā'* (cf. also *Maṭrīzi*, iv, 7, 8) as a saint’s cell. According to one source, rather late however, al-Walid is said to have found a monk in the tower of the church of St. John who lived in the *sawmā'* there (cf. *J. A.*, ser. 9, vii, p. 189; Quatemère, *Hist. Sult. Maml.*, ii, 264). This use of the minaret was kept up during the golden age of Islam. Thus Ibn Djabar records that he saw in the west minaret of the mosque of the Omayyads cells for devout Maghribis and in the topmost chamber, where al-Chasīf had lived in *Fitqaf* there was now a *sākīd* (Rikha, p. 266, 18 sqq.). Ibn Tumant also lived there (Yākūt, *Muṣāmāt*, ii, 596, 18 sq.) and ‘Abd al-Latif also found another devotee living there (Ibn Abi ‘Uṣāila, ii, 204, 2 from below). According to al-Maṭrīzi, the Egyptian minaret was not introduced in a purely architectural way, but even from his account it appears most likely to be Syrian in origin.

If the minaret did not have a single origin, it is improbable that a single type of tower served as the model for it. Ziyād is said to have built the minaret in *Baṣra* of stone. The quadrangular Syrian Omayyad type (*B. G. A.*, iii, 182), which was taken over from the church-tower, was also of stone. In Egypt, on the other hand, according to al-Maṭrīzi, minarets for many centuries were only built of brick and the earliest stone minarets in this country were not built till shortly before 700 in al-Mansūriyya and al-Kāhāgawāwī (Maṭrīzi, iv, 224). In North Africa where the Omayyad, Syrian type was introduced, a round minaret of brick in 7 stories with pillars was built in *Abbahā* south of Kairawān in 184 (800) (Yākūt, *Muṣāmāt*, iv, 119). Ibn al-Hādījī condemns minarets of his time as being built too high. It is interesting to note as throwing a light on what was considered *bid‘a* that he regards the round form as the old and genuine one (Maṭrīzi, ii, 61 below). — For literature see Fraenkel, Schwall, v. Berchem, K. Hartmann, Horovitz quoted above; Doutté, in *K. Afs.*, iv, 1900, p. 339 sqq.; J. H. Gottheil, in *J. J. J.*, xx, 1908, p. 132—154; N. A. C. Creswell, in *Burlington Magazines*, xlviii, 1926, p. 134—140, 252—258, 290—296.

6. The Chambers.

The old mosque consisted of the courtyard and the open halls running along the walls: these were called *al-muḥāqṣāt* (*B. G. A.*, iii, 82, 158, 105, 182) because they were roofed over. When we are told that in Palestine, except in Jericho, towers were placed between the *muḥāqṣāt* and the courtyard (*ibid., p. 182*), this seems to suggest that the halls were closed, which would be quite in keeping with the winter climate of this region.

The halls were particularly extensive on the *kibla* side, because assemblies were held here. The space between two rows of pillars was called *riwātik* or *riwātā*. (B. G. A., iii, 158, 159: Maṭrīzi, iv, 10, 11, 12, 49). Extension often took the form of increasing the number of the *arṣikā*; in some districts a sail-cloth was spread over the open space as a protection from the sun at the time of the service (*B. G. A.*, iii, 205, 430).

The courtyard was called *baṣn*. The open space around the *Kaʿba* is called *Fitqaf al-Kabā*
MASDJD

(Cover, Mekkâ, i. 307; Ibn Hishâm, p. 322; cf. Finâ' Zâirizân: Yâkût, Idrîsî vi. 376). Finâ' is also the name given to the open space around the mosque (Makrîzî, iv. 6). Trees were often planted in the courtyard: e.g. in the mosque of 'Amr (see B 1; when we read in Makrîzî, iv. 6 that it had no şâns, this probably means that this space, planted with trees, between the covered halls was very narrow). In Medina, at the present day, there are still trees in the Kajûda (Batamûnî, Kitâb, p. 249) and in Ibn Djabbar's time there were 15 palms there (Kitâb, p. 194). Other mosques in Cairo had trees growing in them (Makrîzî, iv. 54, 64, 65, 120); in al-Masджid al-Kâfirîn, there were as many as 516 trees (ibid., p. 13), as it is still the case today. In other cases the court was covered with pêbbles (see above D 1); but this was altered with a more refined style of architecture. Al-Ma'âzî mentions that this was only found in Tiberiâs, out of all the mosques in Palestine (B. G. L., ii. 182). Frequently, as in Ramla, the halls were covered with marble and the courtyard with flat stone (ibid., p. 165). In the halls also the ground was originally bare or covered with little stones; for example in the mosques of 'Amr and Maslama b. Makh'allad covered it with mats (see below). The door of the Mosque of 'Amr was entirely covered with marble in the Mamluk period (Makrîzî, iv. 13 sq.; cf. in Sharh: Ibn Batúlû, ii. 53). But in the mosque of Mecca, the şâns is still covered with little stone (Batamûnî, Kitâb, p. 99 below), 400 dinars used to be spent annually on this (Cover, Mekkâ, ii. 19 sq.). In Medina also little pêbbles were used (Ibn Djabbar, Kitâb, p. 190, Ibn Batúlû, i. 263).

There were not at first enclosed chambers in the halls. A change in this respect came with the introduction of the maşṣûrâ [v. v.] on this word cf. Quartemière, Histo. Sult. Maml. i., p. 164, note 46. This was a box or compartment for the ruler built near the mihrâb. Al-Samânhûl gives the history of the maşṣûrâ in Medina (Wustenfel, Medina, p. 71 sq.; 89 sq.). The traditions all agree that the maşṣûrâ was invented to protect the ruler from hostile attacks. According to some men, 0thman built a maşṣûrâ of Istân with windows, so that the people could see the Imam of the community (ibid. and Makrîzî, iv. 7). According to another tradition, Marwân b. 'Abd al-Hasam, governor of Medina, after an attempt had been made on him by a Yaman in the year 44, was the first to build a maşṣûrâ of dressed stone with a window (Baldisbari, p. 6 below; Tabari, ii. 70). Ma'âwiya is then said to have followed his example. Others again say that Ma'âwiya was the first to introduce this innovation. He is said to have introduced the maşṣûrât with the accompanying guard as early as the year 40 or not till 44 after the Khurriji attempt (Tabari, ii. 349 sq.; F. G. I. v. 109, 1; Makrîzî, iv. 12, 1 sq.); according to one story because he had seen a dog on the mûbar (Bahâkî, ed. Schwall, p. 393 below; cf. on the whole question: H. Lamsens, M. M. Schwaîb, p. 202 sq.). This much seems to be certain, that the maşṣûrâ was at any rate introduced at the beginning of the Umayyad period and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Khallûn says, it spread throughout all the lands of Islam (Muqaddima, Cairo 1322, p. 212 sq.; 338). The governor built themselves compartments in the principal mosques of the provinces, e.g. Ziyâd in Kufa and Baṣra (Baldisbari, p. 277, 348) and probably Khurra b. Sharik in al-Fustâṭ (Makrîzî, iv. 12). In Medina, we shall be told that 'Omar b. 'Abd al-Aswâ as governor (86–93) raised the maşṣûrâ and built it of teak, but al-Mahdi had it taken down in 160 and a new one built on the level of the ground (ibid., p. 7; Wustenfel, op. cit.: Baldisbari, p. 7 centre). We are further told that in 161, al-Mahdi prohibited the maşṣûrâ of the provinces and al-Ma'a'mûn even wanted to clear all the boxes out of the masджâd al-Kabirâ, because their use was a sunna introduced by Mu'âwiya (Makrîzî, iv. 12; Ya'qûbî, ed. Houtsoum, ii. 571). But this attempt did not succeed. On the contrary, their number rapidly increased. In Cairo, for example, the lâq-d or al-A'skar built in 169 had a maşṣûrâ (Makrîzî, iv. 33 sq.) and the mosque of Ibn Tâlûn had a maşṣûrâ beside the mihrâb which was accessible from the Dar al-Imârâ (ibid., p. 36, 37, 42; Ibn Taghribirdî, ii. 8, 14). The maşṣûrâ was found in the larger mosques. In the Dîmât al-Kabîr, Muhammad b. Ka'ûlûn in 718 built a maşṣûrâ of iron for the Suljûq's şâltât (Makrîzî, iv. 152). According to Ibn Khaldûn, the maşṣûrâ was an innovation of Islâm's own. The question must however be left open, whether in its introduction and development there may not be some connection with the boxes of the Byzantine court, at least, for example, when the Turks in the Yâshîl Dîmât in Brusia put the Suljûq's box over the door (R. Hartmann, Im neuen Anatabl., p. 27).

Although the maşṣûrâ was introduced with the object of segregating the ruler and was therefore condemned by the strict as contrary to the spirit of Islâm (e.g. Makbâlî, ii. 43 sq.), maşṣûrâ were probably introduced for other purposes. Ibn Djabbar mentions three in the Mosque of the Omayyads: the old one built by Mu'âwiya in the eastern part of the mosque, one in the centre, which contained the minbar, and one in the west where the Hânâfîs taught and performed the şâltât. There were also other small rooms shut off by wooden lattices, which could be sometimes called maşṣûrâ and sometimes zâwiya. As a rule, there were quite a number of zâwiya connected with the mosque which were used by students (Ribâb, p. 265 sq.). We find the same state of affairs in other mosques.

While the groups of the kûrûd, the students, the lawyers etc. had originally to sit together in a common room, gradually the attempt was made to separate the rooms for some of them. Small compartments were either cut off in the main chamber or new rooms were built in subsidiary buildings. In the former case we get the already mentioned maşṣûrâ or zâwiya. Ibn al-Hâlîddî says that a madrasa was often made by the simple process of cutting off a part of a mosque by a half-strade (darbasîn) (Makbâlî, ii. 44). Thus in the hall of the Mosque of 'Amr there were several compartments for teaching, which are called maşṣûrâ and zâwiya, in which studies were prosecuted (Makrîzî, iv. 20, 4 sq.). In the Azhar Mosque a maşṣûrâ or Fustâًtî was made in the time of the Fatimids, where she had appeared, and the emir in the following period made a large number of such maşṣûrâ (ibid., p. 52, 53). In the Askî Mosque about 300 A. H. there were three maşṣûrâs for women (F. G. A. i. 100). These divisions might be a nuisance at the great Friday assemblies and this is why al-Mahdi wanted to remove them in 161 from the masджâd al-Djâma'î (Tabari, iii. 486),
and Ibn al-Hājīdī condemned them as works of the musâl and numbers them then other embellishments with the ashâbī al-sâlā (Makrizī, ii. 43 syq.).

The mu`adhîhins not only lived in the minarets, where, at any rate in the Tūlūnīd period, they held vigil (Makrizī, iv. 48). They had rooms (zawâf, sg. zahrâf) on the roof and these rooms in time came to be numerous (ibid., p. 13, 14).

All kinds of rooms were put in subsidiary buildings, for the khatib (ibid., p. 15), for judges, for studies, etc. In addition there were dwelling-houses, not only for the staff but also for others. As already mentioned, devout men used to take up their residence in the mosque for a considerable period for ṣīkâf and any one at any time could take up his quarters in the mosque; he could sleep there and make himself at home. It therefore came quite natural to the devout to reside permanently in the mosque. Ascetics often lived in the minaret (see above), a ṣâhid lived on the roof of the Azhar mosque, others made themselves cells in the mosque, as a shaikh in Naṣīrīd times (Ibn Dujair, p. 240; cf. in Harrân, p. 245) and as happened in Ṣalâh al-Dīn’s time in the mosque of the Omayyads (Ibn Abî ʿUsâbi’ā, ii. 182). It was however very usual for them to live in the side rooms of the mosque, as was the case for example, in the Mosque of the Omayyads (Ibn Dujair, p. 269; Ibn Battûta, i. 206). In particular holy mosques like that in Hebron, houses for al-mu`tazâlim were built around the sacred place (Sauvage, Hist. Jérus. et Hébron, p. 11 sg.) and also beside the Masjid Yamîn at the ancient Nâsir (B. G. A., ii. 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (zabīgha) and 14-15,000 loaves (raghîf) were daily distributed to those who stayed there and to visitors (Sauvage, p. 20 sq.; cf. Quatremère, Hist. Sult. Maml., i., 231). Bread was also baked in the mosque of Ibn Tūlûn (Quatremère, op. cit., vi., 233) and kitchens were often found in the mosques (for al-Azhar, see Dujairi, Merceille, iii. 238 sg.; Sulaimân Raṣâd, Kanz al-Dujauri fi Taʾrikh al-Azhar, p. 71 sqq., 107 sqq.).

Those who lived in and beside the mosque were called mawṣûlin (cf. B. G. A., ii. 146; for Jerusalem, Naṣīr Khusraw, p. 82, 91; for Mecca, Ibn Dujair, p. 149; for Medina, Ibn Battûta, i. 279, where we learn that they were organised under a ḥadîm, like the North Africans under an amīn in Damascus; Ibn Dujair, p. 277 sqq.). They were pious ascetics, students, and sometimes travellers. The students generally found accommodation in the madrasî but large mosques like that of the Omayyads or al-Azhar had always many students who lived in them. The name of the hâssâmî, plur. arwâjî, was later used for these students’ lodgings (cf. v. Berchem, Corpus, i., 43, note 1; perhaps Makrizī, iv. 54, 23). Strangers always found accommodation in the mosques (cf. C 1). In smaller towns it was the natural thing for the traveller to spend the night in the mosque and to get food there (Yâkūt, iii. 385; al-Kifî, Turīkh al-Hukma, ed. Lippert, p. 252).

Travellers like Naṣīr-i Khosraw, Ibn Dujair, Ibn Battûta, al-Abdârî (J. A., ser. 5, iv. 154, p. 174) were wont to travel the whole Muslim word from one mosque to the other (or madrasî or ṣâbî). The traveller could even leave his money for safe keeping in a mosque (Ṣafar-nâme, p. 51). Large endowments were bequeathed for those who lived in the mosques (Ibn Dujair, op. cit.; Ibn Taghibirdî, ii. 105 sqq.).

In later times the rulers often built a lodge or pavilion (maqâra) in or near the mosque (Makrizī, ii. 345; iv. 13; cf. on the word: Quatremère, Hist. Sult. Maml., i., 11, 15).

There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rosta (290 = 903) talks of similar arrangements in Constantinople (B. G. A., vii. 126 supra). Ibn Dujair (p. 270) describes very fully the clock in the mosque of the Omayyads (cf. J. A., ser. 9, vii. 205 sqq.). It was made in the reign of Nâr al-Dîn by Fâhr al-Dîn b. al-Sârî (Ibn Abî ʿUsâbi’ā, ii. 185 sg.; an expert was kept to look after it: ibid., p. 191).

There was a clock in the Mustanjîrîya in Rayyâd (Sarre and Herzfeld, Arch. Reise, ii. 175) and the Moon of ‘Amr also had a gharîf al-sâlî (Makrizī, iv. 13, 15). In the Mosque of Ibn Tūlûn is still kept a sundial of the year 696 (1296-1297; cf. v. Berchem, Corpus, i., No. 514) but the clocks were usually mechanical (see also Dossy, Supplement, s.v. mîdâna and on the clock generally E. Wiedemann, in Nova Acta der K. Leop. Carol. Akad., vol. C, Halle 1915). In the Magribî also we find mosque-clocks, e. g. in the Bû’ânîya (J. A., ser. 11, xi. 357 sqq.).

The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668, the Mosque of the Omayyads was cleared of all such things; in the courtyard there were for example stores for machines of war and the zâwiya of Zain al-Abîdîn was a regular khân (J. A., ser. 9, vol. vii. 225 sqq.).

I. Miḥrâb [q.v.].whether the Prophet considered it necessary to erect an indicator of the direction of prayer in Medina may be considered doubtful. According to Tradition, when the revelation of the alteration of the kâba came to him, he turned round in the middle of the prayer without further investigation (Wustenfeld, Medina, p. 41, 62; Ṭabarî, Tarîf, xi. 25 centre; Muslim, Musâjd, tr. 2). On the musâllâ however and on journeys he used a spear, which was stuck in the ground, in front of him, but this satora [q.v.] was not intended so much to give the direction as to be a substitute for the wall, to mark off the area of the worshipper; it could therefore also be an animal or some living thing (Bukhârî, Sahîh, B. 18, So. 90-92; Muslim, Sahîh, tr. 43; Zuḥrayîn on Musâjd, iii. 285; Abu Dîwâlî, i. 69; Aḥmad b. Ḥambal, Musâjd, ii. 106). At the present day the miḥrâb is often called kâba (and as early as Ibn Taghibirdî, i. 351; Yâkût, i. 642).

In al-Fûṣût ‘Amr is ṣâfî to have ascertained the kâba very carefully with the help of many other‘ (Makrizī, iv. 6 supra: B. G. A., viii. 359; Ibn Taghibirdî, i. 75 sqq.). But we are not told how it was indicated, probably by a pole or something of the kind. The kâba was established too far to the east, so that during the prayer the worshippers turned more to the south. At first they were probably content with the direction, roughly correct, in keeping with a hadîth of Abû Hurairah, according to which the kâba in general lies between east and west (Tirmidî, Musâjd, al-Salât, p. 139; Makrizī, iv. 24). The first mosque in I-fâhûn was built where Abû Mâsâ had performed the sa’î, and a brick placed in position
by him was taken as the kibla (B. G. A., vii, 200). But later the problem was tackled seriously. Mašriq mentions the different solutions of it in Egypt (iv. 21—33). Al-Azhār had the kibla accurate; the mihrāb al-ṭalabīa, i.e. that of the Mosque of ‘Amr and those of the mosques in Dījāz, Bīlis, Alexandria, Kūus and Assuan were too far to the east, that of the Mosque of Ibn Tulūn was found by a committee to be 14 darājī too far west, those of the villages too far west. The direction was ascertained from the stars. Many however followed the kibla of Syria. In the transformation of churches into mosques, frequent under al-Mamūn, their orientation from east to west was decisive. The door on the east side as a rule was made the mihrāb (Mašrīq, iv. 30). The word mihrāb is said to have introduced it into Medina (Wüstenfeld, Medina, p. 74; B. G. A., iii. 80—87) however it takes for granted that ‘Omar b. ʿAbd al-ʿAzīz only revived it; similarly his governor Kūra b. Shāfīr (90—96) is recorded to have introduced the prayer niche (mihrāb nūqajawwot) into Egypt (Mašrīq, iv. 6, 149, 91; Ibn Dukmāk, iv. 62, 12 sq.; Ibn Tāghhīrīd, i. 70; Suyūṭī, Ḥasan al-Maḥfūrāt, ii, 135 sq.). Only occasionally is Muḥammādi’s governor Mašlama b. Makhkālīd (47—62) or ‘Abd al-ʿAzīz b. Marwān (65—84) mentioned as having introduced this innovation (Mašrīq, iv. 6). It therefore seems not to be wrong when one of the mihrāb in the Mosque of the Omayyads is described as the oldest in Islam. But it is an anachronism to call it mihrāb al-ḍalabīa and attribute it to Muḥammādi (Ibn Djūbi, p. 265; Ibn Batṭūṭa, i. 203). The mihrāb is however said not yet to have come into general use in the second century (see Lammens, Zīlād, p. 94, note 1); on the other hand, Tābārī presupposes a mihrāb in the Muslim sense as early as David (Ṭābanī, i. 2408, 71, 15; B. G. A., ii. 112, 10 sq.; other prophets also had their mihrābs in Jerusalem, ibid.). In the larger mosques there were usually several mihrābs, used by the different madhāḥīb; in the mosque of ‘Amr, for example (according to Ibn Tāghhīrīd, i. 79), in Hebron (Sauvage, Hist. Jér. et Hébr., p. 17), in the mosque of the Omayyads (J. A., ser. 9, vii. 213 sq.; Ibn Djbūtī and Ibn Batṭūtā as above). They might be of wood, but as a rule they were built of masonry or put on pillars. They were often highly ornamented. In the mihrāb of al-Walīd, a looking-glass that had belonged to ʿAṣīrah is said to have been placed (Kāzmaī, ii. 71). A Fāṭimīd adorning a mihrāb in the mosque of ʿAmr and one in the Azhār mosque with a silver girdle which weighed 5000 darāms (Mašrīq, iv. 52). The general objections to adorning mosques were also applied to the mihrāb. A haddih is said to have forbidden this as an inheritance from the churches; it is compared with the altars (see Lammens, Zīlād, p. 33, note 7), but even a puritan like Ibn Rabī’-repeat does not reject the mihrāb in principle; he only condemns its adornment (Majdīr, ii. 48). In fact the mihrāb was held in special respect as the most important part of the mosque which found expression in the erection of a kūbba over it (e.g. Mašrīq, iv. 91; cf. v. Berchem, Conjug., i., No. 79). The special importance of the mihrāb is shown from the fact that its position was occasionally revealed in dreams, e.g. in Kārāwān (Yākūt, iv. 213) and in the Mosque of Ibn Tulūn; here the Prophet appeared to Aḥmad b. Tulūn and showed him the mihrāb and the spot was surrounded by ants (Mašrīq, iv. 39). In the principal mosque of Saʿābī there was a prophet’s tomb under the mihrāb (B. G. A., vii. 110), which recalls Christian altars. As the most sacred part of the mosque, the mihrāb is compared not only with Christian altars, but the word is used of the sacred, place of presence in any sanctuary, e.g. in the pre-Christian temple, which stood on the site of the later mosque of the Omayyads (J. A., ser. 9, vii. 371). In Palestine, in keeping with this idea, very many mihrābs are said to have been the mihrābs of Biblical personalities (see Sauvage, Hist. Jér. et Hébr., p. 42, 76, 96 sq., 102; Le Strange, Palestine, Index).
d. Minbar [q.v.]

In contrast to the mihrāb, the minbar was introduced in the time of the Prophet himself. The word, often pronounced minbar (cf. Brockeßmann, Grundriss, i. 161), comes from the root n-b-r 'high'; it could be derived from the Arabic quite easily with the meaning 'elevation, stand', but it is more probably a loanword from the Ethiopic (Schacler, Z. D. M. G., ii., 1898, p. 146—148; Noldeke, Neue Reitlinger s. sem. Sprachen, 1910, p. 49). Its case is therefore somewhat similar to that of masjid. It means 'seat, chair' (e.g. Chron. Mekka, ii. 8; Aṣḥābiyya, Cairo, xiv. 75) and is used, for example, for sattle (Tabari, Gloss.) and of a litter (Aṣḥābiyya, xiii. 155; cf. Schwally). It is therefore identical with madī'a (Bukhārī, Qīna'a, B. 25), with sārir (Kīmīl, p. 20; Aṣḥābiyya, iii. 3), tukht or kusri (Ibid., i. 214; cf. also Becker, Kanzel, p. 8). The use of the word for the pulpit is in keeping with its history.

When the khutba [q.v.] spoke among the Arabs, he usually did so standing (cf. Masjidhilayāt, ed. Lyall, xci. 23; Dājījīb, Bayān, Cairo 1332, i. 129; in. 143) frequently beating the ground with bow and lance (Ibid., i. 198; Bālaq, 7, 135, 9, 45; or be sit on his couch (Ibid., ed. e.g. Kussb. Sāʿīda (Bayān, i. 25, 31; ii. 141). The Prophet did both of these things. In 'Arafah he sat on his camel during his khutba and on other occasions, when addressing the community during the early period, even as late as the day of the capture of Mecca, he stood (cf. Sūrah ixi. 11). The people sat on the ground around him (Bukhārī, Qīna'a, B. 28; Tālibin, B. 6). In the mosque in Medina he had a particular place, as is mentioned in the stories of the introduction of the minbar. Sometimes, we are told, he stood beside a tree or a palm-tree (Bukhārī, Manāṣik, B. 25; ed. Krei, ii. 400); as a rule however, beside a palm-trunk (Gūbād, so Ibn Sa'd, i. 9, 10, 11, 12) and on a few occasions beside one of the pillars (Bukhārī, Manāṣik, B. 25, ed. Krei, ii. 401; Dīyābākri, Khāmis, ii. 75). This is undoubtedly the original tradition: the Prophet stood beside one of the palm-tree trunks used as pillars in the mosque. For "beside" (usually kāna ilā; Bukhārī, Bayān, B. 32; 'indā) "up" (kāna `alā; already in Bukhārī, Qīna'a, B. 26) is sometimes found later and for the column or trunk, we find a stump on which he sat.

Various passages record how the minbar was introduced, notably the following: Ibn Sa'd, i. 9—13; Bukhārī, Sahih, B. 18, 64, 91; Qīna'a, B. 26; Bayān, B. 32; Hība, B. 3; Manāṣik, B. 25; Muslim, Manāṣik, tr. 10; s. also Wiesner, Handbuch zum Islam, p. 63; Udt al-Qādirah, i. 43; infra, 214; Wustenfeld, Medina, p. 62 sqq.; Ibn Baṭlūba, B. 275 sqq.; the whole material is in Dīyābākri, Khāmis, i. 129; ii. 75 sqq. and Sirat al-Halābī, ii. 146 sqq. The details are variously given. The minbar, we are told, was built of tāfār wood or tamarisk from the woods near Medina; the builder was a Byzantine or a Copt and was called Bāqīm or Bāqī, but the names Ibrahim (Ibid., i. 43); Maimūn, Şāhāb, Kūlāb, Minor (see Khamīs) are also given. He was a carpenter, but a slave of the wife of one of the Anṣūr (Bukhārī, Hība, B. 3) of the Muhājirūn. Others say he belonged to al-'Abbās. The suggestion is sometimes credited to the Prophet and sometimes to others. The palm-trunk is said to have whined like a camel or a child when the Prophet mounted his new seat but was calmed by stroking and kind words from the Prophet. Most stories take it for granted that the minbar was primarily intended for the khutba; in some it is added that the object was to enable the large assembly to hear him (Ibn Sa'd, i. 10, 11). We are told also that the Prophet performed the sālit on it and, during the suḥail, he came down from it. He also took care that the people could see his sālit and follow him (Bukhārī, Sahih, B. 18; Qīna'a, B. 26). This last tradition however presupposes the standing of the minbar (note that the same idea of the palm-stump occurs in Qīna'a, B. 26).

In this connection it is interesting to note a tradition in Ibn al-Āṣfār, according to which the Companions asked the Prophet to take up a raised position as many suhail were coming (Udt al-Qādirah, i. 43). Another tradition is in keeping with this, according to which the Prophet, when he was visited by a man named Tānim, stood on a kusri and addressed him from it (Ibid., p. 214; cf. Lammens, Medīnā, p. 204, note 5). Here we have a seat of honour on which the ruler sits. This is undoubtedly in keeping with the character of the minbar; while the raised seat was in general use among the northern Semites the Arabs usually sat on the ground, often leaning against a sattle. The raised seat was the special mark of the ruler or, what is the same thing, of the judge. We are told that Ṭābāb's Muḥṣin was the first to sit on a minbar or sārir when acting as judge (Aṣḥābiyya, 2nd Cairo ed., iii. 3; Muṣtaṣir, iv. 6 sq.). Al-Haddād, for example, when he addressed the people (hardly in the mosque) sat on a chair which belonged to him (kusrā labr: Tabari, i. 959) and when he tried and condemned his enemies, a sārir was erected for him (Ibid., p. 1119); in the same way a kusri was placed for Yazīd when he issued his orders for a battle (Ibid., p. 1167; see also Becker, Kanzel, p. 8).

If tradition usually suggests that the minbar was introduced exclusively for the khutba, this seems to be a somewhat one-sided view. The minbar was primarily, as Becker was the first to point out, the throne of the mighty Prophet in his capacity as a ruler. In keeping with this is the tradition that it was introduced in the year 7, 8 or 9 (Tabari, i. 1591; Khāmis, ii. 75; Udt al-Qādirah, i. 23). The Prophet used it for the publication of important announcements, for example, the prohibition of wine. That he should also make his public speeches to the community from the new seat was only natural. His khutbae however were not confined to the Friday service and he could still deliver a khutba without a minbar, e.g. at the festival on the muṣalla, where Marwān was the first to put up a minbar (Bukhārī, Khāmis, B. 6) and beside the Ka'bah after the capture of Mecca (Ibn Ḥishām, p. 823).

The Prophet's minbar is often called arādā from its material (Bukhārī, Sahih, B. 64; Qīna'a, B. 26). It consisted of two steps and a seat (madīṣas: Khāmis, ii. 75; Bukhārī, Qīna'a, B. 23; Maṣḥaṭ, Tabari, i. 1591). After the time of the Prophet, it was used in the same way by Abū Bakr, 'Omar and 'Uthman (see below). Its significance as a throne is seen from the fact that in the year 50 Mūṣāwiya wanted to take it to Syria with him: he was not allowed to do so but he raised it by 5 steps. At a later date, 'Abd al-
Malk and al-Walid are said to have wanted to take the Prophet's minbar to Damascus (Tabari, ii, 92 sqq.; Khânî, ii, 75; Ya'qûbî, ed. Houtsm, ii, 283; B. G. A., v, 23 sqq.; Wustenfeld, Medina, p. 63). In the time of the Prophet, it stood against the wall so that a sheep could just get past (Bukhârî, Saḥâbat, i, 91). In the time of al-Ma'âdî, in the middle of the mosque. This was however found inconvenient because the Inâm had to cross from the minbar to the kibla "over the necks of the (seated) believers." Ziyâd then placed the minbar against the wall (Ya'qûbî, i, 642). On the other hand, we are told that 'Abd Allah b. 'Abîâs (governor of Ba Tưr 36-40) was the first to mount the minbar in Ba Tưr (Dîja'et, Bayân, i, 179). When Ziyâd had to fly from Ba Tưr he saved the minbar which he put up in his Masjid al-Hûdât (Tabari, i, 3414 sqq.). The minbar was the symbol of the ruler and the governor sat upon it, as representative of the ruler. It therefore formed a feature of the Masjid al-Djâmâ', where the community was officially addressed. In the year 64 the other provinces, there were minbars in all the provinces. In this year homage was paid to Marwan b. al-Ḥakam not only in the capital but in the other provinces in the Ḥîdâjat, Miṣr, Shām, Dāzirat, Ibrâq, Khurâsân, and other asâmî (B. G. A., viii, 207). Special mention is made of the fact that Tabariya had no minbar.

In the first century and beginning of the second, we find the wall in the smaller towns, delivering the kibla standing, with the staff only. But in 132 the governor 'Abd al-Malik b. Marwan had minbars put up in the kûrâ of Egypt (Mâkri, iv, 8, 17 sqq.; Ibn Taghrîbîrî, i, 350 sqq.). When the kibla became purely a divine service and the ruler was no longer the kibla (q.v.), the minbar became the pulpit of the spiritual preacher and every mosque in which the Frisday service was celebrated was given a minbar. At the same time, i.e. after al-Râshîd, the change was gradually completed and the preacher spoke, standing on the pulpit. Hadîths therefore came into existence, according to which the Prophet used to deliver two kîhbat on Friday, standing "just as is done to-day" (Bukhârî, Li'man, p. 27, 30 and 'Omar, ibid., p. 2).

The minbar was thus now quite analogous to the Christian pulpit. It is very probable that this latter also influenced its form. We have already noted above, of a minbar in the mosque of 'Amr, that it was said to be of Christian origin. The same thing came to be said of the Prophet's minbar (Wustenfeld, Medina, p. 63). Marwan put the Medina minbar larger, while the one brought by him to Mecca had only 3 steps and was of course portable. We again hear of portable minbars later, which did not exclude their being large (cf. above on the minbar of Mecca). Thus the minbar in al-Maghrib is said to have been portable. Ibn al-Ḥâdîd regards this (the oldest) custom as hidâ'a and therefore ascribes it to al-Hâdhâjî (Madkhâl, ii, 47, 13 sqq.). The oldest minbars were all of wood. There is however one hadîth which says that the Prophet had a kûrâ of wood with iron legs made for the reception of Tamîm (Cud, i, 214, sq from below; cf. Lammens, Mu'awia, p. 273, note 3); it is however uncertain whether this had to the minbar. A minbar of iron was made as early as the Omayyad period (Ibn Taghrîbîrî, i, 78, 8; al-minbar al-ḥâdîd probably correct in
spite of Becker, Kanzel, p. 10, note; cf. 79, 4, see below); and also of stone (Goldziher, Mub. Stud., ii. 42, note 5 with a reference to Ibn Ḥadīdāj; later they were also built of bricks (Wustenfeld, Medina, p. 64, 96). As a rule the minbar stood against the kiblah wall beside the mihrāb. Al-Mahdī had tried to reduce the minabār to their original small size (Ṭabarī, iii. 486, 13; Ṣaḥīḥ, iv. 12, 13 sqq.), but he could not arrest the development. In the larger mosques several minabār were even built. Ibn al-Faqqīh about 1000 A.H. already mentions 5 minbars in the mosque in Jerusalem (B. G. A., v. 100, 8 sq.). In the Sūlān Ḥasan mosque in Cairo 4 were planned and 3 erected when a minaret fell down in 762 and diverted attention to other work (Ṣaḥīḥ, iv. 117, 18 sq.).

The importance, which the minbar already had in the time of the Prophet, caused special reverence to be paid to it and the sanctity of the mosque was concentrated round this and around the mihrāb. The governor of Kūfah Khālid b. Ṣā hil Allāh al-Kārī (105—120) received a letter of censure from the caliph because he had prayed for water on the minbar (Ḥārīṣ, p. 20, 15 sqq.). A false oath taken on the minbar of the Prophet led to the Prophet's hatred to hell absolutely (Ibn Ṣa'd, s.v. 10, 3 sqq., 12, 19 sq.; Ibn Ḥanbal, ʿUsūd, ii. 329; cf. Jehovah, Der Eik, p. 144, 147). Legends grew up which represented the Prophet seeing into the future from the minbar (Bukhārī, Ḏ qm'a, bāb 29) and being able to follow the battle of Mu'ta from it (cf. Wākīdī—Willhauseen, p. 311; Ibn Ḥīṣām, p. 796) and also telling how his prayers on the minbar were specially efficacious.

Just as the kāba was covered (kāṣa) so was the same thing done to the minbar. Oṭmān is said to have been the first to cover the minbar of the Prophet with a kūffā (Khamās, ii. 751, 1 from below). Muʿāwiya did the same thing when he had to give up his attempt to abolish it (Ibid., p. 76, 4; Ṣiār, ii. 92, 1). It was not quite the same thing when al-Ḥākim rediscovered the already mentioned iron minbar and covered it with gilt leather because it was covered with dirt (read: fādhīr or i.e. rust (Ibn Taghrībrīdī, i. 79, 5 sq.). Under the Abbāsids a new kūlla was sent every year for the minbar of the Prophet from Baghdad; the Sūlāns later did not renew it so frequently (Wustenfeld, Medina, p. 64). We find other references to the covering of the minbar on special occasions (Ibn Djbair, p. 149, 10). Ibn al-Ḥādīdī (Madkhl, ii. 74) demands that the imām should put a stop to the custom of putting carpets on the minbar. — On the question of the minbar see: C. H. Becker, Die Kanzel im Kultus des alten Islam, Noldde-Festschrift, i. 331—351 = Islamstudien, i. 450—471; Caetani, Enciclopedia dell' Islam, i. 533, 739; ii. 68 sq., 87, 213 sqq.; H. Lammens, Māʾ Ḏawīn, p. 63, 204—208, 273; J. Horovitz, in Lyceum, xxvi., 1927, p. 257—260.

t. Dākka

In the larger mosques there is usually found near the minbar a platform to which a staircase leads up. This platform (dākka, popularly often dikke) is used as a seat for the muʿādhīnīn who prepare the call to prayer in the mosque on the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below under H. 4 and C. H. Becker, Zur Geschichte des islamischen Kultus, iii. 1912, P. 374—399 = Islamstudien, i. 472—500; E. Mittwoch, Zur Entstehungsgeschichte des islamischen Gebets und Kultus, Abb. Fr. Ak. W., 1913, Phil.-Hist. Cl., Nr. 2). The first ḍākhan call is pronounced from the minaret, the second (when the khāṭīb mounts the minbar) and the third (before the ʿalākūn, ʾiḥāmmah) in the mosque itself. These calls were at first pronounced by the muʿādhīnīn standing in the mosque. At a later date raised seats were made for them. Al-Halābī records that Maslama, Muʿāwiya's governor in Egypt, was the first to build platforms (here called ʿanākhīb) for the calls to prayer in the mosques (Ṣūʿa Ḥalābīya, i. 111 below). This story however, given without any reference to older authorities, is not at all reliable. It seems that a uniform practice did not come into existence at once. In Mecca the muʿādhīnīn for a time uttered the second call (when the preacher mounted the minbar) from the roof. As the sun in summer was too strong for them, the emir of Mecca, in the reign of Hārūn al-Rashīd, made a little hut (ẓūilla) for them on the roof. This was enlarged and more strongly built by al-Mutawakkīl in 240, as his contemporary al-Maʿṣūrī relates (Chron. Mekka, i, 322 sqq.). The position in the minbar of Amr in Cairo was similar. Here also the ḍākhan was uttered in a chamber (gūffūf) on the roof and in 336 there is a reference to its enlargement (Ṣaḥīḥ, iv. 11). As late as the time of Bahbars, when the many chambers were removed from the roof of the Mosque of ʿAmr, the old gūffūf of the muʿādhīnīn was left intact (ibid., p. 14; cf. al-Kindī, Ṣuʿūd, ed. Guest, p. 469, note 2). In the Mosque of Ibn Ṭūlūn the ḍākhan was pronounced from the cupola in the centre of the ʿīrāq (Ṣaḥīḥ, iv. 40). Al-Maḏkīsī records in the fourth century as a notable thing about Khurāsān that the muʿādhīnīn there pronounced the ḍākhan on a sārīr placed in front of the minbar (B. G. A., iii. 327). The ḍākhan “platform” in front of the minbar in the mosques of Shahānān must have had the same purpose (ibid., p. 357).

In the viiiith century, Ibn al-Ḥādīdī mentions the dākka as a bidā in general use, which should be condemned as it unnecessarily prevents freedom of movement within the mosque (Madkhl, ii. 44 above). In the year 277 a dākka in the mosque of al-Ḥākim is mentioned (Ṣaḥīḥ, iv. 61): the dākka mentioned in inscriptions from Cairo all date from the period before and after 900 a.n. Ibn al-Ḥādīdī mentions that in addition to the large dākka used for the Friday service there was sometimes a smaller one for ordinary ṣalāt (Madkhl, ii. 46 sq.) and says that in the larger mosques there were several dākka on which muʿādhīnīn pronounced the ḍākhan in succession so that the whole community could hear it (tablūz; ibid., p. 45 sq.). Lane also mentions several muʿābdallāzāgīn in the Azhar Mosque (Manuscripts and Customs, Everyman's Library, p. 87, note 2). j. Kursī, kūrān and Relics.

In the mosques there is usually a kūrsī, that is a wooden sānī with a seat and a desk. The desk is for the Kūrān, the seat for the kūrāz. But reader, kūrsī. Ibn Djbair attended a divine service performed in Baghdad at which a carpet was placed from the minbar, but only after the kūrsī, sitting on kūrsī had recited portions of the Kūrān (Rīhhā, p. 219, 222). The kūrsī, often identical with the kūsāt, is a kūrsī made of teak (Ibn Djbair, p. 200; Yākūt, Uddatī, ii. 319; Maḏkīsī, iv. 121);...
sometimes he spoke from the minbar to which the wāli often had access (cf. Ibn Djibair: see Mez, Renaissance des Islams, p. 320). The ḫāṣṣā are called by al-Makki ʿāǧāb al-ḥārāsī which is in keeping with this (Kātal-Ṣūḥāb, i, 152, quoting K. al-Madāḥi, i, 159). Several ḫāṣṣā are often mentioned in one mosque (cf. for the Mosque of ʿAmr Makrī, iv, 19). Whether the ḫāṣṣā mentioned for the earlier period always had a desk cannot be definitely ascertained. The ḫāṣṣā with dated inscriptions given by van Berchem in his Corpus all belong to the ixth (yxlth) century (N. 264, 302, 338, 359bis, 491). According to Lane, at the Friday service while the people are assembling, a ḫāṣṣā on the ḫūṣr recites the 18th Sūra up to the aḏghān (Manners and Customs, p. 86). The same custom is recorded by Ibn al-Ḥādījī and condemned because it has a disturbing effect (K. al-Madāḥi, ii, 44, middle).

The Qurān very soon received its definite place in the mosque like the Bible in the church (cf. Bukhārī, Ṣaḥīḥ, bab 91: they prayed at a pillar orāda al-muṣlīḥ). According to one tradition, orthodox had several copies of his Qurān sent to the provinces (cf. Noldeke-Schwall, Gesch. d. Mus., i, 112 sqg); al-Ḥādījī, a little later, is said to have done the same thing (Makrī, iv, 175). The mosques had many other copies besides the one kept on the ḫūṣr Al-Ḥākim put 814 aḏghān in the Mosque of Ibn Tāmir, where the founder had already put boxes of Qurāns (Makrī, iv, 36, 40, cf. Ḥusn al-Muḥādara, ii, 138) and in 403 he presented 1,289 copies to the Mosque of ʿAmr, some of which were written in letters of gold (Makrī, iv, 12; Ḥusn al-Muḥādara, ii, 136). Even earlier than this there were so many that the kaṣī al-Ḥārīdh b Miskīn (237–245) appointed a special awnīn to look after them (al-Kindī, Wulīz, p. 469); there are still a very large number in the Mosque of the Prophet (see Banūnānī, Riḥāb, p. 224 above). Of particular value was the muḥāf ḥammā, belonging to the Mosque of ʿAmr, prepared by ʿAbd al-ʿAzīz b. Marwān, later bought by his son and afterwards by his daughter Asmāʿ; her brother left it in 128 to the mosque and it was used for public readings (see its whole history in Makrī, iv, 17 sqg). Besides it, another copy was for some time also used for reading, which was said to have lain beside Ṭūḥmān, when he was killed and to have been stained with his blood, but this one was removed by the Fatūmīs (Ṭāḥī, p. 19) in the time of Ibn Būṭrī, a Qurān for which the same claims were made was kept in Baṣrā, iii, 16. On New Year's Day when the ʿūlāmāʾ used to go in procession through the town, the Caliph at the entrance to the Mosque of ʿAmr took up in his hand a muḥāf ḥammā said to have been written by ʿAlī and kissed it (Ibn Taghhrīrdī, ii, i, p. 472 middle); it was perhaps the muḥāf ḥammā. In Syria, Egypt, and the Ḥudayrā, in the fourth century, there were Qurāns which were traced back to Ṭūḥmān (F. G. A., iii, 143; cf. ii, 117). One of the Qurāns made for Ṭūḥmān was shown in the Mosque of the Omayyads in Damascus in the time of Ibn Dībār. It was produced after the daily salāts and the people touched and kissed it (Riḥāb, p. 268). It was brought there in the year 507 from Tīberiās (Dībār, Ṭelḥīz, Haidārīz, 1337, ii, 25). Other Qurāns of Omayyads were shown in Baghdad and Cordova (see Mez, Renaissance des Islams, p. 327) and Ibn Dībār saw another in the Mosque of the Prophet; it lay in a desk on a large stand, here called miḥmāl (Riḥāb, p. 193; cf. thereon Dozy, Supplement, s. v.). The Fādhilya Madrasa also had a Muḥāf ḥ Ummānī bought by the Kaḥl al-Dīlī for 30,000 dinārs (Makrī, iv, 197) and there is one in Fāṭ (Archives Marocaines, xviii, 1922, p. 362). Valuable Qurāns like these had the character of relics and belonged to the ḥāṣṣām of the mosque. They were often kept in a chest (ṣāṭābir) (Ibn Dībār, Ṣaḥīḥ, for al-muṣlīḥ, Bukhārī, Ṣaḥīḥ, bab 95. Makrī has al-muṣlīḥ; see al-ʿĀṣīlānī, Fath al-Bārī, i, 358); also called tābir (Ibn Dībār, p. 104). In the Kaḥl, Ibn Dībār saw two chests with Qurāns (p. 84, 3). Ibn Dībākī mentions 16 chests with Qurāns in the Jerusalem mosque (B. G. A., v, 100). In the mosques there were also āḏghān for other things, such as lamps (Makrī, iv, 53; Wustenfeld, Medina, p. 82 = Ibn Dībār, p. 194), a tābir for alms (K. al-Madāḥi, ii, 44, infra), for the kātā al-mal or the property of the mosque (see below). There were also chests for rose-wreaths (Makrī, ii, 50) which were in charge of a special officer. In the Mosque of ʿAmr there was a whole series of tābirāt (Makrī, iv, 9).

The Qurāns were not the only relics to be kept in the mosques. Bodies or parts of the bodies of saints (cf. B. 4, C 1) and other ʿāṯār were kept and revered in mosques: the rod of Moses, (in Kāfā, Vakūt, iv, 325) previously in Mecca, see Goldziher, Muh. Stud., ii, 361), the Prophet's sandals (in Hebron, B. G. A., v, 101, also in Damascus, where the Ashrafīya Madrasa had left his heart and the Dammiqya his right sandal; F. A. ser. 9, iii, 271 sq., 402), his cloak (in Adhūr, B. G. A., iii, 178), hair from his beard (in Jerusalem among other places, Banūnānī, Riḥāb, p. 165) and many other things (see Goldziher, Muh. Stud., ii, 358 sqg; Mez, Renaissance des Islams, p. 325 sqg). These relics were often kept in valuable reliquaries. The head of Husain was buried in a tābir in his mosque in Cairo (Ibn Dībār, p. 45). There was a black stone like that in the Kaḥl in a mosque in Shahrāz (B. G. A., iii, 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Ḥadīth (Bukhārī, Ṣaḥīḥ, bab 45, 54; Liʿwāzī, bab 71; Masmūdī, Masādigh, tr. 3; cf. on the question Becker, Christliche Polemik und islamische Dogmenbildung, Z. A., xxvi., 1831, Islamstudien, i, 445 sqg). It is of interest to note that in the earliest period, Saʿd b. Abī Waqqās had no scruples about leaving the wall-paintings in the Iwān of ʿAbbās i at Madāʾin standing, when it was turned into a mosque (Ṭabari, i, 2443, 2451). The case was somewhat different, when, before the chief mosque in Delhi which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Būṭrī, iii, 151) although even this is remarkable (cf. Snouck Hurgronje, Verspreide Geschriften, ii, 451 sqg.—Z. D. M. G., lii, 1907, p. 186 sqg). In some circles the opposition to pictures extended to other relics also. Ibn Taimiyya condemned the reverence paid to the Prophet's footprint, which was shown, as in Jerusalem, in a Damascus mosque also (Quaternaire, Hist. Selt. Musul., tli, 245 sqg). These carpets were used to improve the appearance of the mosques. The custom of performing the
salát upon a carpet is ascribed by Ḥadīth to the Prophet himself. Anas b. Mālik performed the salát with him in his grandmother’s house, and the Prophet used a cloth or mat (ṣāfar), which had become black through wear; as a rule, he used a mat woven of palm leaves, ḫumra (Baḥṣarī, Salāt, b. Aḥmad, 20, 21; Muḥammad, 47; Hāfiz, Ḥanbāl, Muṣnād, 3, 145). In any case, it is clear from Balādhurī that the salát was at first performed in the mosque simply in the dust and then on pebbles (Balādhurī, p. 277, 348; cf. al-Zurkīn, Ṣaḥīḥ ʿala-l-Mawṣuṭi, i. 283 sq.). Later, when the halls were extended, the ground, or the paving, was covered with matting.

The first to cover the ground in the Mosque of ‘Amr with ṣafir instead of ḥozāf was Muḥammad’s governor Mālam b. Muqallad (Maḥrūz, iv. 8; Ḥasan al-Maḥṣūfa, ii. 136; Ibn Taḥrīrī, t. 77). The different groups which frequented the mosque (cf. above) had their places on particular mats: when a kād (middle of the third century) ejected the Shīʿīs and Ṣafarīs from the mosque, he had their ḥusūr torn up (al-Kindī, Wuhāṣ, p. 466). Ibn Tūlūn covered his mosque floor with ʿAbdānī and ʿAmrīnī mats (Maḥrūz, iv. 36, 38). For the mosque of al-Mālik in the year 405, al-Ḥākim bought 1,966 ḏirāt of carpeting for 5,000 dinār (Maḥrūz, iv. 56; cf. for al-Aṣhar, ibid., p. 50). In the year 439 in the Mosque of ‘Aṣhar, there were ten layers of coloured carpets, one above the other (Nāṣiri Khosrow, ed. Schefer, p. 31 (text), p. 149 (transl.)). In the Mosque at Jerusalem 800,000 ḏirāt of carpets were used every year (R.G.A., i. 100). In the Mosque in Mecca they were renewed every Ramadān (R.G.A., i. 100). On ceremonial occasions the miḥrāb was also draped with a carpet (ṣafṣaf, q.v.); in Medina, the miḥrāb and the sacred tomb was always covered like the Ka’ba in Mecca (Wustenfeld, Medina, p. 83; cf. Quatremère, Hist. Sult. Maml., i, ii, 91) and some, especially the teachers, had their skins (ṣarwa), in some cases also a cushion to lean upon. The doors were also covered with some material (Maḥrūz, iv. 56). On feast-days, the mosques were adorned with carpets in a particularly luxurious fashion (see Ibn Taḥrīrī, t. 41, 453). The Puritans rejected all this as bidʿa and preferred the bare ground (Maḥrīṣṭal, ii. 46, 49, 74, 74, 79) as the Wāhawkās still do.

k. Lighting. Where evening meetings and vigils were of regular occurrence, artificial lighting became necessary. Al-ʾAzrāqī gives the history of the lighting of the Meccan Mosque. The first to illuminate the Ka’ba was ʿUkba b. Al-ʾAzrāqī, whose house was next to the Mosque, just on the Maḥkīm; here he placed a large lamp (miḥdāḥ). Omar, however, is said previously to have placed lamps upon the wall, which was the height of a man, with which he surrounded the mosque (Baḥṣarī, p. 46). The first to use oil and lamps (ṣawādīl) in the mosque itself was Muḥammad (cf. R.G.A., i. 203). In the time of ʿAbd al-Malik, Khaṭīb b. ʿAbd Allāh al-Kaṣī placed a lamp on a pillar of the Zemzem beside the Black Stone, and the lamp of the Azrāq family disappeared. In the reign of al-Maʿmūn in 216 a new lamp-post was put up on the other side of the Ka’ba and a little later two new lanterns were put up around the Ka'ba Hārūn al-Raschīd (268–271) placed ten large lamps around the Ka’ba and hung two lanterns on each of the walls of the mosque (thawriyyāt; cf. Ibn Dhibbūn, Ḥiṣb, p. 149, 150, 155, 271; v. Berchem, Corp. Inscrip. Arabi, i, N° 506). Khālid al-Kaṣī had the masāʿ also illuminated during the pilgrimage and in 219 the torches called naṣṭāṭ were placed here and ʿOmar b. ʿAbd al-Qays ordered the people, who lived in the streets of Mecca, to put up lamps on the 1st Muharram for the convenience of those visiting the Ka’ba (Chron. Mekk, p. 200–202, cf. 458 sq.). In 253 Muḥammad b. ʿAbd al-Muṣṭaf adorned a wooden pole in the centre of the qibṣ and ṭūwālī on ropes were hung from it. This was however very soon removed (ibid., ii. 196 sq.). About 100 years later, al-Mājṣīsī saw around the Tāwāf wooden poles on which hung lanterns (ṭūwālī) in which were placed candles for the kings of Egypt, Yemen, etc. (B.G.A., iii. 74). Ibn Dhibbūn describes the glass ṭūwālī, which hung from hooks in the Meccan Ḥanām (Ḥiṣb, p. 103) and lamps (ṭūwālī) which were lit in iron vessels (ibid., p. 103, cf. i. 143). Similar silver and gold ṭūwālī were seen by him in Medina (ibid., p. 192 at the top; see also Wustenfeld, Medina, p. 83 sqq.). According to al-Fakhrī (before 300), 1,000 lamps were lit every evening in Jerusalem (R.G.A., i. 100) and in the next century al-Maḥmūdī says that the people of Palestine always burn ṭūwālī in their mosques, which were hung from chains as in Mecca (R.G.A., iii. 182). The illumination was thus very greatly increased. In the year 60, when Ibn Ziyād was searching for his enemies in the mosque of Kāf, the lamps were not sufficient, and large torches had to be used in searching the pillared hall (Tabarī, ii. 21). Thus, it has already been said about Mecca, shows out of what modest beginnings this part of the mosque’s equipment developed.

In the time of the ʿAbbāsids, lamps and lanterns were part of the regular furniture of the mosque. Al-Maʿmūn is said to have taken a special interest in this. He ordered lamps to be put in all the mosques, partly to assist those who wanted to read and partly to prevent crime (Bahaṣī, ed. Schwally, p. 473). For this purpose, the ṭūwālī, already mentioned, hung on chains were used as at the building of the mosque of Ibn Tūlūn (Maḥrūz, iv. 36, 38), in the Azhar Mosque and elsewhere; they were often of silver (ibid., p. 56, 65). Golden ṭūwālī were also used and were of course condemned by Ibn al-Hādījī (Maḥrīṣṭal, p. 54) as ostentations. At the same time, candles (ṣāman or ṭūwaṣ) were used in large numbers, the candlesticks (ṭāwārī, sing. ṭawra) often hung of silver (Ibn Dhibbūn, Ḥiṣb, p. 45, 151, 194; cf. Wustenfeld, Medina, p. 95, 100. About 400, large candela were made in Egypt, which from their shapes were called tawārī, stoves. Al-Ḥākim presented the Mosque of ‘Amr with a tawārī made of 100,000 dirhams of silver; the mosque door had to be widened to admit it. He also gave it two other large ones (Suyūṭī, H. G. A., i. 206 inference). Nāṣiri Khosrow, ed. Schefer, p. 51 (text); p. 148 (transl.); Ibn Taḥrīrī, ed. Pepper, ii, iii. 105). In the Mosque of al-Ḥākim, in addition to lamps and candle-lanterns, he also put a silver tawārī and he made similar gifts to the Azhar and other mosques; the lamps were of gold or silver (Maḥrūz, ii. 51, 56, 63; cf. Ibn Taḥrīrī, ii. 105). The tawārī and other lanterns could also be made of copper (see v. Berchem, 343.
Corpus, i., No. 502, 503, 506, 507, 511), as, for example, the celebrated candelabrum of the Mosque of Mu'ayyad (Mekkâ, p. 137) which was made for the mosque of Hâshân but sold by it (ibid., p. 118).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Light had an added divine in the divine service and Idrîs here, as elsewhere, was taking over something from the Church. When, in 227, the caliph was on his deathbed, he asked that the sabâṭ should be performed over him with candles and incense (bi 'l-’ishâna wa ‘l-bûkhrû) exactly after the fashion of the Christians (Ibn Abî ‘Uchina, i. 165; cf. ii. 89). The dependence of Idrîs on Christianity is also seen in the story that 'Othman, when he was going to the evening sabâṭ in Medîna, had a candle carried in front of him, which his enemies condemned as bâdan (Vatâqibî, ed. Houtsmma, ii. 197). The Shîa bias does not affect the significance of this story. A light was used particularly in the mihrâb, because it represented the holy cell, to which light belongs (cf. Sûra xxiv. 35). Then, in Mecca, lamps were placed before the imāms in the mihrâb and there were considerable endowments for such mihrâb lamps (Ibn Djubah, ribâh, p. 103. 144). Light, as was everywhere the custom in ancient times, was necessary in mausoleums and the documents of endowment show that a large number of oil-lamps was used in this way (cf. eg. the document for al-Mallik al-Ashraf's mausoleum, v. Berchem, Corpus, i., No. 525). But in the mosque generally the use of lights had a deeper symbolic significance and lamps might be endowed for particular individuals (cf. B.G.A., iii. 74, quoted above). The lamps mentioned in the prayers and minacat, were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Taghribîdî, ii. 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Râmâdân, says Ibn Djubah, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (Ribâh, p. 143); on certain evenings trees were lighted with vast numbers of lamps and candles and the minaret illuminated (Ibid., p. 149–151. 154. 155). In the Mosque of the Prophet in the time of al-Sâmî, forty white candles burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wustenfeld, Medina, p. 100). On the masjid al-nâbi, says Kutb, Ibn Al-Dîn, a procession went from the Ka'ba in Mecca to the birthplace of the Prophet with candles, lanterns (wâqôf), and lamps (mu'âsir, see Chirn Meke, ii. 439). In the haram of Jerusalem, according to Mâakhir al-Dîn, 750 lamps were lit by night and over 20,000 at festivals (Sauvaire, Hist. Firm. et Hébron, p. 158). In the dome of the Sâkhrâ in 452 a chandelier and 500 lamps fell down (Ibid., p. 69); at the taking of the town in 492 (1099) the Franks carried off 42 silver lamps, each of 3,600 dirhams, 23 lamps of gold and a tenant of 40 rîf of silver (Ibid., p. 71). It was similar and still is in Cairo and elsewhere in the Muslim world. For the lâtail al-awlaqî in the Mosque of 'Amr, 18,000 candles were made for the Mosque of 'Amr and every night eleven and a half kilogram of good oil were used (Mâakhir, iv. 21 and more fully ii. 345 sqq.). The four "nights of illumination" fell in the months of Rajãb and Shabîn, especially Mâakhir (Quatremerie, Hist. Sult. Mant., i/ii. 131; cf. also Snouck-Hurgronje, Mekkâ, ii. 77). Quite recently (1908) electric light has been introduced into the Mosque of the Prophet (al-Batânîm. Ribâh, p. 245 sqq.).

[On the question in general see Clermont- Gammeau]. La lampe et l'olivier dans le Coran, in Recueil d'Archéologie Orientale, viii., 1924, p. 183–228; on the copper candelabra see A. Wingham, Report on the Analysis of various examples of Oriental Metal-Work etc. in the South Kensington Museum etc., London 1802; F. R. Martin, Altere Kupferarbeiten aus dem Orient, Stockholm 1902; on glass lamps see G. Schmoranz, Allorientalische Glas-Gefasse, Vienna 1898; v. Berchem, C.I.A., i. 678 sqq.; Max Herz Bey, La Mosquée du Sultan Hâvan (Comité de Conservation des Monuments de L'Art Arabe), 1899, p. 8 sqq.; see also the Bibliography in Ist., xvii., 1928, p. 217 sqq.).

i. Incense.

According to some traditions, even the Prophet had incense burned in the mosque (Tâmidî, i. 116; see Lammons, Moawwim, p. 367, note 8) and in the time of 'Omar, his client 'Abd Allâh is said to have perfumed the mosque by burning incense while he sat on the minbar. The same client is said to have carried the censer (muqamer: cf. Lammons, loc. cit.) brought by 'Omar from Syria before 'Omar when he went to the sabâṭ in the month of Râmâdân (A. Fischer, Biographie von Gewährsmännern etc., p. 55, note). According to this tradition, the use of incense was adopted into Islam very early as a palpable imitation of the custom of the Church. In keeping with this, the tradition that in al-Fusâl as early as the governorship of 'Amr, they 'lighed in the mosque to burn incense in the mosque (‘Abd al-Hakâma, p. 132; cf. Annali dell' Islam, iv. 565). The Sâkhrâ Mosque had incense burned in it during the consecration ceremony (Sauvaire, Hist. Firm. et Hébron, p. 53).

Under the Ommâyads, incense was one of the regular requirements of the mosque (tîb al-masjid; Tabari, i. 1234, 10). Mu'âwîya is named as the first to perfume the Ka'ba with perfume (bâdkûh) and censer (pisheba: B.G.A., v. 20, 12). It became the custom to anoint the sacred tombs with milk and tîb (Chron. Mekkâ, i. 150, 10). Ibn Djubah, Ribâh, p. 191, q. Baibars washed the Ka'ba with rose-water (Mâakhir, iv. 96, 14). Incense, as well as candles, was used at burials (cf. de Goeje, Z.P.M.G., 1905, p. 403 sqq.; Lammons, Moawwim, p. 436, note 9). Al-Mu'tasim's desire to be buried with candles and incense (bâdkûh) exactly like the Christians (Ibn Abî 'Uchina, i. 165, 12 sqq., cf. above) shows that they were aware that the custom bore much the same relation to the Christian usage, as the mosque building did to the church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fâtimids: Ibn Taghribîdî, ii/ii., 484, 12; ii/ii., ed. Popper. p. 106, 33; Mâakhir, iv. 51; on vessels for holding incense see the Bibliography in Ist., xvii., 1928, p. 217 sqq.).

j. Water-Supply.

Nothing is said of a water-supply in connection with the oldest mosques. The Mosque of Mecca occupied a special position on account of the Zamzam well. In the early days of Islam, two basins (baqar) are said to have been supplied by it, one behind the well, i.e. just at the side of the mosque for ta'anî and one between the well
and the ṭukan for drinking purposes; the latter was moved nearer the well by Ibn al-Zubair. In the time of Sulaimān b. ʿAbd al-Malik, a grandson of ʿAbd Allāh b. ʿAbdās for the first time, built a ǧubba in connection with the Zemzem (Chron. Mecca, i. 299). At the same time, the governor Khalīl al-Kasrī laid down lead-piping to bring water from the well of al-Thābir to the mosque, to a marble basin (ṣbīḥa) with a running fountain (fawāara) between the Zemzem and the ṭukan, probably on the site of the earlier ǧubba.

It was intended to supply drinking-water in place of the saltish water of Zemzem, but a branch was led on to a birka at the Bāb al-Ṣafā, which was used for ritual ablutions. The people, however, would not give up the Zemzem water and immediately after the coming to power of the Ḥabbāsids, the provision for drinking-water was cut off, only the pipe leading to the birka being retained (ibid., i. 339 sq.). In Ibn Djbair’s time, there was, in addition to the Zemzem, a supply of water in vessels and a bench for performing the wudu’ (Rihla, p. 89). Khalīl’s plan, arrangements for ablutions at the entrance and a running fountain in the ǧubba seems to have been a typical Omayyad one and to have been introduced from the north. Such fountains were usual in the north, not only in private houses, but also for example in the aṭḥiron (strutum) surrounded by pillars, which, from Eusebius’s description, formed part of the church of Tyre (see Hauch in Herzog-Hauch, Realencycl. p. prot. Theol. u. Kirche, x. 782).

The usual name for the basin, ṣbīḥa (in Egypt now ṣaṣiḥa) is ṣīṭīna, which in the Miṣrīna and in Syria takes the form ṣīṭīn (see Levy, Nahrī, u. child. Worterbuch, iv. 81); Francken, Fremdwörter, p. 124; ṣīṭīna, found in al-ʿIrāqī, Chron. Mecca, i. 340 (probably due to a slip). At the same time, however, birka or ṣbīḥa or ṣbīḥi, which probably comes from the Persian (cf. Francken, op. cit., p. 287) or the old Arabic ḥawād are also used.

The arrangements for ablutions were called maṭābih or maṣṣāḥa, sing. niḍāla (now usually niḍāla), “place for wudu’”. The accommodation in Mecca just mentioned was later extended. Ibn Djbair mentions a building at al-Zāhirī, 1 mil north of Mecca which contained maṭābih and ṣīṭīna for those performing the minor ṣamāʿa (Rihla, p. 111).

In Medina, Ibn Djbair mentions rooms for ṣawṣaw at the western entrance to the mosque (Rihla, p. 197, 13 sq.; cf. the plan in al-Batanunī, Rihla, facing p. 244). At the same time Ibn Zāhid mentions seventeen receptacles for water in the ǧubba in the year 199, probably for drinking-water; later (vii cent.) a large basin in front of a railing is mentioned in the centre of the court. It was intended for drinking purposes, but became used for bathing and was therefore removed. Baths and latrines were built anew by al-Nāṣir’s mother (Wustenfeld, Medina, p. 99 sq.).

In Damas, where every house, as is still the case, was amply supplied with water, Yākūt (d. 626 = 1229) found no mosque, madrasa or ḫānakāh which did not have water flowing into a birka in the ǧubba (Yākūt, ii. 590). Ibn Djbair describes the arrangements in the Mosque of the Omayyads. In the ǧubba, as is still the case, there were four large ǧubbas. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. This was called qafṣ al-māʾ “water-cage”.

North of the ǧubba was a Masjd al-Kaʾlaṣa in the ǧubba of which there was again a ẓībīd of marble with a spring (Ibn Djbair, Rihla, p. 267). There was also running water in an adjoining maṭṣḥad (p. 269), in the ḥānakāh and madrasa (p. 271), and in a hall beside the living apartments there was again a ǧubba with a basin (ḥawād) and spring water (p. 269). There were also ṣīṭāyāt against the four outer walls of the mosque, whole houses fitted up with lavatories and closets (p. 275); a century earlier, we are told that at each entrance to the mosque there was a niḍāla (B. G. A., iii. 159). The whole arrangements correspond exactly to those made by Khalīl al-Kasrī in Mecca in the Omayyad period and must therefore date from the Omayyad.

It was the same in other Syrian and Mesopotamian towns. In Sūrār, al-Mutawakkil built in his new djamāʿ a fawāara with constant running water (B. G. A., vii. 265). In Nasirin, the river was led through the ǧubba of the mosque into a ṣīṭīd; there was also a ṣīṭīd at the eastern entrance with two ṣīṭāyāt in front of the mosque (Ibn Djbair, Rihla, p. 239). In Mawsil in the mosque, which dated from the Omayyad period, there was an entrance with a marble throne over it (ibid., p. 235). In Hadrān, there were in the ǧubba three marble ǧubbas with ḥawād and drinking-water (ibid., p. 246), in Haleb (ibid., p. 253).

In Rihla there were three ḥawād with Euphrates water in front of the djamāʿ (ibid., p. 212) but in the mosque in a ṣīṭīna a domed building with running water (Yākūt, iv. 325, 326, here called ṣināʾin; cf. R. G. A., v. 173; Ibn Djbair, p. 89, 267). It was the same in Amid (Nāṣir-i Ḵhosrow, ed. Schefer, p. 28) and in Zarand in Sīḡistan (B. G. A., ii. 298 sq.). The principal mosques of the ʿIrāq had ṣīṭāyāt at the entrances, for which, according to a remarkable note by Makdisi, rents were paid (B. G. A., iii. 129, read ṣawṣaw; cf. maṭābih; Ibn Djbair, p. 89). In Palestine also, in al-Makdisi’s time, there were conveniences for ablutions at the entrances to the djamāʿ (muṭābih: R. G. A., iii. 182; Maṭṣḥīd: ibid., i. 68) and in Ṣan’a in the fourth century, beside each mosque, there was water for drinking and for ṣawṣaw (B. G. A., vii. 111). In Persia also, it was the custom to have a ḥawād in front of the mosque (B. G. A., iii. 318) and there was drinking-water in the mosque itself on a bench (kursī) in iron jars into which ice was put on Friday (ibid., p. 327). Not only at the Zemzem well but also in the mosques of the ʿIrāq, men were appointed whose duty it was to distribute drinking-water (B. G. A., iii. 216). The regular custom, however, was to have at the entrance to, or in front of the mosque, conveniences for ṣawṣaw, in the court of the mosque itself a fountain as the traditional ornament and for drinking water. It was the exception for the ṣawṣaw to take place in the mosque itself.

In Egypt at first the Mosque of Ibn Tulun was arranged similarly to the Syrian mosques. In the centre of the ǧubba there was a gilt dome, supported by sixteen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (ṣaṣṣa) with a running fountain (fawāara): the ṣawṣaw was called from the dome (Miṣrī, iv. 37, the description is not quite clear). People complained that there were no arrangements for washing (niḍāla) there. Ibn Tulun replied that
he had not made them because he had concluded the mosque would be polluted thereby. Therefore he made a miṣrā'a with an apothecary’s shop behind the mosque (ibid., p. 38, 39; Ḥusayn al-Muḥājir, ii. 139; Ibn Taḥḥān, i. 14). This suggests that previously in Egypt the washing arrangements had been directly connected with the mosque. After the fire of the year 376, the ʿājziyya was renovated by al-ʿAziz (Maḳrizī, iv. 401, in 666 again by al-Ḥanīf, whose inscription still exists (C.F.L., i. 31, p. 106). A new miṣrā'a was built in 792 beside the old one on the north, outside the mosque (Maḳrizī, iv. 42).

The Mosque of ʿAmr first got a ʿājziyya in the time of al-ʿAziz. In 378-379 his vizier Yaḥyā b. Killis installed one in the cupola, already in existence for the bālt al-māl. Marble jars were put there for the water (probably drinking-water) (Maḳrizī, v. 9, 11; cf. Ḥusayn al-Muḥājir, ii. 130; Yaḥyā, iii. 899). A new water basin was installed by Saʿlāl b. ʿAbd Allāh at the times of the ʿājziyya from the Nile. This was prohibited in the reign of Ḥaḍīr al-Ḥanūfī (658-676) by the chief ʿājziyya himself, because the building was being filled with clouds of dust (Maḳrizī, iv. 14; Ḥusayn al-Muḥājir, iv. 47). The emir, who restored it, brought the water for the ʿājziyya from a well in the street (Maḳrizī, iv. 15).

Like Ibn Ṭūlūn, the ʿAjamīs do not seem to have considered the miṣrā'a indispensable. For the Aḥār Mosque had originally no miṣrā'a: as late as al-Maḳrī's waqfīj document for the provision of miṣrā'a, money is given only with the provision that something of the kind should be made (Maḳrizī, iv. 51, 54). At a later date we hear of two miṣrā'a's, one at the adjoining Aḥbāqawiyya (ibid., p. 54). On the other hand, there was already a ʿājziyya in the centre of the court, but whether it had existed from the first is not known. It had disappeared, when traces of it were found in 827 in laying-out a new ʿājziyya (ibid., p. 54). Theexcavations of the Mosque of al-Ḥākim were not erected by the founder. I see that of the Mosque of ʿAmr, it was removed in 660 by the ʿājziyya b. ʿAbd Allāh at the time of the ʿājziyya; but after the earthquake of 702, it was again rebuilt and provided with drinking-water from the Nile (ibid., p. 56, 57) and again renovated after 780 (ibid., p. 61). A small miṣrā'a, later replaced by another, was in the vicinity of the entrance (ibid., p. 61). Other ʿAjamī mosques had basins in the ʿājziyya, which were supplied from the Nile and from the Khaṭṭ (ibid., p. 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the emir Tūḥān in 815 placed a bālt in the centre of the ʿAjamī mosque, which was covered by a roof supported by marble pillars and supplied by the same pipe as the already existing miṣrā'a as (Maḳrizī, iv. 107, cf. 124, 128, 130 etc.). At the ceremonial dedication of mosques, it was the custom for the patron to fill the bālt in the ʿājziyya with sugar, lemonade or other sweet things (e.g. al-Maʿayyid, in 822. Maḳrizī, iv. 139; Mawḍūʿat Djamāl al-Dīn in 811: ibid., p. 253; another in 757: ibid., p. 256).

The importance of the ʿājziyya of the mosque, as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca, Cron. M. M., ii. 116-118; also P.G.L., iv. 211, v. Ṣuḥayl, p. 258, v. al-Maʾṣūrī) and especially when it became the custom to build a sabil with a boy’s school in part of the mosque (see below, E 4 end). A ḥawd for watering animals was also sometimes built in the vicinity of the mosque (Maḳrizī, iv. 76). Sometimes also the birka of the ʿājziyya was used for washing. In the year 799 the emir Yelbughā made arrangements for this in the Aḥmar mosque so that one could get water for ṣahrū from taps from a birka put up in the ʿājziyya (Maḳrizī, iv. 76). Maḳrizī condemns this addition, but only because there was already a miṣrā'a at the entrance and the ʿājziyya was too small for the new one (ibid.) and not on account of the water; and it was only because the wall was damaged that the emir’s gift was removed in 815 (ibid., p. 77).

The custom of using the water supply of the ʿājziyya for ṣahrū survived in many places in Egypt. The arrangements were therefore usually called miṣrā'a or rather mālī (which is not found in the inscriptions).

If they had taps, they were called ḥanəfīyya; according to Lane’s suggestion because the Ḥanafis only permitted ablutions with running water or from a cistern 10 ells broad and deep (Lexicon, s. v.; cf. Manners and Customs. Everyman’s Library, p. 69; cf. on the question: Max Heriz, Observations critiques sur les bassins dans les Šahrs des Mosquées, P. L. E., iii 7, 1896, p. 47-51; do., La Mosquée du Sultan Ḥasan, p. 2; Herz wrongly dates the modern usage from the Turkish conquest in 1517). In quite recent times the miṣrā'a’s have often been moved outside to special buildings. Ibn al-Ḥaḍīdījī condemns bringing water into the mosque, because the only object is for ablutions and ablutions in the mosque are forbidden by “our learned men” (Maḳḳāl, ii. 47 sqq. 49); like shaving, ablutions should be performed outside the mosque in keeping with the Prophet’s saying: “ṣahrū maṭbūḥakum ʿalā ʿaṣabī maṣjadiyyakum (ibid., ii. 58).

It was in keeping with this principle that in earlier times the miṣrā'a was usually put at the entrance and the barbers took up their places before the entrance (cf. the name Bāb al-Muṣayyinin “The Barbers’ Gate” for the main entrance to the Aḥmar mosque). Miṣrā'a’s were also to be found in hospitals; thus the “lower hospital” was given two in 346, one of which was for washing corpses (Ibn Daḳḳāḳ, p. 99 infra).

E. The Mosque as a State Institution.

1. The Mosque as a Political Centre. Its Relation to the Ruler.

It was inherent in the character of Islam that religion and politics could not be separated. The same individual was ruler and chief administrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler’s abode was built immediately adjacent to it, as in Medina (and in al-Fuṣṭāṭ, Damascus, Baya, Kūfa). We can see how this dār al-mārār or ḥawd (so for Kūfa: Tabari, ii. 230 sqq; ḥawd al-mārār: ibid., p. 234) with the growth of the mosque gradually became incorporated in it in al-Fuṣṭāṭ and Damascus and was replaced by a new building. The tradition remained so strong that in Cairo, where the main chief mosque Djamāl al-Akṣar was being planned in 169, a Dār Ummara Miṣr was built beside it with direct access to the mosque (Maḳrizī, iv. 33...
and when Ibn Tūlūn built his mosque, a building called the Dār al-Imāra was erected on its south side, where the ruler, who now lived in another new palace, had rooms for changing his dress, etc., from which he could go straight into the maqṣūra (ibid., p. 42).

The ʿAbbasids at the foundation of Baḥdādd introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fāṭimid Cairo; but Sulaymān b. ʿAbd al-Malik in Ramla had already built the palace in front of the mosque (Ballādhuri, p. 140). Later rulers who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Šalāḥ al-Dīn built for himself a manṣūra under the great minaret of the mosque of ʿAmr (Maḥrūz, iv. 13; Ḥusn al-Muḥāṣṣara, ii. 137) and just to the south of the Azhar mosque the Fāṭimids had a manṣūra from which they could overlook the mosque (Maḥrūz, ii. 345).

The caliph was the appointed leader of the Ṣāfāt and the khāṭib of the Muslim community. The significance of the mosque for the state is therefore embodied in the minbar. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abū Bakr by those who had decided the choice of the Prophet’s successor, he sat on the minbar. ʿOmar delivered an address, the people paid homage to him and he delivered a khutba, by which he assumed the leadership (by Ḥizb al-Muʾād� ibn Ḥisham, i. 1828 sq.; K. al-Ḵalīṣ, ii. 75; Yaḥṣūb, i. 142); it was the same with ʿOmar and ʿUthmān (ibid., p. 157, 187).

The khutba, after the glorification of God and the Prophet, contained a reference to the caliph’s predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Omayyads and the ʿAbbasids (see for al-Walīd: Ṭabari, ii. 1177 sq.; ab-Amin: ibid., iii. 764; al-Mahdi: ibid., iii. 386, 451, 457; cf. on this question also Bukhārī, Aḥkām, bāb 43).

The minbar and the khutba associated with it were still more important than the imāmate at the ʿāṣr, it was minbar al-mulk (Hamza, ed. Freytag, p. 659, v. 4). According to a hadith, the Prophet mentioned the little Hasan up to the minbar and said, “This my son is a chieftain” etc. (Bukhārī, Manāṣīḥ, bāb 25). This reflects the later custom by which the ruler saw that homage was paid to him to his successor-designate; this was also done from the minbar (cf. khutba yaraa al-djumʿa li ʿl-Muʿā-ṣaff bi-waḥlāyat al-ʿāṣr, Ṭabari, iii. 2131). The Fāṭimids showed honour to a distinguished officer by allowing him to sit beside them on the minbar (Huṣn al-Muḥāṣṣara, i. 91); in the same way Muʿāwiya allowed Ibn ʿAbd Allāh b. Maʿmūn and the deputation of Muḥammad b. Hūrin (Ṭabari, iii. 861 sq.; cf. for al-Mahdi: ibid., p. 389). There are other cases in which the formal installation of the ruler took place on or beside the minbar (Aḫlāṣi, 2nd ed. Cairo, i. 12; Wüstenfeld, Medina, p. 15). Even at much a later date, when spontaneous acclamation by the populace was no longer of any importance, the ceremonial installation on the minbar was still of importance (Maḥrūz, iv. 94). It had become only a formality but still an important one. Homage was paid to the ʿAbbasid caliphs in Egypt in the great ṣawāma of the palace or in a tent in which a minbar had been put up, and similarly to the sultan whose investiture was read out from the minbar (cf. Quṭramēr, Ḥift. Sull. Maml., i/ii. 117, 149 sqq., 183 sqq.). If one dreams that he was sitting on the minbar, it meant that he would become sultan (ibid., ii/ii. 103). — The ʿAbbasid caliph had however long had his own throne after the old Persian fashion in his palace (al-Tādīr fi Abīlāk al-Malik, ed. Aḥmad Zāki, Cairo 1914, p. 7 sqq.) and so had the Fāṭimids (Ibn Ṭaghrīrdī, ii. 457) and the Mamluks (Quṭramēr, cf. cit., i. 17; cf. 147). When later we find mention of the kuriṣ ʿl-ṭalīfā (v. Berchem, Corpus, i., no. 33), sarir al-mulk (Chron. Mekka, iii. 113), sarir al-sulṭana (Maḥrūz, ii. 157; cf. al-saṣādir, royal throne: B. G. A., ii. 228, 285; kuriṣ similarly cf.: Ibn ʿArabshāh, Vīta Timurī, ed. Manger, ii. 486) or marṭabat al-mulk (Quṭramēr, cf. cit., i/ii. 61), the reference is no longer to the minbar. This does not mean that the ruler could no longer make public appearances in the mosques: thus in 648 Muʿāz Abāk regularly gave audiences in al-madīrān al-ṣāliḥiya (Quṭramēr, Ḥift. Sull. Maml., i/ii. 17) and memorial services for Ṭabari were held a year after his death in several mosques, madāris and khanāqāhs in Cairo (677 = 1278; ibid., ii/ii. 164 sq.).

The caliph spoke chiefly from the minbar of the capital, but when he made the pilgrimage he also spoke from the manābīr in Mecca and Medina (cf. e.g. Ṭabari, ii. 1234; Yaḥṣūb, ii. 341, 501; Chron. Mekka, i. 160). Otherwise in the provinces, the governor stood in the same relation to the mosques as the caliph in the capital. He was appointed “over al-ṣalāt and sword” or he administered “justice among the people” and the ʿāṣr (Ṭabari, iii. 860), he had “province and minbar” under him (ibid., ii. 611), ab-lavāya ta l-ʿāṣr (B. G. A., iii. 337). Speaking from the minbar was a right which the caliph had delegated to the provincial governor and this was done in the name of the caliph. ʿAmr b. al-ʿĀṣ therefore refused to allow people in the country to hold ḍjuma’ except under the direction of the governor (Maḥrūz, iv. 7). This point of view was never quite abandoned. The khutba was delivered “in the name of” the caliph (ibid., p. 94) or “for” him (ii: ibid., p. 66, 74, 198; Ibn Ṭaghrīrdī, i/ii. 85 infra: B. G. A., iii. 485 infra) and in the same way an emir delivered a khutba “for” a sultan (Maḥrūz, iv. 213, 214). The sultan did not have the “secular” and the caliph the “spiritual” power, but the sultan exercised as a Muslim ruler the actual power which the caliph possessed as the legitimate sovereign and had normally entrusted to him. During the struggles between the different pretenders, there was thus a confession of one’s politics if one performed the ʿāṣr with the one or the other governor (Ṭabari, ii. 228, 234, 258; Chron. Mekka, ii. 168). The pretenders disputed as to whether the one or the other could put up his standard beside the minbar (Ṭabari, iii. 2009).

The caliph, the governor also made his formal entry into office by ascending the minbar
and delivering a khutba; this was the symbol of his authority (e.g. Tabari, ii. 91, 228, 242; Chron. Mkh., ii. 173; cf. Harawi, p. 660, v. 2-3; Iskand., ii. 132). After glorifying God and the Prophet, he announced his appointment and read the kätir from the pulpit and the remainder of his address, if there was a war going on, was exclusively political and often consisted of crude threats. The khutba was not inseparably connected with the Friday service. The commander-in-chief could at any time issue a summons to the sälät and deliver his khutba with admonitions and orders (see Tabari, iii. 379, s.v. 298, 300, 875, 1179) and it was the same when he left a province (ibid., p. 241); a governor who could not preserve his authority with the khutba, was dismissed (ibid., p. 592).

Since war was inseparably associated with early Islam and the mosque was the public meeting-place of rulers and people, it often became the scene of warlike incidents. While the governor in his khutba was issuing orders and admonitions relating to the fighting, cheer and counter-cheers could be uttered (ibid., p. 538) and councils of war were held in the mosque (Tabari, i. 314; ii. 287). Soon after his election, Abd al-Malik asked from the minbar who would take the field against Ibn al-Zubair and al-Hajjaj b. Yashair; he was ready to go (Chron. Mkh., ii. 20). After the battle of the Camel, Ali sent the body to the mosque of Basra and A'isha looked for another mosque (Tabari, i. 317, 323). Rowdy scenes occasionally took place in mosques (Kindi, Waw., p. 18); Yazid was stoned on the minbar (Tabari, ii. 88); one could ride right into the mosque and show no respect to the governor sitting on the minbar (ibid., p. 682); fighting often took place in and beside the mosque (ibid., p. 600, 1701 sqq.; Wustenfeld, Med. und Kultur, p. 13 sqq.); sometimes for this reason, the governor was surrounded by his bodyguard during the sälät or on the minbar or even clothed in full armour (al-Walid; Tabari, ii. 1234; Yâkub, ii. 341; al-Hajjaj b. Yashair; Tabari, ii. 254; sälät and sword were thus closely associated in reality).

It thus came to be the custom for the enemies of the ruler and his party to be cursed in the mosques. This custom continued the old Arab custom of regular campaign of obscenities between two tribes but can also be paralleled by the Byzantine ecclesiastical anathematization of heretics by Becker, Med. und Kultur, i. 485; Girsh. d. d'Eth. Chrétiens)

The first to introduce the official cursing of the Alids from the minbar of the Kâba is said to have been Khalid al-Karri (Chron. Mkh., ii. 56). The first cursing of the Alids was because of special events. al-Mansur, v. 102. Ibn Taghribirdi, i. 248; see also Ibn Isma'îl, p. 180 sqq.) Like the blessing upon the ruler, it was no longer a custom (Tabari, iv. 164). It was also recorded in inscriptions in the mosque (Ibn Abul-Hajjaj, ii. 61, ed. Popper, p. 62, 64; cf. also Mec. 9.9-10. According to this idea, Tabari, in 2164; Anathemata were also pronounced on other occasions; for example, Salih made al-Hajjaj b. Yashair attabulate in the minbar, and al-Ma'mun Ibn Tulun solemnly cursed from the minbar Tabari, in 2048). And other rulers had Mu'tazili heretics cursed from the pulpit (see Mez, op. cit., p. 198, cf. against Ibn Taimiya: Quatremère, Hist. Sulf. Islam., ii. 256). Ibn Baṭṭuṭa describes the tumultuous scene with thousands of armed men uttering threats in a mosque in Bagdad when a Shī' khutba was on the minbar (ii. 58).

It was very natural to mention with a blessing upon him the ruler in whose name the Friday khutba was delivered. Ibn 'Abbas, where governors of Basra are said to have been the first to pronounce such a dâ'âd over Ali (Ibn Khaldun, Makhdum, i s. 37, end); it is not improbable that the custom arose out of the reciprocal obligations of 'Alids and Omeyyads; the khutba, who had to curse the 'Alids in the mosques, used to pray for the Omeyyads (Maqrizi, p. 17). Under the 'Abbasids, the custom became the usual form of expressing loyalty to the ruler (Ibn Taghribirdi, i. 11, 151). After the caliph, the name of the local ruler or governor was mentioned (ibid., p. 156, 161); even in Bagdad in 396 by order of the caliph al-Muktafi, the actual ruler 'Abd al-Rahman b. Ja'far was mentioned in the dâ'âd (Ibn Miskawaih, vi. 499; Cairo 1915, p. 396) and the Bâyids, according to al-Maqrizi, also mentioned the khutba in the remote parts of the kingdom (this is evident from the above-mentioned expression khutba tahtâ, for which we also find 'ashâr: see F. G. A., ii. 20; iii. 337, 338, 400, 472, 485; cf. Glossary, s. v.). There is also evidence that prayers used to be uttered for the heir-apparent (Maqrizi, iv. 37; Kindi, al-Waw., ed. Amerdori, p. 420). Under the Mamlikus also, the sultan's heir was mentioned (Quatremère, Hist. Sulf. Islam., ii. 101; iv. 3). Under the Fatimids, it was even the custom to call 'alamân upon the ruler from the minaret after the afdâân al-sulâm (Maqrizi, iv. 45); this also took place under the Mamlikus (e.g. in 966 = 1269, when the aman was elected: Quatremère, Hist. Sulf. Islam., iv. 45). The prayer for the sovereign in the khutba did not find unanimous approval among the learned (see Snouck Hurgrone, Veroordelde Geschriften, ii. 214 sqq.).

In general, the mosque, and particularly the minbar, was the place where official proclamations were made, of course as early as the time of the Prophet (Bukhari, Sahih, bab 70, 71); 'Othman's bloodstained shirt was hung upon the minbar (Tabari, i. 255); messages from the caliph were read from it (ibid., in 2084). Al-Walid announced from the minbar the deaths of two distinguished governors (Ibn Taghribirdi, i. 242); the results of battles were announced in khutbas (Yâkub, ii. 647; 'alîf 'al-farîd, ii. Cairo 1321, p. 149 sqq.). In the Fatimid and 'Abbasid periods also proclamations, orders, edicts about taxation etc. by the ruler were announced in the principal mosque (Tabari, ii. 40; iii. 2165; Ibn Taghribirdi, ii. 68; Maqrizi, ittisâh, ed. Bünz, p. 87; Hâmid, Quatremère, Hist. Sulf. Islam., vii. 892; vii. 44, 151); documents appointing the more important officers were also read upon the minbar (Kindi, Wâd., p. 580, 599, 603, 604 etc. par.: Maqrizi, ii. 246; iv. 43, 88); frequently the people trooped into the mosque to hear an official announcement (Kindi, Wâd., p. 14; cf. Dors, Gesch. d. Mecr. in Spanien, i. 170).

After the position of the caliph had changed, tradition was so far retained that he still delivered the khutba in the principal mosque on special occasions,
particularly at festivals. Thus the Fātimid al-Aziz preached in the mosque of al-Hākim on its completion (Maqrizi, iv. 55) and in the month of Ramaḍān he preached in the three chief mosques of Cairo, one after the other (ibid., p. 53; cf. 61 sq.), Ibn Taghribirdi, ii. 482 sqq.; exceptionally also in al-Kāshidī: Maqrizi, iv. 63). The Abbāsid caliph also used to preach at festivals (e.g. al-Kāshī, al-Idrāk, ii. 349 sqq.); it was the exception when a zealot like al-Muhādi (257) followed the old custom and preached every Friday (Masūdī, Muṣāf, viii. 2). Even the caliphs faisamit in Egypt preached occasionally (Maqrizi, iv. 942; Quatraro, Hist. Sittl. Moul. 1/si. 158 sqq.). Although the mosque lost its old political importance in its later history, it has never quite lost its character as the place of assembly on occasions of public importance. This is evident from al-Ijārizī’s history and even quite recently large meetings have been held in the mosques of Egypt on questions of nationalist politics.

2. The Mosque and public administration.

The actual work of government was very early transferred from the mosque to a special diwan or magistracy (see Talbar, G., 1, x), and negotiations were carried on and business frequently done in the qāṣ al-imāra (cf. Talbar, ii. 230 sqq.) but when financial business had to be transacted at public meetings, the mosque was used; of this there is particular evidence from Egypt. Here the director of finance used to sit in the Mosque of ʿAmr and auction the farming out of the domains, with a crier and several financial officers to assist him. Later the Ḍiwān was transferred to the Ḥāʾim ʿAḥmad b. Tūlūn but even after 300 A.H. we find Abū Bāk al-Mādhara’ī sitting on such occasions in the Mosque of ʿAmr. Under the Fātimids the vizier Yaḥyā b. Killis—used first the dār al-imāra of the Mosque of Ibn Tūlūn (see above), later his own palace and afterwards the caliphs’ qāṣ was used (Maqrizi, i. 131 sqq.). In the same way, in the reign of Muʿawiyah, the Coptic churches were used and the taxation commission took up their offices in them (Papakyx Erzherzog Rainer, Führer durch die Ausstellung, No. 577); and Ibn Rosta (c. 290 = 900) says that the officials in charge of the measurement of the Nile, when they noticed the rising of the river, went at once to the chief mosque and announced it at once bālī after another, at the same time scattering flowers on those seated there (R. G. A., vii. 116).

The connection with administration was also seen in the fact that the treasure-chest, the baḥt al-māl, was identical with the qāṣ. Kindi, Wulatt, p. 70, 117 was kept in the mosque in al-Ṭustal Usama b. Zaid, the director of finance, in 97 and 99 built in the Mosque of Amra qubba on pillar in front of the minbar for the baḥt al-māl of Egypt. A drawbridge was placed between it and the roof. In the time of Ibn Rosta (c. 300) it was still possible to move about freely below the qubba but in 378–379 al-Aziz put up a running fountain below it (R. G. A., vii. 116; Maqrizi, iv. 9, 11, 13; Ḥmān al-Mādhara’ī, ii. 135; Yaḥyā b. Sahn). Al-Kindi records an attempt to steal the chest in 145 (Wulatt, p. 112 sq.). In the disturbed years about 300, the wall al-Nāşirī closed the mosque between the times of sālāt for the safety of the chest, which was also done in Ibn Rosta’s time (Kindi, Wulatt, p. 266: R. G. A., vii. 116). New approaches to the Baḥt al-Mal were made in 422 from the khūzā of the mosque and from the Diwān (Maqrizi, iv. 13).

In Kufa, the baḥt al-mālāʾ was, at least during the early period, were in the Ṣar al-Imāra (Tabari, 1 2459, 2491 sqq.); in the year 58 during the fighting, it was saved from Ḥayra and taken with the minbar to the Mosque of al-Haddān (ibid., p. 3414 sqq.). In Palestine, in the chief mosque of each town, there was a similar arrangement to that in the Mosque of ʿAmr (R. G. A., ii. 182). In Damascus the baḥt al-mālāʾ was in the most western of the three qubbas in the court of the Mosque of the Omayyads; it was of lead and rested on S columns (R. G. A., iii. 157; Ibn Ḥajjāh, p. 264, 267; Ibn ʿAṯār, i. 200 sqq.); it is still called qubba al-ʿlāʾīna (“treasure-cupola”), earlier qubba ʿalīha (cf. Baedeker, Palestina und Syrien). In the time of the two travellers mentioned, the qubba only contained property of the mosque. Ibn Ḥajjāh saw a similar qubba in the chief mosque of Ḥarrān and says that it came from the Byzantines (p. 246). In Ashkhabad also by the time of ʿAḥšārī, the Syriac church had been everywhere introduced (R. G. A., i. 18). In Ḥamah in the centre of the town, there was a building with marble columns and doors (R. G. A., in 316) which perhaps points to a similar statement of affairs and in Armenia it is recorded that the baḥt al-mālāʾ was kept in the Ḥamah in the time of the Omayyads as in Nis and elsewhere (R. G. A., ii. 241). The qubba was usually of lead and had an iron door and Ibn al-Hadżycli considers it highly illegal to shut off a diwan in a mosque, which is the same as forbidding entrance to it. This shows that the custom still survived in his time.

Ibn Ḥajjāh’s remark about Ḥarrān suggests that here again we have an inheritance from Byzantium. It was probably the building belonging to the pisamaw (cf. above) that the Musulim put to a practical use in this way. For Byzantium had the treasure caelis in the palace, and the treasure-chamber of the church (skepophylakion) were built in this way (cf. Fr. Dolger, in Byzantinischer Arch. Heft p. 1297, p. 26, 34).

3. The Mosque as a court of justice.

That the Prophet used to settle legal disputes in his mosque was natural (see Bakht, T. sâm 19, 29 etc. of Ṣalāt, i. 71, Komite, i. 41); but he could also deliver judgments in other places (ibid. pass. In Ḥajjāh it is recorded that some kāfis of the earlier period from Ṣabrah, al-Shāh, Yaḥyā b. ʿUmar, Marāzhī, at judgment beside the minbar, ʿAbd al-Ḥaṣan, Zaynā b. Afṣaf on the open square outside the mosque (Bakht, T. sâm, i. 18). The coutoms had all the better chance of survival, as churches were used in the same way (Joshua’s styli, ed. Wright, p. 29; cf. Mir, Komite, p. 223). Sitting in judgment was primarily the business of the royal ruler but he had to have assistants and Abū Bakr’s kāfi was mentioned as assisting ʿOmar (Tabari, i. 2155) and a number of judges appointed by ʿOmar are mentioned (R. G. A., vii. 227). In the reign of ʿOthmān, ʿAbd Allāh b. Māṣūf is said to have been judge and financial administrator of Kufa (Ibn Kaita, M. sâm, ed. Wustenfeld, p. 128). On the other hand, we are told that ʿAbd Allāh
b. Nāṣāf, appointed by Marāwa in 42, was the first kādi in Islam (Ṭabarî, ii. 2477): it is recalled that in the year 132 the kādi of Medina administered justice in the mosque (ibid., p. 2505). In Bāṣra, we are told that al-Aswād b. Sarī al-Tamīm immediately after the building of the mosque (i.e., in 40) worked in this capacity (Baladhurî, p. 349). In the early period 'Omar wanted to choose a kādi, who had been already acting as a judge before Islam (Kindī, Wulâ‘a, p. 301 sq.; Ḥasan al-Muḥājīra, ii. 86). Even the Christian poet al-Aslāmī was allowed to act as arbiter in the mosque of Kufa (see Lummens, Mu‘āwīya, p. 435 sg.).

In al-Fuṣṭāl, as early as 23 or 24 H. by command of 'Umar b. al-‘Aṣ, appointed a kādi named ‘Abd (Ḥasan al-Muḥājīra, ii. 86; Kindī, Wulâ‘a, p. 300 sq.). The kādi held his sessions in the Mosque of ‘Amar but not exclusively there. The kādi ‘Abd b. Ṣu‘d (120–127) held his sessions sometimes before his house, sometimes in the mosque and for Christians on the steps leading up to the mosque (Kindī, Wulâ‘a, p. 351 sg.). A successor of his (177–184) invited Christians who had lawsuits into the mosque to be heard (ibid., p. 391); of another judge (205–211) it is recorded that he was not allowed to sit in the mosque (ibid., p. 428). It seems that the kādi could himself choose where he would sit. A judge, officiating in the year 217, sat in winter in the great pillared hall turning his back towards the kiblah wall and in summer in the sān near the western wall (ibid., p. 443 sg.). During the Fātimid period, the weekly building on the north-east of the Mosque of ‘Amar was reserved for the judge. This judge, called from the year 376 onwards kādi al-fāṣīf (cf. Ḥasan al-Muḥājīra, ii. 91; Kindī, Wulâ‘a, p. 590), sat on Tuesday and Saturday in the mosque and laid down the law (Maqārī, ii. 246; iv. 26, 22; cf. Kindī, Wulâ‘a, p. 587, 589; cf. Ma‘sūm, trans. Schefer, p. 149).

Ya‘qūb’s time in Baghdad, the judge of the city used to sit in his chief mosque (B.G.A. viii. 82; cf. in Damascus the vice-kādi in the fourth century had a special iwal in the Mosque of the Omayyads (F.G.I. iii. 158, and the notables (al-shu‘ā‘īn) also sat in the Mosque of the Omayyads at the Bab al-Ṣalāh (ibid., p. 17)). In Nisābūr, every Monday and Thursday, the mālekh al-kāmis was held in a special mosque (ibid., p. 528). In course of time the judge was given a ma‘līkh al-kāmis of his own (cf. Ḥusayn, ii. 99) and in 279 al-Muṭahhīd wanted to forbid the kādī to hold sessions in the mosques (Ibn Kahrîbîrî, i. 57 infra): perhaps however we should read ‘īrāq; see Goldziher, Mat. Stud., ii. 163, note 4). Justice was also administered in the dār al-dār (qubātāri, Hist. Sult. Iran., ii. 79). But the administration of justice did not at once lose all connection with the mosque. Under the Fāṭimid the custom had been introduced that the kādi should hold sittings in his house, but Ibn al-Awāsim, appointed just after 400 H., held them either in the Fāṣarī at the Bait al-Mal or in a side-room (Kindī, Wulâ‘a, p. 612; cf. Ibn Taghribirdî, ed. Popper, ii. ii. p. 69; Kāshāshānî, Sharh 'Al‘ī, li. 457; for 439 = 1048, see Nāṣīr Khān, c. 54, text, p. 149, transl.) In Mecca, the dār al-fāṣīf was in direct connection with the mosque (Ibn Dhu‘ayr, p. 104). In the sixth century Ibn Baṭṭārī attended a court presided over by an eminent juris in a mosque (madrasa) in Shirāz (ii. 55, 63; cf. also al-Ma‘ṣūm, ii. 54 infra), and in Damascus the Shāfi‘i chief kādi held his sessions in the ‘Adilīya Madrasa (so Ibn Khalīkīn, Qantumêre, Hist. Sult. Mant., i/ii. 22; cf. also for Egypt, ibid., p. 87; i/ii. 253), the vice-kādī sat in the Zāhirīya Madrasa (Ibn Baṭṭārī, i. 218). The judgment might even be put into execution in the madrasa (ibid., p. 220). During the Mamlūk period in Egypt, we occasionally find a small mosque being used as a madājiṣ for judges (Makrizî, iv. 270; Ibn Dū‘ayr, p. 98 supra); Ibn Khalīkīn held legal sittings in the Madrasa al-Ṣāhiyya (Ibn ‘Abī ‘Aṣîr, vii. 453).

A mufti, especially in the large mosques, was also frequently appointed; he sat at definite times in a hāza li ‘irfātāt, e.g. in Cairo (al-Ḵawānî, al-Muḥājīra, i. 182; Djīlàlî al-Dîn, ibid., p. 157), in Tunis (Zarkashi, Chroniques, transl. Fagnan, Rev. Min. Soc. Arch. Constantîne, vol. xxi, 1895, p. 197, 202, 218, 248). In Baghdad Abū Bākî al-Dīnawai (d. 408) was the last to give fatwas in the Mosque of al-Mansūr according to the madhab of Sufyān al-Dhawî (Ibn Taghribirdî, ed. Popper, i/ii., p. 152).

F. The Mosque as an Educational Centre.

I. Islamic studies in the Mosque to the end of the Fātimid period.

The new studies stimulated by Islam were from their nature associated with the mosque. The learning by heart and the understanding of the Qurâ‘ân formed the starting-point and next came the study of Hadîth, by which the proper conduct for a Muslim had to be ascertained. The Prophet was often questioned on matters of belief and conduct, in or outside the mosque (Bukhârî, Ḥim, bāb 6, 52; 23, 24, 26, 46). After the death of the Prophet, his Companions were consulted in the same way and scientific study began with the collection and arrangements of hadîths, as has been shown, notably by Goldziher. This process is reflected in the hadîths themselves. According to them, even the Prophet in his lifetime was asked about hadîths (ibid., bāb 4, 14, 33; tr. 9, 51, 53); the Prophet sits in a mosque surrounded by a hâza and instructs his hearers; the latter repeat the hadîths three times until they understood them (ibid., bāb 8, 30, 35, 42). The necessity of Ḥim is strongly emphasised and the ḥalîl al-‘im is recommended; a man is held up as a model because he undertook a month’s journey for the sake of a single hadîth (ibid., bāb 19–22; cf. Goldziher, Mat. Stud., ii. 32 sq., 175 sq.). Jewish influence is perhaps to be recognised when learning is compared with the drinking of water (Bukhârî, Ḥim, bāb 20; cf. Proverbs, xviii. 4; Gen. 31, 41) and the teachers are called nābulājam (Bukhârî, Ḥim, bāb 10). A special class of students, Akh al-‘im, was formed who spread the knowledge of traditions throughout Muslim lands (ibid., bāb 7). They collected people around them to instruct them in the most necessary principles of the demands of Islam; ‘Abd Allah held one of the czasirat every Thursday, only once a week, in order not to tire the people (ibid., bāb 12). In this simple form of instruction which was indistinguishable from edifying admonitions lay the germ of Islamic studies. The teacher (ulama) his hearers; elsewhere it is called fakîh or qâla and the knowledge imparted is
Such knowledge was imparted to the tribes by the Prophet (ibid., bāb 25) or by teachers sent to them. In the year 17, Omar sent teachers of the Kurān in all directions and ordered the people to appear every Friday in the mosque. The complicated nature of the subjects of study resulted at the principal centres of Islam in the formation not only of a guild of teachers but of a regular system of instruction. The typical scholar, in addition to the Kurān, was the muhaddith (ibid., bāb 29) although new branches of study were soon added as a result of contact with lands with older cultures, notably linguistic studies and in this connection the study of the old poetry, philosophical and speculative studies, logic, etc. The learned man of the old period was also called faštik (Huṣn at-Maḥfāra, i. 131; Taḥāri, ii. 1183, 1266; Aqāhīn, viii. 89; Ibn Sa'd, v. 167 etc.). Even after the new branches of learning were added to the older studies, the mosque remained the chief centre of instruction. This may have been facilitated by the fact that in the old Christian countries it had been the custom for studies to be prosecuted in connection with monasteries and churches (on the university connected with the Church of the Castles in Constantinople cf. A. Heisenberg, Gießekirche und Apostelkirche, ii., 1908, p. 17 sqq.).

We hear of a madrīs for educational purposes in the Medina mosque in the first century A. H. (Aqāhīn, i. 48; iv. 162 sqq.). Yazid b. Abī Ḥuṣayn sent by Umar b. Abī Ḥaṣīm to Egypt (d. 128) is said to have been the first to teach in Egypt (Huṣn at-Maḥfāra, i. 131); he is mentioned along with another as teacher of al-Laith (Kindi, Wafā, p. 89) and the latter, upon whose pronouncements fatwās were issued had his ḥālāk in the mosque (Huṣn, i. 134). Omar II had before this sent al-Nāšir, the Mawla of Ibn Umar, to Egypt to bring them the sunna (ibid., p. 150). He also sent an able reciter of the Kurān to the Maghrib as kādī to teach the people kāfira (ibid., A.i. 130). Education was arranged for by the government by allowing suitable people to give instruction in addition to their regular office. From the very first, education in Egypt was closely connected with admiration to right living. The first teachers in the mosques were the kāfira, as a rule kādīs, whose discourses dealt with the interpretation of the Kurān and the proper conduct of divine service (cf. C 3). Their masāʾiṣa was the direct continuation of the moral instruction given by the old Companions (cf. Bukhārī, Ḥadīth, bāb 12). The instruction started in the mosque of ʿAmr was continued for centuries. In the third or fourth century A. H., al-Shāfiʿi taught various subjects here every evening (294) (Huṣn at-Maḥfāra, i. 134; Yākūt, ʿUṣūl, vi. 388). It was after his time that the study of fiqh came markedly to the front and the great teachers used at the same time to give fatwās (cf. Huṣn, i. 182; ʿAbd Allāh al-Kazwīni, d. 315: i. 183: ʿAbd al-Rahman al-Kāzī, d. 339). In the year 326 (938), the Ṣāḥibīs and Mālikīs had each 15, the Ḥanāfīs 3 groups in the mosque of ʿAmr (Ibn Saʿd, ed. Tallquist, p. 24). The Mālikī Muḥammad al-Naʿālī (d. 380) had so many hearers that the class occupied the area which 17 pillars included (Huṣn, i. 207). In the fourth century, al-Maḥdāl mentions the groups (halaq of fudhāl, kūroṣ and ahl al-adāb wa l-ḥikma, who sat in the mosque (B. G. A., iii. 205; cf. for the fifth century Nāṣirī Khosraw, ed. Schefel, p. 50 [text], p. 148 [transl.]). He also mentions that the followers of Abū Ḥanīfah held meetings in the Masjid al-ʿAṣrā with faštik, which here must mean something like lectures, where they read out of a volume and the fudhāl used to sit in the mosques of Palestine generally, to teach between the salāt (B. G. A., i. 182). In the third century, Ibn al-Fākīh tells how the faštik sat in the mosques of Sūqīy, al-Balīk and Irāq, while the people crowd around them (ibid., ii. 317). The madrasah which later lost their importance had also their study-circles in the mosques. For example al-Maḥdī al-Ḥāfīz says that the Ḥanafīya had study-groups in Fāṭā (ii. 439) and the Awāzīya had even a madrīs in the mosque of the Omaiyads (ibid., p. 179).

Arabic philological studies were ardently prosecuted in the mosques. The interest of the early Arabs in rhetoric survived under ʿĀlūs; the faštik Saʿīd b. al-Musayyab (d. 95) (cf. Taḥāri, ii. 1260) discussed Arabic poetry in his madrīs in the mosque in Medina; but it was still thought remarkable that poems should be dealt with in a mosque (Aqāhīn, i. 48; iv. 162 sqq.). In the year 256, al-Taḥāri, by request dictated the poems of al-Jirāmī beside the Bait al-Mal in the Mosque of ʿAmr (Yākūt, ʿUṣūl, vi. 432 infra). As the bāb al-Maṣrīs bāb al-ʿAṣrā, the Aṣfāb al-Arābiyya sat together and were visited by Ḥusayn b. Salama (d. 167 or 169) while he made Ḥasan al-Baṣrī give lessons (ibid., iv. 155). In Granada we hear of a ṣāḥib who gathered many pupils around him in the ḍāmī (Maḥāni, ii. 254). In Tunis in the viiith century, the Ṣāḥibīs of al-Harīrī were actually read in the ḍāmīs Zaiṭūna (Zarkaḥi, transl. Fagnan, Rev. Soc. Arch. Constantine, 1894, p. 111). In Baghda b. ʿAbd al-Malik gave his lectures in the mosque, which bears his name and the pupils used to take their places in front of him after the morning salah (Yākūt, ʿUṣūl, iv. 243 sqq.). About 200 a. H. we hear of lectures on ṭafṣir in the principal mosque of this same town (ibid., vii. 168). At the same time, the study of Ḥadīth still retained its importance (Wustenfeld, Schrift, iii. 362). The Mosque of al-Manṣūr remained the most distinguished school, the goal of all the learned (Yākūt, ʿUṣūl, i. 246 sqq.). When a traveller came to a new town, he could go to the ḍāmī in the confidence that he could attend lectures on Ḥadīth there (B. G. A., iii. 415, in Sās). In Mecca, for example, al-Shāfiʿī lectured (Yākūt, ʿUṣūl, vi. 391), in Medina Ibn Ḥašāb, who died in 234 (ibid., p. 400. 401). In Damascus we hear of some one who lectured on ṭafṣir (Huṣn, i. 182) and of another, Mālik Tahir al-Iṣkaḍārī (d. 359). One lectured on Ḥadīth in the same place (ibid., i. 183). Teachers went from one town to another. Mālik b. Abī Ṭalib came from Kairawayn to Mayer Mecca and Kūrjba, in the last named place he put up in two rūwās of the chief mosque, where he lectured on ṭafṣir, afterwards in another mosque, and he was much sought after on account of his ʿilm (Yākūt, ʿUṣūl, vii. 174). At quite an early date we read of special apartments (which were certainly also lecture-rooms) for authorities on the Kurān, for, according to al-Wākīlī, Abū Allāh b. Umm Maktūm lived in Medina in the Dār al-Kūrā (Huṣn at-Maḥfāra, i. 142).

As is evident from the examples quoted, studies were not only prosecuted in the chief mosques but also in other mosques. In Egypt, not only
the Mosque of 'Amr but also the chief mosques of later date were important centres of study. As soon as the Mosque of Ibn Tulun was founded, a pupil of al-Shābi began to lecture in it in Hādīth (Ibn al-Muqaffa'a, ii, 139). During the Fātimid period this was continued. In the year 361 (722), the Azhar Mosque was finished. Soon afterwards, the new Shī'a Kādí, 'Alī b. al-Nu'mān, lectured in it on Fīqh according to his school; in 378 al-'Aziz and his viceroy Ya'qūb b. Killis founded 35 lectureships and in addition to their salaries, the lecturers were given quarters in a large house built beside the mosque (Maqrizi, iv, 49; Sulaiman Rayad al-Hanafi, Kunz al-Qaṣṣār: 'i Ta'rīkh al-Ashar, p. 32 sqq.). Immediately after the foundation of the Mosque of al-Hākim, the jā'ātātā (taḥqīqāt) Maqrizi, iv, 55) in it. In the Fātimid Mosque of al-Akmar, also founded in 519, teaching was carried on from the very first (Ibid., p. 77).

We can therefore say definitely that mosques were from the beginning through the centuries educational institutions, that learned men occasionally used to live in mosques and that under the Fātimids and probably much earlier, there were special houses for the learned teachers. The mosque therefore corresponded to church, town hall and school and sometimes hostel. It was, then, a public place of assembly for the town. Nasrī Khosrow in 439 (1047) gives a vivid picture of the activity in the Mosque of 'Amr which was visited by 5,000 people daily, teachers, kurām-teachers, students, strangers, scholars, who drew up bills of exchanges and contracts etc. (ed. Scheler, text, p. 50 and transl., p. 148). It was therefore an exception when the Sakhra Mosque was open only on Mondays and Fridays (Saunare, Hist. Épisc. et Écol. P. 54) which happened with very few other sanadaries and also unusual for the mosque only to be opened for prayer, as sometimes happened out of consideration for the safety of the bāt al-ālam. The people demanded unrestricted access to the mosque at all times (cf. Maqrizī, iv, 54).

2 Special Educational Institutions.

In the descriptions of the larger mosques the libraries are often mentioned. These collections were gradually brought together from gifts and bequests, and it was a common thing for a scholar to give his books for the use of the Muwaffq or Aḥr al-ālim (e.g. al-Khanq al-Baghdādi, Yākūt,USB, i, 252; cf. iv, 287). Many other libraries were semi-public. These often supplemented the libraries of the mosques, because they contained books in which the mosques were not much interested, notably on logic, falsafa, geometry, astronomy, music, medicine and alchemy; the latter were called al-ālim al-khulima (Ibn Abī USB, t. 113; use this already for the pre-Islamic period) or al-ālim al-āsaf (on them see Golzheiser, in Ašr Fr. Ak II, 1915, Phil.-Hist. Kl., N° 8, Berlin 1916). The academy, Bāstah-i Ḥism, founded by al-Ma'mūn (98–202) in Baghdad, deserves first mention. It recalls the older academy founded in Tabari, to which Muṣār had invited Gorgias. Gūrīlī, as head of the hospital; he also translated works from the Greek (Ibn Abī USB, t. 123 sq). In the new academy there was a large library, and it was extended by the translations which were made by men qualified in the above-mentioned fields; there was also an astronomical observatory attached to the institution in which there were also apartments for the scholars attached to it (Fihrist, ed. Flusel, p. 243; cf. Ibn al-Ḳif, Ta'rīkh al-Haḳam, p. 98). When the caliph al-Mu'tadīd (279–289) built himself a new palace, he had apartments and lecture-rooms in an adjoining building for men learned in every science, who received salaries to teach others (Maqrizī, iv, 192, 355; Ibn al-Muqaffa'a, ii, 142).

Private individuals of wealth continued benefactions on these lines. 'Alī b. Yaḥyā, who died in 275 and was known as al-Munadidj, had a palace with a library, which was visited by those in search of knowledge from all lands; they were able to study all branches of learning in this institution, called Khasīn al-Ḥikma, without fee; astronomy was especially cultivated (Yākūt,USB, v, 467). Al-Munadidj also presented a whole library to Fāṭi b. Ḥakām (ibid., p. 459, infra; on al-Ṣūr's library, see ibid., vii, 136, 11 sqq.). In Mawṣil, Dā'far b. Muḥammad al-Mawṣili (d. 323) founded a dār al-ilm with a library in which students worked daily at all branches of knowledge which were even supplied with free paper. The foundations were lectured on poetry in it (Ibid., ii, 420). In the fourth century al-Majdīsī visited in Shirāz a large library founded by Aṣūd al-Dawla (367–372) to which people of standing had access. The books were arranged in classes and listed in catalogues, and the library (khāṣīn al-kutub) was administered by a director (wakīl), an assistant (khāsim) and an inspector (mughrīf) (B. G. A., iii, 449; cf. a little later: Yākūt,USB, v, 446, 12 sqq.). In the fourth century, a certain Ibn Sawwār founded both in Bāṣra and in Rāmān-Hurmuz a large dār al-kutub with stipends for the scholars who worked in it; in Bāṣra a shākīt used to hold classes (muḍarīt) on Muṭazili kalām (B. G. A., ii, 413, 18). In al-Ra'y, there was at the same time, a bāt al-ālim with over four hundred camel-loads of books, which were catalogued in a ten volume fihris and included many Shi'i works (Yākūt,USB, ii, 315 sqq). In the year 335; the vizier Sādir b. Arḍāshīn founded a dār al-ilm in Karkh with a large library for scholars (Ibn Taghibirdi, ed. Popper, p. 51, 16 sqq.; Ibn al-Ṣūr, ix., Cairo edition, p. 35, 7).

Many of the libraries had a strongly, but by no means exclusively, Shi'i character. As the fihris al-wāṣib, the 'Abbāsids, as already mentioned, were interested in them and the Omayyad Khālid b. Yarīd b. Mu'āwiyah studied alchemy and medicine along with Ḥadiṯh (Ibn Taghibirdi, i, 246, 5 sqq., USB, v, 165). But the connection between the Shi'i systems and Hellenistic science of which we have evidence, for example in the Khwān al-Safā, perhaps caused a greater interest to be taken in this branch of knowledge among the Shi'is than among the Sunnis. In Cairo, the Fātimid founded similar institutions in the interests of the Shi'i. In their palace, they had a library which was said to be the largest in Islam. It had about 40 rooms full of books and all branches of knowledge were represented; they had for example 1,200 copies of al-Ṭabarī's History and 18,000 books on the "old learning" (Maqrizī, ii, 255–255). The vizier Ya'qūb b. Killis founded an academy with stipends for scholars and spent 1,000 dinars a month on it (Yaḥyā b. Sa'id, ed. Tallmu-t, fol. 108; Ibn Khallīkān, Wafa'yāt, Cairo 1310, ii, 334; cf. Maqrizī, iv, 192, 61). It was
and one built by Abū Sa‘d Ismā‘il al-Astarabādī and another built for the teacher Abū ˙Ishākh al-
Sijarātīn. A Niğmāniya was also built here by Niğm al-Mulk for the İmām al-˙Ismā‘īl and the Ṣu‘ubānī (Makrizī, iv. 192; Ḥasan al-Muhāsabān, ii, 141 ff.). It was an
of great importance when Niğm al-Mulk (456–485, viceroy of the Saljuq sultāns Alp Arslān and Malik Shāh) founded the celebrated
Niğmāniya Madrasah in Baghdād; the building was begun in 457 and on the 10th Dhu ‘l-Ka‘da 459 (Sept. 1067) it was consecrated. It was founded for the Shāfi‘i teacher Abū ˙Ishākh al-˙Sijarātī; but he at first refused to accept the call, because the
foundation on which it was built was said to have been acquired illegally, and Abū Naṣr Ibn al-Sabbākh therefore held the office for the first twenty
days (ibid.; and Wustenfeld, Schätzi, iii. 297; Ibn Khallikān, Wafayāt, Cairo, i, 143 sq.).

The Muslim historians are in some doubt about the history of the madrasas. Niğm al-Mulk is
said to have founded it, but Al-Makrizī and Al-Nuṣayrī point out that mu‘addarīs were already
in existence before him and mention the four above-named, but, as we have seen, even they were
not innovations. Al-Sulki thinks (says Al-Nuṣayrī) the new feature was that Niğm al-Mulk endowed
scholarships for the students. But this again was
nothing new as we have already seen. But the enthuseaism and energy of Niğm al-Mulk meant
the beginning of a new period of brilliance for the
Madrasah. The sultān and men of high rank
had now interested in it and the type evolved
by Niğm al-Mulk, a school in which the students
were boarded, became the prevailing one after his time. We may presume that the other schools
also had a place for prayer in them, i.e. they
resembled mosques. The type of school known
to us is built as a complete mosque. Since even
the older mosques containing living-rooms which
were frequently used by students, there is no
difference in principle between the school and
the ordinary mosque; only the school were especially arranged for study and the maintenance of students.

This character is expressed by the name madrasa,
plural mu‘addarīs; it is a genuine Arabic formation from the word darasa, “to read,” “to study,”
taken from Hebrew or Aramāic (Sāra lviii. 37
and elsewhere; Ḥabashyāṭ, ed. Haroutyoun, p. 53,
18; Aghānī, xiv., 2nd Cairo ed., p. 78; cf. darasa to teach; Būkhārī, Bād‘ī ‘l-Wahr, bab 5 and elsewhere; to study; Kāmil, ed. Wright, p. 171),
where Bāst Ma‘ṣūr is used of a Jewish school
(Būkhārī, Ḏa‘QA, bab 6; Ibn Ḥiṣām, p. 383,
388); it is therefore an analogous formation to
Masjid (cf. also Heiser, Klein. Schriften, ii.
122 sq.; Noldeke, Neue Berichte z. sem. Sprache, p. 38).

In the time of Niğm al-Mulk and immediately
afterwards, the madrasa spread in the Trak, Kurhāsān, al-Ba‘ṣra, etc. He was not content with the two
he founded in Niğm and Baghdād. There was also
a Madrasa Niğmāniya in Balkh (Wustenfeld,
Schätzi, ii. 240). In Ṣawwāl (ibid., p. 319),
Herat to which al-˙Sijarātī (d. 485 = 1092) was
called from Ghazna and in Mawz (Vākūt, iv. 509).
Ibn al-˙Sabbākh, who had to give up his position in
favour of al-˙Sijarātī, received a promise from
Niğm al-Mulk that he would build a madrasa for
him in Baghdād, but the death of this scholar
prevented this being done (477; ibid., p. 304).
The great vizer’s rival Tād‘ī al-Mulk (d. 486 =
1093) in Baghdād founded a Madrasa Tād‘īya
(ibid., p. 311). In Nisā‘IR, other madrasas were
founded at the same time, for example one by
al-Manṣūr who died in 463 (ibid., p. 277) and a
Shāfi‘i madrasa (ibid., p. 327). In Mawz, al-Manṣūr
also died in 488, and a Shāfi‘i madrasa (ibid., p.
321; cf. above). In Marw al-Rudh, Ṣeṣmad al-
Manṣūr (d. 512) built a madrasa (ibid., p. 326).

The prosperity of the madāris stimulated by
Niğm al-Mulk in the fifth century survived for a
long time in the east. In the sixth century Ibn Ḍubair (580 = 1184) mentions some thirty madāris,
all in the eastern part of the town, the most
notable being the Niğmāniya, renovated in 504
(Riḥāta, p. 229). In 631 (1234), the caliph al-
Mustanṣūr founded the magnificent Mustanṣūrya
as a school for the four rites, each with a teacher
and seventy-five students and a teacher for Kurān
and one for Ḥadīth, as well as a physician. Attached
to it were a library, baths, hospital and kitchens;
there was a clock at the entrance; beside it was a
“green where the call to prayer was given from
which he could survey the whole building
(cf. Le Strange, Baghdād, p. 266 sq.; Wustenfeld,
Akademien der Araber, p. iv. and 29).

The Niğmāniya and the Mustanṣūrya survived
the destruction of Baghdād by Hulagū and both
are mentioned at the beginning of the viii th century by Ibn Baṭṭūta (ii, 108 sq.) and the building
of the latter still exists. Ten others are known of
the viii th–ix th century including the Madrasat ‘Abd al-˙Kādir al-˙Jallānī (688 = 1286), Madrasat
Abū Ḥanifa (of about the same date) and al-˙Mīr-
djānīya (758 = 1357), all still in existence, which
were founded for al-˙Sijarātī, Ḥanafis and for the
study of Kurān and Ḥadīth. Besides these three there
still exist seven madrasas founded in Baghdād in
the xv th and xvi th centuries (L. Maission,
Les Madrècques de Bagdad, B.I.F.A.O., vii, 1909,
p. 77–86; the inscriptions, do., in M. I.F.A.O., xxxi.,
1912). Although the Tatars in 699 (1300) destroyed
many madāris (Quattremère, Hist. des Sult. Maml.,
i, i. 163 sq.), Ibn Baṭṭūta shows that in the eighth
century there were still flourishing schools in the east. In Wāṣīt there was a madrasa which specialised
in taḥfīz al-˙Kurān; it had three hundred rooms
for foreign students (ii. 3). In Tustar, the sultān
expended one-third of the revenues on madrasas
and monasteries (ii. 31) and in Şahrāz and other
Persian towns he also found madrasas (ii. 62
and pass.).

For Niṣā‘IR, he mentions four madāris beside the chief mosque (iii. 86); according to
Ibn Baṭṭūta (c. 820 = 1417), this town had still
eight madāris under the Ḳabūsids and he mentions
seventeen in which al-˙Sijarātī’s fiqh was taught (Sefer Namen, ed. Schefer, p. 281). For Marw, Vākūt
about 600 mentions, in addition to the Niğmāniya,
the school founded by Abū Sa‘d al-Muh. b. Manṣūr
al-Mustawfī (d. 494), also the ˙Amidiya and the
Khatānīya (iv. 509). Large madrasas were still being
built in Persia in the xvi th century and they
are still to be found there in modern times
(G. Browne, A Year amongst the Perzians, 1916, p. 108, 217 sq.). Although the institution
had for a long time been in decline, it could of course
take place even now in the ši‘a world without any difficulty.
In 728 (1328) in Baghdād ˙Aṭī, Ibn Baṭṭūta found
a large Şahrā madrasa (i, 415). The Mongols also
built madāris, e.g. Karaka ˙Khān, the descendant
of ˙Citgb ˙Khān (Quattremère, Hist. Sult. Maml., ii.
56). Hulagū’s mother built two madrasas in Bakhārā
where 1,000 students studied daily in each (J.A., ser. 4, xx. 389). The period of greatest prosperity of the madrasa in Central Asia was under the Timurids, notably in Samarqand, where Timur built a džamí 'in the Indian style', and his wife a madrasa (ibid. 'Arabshâh, Vita Timuri, ed. Manger, 1767, p. 444 sqq.; see also Diet. Kunst der islam. Welt, p. 99 sq.).

In the towns of Mesopotamia and Syria the movement spread from the fifth century onwards. Nur al-Din b. Zangi founded madrasas for Şâfîîs in Damascus, Halab, Hamâ, Hims, Ba'albek (J.F.A., ser. 9, iii., p. 428; cf. 488; Maqrizi, iv. 192).

Kamāl al-Din (d. 572) founded a madrasa in Mawsîl, two in Naṣîbin and one in Damascus (Wüstenfeld, Schäfî, p. 317). Taqi al-Din, the nephew of Şâlî al-Din, built a madrasa in al-Ruha (Maqrizi, iv. 195, 195). Ibn Ijâbîr who travelled from 578 (1183) to 587 (1191) mentions two in Naṣîbin (p. 240), one in Harrân (p. 247) and a large Hanafi madrasa in Halab and four or five others (p. 253), three in Hamâ (p. 257); one in Hims (p. 258) and six in Damascus. Likewise in Damascus were the great Şâfîîs (p. 283, both 284, and six or more) and six in Mawsîl (p. 236, 4 sqq.); a madrasa in the last-named town was built in two stories with a Dār al-Hadîth on the ground floor (Ibn Aibu Usâîbâ'î, ii. 204, in the year 585).

The development in Damascus was of particular importance. Information about this is contained in the Tanbih al-Tâlib wa Irjâd al-Dârîs of Muyîha l-Dîn al-Nu'aimî (d. 927 = 1521), the synopsis of which by 'Abîd al-Bâsît al-'Ilâmî (d. 1059 = 1549) has been published by Sauvare (J.F.A., ser. 9, iii.—vii.), the substance had already been given by Fleischer from Mkhâlîf Meshâka (Al. Şriften, iii. 306 sqq. = Z.D.M.G., viii., 1854, p. 346 sqq.; cf. iii., 1894, p. 123; there are a few differences in points of detail between Fleischer's and Sauvare's publications). A Dâr al-Kurân, the Rishâiya, was founded here about 400 (J.F.A., ser. 9, ii. 252) and the first madrasa for fikh studies was the Hanafi Şâfiî, which was founded beside the Mosque of the Omayyads by Shujûa' al-Dawla Şâdir in 491 (1097) (ibid., iv. 266); next came, sometime before 520, the likewise Hanafi Tarâkhâniya (ibid.) and in 514 the Şâfiî Aminîya founded by the Aṭâbeg Amin al-Dawla (ibid., iii. 395), then the Hanbalî Şâfiî, founded by a scholar who died in 536 (iv. 467), the Hanafi Şâfiî built extra muros by a princess in 526 (ibid., p. 254), the Hanbalî 'Omarîya founded by a shaikh who died in 528 (ibid., p. 473; cf. Fleischer, Al. Şr., iii. 328).

The two rulers Nur al-Din b. Zangi (541—569 = 1146—1163) and Şâlî al-Din (570—589 = 1174—1193) displayed a magnificent activity in this direction as did their emirs and relatives. Nur al-Din founded a Dâr al-Hadîth, the Nîrîya (ibid., iii. 280), and the following Şâfiî madrasas: al-Şâliyya (ibid., p. 414), al-'Usrâniya (ibid., p. 425), al-'Imâdiyya (ibid., p. 430), al-Kâllasa (ibid., p. 439), and he began the building of the 'Adilîya (completed by al-Şâlih, ibid., p. 425), and as a Hanafî madrasa, the large and small Nîrîya (ibid., 388, 291).

In his reign an emir also built the Asadîyya for Şâfiîs and Ḥanâfîs (ibid., iii. 387), another emir a Şâfîî Muhâdîhidîya inside and another outside the town (ibid., 440); of Hanafî madrasa, an emir al-Duṣkâ built two, al-Balkîha and al-Nāshîya (ibid., 425 sqq.); a slave of Nur al-Din, the Râhîniya in 565 (ibid., p. 259), an emir the Mu'niyya in 555 (ibid., p. 281); a lady built a Ḥanbali madrasa with a Dâr al-Hadîth, the 'Alîma (ibid., p. 477; a Ḥanbali Šâhî, who died in 556, the Musâmîria (Fleischer, op. cit., p. 329).

Şâlî al-Din rebuilt the Şâfiî Kâllâsa, which had been burned down (J.F.A., ser. 9, iii. 439) and himself founded the Mâlikî Şâliha and a Mâlikî zawiya in the Mosque of the Omâylâds (ibid., iv. 400 sqq.). There were also built in his reign a Dâr al-Hadîth by the Kādistânî (ibid., iii. 277), a madrasa for Şâfîîs and Ḥanâfîs, the 'Âdhawîya, by his daughter or brother's daughter in 580 (ibid., p. 425), six Şâfîî madrasas (ibid., p. 391, 399 sqq., 403, 435, 442), some five Ḥanâfî including one founded by his (previously Nur al-Din's) wife (ibid., iv. 256, 266, 277, 284 sqq.). This building activity was continued into the seventh to ninth centuries so that al-Nu'aimî can give the following totals: seven Dâr al-Kurân, sixteen Dâr al-Hadîth (one, the Kûsha, is not given in Fleischer), three for both Kurân and Hadîth, sixty Šâfîî (two of them also for Ḥanafîs); in Fleischer, Ns. 16 and 31 and are not given), fifty-two Ḥanâfî (two of them also for Šâfîî); Fleischer, one of them, the Dammâghîya, is not given; it appears among the Šâfîî as Dâbbâghîya), four Mâlikî and ten Ḥanâfî madrasas (in Fleischer, one of the two Dîyâya is not given; on the other hand he has the Musâmîria), also three Mâlikîs al-ţibb, all of which belong to the seventh century. The founders were mainly rulers and emirs, but also included merchants and quite a number of men of learning, and a few women also. As in the east, especially in earlier times, a madrasa was often founded for a particular scholar (ibid., iii. 400, 488) and one sometimes finds a learned man handing over his house to be a madrasa (al-Dawla'ya, ibid., p. 405, cf. 439, iv. 470). According to Mkhâlîf Meshâka, in his time (1848) these madrasas had practically all disappeared or were used as dwelling-houses, because their endowments had disappeared and there were only five left in his time (Fleischer, op. cit., p. 307—311).

Şâlî al-Din introduced the madrasa into Jerusalem. In 585 (1189) he endowed the Kânānî Şâliha, in 587 the Zâwīya Khatînîya south of al-Akâsâ for a particular scholar and in 588 he turned the Church of St. Anna into the Şâliha Madrasa; in 589, 583 and 598 emirs built similar institutions and in the seventh—ninth centuries a whole series of them came into existence. According to Mudjîr al-Din (d. 927 = 1521), there were thirty-one madâris and monasteries (which were in part used in the same way as madrasûs) in direct connection with the Haram area or near it, and sixteen at some distance. Of these some were especially called ma'drasa; one a Dâr al-Kurân and one a Dâr al-Hadîth (Sauvare, Hist. Jûrûs. et Hîbr., 1876, p. 139 sqq.; v. Berchem, Corpus, ii. 1; cf. for Şâlî al-Din: Ibn Khallîkân, Wâfiyât, ii., Cairo 1310, p. 402 sqq.). In Hebron there was also a madrasa, that of al-Malîk al-Nâsîr (Sauvare, op. cit., p. 23).

Next to Nîjâm al-Mulk, Şâlî al-Din has the greatest reputation as a builder of madrasas. He owes this mainly to the fact that his great activity as a builder lay in countries, which became of great importance in the Muslim world, Syria with Palestine, and Egypt. Even before the fall of the Fatimids he had founded in the year 566 in the vicinity of the Mosque of 'Amr, the Nâsîrîya
overshadowed by the “House of Knowledge” (dār al-Ṭūlā or dār al-Ṭiḥkama) founded by al-Hākim in 395 (1005). It was at the northern end of the west palace and contained a library and reading-room as well as rooms for meetings and for classes. Librarians, assistants, with their servants administered it and scholars were given allowances to study there; all branches of learning were represented — astronomy, medicine etc. in addition to the specifically Islamic subjects. Al-Hākim built similar institutions in al-Fustāṭ (Maqrizi, ii. 334 sqq.; according to Ibn Dukkām, ed. Volleni, p. 509 infra, there still existed in his time about 600 books, a building called the Dār al-Ṭūlā in al-Fustāṭ). In the year 435, al-Sanbādi saw in Cairo a library with 6,500 books on astronomy, handasa and falsafa (Ibn al-Kīfī, p. 440, 13 sqq.). We do not learn very much of the subjects taught there but occasionally hear of someone who lectured on Arabic philology in it (Kindi, Walī, p. 610, 13). But the whole institution was closely associated with Shi‘a propaganda, which is obvious from the fact that it was administered by the Dā‘ī ‘l-Dhā‘īr who held conferences with the learned men there every Monday and Thursday (Maqrizi, iv. 226; Kākāshandī, Shub al-Ṭihkā, ii. 487); occasionally he was a kāfī (Kindi, Walī, p. 605, 11). A similar missionary institute (dār al-Ṭihkā) was built in Halab in 507 by the emir Fakhr al-Mulk (Ibn Taghrībrīdī, ed. Popper, p. 360, 17). We may assume that these buildings were also arranged for the performance of the sălāt.

With the dār al-Ṭihkā, Islām was undoubtedly continuing Hellenistic traditions. Al-Maqrīzī mentions a dār al-Ṭihkā of the pre-Islamic period, where the learned men of Egypt used to work (iv. 377, 4); Ibn Abī Usayba‘, also mentions pre-Islamic seminars in Egypt where Hellenistic learning was cultivated (dār al-Ṭihkā, i. 104, 16, 22; Athens is also called dār biḥnāt al-Yunānīyn: B. G. A., ii. 135, 14) and the similarity with the Alexandrine Manus, which was imitated in Persia and Antioch, for example, is apparent (John W. H. Walden, ed., Universities of Ancient Greece, New York 1919, p. 49–50). Al-Hākim’s institution was closed by the vizier al-Afšāl on account of political and religious disputes, but shortly afterwards (517 = 1123) reopened by the vizier al-Ma‘mūn in another building, south of the east palace (Maqrizi, ii. 313, 337, 17 sqq.). But it was now considerably smaller. During the famine in the reign of al-Mustansir, the library was plundered. In 461 (1068) an eye-witness saw twenty-five camels carrying books from the palace library (Maqrizi, ii. 254; cf. Wustenfeld, Fātimidenhalsen, p. 261). The institute was finally closed with the end of the Fātimid dynasty (567 = 1171). Ša‘bār al-Dīn had all the treasures of the palace, including the books, sold over a period of ten years. Many were burned, thrown into the Nile, or thrown into a great heap, which was covered with sand so that a regular “hill of books” was formed and the soldiers used to sole their shoes with the fine bindings. The number of books said to have disposed of varies from 120,000 to 2,000,000 but many were saved for new libraries. The Kāfī of al-Fadil is said to have procured 120,000 volumes (Maqrizi, ii. 253–255; Abu Shāma, Kitāb al-Ru‘udatāin, Cairo 1287, i. 200, 268). Ša‘bār al-Dīn also allowed anyone interested to take what he liked from the khāṣṣat al-Ṭīlāb in Halab for example (Yākūt, Udāba‘, vii. 20). These attacks on libraries did not mean they were tired of books as Yākūt (Udāba‘, v. 389) suggests, but was only one expression of the reaction against the Shi‘is.

3. Origin and spread of the Madrasa.

While the institutions called the Dār al-Ṭūlā developed in Fātimid countries into centres of Shi‘a propaganda, the madrasa grew up in the east out of similar Sunni institutions. It is interesting to note that in 400, al-Hākim built a Sunni dār al-Ṭūlā in Cairo. In it lived two Mā‘likis scholars, who gave instruction and gathered round them men learned in hadīth and šī‘a (Ibn Taghrībrīdī, ed. Popper, ū‘lī, p. 64, 105, 106; al-Jihālah, Dīwān al-Islām, Hai‘ardābād, 1337, i. 186). As the instruction (see the first reference) was given in the Dā‘ī ‘l-Dhā‘īr, the institute must have been connected with a mosque, probably that of ʿAmr. It owed its existence however only to a passing fancy and after three years, the institution was abolished and the two learned teacher-executed. With the growing strength of the Sunni, especially in the Shāfī‘ī and Ḥanafī form, many educational institutions arose in the east which had a pronounced Sunni character; the Sunna in the fourth century wanted to have influence with the other schools (R. G. A., iii. 332, 365, 415). Many teachers built houses of their own, where they dictated hadīths and held lectures on šī‘a, e.g. a teacher who died in Merv in 420 (Wustenfeld, Imām Shā‘īrī, ii. 232). Abū Hātim al-Rustī born in 277 (890) founded in his native town a school with a library with apartments and allowances for the maintenance of foreign students (ibid., p. 163). In Amul, al-Rāyī (d. 502) built a school; he himself taught in the mosque, also in al-Ra‘i (iii. 245). In Tābarān a school was built for al-Hātimi (d. 593 = 1003) (ibid., ii. 202). In Bāghbād, al-Isma‘īlī (d. 396 = 1006) founded two lecture-ships in šī‘a studies, one of which was filled by al-Isfārā‘ī, who otherwise lectured in the mosque of Ibn al-Mubarak, and the other by al-Khāṭir (ibid., p. 204, cf. p. 217). The philosopher and bīḍjī- poet al-Zawānī who died in 463 lived with other learned men in a madrassat al-Suyūtī (Yākūt, Udāba‘, vi. 409).

In Niṣābūr especially, where studies were vigorously prosecuted in the mosque (e.g. Wustenfeld, Schā‘īrī, iii. 236) many such institutions arose. Thus a special school was built for the Shāfī‘ī šī‘a-scholars al-Sā‘īgh al-Nisābūrī (340 = 960; ibid., ii. 156; cf. 160). Abū ʿAlī al-Husainī (d. 392) himself founded a school in which to teach Ḥadīth and it was attended by 1,000 scholars (ibid., p. 293). Ibn Fūrak (d. 406; ibid., p. 216) did the same and in the year 437 Abū ʿAlī-khaṣṣat al-Dīn al-Isfārā‘ī (ibid., iii. 284) and for Rukn al-Dīn al-Isfārā‘ī (d. 418 = 1027) a school was built which surpassed all others (ibid., i. 229). As early as the fourth century, we thus find al-Ma‘ṣūlī praising the very fine madrasa of ʿalā‘al Jāhār (R. G. A., iii. 315). In the first half of the fifth century, there were four especially famous madāris in Niṣābūr: al-Madrasa al-Bihāshīya, founded by al-Bihāshī (d. 384), when he became a teacher in Niṣābūr in 441 (Wustenfeld, Schā‘īrī, iii. 270; al-Suyūtī is therefore wrong in ascribing its foundation to before the birth of Niẓām al-Mulk [in 408]; see Ḥamīn, ii. 141). al-Sa‘diyā founded by the emir Naṣr b. Subuktakīn (governor of Niṣābūr in 389)
for Şahîs and the Kâmiyya for Malikis; for Şahîs also the Sharifiya (called after its head also Madrasa Zain al-Taḏjîj) and notably the great Sahliyya or Nasîrîyya (for the identity of the two of Malikis, iv. 228 sqq., especially the second), beside Şahî’s mausoleum; he also built a madrasa beside the Mashhad al-Ḫusain and in 572 a Hanâfi madrasa, the Suyûfiyya, and he turned the house of an emir named Sa’d al-Ṣu‘āda into a khānasîkh (Husn al-Mahdawâra, ii. 141 sqq.; Ṭakrîzî, iv. 192 sqq.; Ibn Ḫallîkîn, ii. 402 sqq.). Those around him emulated this activity. His vizier the Šahî ‘Afîf al-Dîn in 580 built the Fâlidîyya for Şahî’s, Malikis and for Ḫâfî (Mâktrî, iv. 197), a brother the Sâfî (ibid., p. 199), another, al-Malîk al-Ashî, the Madrasat al-Ashî (ibid., p. 195), his nephew Taḳî al-Dîn built in Cairo the Masjid al-‘Izz or Taḵwiyâ for Şahî’s (ibid.; ibid., p. 194; Ibn Ḫukmûn, p. 93) and two others in the Faiyûm (Mâktrî, iv. 195). Other emirs and their relatives followed his example (ibid., p. 196, 199 sqq.) and even a merchant, al-Ḫâṣî, founded a madrasa in 570 (ibid., p. 194). Ibn Ḫubârî, who travelled through Egypt in the time of Şalâl al-Dîn, speaks of several madrasas in Alexandria (Khibâ, p. 42) and particularly of one beside Şahî’s tomb, which looked like a whole town (ibid., p. 48).

During the period of the Ayyâbîs and Mamlûks the number of madrasîs increased to an extraordinary degree. In this period, called Bain al-Kayr, there were two long rows of madrasîs on the site of the old Fatâmid palace in Cairo (cf. P. Ravaissie, in M. M. A. F., i. 1889, p. 409 sqq., pl. 3). As a rule, the madrasa was in the street in line with the houses. Ibn Ḫukmûn mentions that in Cairo only two stood isolated (p. 98). Al-Nâ‘îmî and Ibn Ḫukmûn describe several madrasîs (and madâsjîd) as mulâ‘alâka i.e. above the ground-floor. Ibn Ṭaṭṭûs, who travelled at the beginning of the eighth century, found madrasîs even in quite small towns, e.g. in Dîmayt, Muniyât b. ‘Abî ‘Ubayd, Ḳina, Kâs, Aṣna (i. 65, 96, 106, 108). Ibn Ḫukmûn (p. 92-99) about 800 gives a list of twenty-four madârsîs; this is obviously very incomplete; on the other hand, it contains nine names, not given by al-Mâktrî. This author (d. 845 = 1442) mentions 75 madârsîs, fourteen for Şahî’s, four for Malikîs, ten for Hanafîs, three for Şahî’s and Malikîs, six for Şahî’s and Hanafîs, one for Malikîs and Hanafîs, four for all four rites, two exclusively used as dâr al-Ḳâta, while the rite of twenty-five is not mentioned and four remained unfinished. Of these madrasîs, according to him, about thirteen were founded before 600, twenty in the seventh century, twenty-nine in the eighth century and two after 800. To the two schools of Ḥâḏî (al-Kâmîlı of the year 622 and al-Ḵârîyâ of about 750, see iv. 201, 211 sqq.) is to be added the Maṣûghiyya mentioned by Ibn Ḫukmûn (p. 99). A notable feature is the decline of the Hanbalîs and in contrast to Damascus the large number of schools which included all four rites. The first Egyptian madrasa to include all four rites was the Sâhîyya, founded in 640-641 by al-Malik al-Sâhî (Mâktrî, iv. 209 sqq.) probably on the model of the Mustânsîrya.

In Şalâl al-Dîn’s time, the madrasa was also introduced into the Ḥîdâya. In the year 579, the governor of ‘Aden built in Mecca a madrasa for the Hanafîs and in the following year a Şahî’s madrasa was also founded there (Chron. Mekkâ, ii. 104). Up to the beginning of the ninth century, eleven madârsîs are mentioned (ibid., p. 104-107) but others were added (ibid., iii. 177 sqq., 211 sqq., 225 sqq., 351 sqq., 417), in the ninth century they ceased to be used for their original purpose (see Snouck Hargronje, Mekkâ, ii. 229 sqq.). Madrasa were also built in Medina (Wustenfeld, Medina, i. 58, 98, 112).

In Asia Minor, madrasas spread over the Seldjûks; the oldest known date from the seventh century. In Konya for example there were the Sîr çifti Madrasa of the year 640 (1242-1243), Karaîay Madrasa 649 (1251-1252) and İndjemi-nâré Madrasa 674 (1274-1276) (Ch. Huart, Konia, 1897, p. 156, 160, 175; Fr. Sarre, Reise in Kleinasien, 1896, 48 sqq., 51 sqq.; R. Hartmann, in Deutscher Arch. Zeitung, 1899, 87, 119; in Swäf three madrasa date from the year 670 (1271-1272) namely the Sâhîyya or Gok-Madrasa, founded by Fakhr al-Dîn, that of Muẓaffar Barûqîrî and that of Shams al-Dîn Muḥammad. The first mentioned is probably identical with the Dâr al-Tâbrîs described by Ewliyâ, which contained eighty rooms in two stories (see v. Berchem, Corpus, ii. i, 18 sqq., 26 sqq., 31 sqq.). In Diwîgî, a madrasa has been built in the Jâmi‘ Ahmad Şah erected in 620 (1228-1229) (ibid., p. 71 sqq., 80). About 733 (1333) Ibn Baṭṭûs found madrasa all over Asia Minor, even in quite small towns (ii. 260, 267, 269, 285, 296 sqq., 340, 345, etc.). Building activity was continued under the Ilkhan, Huart, Konia, p. 59, 92, 109; Sarre, Reise in Kleinasien, index; R. Hartmann, op. cit., p. 24 sqq.). According to the Kürsâs, the madrasa was brought to North Africa as early as the time of Şalâl al-Dîn, for we are there told that the Almohad Yâqûb b. Yusûf (580-595 = 1184-1199) built mosques, hospitals and madrasas in Ifriqiya, the Maghrib and al-Anadâs (Tornberg, Annales Regni Mauritaniae, Upsala 1843, i. 143); but no exact details are given to corroborate this statement. The Maghribi madrasas were exclusively Malikî. In Tunis, many madrasa were erected (cf. the Hafsîs (625-941 = 1228-1534), the oldest being the Madrasat al-Maḍrâṣa, 1150. In the Chronicle of Tunis (Zarkashî, in Chronique des Almohades et des Hafsides, transl. E. Fagnan, in Rec. Nat. et Mêm. Soc. Arch. Cons., xxii, 1895, see index) eleven are mentioned including the Madrasat ‘Unṣ al-Djamal of 742 (1341), the Madrasa Ibn Taḥfildîn, founded by a learned man in 766 (1364), the Madrasa Shammâ-ya (before 734 = 1333; see op. cit., p. 105, 106, 221), Madrasa Belhafa-fîn in 795 (1393) (ibid., p. 183), and six of the ninth century (see op. cit., index; cf. also Marçais, Manuel d’Art Musulman, ii, 900, n. 2). Ibn Ḫukmûn mentions at the beginning of the eighth century the Madrasat al-Kutubîn (i. 20). There is no trace of madrasa of the Almohads and the statement in the Kürsâs regarding them does not agree with the other sources. The first madrasa in the Maghrib was, according to Ibn Marzûk, Muṣnâd, the Madrasa al-Sahfîrî built by the Marinid Abû Yusûf Ya‘kûb b. Abâl al-Hâkî (656-658 = 1258-1260) in Fâs in 684 (also called al-Halâfîya, in Swäf, the edition by Lévi-Provençal, in Hêpîrîs, v., 1925, p. 34 (Arabic) = p. 44 (French)). In Fâs, we are told by the same source, Abû Sîd (757), and his son Abû l-Hasan (731-749) built several madrasas: the M. al-Madinâ al-Baiḍâ‘ (= M. Dâr al-Mâktrî in Fâs al-Ijâdîd) in 721 (1321), the M.
al-Šīrāzī in 723 (1321), the M. al-ʿAttārīn in 725 (1325) later called M. al-Wādī and in 747 (1346–1347) M. Miṣḥāb after the teacher; the next Marinid Abū ʿIynān (749–759) built in 750 (1351) the Banānīya (Tornberg, Annals Reg. Murn., i. 280 infra; Ibn Maruzkī, in Ḥujjārī, v. 34 and 68; Ed. Petworth, Inscriptions de Fīṣrū, in J. A., ser. ii., x. 1917; xii., 1918; Maqrīzī, Manṭal al-Muslamān, ii. 1927, p. 465 sqq.). No longer in existence is the M. al-Lebbādī (Bell, J. A., ser. ii., x. 143); the M. al-Šīrāzī consisted of a larger and a smaller madrasa; the latter is now the M. al-Ṣīrāzī (ibid., p. 215 sqq.). Others were built under the Sharīʿ, notably the M. al-Ṣāḥīrīn in the xiiith (xviiiith) century, now the largest in Fīṣrū (ibid., p. 114): Bell writes Shaghhrā Ḍān). In other towns also Abū l-Ḥasan built madrāsī: in Tākā Nakās, Salū (742 = 1340), Tākā, Sābī, Afīn, Amīnr, Abū ʿAqīl, Mārākāsh, al-Naṣr al-Kahī, Bel Ummān in Tīmīsān (714–715), Tīmīsān and al-Dīmāzārī (Ibn Maruzkī, Ḥujjārī, v. 35 and p. 69). That of Nakās was completed by the son of Abū l-Ḥasan, Abū ʿIynān, who was a great builder of schools (Ibn Baṭṭūtā, i. 84). In Tīmīsān, the Ţālīnī Abū ʿAbd Allāh Māsī I had already built a mosque in 710 (1310) and before 737 Abū Taṣḥīfīn founded the similar institute, which bore his name (Maqrīzī, Monumenta arabica de Illumenc; do., Manṭal al-Muslamān, 1927, ii. 483, 515).

In Spain according to Ibn Saʿīd (viith = xiiith century), there were no madrasas; instruction was given in the mosques (al-Maṣkaṣi, ed. Dozy, i. 136); but in the following year, however, a large madrasa was founded in Granada by the Nasīr Wābāf Abū l-Haḍjasdārī in 750 (1350) (Almanzor Cardenas, in Bolletin de la Real Acad de la Hist., xxvii. 490; Maqrīzī, op. cit., p. 517.) According to Ibn Saʿīd, men of learning were held in high esteem in al-Andalus; the Marinids in the Maghrib also built madrasas in their enthusiasm to further learning. The traveller al-ʿAbbarī (688 = 1289), however, found no interest in learning in Tīmīsān, al-Ḍiṣṭārī or Constantinople (with one exception); it was only in Tunis that he found any enthusiasm (J. A., ser. v., iv., 1554, p. 154, 157, 158, 161, 169). This is certainly connected with the fact that the madrasa had just then been introduced into Tunis. But not even the madrasas brought about any deepening of interest in study in the west. Ibn Khaldūn (580 = 1479) testifies to the spread of madrasas in Tunis and the Maghrib but laments the decline in education. In al-Andalus, Muslim culture was dying out and after the decline of Kurūba and ʿAqārīn, education in the Maghrib was on a low level; while the old schools in the Ibrāk were no longer of importance, Cairo was a centre of learning to which all made their way and studies also flourished in Persia (Muṣǧaddima, Cairo 1322, p. 342–344, fasc. 6, No. 2). This decline in interest in learning soon became general. The learning of the time lacked vitality and international scholarship was affected by political conditions. In 1517 A.D., I. 264 Afrounīn says that the lecture-rooms in Cairo were large and placed under the masters who attended them were small. Some still studied fiqh, but very few the arts (Descr. de l'Afr., iii. 372, in Rev. de Voy. et de Doc., ed. Schéfer, Paris 1896–1898). In Egypt, interest in the specialised madrasa decreased considerably and the great builder of the xiiith (xviiith) century, the emir ʿAqūdī, still built madrasas, but his real interest was in the mosque (see below). Lane only mentions the ʿAṣ̣̄har Mosque as an important centre of study in Cairo. The development in Mecca was similar, where in modern times studies are only prosecuted in the mosque (Snouck Hurgronje, Mecca, i. 17, and cf. above). On education and the madrasa in general cf. also F. Wustenfeld, Die Akademien der Araber und ihrer Lehrer, Göttingen 1837; Kremer, Kulturgeschichte, 1877, ii. 479 sq.; Haneberg, Abhandlung über das Schul- und Lehrwesen der Muhammedanen im Mittelalter, 1850; v. Berchem, Corpus Inscri. Arab., i. 252–266; G. Gabrieli, Manual de Bibliographia Musulmana, i., 1916, p. 109 sqq.

4. Development of the Madrasa and similar Institutions.

a. Madrasa, Masjid and ʿĀṣ̣̄harī.

There was, as already mentioned, no difference in principle between the madrasa and other mosques. Even after the introduction of madrasa, the regular mosques remained schools as before. Ibn Baṭṭūtā, who travelled in the eighth century, in the period when madrasa flourished most, attended lectures on ʿAṣ̣̄har in the Madrasa of ʿĀṣ̣̄harī, but also in the ʿĀṣ̣̄harī Maṭṣūrī in Baghdad (ii. 83, 110). In Damascus in 580, Ibn Ḍubair refers to rooms in the Mosque of the Omayyads, which were used for ʿĀṣ̣̄harī and Māliki students, who received considerable stipends (ʿudrā, maʿalī′) and among whom were many Mālikīs; the mosque had large endowments (waṣlī) for strangers as well as for students (Omar, p. 266 supra, 272 supra). Ibn Baṭṭūtā also speaks of the halākāt at-ṭabarīs in the mosque in the different sciences (i. 212). In Egypt in the time of al-Ḥakīm (ninth century), there were 8 rooms for fiqh studies in the Mosque of ʿAmr and before 749 there were over 40 halākāt in it (Maṣẖūrī, iv. 20, 21). In the Mosque of Ibn Tīlūn after its renovation in the reign of Lāḏīn (696–708) courses of fiqh, according to the four madhāhabit, and other studies were arranged (ibid., p. 41; cf. Quatremer, Hist. Sult. Maml., iv/ii. 47 sqq.) and in 767 an emir appointed 7 teachers in Ḥanāfī fiqh there (Maṣẖūrī, iv. 42). In al-ʿAṣ̣̄harī in the seventh century and later after the earthquake of 702 many lecture-rooms with paid teachers were built (ibid., p. 52), likewise in the Mosque of ʿĀṣ̣̄harī, where, after the earthquake, lecture-rooms in fiqh for each madhab and for ʿAṣ̣̄harī were founded with salaries for the teachers and scholarships for the students (ibid., p. 57). In Fāṭimid mosques, like the ʿĀṣ̣̄harī, the ʿĀṣ̣̄harī ʿĀṣ̣̄harī Maks built by al-Ḥakīm, Mālikī emirs founded new lectureships (ibid., p. 66, 81) and not only in the Maghreb al-Ḥaṣānī but also in the Maghreb the Naṣīrīs were studies carried on in the eighth century (Hāṣīn al-Muḥammadī, i. 195; Muḥlī l-Dīn).

When a particular room was set apart for teaching purposes in a mosque, this was often called a madrasa; for example 6 of the Damascene madrāsā were in the Mosque of the Omayyads: the Shāhānīya, Ghazālīya, Khiṣṣā, Sāfinīya, Munāḍīya, of which the first and third were also known simply as Ḥakāk (J. A., ser. 9, iii. 410, 432, 437; iv. 262, 270, 481; others: vii. 230); al-Ḥakīm's Māliki madrasa was
in the Mosque of 'Amr (see above) and Ibn Du`ānī (p. 100 sg.) mentions 8 zawāyā in this mosque, which were excavated for Aqīl. These madrasas were often also built close beside the large mosques so that they practically belonged to them. This was the case in Mecca (Chron. Mokht., ii. 104 sgg.; cf. Ibn Batūta, i. 324), in Damascus where there was a Shāfi`i madrasa beside the western gate, Bāb al-Bard (Ibn Djuibār, p. 271), in Ni`ābūr (Ibn Batūta, ii. 50) and in Cairo where al-Madrasa al-Taibasīya in 709 and al-`Akbūhghātīya about 730 were built so close to the Āzhar Mosque that they had common walls and windows in them, which was specially permitted by a fatwā; they were afterwards completely incorporated in the Mosque (Makrizi, iv. 223 sg.). In Fās, the chief madrasas are arranged round the great mosque al-Karaṣīya and the same arrangement is found in Marrakāsh (Pauté, in Hepheris, 1923, p. 515 sgv., 523).

If the madrasa, as a building, had little independence, its character as a home for students and place of instruction was very marked. But even where it was quite an independent institution, the distinction between madrasa and ordinary mosque was very slight, all the less as sermons were also preached in the madrasa. In the fifth century the minbar had already been introduced into a large number of mosques. In the Ni`āmīya in Ni`ābūr, services were held as soon as it was finished (by `Abd al-Raḥīm: Wustenfeld, Schaftf., ii. 285.) and the Ni`āmīya in Baghdād had a minbar (Ibn Djuibār, p. 219). A problem was however raised by the fact that these madāris were Shāfi`ī and this school held that only one mosque in a town could celebrate the Friday service, unless the town had been of very considerable size and we are definitely told that al-Djuwainī conducted the Friday service in the madrasa in Ni`ābūr although he was also khaṭīb at the Manīfī mosque (Wustenfeld, Schaftf., iii. 251). In Egypt from 609 to 665 there was only one Friday khatta, but after this time there was usually a minbar in the larger madrasas. The caliph actually preached in the madrasa built by Kalān in 678-658: Makrizi, iv. 221. The minbar for the djamī` in many mosques is expressly mentioned, e.g. the Ḥijāzīya 761 (ibid., p. 222 sg.), the Bakrīya 776 (ibid., p. 230), the Zāmānīya 797 (ibid., p. 241), the Djāl (ibid., p. 249). The Schiβīya, which had not a minbar at first, was given one in 758 and was henceforth used for the Friday service (ibid., p. 205). In Fās the mixed type of djamī` and madrasa was found in the Bū`anānīya (Bel., J., etc., ser. ii, xii. 339).

It was only natural that the madrasa should also be called masjīd (cf. Ibn Djuibār, p. 48, 49, with line 19, 20). Ibn al-Hādhīdī in the viiith century still wants to distinguish between masjīd and madrasa and give more importance to the former (Marāghī, ii. 3, 48). The distinction remained however quite an artificial one and this is also true of the distinction between madrasa and djamī`. The name madrasa was decided by the main object of the institution and the special style of the building. The name djamī` was only given if the Friday service was held in it. Thus, as late as 772, we find the emir Bābālī building a madrasa and opposite it a djamī`; but in the year 815, the madrasa was given a minbar and used as a djamī` (Makrizi, iv. 235 sg.). If these two uses of the building are equal) either name may be used (cf. the double name in an inscription of the emir Muqīb: van Berchem, Corpus, i., No. 201). In some cases a Friday mosque can be said to be in the madrasa (Ibn Batūta, ii. 39). The great Djamī` Ḥasan began in 757 was also one of the largest madāris in Cairo (Makrizi, iv. 117 sg.) and on the other hand, the Djamī` Khaṭīb in Bālāk built in 737 and the Djamī` Aṣlam founded in 746 were educational institutions (ibid., p. 106, 111; Husn al-Maḥādāra, i. 192). In the ninth century the Djamī` al-Mu`ayyadi was the most important new madrasa in Cairo (Makrizi, iv. 139). The same variation in nomenclature is often found in this century (cf. v. Berchem, Corpus, i., No. 235, 248, 253, 262). On the other hand Makrizi, in the ninth century, only uses masjid as a name for quite insignificant mosques (iv. 263 sg., where 19 masjid is mentioned). In the xith century the emir Kāthkūdā built 18 large mosques and many smaller ones and his interest in the furtherance of learning was specially displayed in his buildings at the Āzhar mosque, which had developed at the expense of the specialist madāris (al-Djabarti, Merveillles Biographiques, iii. 230 sgg.; Sulaimān Rasād, Kanz al-Djuwāhar fī Ta`rikh al-Āzhar, p. 74 sg.); for the similar situation in Mecca cf. above.

The connection between māusoleum and mosque was also found with the madrasa. The tomb of the founder was placed in Nūr al-Dīn's madrasa in Damascus (Ibn Djuibār, p. 284, 4 sg.) and during the Manlūk period it was the regular custom for the founder of a madrasa to be buried under a kūba in it.

h. Monasteries.

A close connection arose between the monastery and the madrasa. As already mentioned, it was quite a common thing for devout men to live permanently in the mosque e.g. in the minaret or somewhere else on the roof or in subsidiary buildings or in a cell in the mosque. Such a cell which can be used for teaching or for meditation is called zāwa`ya, lit. corner (Ibn Djuibār, p. 240, 245, 266; Makrizi iv. 20; cf. Greek θορυβον; see Dozy, Supplement, s. v.). Pious ascetics however had retained from the older religion the custom of living in special monasteries e.g. in Djuwāln in the fourth century (B. G. A., i. 188); Muslim historians trace these back to the time of the Companions (Makrizi, iv. 272 sg.). In the fourth century ascetics and Sufis, especially the Karrāmīya (q. v.) or Kirmāmīya (cf. Mez. Renaiscance, p. 273), had quite a number of monasteries (khwānāwī, also khwānīmī, sing. khwānākī) in Farghāna, Marw al-Rūdh, Samarkand, Djurdān, Tabaristān etc. (B. G. A., iii. 323, 365); in Jerusalem and in Egypt also the Kirmāmīya had their monasteries in which they held ḥakhr (ibid., p. 179, 182, 202).

The distinction between khwānākī and ribāt (plur. rubūt) is one of origin rather than fact. Ribāt was simply a dwelling for men who waged the gīhād on the frontier but the word was also used by the Sūfis who waged a spiritual gīhād (cf. Makrizi, iv. 292 sg.). There was a ribāt at the Magribī in the fourth century in the town of Salā (B. G. A., ii. 56). When Ibn Makrizi says that they had only two rubūt of the eastern kind (in Safi and Salā, Hepheris, v. 36, 71), it is doubtful whether he means an establishment of Sūfis or of ghāzīs. In the viith (xith) century there were several military rubūt on the river Niger, from
which the Almoravids originated. From the xvi century onwards many were built in Morocco against the Spaniards and Portuguese. *Mārīs* is the usual word for *riwāt* (see Bel, *J. A.*, ser. 11, ix, 1917, p. 325, N° 1). In the east in the fourth century, rubūt are frequently mentioned, which probably had a military character (*R. G. A.*, iii, 303, 334, 415). The original distinction between *khānaqāh* and *riwāt* is never quite forgotten; as late as the beginning of the eighth century we find *riwāt* used of a barracks (Maḍrīzī, iv, 276). Ibn Batūta says that the word *khānaqāh* had not reached the west; here the old Arabic term *ṣāwiyā* was used (Ibn Batūta, i, 71; *khānaqāh* however in Ibn Murtuza, *Hujjatīs*, v, 39 sq.). Usually we find the three terms used without any definite distinction being made between them (ṣawma'ā also seems to be used in the *Kīfās* of a Muslim monastery, see Tornberg, *Annales*, p. 143; cf. p. 18); for all three names are applied to *Ṣūfī* monasteries, which also take in strangers, i.e. are used as hospices.

Ibn Batūta mentions many monasteries in the 'Irāq and Persia. Beside the tomb of al-Rifā'ī, not far from Wāsīt was a *riwāt*, which he calls *riwāt*, where "thousand of poor men", i.e. *Ṣūfīs*, lived (ii, 4). In al-Lūr especially, he found a vast number of monasteries; the *ṣūfī* there built 460 *ṣawma'ā* and spent 1/3 of his revenues on them and the *madāris* (ii, 31).

For *Ṣūrīya*, Ibn Djubair testifies to the flourishing monasteries which were often regular palaces and he says that the names *khānaqāh* and *riwāt* are used indiscriminately (p. 243, 271, 284); the word *khānaqāh* sounded strange to him as a westerner, as to Ibn Batūta (p. 284). Nevertheless al-Nu'ānim distinguishes the three terms and mentions 29 *khānaqāhs*, 23 *rubūts* and 26 *ṣawma'ās*. The oldest *khānaqāh* mentioned by him (Duwaira) was founded for a learned man who died in 401 (Sauvaise, in *J. A.*, ser. 9, v, 269, 377, 387 sqq.).

It was similar in Egypt. The first *khānaqāh* was built by Ṣalāh al-Dīn in 560 in Cairo (al-Ṣālihiyya, originally called Dār Sa'īd al-Ṣu'ūdā: Maḍrīzī, iv, 273), the next in the seventh century by Baibars al-Bunduqdārī, who also founded new monasteries in Syria (Ibid., p. 282, 298). Of *khānaqāhs*, al-Maḍrīzī mentions 22 (Ibn Duwēmak only one), of the sixth century: one, seventh: one, eighth: 18, ninth: one. Of *rubūts* 12 (Ibn Duwēmak 8), of the seventh century: 9, of the eighth: one, besides 50 of *ka'ba*. Of *ṣawma'ās* 26 (Ibn Duwēmak, 9); these were mainly outside the town and were obviously quite small, often being simply the house, later the tomb of some devout man. The oldest dated from the sixth century. In Jerusalem also Salāh al-Dīn built a *khānaqāh* (v. Berchem, *Corpus*, ii, p. 87 sqq.). Among the *khānaqāhs*, *ṣawma'ās* and *rubūts* in this city the last named seem to have been specially intended as hostels for pilgrims (Ibid., p. 197 sqq.: see also Sauvaise, *Jurs. et Isb., index*). In Mecca 50 *rubūts* are mentioned; the oldest dated from 400 (Chron. Mecca, i, 108—115). At places of pilgrimage, the monasteries played an important part as hostels but even in other places they also gave accommodation to strangers. Ibn Batūta on his travels usually stayed in them (he calls them *ṣawma'ās*) but he also lodged in madāris, which were generally used as hospices (cf. Quatremerre, *Hist. Sult. Maml.*, viii, 35; note). Some of these institutions were convents for single *Ṣūfīs* (Maḍrīzī, iv, 293 sqq.).

The main object of monasteries, however, was to afford *Ṣūfīs* a home and place for their devotional exercises. In the *khānaqāh* of Baibars founded in 706, 400 *Ṣūfīs* were maintained (Maḍrīzī, iv, 276 *infra* and in the *khānaqāh* Siryūkūs 100 *ibid.*, p. 285). They were given lodging, food, clothing and money; there were often baths attached to them. The building was arranged for *dākīs* exercises, and al-o for *ṣāwīs* so that it was a kind of mosque. Ibn Djubair mentions a *riwāt* on the summit of Abū Kabbās in which there was a mosque (p. 108). A *riwāt* may be actually called a madrīzī (Maḍrīzī, iv, 294; cf. *khānaqāh* and *madrasah*, p. 283 and the term madārib al-*riwāt*: Ibn 'Arabīshī, *Vita Timuri*, ed. Monger, iii, 890). The monastery founded by Šalāh al-Dīn was actually given a minaret in 780 (mī'ār-ad-ša'ī) and it is recorded that people used to wear sandals to walk in the *ṣawm* (Maḍrīzī, iv, 275 *infra*). Sometimes only the occupants of the monastery are admitted to the *ṣawm* (Ibid., p. 277: *khānaqāh* *liābīs*: There was therefore an imām on the staff of the *khānaqāh* (Ibid., p. 287). Like other sanctuaries the monasteries sometimes preserved relics; the *Rihāt* al-Āharī, for example, preserved a piece of iron and wood which had belonged to the Prophet (Ibid., p. 293). We sometimes find a *khānaqāh* built close to a large mosque like the *khānaqāh* of Aḥbūghā beside the *Arāh* Mosque (Ibid., p. 297; cf. p. 289: Kūsīn) or the founder built a madrīzī for the Friday *ṣawm* beside the monastery (Sīyākus, Ibid., p. 285). The occupants of the *Ṣālihiyya* *khānaqāh* took a prominent part in the Friday service in the mosque of Ḫākim (Ibid., p. 274). At a later date, we find the monasteries themselves arranged for the Friday *ṣawm*. This was the case with the Rihāt al-Āfrām, which in 663 was given a minbar for the Friday and festival *ḥuṣbā* (Ibid., p. 297) and al-Mu'ayyīd made a house, that had been begun before he came to the throne, into a *gāmā' wa-*khānaqāh (Ibid., p. 134 *infra*) just as *ṭīr ṭīr* a *gāmā* could be built with living-rooms for *Ṣūfīs*, e.g. the *ṣāwī* al-Ṭāṣī (beginning of the xth century, like the preceding, *Ibid.*, p. 140 *infra*) and in the xth century, the *ṣāwī* Shāikhū (before the building of his *khānaqāh*, Ibid., p. 113) Baibars al-Bunduqdārī was buried in his *khānaqāh* and the monasteries had as a rule tombs, either of the founder, or of devout men who had lived in them.

The development of the monastery is therefore quite analogous to that of the madrasa: the one institution merges into the other, because learning and manifestation of piety are inseparable in Islam. Learning was also cultivated in the monasteries; at the present day, we find students living in a monastery and attending lectures in a madrasa. Some scholars lectured on Ḥadīth in their rooms in a monastery (Ibid., p. 294, 295, 303) but instruction was also arranged for in some monasteries just as in the madrasa. 'Abd al-Ḥāfiẓ (d. 629 = 1231) lectured in a riwāt in Baghdad on *nīqāl, Ḥadīth*, etc. (Ibn Abī Uṣābīa, ii, 203) and a Rībāt al-Khātāmī is mentioned here, which had a library (Ibn al-Kīfī, ed. Lippert, p. 269). There are many references to libraries in monasteries (see for Marwān: Yākūt, iv, 509). In Khānaqāh Shāikhū founded in 756, an extensive course of lectures, Fīlsh according to all four Madhāhib, Ḥadīth and...
Ibrāhīm (Maṭriz, iv. 283) was given. In the Ribāt al-Āṭārī in the eighth century, instruction was given in Shāfi‘ī Fiqh (ibid., p. 296) and in the Ḍāmt al-Fālāqī built in 821, arrangements were made for students as well as for Sāffī (ibid., p. 136); the İḫṣāṣ madrasa al-İḫṣāṣīyya (730) was also a hānāṣaḥ (ibid., p. 238 sufrā); they had a common director.

In the eighth and ninth century this combination of the two institutions became quite frequent, for example in the Nafṣāsī in Cairo of the year 757 (v. Berchem, Corpus, i. 242 sqq.), in the mausoleums of Barsbā 835 (ibid., p. 365 sqq.; cf. Ibn Iyās, ii. 21, 22, 41), of al-İrāqī in Qustul in 835–838 (ibid., No. 371 sqq.) and of Ka‘īr Bā‘ı 879 (ibid., p. 431 sqq.). The same institution thus came to be given different names (cf. ibid., p. 172 sqq.) and al-Suyūṭī deals with the ḥānąniyyāt under the madāris. In the east, Ibn Batūṭā found the same relationships, for example in Shāfa‘ī and in Kerbelā’ (ii. 78 sqq., 88, 99) and this is what he means when he says the Persians call the ḥānaws madrasa (ii. 30, 32). In the west, he lauds his own sovereign, who had built a splendid ḥānaws in Fās (i. 84); here also learning and Sufism were associated (see the quotation in Dress, Supplement, s.v. ṣawwā), and the ḥānaws still plays an important part in North Africa (see Depont and Coppolani, Les Confréries Religieuses Musulmanes, Algiers 1897; El-Hachiche, Voyages au Pays des Senoussas, trans. Serres and Lasram, Paris 1912). Cf. on the monasteries: v. Berchem, C. A. I., i. 163 sqq., 174 sqq.; c. Hospitals.

We commonly find, e.g. in Ibn Dujair and al-Maṭriz, the hospital, bimaristan, mārīsīn, mārīsīn, mentioned in close connection with the madrasa, probably because it was administered by learned men and as a rule also contained a medical school. Al-Walīd is said to have been the first in Islam to build a hospital in the year 88 (Maṭriz, iv. 256 sqq.; B. A. II., v. 106). In Cairo in 259 or 261 (i.e. before the mosque) Ibn Ťūlūn built a hospital for the poor. At the same time he installed a dispensary behind the mosque and a physician used to sit there to be consulted every Friday. According to al-Maṭriz, his mārīsīn (called in Ibn Ḍuḳāḳ, p. 99 the “upper”) was the first in Egypt; this probably means the first free public hospital; it is improbable that this Hellenistic institution did not already exist in Egypt (Maṭriz, iv. 38, 39, 258; Hum, i. 139). Al-Maṭriz (iv. 259 sqq.) mentions in addition to this hospital in Cairo the Mārīsīn Ǧa‘fūr (in 346. perhaps identical with that called the “lower” by Ibn Ḍuḳāḳ, p. 99), al-Magḥfira (232–247), al-Manṣūr (682), al-Ma‘ūnaydā (821). To these must be added the two which Sāẖīf al-İn maintaine in Müsir and Ǧa‘fūr (Ibn Dujair, p. 51, 52; cf. Ibn Ǧaḥlākān, Cairo 1302, n. 202 sqq.). In Damascus Ibn Dujair found two hospitals: one of them the Bimaristan al-İnṣār (p. 283, 284; cf. Ibn Ǧaḥlākān, ii. 403). He also mentions two hospitals in Nablus (p. 249), in Harrān (p. 247), in Ḥalab (p. 253), in Ǧa‘mā‘ x (p. 257); in Bāḡdād he refers to a number without particularising them but we know of hospitals here from the third century and in 304 Sāẖīf b. Thāḥtāt was director of the hospitals of Bāḡdād; he was responsible for the foundation of three more (Ibn al-Kifīr, ed. Lippert, p. 193; cf. Kīrāb al-Wusāsār, ed. Amedroz, p. 21 and on the whole question: Mez, Renaissance, p. 326 sqq.). There was a hospital attached to the great Mustānṣīrīya madrasa (Le Strange, Baghdad, p. 268).

As regards the teaching of medicine, Ibn Abī Usābīa shows (i. 103 sqq.) that it was continued without interruption in Islam: for example, he mentions ʿAbd al-Malik b. Abūjar, who was in charge of the medical school in Alexandria, and after the conquest adopted Islam. At a later date, the chief medical schools were in Anāǧīya and Harrān, among others places (i. 116 infra). For a long period most of the physicians were Christians (cf. also B. A. II., iii. 183). Teaching was usually given in connection with the hospital. The student around whom they trained (akhiradda) and they assisted him (e.g. the Georgios, summoned from Gundeshāpūr to Baghdad by Maṣṣūr: Ibn Abī Usābīa, i. 124). Khalīfān had installed his hospital in his house, the Maṣṣūrī, where the rā‘is al-aṣifactāb lectured on medical science (Maṭriz, iv. 260); instruction was also given in the great al-Bimaristan al-Nūrī in Damascus (Ibn Abī Usābīa, ii. 192). Lectures on medicine (ṭib) were sometimes also given in but in this case it was for the most part a theoretical science closely connected with philosophy. Ibn al-Ḥaṭīām (d. c. 430) lectured on ṭib in the reign of al-Ḥakim (ibid., ii. 90) and when Lāḏūn restored the mosque of Ibn Ǧūlūn he also endowed lectureships on this subject (Maṭriz, iv. 41); which shows that ṭib should be read in Fourquare, Hist. Sci. Med., v. i. 47). Ṭibb could also be studied in a madrasa; for example, al-Dūjī, who died in 641 lectured on it in the ʿAḍārāwīya in Damascus (Ibn Abī Usābīa, ii. 171). At the same time there were special madārīs al-ṭibb; thus in the seventh century three were built in Damascus (J. A., ser. 9, iv. 497–499; Fleischer, Kst. Schr., iii. 329). The teachers in them could also be physicians at the hospitals (Ibn Abī Usābīa, ii. 266).

d. Children’s Schools.

These were older than Islamic science, since at the very beginning of Islam, reading and writing were taught in Arabia. In Medina the teachers were often Jews (see Balādhūrī, p. 473 infra; cf. the name rabbānī for the teacher: Ṣūrā, iii. 73; 48, 68; Balādhūrī, Al-Maţiz, hāb 10; Yaḥshū‘ī, ed. Houtsma, ii. 2143); but the ability to write was not so common here as in Mecca (cf. on Mecca Noldeke–Schwally, Gesch. d. Qurān., i. 15 sq.; Goldzider, Muh. Stud., i. 110 sq.; Goldzider, Muh. Stud., i. 110 sq.). After the battle of Ḍārūr, several captured Moeccans were released to teach writing in Medina (Kūmāl, ed. Wright, p. 171; cf. Goldzider, op. cit., p. 111; Sprenger, Leben Muh., iii. 131). After the capture of Kaṣīrātā, the prisoners were settled in al-Ḍūrj and some were employed in the school (kuttāb) (Balādhūrī, p. 142). Another contemporary of ʿOmar’s, Dujair b. Haiya, who was later an official and governor, was a teacher (muallīm kuttāb) in a school in Tāfīr (Ibn Ḍaiḍar, Iṣbatā, Cairo 1323, i. 235). Maṭāwīya, who had acted as the Prophet’s amānūna, took a great interest in the education of the young. They learned reading, writing, counting, “wumming” and a little of the Qurān and the necessary observances of religion. Famous musicians like al-Ḥaḍjīlājj and the poets Kaẓmāt and Tīrīmātā are said to have been schoolmasters (Lammens, Maṭāwīya, p. 329 sqq., 360 sqq.). The main subject taught was adab, so that the schools of the children were called maḍāliṯ al-adāb (Iṣbatā, xviii, 2nd Cairo ed., p. 101); and the teacher was called
often said to be "to teach them the Kur'ān." In the Maghribi also, the children only learned the Kur'ān, i.e. to recite it, while in Andalus they also learned reading and writing (bītāb), poems and a little grammar. In Ifni they learned, beside the Kur'ān, some Hadith and a little of other sciences (Ibn Khaldūn, Muqaddima, p. 447 sq.; fayl, vi. 32).
